SHOE & LEATHER
JOURNAL

ACTON PUBLISHING CO. LIMITED
TORONTO **MONTREAL**

To the Shoe and Leather Trade

WE CALL the attention of the trade to the fact that we are the original and only manufacturers of Nubuck Leather. It is our invention. We spent our time and money perfecting it, introducing it and advertising it extensively to shoe manufacturer, shoe wholesaler and shoe retailer. It has become deservedly popular and well-known throughout the country, not only because it is a new thing in leather, but because of its downright merit.

Because of its merit and its popularity it is necessarily being imitated, but the imitations are not Nubuck, nor can they be represented or sold as Nubuck.

For the protection of those who are buying Nubuck and for our own protection we shall prevent by legal action the unlawful use of this trade mark name, and we warn the trade accordingly.

CANADIAN AGENTS FOR

"CARR'S POLISHES" and "REVOLITE" JUMBO RUBBER HEELS

"BLACKIT"
AND
"BROWINIT"

PROFIT PRODUCING POLISHES

BRIGHTEST
AND
BEST

are Carr's "Blackit and Brownit" for the very simple reason that they contain every essential element to make them so.

The embodiment of these elements means the most brilliant and lasting polish. It also means the preservation of the leather, protection against bad weather, economy and minimum waste, resulting in the greatest measure of satisfaction to the user. And it is that feeling of satisfaction you wish to create in every customer, is it not?

Manufactured by CARR & SON, London, Eng.
Makers of the most complete line of Shoe Polishes since 1837

THE QUALITY OF THE RUBBER HEELS

Made in Thirteen Sizes.

you sell has a direct effect on every branch of your business. If the quality be indifferent, the effect is surely not the best, but if the quality is the highest, the impression created is bound to be the most favorable and therefore the most profitable.

"Revolite Jumbo" Rubber Heels are made only of the best quality and so should appeal to every progressive shoe merchant.

A Heel to Fit Any Style Shoe

“Endural” Calf Won't Let The Water In

Endural is a heavy chrome tanned calf that's made especially for winter shoes.

There is never a moment in the making that winter weather conditions are not fixedly kept in view.

So “Endural” is all that a good winter water-proof leather should be.

It meets every imported viscolized leather we have ever seen, meets them at every point save price.

For “Endural's” laid down cost is about 4c. less on every foot you use.

It is made in two colors, No. 22 and No. 44, and in 4 weights for men's and women's shoes.

You can prove the truth of what we say by a try out. It will be good for you and good for us. Come on.

And Now Let Us Settle Down to It

Now that the greatest and most joyful holiday season is once more a thing of the past, let us decide that 1912 will be by far the greatest in the history of Classic Shoes, and settle down to make it so.

While we are putting forth our best efforts to produce for the retailer and consumer the best styles, and if possible, even better quality, let our merchant friends give the Classic lines the prominence they so well warrant.

The result will be that a year hence we will all be better prepared to enjoy, in a greater measure, the next anniversary of the joyous season just passed.

FIRE!

Because of the fire in our factory on December 30th we will be delayed a little in delivering orders.

But we are having made an extra supply of new lasts, and our employees have generously offered to work nights to catch up.

Deliveries will be delayed about three weeks—perhaps not that much, until we are again running on schedule time.

Be sure that customers will be supplied just as soon as we can get those quick-selling Tetrault shoes through the factory.

Tetrault Shoe Mfg. Co. Limited

MONTREAL

'NUGGET'

NUGGET BOOT POLISH

Will not Freeze

The advertisement features a man in a dark winter suit and hat, sitting on a box labeled "NUGGET BOOT POLISH". He is holding a tin of the product, which has "NUGGET BOOT POLISH" and "MADE IN THE U.S.A." printed on it. The background is a snowy, icy landscape with icicles hanging from the top. The word "NUGGET" is written in large, stylized, 3D letters at the top. At the bottom, the phrase "Will not Freeze" is written in a similar 3D font, with "not" underlined.

"Can be obtained from any Wholesaler"

A New Year's Chat With You

The best New Year's Resolution:

"I will sell the Doctors Shoe"

¶ The worst thing about New Year's resolutions is that they are usually so easy to make and so hard to keep. And the older the year gets the harder it is to keep them.

¶ But, if you resolve to sell the Doctors Shoe during Nineteen-Twelve you'll find that you've made at least one resolution that is not hard to keep and which grows easier as the year goes on.

Doctors
ANTI-SEPTIC

FISK LIMITED

MONTREAL

YOU are not in the shoe business to make elegant window displays or to appear up-to-date, but to make money. It is well to keep this in mind when buying shoes.

Elegant window displays and an appearance of up-to-dateness are valuable helps to any dealer but if he buys his stock with a view to appearance only he is doomed to failure.

Display attracts. Extreme lasts and "created" shapes give an appearance of progressiveness but you have to back this up with satisfactory footwear.

Yamaska Brand Shoes

back up their appearance with long, comfortable service. They are made on up-to-date machinery from the best leathers and are always full value. Wearers of "Yamaska" Shoes get the habit of coming back to your store for more of these good shoes.

It will pay you to get your customers into the "Yamaska" habit.

**LA COMPAGNIE
J. A. & M. COTE
ST. HYACINTHE, P. Q.**

Don't Buy Appearance Only

It isn't wise to buy shoes on appearance for a natty last and fine finish oftimes hide many shoemaking defects.

It does pay to buy shoes that have been put to the test and have proven satisfactory.

It pays to buy Blouin's Shoes. They are as reliable and wear-resisting as good leather and good workmanship can make them. They have the appearance as well.

F. BLOUIN, Boots, Shoes, Moccasins, QUEBEC

Do you want to sell more Dongola Shoes this year?

The sale of any shoe depends a great deal upon the leather that is in it. Take a Dongola Shoe for instance, if it is made from Maple Leaf Glazed Kid it will sell more readily and do your business more good than if it were made of some inferior leather.

That's because Maple Leaf Leather makes a mighty fine-appearing shoe as well as a long-wearing one.

You can increase your sale of Dongola Shoes by specifying that they be made from Maple Leaf Glazed Kid.

 This Is Your Receipt

A National Cash Register Receipt

PUTTING A RECEIPT IN EVERY PARCEL BENEFITS THE CUSTOMER

- It prevents disputes. Prevents overcharging.
- Prevents mistakes in change. Stops mistakes in charge accounts.
- Insures a proper record of money paid on account.
- Gives information about special sales and new lines of goods handled by the merchant.
- Protects children and servants by giving them a receipt to take home.
- Shows which clerk waits on each customer, and in case goods are exchanged, proves the price paid and date purchased.

National Cash Register Receipts protect Millions of customers daily against mistakes and carelessness

Considering the material, workmanship, and what they do, National Cash Registers are the lowest priced machinery made. They sell from \$13.00 to \$870.00.

PUTTING A RECEIPT IN EVERY PARCEL BENEFITS THE MERCHANT

- It stops mistakes. Stops losses. Removes temptation. Increases trade. Increases profits.
- BECAUSE It enforces a correct record of All cash sales. All credit sales. All money received on account and all money paid out.
- It wins the confidence of the public. Makes every sale advertise your business. Satisfies customers. Makes each clerk responsible for the way he serves customers. Every merchant's success depends on whether his methods of handling his business give the above results.

National Cash Register Receipts protect hundreds of thousands of merchants daily

Co-operation Necessary in Success of Shoe Business

All Branches of the Trade Have Their Shortcomings—Traveler Speaks of Some Faults in the Accounting and Warehouse Staffs—How Road Man's Troubles Might Be Minimized.

There are faults on all sides in every business. No establishment or system is perfect. The tendency is for one branch of the service to blame the other. Few persons who make errors or commit blunders are willing to admit or acknowledge the corn. The disposition is to shift the blame and cast the responsibility on someone else. The shoe retailer perhaps lays the charge at the door of the wholesaler, and the latter in turn attaches the shortcoming to the manufacturer. The

manufacturer will often censure the traveler, and the latter will pass the reprimand on to the sales manager, the transportation companies, the bank, or the bookkeeper, who, naturally, will say the whole affair was caused by the neglect or indifference of the shipping or warehouse men—and so on it goes.

Everybody is quite willing to accept anything in the line of praise or compliment, but when there is an investigation into some shortcoming or deficiency of product, delivery, or service, when one has "to walk the carpet," then comes the disposition to unload the reproof or onus on other shoulders.

In the SHOE AND LEATHER JOURNAL there have recently been references to the evils of cancellation, substitution, misrepresentation, goods not up to sample, broken promises, taking orders when there was no hope of them being filled within the time specified, and other sins of omission and commission.

The Apostle of Friendship

The traveler has to act as the go-between of the wholesaler, whether manufacturer or jobber, and the retail dealer, and straighten many a tangle and snarl to which he is perhaps not a party. He is a peacemaker, a patcher-up of trouble, a pacifier, an adjuster in salesmanship, delivery, and settlement. Like other exponents of the shoe and leather industry, he has his troubles and his phase to present. There are always two sides to every story, as circumstances alter cases. It is well to have all parties heard before coming to a decision or offering comment.

A well known traveler for a Montreal shoe company, who has been on the ground for a number of years, writes, stating that the gripmen should be heard. He had been the representative of several houses before assuming his present post, seven

years ago, and is therefore in a position to speak with both knowledge and experience.

Drafts Reach Retailers Before the Goods

"Much of a road representative's grievances," he remarks, "are caused by inefficient bookkeeping and loose methods of stock keeping and filling orders. This applies to nearly every house in a greater or less degree. One of the chief sources of annoyances to a retailer is to have the wholesaler draw on him before the goods reach him. Nearly every man likes to see what he is buying, or, rather, has bought before he settles for the consignment. To have a draft presented before the shoes have left the factory or the warehouse displeases the shoe man, and when the traveler, who, in all likelihood, knows nothing about such a proceeding, calls around afterwards for a sorting, spring or fall order, he is apt to hear about the matter in no unmistakable terms. Then it often looks as if the firm was suspicious of the financial standing of the customer. Now, I maintain that the average traveler, who gets *close* to his customer and calls on him frequently, is often a better judge of the monetary capability and responsibility of the man than any mercantile report. But I am making no complaints on that score. Drawing on a retailer before the shipment reaches him or the time arranged for the payment of the goods, conveys, on the other hand, the idea that the house is hard up, an impression that it is not well to get abroad.

Counter Claims Not Credited

"Then a retailer often has counter claims, for which he is given no credit. This may be caused by the return of certain goods that were not up to the standard, missing pairs, mis-mates, stock not in hand, or some other reason. When the draft is forwarded the retailer should be given credit for all that is coming to him. Credit amounts should not be transferred to a later month. Owing to the dealer not receiving credit for goods returned, etc., the draft is often returned, and this causes delay and misunderstanding. The return of every draft costs the house money.

Annoying Letters Another Thorn

"Again, letters are often sent to a traveler's customers about which he knows nothing until confronted by the retailer with some such remark as, 'That is a nice firm you are working for. Look here what they have sent me.' Then the commercial man has to plead ignorance or offer some excuse, promise to untangle the affair, call it all a mistake, or apologize for what has been

done. I contend that a copy of every letter sent out to a shoe man by a wholesaler, which bears a complaint, or refers to careless shipments, substitution of goods not ordered, delays, defects, belated payments, etc., should be given a traveler. He will then be in a position to know how to deal with these matters, and not have them sprung on him unawares. Such a course would prevent much bickering, bad feeling, misunderstanding, and contention. There must be co-operation all around if the best and most satisfactory results are to be obtained. The warehouse staff or the accounting department cannot exist by itself independent of the traveling force, who, after all, are the men who make the business and keep things humming. Good team work is necessary.

Not What the Retailer Ordered.

"Other subjects that crop up are when a merchant sends in an order by mail for so many shoes of such and such a number or sample; the house has not the required allotment in stock. Perhaps another style somewhat similar is then substituted, yet this is not what the retailer requested, and such treatment makes him mad. If he orders a certain style of toe or forepart, a high heel, steel shank, or a flat tread, something pretty nearly the same is not going to answer. The man should be communicated with before the goods are shipped. It should not be taken for granted that because such lines are near enough they will go through without a kick. The house should keep in close touch with its road force, as a 'drummer' will frequently take an order for a certain width, size or pattern, and, after the booking has gone in, will be told that it could not be filled. The retailer is not only displeased, but the traveler, who has disposed of these lines in good faith, is out his commission, and through no fault of his. Of course, such a thing as I mention is liable to occur any time, but it could be frequently minimized if the company acquainted the boys on the road of what they have in stock and the relative quantities.

Paying Attention to Delivery.

"Then the house should pay close attention as to how the dealer desires goods shipped. If he specifies freight, it is not well to forward them by express, and *vice versa*. I have told you only a few things that we have to face that are often the fault of the accounting or office staff, or the warehouse men. Travelers are not perfect by any means. I know we have our faults. There is the fellow who will, when in close quarters, or finding business dull, cut prices or split his commission. Happily, these are scarce. The chap who cannot sell goods without sacrificing, is a weak and unstable servant. Any dash fool can slice quotations, but it only acts in the end as a boomerang. There is but one termination to such tactics, just as there is any business where the outgo is larger than the income.

"I am not blowing, I do not represent the leading house in the business, nor the oldest, but since 1902 I have never cut a price, and my sales average from \$100,000 to \$150,000 a year. The retailer has his faults and frailties, and so have the jobbers and the manufacturers. The views of the question that I have tried to bring out may simplify matters, enable a better understanding to prevail between the producer and the buyer, and make easier the pathway of the traveler. If a house is so anxious for payment after goods are shipped it is a poor rule that will not work both ways. There should be equal promptness and attention given to credits or rebates. Letters dealing with misunderstandings or other troubles should never be sent without a copy going to the traveler, as I have already pointed out. He desires to hold good accounts and it is necessary to have things on a smooth working, harmonious basis, if the highest results are to be achieved and the road representative do the best for the house, the customer and himself. Co-operation should be the watchword for 1912."

Not Afraid of Odd Prices

A Veteran Hamilton Shoe Retailer Believes that Quality Should Never Be Sacrificed to Sell Goods at a Certain Figure.

One of the oldest and most successful retailers in the shoe trade in Ontario is J. D. Climie, 30 King St. West, Hamilton. He has been in business for thirty-three years and believes in keeping a close watch over stock and allowing no shelf-warmers to accumulate. He says that he is not afraid to handle novelty footwear and has never lost any money on "freaks." He sells the goods while the demand is on and thus keeps things moving. In his large store is a traveling parcel carrier and all goods, cash and sales slips are sent to the office where the shoes are examined, checked and parcelled. He believes that a carrier is both a time and labor saver in the store. Mr. Climie frequently visits the important shoe centres on the other side of the line and stocks styles that are the rage in the big American cities.

"I give my customers what they desire," he remarked, "and find that the people to-day buy a much better and higher class of footwear than they did years ago. They recognize that value and quality count every time. I am not afraid of odd prices and sell shoes at three seventy-five, four and a quarter, four seventy-five, five and a quarter, and five seventy-five. Should a certain line be advanced ten or fifteen cents by the manufacturers, I raise my price accordingly. I do not believe that any of the material or style in a boot should be sacrificed for the sake of keeping it at a certain figure. The retailer cannot afford to take ten cents less for a pair when he has to pay that much more for the goods. His only course, therefore, is to raise his price and preserve the quality up to the standard. If a shoe goes up ten cents per pair I mark my quotation that much higher. I do not see why any retailer should be afraid of odd prices."

Regarding repairs, Mr. Climie does not conduct a repair shop on the premises. He did so for some years, but found that it was difficult to obtain skilled help, and too many requests were made for work to be attended to gratis. He now sends all work that comes in to an outside shop. He believes in the P.M. or commission system of clearing the shelves of "stickers," and considers there are too many styles in footwear.

The Kaleidoscope of Fashion.

"Why styles," he added, "almost change over night, and it requires skilled and shrewd buying as well as keeping too many lines in hand. But I suppose that every trade has some drawbacks. I believe that a local shoe retailers' association would do good work. Even if we met only to shake hands and become better acquainted with one another, I think that it would be a fine thing. Many understandings might be cleared up. Now, in Hamilton, some of the shoe stores are open in the evening while others close at six o'clock the entire year, with the exception of Saturday nights. Surely some arrangement could be effected regarding early closing and half-holidays. A couple of years ago I was requested to close on a certain afternoon in the week during the summer months. I refused for the reason that some of the dealers, who agitated for an afternoon off, kept open in the evenings, which I never do. I asked my clerks whether they would prefer an afternoon holiday each week and do business at night, or whether they liked the plan of ending their labors at six o'clock and having the nights free. They expressed strong approval in favor of having the evenings to themselves. By means of an association we could come to an arrangement whereby all would close at night while a half-holiday might be mutually arranged. Then all would do business on the same basis. Another thing that might receive attention is the matter of approbation. It appears to be increasing and results in loss and soiled goods. I would go in heartily for any concerted action that would kill the practice. Other questions could, I think, be calmly considered and much good result, such as special sales, credit, repairs, profits on rubbers, etc."

How He Makes His Windows Sell His Footwear

Enterprising Retailer of Preston Adopts Original Methods In His Trims—The Advantages of a Good Repair Department—A Thorough Believer in Benefits of the Cash System.

The visitor to the town of Preston, Ont., while passing along its main business thoroughfare, generally pauses when he or she comes in front of a certain business house. It is called "The Home of Honest Shoes," and has a striking front—one that is a credit to the progressive centre.

Milton Cumming is the wide-awake proprietor of the store. He has been in the shoe business all his life, but embarked in the retail line for himself some two years ago. He has already one of the finest trades in Waterloo County. His establishment is 65 feet in depth by 15 feet in width. Its interior appearance is clean and inviting. All the cartons are uniform and labeled. "The Cumming Shoe." This gives the shop a neat and trim aspect throughout.

Repair Branch a Trade Puller.

The repair department is at the back, divided off by a partition. The proprietor makes this branch pay. "I think," he remarked, "every shoe store should have such a department. Everyone knows that in the best of shoes there are sometimes flaws, or they will sometimes break out; and by being able to fix them you are sure to have a satisfied customer."

Mr. Cumming believes in selling shoes of quality only, and he has a number of effective plans for increasing trade. He has job tables, where he gets rid of all odds and ends. He has firm faith in good advertising, and devotes special attention to window displays. The accompanying picture is a recent effort in this direction.

"I always try and keep my windows a little better than my competitors," he added. "As Monday is generally a quiet day for the shoe trade, I take advantage of it, and always dress my window when I have lots of time, in order to be able to make it right. I do not mind spending a couple of dollars in displays each week, as I know it pays.

Window of Soft Soles

"As you will notice by the picture of the window, it is full of soft sole shoes, made by the Hurlbut Company, of Preston. Through their consent in allowing me to use their samples I made a great display. I might mention that during this time I sold more soft sole shoes than I disposed of during the three months previous. The background is made of white cotton, and the word 'So-Cosy' is formed of small infants' shoes, while the bottom of the window is decorated with different kinds of slippers, 'products of Turkey, Japan, Austria,' and last but not least, 'Preston Make.' The holi-

day season is the harvest time of the shoe man, and I am pleased to say that I have no reason to complain of the returns.

A Strictly Cash Trade

"I do not believe in approbation, and do a strictly cash business. Although I lose some customers through this, I have no doubt but what it pays in the end, as most of these would beat me anyway," declared Mr. Cumming. He is a careful buyer, a good stock-keeper, and gives special supervision to proper fitting. By the means briefly outlined he has won a place in the esteem and confidence of the community that places him in the forefront of the smaller retailers of Western Ontario.

Traveling Goods Department.

Mr. Cumming handles trunks, valises and club bags. He is located in a town which is the Mecca the year around for visitors from far and near, who flock to Preston to take baths in the famous mineral springs. Now, here is an opportunity not to be neglected. There is not only the local trade to cater to, but many of the health seekers, who stroll about the residential and business section drop into

his store, for he features traveling requisites in window displays and calls attention to his stock by various up-to-date methods. Along the top of the shelving he has all kinds of suit cases, telescopes, and fitted bags. These are easily reached and yet are in full view.

Opera chairs are used for the accommodation of customers. These are placed in a row facing the goods. Adjoining is a wrapping counter, a portion of the surface being used for displaying certain lines on stands on which the proprietor desires to concentrate attention.

Speaking of conditions generally, Mr. Cumming said: "Yes, I like the shoe business. It is an interesting study. You can get closely in touch with your patrons if you will only observe their tastes and desires. In a town of this size, where you get to know nearly all your customers personally, you must make every effort to please and satisfy. See that they get shoes that suit them, and that they fit properly. Do not foist something on a patron which he or she does not take to kindly, simply to get rid of the goods. You know yourself if there is one thing that disgusts you it is to be cajoled, persuaded, or 'talked into' purchasing footwear that you do not want or does not strike your fancy.

inwardly rebel and vow that you will never patronize that place again. The merchant thinks perhaps he has done a good stroke of business in getting rid of something that he was tickled to see leave the shop, but what about the purchaser—he or she too may be leaving the shop, never to return. I tell you that you cannot drive away customers more quickly than by refusing them a freedom of choice, the right to make their own selections, or making them feel that just because they happen to enter the store they are under obligation to buy. You may lead people in this world, but you cannot drive or stampede them. Perhaps you can do it once, but the second time the attempt generally results in a miserable failure. Better never try it."

Are You a Doleful Shoe Seller ?

"I always envy you men," remarked a lady the other day. "You seem to enjoy your smoke so much. I invariably notice that a man when smoking is never very restless, irritable or rude. It seems to have a soothing, satisfying effect."

"Yes, I like my after-dinner smoke," replied the office manager. "I can always do better and more rapid work after having a few puffs from my pipe or cigar." This is not an endorsement of the smoking habit, but the lesson may be applied to busi-

ness. Some shoe men seem always alert, bright, active. They go about as if they enjoyed their work. They look over their stock and shelves with pleasure. They plan for the future with keen interest, and if a dull day comes along they smile and declare the morrow will be brighter. They are enthusiastic and optimistic. Such a retailer is worth a dozen pessimists or doleful, decrying, morose individuals, whom you encounter now and then. Why? Well the average man nowadays has not much time for leisure, and if he does not find pleasure and enjoyment in his daily duty, in the occupation that he follows for a living, this life does not hold a great deal in store for him except despair, and dejection.

A proprietor with weebegone, melancholy countenance will reflect the same state of affairs throughout the whole establishment. There are some merchants who are eternally complaining about the weather, the backward seasons, the thanklessness of the public, the unfair competition, the price-cutting evil, the slow returns from investment, and many other things. Conditions are much the same the world over. The main thing is to down the drawbacks—overcome them. Too many shoe dealers instead of driving their business allow it to drive them. Be a master of your trade, or it is liable to master you. A man's peace of mind, his outlook in life, his vision and scope are largely what he makes them himself.

A striking picture in men's footwear comfort.

Holiday Trims That Were Great Trade Winners

Old Established Toronto Shoe House Demonstrates What May Be Achieved In This Line—Suggestions That Appealed to Many in the Way of Gift Giving—Skates, Snow Shoes and Hosiery in the Display.

Two artistic and imposing windows which attracted much favorable attention were put in by H. & C. Blachford, 114 Yonge Street, Toronto. The flooring in the men's window was of paper panelled to look like hardwood. In the background was a fireplace made of pine boards covered with crimp paper to represent brick. Above the fireplace was wall paper of poinsettia pattern and the mural decorations consisted of two pictures in white pine frames. There was a panel effect above the plate rail to show the mirrors. To represent a fire in the grate were three large pieces of cork, and underneath was an electric light covered with red silk to impart the necessary ruddy glow to the apartment. In front of the hearth was a prairie wolf skin, giving an added effect of home comfort and cheer. In the background were crossed snow shoes. Holiday slippers, skates, moccasins, dress shoes of patent leather, and a few pairs of up-to-date tans as well as half hose were tastefully shown.

In the women's window the bottom and background were of white corded silk. The ornamental idea was chaste and pleasing, the white pillars supporting a ledge. There were panel effects above

the ledge on which were crossed snow shoes. In the centre of the ledge was a wreath of holly with Santa Claus peeping out. At each end of the ledge the square pillar was adorned with silver holly leaves. On top rested a green straw basket filled with poinsettia and ferns. This window contained a splendid collection of satin slippers in various shades: felt, gold, silver and bronze kid slippers, carriage boots, women's flexible sole shoes, and silk hosiery.

The supporting iron pillars in the fascinating front were embellished with white crimp paper, encircled with red satin ribbon, evergreen and holly. The clever designing and decoration was the work of A. J. Blachford, manager, E. B. Weiss, who looks after the men's windows, and Jacob Holtz, who supervises the women's decorations. No finer Christmas windows have been seen in Toronto for a long time than the ones presented by the enterprising Blachford firm, which is one of the oldest and most widely known in the Dominion. The name has been associated with the sale of stylish and reliable footwear for generations. One of the features of the store is a well equipped hosiery department.

A pleasing array that delighted the lady patrons.

Only One Reason for Buying any Particular Shoes

And That is Because You Believe They Will Sell With Less Trouble and More Profit Than Any Other Line—Uncle Hy Gives Some Sound Characteristic Advice to Retailers.

By H. M. TANDY.

Uncle Hy. Brown was busy posting up his cash book in the back of the store. It was the Possum Centre Boot Emporium. Posting books was an occupation he cared very little about, and consequently his temper was none too good when Billy, his clerk, shoved a business card before the column of figures that the boss was adding.

He was plainly provoked at the interruption, and, glaring at the unoffending Billy, was about to administer a lecture, but quickly caught himself and, adjusting his glasses, picked up the card and read: "Jack Suitcase, representing Jones Sellem, Quebec."

"He's waiting fer you in the front of the store," volunteered Billy.

"Tell him I'll be out in a minit," said Uncle Hy, deliberately wiping the pen, closing the cash book and getting down from the stool to follow Billy.

"Hówdedo, Mr. Suitcase," he said, shaking hands with that individual, "hev a chair. I suppose you've got some fine stuff this trip, eh?"

Never Heard of Them.

"Yes, Mr. Brown, I've sure got a nice bunch of sample shoes. Sellers, Mr. Brown, sellers! Some of the snappiest patterns that were ever turned out," the salesman said, slapping his knee enthusiastically.

"That's good, what's the name of the line?" said Uncle Hy reservedly.

"We call 'em 'The Sure Sellers,' and they sure are the goods. Why—"

"That's strange," Uncle Hy interrupted, "I ain't never hearn tell of them. Ye don't say nothin' about 'em in the SHOE AND LEATHER JOURNAL, do ye?"

"Well, no, Mr. Brown," said the salesman, "I persuaded my house not to advertise them at all. You see we take the money we save by not advertising and put it into extra quality, and give you and the other good merchants who handle this

An old half-deaf feller that was allus out fer more'n was commin' to him

line the advantage of this money. Better shoes for the same money, that's our motto. That suits you all right, doesn't it?"

Just Placed My Order.

"Yep, it suits me all right, but I don't believe it will suit you so well. I've jest placed my order, an' to tell the truth it was fer a line that I got to know a hull lot about through readin' my trade paper. I was so much interested with what

I seen printed about 'em that I jest dropped a line to their fac'try to send me full particulars. They were right on the job, too, them fellers. They sent a chap right down here to see me, an' his goods was right up to the claims they printed about 'em, an' I gave him my order."

"I'm very sorry to hear that, Mr. Brown, very sorry. If I'd have got here sooner would I have got your order?"

"That's a pretty hard question to answer, Mr. Suitcase; I couldn't say whether you would or not. I'm not sure that ye would though. Ye see I'm in the sellin' game jest like ye are, an' I buy what I think I kin sell best. Now, when I read about a line of shoes month arter month in the shoe journal I simply can't help feelin' that they're well known, an' popular, an' well

Uncle Hy went over and sat down on a box near Billy

liked by everybody. I git to think well of them, and when I thinks well of anythin' I kin sell it. That's the way I feel about it."

Good-Bye, Mr. Suitcase.

"Well, Mr. Brown, I'll bid you good day. I hope you haven't made a mistake."

"I don't believe I hev. God-bye, Mr. Suitcase." Uncle Hy saw the traveler to the door. He then went over and sat down on a box near where Billy was working. "Billy," he said confidentially to his chief (and only) assistant. "This buyin' an' sellin' game is very much like a pessimist's description of existence—'simply one dom thing after another.' Everyone is arter ye to sell ye, an' yer arter everyone to sell him.

"It's all right enough an' perfectly square, but there's a heap to be larned if yer goin' to take care of yerself, an' I'm goin' to give ye the benefit of some of my experience. I know it won't do ye a great deal of good, Billy, for every man has got to buy his experience, but it may do ye some good. Fer one thing, my boy, listen to every travelin' man's story, even if ye be awful busy. Ye kin allus git some infermation out of 'em afore ye got through thet ye'll be mighty glad to hev. An' don't never buy from a man jest because ye like his looks or because you think he needs the business.

Only One Reason For Buying.

"There's only one reason fer buyin' any particular goods, an' that's because ye think they'll sell with less trouble an' more profit than any other kind. An' allus be frank an' square an' friendly with the road men, Billy, fer if they like ye an' think yer square they'll give ye every advantage that's goin' in the way of special values, good service, the best delivery rates, an' other favors. On the other hand, my boy, don't leave it entirely to

Fate, but let the boys that call on ye see that ye knows what's what, an' insist on gittin' all that's comin' to ye. But, don't make the mistake, Billy, of goin' arter more'n is comin' to ye, or ye'll choke on it.

He Objected on Principle

"Grandfather used to tell about an old deaf feller that was allus out for more'n was comin' to him. One day he came into the store an' wanted a couple of envelopes. Grandfather handed them to him.

"How much?" says the old bargain hunter.

"Oh, nothin' fer 'em," says grandfather.

"Too high, too high," says the old skinflint, who hadn't heard at all, but was beating down the price just on general principles.

"Well," says grandfather, 'make it a nickel then,' and the old feller went his way thinking that once more he'd got a bargain. An' now, Billy, jest before ye go an' wait on that customer, let this sink into yer system—try as ye like, there's only one thing ye kin git fer nothin'."

"What's that, Uncle Hy," says Billy, moving himself in the direction of the customer.

"Nothin'," said the proprietor, going back to finish up his bookkeeping.

Don't Call the Boss a Bluffer, Easy Mark or a Crank

Shoe Salesmen Should Be Loyal to an Employer While in His Service—The Clerk That Berates and Belittles the Proprietor on Every Occasion is a Doubtful Proposition—Be Loyal or Quit the Job

I was walking down street the other morning when I accosted an old friend whom I had not seen for some weeks.

"How are you getting along at the store?" I naturally enquired. "How does your new job suit you?"

He gave me one glance and hissed, "Say! that is the meanest and most contemptible institution to work for in the province. They do not know when they give a man enough to do. They are always piling a little more work on you, and as for the boss, he is a sneak of the worst kind. He's a crooked, ungrateful, two-faced wretch. He's an underhand, miserable, double-dyed——"

"Hold on there a moment," I said. "If the house is as bad as you make out, and the boss a shyster, why in blazes don't you leave? I'd get out at once from such a rotten concern."

"Well! I intend to," he added with vehemence. "I'd rather starve, break stone or work for a Chinaman. Everything about the atmosphere of the place makes me sick."

"Sec here," said I, "you get your money regularly, do you not?"

Don't Be a Grouch

"Yes," he answered, "but I earn every darn cent that I get, and more too."

"Then what are you really kicking about? Too much work, favoritism, or dirty usage?"

"All of them," rejoined the man who was in charge of the women's department of a Toronto boot and shoe store.

"Well, if I had one-half the grievances that you are smarting under, I'd chuck or pitch the whole thing. The world is large, transportation is cheap, and there are other jobs to fill. You made a living before you went to that store, and no doubt you can find a better place."

"You bet I will some day. There's no appreciation in the whole blame business, and a constant policy of nagging, snarling, backbiting and interference."

I passed on and hoped the fellow felt better as a result of getting rid of his grouch. Yet you meet scores of these kinds of employees every day. They are incessantly berating their employers, the manager, the scale of wages, the ragged treatment, the hours of service, the slow promotion, the policy of favoritism, the rigid discipline, being docked in their pay, getting called down or reprimanded, and dear knows what all. The category of abuses and evils is too long to specify.

Calling the Boss Names

Now some or all of these things may be true, but for a servant of any retailer to go around calling the boss a has-been, a never-was an easy-mark, a dough-head, a bluffer, a crank, and a fool, is neither clever, honest, manly nor inspiring. It injures the "knocker" much more than it does the "knocked." Such an employe is a incubus to any institution, a millstone, a dead weight, a knave, a poor prop to bolster up the concern. If I had one tittle of the

grievances of that footwear salesman, I would keep my mouth shut. I would be ashamed to take the firm's money or be identified with the organization in any way, even in the most menial capacity. I would hold my tongue even if I had to bite an inch off its end. I would have enough loyalty, propriety, appreciation and gratitude to preserve a discreet silence until at least I was out of the place altogether.

Be Loyal at All Costs

No business house is probably perfect. There are minor faults about every post, and some drawbacks in every situation. The ideal position is never reached. But for the love of goodness keep these things to yourself. Do not blatter and blab, squeal and welch, hammer and hurl verbal brickbats at the firm where you make your living. If you are part of the organization, be quiet until you quit, then, perhaps, you can talk, if you find any sympathizer willing to harken to your jeremiads.

In the meantime, if you are really "suffering," pouring out your ailments into the ear of every ready listener or giving away secrets to a competitor is mighty poor business. It all reacts. The place where you earn your daily bread may be deficient in many ways, but in the name of common sense, fair play and decency, shut up while you take home its dollars, only to detract and denounce it on every conceivable occasion. Why in thunder do you stay if conditions are as rank as you make out? Go some place else. Get as far away as possible, and then do your kicking. If you want to fume and funk, shirk and shatter, jibe and jolt, try it on someone who does not hand you over a pay envelope each week. If other pasture fields are so green and luxuriant, why don't you jump the fence and try grazing there?

Bulldozing a Customer

A shoe retailer in Winnipeg the other day, discussing the question of the sales force, remarked that he did not have any more vexation or difficulty in securing competent, alert, courteous clerks than perhaps other merchants. He added that the chief trouble appeared to be that a clerk would frequently not sell a customer what he or she wanted, but instead sought to foist something else on them. "Now," he continued, "this is a serious mistake. You must give purchasers credit for a certain amount of intelligence and judgment, and let them have a say in the selection. A salesman may point out certain features and explain various points with propriety, but to declare just what should be taken and assume an air of superiority of manner and knowledge is a grievous error. You can never successfully bulldoze a customer, you cannot force a patron to do such and such a thing, for the minute that you attempt it, you arouse a feeling of resentment and antagonism. But you can, by tact, shrewdness and deduction, lead."

The Editorial View Point

THE PEOPLE HAD THE MONEY.

Notwithstanding the absence of snow and ice, the holiday season seems to have realized not only the activity of normality but to have rather gone beyond the usual in interest. People apparently had the money and were willing to spend it on Christmas gifts, at least. In all lines in which holiday goods predominate there was a good trade during December. Nevertheless those carrying staple lines undoubtedly felt the absence of seasonable weather in diminished sales. In heavy wear, furs, and all that go with zero weather and snow, the movement has been disappointing. Money seems to be moving more freely, however, and there are not so many requests for renewals as earlier in the season.

TAKE COURAGE AND PRESS ON.

As time passes, indications increase that conditions in the West are being affected more or less by the unfortunate circumstances that have this year attended the gathering of the crops. What with loss through standing grain being frozen, the impossibility of getting some of the crop threshed, and latterly the difficulty of moving what has been threshed, the Western farmer has this season had a most discouraging time of it. The country has, however, passed the stage when a single poor crop can seriously affect conditions. The results this year are sufficiently substantial to enable the agriculturist to take courage and go forward. All the same it must be expected that money this winter and spring will not be quite as plentiful as might have been, and much patience in connection with collections will be required.

SHOULD CURB SPECULATIVE CRAZE.

A serious factor in the business situation is the fact that merchants as well as farmers have been seized with a craze for land speculation and many have gone in beyond their depth. Should a squeeze occur there will thus be serious trouble. An Ontario manufacturer the other day quoted a case of this kind which is more or less typical. He received a large order from a Western merchant who had not been meeting his payments promptly. He secured a report on him and found he was heavily involved in property transactions, which accounted for his being so pushed for money. The order was held and the merchant told he must clear up part at least of his indebtedness before the goods could be shipped. A good deal of this sort of thing seems to have cropped up in the last two or three months.

HOLIDAY TRADE UP TO THE MARK

Business with the retail shoe trade was fully up to the average for the holiday season. People appear to become more utilitarian in their ideas from year to year and where one pair of shoes or slippers might have been given ten or fifteen years ago, a dozen at least take their place to-day as gifts. In everything except rubbers and overshoes trade was up to or beyond that of last year, and in some quarters the few degrees of frost and flurries of snow brought an appreciable lessening of rubber stocks. In fancy leather goods such as are adapted particularly for gift purposes, the trade done this year was particularly gratifying, and as more shoe dealers than ever carry these lines, the trade at large has profited considerably from this fact.

LEATHER IMPORTS AND CONDITIONS.

In another column is given a compact statement of the imports of leather and shoes for the past four years. The figures afford abundant food for thought both for sole and for upper leather

manufacturers. In spite of the marked development of the leather industry the importation of finished leathers grows apace. The increase in sole leather is over fifty per cent. on last year. The volume of imports on upper leather was double that of 1908 last year or an increase of \$500,000 in value. This represents an output equal to that of a very large concern. The reason cannot be the reduction of the duty, as 1910 shows even a larger increase than last year over 1908, and the Albany arrangement was not consummated until after the returns for 1910 were completed. Probably the most reasonable view of the situation is that duller times in leather across the line have made the Canadian market more attractive than ordinarily.

IT PAYS TO STICK TO BUSINESS.

A few men may be making money by "high-flying" but one never hears of the great majority who leave the sphere of legitimate business to take "whirls" at real estate, mines or promoting who wind up in a hole or in the penitentiary. The man who sticks to his business and uses his brains in connection with it stands a chance of a much surer thing than he who puts his money either in wheat or horses. But, more than that, he is doing something for his day and generation while the fellow who makes his "pile" by gambling is a parasite who lives in the community. Canada is just now laying the foundation for a good lesson on social and business morality in the perfect craze there is for getting rich by "manipulation." Stick to your business and when the slum breaks you will be like the man who built upon the rock.

KEEPING AHEAD OF THE GAME.

We have very largely our happiness in our own hands. True the dispensations of Providence are mysterious as they are unavoidable, but most of the trouble that reaches us in life is of our own making. The man who is content with moderate progress and happiness can usually attain his ambition by putting enough will and muscle behind the effort to get them. In business as well as in social life, success and happiness are involved in keeping "ahead of the game." As Wilkins Micawber put it: "Annual income twenty pounds, annual expenditure nineteen pounds nineteen and six, result happiness. Annual income twenty pounds, annual expenditure, twenty pounds ought and six, result misery." But on the other hand the man who gives more than he gets in kindness and helpfulness will realize even more fully than he who keeps his income within his expenditure the possibilities of happiness that even a humdrum life affords.

FOREIGN MADE SHOES IN CANADA.

A most astounding development would seem to be revealed by the figures with regard to boots and shoes, the returns of imports for which show an increase of half a million dollars in value or thirty-three and one-third per cent. on 1908 and 1910, and sixty per cent. on 1909. In spite of the increased duty on fine boots and shoes, Canadian imports have increased with the exception of one year, and no doubt the returns for the current year will be in line with the development indicated. The reason appears to be two-fold, the general prosperity which leads to the payment of higher prices, and the unsatisfactory condition of the American market which is causing manufacturers there to give more attention to Canada. Our own manufacturers do not appear to be suffering to any extent, although it cannot but be regretted that the two million dollars worth of shoes made outside this country should not be produced within our borders and give employment to Canadian workmen.

THE PRIZE WINNERS FOR DECEMBER

1. JAMES HARLEY, Vancouver, B.C.
2. J. C. TRIMBLE, Toronto, Ont.
3. W. H. PLUMMER, Sussex, N.B.
4. OSCAR C. BAILEY, Ingersoll, Ont.

ONE PRICE AND QUICK INITIATIVE WON

(James Harley, Vancouver, B.C.)

Some time ago a Japanese gentleman entered the store and desired to see a pair of good shoes. Knowing the quality and style of shoe generally purchased by this class, I immediately produced a \$5 shoe. At the outset let me say ours is strictly a one-price shoe store. After examining them carefully—as only a Jap can—my customer seemed satisfied.

“How much?” was his next query. “\$5.00,” I replied. “\$4.50,” was his rejoinder.

I then showed him a \$4.50 shoe, emphasizing the strong points of the better shoe. I ranged from the upper stock to the linings, but after all my talk his only response was \$4.50. He seemed to have me beaten. I was determined to sell him, and casting about in my mind for some fresh argument, I noticed he carried a bag in his hand containing a hat, from a store whose policy was anything but one price. I would take a long shot. I asked to see the hat. He willingly showed it to me. After commenting favorably on its appearance I asked him: “How much did you pay?” “\$3.50,” he quickly replied. “How much were you asked at first.” “\$4.00,” and a huge grin overspread his face.

Getting his hat 50c. cheaper was evidently a reason in his mind why he should buy his shoes for less. I looked under the band of the hat and noticed the price, \$3, written in plain figures. I showed it to him. He looked at it for a moment, and immediately his hand went to his pocket. I had him beaten. He paid his \$5, and I trust the lesson I sought to teach him will bear good fruit, the gist of which was: “Buy your goods at a store where absolutely *one price* is maintained.”

GOOD JUDGMENT AND TIMELY SUGGESTION

(J. C. Trimble, Toronto, Ont.)

During the afternoon of one of the busiest days “in this busy season” I had occasion to serve a gentleman in quest of “goloshes,” as he called them. Anyone could readily learn his nationality, for his speech smacked strongly of Old England, to say nothing of his general appearance. As I usually do, I inquired if he would like the low or high-cut rubber. He answered that he wanted it for protection against the rain and snow of our Canadian winter, and so I brought the highest and best quality in stock, at the same time suggesting that he should wear much heavier shoes, as the pair he had on were single sole velours calf. He didn't seem averse to the suggestion. I produced one of our heaviest oil-tanned calf bals. We had found from experience that this shoe was as near waterproof as could be procured, and after explaining its virtues, I persuaded him to allow me to try, at least, to fit him in his first pair of Canadian shoes. I tried nine D and it was a little snug, but nine E did the trick.

“How heavy they are,” he commented.

“Yes, they must be for their heavy work, but I can show

you one from the same last made up much lighter, and that would give you a desirable change of footwear and have something that I could fit a rubber on to,” for I must confess that I had considerable trouble with his narrow toes.

He thought that would be all right, so I fitted him, and made out my bill for \$12.50 instead of \$1.00, and he left the store quite contented with his first purchase in a Canadian shoe store.

A STRONG HEART AND SHREWDNESS

(W. H. Plummer, Sussex, N.B.)

I had a good selling experience last week, when a young man asked to see a black viscolized boot, “something to wear without rubbers.” He looked to be one of the “good fellow,” sporty kind, so I showed him a winter calf blucher, made on a high toe, snappy last, at \$4.75. He liked the shape alright, but insisted on having a shoe with double soles. The only style we had like this was the “Doctors' Special,” box calf blucher, at \$6.00, which did not appeal to him like the dull finished winter calf. He would not listen to waterproofing appliances, so I mentioned tans. He was “tired of tans,” and guessed he wouldn't “bother just now.”

We were rather busy at the time, and I was almost tempted to leave him and wait on another customer, but did not want to give up so easily, as we have a big range of winter tans that are hard to get by. I assured him it would only be a pleasure to show him what we had, and that it would not matter whether he bought or not, so he consented to look at them. I showed him four or five pairs, ranging from \$4.25 to \$6.00. The \$6.00 pair were made of heavy tan grain, a “Doctors' Special,” double sole, leather-lined, a splendid winter boot. The stock had that solid, firm, waterproof look about it, and it captured him at once. He tried them on and decided to take them, as the last pair of tans “certainly wore well.”

I also sold him a pair of sole rubbers and a can of viscol to “soften up the new pair.” I called his attention to our line of hockey boots, and after looking them over, he said he had thought he would not skate this winter, but supposed that when the time came he would not be able to resist the temptation, and would probably be in for a pair sooner or later. If I had been faint-hearted or even susceptible to suggestion at first, he might have not done better than to buy a pair of tans at some other store. The sale which amounted to \$7.05, was not forced. A few days later I sold him the hockey boots for \$3.25.

TACTFUL INTRODUCTION OF GOODS

(Oscar C. Bailey, Ingersoll, Ont.)

Just after eight o'clock one morning recently, a man came in and asked for a cheap cap. While he was looking over our range he was joined by four other men. I found from their conversation that they were all employed on the C. P. R. The first man bought a cap at 25 cents. I asked the others if I

could do anything for them, and they replied in the negative; they were just waiting for a train. I pointed out that there was lots of time, as the train didn't leave for an hour yet. Then I called their attention to a display of shoes in one of the show cases and spoke about the style, quality and reasonable price of our lines. One man remarked that he intended buying a pair of shoes soon. I at once suggested that he let me show him some selections from our range. After trying on several he bought a pair at \$3.50.

As I was wrapping up the parcel I introduced the matter of socks and sold this man and one of the others two pairs each at 25 cents.

Discourtesy of Not Answering Letters

"There are several kinds of discourtesy," remarked a shoe manufacturer the other day. "I do not mean the brusque and inconsiderate reception sometimes shown a traveler or a manager. I do mean, however, that of not answering letters. Many a retailer will receive communications from us and never acknowledge receipt of them. Perhaps we write again, calling attention in a mild way to the subject, or suggesting that

perhaps our previous epistle did not reach him. There is still silence, and a third or fourth query on certain matters often fails to elicit a response. Now, every letter, booklet, catalogue or photograph which comes into this office is acknowledged the same day. I have made that a law in all departments, and if I see or hear of a case where it is not rigidly adhered to I make it my business to impress upon the clerks that there must be no violation of this simple rule. There are scores of establishments where an answer or acknowledgment is sent only when it is thought that there will be direct monetary returns or advantage. That is a short-sighted and high-handed way of doing things. Reply to every letter promptly and politely. It pays every time. Postage does not count against the practice that some, otherwise bright and progressive business men, have of neglecting to respond to letters or putting the matter off day after day. All letters received should be answered within twenty-four hours, whether they are seeking information, market prices, conveying advice, or calling attention to something new. What would you think of a wholesaler or retailer who, when you verbally asked a question, kept his mouth shut, making no answer whatever. You would consider him rude and ill-bred, yet questions or remarks made by post are equally important and timely."

Attributes His Success to Good Stockkeeping

One of the liveliest shoe men, although not the largest in the city of Hamilton, is George Finlay, who conducts a progressive establishment at 23 McNab Street. He attributes his success in the footwear line to having what the people want, and there are few merchants who more closely study the needs and tastes of their patrons. He began his career in the Neill shoe store at Lindsay, and some years ago went to Hamilton to manage the enterprise of H. J. Gilbert. After his retirement Mr. Finlay secured control of the premises and soon bought the store. This was about four years ago, and a large and constantly increasing trade has been built up. Mr. Finlay has in his employ bright, alert salesmen, among them being George Neilson and Wm.

Bradstone. Travelers sometimes refer to the proprietor and his head salesman as George the First and George the Second.

Mr. Finlay keeps in stock everything from a baby's cack to an oil tan larrigan. He is a true friend to every traveling man, and always has the glad hand for them. If he does not require anything in their line he will always take time to look over their samples. By geniality, courtesy and careful buying he has managed to do a steadily advancing business. He devotes special attention to window displays. The accompanying cut shows a recent effort in the line of an attractive and appropriate holiday trim.

On the Road

WHAT IT COSTS A SHOE TRAVELER FOR "TIPS"

The tipping evil—will it be abolished? The Commercial Travelers' National League of America has served notice on all hotelkeepers' associations in the United States that the "evil" must cease this month. Will the ultimatum be effective? The practice seems to be pretty widespread and securely entrenched. It can only be eradicated by organized and concerted effort. The Commercial League of the United States has decided to "grapple with the monster."

It is reported that hotel tipping in the "land of the free and the home of the brave" costs the traveling men the enormous sum of \$50,000,000 annually, which is disbursed by salesmen to bellboys, porters and waiters, in addition to \$325,000,000 paid as regular hotel charges.

The tipping nuisance in Canada has not attained such proportions, and does not entail such sums as are handed out to hotel and restaurant employees on the other side of the line, but the sums forked over by the shoe travelers are big enough in the aggregate to cause them to have sympathy and to watch with eager interest the struggle on the southern side of the forty-ninth parallel. It costs the average road dispenser of footwear in Ontario, Quebec, and the Maritime Provinces at least five dollars per week on the average, and in Western Canada the outlay is much heavier. Now, five dollars per week, if a man is "on the pike" for forty weeks in the year, runs away with two hundred dollars. The salesman who is on commission has to add this to his disbursements for expenses, and the one who is on salary must have the house put up this amount. Increased expenses means decreased salaries under present business conditions.

Higher Hotel Rates—No Better Service

The tipping or hand-out habit would not prove such a handicap or burden, but there are other things which have to be taken into consideration. During the past five years hotel rates in the Dominion have gone up from fifty to one hundred per cent. The commercial man is the one who has to bear the brunt, as, without his patronage, the inns would often have pretty slow business. In fact, three-quarters of the trade that comes to the average house, particularly in the smaller towns and villages, is that which is bestowed by the traveling fraternity. Dollar and a half a day houses are now two dollars, and two dollar a day hostelries have advanced their rates to two and a half and even three dollars, while the service and accommodation have in many instances not improved one whit.

But this is not all. Sample rooms, which in some hotels used to be provided free, are now fifty cents per day, and in other cases they have been advanced in price from fifty cents to a dollar. The jump has not even resulted in them being kept any cleaner or made more attractive. They are often in basements or lean-tos and are damp and unhealthy. A hotel

man is able to collect the fee for a couple of days in one. If the room is used over a quarter of a day the full charge is frequently made, and the next man who comes along has to whack up a similar amount. There is no pro rata business according to the time used. Where the charge for transferring trunks and baggage used to be fifty cents it is to-day seventy-five cents and a dollar. Then, comparatively few of the houses now run free busses, and another quarter is added. Baggage which runs over three hundred pounds has to be paid for on the railways at so much per hundred. The roads are now strict in this respect, whereas they formerly allowed considerable excess.

Dollar a Day for "Hand-outs"

The average shoe traveler carries between four and eight hundred pounds in samples, and the outlay for rail transportation of these trunks is from three to four dollars a week, the levy being from twenty cents to eighty and ninety cents per hundred, according to distance and destination. On top of this increased cost of living and moving is the tipping habit. Speaking of what it entails upon the average salesman of footwear, a Toronto man, who is out forty-three weeks in every year, remarked: "It does not matter whether you are on commission or salary or salary and commission combined you can't get off with less than a dollar a day for this 'hand-out business.' If you think so try and see. There is at least a quarter for the waitress, a like amount for the porter, and another quarter for the transfer man. Then there are the bellboys, the elevator operators, the coat-room lads, and in some cases the baggage man at the station. No one would object to tipping a waitress for good service and attention, but here is the rub. One of the largest hotels in Western Ontario pays its porters only eight dollars a month each and expects the balance to be made up by commercial men. Certainly one feels like rebelling. This self-same hotel charges travelers three 'plunks' per day and gives the rankest kind of service.

The Custom is Pernicious

"Hotel waitresses generally receive from twelve to twenty dollars a month and make, in some of the larger dining-rooms, two to three dollars per day on the average. The tipping evil is growing, and is being looked for more and more around hotels, even in the smaller centres. In the eastern portion of Canada a commission man is allowed only five per cent. on the goods that he sells. By that I mean those that are shipped and paid for; and in the West, where expenses are higher, he usually receives seven and a half per cent. Now, the average expense of a traveler in Ontario for five days each week, if he covers much territory, will run close on to thirty dollars, with the high rates at hotels, and if he is out forty weeks in the year, this means twelve hundred dollars as the cost of traveling. Practically all the commission on the first twenty-five thousand of his sales goes to cover expenses before he earns a dollar in the way

of salary. What he makes after these items are deducted depends on the extent of his business.

Sweating to Corral Business

"The number of shoe travelers and shoe factories are increasing every day. It is like pulling teeth to close the same amount of business that you could do a few years ago at a much lessened outlay. You have to literally sweat blood in some instances, considering the combinations that you are up against. I am not complaining—merely giving you a recital of facts. If the tipping practice was abolished each man on the line would be over a couple of hundred dollars in pocket, and, considering the fact that there are twenty-five hundred or more traveling shoe salesmen in Canada, look what economy would be effected. Yes, we in the northern portion of America will watch with interest the ultimatum sent out by the travelers in Uncle Sam's domain, and some day we may take action if the move now inaugurated meets with success.

"It may be all right for rich tourists, affluent financiers, and glib promoters to hand out the half dollars and dollars for service at the hotels. They affect to have plenty of money and essay to create a good impression, but the average footwear salesman on the road is not troubled with too burdensome a salary. It takes a good man to clean up two thousand annually. You may say that some make four, five, and even seven thousand a year, but you can count these fellows on the tips of your fingers. The average salesman does not realize over twelve or fifteen hundred dollars, and there are some pretty fair men which can be had at this figure. Traveling is not sport or pleasure, catching trains at all hours, going about in every sort of weather, meeting all conditions and types of mankind, and facing opposition of the fiercest nature. But, there, I have had my say, and what I have told is true to a dot, taking everything on the law of average."

If You Have One Price Stick To It

"I walked into a retail store in Eastern Ontario the other day, and while engaged in conversation with the proprietor," remarked a traveler, "he assured me that his success in the shoe business was due to marking all goods in plain figures, having only one price for everybody, and selling strictly for cash. I believed him, but having occasion to call back later I did not find him in. A countryman entered and asked for some lumbermen's knitted socks. He was shown a line by a clerk, and the prices ranged from ninety cents up."

"'I will not pay it,' asserted the rather roughly-dressed visitor. 'I got a pair here last season for seventy-five cents. I will not give any more.'

"'Well, we can't sell you a pair at that figure this season,' remarked the salesman. 'They are good value at the money asked.'

"The caller started for the door. 'Hold on a minute until I see the boss,' shouted the clerk. Down to the cellar he went, and pretty soon came back with the announcement that the rural patron could have a certain pair for seventy-five cents.

"'I thought you would not cut the price,' he added, 'and now you offer them at fifteen cents less than you asked at first.'

"'The boss says that as you are a good customer he will make a special concession in your case,' the clerk rather awkwardly explained.

"The caller took the socks, paid his money and departed, but he gave me a knowing wink as he passed out. 'Thought I could bring them to time,' he mumbled. 'They say they are all one price in this store, but you can get a reduction if you raise a bit of a racket and make a bluff to leave.'

"If a retailer has one price he had better stick to it," mused the traveler. "If a cut is made to one man or woman on any pretext, that person thinks he or she is so shrewd and clever that the tale is certain to be told in a confidential way, and the prestige, which one price to all carries, is lost."

THE WINDOW OF A WESTERN ONTARIO RETAILER

A pleasing and inviting holiday window of J. O. Boughner, shoe retailer, of Simcoe, Ont., who also conducts a store in Dunnville. The window is twelve feet long, eight feet high, and five feet deep. The entrance to the store is at the corner.

Jobbers and Manufacturers Needed by Retailer

The Relative Importance of the Two Branches of the Wholesale Trade—Each Has Strong Points—The Supplying of Specialty and Standard Lines Discussed—Some Interesting Views

"We require them both, and they are equally useful in their way," said a prominent Hamilton retailer. "We do a large proportion of our buying from the manufacturer because we do a large specialty trade: but we also find the jobber a helpful as well as paying factor in the game of shoe distribution. The jobber does not seem to be afraid to state his case from the interviews that have appeared in the *SHOE AND LEATHER JOURNAL*, but I think some of the points claimed are somewhat strained. An up-to-date manufacturer of importance carries a stock as well as the jobber and can supply rush orders quite as promptly as any jobbing house. With us it is as convenient to order from a London or Toronto manufacturer as it is to call up a jobber on certain lines and we get them quite as promptly. There is an advantage that often lies in the manufacturer in filling a rush order. You are more apt to get what you order, whereas the jobber is often tempted to substitute lines from the very nature of his stock. Some of the jobbers talk as though they could supply goods at lower figures than manufacturers on account of the way they order from the makers, and to some extent this may apply as against small manufacturers, but when it comes to a show down, of the same goods, quality and finish considered, they cannot begin to make good the claim."

Jobbers Men on the Spot.

"It may seem an advantage to have the jobber so 'handy' with his stock, etc.," asserted another large dealer, "but he is not as often on the spot with the goods as he makes out. We have had quite as much trouble 'sorting' or even with 'placing' orders with jobbers as with manufacturers; for, in spite of their 'picked' lines there is often a dearth of ideas that makes the showing stale beside the fresh, crisp product of the individual maker. If frequency of calling is any advantage, the jobber certainly has it, but this very thing becomes, at times, a mild sort of nuisance, to put it very gently. There are days when a dealer could do nothing but look at shoe samples if he could only spare the time. Some of us long for the good old times when the traveler came twice, or at most four times a year with new goods with a couple of times between for sorting trade. To-day four or five times a month the shoe traveler is on deck with a full line that he insists upon you looking over. It may be a good deal easier to keep up a stock and it may make it less necessary to carry a full range of sizes, but I fail to see that the retailer carries any less volume of goods than he did twenty or twenty-five years ago. One would think, from what some jobbers say, that the dealer to-day only carried samples and ordered for sales requirements from the jobbers' stocks. As to buying more cheaply or more largely from jobbers, I think that is another myth. Some lines may seem to be cheaper, but no shoe man will claim the product of the very best Quebec shoe can hold its own, through and through, with the product of some of the best factories in Montreal or the West."

Money on Bread and Butter Lines.

"Yes, I think the jobber has done a good deal for the shoe trade," said a Lindsay dealer. "Of course we are handy to Toronto and the telephone gets us into immediate touch when we are out of stock. Travelers are around every week, of course, but we find it necessary even with that to call up the jobber two or three times a week. I agree with the retailer who says that more money can be made out of jobbers' lines than straight manufacturers'. We carry a pretty good range of specialties as well as what we call the 'bread and butter' of the trade, and I only wish I could say we made as much money out of the former as the latter. We have less trouble in every way and make more money on the plain everyday lines we get from jobbers than on any of our specialties, although I may say that on some of the latter the margin is good

enough. One difficulty I find with manufacturers is keeping up the stock; they are usually out of sorts and we have to wait sometimes three or four weeks to get supplies and that means loss of sales because a customer who wants a well known shoe is hard to satisfy with anything else."

Both Necessary and Helpful.

A Calgary shoeman says, with regard to the question, "Of course we could not do without the jobber out here. Until we get shoe factories of our own we shall always have to depend largely upon the jobber. In fact I am of the opinion that the jobber is a very necessary 'evil' or anything else you like to call him. There are certain staple lines that a dealer does not feel like stocking up with that he is able to get on short notice from the jobbing house. This gives him greater opportunity for handling special lines that can only be had by ordering considerably ahead, and this is an advantage all around, for the first class of shoes help to sell the commoner grades, notwithstanding what some of your jobber friends say about these lines being the 'backbone' of the trade. The two classes of trade go hand in hand, the one helping the other when handled judiciously. I do not think that some manufacturers have any idea that the jobbing trade can be dispensed with. While this is an age of specialization, it is also one of concentration, and it is an undoubted advantage to the retailer to have a depot to which he can turn in an emergency and secure a supply of goods to meet a sudden demand. In our case we have often to wire to Winnipeg for supplies when a turn in the weather or some unforeseen circumstance transpires that makes a demand for a certain class of goods. We can no more do without the individualized product than the general, and for giving 'character' to a store, we must have a certain number of specialties or so called high-class goods that none but a certain kind of manufacturer can supply."

Kill Some "Millinery" Styles.

"I do not see much in this discussion beyond the fact that conditions have so changed in the shoe trade that to-day an up-to-date manufacturer must be a jobber, and an up-to-date jobber must be practically a manufacturer," declares another Western man. "The demand to-day is such variety of product that no dealer could begin to carry an adequate stock and get out whole. Take, for instance, in special lines such as hockey and skating boots with which there is less uncertainty in this country, perhaps, than elsewhere, no dealer feels like filling his shelves in advance of the season with a range of these goods with any uncertainty as to the sale. The same applies to innovations that originate with manufacturers and jobbers themselves, and not with the dealer and consumer, and which, if indulged in to any extent by the dealer, might mean serious loss in unsaleable stock. The dealer does not originate a tittle of the ideas in footwear that are put on the market and on which he is so often asked to gamble. It is only right that the producers and wholesale handlers should take a large share of the chance involved in these ventures, and it is amusing to hear jobbers talk of taking care of the retailer. They are taking care of themselves. Let me add that I think if wholesalers, both manufacturing and jobbing, could get together and kill off a lot of the 'millinery' we have thrust upon us in the way of shoes they would be doing a good thing for the trade at large. I believe the jobber is a useful and very essential factor in the trade, but all of us realize that his interest in the retail trade is first and last his own."

Do Jobbers Do Retailing?

"When you are on this question of wholesaling," writes a New Brunswick retailer, "why don't you take up another phase or two of the situation that results from the large increase in the number and extent of the wholesale facilities that have char-

acterized the trade in the past few years? In spite of the supposed attitude of some of these jobbing houses a deal of retailing is being done by them to the injury of the dealer. I know people in this town that every time they go to a big city return with a supply of footwear for themselves and their friends. They bear a letter of introduction from some traveler or by some similar means seem to secure an entre into some of our best wholesale establishments, and, while in individual cases the amounts may appear insignificant, the total in a year must reach a considerable amount. Then I have visited large departmental stores and actually bought goods at lower prices at retail than I could secure from any wholesale house. I think this is most unfair. I do not see why a purely retail concern should be able to buy goods on terms that are undoubtedly closer than those at which even jobbers themselves can buy. How can a dealer be supposed to make a living and meet this kind of thing? Our town is flooded with catalogues that give

the impression to the people that we are robbing them and thus the evil affects not only the dealers in the town where these stores are but the whole country."

There Is Nothing Like Leather

For over twelve months now a road made principally of leather has been in use at Handsworth, Birmingham, and shows practically no signs of wear. It is another example of the elimination of that commercial bugbear, "the waste product," for until some ingenious person hit upon the idea of the leather road practically no use had been discovered for the leather waste from which it is made. The waste leather was shredded until it virtually became a pulp. It was then treated with bitumen and tar and laid in the usual way.

Imports of Shoes and Leather Into Canada

Some Interesting Figures Presented—Over Half a Million Dollars Increase in Shoes—Increasingly Heavy Foreign Purchases of Shiny Leathers, Calf, Goat and Sheepskins

The SHOE AND LEATHER JOURNAL quotes herewith a statement of the imports of leather, boots and shoes and other leather products as compiled for the tanners' section of the Toronto Board of Trade by F. G. Clarke, the president, and sent to all the members.

In the Canadian customs schedules the classes of leather are more or less mixed so that it is difficult to make comparisons. The statistics presented will, however, prove eloquent for the pur-

pose of discussing the bearing of the present tariff rates upon both leather and shoes.

There has been considerable soreness amongst upper leather manufacturers with regard to the lowness of the protection on their product, which would seem to be warranted by the facts evidenced in the attached report. The figures are comparative and are for the fiscal year ending March 31st.

	1908	1909	1910	1911
Sole Leather	246,525	59,218	81,769	122,179

The Retailer Asked Too Long a Time

"I had an amusing experience recently with a retailer," remarked a shoe manufacturer of an Ontario city, "which shows that while we may have our faults, the men to whom we sell our goods have a few also. One of our travelers, while out north, called upon a merchant and, after some persuasion the fellow decided to give him an order for six pairs of shoes to be shipped in two weeks. Now the bill amounted to about fifteen dollars, and what do you suppose the request was—that the dating should be on the same conditions as our spring order lots, namely April 1st. The order was booked on October 15th last. The traveler, evidently thinking that the factory would not stand for such a long term date marked that payment was two per cent., ten days, after the first of February next. The shoes were shipped—a whole

half-dozen pairs mind you—and judge of our surprise when we got a letter back to the effect that the conditions were not satisfactory on the fifteen dollar lot, and the distinct understanding was that the consignee was to be allowed until April 1st to pay the bill subject to the usual discount within ten days. The letter read. "We are, of course, able to meet the account any time, but the agreement was that settlement should be made on the basis of spring dating, and here you have inserted 'payable February 1st.' Now when we make a stipulation we desire to have it carried out to the letter and are at a loss to understand why you have not done so." We promptly cancelled the order. Now, with some retailers if you give them an inch they will take a rod, and to think that any merchant would seek six months to settle a fifteen dollar bill is preposterous. Happily retailers of this kind are few and far between."

A PLEASING YULETIDE WINDOW AT SMALL COST

One of the most attractive windows seen during the yuletide season was that put in by W. G. Pink, 278 College Street, Toronto. Mr. Pink makes a special study of window display, and his fine front readily lends itself to effective work in this line. The accompanying cut affords some idea of the neat and appropriate holiday dress presented.

In the women's window, showing acceptable holiday footwear for females, the flooring was of cotton batting lettered with Christmas snow. Forming the background were two chimneys, made of card board painted red, the lines of mortar between the bricks being defined in white. St. Nicholas was depicted in the act of descending one of the chimneys. Above the chimneys was a ledge adorned with gold fringe. Overhead was a background of poinsettia, evergreen, silver and bronze holly leaves. Suspended from the centre, by means of red satin ribbon, was a wreath of holly

in which was inserted a lady's patent pump. Above the mirror at the side were crimson satin ribbons criss-cross, with fancy slippers attached. All kinds of dainty footwear were exhibited, but there was plenty of display room allowed.

In the men's window the flooring was similar to that in the women's. The background was different, being of brown burlap with panels of red paper. The ledge was like the one in the other window. Over the side mirror were silver tinsel cords forming quadrilateral figures, with slippers attached, by means of snap hooks. Suspended in the centre was a holly wreath and in it was a man's slipper. Along the side were silver holly leaves and poinsettias. A silent salesman show-case just inside the main entrance was treated in a manner similar to the windows. The material used in the artistic trimming of the two windows did not cost Mr. Pink more than four dollars, but he made splendid use of it.

Some Constructive Retail Ad. Criticism

Pitfalls the Merchant Should Avoid in Making His Advertising Most Profitable—Definite Examples Given—
Good Cuts Always Advisable When Illustrations Are Used At All

A cut should illustrate something *definite* whenever possible. A mere "eye-catcher" is of little use, hence the illustration used in the Clark Shoe Co.'s ad. could be replaced to advantage by a cut showing a stylish shoe. The two figures and their position lack point—at least it is very difficult for the reader to know what the advertiser is driving at in the illus-

SMART SHOES

Young men always want smart shoes! The up-to-moment young man is a sort of lexicon of shoe style. He knows just exactly what he wants in a pair of shoes, and he knows just where to go to get them.

That's the Reason He Comes Here

Our success in pleasing young Men with shoes is not just "luck"—it's due to our knowledge of young men's wants, and our ability to provide for them.

SMART SHOES

Leathers of gun metal, calf and other dull leathers, patent calf and handsome models in NEW FALL TANS. The swell high knot toes, military heels, high arches and short vamps, handsome perforated tips and vamps, plain or fancy tops are in evidence at prices ranging from

\$1.50 to \$6.50

Repairing a Specialty

A 10-in. d.e. Brantford ad., well written but poorly illustrated.

tration. Possibly this firm used it in default of something better just at the moment, but if this be so, it is not the best policy to pursue.

The opening paragraph starts out well, but the last sentence is slightly inaccurate. Most young men do not always know exactly what they want, nor do they always know where to get it. It is "up to the merchant" to boil their more or less hazy ideas of good footwear and style down to something concrete, and to advertise so that they will know just where to go when shoes are wanted.

The copy is very logical. First comes a little generalizing, then an application of this to the firm in question, then good selling points of some of the lines carried. And a range of prices is mentioned—a *necessary feature*. This is one of the few ads. one sees that calls attention to the window displays. As these two departments are closely co-related, it is always wise to do so.

There is no good purpose served in the boxed display lines in the centre of the ad. They would appear better if the boxes

were removed, and the look of the ad. as a whole would be bettered if the rule border were set more carefully. It is decidedly poor compositors' work, and should be complained of by the advertiser, as such little points do much to detract from a good ad.

Herewith is shown a little circular, 11 in. x 4¼ in., printed on good quality light yellow paper, and distributed by the Brantford firm above mentioned. This circular is addressed to women, and is dainty throughout. The cuts, though of the stock variety, are classy and heighten the tone of the circular as a whole. The copy is well set, and decidedly to the point—the point in this case being the *service* the Clark Shoe Company are able to offer to women customers rather than the merits of any particular shoe.

It is unnecessary to place the firm name at both the top

Repairing a Specialty

A dainty 11-in. circular by the same firm appealing to women.

and bottom of an ad. The critic would prefer to see this eliminated from the top here, and the real heading beneath set after this style:

A Wealth Of Choice Models

Care must always be taken to see that the grammar is correct. In this case the verb should read "awaits," to agree with

the word "wealth," rather than the word "models." These slips are easily obviated, as are those like the display line below, where "right" is spelled "righ." This takes care, however, and the advertiser should be his own final proofreader whenever possible. This circular shows an aggressiveness worthy of imitation by other shoe men everywhere.

C. B. Pratt, of Ottawa, does considerable retail advertising, and he is usually sure to get in something pointed and descrip-

effective when followed by a series of daily talks about definite styles and makes of shoes, giving plenty of details, and also prices in each case.

A Traveler's Love of Canadian Goods

"I was passing along the main street in a western Ontario town the other day when I noticed a sign 'The American Shoe Store,' remarked a traveler. "This set me thinking. While a man may put up any announcement he pleases, yet I have failed to see any such notices as 'Canadian Shoe Store,' 'Dominion Shoe Store,' etc. Are we going to have a little more loyalty and patriotism in Canada, more love of country and more appreciation of what we possess and what we produce? I am no 'little Canadian,' but 'Canada for Canadians' is not a bad slogan after all. All Canada exhibitions are good institutions, and I wish that some of our cities and towns would hold more of them. It makes me hot, and I feel like resenting such flaring foreign announcements to cater to an alleged superior class of trade. When I hear remarks such as I have heard some retailers make that 'My customers demand American shoes, they will not have anything else,' or 'Canadians cannot give the style, fit and finish that suits my patrons,' I feel like telling such a narrow minded, dollar loving dealer to go where he thinks things are so superior. Yet these self same men will cry long and loud about catalogue houses, departmental stores, and bitterly denounce out-of-town purchasers. They say that such people are no good to the place, that they earn their money at home and send it elsewhere to build up rival communities. These very merchants, if they would only gaze in the mirror a minute, could see the same kind of an individual right before them. They are quick to detect the mote in the eyes of others but are blind when it comes to discovering the beam in their own optic. They do not practice what they preach. Did you ever see an American dealer

A 7-in. 3-col. Ottawa ad., well written and displayed.

tive. The ad. shown here is a good instance. The cut of the carbon signature across the top left-hand corner is an unusual setting, and the copy that follows is good. These illustrations are line cuts which stand out clearly, though little detail is shown. Well-written copy about definite articles always reaches the mark, especially accompanied by price quotations and decent illustrations. Plenty of white space is left for margin purposes, and the black cuts at the two bottom corners make the contrast the more noticeable.

J. T. Stenson and Sons' ad. is a straight-to-the-point selling talk, such as a good salesman would give when talking personally to a customer. This is the kind that counts every time. It is general in tone, emphasizing service and stock carried, rather than particular shoes. The heading and the figure in the stock cut both help to carry out this idea—the direct personal talk. The copy is moderate in statement and for that reason all the more readable and clinching. This sort of ad. is all the more

ABOUT YOUR SHOES, SIR!

We'd like to have you know our Shoes—know of all their good points—know of the good Shoes we offer at such reasonable prices as

\$3.00, \$3.50, \$4.00 and \$5.00

THESE POPULAR PRICES you will find at most every shoe store, but believe us, sir, you will not find such SHOES as we offer at these prices—No, sir, not by any means. It's OUR SHOES and not OUR PRICES that talk value for us.

We are all well pleased with the SHOE AND LEATHER JOURNAL, and would not care to do without it.—J. O. Boughner, Simcoe, Ont.

put up a sign, 'Canadian Footwear?' Why he would be driven out of the town and jeered at unmercifully. He would even be called a traitor. What kind of a reception would a traveler for a reputable Canadian shoe manufacturer get from shoemen over the line? He would be told that he should not have been let out, that they had no floor space for 'curios,' or the museum was just down the street and that he might deposit his samples there as they had no use for them. National honesty, a belief in our own ability, genius, brains and skill is what some people require on this side of the line."

Recent Activities in the Shoe and Leather World

What Is Going On in Different Centres of Interest—Personal Notes and News That Will Be Found Instructive and Timely—Interesting News of the Trade in Short, Readable Shape

Smith Bros., shoe retailers of Hamilton, Ont., recently assigned to W. G. E. Boyd.

H. S. Carkner of Winchester, Ont., was in Toronto calling on the trade this week.

Horton Bros., shoe merchants of Moose Jaw, Sask., have disposed of their business to J. McCauley.

George Chambers, head salesman of the Regal Shoe store, Toronto, is holidaying in the Porcupine district.

A building permit has been granted to W. B. Levack to erect a tannery in Toronto to cost \$13,000.

The assets of J. S. Langlois & Co., shoe manufacturers of Quebec City, were sold on December 27th.

The capital of the Macfarlane Shoe Company, Montreal, has been increased from \$150,000 to \$300,000.

The Bleury Boot and Shoe Store of Montreal, assigned a few days ago to Chartrand and Turgeon.

E. R. Allen of Boston, chief controller of the Regal Shoe factories, was in Toronto this week on business.

J. S. Ashworth, of Toronto, Canadian manager for Sir H. W. Trickett, Waterfoot, England, is spending a few days in New York on business.

Christian Commercial Travelers' Association, known as The Gideons, is campaigning to raise \$5,000 to carry on the work.

The partnership between J. G. and J. S. Townsend, shoe retailers, George St., Brantford, has been dissolved; J. G. Townsend continues.

Leon Ackerman, doing business in Montreal under the name of the Canada Leather Goods Co., recently made a voluntary assignment.

L. B. Hutchison, Toronto manager for the Kaufman Rubber Co. of Berlin, spent the recent holidays at his home in Penetanguishene, Ont.

W. H. Miner, vice-president and general manager of the Miner Rubber Co. of Granby, Que., returned recently from a business trip to Winnipeg.

B. L. Martin of Moosomin, Sask., where he conducts a successful retail shoe store, was in Toronto this week. He is paying a visit to his former home in Goderich, Ont.

W. J. Detweiler, who conducts a large and flourishing footwear establishment at Sault Ste. Marie, Ont., was in Toronto on a business trip this week.

J. Heffering Toronto, representative of the Tetrault Shoe Manufacturing Co., Montreal, is spending a few days in Montreal on business.

Stephen Parker, sales manager of the W. A. Marsh Co., shoe manufacturers, Quebec, was in Toronto recently calling upon the trade.

Gilbert J. Scott, who covers Western Canada for McLaren and Dallas, Toronto, has left on a business trip throughout the Prairie Provinces.

A license to do business in the province of Ontario has been taken out by the Miner Rubber Co. of Granby, Que., the sum to be expended for this purpose not to exceed \$40,000.

W. A. Hamilton of the W. B. Hamilton

Shoe Co., and John A. Walker of Walker, Parker & Co., Toronto, have been elected members of the boot and shoe committee of the Toronto Board of Trade.

The committee of the tanners, hide and wool interests of the Toronto Board of Trade recently elected, are W. D. Beardmore, Toronto; Hon. E. J. Davis, Newmarket; and C. G. Marlatt, Oakville.

D. Lorne McGibbon of Montreal, states that the sales of Canadian Consolidated Rubber Co. in November were close to \$1,000,000. This constitutes a new record for the company.

George E. Boulter, who represents the John McPherson Co. of Hamilton, and the Plyde Shoe Co. of Montreal, has secured new offices and sample rooms at No. 208 in the Lumsden Building, Toronto, removing from 20 Wellington St. west.

The Provincial Board of Health recently considered a complaint of the pollution of Carling Creek, a tributary of the Thames, at London, Ont., by refuse matter from C. S. Hyman's tannery. The cause of the complaint was ordered to be removed.

The Parisian Shoe Co. has taken over the business of Poliquin & Gagnon, Montreal, and the firm will now be composed of Messrs. Poliquin, Gagnon and Lavoie. The new firm has added a line of Good-year welts.

Robt. Orr Halley, who some years ago was a member of the firm of Halley Bros., who conducted a large retail shoe business on Yonge St., Toronto, died on Dec. 30th of heart trouble. He was 65 years old, and had lived in Canada about fifty years.

A. W. Redden and Co., Sydney, C.B., have under consideration the erection of a new and up-to-date shoe store and are now busy preparing the plans for the structure, which will embody all the latest ideas and conveniences. Work will be started in the spring.

Alfred Webb, book-keeper for the Fennell Leather Co., Montreal, was arrested this week in that city on the charge of obtaining \$209 by false pretences. He pleaded not guilty and was remanded until January 10th for trial, being admitted to bail.

Edward Stark, shoe dealer of Victoria, B.C., recently bought out the business conducted by Russell E. White in that city, known as the White Shoe Store. Mr. Stark is conducting a clearing sale of the stock on the premises, 1321 Douglas Street, Victoria, B.C.

Nicholas Wadden, shoemaker, died recently in St. John's, Nfld. He was a native of Wexford County, Ireland, and had attained the advanced age of 95 years. He carried on a successful boot and shoe business in St. John's for over half a century, and by frugality and industry acquired considerable property in the city.

D. B. Thomas, alias David B. Myers, alias David B. McCain, the fake "promoter" of a shoe factory in Lindsay, Ont., who swindled Burrows & Shepherd of Breckenridge, Minn., out of \$11,000, besides forging a warranty deed, was sentenced recently to an intermediate sentence at hard labor at the State Prison at Billwater, Minn.

The secretary of the Gideons, the organization of Christian commercial trav-

elers, presented his report at a meeting of the society held recently in Toronto, and showed that 8,000 Bibles had been placed in hotels since March last, and that \$5,000 had been received in contributions. Three camps had been established, at Toronto, Hamilton, and Winnipeg.

John T. Lawson, who was formerly in the shoe business in Orangeville, Ont., but who went West about a year ago and opened a store in Regina, Sask., spent a few days in Toronto this week visiting a number of old friends. He is building up a big trade in the West and reports the outlook for the coming year as most promising.

Two remarkably strong, high-grade, wholesale shoe concerns have decided to merge their interests. Having been engaged for twenty years in a strenuous but friendly rivalry, each growing steadily in strength and prestige, Winch Brothers Company and Clark-Hutchinson Company, both of Boston, Mass., will henceforth be one house, under one ownership and control.

A quarterly dividend of one and three-quarters per cent. has been declared on the preferred shares of the capital stock of Canadian Consolidated Rubber Co., Limited, Montreal, and a quarterly dividend of one per cent. on the common stock. A quarterly dividend of one and three-quarters per cent. has also been paid to the shareholders of the Canadian Consolidated Felt Co., Limited.

W. J. Thurston, of Guelph, Ont., has, in connection with his shoe business, handled skates for a number of years, and last winter sold no less than 438 pairs, ranging in price from two to five and six dollars per pair. He considers that carrying skates is a good, profitable line for the shoe merchant. They are attached in the premises to hockey and skating boots, in the sale of which Mr. Thurston does a very large trade.

In a proclamation recently issued by the merchants of Leamington, Ont., setting forth the benefits of local option in that town, the names of two well-known shoe retailers appear. They are W. J. Trott and L. J. Wright. The merchants declare that, since local option's inauguration, nearly two years ago, business has steadily improved, that collections are better, and more building in progress, while the moral tone of the community is greatly advanced.

A despatch from New York says: "As a New Year's resolution, the thousands of traveling salesmen who comprise the Commercial Travelers' National League, have decided to stop tipping hotel help, barbers, Pullman car porters and everyone else, according to the president of the League, P. E. Dowe. 'From to-day on,' said Mr. Dowe, 'the crusade against tipping will be waged in earnest, for the victims of this pernicious custom realize fully that the time to break the chains which bind is now or never.'"

The many friends of E. E. Donovan, superintendent of the Cook-Fitzgerald Co., London, Ont., will be pleased to learn that his earnest, faithful work in the interest of the company has been recognized by his elevation to the vice-presidency. The promotion is well merited and came in the

nature of a pleasant holiday surprise to Mr. Donovan, who is one of the most thoroughly qualified and progressive shoe manufacturers in Canada. The name Donovan is widely known in connection with the production of high grade footwear. A. W. Donovan, a brother of the newly-appointed vice-president of the Cook-Fitzgerald Co., is president of E. T. Wright and Co., of Rockland, Mass., and also head of the Boston Boot and Shoe Club.

The Inquiry Is Resumed

The Board of Investigation into the affairs of the United Shoe Machinery Company resumed its sessions in Montreal this week, after the holiday adjournment. The first witness was Joseph Daoust of Daoust, Lalonde & Co., and president of the shoe section of the Canadian Manufacturers' Association. The commission, after holding sittings in Montreal, will revisit Quebec and Levis in order to hear further evidence.

Travelers at Festive Board

Certainly the thirty-fifth annual banquet of the Dominion Commercial Travelers' Association, held in the Windsor Hotel, Montreal, on December 18th, was one of the best. Over six hundred were present, and the guests of the evening included: Sir Wilfrid Laurier, Hon. G. E. Foster, Hon. C. J. Doherty, Mayor Guerin, Henri Bourassa. The speeches were more than ordinarily interesting, and the atmosphere more than usually one of friendliness. Sir Wilfrid aptly gave expression to the sentiments of those present by stating he felt the comradeship of the commercial travelers at their banquet was like "a roaring Niagara of hospitality." Past-president S. J. Mathewson was prevented attending by illness, which was too bad, for he is one of the most interested workers of the association, and its true friend.

Good Demand for Hockey Shoes

The Wanderer Professional Racer, which hockey boot has enjoyed a large sale in all parts of the province, is being handled this season by the firm of Blachford, Davies and Co., Toronto, who are carrying a re-

presentative stock. The shoe is strongly made and re-inforced at all vital points, giving wear, strength and comfort. With the advent of cold weather, the popularity of skating and the great national winter game of hockey many sorting orders are being filled.

They Want the Canadian Market

Mr. H. J. Fuller of the Canadian Fairbanks Co., Montreal, who has just returned from Chicago, says that business is still far from satisfactory across the line, and more manufacturers than usual welcomed the holidays in order to close their plants.

"I have seen," he said, "no notice taken

of the fact that the New England Manufacturers' Association has contributed the sum of \$200,000 and the State of Massachusetts \$100,000 towards holding exhibitions of New England products and manufactured articles in leading Canadian cities.

"As I understand it, these exhibitions will partake of the character of the exhibitions in the Mechanics' Hall, Boston. The promoters of the scheme are already asking for desirable places to launch their exhibition in Montreal, Toronto and other cities on this side of the line. This goes to show how anxiously the Americans are looking towards our markets, and how they would have welcomed the opportunity Reciprocity would have given them to sell their goods here."

Regal Company Will Erect New Factory

It is understood that plans are under way by the Regal Shoe Company, whose head offices are in Boston, where a handsome executive block and stock-room have recently been completed, for the erection of a new factory in Toronto, which will have a capacity of about one thousand pairs daily. Some eight months ago they bought out the Sovereign Shoe Co., 102 Atlantic Avenue, Toronto, and established a Canadian factory, which has since been operated to its fullest extent, but has not been able to keep up with the demand for Regal shoes. Several sites are under consideration for the new plant, work on which will likely be started in the spring. An officer of the company, when on a recent visit to Toronto, remarked that the success of their Canadian enterprise in establishing a factory in Toronto, was such as to necessitate more commodious premises and that their move was being watched with much interest by leading makers of footwear on the other side of the line.

Would Limit Heels to One Inch

An outcry against the present fashion of women's footwear was raised last week by the French Medical Faculty. "That tired feeling," of which so many women are complaining, it is asserted, is largely due to the wearing of high heels. According to the French doctors the unnatural position which the foot is forced to take when shod in a fashionable shoe constitutes a complete displacement of the centre of weight of the body on the fore-foot, occasions a contraction of the muscles of the toes and legs. Strong criticism is also made of women who, as soon as they return home from the theatre or from some social function, give way to impulse and change their high-heeled shoes for a pair of soothing and flat-soled slippers. This remedy, it is affirmed, is rather worse than the ill itself, for it causes the foot to pass from one extreme to the other, which in the end is bound to produce persistent suffering. Varicose veins are also given as one of the probable consequences of the high heels of fashion. In the opinion of leading French doctors, women who value their health should never wear heels higher than one inch.

Stop Fraudulent Sale of Stocks

W. D. McPherson, M.P.P., Toronto, says that it will not be long before there is on the Ontario statute book an act to prevent the fraudulent sale of stocks by dishonest debtors. In addressing a recent meeting of the Canadian Credit Men's Association, Toronto, he went over the ground of the fate of the last bulk sales bill introduced into the Ontario Legislature by Dr. Jessop, and which, he said, was hoisted because the

government wished first to study the workings of similar legislation in Western provinces. Mr. McPherson announced that the Ontario Government had expressed itself in favor of the principle of the bill, and that he would introduce a bill on these lines this year which would, he was assured by the Attorney-General, receive the government's favorable consideration. The object of the bulk sales act is to prevent a merchant from selling his stock-in-trade in bulk without the knowledge and consent of the majority of his creditors. On the Board of Governors are A. R. Clark, tanner, and J. A. McLaren, wholesale shoes, Toronto.

Dolls' Home in Shoe Window

One of the most effective windows put in for the holiday trade was in the store of Vermilyea and Son, of Belleville, Ont. In one window was an immense cardboard horseshoe decorated with holly, and from the inner portion of the shoe the countenance of Santa Claus showed forth with a beaming smile. In another window there was a miniature house and yard with doors and windows, the four apartments, two upstairs and two downstairs, being attractively furnished. There were kitchen, dining-room, living-room and bedroom, with furniture and all household utensils complete, and a whole family of dolls.

The Holiday Trade Was Brisk

The holiday trade of the shoe retailers in various parts of Canada was, on the whole, satisfactory, and many report a larger business than for the corresponding season last year. In some sections there was a falling off, owing to the mild weather and the absence of snow and cold. The week before Christmas conditions improved, and things were humming in most centres. The sale of holiday slippers and house shoes was gratifying. From reports received from a number of places the volume of business was generally encouraging. Many retailers are now holding their mid-winter stock reduction sales, while others have been busy taking stock in preparation for the event. A Western Ontario foot fitter says that his trade was never better, and he is well pleased with the result. A leading shoe merchant of Winnipeg relates: "Our holiday turnover has been beyond our expectations. While the weather here for four or five weeks was unseasonable and did not help matters any during the latter part of November and the first half of December, we have no kick coming on the holiday trade. The weather has now turned cold, and we look forward to a good January business." Jobbers, who have been doing a fair sorting business, now declare that activity in felt and heavy goods and rubbers is marked.

SHOE TRAVELER required for Western Ontario. Must be experienced and able to furnish good recommendations. Apply to Sales Manager, Geo. A. Slater, Limited, cor. Aird Avenue and Ontario Street, Montreal, Que.

FOR SALE—Four complete sets of McKay patterns and dies, on up-to-date lasts for making oxfords, blucher bals and buttons, all in good condition. For full particulars apply Slater Shoe Co., Limited, 105 Latour St., Montreal.

WANTED TO BUY—Small stock of boots and shoes, with repair shop in connection. State size of stock and price. Address Box 36, SHOE AND LEATHER JOURNAL, 59-61 John St., Toronto, Ont.

Lynn Shoe Prices Advance

A despatch from Lynn, Mass., contains the information that the increase in the wholesale price of shoes, which will be inaugurated in March by the Brockton Shoe manufacturers, will be put into effect at the same time by most of New England manufacturers. The matter will be taken up later before the convention in New York. In Lynn, makers say the advance in price will probably be from five to seven per cent. Retailers will add enough to their prices to protect themselves.

The Demand for Lower Heels

Information from salesmen show that orders now placed include many for heels lower and broader than for several years. The South, where high heels have ever been popular, is leading in this matter, and it is a surprise to witness this notably high-heeled section asking for lower heels. There has been a tendency in this direction for two or three years. In pumps, heels from one inch to one and five-eighths in height will be observable, and even on oxfords there is a tendency toward lower pedestals. The Cuban heels are still popular, although some of the low heels are on a military order.

Thief Caught in Shoe Store

An exceptionally good night's business apparently suggested the possibility of a fair coup and get away from the shoe store of A. Levy, 260 Yonge St., Toronto, at an early hour the other morning. This might have been the case but for the fact that Mr. Levy has his premises equipped with the electrical burglar connections of an electric protection company. The entry to the premises sent an alarm to the company's central station with the result that a thief well known to the police was caught making himself thoroughly acquainted with the premises, and held until a patrol officer was summoned, and the burglar was taken to the police station. Nothing was missing and beyond some damage to the cash register there was no loss.

Leather Business Active Abroad

A prominent member of the leather trade, who has recently returned from England, is authority for the statement that the shoe and leather business, and almost all other business in England, has not been in such a prosperous condition for the last forty years. There is a large demand from the English market and from all European markets for light splits, for the reason that other sorts of leather usually called cheap leather have advanced so much in price that it is necessary to get splits from which to make cheap shoes. East India kips, it is reported, were never so high as at the present time. The increased demand for splits and the consequent raise in prices is looked upon by good judges to be something similar to what has occurred periodically, although the advance in price may not be so marked as in other years.

Showing Shoes on a Wagon

"I saw a novel and effective advertising scheme while out West," recently remarked a Toronto traveler, who has just returned from the Prairie Provinces, "and I wonder that some Easterners do not adopt it. A wagon was driven up and down the business streets and through several residential portions of the place while I was there. On it was a huge V-shaped structure only the 'V' was inverted. On one side were nailed several pairs of shoes, mostly of a heavy variety, and over a portion of the surface were the words: 'Only

\$2.50 to-day at ———. Come and get a pair. They are worth the money.'" On the other side were lumbermen's rubber goods nailed at the top to the sloping wooden surface, and the announcement was to the effect that these articles could be had for ———." I asked the dealer how the scheme worked. He told me that it was the best advertising method for quick results on a busy day that he had yet discovered."

A Progressive Western Shoe Man

One of the aggressive retailers in the "postage stamp" province, which will now lose that undesirable title since its boundaries have been extended, is J. Nash, of the firm of Nash & Lott, Brandon, Manitoba. He has been identified with the trade

for a quarter of a century. He gained his first experience in the art of St. Crispin at Orangeville, Ont., where he worked for four years on the bench. Then, like many other young men, he was seized with an uncontrollable desire to see the West, and one morning he packed his trunk and started. That was over two decades ago, and Mr. Nash is still on the ground. He located in Brandon, and there he is operating one of the finest shoe businesses west of the Great Lakes. He worked on the bench for Zink Bros. for some time, and then took a hand in the selling game. He made good from the start and was with the firm for eight years. Recently his former bosses sold out and are now leading retired lives. Over ten years ago, Mr. Nash began in the retail line at 937 Rosser Avenue. His partner, Mr. Nott, withdrew some months ago, but the business is still conducted under the old name. Mr. Nash is an alert shoe man and carries a select and comprehensive stock.

Honors Come to the Trade

At the recent annual meeting of the Commercial Travelers' Mutual Benefit Society, held in Toronto, S. R. Wickett of the firm of Wickett and Craig, tanners, who is a former president of the Society, was re-elected a trustee. A. J. Tipping, traveler for D. D. Hawthorne and Co., Toronto,

was also re-elected a member of the Board of Trustees. H. Goodman of the M. Langmuir Manufacturing Co., Limited, was continued as treasurer, the offices being filled by acclamation. At the late elections of the Toronto Board of Directors of the Commercial Travelers' Association of Canada, Charles J. Silver of the traveling force of the W. B. Hamilton Shoe Co., Toronto, was chosen a member of the directorate. E. O. Zimmerman, representing the F. F. Dalley, Co. of Hamilton in the contest. Their many friends are extending congratulations.

Proposed New Building for Travelers

A ten-storey building to cost \$250,000, and to contain sample rooms, billiard parlor, dining-rooms, bowling alleys, and so forth, for the use of commercial men of the province, was one of the propositions brought before the Commercial Travelers' Association at their annual election of officers held recently in Toronto. James G. Cane, the second vice-president, presented a report from the building committee, and submitted plans for the proposed building, which were laid over, to be dealt with later. After considerable discussion the by-laws changing the annual mortuary benefit from \$50 for 20 years to \$66 2-3 for 15 years, was passed. A petition asking the government to appoint a commission to look into the hotel accommodation of the province, particularly that of the local option districts, was circulated at the meeting, for signatures. No action was taken by the meeting as a whole, although it was discussed.

To Double Rubber Supply in Six Years

Few persons appreciate the fact that according to expert reports the world is on the eve of doubling its supply of crude rubber within another six years. For instance, the world's supply of rubber last year may be placed at 75,000 tons, of which 65,000 tons was of the "wild" variety coming from Brazil, and such places. By the end of 1917 it is expected the world's supply will have grown to between 145,000 and 150,000 tons, due to the enormous increase in production of fine cultivated rubber in the Far East. There is to-day under rubber cultivation in the East a total of 875,000 acres of rubber, distributed as follows:

	Acres.
Malay Peninsula	300,000
Ceylon	200,000
Dutch East Indies.....	175,000
Other tropical countries	200,000

This acreage should produce nearly 80,000 tons inside of the next six years, the output gradually increasing to that figure from year to year.

United States Rubber in three years will be getting 25 per cent. of its rubber from its own plantations. In five years it will be getting 75 per cent. and ultimately all at a cost of not much over 25 cents per pound.

Vancouver Credit Men Meet

The British Columbia Credit Men's Association, which was organized a few months ago, now has a membership of over thirty firms, comprising all the leading wholesale houses in the different branches of the business. The association is affiliated with similar bodies in Winnipeg and Seattle for the purpose of interchange of information relative to the credit standing of newcomers from the south and east, who are starting up in business in Vancouver, Victoria and other cities and towns of the province. The several objects expected

to be furthered by the association are: The protection of the members from bad debts, the *bete noir* of all business houses, by organizing the credit departments of the wholesale trade into one central body, and establishing a uniform basis upon which credits may be founded; to prevent settlements of insolvent debtors without the fullest investigation, and to resist all fraudulent settlements; to control, where possible, the winding up of insolvent estates, and to provide for proper transfers of retail business, etc.

Asking For Company's Dissolution

A recent despatch from Boston says: A suit asking for the dissolution of the United Shoe Machinery Company, has been instituted by the Federal Government, which filed a bill in equity in the United States Circuit Court. The bill is brought against the United Shoe Machinery Corporation, United Shoe Machinery Company of New Jersey, eighteen subsidiary corporations, and twenty-three individuals, to prevent and restrain the defendants from "maintaining and engaging in unlawful combinations, contracts and conspiracies in restraint of interstate and foreign trade and commerce, in violation of the Sherman Act, in the manufacture, sale and lease of machines, mechanisms, tools and devices used in the manufacture of boots and shoes." The court is asked to order the dissolution of the defendant corporations in such parts that no one of them will constitute a monopoly or can become a monopoly of the shoe machinery business. The defendants include President Sidney W. Winslow, William Barbour, Wallace F. Robinson, George W. Brown, Edward P. Hurd, John H. Connor, Louis A. Coolidge, Edwin P. Brown, Frank L. Bubbott, Henry B. Endicott, Edmund De B. Gardner, John H. Hanan, Elmer P. Howe, George E. Keith and others prominent in the shoe machinery and shoe trade. President Winslow and other officials of the United Shoe Machinery Company were indicted by the Federal Grand Jury last summer for alleged violation of the Sherman Law. The cases have not yet come to trial.

A Capital Shoe Anecdote

T. C. Irving, manager of Bradstreets, Toronto, who is probably the best-known story teller in Toronto, is particularly strong on anecdotes about clergymen. The recent visit of Rev. R. J. Campbell, the famous London minister, to Bond Street Congregational Church, Toronto, recalls a story told by Mr. Irving concerning an incident which took place at the same church many years ago.

Rev. Mr. Marling was then its pastor, and he presided at a meeting there addressed by Rev. Morley Punshon and Rev. Dr. Shaw, a well-known divine from the United States. The latter commenced by saying that when he found he was to appear on the same platform with Mr. Punshon he not only shook in his boots, but that his boots shook for quite a time after he took them off for the night.

Mr. Punshon, who had just arrived from England, began his speech by saying:

"Those boots of Dr. Shaw's puzzle me very much. What kind of boots can they be? They can't be what are called Wellington boots, for Wellington never shook. Neither can they be what I used to know as Bluchers, for Blucher didn't shake, either. I can only suppose then, that they had very poor soles and elastic sides, and that they were badly in need of heeling."

Button Shoes Strong Sellers

A prominent Eastern shoe retailer was recently quoted in the fashion notes of a daily newspaper to the effect that he was selling three pairs of button boots to every pair of lace ones. This probably represents an extreme case, but, nevertheless, every retail dealer throughout the country knows that the button boot is to-day the one that is in demand in women's shoes. This popularity of the button pattern is accounted for by a demand on the part of woman for trim and graceful footwear to go with the short walking skirts of to-day. With the prevailing styles in women's skirts it is absolutely essential that footwear be of the very highest quality.

A Veteran of the Road

One of the old timers on the road is William C. Myers, better known to his confreres as "Billy." He has been selling shoes to retailers in various parts of Canada for close on to twenty years, and this fall made his first trip through to the Coast in the interest of the Rideau Shoe Company, of Montreal, with whom he has been for the past three years. He was greatly taken up with the prairie provinces, and is looking forward with keen pleasure to a return visit in the spring. His

first position was with James Linton & Co., of Montreal. He was later identified with the John McPherson Co., of Hamilton; James Robinson, of Montreal, and George A. Slater, Montreal, when he joined the sojourning staff of the Rideau Shoe Co. There are few in the commercial ranks to-day who have more friends among the trade or are as widely known as "Billy" Myers. He resides in Toronto, and is just recovering from a rather severe illness.

The Troubles of a Tanner

"Yes! we tanners have our troubles, although shoe manufacturers seem to think they are the only ones that suffer from trade turmoils," said an Ontario leather man the other day. "A manufacturer will often enter into a contract to take calf skin of a certain kind for six months or a year. Now, if the price per foot should later go up a couple of cents, he immediately notifies us that he will take the full supply contracted for and more too, if we can give it to him, but, if the price should drop a cent, we have to bear the loss. The manufacturer expects to get the benefit of any reduction and, although we could hold him to the terms of the agreement, what good would it avail? He would simply not give us any further business after his contract expired, and we have to relinquish

any profit that we would make and ship him the skins at the lessened quotation. So you see that there is very little advantage in a contract. If the price goes up the manufacturer will not pay any more, and if it goes down, why we simply have to climb down too, or we would not get any future business. There appears to be nothing gained by seeking to bind a man in the leather business. The shoe manufacturer wants the tanner to carry the stock and assume all the risk or loss in any event, contract or not."

Mr. Tebbutt Secures Another Patent

The Tebbutt Shoe and Leather Co. of Three Rivers, Que., are exceedingly busy at present, and are turning out now from 1,800 to 1,900 pairs daily. President J. T. Tebbutt of the company, has just received from the United States Government a patent on his celebrated Doctor's Antiseptic shoe. The patent bears the date of December 11th. The United States Patent Office is very particular and searches the whole world before granting any patent. The recent outcome of Mr. Tebbutt's application is therefore all the greater tribute to his invention, and makes two Canadian patents now held by him the more valuable.

Mr. Rousseau Leaves Hospital

Frank E. Rousseau, the traveler who lost one foot at the ankle and the other below the knee when alighting from a train at Blyth station on October 4th last, was removed from the Wingham hospital to the residence of his mother, 44 Sophia St., Hamilton, Ont., on Friday, Dec. 29th. He expects to leave for an American city in a few weeks to be fitted with cork limbs with which he hopes to be able to resume his territory on Western Ontario for the Relindo Shoe Co., Toronto. The fund which was presented to him through the travelers and others amounted to \$1,740. The checks reached Mr. Rousseau in the hospital at Wingham a day or two before Christmas. He was deeply touched by the generosity and sympathy of his friends. Checks for over \$1,500 were forwarded from Toronto by Charles J. Silver, one of the treasurers of the fund and the remaining sum was collected by John E. Swarts, proprietor of the Queen's Hotel, Wingham, and handed by him and W. J. Greer, shoe retailer of that town, to Mr. Rousseau.

Shoe Factory's Annual Fete

The annual banquet of the W. B. Hamilton Shoe Co., Toronto, was held at the National Club on Friday night, Dec. 29th. It was a jolly termination to a business meeting held in the afternoon. The slogan of the occasion was "Toot, Toot for the Model Shoe." The directors of the company, the traveling salesman, the office and order department and factory management were all represented around the festive board and the spread was an elaborate one. W. B. Hamilton ably presided and kept things moving. The speeches were bright and witty, and the apt quotations on the menu card were the cause of much merriment. Among those in attendance were: W. A. Hamilton, C. B. Hamilton, G. A. Secombe, W. A. Griffiths, W. T. Purvis, L. S. McKindsey, W. T. Hambrook, R. D. Hornibrook, E. McConachy, D. Henderson, W. A. Griffiths, B. McKellar, J. E. Firth, G. B. Campton, C. I. Silver, J. Huxley, L. S. McKindsey, C. H. Smith, R. Roach, B. A. Trites, W. H. Jardine, Geo. Nicholson, A. Hatt, W. J. Colson, I. Whitton.

He is Little, But Oh, My!

James C. Moynes lives in Belleville. He is not large in stature, but he is a bundle of energy and activity. It keeps the ordinary salesman hustling not to let him out of sight. He covers the territory rapidly but thoroughly. He

is in his twenty-fifth year of service for the James McCready Co. of Montreal (now the Ames, Holden, McCready, Limited). He says there are "no better people on earth to work for," and he ought to know after nearly a quarter-century of insight. Mr. Moynes has been on the road forty-one years. He took his first position in Montreal with a dry goods house in 1870, with whom he spent two years. He left the metropolis with his first samples in May of that year. In January, 1872, he engaged with the old shoe firm of Moseley & Whitham, with whom he was for some three or four years. He was with some other footwear houses for a few years, among them being Pinkerton & Turner, with whom he labored for seven years before becoming identified with the McCready staff in November, 1887. Mr. Moynes is genial and warm-hearted, a live salesman and a true friend.

Lessons From the Holiday Trade

In one way it is fortunate that the Christmas rush comes so close to the first of the year, as a shoe merchant has an opportunity to size up the weaknesses of his cash and book-keeping systems in time to make a change at the first of the year. A system that won't stand up under the Christmas rush is no use to the merchant, and right now is a splendid time to figure whether you got all the money that came into your store, not only during the Christmas trade, but all through the year. You are now making up your inventories and you will soon see whether you have a profit or whether the balance is on the wrong side of the ledger. There is no better time than now to consider the advantages of the National Cash Register system as a perfect automatic check on all transactions where money is involved in your business. You know that losses come through carelessness though your clerks are not always to blame for this. If you possessed a machine, like the National Cash Register, which would be no trouble for them to use, and which would make a record of everything they do with your money, you will find you will get every cent of profit that your business has earned for you. There is a National Cash Register built for every business. There are registers which will take care of the totals of each clerk or of separate departments, referring to cash sales, money received on account, money paid out and credit sales. For particulars of the National Cash Register which will suit your business, send a post card to the National Cash Register Co., 285 Yonge St., Toronto, Ont.

Fire Will Not Delay Orders

Fire broke out early on Saturday morning in Tetrault Shoe Company's factory, Montreal. The damage was confined chiefly to the making-room. Mr. N. Tetrault states that by rushing work on orders day and night, they do not expect to be over three weeks behind in spring deliveries, perhaps less.

The firm have an extensive supply of new

lasts and the employes have offered to work night and day. The loss is estimated at about \$35,000, which is fully protected by insurance.

Next to the Tetrault factory is the reformatory, controlled by the Fathers of Charity, and for a time there was much excitement among the boys confined in the building. The shoe company is owned by the Fathers of Charity, and many of the boys in the school work in the factory. The firemen had great difficulty in forcing their way into the burning building, because of the heavy iron bars placed on the windows to prevent the boys escaping. Had the lads been at work in the factory it seems certain that there would have been some loss of life.

May Investigate Factories

The proposal of the New England manufacturers to raise the prices all round on the first of March has been met by the threat of the United States Government to investigate the shoe factories of the country if the proposal is carried into effect. Consequently they will think it over again. In the meantime, anyone who can get a pair or two of shoes ahead might be wise to do so.

Tanners Talk of Higher Prices

The tanners' section of the Toronto Board of Trade held their annual meeting and election of officers a few days ago. The business proceedings were followed by a dinner at the National Club.

J. J. Lamb of the Omecce tannery, who is the retiring chairman, presided. He took occasion to review conditions during the past year, and intimated that owing to the stiff price of hides, advanced quotations in leather would be in order during the coming year. He remarked that with hides three or four cents a pound higher than at this time last year, and with a shortage in the slaughter of 425,000, fewer cattle throughout the continent than in 1910, the outlook of the tanning business was not any too reassuring for Canadian tanners. The following officers were elected:

Chairman—F. G. Clarke, Toronto.
Vice-Chairman—J. Sinclair, Barrie.
Secretary—F. G. Morley, Toronto.
Representative to Board of Trade Council—Alfred O. Beardmore, Toronto.

The following were elected to serve on the executive, legislation, and transportation committees:—J. C. Breithaupt, Berlin; C. G. Marlatt, Oakville; A. O. Beardmore, Toronto; S. R. Wickett, Toronto; G. P. Beal, Toronto; C. King, Whitby; Geo. C. H. Lang, Berlin; A. R. Clark, Toronto; J. J. Lamb, Omecce; George McQuay, Owen Sound; E. J. Davis, Newmarket; H. B. Johnston, Toronto; R. M. Beal, Lindsay; and S. Morley Wickett, Toronto.

Recent Trade Inventions

The following information has been specially compiled for the SHOE AND LEATHER JOURNAL, by Mr. G. Hughes, R.P.A., editor of *British Machinist and Patents*, 55-56 Chancery Lane, London, England:

18309—Cleaning Boots. T. M. Ellis, London.—The stock of a brush in a boot-cleaning or like outfit is made of a single piece of sheet metal, perforated to receive the tufts, and having the edges turned up to form finger grooves and turned over at the top to co-operate with the finger grooves in receiving the base of the pad. The tin of paste may be inserted against various stops and be clipped between the base of the pad and a plate, or between the

inturned edges of the stock. A sheath as described in Specification No. 17583, 1908, may engage the finger grooves. The tufts are fixed by ordinary wiring in the short ferrules or the ferrules may have their ends partly closed. The cavity may hold boxes or other articles, and where no pad is required a wooden back or a mirror, or a brush detachable and reversible, so that the bristles may project either outwards or inwards, may be substituted.

18425—Boots, etc. W. E. Farr, London.—Ventilating. A sliding shutter ventilator is inserted in the upper, preferably on each side, near the waist.

18430—Shoe Brushes. A. Jones, London.—A shoe cleaning brush consists of three detachable parts with hard bristles, for shining, and with soft bristles for blacking, the parts being connected by double-pointed screws. An iron or wood scraper perforated for suspending, is attached. A leather, cloth, or wool pad of similar shape may be provided to be substituted for the bristles.

18520—Boots. Stiffeners. A. Wilson, H. Noble and J. Brook, Leeds.—Counter stiffeners are made in two parts, of sheet tin, aluminum, alloy, celluloid, or other resilient material, the two parts, which are shaped to the contour of the counter and the heel of the insole respectively, being united at their edges by a folded joint or by soldering, brazing, etc. One part of the finished counter is formed from a blank by first curling over the flanges and then bending it to the shape of the counter. The other part is formed from the blank by turning up the flange. The two parts are connected by engaging the flanges, and then folding and pressing to form the joint. The blanks have parts cut away to prevent puckering, etc., at the joint. The stiffener may be covered with leather or the like, or may be enameled, painted, etc., and may be secured in position in the boot or shoe by pins or rivets driven through the holes in the leather.

An Enthusiastic Road Man

Ed. E. McIntyre is a Perth County boy, and gained his first experience in the shoe line in a retail store in Owen Sound. He came to Toronto and served for a period. Then he journeyed across the line and for several years sold American shoes in retail shops, having been employed in leading establishments in New York, Rochester and Cleveland. Returning to Canada he secured an engagement on the road with the Victoria Shoe, Toronto. The next five years he spent with the Minister, Myles Shoe Co., and was a most successful salesman. For the last three years he has been with the Brandon Shoe Co. of Brantford, and looks after Eastern and part of Northern Ontario and Montreal city. He is of a quiet, even-going disposition and his last trip with spring samples, which he closed a few days before the holidays, was the largest in volume that he has ever had. He has the faculty of gaining the confidence and esteem of all his customers, and numbers scores of retailers among his friends. Mr. McIntyre resides in Toronto. He likes traveling, and obtains enjoyment from his work. He is a close student of shapes, styles, buying tendencies, and the goods which people demand. "Ed." formerly wore a moustache, but he and it dissolved partnership some time ago.

CALGARY WANTS SHOE FACTORY

Will Grant Tax Exemption and Big Wholesale House Will Take \$150,000 Worth of Product the First Year—Labor and Leather Supply Ready

Calgary, Alta., Dec. 27.—This city took a step in the direction of industrial expansion the other day which has set a pace for all cities on the American continent. Fifty business men put aside their correspondence and other duties for a day and a half and engaged in a canvass of the city to raise \$100,000 as a campaign fund for the securing of industries for the city. Within thirty hours of the time the canvass was inaugurated, the fund was over-subscribed, three hundred and thirty business men contributing the amount which will be utilized by the Calgary Industrial and Development Bureau, during the next three years, in attracting industries for which special opportunities are offered by that city.

Should Go to Canadian Makers

One of the industries which Calgary is much in need of is a modern shoe factory. The growth of the shoe trade in Western Canada, in recent years, has been remarkable, and would seem to warrant the establishment of such a factory in that portion of the Dominion. In the Calgary district alone the shoe trade exceeds \$4,000,000 per year. In the country districts 90 per cent. of this trade is in Canadian shoes, while in the cities the percentage is 75 per cent. Canadian against 25 per cent. of American manufacture.

To a manufacturer establishing in Calgary or some other western point, the greatest asset would be the fact that he could supply the trade promptly on receipt of orders. At the present time the shoe manufacturers of the East are so far away from the consumer that the Western merchant must count on a month's delay in the transit of shoes from the East. The manufacturer locating in the West would be able to give the merchant his goods when wanted, and save him a month's delay before the same goods could be brought in from eastern centres.

A manufacturer locating in Calgary would also be able to effect a saving equal to 10 per cent. on staple shoes and 6 per cent. all around, by escaping the lake and railway rates of \$2.00 per hundred carload, or \$2.94 per hundred, less than carload.

Tanneries Springing Up

With tanneries springing up throughout the West, the problem of securing an adequate supply of shoe leather is solved. Calgary being the centre of the western cattle market, cheaper leather should be obtainable there than in the East. It is well known that the bulk of the hides used in the manufacture of leather in the eastern cities is taken from the Alberta ranges. These hides are shipped east in the raw condition, there manufactured into leather, and shipped back to Western Canada, where one of the principal markets for leather is to be found. As tanneries become established in the West, it is safe to predict that, in the near future, the hides from the western ranges will cease to go east, as more and more of the leather used in the West is manufactured there.

The labor problem is not so serious as most shoe manufacturers imagine. An eastern manufacturer who was in Calgary a few days ago, decided to ascertain for himself whether it would be possible to secure locally one hundred men with experi-

ence in the operation of modern shoe machinery. By the insertion of a small "want" ad. in a Calgary newspaper, for one issue, he secured 46 replies from men in Calgary who were skilled mechanics in this line, many of them having previously been connected with large shoe manufacturers in the British Isles.

Assured of Profitable Trade

As an evidence of the fact that a manufacturer establishing in Calgary may be assured of a profitable trade, one leading wholesale shoe house in this city is prepared to take \$150,000 worth of the product of a shoe factory during the first year of its operation, and to increase its orders materially in the years following, if the product of the factory is satisfactory.

With a view of inducing shoe manufacturers to locate in Calgary, the city offers to grant exemption from taxation until 1918, upon factory plant and buildings, to any firm employing twenty-five hands or over. Power, light and water, also a factory site with trackage facilities, will be sold at cost by the city. The city has over one hundred and sixty acres set aside for industrial sites. All are splendidly located, and have every facility for shipping. Accommodation is also provided for the employees in factories by the extension of the street railway to the factory sites. Altogether, Calgary has made the way easy for the manufacturer to enter that city. Not only does it offer him good inducements, but guarantees him fair treatment after he locates.

Mr. Andrew Miller, Industrial Commissioner of Calgary, would be very glad to hear from any shoe manufacturer who may be interested in the opportunities which present themselves.

Steady Markets in Hides

In the annual financial survey of the Toronto Globe issued this week, W. D. Beardmore of the Beardmore Co., Toronto, ably reviews the hide and leather situation in Canada for the year 1911. His remarks, which are timely and comprehensive, will be read with interest.

"With regard to Chicago packer hides, heavy natives in January, 1911, ranged at from 12½c to 13½c. In February, March and April the same hides stood at from 12½c to 13c. In May there was an advance, and by the end of the month they sold at 15c. In June these same hides stood at 16c, in July at 16½c. In August there was a slight decline, and they sold as low as 15½c, though the month closed with sales at 16½c. In September, October and November, prices ranged from 16c to 16¾c, and in December November hides sold as high as 17c. This month, December, prices have eased fractionally, though December hides have not sold less than 16c, and some have sold at 16½c.

"The year opened with heavy Texas selling at 12½c. There was a gradual advance up to the end of May, when they sold as high as 15½c. The end of June they sold at 16c, and the end of July there was a decline; in August they sold as low as 15c, in November they sold at 15¾c, and the year closes with Texas hides at 14¾c, the quality, however, having very much declined, and if quality and condition are taken into consideration packer hides, both natives and Texas, are selling in December at about the highest point of the year.

"The new season at the River Plate opened in July, with prices which varied very little from those of 1910, and the course of the market ever since has been very

steady. This has been practically the course of the market for dry hides all over the world, in South Africa, China, Brazil and other places, and the close of the year sees dry hides ranging slightly higher than they were in 1910, say, from ½c to 1c per pound.

"In the United States during the year 1911 business in most kinds of leather has been very dull and disappointing, and in that country prices have in many cases shown a serious loss to the tanner. At the close of the year, however, there has been a very great improvement, and a very considerable advance has been established in nearly all kinds of leather, leaving things on a much more satisfactory basis.

"In Canada during the last year business has been generally very active, and the leather trade has participated in the general activity. While profits have been cut very fine, the tanner has received in most cases a small return over the cost of production. Trade has been healthy, and there have been very few failures.

"The shoe business was somewhat disappointing during the early part of the year, but in the later months it has very much improved, and the year closes with considerable activity."

SHOE MACHINERY INVESTIGATION

Summary of What Footwear Manufacturers Have to Say Before the Board—Sittings Held in Montreal, Quebec and Levis—Will Be Resumed this Week

The Judicial Commission appointed by the Dominion Government at the request of several shoe manufacturers of Quebec, who complained of the mode of operation of the United Shoe Machinery Company of Canada, have been holding sittings in Montreal and Quebec.

The Commission is presided over by Mr. Justice Laurendeau, representing the government, with W. J. White, K.C., for the company, and J. C. Walsh for the manufacturers and the consumers.

H. G. Dunham, secretary-treasurer of the United Shoe Machinery Company of Canada, and secretary of the United Shoe Company, the American concern, was the first witness heard, his testimony bearing on the relations existing between the American and the Canadian concerns, as well as the nature of the contracts entered into by the company with merchants making use of its machines.

Were Not Sold Outright

Mr. Dunham, secretary of the company, volunteered the information that most of the company's machines were not sold, but leased to manufacturers, the rent being paid as a royalty on every pair of shoes passed through the machine. He declared that certain machines were never sold outright. Other machines were sold or rented with the understanding that they could be employed only in connection with other machines supplied by the United Shoe Machinery. For instance, a welter was sold or rented with the restriction that none of the shoes welted by it could have a stitch or seam from a machine of another manufacturer. That policy was dictated by the interests of the trade, in order to protect the smaller manufacturer against the larger one. Mr. Dunham produced blank copies of leases for each kind of machine as supplied by the company.

A. Falconer, K.C., counsel for petitioners, expressed some doubt at the contention of the company's officials that machines manufactured by the firm required an out-

fit of tools worth \$60,000. F. W. Knowlton, general manager, who was on the stand for several days, was requested to file a list of the tools forming the outfit, with the price of each.

Connections of the Canadian firm with the American firm were also probed, Mr. Knowlton, acknowledging that the American house was creditor of the Canadian house, but he did not admit that the United Shoe Machinery Company of Canada was merely a branch of the firm of the same name in the United States, though indebted to the latter by \$297,000.

Mr. Knowlton declared that practically every shoe manufacturer in Canada had an open account with his company.

Machines Were Left Idle

General Manager Knowlton said that in Canada the machinery was coming from Boston, or at least parts of the machinery were coming to the Dominion in pieces that were assembled in the local plants of the company. A story of the company's difficulties with Quebec manufacturers was entered into, Mr. Knowlton telling about Brunet, Lachance & Tanguay, who, having attempted to purchase machinery other than that supplied by the United Shoe Machinery Co., were compelled to pay a royalty on the company's machines, which were left idle, the company having refused to remove them when first requested. As a rule the company bought the machinery from its rivals at about 10 per cent. of the original price, and sent it out for scrap. Mr. Knowlton was on the stand for seven sessions of the commission, and in his concluding evidence said: The company had offices in Montreal, Quebec, Toronto, Winnipeg and Vancouver, which were the headquarters for the salesmen and the mechanics used for the inspection and the repairs of leased machines. Most of the supplies were shipped from Montreal, but in some cases they were shipped directly from the United States. The road men of the company had to see if the machines were kept busy, and in good repair; they had also to report when other machinery was used.

In 1899, the United Shoe Machinery Company assumed control of the Goodyear Shoe Machinery Co., and continued the business under its charter, and amalgamated other concerns.

The number of employes was then fifty; it has now over three hundred in Canada, the increases being due to the development of the shoe manufacturing industry, and the development of the machinery industry, which had the effect of curtailing the importation.

Mr. Caron on the Stand

At sittings of the commission in Quebec and Levis, the first witness heard was Ernest Caron, general manager of the Canadian General Shoe Machinery Co.

This company, which has a capital of \$500,000, and which has spent \$200,000 for its plant, has been manufacturing shoe machinery for the last eleven years, and has sold its machinery to Canadian manufacturers, and even in England and Germany, since 1908. Mr. Caron has been unable to sell any more of its machinery on account of the contracts imposed upon manufacturers by the United Shoe Machinery Company, which obliges them to use exclusively the machinery made by the alleged trust. The witness declared that the sale of his machines was blocked by the actions taken by the United Shoe Machinery Company for breaches of contract against manufac-

turers using them. Only two factories in Quebec and one in Montreal now use them.

A discussion took place between counsel as to the introduction of petitions from the Quebec shoe manufacturers, one of which John Ritchie had signed, and another which he stated he could not sign, because of the "tying" clauses. He was satisfied with the company outside of the obnoxious clauses. He said he had signed because of the communication from the company that its representatives were willing to meet the manufacturers and endeavor to remedy any objectionable sections. The petition asking for delay in the investigation had, to the best of his belief, been sent direct to the minister at Ottawa. While he agreed that the leasing system enabled a man to start with little capital, the trade of the country was limited, and somebody must pay for it in the end.

No Attempt at a Merger

There has never been any attempt at a monopoly or merger of the shoe trade in Quebec, said Mr. Ritchie, nor had there been any attempt to limit the output.

Mr. Ritchie stated that he employed 350 hands. As a result of improved machinery he now employed less hands than formerly. Mr. Ritchie stated that on certain auxiliary machines there was no royalty or premium. The witness added that he had never examined Mr. Caron's machines closely because he was unable to buy them. Mr. Ritchie said he would not object to a merger in certain groups of shoe factories, but not of the whole trade. There are about 21 shoe factories in Quebec. Mr. Ritchie said he was satisfied with the service which he received, but objected to the "tying" clause and the length of lease.

The Prices are Fixed

In answer to Mr. Walsh, Mr. Ritchie said there was practically no choice to-day. Prices were fixed by the United States Company. The only reason why he could not take any other machine into the factory was because of the leasing clauses.

Mr. Ritchie added that considering the company was a monopoly, the royalty charges he thought were fair. If the "tying" clause was out, competition would bring about the desired result. The royalty on the Goodyear main machine was 5½c on \$2.50 boot, which the witness thought was too much. Mr. Ritchie said that while the cost of labor and material had increased, the royalties on machines had not done so. The leased machines were the most important ones in his factory.

Cleophas Blouin, in his evidence, stated that he had conducted a shoe factory in Levis for ten years. He had given evidence in the case of Brunet & Company against the United Shoe Machinery Company. He did not, however, remember just what evidence he had given and referred the commissioners to the printed testimony officer.

Must Instal Entire Outfit

Thos. Duchaine gave evidence to the effect that he had used Caron machines in his factory for two years. There were certain machines which were not satisfactory, and, applying to the United Shoe Company for machines which he needed, he was refused unless he installed the United Shoe Company's machinery entirely. This he did, and sold the Caron machines to the United Shoe Company. Mr. Duchaine stated that if the "tying" clause was cut out of the lease of the United Shoe machines they could use others. He stated that the thread used in the manu-

facture of shoes turned out in his factory had to be purchased from the United Shoe Company, and the cost was twelve cents more than charged ordinarily. Witness stated that it cost him one-half cent more a pair for shoes manufactured by United Shoe Company machines.

Served With An Injunction

Prior to 1905, when the firm was dissolved, Mr. T. Lachance, formerly of Brunet, Lachance & Tanguay, testified they had used other machines than those of the United Shoe Machinery Company. These other machines were manufactured by Mr. Caron. The company was served with an injunction restraining them from using other machines than those of the United Shoe Machinery Company's make. Litigation followed this, and finally the case went to the Privy Council, which sustained the United Shoe Company in their contracts. Following this judgment, Mr. Brunet continued the business, and the witness and Mr. Tanguay formed a new partnership. They installed United Shoe Company machinery. He had found the machines satisfactory, and thought that the lease system was advantageous to the small manufacturer.

Mr. Muir Gives Facts

James Muir of the James Muir Co., said he had been connected with the shoe business for fifty years. He had heard that shoe-making machines could be procured elsewhere, but he had never endeavored to get them. He understood that some of these machines were made in England and some by the Canadian Shoe Machinery Co. Asked when the United Shoe Machinery Co. commenced business in Canada, Mr. Muir replied that it was about ten years ago. Prior to that the Goodyear Co. existed. The witness was interrogated in regard to certain machinery, and where they came from prior to the formation of the United Shoe Company.

In reply to Mr. Falconer, Mr. Muir stated that he had never been approached by any party with a view to purchasing machines, and even if he had been so approached it was a question whether he would buy machines. Concerning the leases signed with the United Shoe Company, Mr. Muir stated that they had never troubled him. He had never experienced any bother, declaring that he was as well off with the lease of the United Shoe Company, Mr. Muir was asked if he wished to purchase a machine from another producer would his lease with the United Shoe Co. prevent him from doing so, to which query he replied that he had no fear of trouble if he got another machine. He did not think the company would take him by the throat if he introduced a competing machine in his factory, judging from the manner in which his firm had been treated by the company. Mr. Falconer asked witness if he had heard what had happened to some manufacturers who introduced competing machines in their factories. Mr. Muir replied that he did not personally know what occurred. He never had any hesitation in signing the lease with the United Shoe Co., though at the time he might have thought that some of the clauses might be modified.

In reply to Mr. Falconer, Mr. Muir stated that he was as well off with the lease of the machines as if he owned them.

Adjourned Over the Holidays

The commission adjourned for the holidays, and resumed hearing further evidence this week in Montreal and Quebec.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:—

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

WHY DIAMOND FAST COLOR

Nothing so cheapens a shoe as a brassy eyelet. In most instances it is more conspicuous than a break in the leather and even more difficult to remedy. But there is a sure way to protect your patrons from any annoyance in this connection. Diamond Fast Color Eyelets cannot wear brassy, they always look new and help to preserve the appearance of shoes throughout the longest wear. There is also a positive way to tell whether the shoes you purchase are fitted with them. Just look for the little diamond  trade mark raised on the surface of each. It is inconspicuous but very important. Your customers realize it. It is your guarantee that the eyelets are genuine Fast Color, for only the genuine Fast Color have the  trade mark.

“IT'S IT”

Individualism marks the difference between artistic heights and mediocrity.

Given an equal amount of material no two men fashion the same product in the same way.

Brains, deft hands and experience all play their part.

ASTORIA and LIBERTY SHOES lead.

There is a reason.

COOK - FITZGERALD CO.

Limited

LONDON - - ONTARIO

To make shoes really waterproof

“Endural” is a winter calf.

It is a winter calf with a “mission.”

That mission is to make Waterproof Shoes for men and women.

It fulfils its mission—far better than any imported viscolized leather—and far cheaper.

No dampness can penetrate it. The foot inside a shoe of “Endural” calf is always perfectly dry.

Dry feet inside your shoes means more sales and bigger profits. Besides, you save about 4c. on every foot of “Endural” you cut.

“Endural” is made in two colors, No. 22 and No. 44, and in four weights, for men’s and women’s shoes. Send to-day for your samples.

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

The Great Demand for “Great West” Felts

during the past season was due to the high grade, classy styles and good-fitting qualities.

The consumers appreciated the advanced and improved features of “GREAT WEST” FELTS, and you, Mr. Merchant, found the demand an ever increasing one.

“Better be sure than sorry.” Order early, and in sufficient quantities, to protect your trade, and to assure prompt delivery through your jobber. Our record of **prompt delivery** last season demonstrated that our business—from factory at Elmira to selling force in the field—is thoroughly organized. “GREAT WEST” FELTS were fully up to sample—we made good our claims—we delivered the goods.

To meet the increased demand for “GREAT WEST” FELTS we have provided extra facilities, and will take care of your orders.

Deliveries promptly made (through your jobbers). The “GREAT WEST” Brand—the stamp of quality—is stamped on every “GREAT WEST” shoe.

If your regular jobber cannot supply “GREAT WEST” felts, we can tell you where your order will be filled.

Positively not in any trust or combine.

THE BEAUTY IN A DIAMOND FAST COLOR EYELET

WHILE everything else about a shoe grows dull and unsightly with wear the beauty of Diamond  Fast Color Eyelets does not change; they retain the same bright, new appearance throughout the wear of the shoe; in fact if it were practicable to transfer them from one shoe to another a Diamond Fast Color Eyelet would outwear several pairs of shoes. As they cannot wear brassy their bright, new appearance adds wonderfully to the satisfaction of shoe wearers, millions of whom are learning every month just what the little Diamond  Trade Mark means, and knowing will certainly want Fast Color. They should be in every good shoe. It's for you to say whether you will have them in yours. Just specify Diamond Fast Color when you order.

Turn Your Transient Customers Into Permanent Ones

Because you cannot depend on transient trade to make your business prosperous is a mighty good reason why you should handle Blouin's satisfaction-giving shoes.

Their good honest appearance and reasonable prices bring customers to your store, and their genuine merit and "wear-ability" bring these same customers back again.

Blouin's Shoes know no transient trade for every sale means a permanent customer.

They have proved this to others. Let them prove it to you.

Good Outlook for Record Business in Felt Footwear

Factories Report That Prospects for Season Are Promising—Increased Demand in Eastern Towns—Some Natty Samples Presented to the Trade—How One Dealer Appeals for Big Business

Travelers are now out selling felt footwear for delivery next fall. Canada is being covered thoroughly from sea to sea, either by going direct to the trade or marketing through jobbers. January and February are generally devoted to the sale of felt goods, and then comes the rubber selling season for two or three months. The great centre of felt manufacturing in Canada is Waterloo County, where over half a dozen factories flourish. There is also a busy one in Perth County.

The prices this season are about the same as last year, but the prospects are that a much larger business will be transacted. All the firms now have their samples ready, and some fine, new lines are being presented. Felt shoes are never made in such a variety of shapes, styles, and trimming as leather ones, but the showing this season is an admirable one. All staple lines are in black, but colored felts are growing in popularity. Red, green, brown, grey, claret, blue and other shades may now be seen in slippers and house shoes, and some really fetching creations are exhibited. Felts are being worn more and more in Canada. Formerly their sale was confined principally to the prairie provinces, the lumber and mining camps and in the districts far north. They were looked upon as part of the dress of those living in the colder sections.

Worn By Many Good Dressers

To-day this aspect of affairs has changed, and shrewd business men and stylishly dressed women are not backward in wearing this class of footwear during such bitterly cold spells as the Dominion had for a couple of weeks recently. Comfort is preferable to all else when one is a sufferer from frigid feet or toes. Doctors report that a number of young people while coasting, snow shoeing, tobogganing or skating during the temperature, which was away below zero, had their toes frozen. This is a serious matter, and very painful for the victims. It is not likely such a thing would have happened if the parties had worn felt shoes. Some will "sport" moccasins, larrigans, artics, wannigans, and other creations, but not felt. The latter affords more constant comfort, is not clumsy or awkward looking, will wear well, and, if soft weather comes, all that has to be done is to place rubbers over the boot the same as with leather foot covering, and the owner is perfectly safe from wet pedal extremities.

Superior Lines of Felts

The class of felts turned out by the factories to-day are superior goods in every way and most firms are making a business man's shoe that for neatness, trim and build is decidedly attractive. These are now being worn a great deal and no more cold or frost-bitten feet is the happy outcome. One manufacturer told the SHOE AND LEATHER JOURNAL that he knew men who wore felt

the winter through, and were regarded as particular dressers. Such shoes no longer look ponderous or uncouth. In fact, the reverse is the case, and one can obtain many varieties. There is the felt shoe foxed with leather, the felt lined product, the shoe with an elk sole and rubber heel, all the top being of felt. These and many other lines are shapely, and one does not need to sacrifice fashion to comfort. They sell to the retailer all the way from 75 cents to two dollars and a half or more per pair. Practically all lines come within these figures, and, of course, slippers, and other kinds of felt house shoes, are in many instances cheaper. There is a good profit to be made handling felts and it is a wonder that the retailers in the smaller towns and cities of the East do not push them more vigorously, in view of the reasons which have been pointed out.

High Priced Wools Used

The process of making felt is interesting. The various machines have been so improved in recent years that the output of the factories has been in many cases doubled and even tripled. The high priced wools, that enter into the manufacture, come principally from the Cape of Good Hope, Persia, Russia, and South America, no Canadian wool going into the making as it has not the proper fulling properties, which is the art of thickening and making the product firm and compact. This is done by rolling and pressure in a number of machines. There are over six thousand felt shoes and slippers of various kinds turned out daily in Canadian factories which are now running to capacity, and will be kept busy all year on the orders that are coming in. Deliveries will start in May or June next, and keep up until fall. They will continue for sorting until a later date.

There is only one objection heard to stocking up with a heavy line of felts. The retailer will say that the sale for them is limited if the winter happens to be mild. Canadian winters do not, judging by the experience of this season, appear to be lessening in the strength and length of their frigidity. It always makes the felt manufacturer as well as the coal man smile when the temperature is anywhere from zero to forty and fifty degrees below, for it is an ill wind that does not blow somebody good.

Retailer Features Felt Shoes

Speaking to a leading Ontario retailer the other day, he remarked: "I find that the sale of felt goods in this town is increasing each year. I do not mean in slippers alone, but in shoes or boots as they might properly be called. We have some neat creations here, and they give every comfort, ease and satisfaction to the wearer. Did you ever see tastier lines than these? Look at this felt lined lady's boot, and this man's, which is all felt. What could be nicer

in outward appearance—nothing bulky or ill shaped about it. I want to tell you of a little personal experience. I suffered from cold feet for years until I started to wear felt shoes, and, since then I have never known what it is to have chilly toes. I stock several lines each year, and if I do not happen to get rid of all of them, I do not have a clearing or discount sale. These goods come in handy for next season. We do not sacrifice them as the stock is staple. Styles and lasts do not change over night the same as they do in leather footwear. Felt slippers are being worn more and more in the house, whether in juliettes, cosy or low cut. They make excellent holiday presents. I made a feature of them and, in the cold days that we have just had, I decorated my window entirely with felt footwear, and arranged the display attractively, with prices on each shoe, and some suitable mottoes, such as 'Try a pair and you can laugh at King Winter,' 'Treat your feet well as you use them from sixteen hours to eighteen hours a day,' 'Protect your toes with as much care as you do your chest.'

"Then I find that curlers, persons who attend hockey matches, and other winter sports will buy heavily. Learn the warm, good qualities yourself and then you will be able to impress the points on others. Felt shoes will soon be worn by twenty-five per cent. more persons in the towns, villages and cities than they have in the past. The manufacturers deserve every credit for their enterprising and progressiveness, and no branch of the footwear trade has been making greater strides. A woman or a man, who now wears felt footwear during the cold season is looked upon as sane, thoughtful and cheerful."

Opposing Views on Limiting Styles

Are there too many styles of shoes at the present day? Ask any retailer and in all likelihood he will tell you, "Yes, by all means." It requires him to carry too many lines in stock, and have too heavy an assortment. The average dealer houses on his store shelves, and in his reserve quarters, from two thousand to ten thousand pairs of shoes. He will have probably over a hundred and fifty lines in men's, and perhaps many more in women's, not to speak of the countless patterns and combinations of leathers in misses', boys', girls', infants', etc. To keep the various sizes and widths is a problem that causes him to do some hard thinking and undergo financial worry.

Writing on this subject, a retailer from London, Ontario, says, "I have over a hundred and sixty styles here in men's footwear, and this is a ridiculous number. Fashions are as varied and multiform as in millinery, and change as suddenly. I would hold up both hands for any concerted action that would limit the number to reasonable bounds. Some manufacturers turn out so many scores and scores of lines, and it is time that the constant changes in lasts and models ceased. I would do anything in my power to curtail the increase."

Efforts have been made by the National Styles Committee across the border, to limit the number to eight for men and eight for women. The attempt failed. It is alleged the reason was because the manufacturers did not consult representative retailers, learn their opinions, and enlist their support and co-operation.

A leading Montreal manufacturer stated this week that even if certain fixed styles were adopted, he would not be bound by them. He declared that as long as he had the running of his factory he would make what he pleased, choose what lasts he desired, and select the patterns. "Do you think that I would destroy the individuality and dignity, the distinction and grace which my products have won? Why, you might as well say that the tailor should only sell fabrics of certain color or weave, or the shirt manufacturer should select materials of a certain stripe. No attempt is made to curb suit manufacturers, and why should shoe manufacturers be restricted to specified lasts, toes, build, heels, leathers, vestings and other things. No, sir, we will make our own selections and stand or fall by them. Originality, expression, beauty and variety will always be typified in my

shoes to the extent that I please, and I am not going to let anybody else have the say."

Novel Plan In Slipper Selling

Enterprising Shoeman Displayed Over 1,000 Pairs by Means of Rods Suspended from Ceiling and Did a Remarkably Brisk Holiday Business

A unique way of selling slippers and all kinds of house footwear was adopted by W. G. Pink, 278 College Street, Toronto, during the recent holiday trade. He has made a practice every year during December to insert a few hooks in the ceiling, and from these depend stranded wires, holding in position long steel rods. Other rods are supported from the first one by means of button hooks. The rods run on three sides of the store, the lowest being about six feet from the floor, the next a foot higher, and the topmost one about eight feet. These are arranged some distance out from the shelves, and do not interfere in any way with the removal of cartons. Slippers are suspended by snap hooks from the rods, and on each slipper is the size and price, so that customers may wander around at leisure and see the varied assortment. Over one thousand pairs were exhibited in this manner, the combination of colors and trimmings adding much to the interior beauty and holiday appearance of the store, as well as affording callers numerous suggestions for gift giving.

The different sizes were all kept together and a selection could be made easily and quickly, the goods practically selling themselves, due to the excellent display plan. There were boudoir, juliettes, kozy, opera, romeo, everett, nullifier, pullman—in fact every kind of slipper shown, and the colors and trimmings presented a very inviting picture. A common remark made by customers entering and witnessing the novel scheme was: "My, what a lovely line of slippers. I never saw so many before in my life. I must get grandfather, brother, sister or mother a pair." Window displays sell goods, so do proper and carefully planned and artistic interior trims, as Mr. Pink can testify, for his trade this season in house footwear surpassed all previous records. In taking down a slipper to try on a patron he and his staff always removed the one on which the ticket bearing the price and size was not attached, so that it could be instantly replaced if not suitable. Thus confusion was avoided.

The Man Who Delivers the Goods

By WALT MASON.

There's a man in the world who is never turned down, wherever he chances to stray; he gets the glad hard in the populous town, or out where the farmers make hay; he's greeted with pleasure in deserts of sand, and deep in the aisles of the woods; wherever he goes there's the welcoming hand—he's The Man Who Delivers the Goods. The failures of life sit around and complain; the gods haven't treated them white; they've lost their umbrellas whenever there's rain; and they haven't their lanterns at night; men tire of the failures who fill with their sighs the air of their own neighborhoods; there's the man who is greeted with love-lighted eyes—he's The Man Who Delivers the Goods.

One fellow is lazy, and watches the clock, and waits for the whistle to blow; one has a hammer, with which he will knock, and one tells the story of woe; and one, if requested to travel a mile, will measure the perches and rods; but one does his stunt with a whistle or smile—he's The Man Who Delivers the Goods. One man is afraid he'll labor too hard—the world isn't yearning for such; and one man is ever alert, on his guard, lest he put in a minute too much; and one has a grouch or a temper that's bad, and one is a creature of moods, so it's hey for the joyous and rollicking lad—for The One Who Delivers the Goods.

Trimming a Small Window in Artistic Manner

How a Montreal Shoeman Gets the Best Value from His Silent Salesmen—Simple Arrangement, Spare Time Work and a Few Purchased Accessories the Only Needful Elements for Success

Herewith is shown an excellent display for small windows, such as are common in hundreds of shoe stores throughout Canada. There is absolutely nothing elaborate about the window itself nor the store front of which it is a part. In fact, the two posts in the fore ground serve to detract from the display as a whole. It is easy, therefore, for anyone to emulate such a display provided a few simple accessories are purchased, and a little head work utilized.

This window is closed at the back by ordinary slide frames, each containing about six large frames. But the deterrent effect

in the ceiling are hung in the centre of the arch, the quaint globes adding to the artistic effect produced by the decorated arch and the side columns.

The placing of the shoes calls for some remark. It will be noticed that they are not set up in serriced rows as is often the case, but arranged in such a way as to make each one stand out separately, while yet forming a link in the general scheme. The shoes at the back rest on higher stands than do those in the front. In each case individual stands are used; and these are much better

The striking display of a Montreal retailer.

of such a background is hidden by a plush curtain hung on a pole about one-half way from the top. Just in front of this is the skeleton of the display consisting of four poles such as come in oilcloth rolls, fastened at top and bottom to small crosspieces to keep them steady. Extending from one top crosspiece to another are two parallel curved bars of wood, on the bottom sides of which are nailed several straight pieces upon which the artificial vines and grape clusters are hung.

The only thing about this display that calls for any outlay, is the curved top bars which were made by a carpenter, and the grape clusters and vines secured from a firm making a specialty of such materials. All the rest of the work was done by Mr. Lecompte himself in his spare time. Two lamps connected with sockets

for any small window than the larger kind—as well as more in line with modern methods in window trimming.

The silk cord fastened to the raised floor of the window at the front is a little detail that adds to the general attractiveness, as do the three artificial plants on the floor. But it is just these details that make or mar the success of a display.

How much did this display cost? Well, the artificial vines and plants are used by Mr. Lecompte again and again in different combinations. He gets a new material of this description every month or two from firms supplying such lines. Hence the cost of the material in this window depends pro rata on the number of times it is used. The rest of the cost is practically nil—say \$1 or so, as a liberal estimate.

The Editorial View Point

READY FOR A FRESH START

January quiet has reigned in practically all lines. Both, wholesale and retail establishments largely devote the first two weeks of the year to stock taking and consideration of future plans, and as comparatively few travelers are out during this period it is difficult to say much as to trade. As far as can be learned, holiday business turned out quite satisfactory. The advent of it even in many quarters helped materially towards the last of the season, and was responsible for a movement in staples that might otherwise have been lacking. The severe weather also that has prevailed during the past ten days has contributed to no small degree, notwithstanding its lateness to relieve the shelves and floors of heavy goods, although in many cases business has had to be helped along to some extent by easing prices a little. Travelers who have been out with fall goods or specialties report rather a better inclination on the part of buyers to look at their lines, and say that the outlook is brighter than usual for this time of the year. Money seems to be a little more plentiful, and payments are fairly satisfactory. The report of failures for 1911 shows a satisfactory diminishing compared with that of 1910, and reveals a marked contrast to its three predecessors.

THE FIRMNESS OF LEATHER QUOTATIONS

The hide market shows no sign of abatement, although there is a little more disposition to discount the future. January sales at the large centres are practically all cleaned up at the ruling figures, and contracts are being made as far ahead as May. There seems to be a genuine shortage in the supply of cattle, and those who operate largely, seem satisfied that there is no relief ahead in respect to prices for a considerable period to come. As a result, leather quotations remain firm with a tendency towards further strengthening. Sales of leather, both for manufacturing and jobbing purposes have been good for the past couple of weeks, manufacturers buying freely to complete spring orders. Export trade has also been quite brisk, and the demand from abroad with the activity of the home market has combined to keep stocks well cleaned up. Prices of the better grades of upper stock are even firmer than they were a month ago, and manufacturers are still struggling to reconcile what they have to pay for materials with what they are getting for their goods. It is claimed that some lines of Canadian leather are finding a sale in the United States in spite of the duty and the adverse trade conditions there, but the amount is not large.

NEW FEATURES LIKELY TO STAY

The season with the wholesale trade is now about over although there has been considerable sorting done during the past two or three weeks. The dissatisfaction with rubber shipments has practically subsided, and dealers have a chance now to study conditions and wonder what the future holds for them. Manufacturers have not given any hint as to plans for the coming season, but it is pretty generally accepted as inevitable that there will be little change from the modus operandi of last year. The net price list has apparently come to stay, and the present inclination seems to be to maintain the status quo of last year, as far as discounts for early orders are concerned. Undoubtedly many orders were held back last year on account of the lack of inducement for placing early, but it is urged that when the trade settles down to the fact that the early order discount has been permanently discarded, there will be no more difficulty in securing early orders than there is with the leather goods. It cannot be denied that there is substantial advantage to the manufacturer in having to some extent the season's requirements before him before getting under way. Within a

short time, however, there will be a definite indication of the programme for the current season

GOOD OUTLOOK FOR SHOE TRADE

Manufacturers are busy completing their spring orders, and, in general, closing up the season's business, the volume of which will undoubtedly reach an even more satisfactory figure than that of the same season for 1911. Since the advent of sharp wintry weather, there has been a very pressing demand for hockey and skating lines, so great indeed, that some of the jobbing and manufacturing concerns have had to work overtime to get out the orders. There has also been an accelerated demand for felts and heavy goods which looked for a while as though they were going to occupy the shelves for a considerable period, if they were not indeed to be carried over for another season. Dealers have thus enjoyed a period of activity for the past couple of weeks that is not common to the early part of January. With the retail trade there seems to be a general feeling of satisfaction with regard to the results of holiday trade, and with business since the first of the year. Travelers who have been out thus far, report business prospects bright, and every reason to expect the current year to be a considerable improvement upon even last.

MAKING A SALES STAFF EFFICIENT

At the beginning of the year a prominent dealer sent in subscriptions for several members of his staff, with the remark that he found it a very great advantage to have his help in touch with trade matters, and given instruction in the various departments of modern business endeavor. This spirit is most commendable, and in itself is evidence of progressiveness and broadness of view that are no doubt at the bottom of that particular merchant's success, and the efficiency of his sales' staff. It is in marked contrast however, to the attitude of another dealer whose single clerk had expressed the satisfaction and help that he had received from a few occasional copies of the JOURNAL which had come to hand, and who was anxious that the proprietor should subscribe for a copy for general use in the store. The head of the establishment said that he had no time for reading, and when told what his clerk had said, remarked that the latter might subscribe for it himself if he thought so much of it. Fancy the influence such an employer must exert upon his assistant or how much true success can be in wait for a man in business these days who has no time to read.

SOME FREAKS IN FALL SAMPLES

Manufacturers are already studying the requirements of the approaching fall season, and no doubt in a couple of weeks their ideas will be pretty well in shape. Of course, not nearly the attention is given to this season that characterizes spring efforts, but nevertheless change rules in regard to footwear for fall and winter to an extent that was not thought of a few years ago. On the other side of the line trade has been so uncertain that a stronger effort than usual is being put forth to coax business for fall, with the result that pattern makers seem to be at their wit's end to provide special attractions. "wocker" soles, fancy welts, English shapes, fantastic combinations of toccap, vamp and quarter are to be found in many of the advance styles, and innovations in eyelets, with button and eyelet combinations figure largely. Of course, when the freaks are weeded out a little there may not be as many monstrosities, but it looks as though there would be a goodly sprinkling of "millinery" in the running. It will be a pity if our makers should be led to follow too largely a tendency that is undoubtedly

the outcome of a frantic effort on the part of American makers to force trade by attempting the extraordinary. In a general way buttoned styles seem to be increasing their hold as well as English shapes.

CAN THE JOBBERS DO BETTER?

Annually at about this time jobbers begin to tell manufacturers just when they want deliveries of spring shoes. Of course, in most instances, jobbers have known since September or October that they would require delivery at a certain early date. But orders were not placed in those months, or, if they were, they were not large. Why jobbers should hesitate to order the more staple lines, at least, year after year, is hard to understand. Manufacturers are asked to do a year's work in six months. Can they do justice to themselves or to their customers? Is it fair to ask makers to maintain factory and staff for several months in comparative slackness, and then to call upon them to perform humanly impossible feats in a few months? Is it the square deal to actually force a manufacturer to purchase expensive lasts late in the manufacturing season so as not to disappoint jobbers who could have placed their

orders earlier to just as good advantage? Hardly. And the jobbers are a square lot of men.

IMPERFECT FITTING OF RUBBERS

A shoe manufacturer and a jobber have called attention to careless fitting of rubbers by some retailers. The shoe man has received half a dozen pairs of high toe shoes returned by retailers in all parts of the country, usually accompanied by indignant letters. The shoes were all well made. But the high box toes were destroyed by the wearing of low toe rubbers. Low rubbers and the natural heat generated by the human feet are a bad combination for a pair of high toe shoes. The jobber showed a carefully made rubber which should have been sold to fit a low heeled shoe for a Miss. The rubber was good for at least two months hard wear—except for a perfectly bored hole in the low heel for which a high Cuban heel was no doubt responsible. Now, rubber makers will furnish fits for every shoe made, and this misfitting can be overcome by greater care on the part of some retailers who are really more thoughtless in this matter than actually ignorant.

Time Saving Methods of Card Writers

Make Special Sale Cards Ahead of the Occasion Required—An Excellent Alphabet Illustrated for Small Cards—Getting the Engravings Ready in Ample Time—Detailed Description of Some Good Samples—The Eighth Lesson of this Instructive Series

By R. T. D. Edwards, The Robert Simpson Co., Toronto.

(Copyright by Acton Publishing Company, Limited.)

In the last lesson we touched briefly on time-saving methods for the card writer, and this article will be devoted in part to showing how time may be saved by preparing ahead for rush seasons. It is a great source of satisfaction to a man to know that when he is

so before the sale opens. They should be prepared, if possible, two weeks previously, giving opportunity for more carefully executed work. This will also allow of the last few days being given over to price tickets, which, of course, cannot be prepared so far in advance. In this connection, in the larger shoe stores, it is necessary for the card writer to keep in close touch with the advertising man, who is always acquainted with the facts regarding special sales.

Headline Cuts

For special sale cards headline cuts are sometimes desirable for several reasons, chief among which is the fact that their use saves time, and, besides, keeps all the cards relating to any particular sale uniform in appearance. By headline cuts we mean engravings

No. 6

No. 2

No. 1

brought face to face with a rush he will be able to handle the work with ease. Most card writers have experienced times when an unusually large quantity of work was thrust upon them, and the result was confusion. This article is designed to show how this may be avoided. If the card awriter has to put just a price on a card instead of one or two lines of lettering, as well as the price, he can turn out from three to four times as many cards, and where possible this must be done in rush seasons. Herein is pointed out a method which will be found valuable.

Looking Ahead

Much time is saved by looking ahead, and it becomes necessary for the card writer to be continually peering into the future. For instance, special sale cards should never be left until just a day or

No. 3

No. 4

No. 5

of headlines, such as are shown in the accompanying illustrations. In some instances they may not be entirely practical on account of the cost of the cut and printing. However, where a large quantity of cards is required the amount of time saved will justify the ex-

penditure of the necessary amount of money for the engraving and printing, and, furthermore, there is no reason why a January sale headline, for instance, cannot be used more than once.

In securing these cuts you make your original design and send it to an engraver. From the cut you can have as many cards printed as you desire.

From Figs. 1 and 2 the student can secure ideas for the design and lettering of a headline. These will be found useful for cards to be hand-lettered for reproduction by means of an engraving. The majority of styles of lettering used in the illustrated headlines have been previously dealt with in this course. The others will be explained later.

How to Execute Cards.

Let us first consider card No. 2. It has a cut-in letter effect. Decide upon the height which you want to make your letters and rule the guide lines in the usual way. Draw the outline of the panel and sketch the letters in carefully with lead pencil. Then the lettering or the filling in of the background may be proceeded with, leaving the white cardboard to constitute the letters. The second line on this card introduces the shadow letter. It is executed in a manner similar to the cut-in letter. Draw the guide lines and the outline of the letters as before, then proceed to shade the lower and left-hand sides of the letters at an angle of about 45 degrees. When this has been completed erase the pencil lines and you have an imaginary letter shaded. The lower design shows the brush stroke block letter, with a pen-ruled border. Use ink for ruling as advised in previous lessons.

Cards Nos. 3, 4 and 5 show shade effects used to good advantage. Special colors may be used for this shading with desirable results. Card No. 6 illustrates the use of double ruling, which is very easily executed and gives excellent effect.

In making drawings for engravings it is advisable to have them larger than the finished cut is to be, as in the engraving process small defects will be lost, whereas if a cut is ordered to be made larger than the drawing the defects will be exaggerated.

The Alphabet

The alphabet illustrated herewith is an excellent one for use on small cards where neat lettering is desired, and where special emphasis must be placed upon certain words.

The general style of this alphabet is similar to the brush stroke block. The chief difference lies in the use of the spurs. On account of the student being well acquainted with the brush stroke block alphabet it is unnecessary to enter into a detailed description of that shown in this issue.

Luck will change quicker for the man who can be cheerful when things are not coming his way than for his grouchy brother.

Is Your Trunk Department a Success?

This is the Time of Year to Figure Out the Answer to This Question—If Not, Why Not? Plenty of Scope for Successful Salesmanship and Net Profit in This Department

January should be the month in which every retail shoeman sits down and sizes up his trunk and leather goods department, with a view to finding out the weak spots in the last year's trade, and how the same can be eliminated during the coming year. Some questions he may with propriety ask himself are these: If I have not made a profit from my trunk department during the last twelve months, is it because I have not given it a fair show? Has it received proper attention in window displays and advertising space? Were the trunks and leather goods displayed in a prominent part of the store during the traveling season? Did I and my salesmen use every possible opportunity to sell articles in this department when shoes were bought?

Now there are very few shoeman who can honestly answer such questions in the affirmative. The average man buys just as little as possible for this department, and then lets it run itself. When this procedure is followed, the shoeman might far better dispense with the department altogether. But in so doing he will be taking a step backward, at a time when many progressive shoemen are just beginning to see how such a department may, not only in itself be made a profit-winner, but may become a valuable feeder for the shoe section proper, and vice versa.

To show the trend of the times, many men's wear stores are beginning to carry a stock of shoes, believing that their efforts to cater to men's wear necessities should extend even to the feet. In the same way, exclusive shoe stores are increasing the quantity and bettering the quality of their leather goods departments, and in many cases carrying umbrellas, canes, and even hosiery as well. This development is quite logical. Specialization can be carried too far, and the shoe store with a comprehensive, yet closely related list of goods to offer customers stands a better chance of winning out in the strenuous business competition of to-day. This, of course, applies most of all to the shoe stores in the smaller towns and villages. In large cities, specialization is the watchword, as there are too many in the field to win out otherwise.

Now is the time to clean out old stock by special inducements and persistent salesmanship. Soon spring goods will have to be ordered, and the way should be clear for the latest and most up-to-date stock in all lines in the leather department. In February 15th issue of the SHOE AND LEATHER JOURNAL, some of the latest styles in bags and trunks will be shown, with descriptions.

Why not determine to get the best possible results from your trunk department during 1912? Clear out the deadwood now, even at a sacrifice, and get in shipshape for a splendid summer's business.

A Firm That Does Not Believe In Special Sales

How Berlin Shoe House Builds Business on Permanent, Progressive Lines—Canadian-Made Shoes Handled Exclusively—
The Importance of Right Buying—Sound Methods That Have Brought Success

"A great many people were all the time asking me why I did not go into business for myself. I had been working on the bench for a number of years as well as selling shoes. I thought the thing over for a long time, and one day I asked the boss for a raise in wages as I believed that I had earned it. He did not give me much encouragement regarding higher pay, and I resolved that at the first opportunity

which presented itself, I would get out. That chance came five years ago. Have I made money in the retail shoe business? Well! I have made a living anyway," remarked Adam Sippel with a broad smile.

The firm of Sippel and Hagen is one of the most substantial in Western Ontario. The store has both an imposing front and inviting interior. There are neatness, order and taste about the premises which create a favorable impression the minute that the visitor enters. Mr. Sippel was born in Berlin and knows nearly everybody in the town and for miles around in Waterloo county. Twenty-eight years ago he started to learn the shoemaking trade, and he is still identified with the footwear business. He carries a large stock. His partner is H. A. Hagen, but he devotes practically all his time to the busy shirt factory which is run under his name,

having gone into that line a few months after launching in the retail partnership with Mr. Sippel.

The Attributes That Tally

Mr. Sippel attributes any measure of success that the business has met with to right buying, prompt and polite attention, and giving customers a satisfactory service. "I always believe in using the people nicely," he remarked. "Courtesy pays in every way. Give good values and do not try to foist your own ideas down the throat of others. When prices are marked down here the reductions are genuine. We endeavor to impress upon all that they can depend on what we say about the goods. Good buying goes a long way in making the commercial pathway easy of ascent. Never purchase what you take a fancy to, or what you think ought to sell, but what you have learned from experience and insight that your customers want. Every man should know his trade thoroughly. He should be familiar with the various classes of shoes that he has sold during the past season, and anticipate what will go during the coming season, based upon his observations and record of the corresponding period of the year previous."

No special schemes are adopted by the firm. They rely on time honored, well-tried-out methods, backed by attractive window displays and clean, bright premises, neat stock keeping, and using the people right. They do some newspaper advertising, and each

The interior of Sippel & Hagen's store, Berlin, Ont. The premises are 100 feet deep and 22 feet wide. The firm's slogan is "where the good shoes come from." They have built up one of the largest trades in Western Ontario.

year present their customers with an artistic calendar—one so handsome and unique, that it will be kept. They think that money spent in cheap trashy productions might as well be thrown away.

All Canadian Made Goods

A feature about this large store, which is 100 feet deep and 22 feet wide, is that not an American shoe can be found on its shelves. Mr. Sippel is of the opinion that Canadian factories are capable and enterprising enough in the matter of style, fit, finish and workmanship to please any customer. "We carry" he said, "goods of practically all the leading Canadian makers, and our relations with them have always been very pleasant. We did not fancy paying duty on top of the purchase price and then, if a shoe went wrong, there was too much red tape to bother with in getting an adjustment of the trouble. Some months ago we cut out all American made footwear and we have not suffered the loss of a single customer. Now the majority of people to this town work for a living in the various factories, but the girls and young men buy good footwear, even for every day use—much better than you would suppose. We are not afraid to handle a few freaks and have never lost money on them although we candidly admit that we would welcome any movement to lessen the number of styles. There are too many and entail too heavy an investment."

The Losses are Very Few

The store closes every night except Saturday night at 6.30 o'clock. The firm have lost very little money through credit or approbation since they have been in business, but are careful to whom they extend these concessions. Mr. Sippel has been catering so long to the public that he rarely if ever gets "stung." He considers that a repair department is a good adjunct to a retail business in a place the size of Berlin, and it has paid well. They do not see how an ordinary shoe store could get along without one, as the best of shoes will occasionally go wrong. There may be a rip or some other little defect, and they remedy this if they think that the case is one which they should attend, but, of course, exercise their judgment in each individual instance.

No Faith in Constant Bargain Shouting

The firm do not favor the clearing sales every January or July, and rarely put them on. "We do not believe in encouraging this class of trade," added Mr. Sippel. "We do not want to turn regular customers into bargain hunters, who will purchase here one day and some place else to-morrow."

All lines are closely watched, and a big table used for getting rid of some of them, while others, if they are not moving as freely as they should, have the price cut and a frank explanation given for so doing. Such a thing as a general reduction or sacrifice sale is practically unknown since they have been in business. No shoe of any character is kept in stock over two years—in fact, very few lines that long. They have to go as there is no money in dead stuff.

Regarding prices, no hard and fast system is used. All goods are marked in plain figures, and the selling price of a boot is largely gauged for what will that product bring? What price should its style, build and finish command? The bulk of all goods is bought direct from manufacturers, although certain regular lines, in which considerable sorting is done, are obtained through jobbers.

Attention to Special Lines

Special attention is devoted to findings and for some time trunks, fitted bags and suit cases have been handled. The latter are neatly displayed on the top of the shelving and the more expansive goods kept at the back of the store. Profits on them, the firm consider, are satisfactory, and they see no reason why this trade should go to the harness man, the general store or other merchants. Skates are also handled and put on.

The front of the store is striking and the windows are of the show case type. There are fine large mirrors at the side and back and the flooring and ceiling are of quarter cut oak. The backs are on weights and easily elevated. In the decoration of the windows,

which are never crowded to excess, just enough lines are shown to create a favorable impression. The firm find that they manage to capture a large proportion of their trade by appealing trims. Over the windows is opaque glass, each window being nine feet deep. The shelving inside is white enamel, and the effect is decidedly pleasing. About three quarters of the way back is an arch, but the view from the front to the rear is uninterrupted. Quarter cut oak settees placed back to back, are used, principally for the accommodation of patrons. The arrangement of stock is neat and tasty, and the whole establishment is a credit to the progressive mercantile institutions of busy Berlin.

Higher Profits Are Necessary Today

Western Retailer Tells of How Carefully Margins Have to be Figured in Order to Offset the Many Sources of Loss

"There is no business just like the shoe business and therefore the retailer should have a bigger margin of profit than he generally gets," remarked a Moose Jaw merchant the other day. "I agree that all profits should be based on the selling price of a pair and not on the cost price. There is where many a man makes a mistake. He thinks he is coining money when he is not. Now a few figures will amply demonstrate what I say. Twenty-five per cent. on the cost price of a shoe is equal to only twenty-per cent. on the selling price, thirty-three and a third per cent. equals twenty-five on the selling, fifty per cent. is equivalent to thirty-three and a third on the selling, and one hundred per cent. on the cost is tantamount to fifty on the selling. You see there is quite a difference on how you reckon or fix your profit. All the goods on my shelves are marked on the selling price profit basis. I mark them up fifty per cent. on the cost which equals only thirty-three and one third on the selling. Take a man's boot retailing at five dollars. If you have to throw in an extra pair of laces and put on a pair of heel plates, as you frequently do, that eats up five cents, and if the shoe happens to rip and you send it to the repair shop to be sewed, that is another ten cents you are out. Then there are always a few pairs in every line that drag and will not sell. You have to get rid of them at the end of the season at a reduction. You therefore on specialty stuff have to make even a larger profit on the first few pairs than I have named to break even when you consider that it costs twenty-two per cent. to do business in this city. One has to carry so many styles and stock soon runs up into money.

"Take a men's furnisher, for instance. If he invests fifty dollars in collars he has a large and representative selection. Now, a fellow going in to purchase a collar will not generally walk out if the haberdasher does not happen to have one with a square corner or if the neckband is half an inch lower than he has been in the habit of wearing. He will accept a substitute. Not so in the shoe line. If a man wants a high heel, a flat tread, a high arch or knob toe, he will not take any substitute. He is particular and you have to carry what he asks for or you will lose his custom. Shoes represent a heavy investment and there are more people particular regarding their footwear than they are about any other portion of their raiment. Each has his or her own ideas, and you have to cater to varied tastes. You cannot afford to sell at too close a margin considering the responsibility involved. You must, therefore, base your selling figure high enough to let you out clear of all contingencies. Shoes are expensive things to carry over for a season, and in some instances their value depreciates fully thirty-three to fifty per cent. It requires close study and observation, sagacious and discriminating buying if you do not get stuck. A certain style of linen collar you can wear the year round, but not so in shoes. You have to operate carefully and cut out all unnecessary extravagancies. I am trying to keep my stock in a shape to eliminate special sales. I like the idea of clearing out a lot of 'stickers' in a body even if I have to sacrifice heavily. A wider margin of profit than has been obtained in the past is essential to offset style losses and the dribble that forms that part of every consignment, no matter how great the rage may be for any particular leather, last or model."

Shoeman Slips One Over on Catalogue Houses

Believes the Local Business Belongs to Him and Gets After It in Spirited Manner — Fighting Outsiders With Their Own Weapons—The Way to Corral Trade is to Get After It—Some Side Lights

By H. M. TANDY

Hy Brown, proprietor of the Possum Centre Boot Emporium, looked up from his bookkeeping as the tinkle of the bell over his head announced the entrance of a customer.

"Howdy, Bub," he said, nodding cordially to that individual who seated himself in a chair before the stove.

"How's everything, Hy. Business keepin' up?"

"Tolerable, Bub, tolerable," said the proprietor, wiping his glasses. "But to be frank with ye, I'm sorry to see ye buyin' from Shears & Sowbuck lately. Bub, I'd like to hev sold ye that pair of shoes."

"An' I'd like to hev bought them from ye, but Gol Darn it, Hy, it's every man fer himself these 'ere days. I'm fer savin'

Billy had visions of a big store in the near future.

money when I kin. Ye can't blame me fer that kin ye? Hy! Yer prices are too dern high, that's all there is to it. Do you know I saved fifty-two cents buyin' them shoes in Toronto."

"Ye saved that did ye, Bub," said the proprietor, after a moment's pause.

Let's Do a Little Figuring

"Yep, that's right," Bub answered.

"All right, Bub, now let's do a little figuring," said Hy, producing a pencil and paper. "Come over here. I've got Shears & Sowbucks catalogue right here. Now what kind of shoes did ye buy? This pair here, an' they cost ye \$2.48."

"Yaas, an' they're a mighty slick lookin' pair of boots, too."

"Bub, d'ye see them shoes there? I kin sell ye them shoes fer \$3.00. Yer shoes cost ye \$2.48. Ye paid the express remember, an' that was 25 cents, anyway, I reckon—that's \$2.73. Now there's 27 cents difference between them shoes an' mine. Now, presumin' yer from Missouri, I'll show ye. For the sake of argument, we'll say that yer shoes looks as well as these 'ere ones. But there's more to a pair of shoes than looks. Fer instance, there's wear an' there's comfort. Now, Bub, these ere shoes will be lookin' like new when those Toronto ones are on their last legs, an' that's because they've got real leather in em', not near-leather. An' see how heavy them soles be; they're full double soles with rawhide slipped in between 'em. They're water tight, them shoes are. They're easy on the feet, too. Them shoes are made on a special last, an' they aint no threads protrudin' through the insoles to hurt yer feet.

Takes Longer and Costs More

"The soles of these shoes is fastened to the uppers by the same method a shoe maker uses in makin' a hand turned shoe. It take longer an' it costs more to make a shoe this way, but it makes a stout shoe that'll give ye service. Here's another pint to be considered in buyin' shoes from me, Bub—when ye come into my shop to git a pair of shoes ye try 'em on till ye gits a pair that fits. Ye're not tempted to wear a pair that aint right, 'cause ye got'em

or can't wait to send 'em back to Montreal or Toronto to change 'em.

"Mebbe ye didn't know it, Bub, but catalogue house shoes are responsible for most of the sore feet in this 'ere Dominion. An' then agin, there's this," continued Hy, "Ye sent yer money up to a big city, an' it aint likely to come back to Possum Centre in a hurry. It's gone to pave streets in Montreal, Toronto or Winnipeg. An' did ye ever think of this, Bub—if the retail stores of this ere town closed up fer lack of trade, up go yer taxes. Do Shears & Sowbuck pay any of the taxes of this community—not on yer life. Another thing—who gives credit, when credit's a mighty fine thing to have—who buys yer butter an' eggs—Do Shears & Sowbuck? An' another thing, Bub, do you or yer family or yer friends git any benefit from the money Shears & Sowbuck pay their help? The more business yer local stores does an' the more clerks they employ, the more money goes into someones pocket right here in Possum Centre. An' the more there's goin' on in Possum Centre, the more yer property will be worth. Bub, ye'd hev got yer 27 cents back time an' agin if ye had bought yer shoes of me."

Aint no Time to be Talking

Bub was visibly surprised at the result of the figuring and had hardly a word to say. Finally he blurted out, "This aint no time to be tellin' me all this Hy. Gol Darn it, I've bought the shoes. Shears & Sowbuck told me all about their boots, an' I never knowed these things about yourn afore."

After exchanging a few remarks on the weather, Bub stumped out into the night.

Hy stirred up the fire, relit his pipe and reflected in silence for a time. "By Gum, there's somethin' to what Bub says. I've got the goods, and my prices is right, but them pesky catalogue fellers has been gettin' altogether too much business out uv this neck in the woods."

Get Business By Going After It

"It's because folks know all about their goods, an' don't know the good pints of my goods, an' the advantage iv doin' their tradin'

Catalogue house fellows trying to get into Possum Centre—Nothing doing.

here in Possum Centre. B'gosh, I'm going to git in the game. The way to git business is to go after it, an' I aint been doin' that. I've got to compets with them fellers in big cities, an' they're mighty sharp after business, too, but I've got the advantage of bein' right here on the spot. What this business needs is a 'course of sprouts.' Now I've been lookin' over that copy of the SHOE an' LEAMHER JOURNAL I got the other day. An' By Hickory, if a feller ud run his business on the tips he gits from that he'd be up-to-date all the time. They know more about runnin' a shoe business than them catalogue fellers does. The shoe business in this town belongs to me, an' I'm goin' to learn how to git it. I believe I'll subscribe to that 'ere paper an' study up on all the modern

ways of doin' business. I'll do some advertisin' here in Possum Centre. I never did none of that window trimmin' afore, but I'll read how it's done, an' try my hand at it. Mebbe I might try out one of them store papers like I was readin' about. Yes, I jest believe I'll subscribe to that paper to-morrow. No, By Gosh, to-morrow may never git here—I'll do it now."

Slipped it Over All Right,

Three weeks later the proprietor of the Possum Centre Boot

Emporium stood in the doorway and smiled. "I guess yer Uncle Hy slipped one over on them catalogue fellers that time all right, all right. Let's see, that's 17 pair of men's shoes, 18 pair of women's shoes, 8 pair of slippers, an' 3 pair of children's shoes I've sold this week already, an' my trade on shoe polish, shoe strings an' such like has jest about doubled. That's what them catalogue fellers ud call 'going' some.' 'Pears to me I sced somethin' somewhere 'bout 'fightin' the devil with fire', which sounds pretty good to yer Uncle Hy."

Credit Man Justifies the Stand That He Takes

Believes That the Fellow on the Inside Has Right to Have Final Say as to Whom Factory Will Sell—How One Traveler was "Closed Up" and Another "Stung" for a Pair of Shoes by a Retailer

"I see that the travelers had their innings in the last issue of the SHOE AND LEATHER JOURNAL," remarked the manager of Montreal shoe manufacturer, "and perhaps you would not mind giving a hearing to our side of the case. I recognize the need of co-operation, the pulling together of all branches of the business, to build a growing and profitable trade, but there are times when the judgment of the road men is at fault. They are not always the best critics as to whom we should sell."

"I remember a year or two ago a man opened a retail store in a city in this province, and naturally, there were several representatives on hand to secure his order. Now we had a salesman on our staff, who was a personal friend of this fellow, concerning whom we had not heard good reports. One day the traveler came in bursting with pride to the effect that he had corralled a booking for two thousand five hundred dollars worth of shoes. We did not care to fill the bill, and run the risk of payment. The traveler told us that he was honored in beating out the other chaps, and assured us that the order was all right. He knew for a fact that the goods would be paid for. This was along in February, and the payments were to be made in June and July. We were told that we could write Mr. So and So regarding references of the responsibility of the dealer. We took the matter into consideration and decided that we would write. The first party that we communicated with replied that the new dealer was "a loafer, a dead beat and a crook." Another firm with whom the new retailer had been connected, replied that, as for giving him credit, they would like to administer five dollars worth of shoe leather under his coat tails, or, in other words, kick him off the place if he ever came near them. Our man returned at the end of a week's trip and asked us if we were going to fill the order.

"No we are not," I replied. "We have written certain people whose names you have given us and have received anything but flattering recommendations."

Dirty, Rank Treatment—I Say

"Yes, and that is the way you treat me," was the hot answer. "Great encouragement to work for this firm, isn't it? Here I go out and, in the face of the strongest opposition, and by a good selling talk, secure an order for \$2,500 worth of goods—only to be thrown down. I tell you that fellow is all right, and I know it. He gave me the order for the G— brand of shoes in preference to all others, and, because I was too smart for the bunch that I was up against. Now you hurl me and my business about like this. It is rank treatment to say the least."

"I pointed out that we could not afford to take a chance and that so far as we could learn, we would never get our pay."

"The traveler became nasty in mien and language, and insinuated that an office man did not know as much as he might and that he was receiving rotten and dirty usage from the house.

He Pulled in His Horns

"This sarcastic and belittling reply was more than I intended to stand, and I promptly withdrew his contract from a drawer in my desk. Now, here is your contract. You can have it back this

minute if you are not satisfied. I will not stand the line of talk you are dopping out from any man. We want to be square and fair, but you cannot knock and kick the factory and its management like this." He knew that I meant every word I said, and promptly drew in his horns. Well to make a long story short—Mr. Retailer got his goods from several other firms on the datings named and conducted a rushing business for three months. On July 2nd, just as his paper was falling due, he made an assignment and his liabilities were heavy. The dealer was a grafting and lying individual, and soon after left the country. Fully half a dozen factories were stung, and yet, if we had listened to our traveller, we would have had to bear the whole brunt of the raw deal."

The Traveler Fell To It

"One more instance. A traveler, who had represented us in Nova Scotia died after a short illness. We appointed another man to cover his territory. He went down to one town and called upon a customer who is always trying to sting manufacturers. He presented his card, and when the dealer saw the words—"B— Shoe Company," he replied, "Not for me!"

"Why," asked the road man. "Ever tried them?"

"Oh yes!"

"Did you not find the line all right?"

"No complaint on that score at all," was the ready reply, "but your factory does not honor just and fair claims."

"Well, that is news to me," remarked the traveler. "We scarcely if ever, have any kicks coming on that point."

"Well, I have a grouch and don't mind telling you so," added the merchant.

"What is its nature?" inquired the new man anxious to adjust any trouble "and perhaps I can remedy it."

"Well, some time ago I sent back to you a pair of patent leather shoes that should have been renewed. They declined to entertain the claim."

"If I manage to make it good I presume that I may look for some business from you," ventured the caller.

"Certainly," added the retailer. "I have no objection to your house—only the one that I have referred to."

"When Vanner, the traveler, got in at the end of the week he told me of all the circumstances, and was confident he could get business—and a good deal of it—from Bucker, if he could straighten this matter out. I was dubious of the whole thing. After telling the new man why; as he was persistent that we make good the claim, the justice of which I did not for one minute acknowledge, I made this proposition.

Take Them With My Compliments

"Now Vanner, I tell you what I will do. You may go to the stock room, pick the best pair of patent leathers there selling at four and half, and express them prepaid to Mr. Bucker. I will charge the shoes up to your personally, and as soon as he gives you an order for one hundred dollars worth of goods, I will cancel the bill against you. Is that fair?"

"Yes, that will do," answered Vanner. "I know that I can

get business from Bucker, for I got close to him and he took a fancy to me."

"Vanner selected the shoes, prepaid the express and had the stenographer write a note to the effect that he had induced the house to make things right, after explaining it all to them, and was shipping Bucker one of the best pairs of goods in the shop for his personal wear. Would he accept them with the compliments of Mr. Vanner, etc. Not for ten such claims would the factory lose his valuable business."

Strange He Don't Write

"The next week Vanner came in and inquired if there was any word from Bucker. I told him, "No," and he remarked that there was possibly an acknowledgment up at his private address. But no word came. Another week passed, but with the same result, and Vanner exclaimed that it was peculiar Bucker did not even send a note of thanks for the shoes. I told the traveler that he had very probably been "worked" for a nice, new pair free, and he indignantly scouted the idea. He knew better, and had more faith in the honesty of human nature than I had. Another week—two of them went by—and still no squeak from Bucker. Finally the traveler said that as he had business over that way he would call and see what was doing. A few days after he walked into the store of the retailer."

He Was Entirely Filled Up

"The merchant affected not to remember him at first, and finally recalled that he represented the B— line. Vanner was polite but guarded. It was a little late in the season for fall orders, and, when the traveller asked Bucker to go over and have a look at his samples, anyway, the latter suavely replied that he was full up and could not stock another pair. In fact, he doubted, with the weather prospects and state of trade generally, if he had not very much over bought. Vanner, after urging the quality, merit and style of his goods in vain, waited until he obtained a flat throw-down, and a distinct refusal to look at his samples. Then he adopted another ruse.

"By the way," he inquired, casually, "did you get the pair of shoes that I sent you over a few weeks ago, making good that

claim." Bucker thought deeply for a minute, and remarked, "Oh yes! they came all right, and were very nice, thank you," and he turned to go into his office as if the interview was at an end. Vanner then lit into his man and informed him where he got off at. He told him in plain, picturesque language what he thought of his contemptible course of treatment."

Was Stung Good and Proper

"I felt like rubbing it in a bit but he answered that he did not care to have the matter referred to as he had been stung good and proper and had lost a large slice of his faith in human nature.

"Now," concluded the speaker, "that retailer saw at once that the traveler was new, and thought, if he met him with a grouch, he would be able to get ahead of this firm, and he did—to the extent of one pair of shoes. The fellow had made a practice of humoring his customers for years at the expense of the factories by sending one pair of shoes back after another, telling the buyer that the factory would likely stand for a new pair. He did it once too often with us, and we at last refused. That traveler now sees all is not gold that glitters, and does not put so much confidence in promises of probable business, or "give you a big order next time."

Mutual Concessions Are Needed

"I maintain that a factory manager or credit man is the best judge of the financial responsibility as to whether a retailer is a good account or not. He can, by various means, find out how the dealer is meeting his paper, learn his record of the past, and how much he owes, which no salesman can learn, no matter how often he calls. The credit man and the traveler should work hand in hand. Both should give and take a little. But it is not fair to say that the fellow on the inside of the factory walls does not know a thing or two as to what is going on outside. We have no grievance against the majority of our travelers who are only too anxious to labor hand in hand with us, but now and then a case crops up which leads to some lively sessions, and mutual concessions are needed. The traveler's lot may be a hard one, but the position of the credit man or the manager is infinitely worse. Many an account looks all wool and a yard wide which, when examined, turns out to be mere shoddy or cheese cloth."

Interior view of Henderson Bros. store, Port Arthur, Ont. The shoe department occupies all one side of the store, and is one of the best paying and ably managed branches of the business.

Some Stray Shots from "Solomon"

If we were as anxious to be wise as most of us are to seem so we would escape much trouble. There are men who make fools of themselves trying to impress people with their wisdom. Look out for the fellow who is always making the effort to appear omniscient; he is more dangerous than the fool who "knows more than seven men who can render a reason." Before wisdom, as before honor, is humility. The wise fool wants a chance to run the universe and usually runs anything he takes hold of into chaos. "The foolishness of man perverteth his way and his heart fretteth against the Lord." If people would do a little more thinking and listening they might accumulate both money and wisdom. We get so "sot" on our ideas and ways that we miss many a good thing by sniffing either at the ways of the Lord or other people.

It's not so important how much money you made last year as how you stand with regard to character and manhood at the close of another period of business activity. Have you the respect for the man who wears your hat that you had a year ago? Don't put too much emphasis on the profit and loss account in your ledger. Take stock of your assets and liabilities, but don't forget to ask what you have gained in character. "A poor man is better than a liar." You may be worth less than you were in money a year ago but if you can look into the mirror and see the face of an upright man or walk amongst your fellows with the feeling that no man, woman or child is the worse for your having lived the year through, you have not missed the mark. Let liars hug their gains.

We have a good deal of the savage in all of us. Just note the crowd that gathers about a dog fight or the interest that will attach, even amongst fairly decent people, to a pugilistic bout. But we are steadily getting away from not only the idea of physical contests, but many others. The best lawyers today devote their energies to preventing law suits; "manly sports" such as boxing are more and more left to the riff-raff, and even the nations are getting together on the common sense plan of settling disputes by arbitration. "It is an honor for a man to cease from strife; but every fool will be meddling."

When you feel tempted to tell people how big or how good you are, shut up. The surest sign of a weak man is the tendency to "blether" about himself or his doings. There are some people who can't talk to you five minutes without working in some information about themselves, their big doings or their big friends that makes you want to kick them under the coat tails. You can depend upon it that if you are worth knowing or hearing about the world

will not long be in ignorance of where you live. Be good and let the seeming take care of itself. Be great and don't thrust your greatness on people who will see it before you do if it's of the right kind. "Most men will proclaim every one his own goodness; but a faithful man who can find?" Be faithful.

Hard work is the open sesame of success. No fortress of achievement can hold out against it. Genius, luck, pull and even graft take a back seat as factors in "getting there" when it appears. If a man gets a line in a thing that he stands a chance of doing at all well and puts steady licks behind it he will win out in spite of fate or mortal enemy. Nothing can stand before hard work, especially when thoughtfully directed. That is why the Wise Man says, "Love not sleep lest thou come to poverty; open thine eyes and thou shalt be satisfied with bread." No man with work in this world to do can afford to spend more than a third of his time in bed. Look up the cause of failure and the most potent will be found "sleep," whether natural or otherwise.

THOUGHT FOR THE DICKENS YEAR.

As the year 1912 is the Centenary of the birth of the great novelist, whose wonderful achievements still challenge the admiration of the English-speaking world, a statement of the author as to the secret of his success as taken from David Copperfield and generally regarded as largely autobiographic, is quite timely:

"I never could have done what I have done without the habits of punctuality, order and diligence, without the determination to concentrate myself on one object at a time, no matter how quickly its successor should come upon its heels. I do not hold one natural gift, I dare say, that I have not abused. My meaning simply is, that whatever I have tried to do in life, I have tried with all my heart to do well; that whatever I have devoted myself to, I have devoted myself to completely; that in great aims and in small, I have always been thoroughly in earnest. I have never believed it possible that any natural or improved ability can claim immunity from the companionship of the steady, plain, hard-working qualities, and hope to gain its end. There is no such thing as such fulfillment on this earth. Some happy talent and some fortunate opportunity may form the two sides of the ladder on which some men mount, but the rounds of that ladder must be made of stuff to stand wear and tear; and there is no substitute for thorough-going, ardent and sincere earnestness. Never to put one hand to anything on which I could throw my whole self; and never to affect depreciation of my work whatever it was; I find now to have been my golden rules."

You may be enjoying or at least be fascinated by that secret game you are playing, but have you thought of what is ahead of you? Perhaps you may not be found out, the chances are that having worked it so long, your skill or cunning may keep you out of the clutches of the law or out of the way of public condemnation. But have you thought of what the thing must mean in the end to you personally and those you have wronged? When you are all through and are weary of the game with what feelings will you look back on the whole thing? How will it seem when those you have "done" or robbed of that which is more precious than gold are under the sod, and you are facing the same prospect? "Bread of deceit is sweet to a man, but afterwards his mouth shall be filled with gravel." Don't forget the gravel pit is ahead if you are fond of "twist" loaves.

We put danger signals on poison bottles and muzzle vicious animals, and we fail to label or leash that most dangerous and hurtful of all things, a wagging tongue. "Death and life are in the power of the tongue." How much devastation, how much healing has it wrought. You pride yourself that you say what you mean. So does the bullet or knife that goes to the heart of the victim of its "directness." Of all the cruel assassins that spare neither age nor youth, wealth nor poverty, saint nor sinner, the bad tongue is meanest and busiest of the devil's own agents. Let this year see an attempt on your part, if you have been a wielder of the silent stiletto or the bludgeon to make the tongue a means of health instead of death.

Will All Shoes Be Advanced in Price This Fall?

Several Manufacturers Declare That There Will Have To Be An Increase—Ascending Prices of Leather and Stiff Market Urged as Reason—No Disposition to Reduce Standard of Goods—Is Raise Warranted

A leading Canadian maker of feminine footwear remarked this week that retailers might as well prepare themselves for an advance next fall of from five to seven per cent. on many lines. "The increase is bound to come," he added, "for the maker is encountering conditions which are fixed, and he has to have some profit. I have been following the markets closely and talking with many tanners. No man is going to do business at a loss. We are paying on some lines of leather from one to three cents higher than we were a year ago, and, when we have to enter the market, we discover that we are faced with stiffer prices all the time. This is no mere hard luck story. Any man in the business knows what I am saying is perfectly true.

"All other lines of trade appear to be on a profitable, living basis, but the shoe maker is keeping prices down. I know of some factories that are not paying a cent of dividend on their investment. If the tanner pays more for his packer and imported hides, he has to get more out of his product. A like condition applies with equal force to the footwear manufacturer. Hides generally are three or four cents a pound higher than they were twelve or thirteen months ago, and there has been a shortage in the slaughter of over four hundred thousand fewer cattle on this continent than there was during 1910. There has been a very considerable advance established in all lines of leather. In January of last year, packer hides in Chicago sold from 12¼ to 13½ cents; to-day the same hides are going at sixteen to seventeen cents. When you consider it takes three feet of leather to make a pair of man or woman's shoes, you see that matters are not exaggerated.

"The New England manufacturers are contemplating action. They have to do so to protect their own interests, and the people will not stand for any inferior productions. All the retailer has to do is to add the small extra cost and the public will pay it gladly."

Will Keep the Quality Up

A well known Ontario maker of men's staple lines remarked, "Yes, I see no other way out of the dilemma than to make a slight advance in my prices this fall, and if conditions do not change, I am going to do it. I have not a large supply of leathers on hand, and had to stock up with some box calf the other day, paying a cent a foot more than I did a year ago. It takes three feet to make a shoe. All goods that I turn out must be up to the mark, and I do not intend to allow my lines to suffer in finish, appearance or the materials that enter into their construction. If the prices are not increased, the difference will have to be taken out of the shoes themselves.

"The public surely want the same quality of standard as they have been getting. They have learned from bitter experience that there is no money, satisfaction or profit in cheap, trashy footwear where the shoe is lacking at vital points. If we do not get increased prices there will be a strong disposition to economize somewhere. Then wages are by no means going down. Any maker will tell you how difficult it is to get sufficient and competent help in the fitting room while lasters are none too plentiful. I could tell you of many more troubles that we are up against, but I have said enough to let you know where we stand."

Increase is Bound To Come

The same story was told by other manufacturers, and, while only one or two would declare definitely that they intended to advance the price of shoes from fifteen to forty cents a pair this fall, they expressed the hope that they would not have to blaze the way for the others. "This is a case of mutual interest, protection and welfare," declared one who sells entirely to jobbers. "The boot and shoe section of the Canadian Manufacturers Association should come to a definite understanding on this matter. You will notice that two or three factories in Quebec have of late months gone to the wall. Mark my words, there will be others and not

in that province either unless they do something speedily to recoup themselves. We cannot maintain the quality and style in medium and high-grade goods if we want to keep up to the standard that we have now established. There must be a raise in price unless the figure for all materials should go down."

They Took the Initiative

One of the largest manufacturers in Canada last fall advanced the price on some medium lines from three to five per cent. In conversation with their sales manager he said that he found that business in these samples had not fallen off any. A few retailers complained, of course, but when the reason was frankly and fully presented, they had no kick coming. "If the facings, hooks, counters box toes, insoles, heels, trimmings and linings are not to be scamped or miserable stuff substituted the price of shoes has to ascend," he continued. "The makers are not branching out as they should. Look at other industries, how they are erecting additions to their factories. I venture to say that, considering the relative importance of the trade, fewer makers of shoes are developing to the same extent as their brothers in other lines, I know that some have greatly augmented their capacity, but not many.

"Do the wearers of good footwear want pieced trimmings, leather board heels, canvas or shoddy insoles, flimsy boxes, and cheap counters as well as inferior sole stock? Not a bit of it. I was in the retail business, and I tell you the people will pay a reasonable price for a good article no matter in what line, but, like the average spender, they want their money's worth. I think that the advertising phrase, "Made up to a standard and not down to a price," describes the attitude of the ordinary buyer of Canadian footwear. If the product deteriorates from the causes spoken of, the makers and the retailers will suffer much more through loss of patronage and prestige than if they had the courage to advance prices. The stock and findings in a shoe must be kept up to the mark, and, with our rainy weather and sloppy streets, if there is anything inferior, the damp, hard walks and rough usage given shoes, generally locate the defects at short notice. Labor costs more to-day than a year ago, living expenses are going up all the time, factory administration is more expensive, and, when you add all these to the advancing figure for leather, which is far more costly than it was six months ago, the only way is to mark up your goods accordingly."

Will There Be An Outcry?

Other manufacturers, when spoken too, presented similar arguments. "Yes, it is time this matter was taken up and thoroughly understood," writes a Montreal manufacturer of both welts and McKays. "I will give you some information in a few days to show the Canadian shoe dealers that they may expect similar advances to those about to be put into effect in Lynn and Brockton, and it will come this fall sure. I know there is always a howl when higher prices are talked of, or even breathed, but we are now at the parting of the ways, and have to do something. We are not in business for our health, and we are going to operate our factory at a fair, living profit. When we cannot do this we will get out. We must get our own out of our footwear, and we are not going to turn out inferior work or material. Then lasts and patterns are changing far more frequently than a few years ago, which all means heavy additional expense, for a maker must keep up-to-date or he will soon lag in the race. To lag is to decay, and to decay is commercial paralysis and death."

The SHOE AND LEATHER JOURNAL will be pleased to hear from representative retailers as to how they view the proposed increase and what will be the effect of an advance in their trade. It may necessitate charging odd prices, but some dealers maintain it is time fixed figures to the public were abolished and a distinct step taken in the direction of selling at \$2.85, \$3.35, \$3.60, \$4.15, \$4.40, \$5.30, \$5.70, etc."

Stock Arrangement for Hosiery in Shoe Store

Suitable Boxes Are Necessary—All Goods are Arranged as to Color, Line and Price—Descriptive Card on Box is Preferable to Selling from Samples Which Soon Become Mussed

The footwear merchant is supposed to clothe the feet. If he stops at selling shoes alone he is not living up to the full privileges or responsibilities of his business.

More shoe dealers in the towns and cities of Canada are to-day carrying hosiery than ever before. They find it a ready and profitable line—one that will attract trade, a class of custom which they never expected to get. Why should the foot-fitter allow the business in socks and stockings to go to the dry goods, the general or the men's furnishing establishment? It properly belongs to him, and it is the most natural thing in the world for a lady to purchase silk or lisle hosiery when selecting a new pair of shoes. In children's goods the shrewd retailer, with a keen appreciation of the future, is looking to their needs.

The manager of one of the leading shoe emporiums in Western Canada, where a very satisfactory business has been built up, has furnished the *SHOE AND LEATHER JOURNAL* with an outline of their methods.

One Style of Boxes

Stock boxes are used and a number of choice pretty lines displayed in a silent salesman show case, the interior trim of which

Card for insertion at opening in box

Pin ticket to be attached to every pair of hose.

is altered at least once a week. The hosiery branch is presided over by a young lady who also looks after the sale of findings, both popular and fancy, which have become a feature of the store.

"One of the first requisites I would consider," writes the manager, "are stock boxes of uniform color and style. You know there is nothing that looks quite so nice or is so impressive in a shoe house as standard size cartons and labels. The effect is always pleasing. We carry out the same idea in our hosiery department. Some of the boxes for cotton hose are wider and shallower than those for wool and cashmere, and the ones for ribbed hose are generally narrower and deeper than those for plain hose. All boxes I would have made with an opening in front, behind which I could insert a card stating trade number of hose, giving description, size, cost, and selling price, which cards I could change or renew as I required to do so.

Details of Marking

Having received our hosiery, we check the quantities, kinds, and prices, by the invoice, and mark cost and selling price on label end of box or package, then we have every pair ticketed with pin ticket, giving No., size, cost, and selling price, the pin ticket holding the pair together at top. If a new line, we get stock boxes and put in card with description, number, size, cost, and selling price, and

fill boxes and put forward; the balance we send to reserve stock room.

We prefer the descriptive card on box to number only on box and samples with box number and description, for the reasons that a clerk can tell at a glance the contents of each box without hunting through a pile of samples to find kind of hose required, and then hunting box with number to correspond, and again, our hose are shown from box fresh and clean and in shape. The pair displayed is sold and a fresh pair is ready to show next customer. Where samples are ticketed and kept forward and shown a number of times, they soon get out of shape and looked mussed. Imagine a fine lisle thread hose shown and customer runs her hand down leg into foot feeling for seams, and this is repeated three or four times or more, what kind of condition will the hose be in?

Our hosiery department is at front of store because we consider it one of our most important, and because we wish every customer entering to have his or her attention drawn to the extra quality and value of the hosiery we sell.

Each Kind Separate

We arrange our cotton hosiery together in one section, plain lines containing a range of children's sizes in close proximity to each other, first the blacks, next the tans, then the whites and colors, ribbed hose arranged in the same way, and next to them the cotton hose, in which we carry ladies' sizes only, arranged as to colors and prices. In this way we facilitate dispatch in service; after these we arrange the different lines of lace, ankle and leg embroidered, and out sizes, and any other special lines of cotton, lisle, and silk hose. The same plan is carried out in arranging stock of wool, worsted, and cashmere hose. First the lines with ranges of children's sizes, then the lines in women's sizes only, followed by the special lines in embroidered and out sizes. All hosiery is arranged as to color, first black, then tan, next white, and followed by other colors, each color as to price, first the lowest price, followed by the next advance, and so on up to the highest price.

Filling Up the Boxes

Every Monday morning, and as often as required through the week, the lady in the department goes carefully through, opens each box and makes a list of requirements, which is taken to the reserve stock room, and goods required are selected and brought forward and placed in their respective stock boxes. When selecting stock from reserve a note is made of any lines getting low, and these are entered in Goods Wanted Book, ordered with first purchases, in due time received, and placed in stock in manner described before, and thus our arrangement of stock and plans connected therewith being carried out, brings success to the hosiery department.

Will the price of all lines of shoes be advanced in Canada next fall? What are the reasons of the much talked of increase, and will the manufacturers take concerted action or only a few of them make the move? How will those who do not overcome the advanced quotations for hides, the upward tendency of wages and other increases in the cost of doing business? Sole and upper leather is very high and the latter shows no signs of a decline, as a study of the present and future conditions of the hide market reveal. If prices are not augmented, will the difference be taken out of the shoes? The tanner claims that he is now doing business at practically no profit owing to the condition of affairs which he is up against and the shoe manufacturer contends that he is facing a similar state of things. What will be the outcome?"

Some News and Views on Snappy Styles

CAN RAZOR TOES COME BACK ?

Some last makers on the other side, knowing that the high toe in men's footwear is declining in favor, are actually making an effort to re-introduce the sharp-pointed or razor toe, which was in vogue a number of years ago, and was responsible for more enlarged joints, bunions, corns and other foot ills than any type of last ever placed on the market.

"I do not think it will be a 'go' though," remarked a Canadian buyer, who said that the high, bold toes for women would not disappear yet for some time. The flat, receding toe might be popular for men, who preferred the custom last, straight cut, but for women the elevated toe, which came on the Canadian market some time later in female footwear than it did in men's, was bound to stay awhile. Heels would be a little lower and tops slightly higher in some instances.

A METROPOLITAN SLIPPER NOVELTY

The ornamentation of this slipper novelty was made by a firm of manufacturing jewelers, New York, for an exclusive shoe store in that city. The shoes are priced at \$100 for the

pair. The decoration consists of a solid mass of rhinestones in the form of a net, over black velvet, the body of the upper. In the manufacture of these slippers, six gross of stones were used on each exclusive of the heel ornament.

THE HALF-HIGH PATTERN

One of the new styles in women's shoes is a "half high" pattern, which is neither a low nor a high. It has eight buttons, and reaches far enough over the instep and around the ankle to suggest the ordinary high top boot, when worn with a dress skirt of moderate length. It gives the appearance of the high boot, but is believed to be as comfortable as an oxford, allowing the ankle plenty of freedom. If worn with gaiters these shoes will find a use, although they will not give the exposed foot the grace of the oxford or pump, and therefore are not suitable for wear with skirts of the present usual height.

SHOES WITHOUT SHANKS

Quite a few shoes are now being made without steel or wooden shanks, and in many cases the shank of the shoe is made as pliable as the sole. It is claimed that instances are on record where this flexible shank shoe has done away with foot ailments similar to fallen arch, and, while these shoes are mostly retailed under special names, one cannot but notice the larger number being manufactured each year, which indicates that the demand is increasing.

Wider shanks are also coming into more general favor. The public is recognizing the fact that the foot must have some means of support, and with this end in view the shank is made

wider in order to give a greater bearing surface for the foot. Some of the makers of custom lasts have taken this feature up very seriously, and the newer models are much broader in the shank than for some years.

THE STRAIGHT BUTTON GAITER

The straight button shoe, with overgaiter effect, patent vamp and fabric top, may not become popular, but is likely to

Men's gaiter boot, patent vamp, cloth upper, receding toe, flat tread.

be worn by some, as a novelty. In certain patterns vestings are shown as sewn over the vamp, giving the genuine gaiter effect. In other models the vamp overlaps the quarters.

High button oxfords—that is, an oxford with the semblance of a full front and convex cut, with six or seven buttons, are also being shown. There are many eccentric creations in tips, perforations, stitching, fudging and wheel effects, but Canadian makers are not likely to go to any extremes in this line. The demand for "millinery" is too limited except in the very large cities.

The "rocker" will not be taken up by Canadian manufac-

A woman's straight button gaiter, patent vamp, Cuban heel and white buck top

turers, except with the idea to "tone up" the line. Its curved tendencies look graceful but no one seems to want to wear "a rocker."

"BULL-DOG" TOE RETURNING

A New York correspondent writes the *SHOE AND LEATHER JOURNAL* as follows: In shoes, the big, clumsy, homely "bulldog"

toe is coming back, with the ready-made trade at least. But, as a rule, the man who takes pride in his personal appearance, who does not care to have his feet resemble those of a New York "cop" or London "bobby," sticks to the English last, with low, flat heel, giving greater security in walking, and moderately pointed, shapely toe. Shoe dealers tell me that they are selling just as many tan shoes as black ones now, and this is in accordance with the prediction made last October.

A STYLISH WOMAN'S SHOE—ONCE

No, this is not strictly a 1912 model, but this gaiter was "quite the thing" some thirty-five or forty years ago. It is a woman's shoe, size four, has a steel shank and a heel one inch in height. The toe is a straight box, the elevation being caused by an upturn of the insole. Some dealers in those days referred to it as the "puff" toe. The vamp and foxing are of enamel cow and the upper of champagne "kid." The shoe is

McKay sewn, with a fair stitch through the slip sole. The insole is of canvas. The edge trimming and half chain stitching around the vamp and on both sides of the front seam are features of the boot, which was formerly the property of Michael Gleeson, merchant, of Greenwood, Ont., but was presented by him to J. J. Farewell, a Toronto traveler, who prizes the curio highly.

MERRIMENT OVER "ROCKER" LASTS

"What do you gentlemen think of the "rocker," or spring toe lasts that are being shown for fall, and how many of you are going to carry it out?"

The question was asked by Joe P. Byrne, of John Kelly, Inc., after the business session of the Rochester Association of Traveling Shoe Salesmen last week in Rochester came to a close, and Ben B. Blythe has been assessed one story in order that he might be excused to keep an important engagement.

There was a general laugh, as the "rocker" last is looked upon as a joke by most Rochester shoe manufacturers and salesmen, says an exchange.

"Well, we decided to have nothing to do with it," remarked one salesman, "but later decided to put it in because we felt that the retailers would want to see it. We don't expect to sell it, but if a fellow doesn't have it retailers will think that he isn't up-to-date."

"We are going to have a 'rocker' last in the samples, not to sell, but to show why it shouldn't be bought," ventured another

roadman. "We don't believe women will wear them, and we don't want to sell anything that dealers in their turn cannot sell."

HISTORIC SHOE STYLES

The Greeks had their favorite styles in sandals and so did the Romans. There are century old sandals in the British Museum. In the Middle Ages the knights wore shoes of metal. They went to the blacksmiths for them, says an exchange. There were round toe shoes and square toe shoes. The Cavaliers in England wore pointed toed shoes and the Puritans, who were exactly opposite from the Cavaliers in as many fashions as possible, wore square toed shoes. During the Wars of the Roses, red roses or white roses were used for decorating shoes. Aeschylus, the Greek, set the fashion of high heels on stage shoes. He put heels on his heroes to make them nearer the stature of the gods. Louis IV. of France, wishing to look tall, wore high heel shoes, so that he could look his tallest guardsman straight in the eyes. His couriers did likewise.

WHAT WILL SELL THIS SPRING

"My idea is that tans of various shades will be strong sellers this spring, and the retailer who is alive will see that he is well supplied. Tan buttons, with moderately high heels, short forepart, ranging from twelve to fifteen buttons, will prove winners. You will also see a big demand for white goods and strapless pumps of all kinds, since we now have low cuts that will not slip at the heel or bulge at the shank," remarked a leading Canadian maker of women's lines this week.

It Pays To Insist On Fitting

"I always believe in making a person try on shoes before leaving the shop. There are some people who come in and ask for a certain size and width of shoe, and, if the article looks all right, they will say: 'Oh, I will not bother fitting the pair on. They will answer all right.' Now, it is poor business to allow such a person to depart. The shoe may not pinch or cramp the foot, but that does not imply a fit," remarked a London shoe man the other morning.

"It may be too full around the arch or enable the foot to wobble and slide all over. A boot that fits like a bag or sack will never look neat or dressy. No man would think of buying a ready-made suit of clothes by simply giving his chest and waist measurement, and remarking: 'Oh, I will take chances on the fit around the shoulders and the back.' Such a one would be deemed exceedingly short-sighted and utterly regardless of appearance. The same applies to a shoe. Giving the size and width does not ensure a fit. By all means use every argument in your power to have customers try on footwear."

At this juncture a lad entered and said that he wanted a pair of elkskin moccasins.

"What size?" inquired the shoe man. "Two," was the reply.

The boy took a look at a pair, handed over a dollar, which was the price, and told the merchant to do up the goods.

"You had better try them on first," remarked the retailer, "they may not fit."

"Oh, yes they will," answered the lad.

"Well, it will only take a minute or two to see," persisted the shoeist, and the youth consented. He found that they were too short, and the proprietor soon secured a pair of number three, of the same style. There were found all right, and the young caller departed in a happy frame of mind.

"Now, that exactly brings out the point I desired to emphasize," continued the merchant. "If I had taken that boy's word for it he would have gone home, put on the moccasins, and returned later in the day. We would perhaps be busy and would have to attend to him and exchange the goods. That would mean trouble for the boy as well as loss of time for us."

Make Friends With All Your Shoe Customers

Do Not Urge Him or Her to Buy Beyond Their Means—Perhaps Patrons Are Too Proud to Frankly Tell Salesman They Cannot Afford the Price—Bluff and Pompousness Are Poor Vending Assets

The following interesting comment on the danger of over-selling shoe customers is from a Manitoba man and contains good, timely advice:

It is a serious fault to force the customer by sheer strength of personality to buy something he does not want and is unsuited to his pocketbook. Overplaying salesmanship is the result of false ideas as to real trade building; and while approved of by many concerns, it leaves that "bad taste in the mouth" which should never be permitted by a house which builds on the rock of "popular favor." Not everybody has the money, particularly at this time when economy is necessary. Sell the customer good and reliable footwear; but do not urge him or her to overtrade, for he may be too proud to frankly tell the salesman he cannot afford the price.

Many salesmen have the habit of talking such "big things" that they overshoot the mark; the money in the pockets of the customer has, to them, no value; much like their own, for as a class they are liberal spenders. They overcraw the customer, who will not say no. It is comparatively easy to "get the customer on the run," and then sell him a far better shoe than he thought of buying; but he afterwards regrets his weakness, and human nature will make him put the blame on the salesman, rather than on his own inability to say no. For the enduring good of the business, build it safe and strong, be the friend of each and every customer, and do not sell him a \$7 or \$8 shoe when he can but afford one at \$4 or \$5. Do not run roughshod, for if you do he will be "sore" at the house ever afterwards.

The salesman is prompted by self interest to make his book is large as possible, and it is quite natural for him to want to sell

all he can; but there is a wise limit to the amount he should sell the customer, if it be desired that he remain a friend of the store. We advise that a feature be made of this point, and the salesman be urged to think of the interest of the customer in a sensible and practical manner. "Put yourself in his place," is a good rule by which the salesman is to judge his selling efforts; so long as he does this there is no danger of overdoing the selling. This point can also be epitomized by saying "know your trade!"

We do not want this article to be misconstrued, by using it as an excuse for negligence in selling the patron every dollar's worth of goods he should buy; but in the coming seasons there will be many men who will be obliged to economize, and I would urge all merchants to meet this condition with a friendly interest in the wants of their customers. Men with an assured income, or well-to-do, do not realize the importance of a dollar more or less, to the man who is a wage-earner—big or little—and it will be well to think about selling from this point of view.

Maintain the reputation of the store, by selling reliable shoes, but consider the requirements of every man who is a buyer, and do not take advantage of his timidity or weakness to oversell him. I have so often made this point, and it will never grow old.

Make a friend of every customer. Point out to him the profitable investment of good values so far as his pocketbook will permit. Win his confidence, by showing a friendly interest in his intended purchases; put him at his ease, and do not "run a bluff" on him from the time he steps into the house until he leaves it.

Be the first to make a feature of this friend-making system of selling only what the customer wants to buy, according to your best judgment of his financial ability or condition.

A WESTERN CANADA HOLIDAY DISPLAY

This inviting window trim was made at the Yuletide season by Messrs. Thom & Webb, proprietors of the Imperial Shoe Store, Edmonton, Alberta. Owing to the light effects the picture does not do justice to the unique decorative scheme.

The Happenings in Retail and Wholesale Circles

Readers Will All Find These Pages of News Jottings Interesting and Instructive—What Is Transpiring Behind the Counter, in the Towns, and Amid the Warehouses—Personal News and Views

George E. Boulter, Toronto, was in Rochester last week on a business trip.

The Standard Leather Packing Co., Limited have registered in Montreal.

W. B. Lawson, shoe retailer, London, Ont., has sold out to Johnston & Murray.

Louis Spevack, shoe dealer, Winnipeg, assigned a few days ago to C. H. Newton.

Israel Talbot, shoe merchant, Montreal, has assigned to V. Lamarre.

The National Shoe Retailers' Association will meet in New York city on January 24.

The assets of L. O. Girard, shoe retailer, Montreal, will be sold on January 24th.

The assets of Emile Trudel, shoe retailer, Quebec, have been disposed of.

Phaneuf, Larose & Co., wholesale shoes, Montreal, have registered in Quebec.

The Grand Trunk Railway is laying a switch from its main line to the tanneries of Beardmore & Co., at Acton, Ont.

H. L. Daville, representing C. Parsons & Son, Toronto, has left on an extended business trip throughout Western Canada.

James Davis, shoemaker, of Kingston, Ont., passed away last week. He was a well-known resident of that city.

A. J. Boyer, shoe man of Montreal, assigned recently. A meeting of the creditors was held on the 10th inst.

Wilfrid Therrien, footwear merchant Montreal, lately made an assignment to Bilodeau & Chalifour.

Alf. Snider, of Canada Felting Co., St. Jacobs, Ontario, was a visitor to Toronto last week.

Alfred O. Beardmore, of Beardmore & Co., Toronto, has been spending a few days in Chicago on business.

George J. Henry, shoe retailer, 926 College Street, Toronto, is retiring from business.

J. M. Henderson, of Henderson Bros., Port Arthur, was in Montreal and Toronto last week on business.

R. D. McLean, of McLean Bros., Red Deer, Alta., was in Toronto last week on business.

The partnership of Osborne & Clease, shoe retailers, Saskatoon, has been discontinued.

L. O. Girard, engaged in the shoe retail line in Montreal, has assigned to A. Desmarteau.

A. D. McGuire, who recently opened a small tannery in Wallaceburg, Ontario, is doing a rushing business.

William Hazel, dealer in boots and shoes, Gananoque, Ont., has made an assignment to W. T. Abbott.

Howard C. Blachford, of H. & C. Blachford, Toronto, left last week on a trip of inspection to Montreal, Quebec, New York, Boston, Rochester and other centres.

R. H. Greene, manager of the footwear department of the Gutta Percha and Rubber Manufacturing Co., Toronto, was in Montreal last week on business.

In the near future Calgary is to have another handsome \$100,000 building. It will be the home of the knights of the grip containing a club, a lodge room, hall,

and other features for the benefit of commercial men.

The Maple Leaf Shoe Company have dissolved. F. Saucier will continue the manufacturing business under the same name in Montreal.

Clayton Hurlbut, of the Hurlbut Co. of Preston, has returned from a successful business trip to Boston, New York and other American centres.

J. H. DeWolfe, shoe dealer, of Gananoque, will remove into his new store in the Rogers Block in that town as soon as it is ready for occupation.

The United States Rubber Company has declared a quarterly dividend of 1 per cent. on the common stock, the same as three months ago.

J. S. Ashworth, of Toronto, Canadian manager for Sir H. W. Trickett, Waterfoot, England, who has been on the sick list for a few days, is able to be around again.

L. J. Iles, formerly assistant in the sample room of Blachford, Davies & Co., Toronto, has been appointed to a position on the road. He will cover the ground between Toronto and Kingston.

Thorntons, Limited, hide dealers, are drawing plans for a new addition to their main warehouse in Brantford, Ont. This company operates branch houses in the most important markets of Canada.

Heads of large St. Louis shoe manufacturing concerns, discussing an Associated Press despatch from Brockton, saying that an advance of 50 cents a pair in the wholesale price of shoes was likely, said the price would not be advanced by St. Louis manufacturers.

The stock, with fixtures, of Smith Bros., shoe retailers, of Hamilton, who recently made an assignment, was sold by the assignee, W. G. E. Boyd, to Smith & Rickards, of Hamilton, at 75 cents on the dollar. The liabilities were about \$5,000.

In a blaze which broke out at the rear of the Cawker Block, in Bowmanville, recently, and did damage to the extent of \$5,000, the shoe store of Fred R. Foley was somewhat damaged by smoke and water and had a close call.

Fire last week destroyed \$8,000 worth of stock of a men's furnishing and shoe store kept by F. and F. Henderson in Perth, Ont. R. W. Croskery's boot establishment was badly damaged by smoke, as was the Odd-fellows' Hall above. All losses are covered by insurance.

After being confined for two weeks suffering from hardening of the arteries and heart trouble, Charles H. Land, an employe of the Toronto Globe for thirty years, died last week. Mr. Land, who was sixty-two years of age, was born in Elora, where he was in the shoe business for a number of years. For a short period he lived in Cleveland, Ohio, and came to Toronto in the fall of 1882.

L. C. Jones has acquired the interest of N. P. Appleton, who was his partner in the Gray Pattern Company business, Montreal. Mr. Appleton has returned to Brockton, to take charge of his father's business.

Mr. Jones will continue to give a specialized service to manufacturers.

W. S. Shore, who was formerly in the shoe business in Stratford, Ont., has joined with Ed. Paff. The new firm will occupy a new store on Downie Street at an early date. Mr. Paff will remove his present stock to the new stand. Many friends will wish the firm every success.

George Cain, the nine-year-old son of George Cain, of Toronto, general sales manager for the Miner Rubber Co., had his leg broken in two places recently while standing at the foot of the toboggan slides in High Park. The lad was run into by a toboggan, and will be in the hospital for some weeks.

Eighty dollars a square foot is the latest and highest offer ever made for property on St. Catherine Street, Montreal. This offer has been made to George G. Gales, shoe retailer, for his property situated at 481 St. Catherine West. Mr. Gales refused the offer, and says: "I consider my property worth \$100 a square foot."

Fire broke out in the basement of the shoe store of B. H. Greenwood, of Stratford, a few days ago, and for a time threatened the destruction of the building. Prompt work on the part of the fire department prevented the spread of the flames, which did damage to rubbers, shoes and a shoe repairing outfit to the extent of \$1,000.

At the annual meeting of the board of directors of the Canada Credit Men's Association, Toronto, J. A. McLaren, of McLaren & Dallas, wholesale shoe dealers, was elected chairman of the Committee for the Prosecution of Fraudulent Debtors. A. R. Clarke, of A. R. Clarke & Co., Limited, tanners, Toronto, was made vice-chairman of the Entertainment Committee.

At the last meeting of the Boot and Shoe Workers' Union, Local No. 412, held in Montreal, the yearly report of the officers was adopted and a vote of thanks was passed to them for their good work. During the past year, by arbitration and conciliation, increases in wages was secured from several large firms. The following firms have an agreement with the Boot and Shoe Workers' Union: Ames, Holden McCready, Rideau Shoe Co., Eagle Shoe Co., J. & T. Bell, and George A. Slater.

Charles F. Holl, of the Boot and Shoe Workers' Union, Toronto, is the president of the Independent Labor Party executive. W. Brown, of the Boot and Shoe Workers' Union, has been made financial secretary. The Labor Party has decided to proceed at once with the organization of ward associations similar to those of the old party lines. The executive will prepare a list of the members in each of the wards in Toronto, and formulate definite plans for the future.

The fourth number of "Foot Prints," a bright and well illustrated publication, issued by the Canadian Consolidated Rubber Co., Limited, Montreal, is to hand. The booklet contains many helpful hints on salesmanship, store management, and merchandizing methods. The last edition is replete with information on felt footwear.

Any shoe man handling rubber or felt goods, who is not now on the mailing list, may have his name placed there on request, and can also obtain all previous numbers.

Two brothers, Gus and Henry Lodine, 100 Front Street West, Toronto, were charged in the police court recently with stealing a number of pairs of shoes from the Brockton Shoe Company, Toronto. They had been engaged to remove the waste paper from the store by the rear door. In the absence of the clerks they managed also to remove the boots, but shortly afterwards a detective who had been watching their operations, arrested them. Gus was sentenced to 15 days' imprisonment and Henry to 50 days.

Sudden Death of Mr. Phelps

Death came with startling suddenness to George Wm. Phelps, 237 Borden St., Toronto, on Jan. 14th. He retired in his usual good health, and was taken with a chill during the night, which was followed by a hemorrhage.

He passed away at an early hour in the morning. He was twenty-four years old, and for nearly eight years had been employed in the wholesale boot and shoe warehouse of McLaren & Dallas, Toronto, where his willing, obliging disposition and bright, cheerful manner endeared him to all. General regret is expressed among his associates at his untimely end. Mr. Phelps was married only six months ago. The funeral took place from the residence of his parents, Mr. and Mrs. F. H. Phelps, 260 Palmerston Avenue, Toronto, and was attended by many representatives of the trade. Interment was in Mount Pleasant Cemetery.

No Club Life For Them

Jackson Johnson and Henry W. Peters, president and vice-president, respectively, of a new twenty-five-million-dollar shoe company, in St. Louis, have announced that they will give up all active connection with the clubs to which they belong "because sociability interferes with business." Johnson will resign from four organizations, and while Peters will hold his memberships, he says he will take no part in club life. "I have found that if a man goes out much at night he is not himself the next day, no matter how temperate he may be," said Johnson. Johnson says he will quit playing golf, too.

May Give Placing Discount

There is considerable speculation as to what lines the various rubber manufacturing companies will follow in connection with the preparation of their price lists for spring, which will be out in a few weeks. It is said that prices in all lines of rubber footwear are likely to advance from five to ten per cent., as the goods were marketed on too close a margin last year. Net prices will probably be adhered to by all the companies. It is reported that one or two of the independent concerns who gave a trade discount last year will not follow this plan during the coming one, but will give five per cent. off the list for orders placed in March or April. This method was not adopted last season. Giving a placing concession of five per cent. appears to be generally in favor in order to

secure a big volume of business early and not have the rush on so late as it was during 1911, when retailers, having no inducements to buy, delayed placing their bookings, and then handicapped the companies by all wanting their rubber orders filled at once.

"Honest" Shoe Making

A shiftless colored boy in Alabama, after being caught in a number of petty delinquencies, was at last sentenced to a short term in the penitentiary, where he was set to learn a trade. On the day of his return home he met a friendly white acquaintance, who asked: "Well, what did they put you at in prison, Rastus?" "Dey started in to make an honest boy out'n me, sah." "That's good, Rastus. I hope they succeeded." "Dey did, sah." "And how did they teach you to be honest?" "Dey put me in de shoe shop, sah, nailin' paste-board soles on to de shoes, sah."

Veteran Leather Man Dies

There died recently at his home in St. Lambert, Montreal, Piers Locke, aged 72 years. He was a native of Lockport, N. S., and started in the leather business in Montreal as Black and Locke, in 1869. He retired some years ago and had since lived quietly at his home in St. Lambert. He leaves a widow, three sons (one of whom is Ralph Locke, of Dufresne and Locke, shoe manufacturers, Maissonneuve) and five married daughters. The late Mr. Locke was highly esteemed by a wide circle of friends.

Over 100 New Shoe Factories

The 1912 "American Shoemaking Directory" shows that over 100 new shoe factories have been established during the year of 1911. This handy little directory contains full information regarding all shoe factories in Canada and the United States, giving the kind of shoes made, capacity, names of superintendents, buyers, etc. A new feature this year is the addition of 10 maps, showing the location of shoe factory towns and cities. It contains a large amount of valuable information, is vest pocket size, measures $2\frac{3}{4} \times 5\frac{1}{2}$ inches, is bound in red leather, and sells at 2.00 each. It is published by The Deming and Rogers Publishing Co., 683 Atlantic Ave., Boston, Mass.

A Wonderful Nailing Machine

Joseph McCully, retail shoe dealer, of Elora, Ontario, has secured the Canadian agency of the Crow Nailing Machine, the latest improved nailer for shoe repairing. The machine is made by the Specialty Shoe Machinery and Tool Co., of St. Joseph, Mo. It is claimed that it will do every kind of nailing that a shoemaker can do by hand and in two-thirds less time. It has a quick-change device for surface and counter nailing, and will nail heels as well as soles. It carries four sizes of nails at once, using all lengths from $2\frac{1}{2}$ to 8. Mr. McCully reports that he has sold six of these machines, and they are giving the greatest satisfaction. The machine is of much interest to the trade, and particularly to repair men. They are operated by foot power only, and are guaranteed in every respect.

Visitor From the West

J. P. Archibald, of Victoria, B.C., was in Toronto and Montreal recently on business. Until a few months ago he and his brother William, who are former residents of Truro, N.S., conducted a successful retail shoe store in the capital

of the Pacific Coast province under the name of the Baker Shoe Company. The business was established by J. H. Baker about a quarter of a century ago, and afterwards turned into the Baker Shoe Company, being purchased by the Messrs. Archibald some four years ago. They sold out recently to Mutrie & Son, who went into the shoe line in September last. They have moved the stock to the store occupied by them. Martin Mutrie and his son Lloyd, came to Victoria from Brandon, and are building up a fine trade in the footwear line. William Archibald is at present on their staff, and J. P. Archibald will likely represent several eastern manufacturers in the West.

A Successful Ontario Tanner

The new vice-chairman of the tanners' section of the Toronto Board of Trade is John Sinclair, who for a number of years, has been manager of the Barrie Tanning Company, one of the flourishing industries of Bar-

rie, Ont. The company, since their reorganization nine or ten years ago, have made great advancement. In 1910, they completed a finishing room 100 by 50 feet, five storeys high. Last year a large hide house was built, and other improvements are now in contemplation. Previous to taking up residence in Barrie, Mr. Sinclair learned the tanning trade in Hastings with J. Welsh, and was afterwards in business in Uxbridge for some time. He is a brother of Alex. Sinclair, who is tannery superintendent at Barrie. The company make all kinds of staple, fancy, bag, strap, case, trunk, shoe, bridle and other leathers, and are widely known for their book binders' leathers and specialties. The company have a warehouse and salesroom at 51 Front St. East, Toronto, under the direction of G. A. Bickell. Mr. Sinclair is one of the quiet, solid substantial citizens of Barrie, and has a wide circle of friends in all branches of the leather trade. He is a frequent visitor to the important leather centres in the Eastern States.

Would Tax Catalogue Houses

William Proudfoot K.C., of Goderich, M.P.P. for Centre Huron, will introduce a bill at the approaching session of the Legislature, which will provide for the taxing of mail order and catalogue business done in all towns and cities by departmental stores situated in some other town or city. The Board of Trade of Goderich took the first action on the matter, and asked Mr. Proudfoot to introduce the bill. Details of the scheme have not been worked out, but it is proposed to make the tax equal to the average taxes paid by ordinary retail businesses. It is claimed that the business done by the large departmental stores through catalogue and mail orders is unfair to smaller local merchants.

Teaching the Boys Shoemaking

The headmaster of one of the St. Pancras schools of the London County Council has proposed a useful and practical addition to its teaching. He proposes that the boys should be taught shoe repairing during school hours. Last year 100 pairs of boots were supplied to children attending this school, and it would be a benefit to the children to be able to do the repairing themselves. Both the headmaster and the

assistant master have had experience in the bootmaking trade, and could teach its rudiments. The education committee has been recommended to approve of the scheme, and to vote \$5 towards the necessary outlay for tools, and a private subscription of \$5 has also been received. If this scheme succeeds, it is proposed to extend it to other of the London County schools, as being a practical and educational branch of teaching.

Mr. Lamb on Leather Outlook

John J. Lamb, the retiring chairman of the tanners' section of the Toronto Board of Trade, is senior member of the firm owning and operating the Omemee tannery. They are manufacturers of harness and collar leathers.

Harry Lamb is associated with his father in the business, which is one of the most flourishing in Ontario. In his recent address as retiring chairman at the tanners' annual meeting, Mr. Lamb reviewed the situation of the past year. He said: "During 1911 manufacturers in general in Canada had a busy year. Immigration will show a record with probable yearly increase for a long time in the future, which, accompanied with agricultural prosperity, will ensure continued activity. While adverse circumstances of different natures affected the crops in most sections of the Dominion, the aggregate yield has been the largest in the history of the country, and the high prices prevailing for all descriptions of agriculture products must have a good effect on the business situation."

"In the tanning business the year 1911 opened with lower prices for hides, but during the year there have been steady advances, with but slight fluctuations, and at the present time record prices prevail, the figures being from three to four cents per pound higher than one year ago. In mentioning high prices of hides at present we must also remember that quality at this season of the year has very much deteriorated. There appears to be a shortage of hides in all the large markets of the world. There has been a decrease in the slaughter of over 425,000 cattle in large centres of the United States from the first of January to date, compared with last year. Tanning materials also continue at a high level of prices, and marked advances in all classes of leather are imperative in the near future.

"The tanning industry, exacting as it is, and requiring the closest attention in all the different stages of its manufacture, does not yield profits commensurate with the large capital required in the business nor as good as those of most manufacturers in other lines of business."

Canada Wanted To Get Back

At the annual dinner of the Shoe Manufacturers' Association, held last week in New York City, Dr. J. A. Macdonald, of Toronto, editor of the *Globe*, one of the speakers, deplored the fact that the move for a reciprocity agreement between the United States and Canada had come to naught. "Arrange your tariff any way you please," he said, "only make it easier for both countries to buy. The main reason why Canada turned down the reciprocity agreement was because Canadians wanted to get back at the United States on the tariff question. They know they lost by not having a reciprocity agreement with

you, but they have got along all right notwithstanding the tariff, and they are willing to pay for it now." The speaker urged that the United States and Canada should stop the influx of Orientals, which action, he said, would be to the interest of both countries.

The New Marilla Insole

one of the newest findings on the market is the marilla insole, which is the invention of Mrs. Metcalfe, a lady residing in Galt. The Hurlbut Co., of Preston, are now turning out large numbers of them. The insole and counter are of velvet. The pile of the velvet prevents the foot and heel from slipping.

They can be easily inserted in pumps and slippers of all kinds. They are now being handled by progressive retailers and are giving satisfaction. When put in the shoe they always keep the foot in place, thus affording comfort and ease to the wearer. The accompanying cut gives a good idea of the shape of the insole. The inventor claims they are what women have been looking for for a long time. They may also be worn by men.

Organize Hockey Team

The employees of A. R. Clarke & Co., Limited, tanners, of Toronto, formed a hockey club at a recent meeting held at their club rooms. The team, which is entered in the Riverdale Manufacturers' Hockey League, hopes to give a good account of itself this season. The following officers were elected: Hon. president, A. R. Clarke; hon. vice-president, J. Ross; hon. second vice-president, C. E. Howarth; hon. treasurer, H. A. Sailor; president, G. B. Clarke; vice-president and manager, Alf. Collins; secretary-treasurer, H. H. Diggon.

Unique Hockey Shoe

A hockey shoe that has made quite a hit where shown is one patented by the Rock Shoe Mfg. Co., Quebec, and here illustrated. In general appearance the shoe itself is like others. But there are unique features. The ankle support within the shoe proper is not laced. Two straps are attached to the ankle support. The smaller

of the two is attached to the left side of the ankle support at a point over the instep. It is carried to the right side of the foot, passed through a slit in the support, and another in the shoe itself, the latter under the eyelet holes, and fastened to the lower part of a double buckle, which takes

the place of a regular buckle on this particular shoe. The long strap is attached to the right side of the support, over the instep, and crosses to the left side, through a slit in the shoe, below the eyelet holes, down to a prongless buckle. It is pulled tight, not fastened, and carried over the shoe, after the shoe has been laced, and fastened to the top part of the double buckle on the right side of the shoe in the same manner as a regular hockey boot strap.

Selling Shoes in Early Days

John James Farewell, he of the good Scriptural Christian name and "Uncle Sam" appearance, believes that he is the oldest shoe traveler in the Dominion. If there is another who has been on the road for as many years spent exclusively in vending shoes, Mr. Farewell would like to hear from him. He was born on New Year's Day, 1847, and how old he is the reader will have to figure out. He has a son, Lancelot Farewell, who is also in the shoe line, residing in Winnipeg. "The boy" stands about six feet three, and weighs nearly 250 pounds, yet his friends have christened him "Tiny." Mr. Farewell, senior, is of English extraction. The family name and associations are historical in East Whithy township, where the grandfather located over a hundred years ago, and had the honor of naming the present flourishing town of Oshawa.

John James Farewell began his career in a general store in Brampton, and secured his first job on the road with the J. D. King Company, then Damer, King & Company. This was on April 1st, 1871. He remained continuously with that concern, with the exception of a short time spent in the flour business, until it ceased operations, some five years ago. There were few railroads in Canada in those early days, and outside of G. T. R. line and a few branches, many towns could not be reached except by driving. When a traveler took out his samples there was no such a thing as coming home at the end of every week. He stayed away until his trip was finished. Mr. Farewell visited eastern Ontario and Quebec, and first opened up the Maritime Provinces for the King Company. When he joined the staff there were only two road representatives, and he saw the number grow to twenty-one. Five years ago he became identified with D. D. Hawthorne & Co., Toronto, and to-day covers the territory north and north-east of Toronto. Mr. Farewell can recall many reminiscences of the historic days in eastern Ontario. There are only a few retailers of the early seventies. When the King Co. introduced half sizes, cartons, the branded shoe and other innovations there was great interest aroused in the trade. Boots were sold in those times by the merchant placing them on the open shelf to collect dust and dirt, or they were put in huge bins, all pairs being fastened together by a cord. The trunks, which a traveler carried, were huge, clumsy affairs, with no interior conveniences like those of the present day. Such a thing as excess baggage was unknown. A man could take along as much paraphernalia as he pleased, and no questions were asked about extra charge.

Among Canadian Factories and Tanneries

Several Concerns Are Planning Extensions—Additional Equipment Being Installed—
New Companies That Have Begun Operations—Changes in the Manage-
ment of Several Concerns—What Producers Are Doing

QUEBEC

Tourigny & Marois have dissolved partnership, Paul Tourigny leaving the business. A. E. Marois will continue under the same style. Under the management of "Fred" Marois this factory has developed remarkably,

and their jobbing trade has grown splendidly.

Frank W. Knowlton, manager United Shoe Machinery Company of Canada, Montreal, was in Quebec recently.

Practically all of the factories in Quebec will show high toes for fall, 1912. A few samples with receding toes will be shown.

J. H. Hamilton, managing director J. B. Blouin, Limited, Levis, was in Montreal in January.

There has been a particularly large quantity of box kip and calf used by local manufacturers in the year past.

Lucien Borne says that more kid is being used per month this year than in any of the past twenty-four months, and manufacturers substantiate this statement.

Several changes have been made in the arrangement of their offices and sample rooms by J. B. Blouin, Limited, Levis, renovating them. Several new machines were added in the factory recently.

The "gaiter" shoe is being shown by several Quebec makers, but they do not consider the shoe a good one to push. They are putting it before those buyers who want something out of the ordinary, and are content to take chances on its giving satisfaction.

"We hope to have samples of fall lines ready for inspection by the jobbers February 10th," said Louis Gauthier, "but it may be a few days later, February 15th. We are extremely busy on spring delivery orders, and this makes it difficult to get our samples out."

Button shoes for men have been strong sellers, according to one Quebec manufacturer, who does business all over Canada. Next spring will see a lot of them worn. Four and five-button oxfords are especially strong, far outselling the two and three-button styles that were popular.

The O. B. Shoe Company, Limited, Drummondville, Quebec, have been granted a charter. The capital stock is \$100,000. The company are now fully organized, and plan to make three thousand pairs a week. Their specialty will be men's Goodyear welts. The company report bright prospects.

It is with a good deal of pleasure that manufacturers note the gradual tendency toward saner styles. Freak styles are unprofitable for everyone concerned, and at best serve only for a season or two. Extremes are best avoided. It is a matter of education to convince consumers that staple styles with minor changes from time to time are best in the long run, from a price and comfort standpoint.

"I have considerable trouble with cer-

tain of my men who are addicted to drink," said a provincial maker of shoes the other day. "but I induced them to cultivate the habit of eating chocolates whenever thirst made them wishful of a satisfaction for the craving. For the past several months half a dozen of my men have been eating candy quite regularly, and none of them have lost a day." Here's a tip for those who want to use it.

J. B. Blouin, Limited, Levis, has been finally reorganized. Directors are: J. C. Blouin, president; J. H. Hamilton, managing director; O. Bernier, secretary; Lucien Borne and Wm. Davidson. The company employ 125 hands, and will make a line of wets for men, boys, youths and little gents, as well as their usual range of staples in peg, standard screw and McKay. They will cater to the jobbers, as in the past.

Alexander R. Drysdale, secretary the John Ritchie Co., Limited, has resigned from the firm with which he has been connected for thirty years. His wife has been in poor health for some time, and Mr. Drysdale has retired in order to go to British Columbia to live in a more agreeable climate. Mr. Drysdale is known to the trade in all parts of Canada, especially to the jobbers, upon whom he has made many and many a call. J. E. Warrington succeeds Mr. Drysdale as secretary, and will look after inside work he formerly did, while B. W. S. Martin will look after the sales work formerly attended to by Mr. Drysdale.

MONTREAL

As an inkling of the regard in which Canadian-made shoes are held these days, a short time since, the Macfarlane Shoe Co. received a large order for children's shoes from a well-known Montreal retailer. This order formerly went to the States. And yet people say American shoes can beat our own product. Perhaps in some cases, but watch Canadian factories from now on.

All the sales offices are happy, except for the ever-lurking fear that delivery may be delayed in some cases. Work their hardest, it seems an almost superhuman task to get the vast accumulation of orders in many factories out on specified dates, yet if brain and effort will do it, the thing will be done. Shortage of labor is a problem in some factories, and an anxious one at that. What is the solution?

Business is booming in practically every factory in town. These days about the only place a caller can catch any of the sales managers of Montreal factories is right among the men, keeping an eagle eye over the details of some particular order being wanted in a hurry. Superintendents and foremen are looking preoccupied, and they have enough to worry them, in all conscience.

The Superintendents' and Foremen's Association recently formed here should prove an excellent thing from every point of view. Good workers will be known as such, and poor men floating around here and there will be catalogued according to their abilities, and treated as circumstances dictate. Thus will one thorn in the side of many a manufacturer be pulled out. It

is to be hoped the interest will only grow apace. Not only on the protective side, but in a social, technical and personal way will the meetings be of great benefit to all concerned.

Of late the fire fiend seems to be on the track of Montreal shoe manufacturers. Only a short time since the Tetrault Shoe Co. suffered considerable damage, which, however, will not put them behind more than three weeks on delivery; then James Robinson's warehouse had a very slight baptism, very little damage being done; more recently some of Daoust, Lalonde & Co.'s stock was slightly damaged through the bursting of the automatic sprinklers, a complaint kindred to fire. Luckily small lasting damage was done in any of these cases, and work is now going on practically undisturbed.

ONTARIO

Edw. Cox, of the United Shoe Machinery Company, Boston, was in Toronto last week on business.

Charles F. Hays, superintendent of the Aylmer Shoe Company, Aylmer, Ont., was in Toronto recently calling on the trade.

The Berlin Felt Boot Company, Berlin, are rushed with business, and have installed a pulling-over, a No. 5 U.S.M. lasting and other Goodyear machines in order to give increased output.

John Evans, superintendent of the new harness factory of Beal Bros., Toronto, was pleasantly surprised recently when the employes presented him with an appreciative address and a gold signet ring.

W. E. Wilson, late foreman of the Goodyear and turn departments of Getty and Scott, Galt, has resigned. J. Houlihan, formerly of Toronto, late of Rochester, N. Y., has assumed charge of these departments.

The Aylmer Shoe Co., of Aylmer, Ont., at a recent meeting of the board of directors, decided to market their product exclusively through jobbers. They will no longer go direct to the trade as formerly.

The firm of Charles A. Ahrens & Co., Berlin, may erect a large addition to their factory during the coming year. The company have been very busy during 1911, and the volume of business shows a gratifying gain over the year previous.

The Elkman Shoe and Supply Company is the name of a new industry which has been established in Brampton. George L. Williams, president of the Williams Shoe Company, of that town, is the manager, and his sons will carry on the business.

Valentine & Martin, of Waterloo, have recently increased the capacity of their factory by installing a rapid standard screw machine. The factory has enjoyed an exceptionally busy season. Mr. Valentine was recently in Toronto on business.

H. E. Burnham, late of the Niagara Shoe Company, Buffalo, has been appointed superintendent of the shoe factory of the J. W. Hewetson Co., Limited, Toronto, and has entered upon his duties. The company have recently added several new machines, and are running overtime to keep up with their orders.

Rivett & Stephens, who conduct a shoe repairing business at 1088 Bathurst Street, Toronto, and a shoe store in Wychwood, have leased a flat in the building formerly occupied by the Victoria Shoe Company, at 122 Adelaide Street West, Toronto, and will make boys' and youths' nailed work

and McKays. The company are capitalized at \$10,000, and have begun manufacturing.

Petrolia expects to land a \$40,000 shoe manufacturing company. Plans are now under way which, if they materialize, will result in the town securing the industry.

D. B. Detweiler, vice-president of the G. V. Oberholtzer Co., shoe manufacturers, of Berlin, is chairman of the Canadian Great Waterways Union. He has prepared an interesting pamphlet on the Inland Waterways of Canada, advocating ocean navigation via the St. Lawrence and deeper Welland Canal route. He declares that the Georgian Bay Canal scheme is impracticable.

F. Stewart Scott, a member of the firm of Getty & Scott, shoe manufacturers, Galt, who was recently elected mayor of that enterprising town by acclamation, in his inaugural address outlined many reforms and progressive moves, including street delivery of letters. Mayor Scott has for five years been a member of the municipal council and in that time such has been the measure of confidence reposed in him that he has never had a contest. He was one of the reeves last year. He is a Galt boy, born and bred.

The United Shoe Machinery Co., corner of Duncan and Adelaide Streets, Toronto, will shortly remove from their present premises to 122 Adelaide Street West, where they will occupy two floors in the building lately tenanted by the Victoria Shoe Company. Alterations are now being made, and in the new quarters, the company will carry a large stock of shoe findings and machine parts. The removal will take place at the end of the present month.

The W. B. Hamilton Shoe Co., Toronto, have issued an artistic and admirably illustrated catalogue, setting forth the various styles of the Model Shoe. The company, who state they are the largest combined manufacturers and jobbers in Ontario, publish attractive pictures of their warehouse and factories, while on the frontispiece is a halftone engraving of the late W. B. Hamilton, who established the industry in 1862.

A Newmarket, Ont., despatch says: The recent vote gives assurance to the proposition to double the capacity at the Davis tannery. There were 492 votes cast for the by-law to give the company a fixed assessment of \$20,000 for ten years, and 14 votes against it. The number of the qualified voters was 618; necessary to carry the by-law, 371, being 121 more than required. A majority of 478 property owners in Newmarket gives unmistakable evidence that the town is united in fostering industrial institutions. The plans are almost ready for the new tannery. It will be located immediately south of the present tannery, four stories high. Work will begin as soon as spring opens. This means fifty more employes, with constant work.

Beardmore & Co., 39 Front Street East, Toronto, have taken in the space formerly occupied by Warren Bros. & Co., which will afford them double flooring area. The sole cutting department has been removed from the top floor to the basement. The enlargement will give the Beardmore Belting Company more room for their offices and shipping department on the ground floor, while the remainder will be devoted to shipping purposes by Beardmore & Co. The first floor will be entirely used by Beardmore & Co. for their general offices, sales and order department. The upper leather, findings and cut sole stock room will

be on the second flat as well as welting, and the factory of the Beardmore Belting Co. The third floor will be used as a sorting room for the cut sole and counter departments of Beardmore & Co.

Another vigorous industry that has not made "much noise" since it was started last August is the Dominion Shoe and Slipper Company, which is located in Berlin. This company, under the management of Harvy Graber, is manufacturing no less than two hundred different styles of boots, shoes, slippers and felt goods, which have been successful on the market in securing ready buyers. The firm is busy

T. W. Hart, who has just returned from a successful business trip through the Maritime Provinces in the interests of the Nugget Polish Co., of Toronto, leaves next week on an extended tour of the Prairie Provinces. He will go as far west as Victoria. Mr. Hart has been with the Nugget Polish Co. some fourteen years, two of which he has spent in Canada. He

is a good salesman, and covers territory rapidly but thoroughly. The Nugget Company recently increased the size of their tins of polish, and report an unprecedentedly brisk demand from the trade for their justly celebrated preparations. A record business was done last year in Canada under the management of W. F. McNeill and staff.

getting out samples for the fall trade, and preparations are being made to employ between 20 and 30 hands in a few weeks. The samples reveal splendid quality, and excellent workmanship. The future of the industry is most promising.

A despatch from Truro, N.S., says: New machinery is being placed in the Durkee shoe factory and still more to come, a new welt tacker and a new rapid standard screw machine to replace the old one. The capacity of the new machine is 100 per cent. above the old one. As this class of work is rapidly increasing, one of the Hercules Leveling Machines will soon be installed, and there has also been a fire escape placed on the back part of the building. There have been important changes in the working force. James Campbell, a Lynn expert, and quite recently associated with P. G. Harvey & Co., of Lynn takes charge of the lasting and bottoming department. Chandler Parker has charge of the finish-

ing department and E. M. Gallagher has charge of the treeing and dressing department.

The Lang Tanning Company, Limited, of Berlin, Ont., have erected extensive additions to their property during the past year which have made their tannery one of the best built and best equipped, not only in Canada, but in the United States. The company are now the largest exclusive harness leather tanners under the British flag, their present capacity being 1,000 sides of harness leather per day. All their buildings are admirably laid out, and are constructed of steel and built according to the specifications laid down by the fire underwriters. The past year was certainly one of extensions. They consisted of a three-storey brick building, 264 feet by 40 feet wide, and a four-storey concrete structure, 80 feet by 64 feet. These two buildings are used for dressing and finishing leather. A concrete tan yard, 274 feet by 64 feet and another 235 feet by 102 feet, as well as a concrete addition to the beam house, 136 feet by 35 feet were also constructed.

The new extension to the factory of the Kaufman Rubber Company, Berlin, is now completed, and will double their capacity. The addition is of mill construction, built of steel and reinforced concrete. It is 60 feet wide by 120 feet long, and consists of four floors and a basement. There is an abundance of light on all sides, and the ceilings are fifteen feet high. The basement is used for supplies of every kind, the first and second floors for stock rooms, the third for the cutting department, and the fourth for shoemaking. The floors are all of concrete covered with hardwood. There is an overhanging shed at one side where the railroad siding communicates with the mill proper and the warehouse. There are two elevators, constructed against an outside wall. Fourteen solid concrete pillars on each flat support the overhead floors. The building is heated throughout with hot air by means of the fan system. The first pair of rubber shoes was turned out by the Kaufman factory on December 12th, 1908, and the capacity with the added equipment, is now 8,000 pairs per day. About four hundred hands are constantly employed. Aluminum lasts are being used in the making of several lines of rubber footwear, it being claimed that they are more uniform in shape, and do not shrink as some hardwood lasts do, after a certain amount of usage. The factory has been exceptionally busy all the year.

Leather Machinery for Sale

- One "Evans" Fleshing and Slating Machine, with extra cylinders.
- One "Turner" Serial Four Tables Unhairing Machine, with extra cylinders.
- Two "Turner" Single Table (Iron Base) Putting-Out Machines.
- One Stamping Machine.
- One "Rood-Vaughn" large size Shaving Machine.
- One "Slocomb" Staking Machine.
- One "Baker" Staking Machine.
- 18 Wooden Level Bed Glazing Machines.
- Two "Bowers" Glazing Machines.

All the above machines are in A1 working condition. Apply—

Many Shoe Manufacturers Were Heard

Prominent Montrealers Gave Interesting Evidence Before the Commissioners in U.S.M.C. Inquiry—The Hearing Will Be Resumed on 25th—Mr. Holden Defends the Company's Course

The Commission hearing evidence in the United Shoe Machinery inquiry held several sittings in Montreal last week, and adjourned for a few days, awaiting the presence of some witnesses. The hearing will be resumed on January 25th in Montreal, after which the board will go to Quebec.

Joseph Daoust, of Daoust, Lalonde & Co., Montreal, stated that the "tying" clause in the contracts or leases of the U. S. M. Co. was a real restraint to industry in so far as it was a perpetual tying clause. It being made for a term of twenty years, it was renewed whenever a firm changed name or hands, at each change the contract having to be renewed for twenty years, even if nineteen years of the first contract had expired. Mr. Lalonde declared that he considered that clause as a barrier to competition in the machinery business, as it was impossible for any other concern to introduce new machinery in the market. He thought that in some instances there were some pieces of machinery that could possibly do better work than those supplied by the U. S. M. Co., but that he never attempted to try them, nor did he take the trouble of inquiring as to their mode of operation as he felt it was a pure loss of time since he was tied hand and foot to the U. S. M. Co.

Under the cross-examination by Mr. T. C. Casgrain, K.C., Mr. Daoust said that most of the machines in his plant were under lease and that he had no option. The percentage of machines he owned was rather small, and it was impossible to acquire more, because of the tying clause of the leases by which the machinery supplied by the company could not be used in connection with machinery supplied by other firms. Witness added that in his interpretation the clause was tying and he did not care to test it since he had seen a few instances of trouble to the manufacturers who had attempted to fight the machinery company.

Machinery is Barred

Mr. Daoust mentioned especially a heeler and a pegger, manufactured by Mr. Caron, which could be used with advantage, and which were barred out of witnesses' factory owing to the tying clause. He never tried those machines because he thought it useless. The U. S. M. Co. did not compel the manufacturers to lease machines which were useless, and as a rule all the machines in his factory were kept busy.

There was a sharp argument between Mr. Falconer and Mr. Casgrain, when the latter wanted to produce a resolution of the shoe section of the Canadian Manufacturers declaring that the system of leasing machinery, as carried on by the U. S. M. was profitable to the local industry, and Mr. Falconer won his point that such resolutions could not be produced as evidence unless each of those who signed them were called in the box as witnesses and explained their reasons.

Mr. Daoust explained that representatives of the U. S. M. Co. had interviewed the officials of the association with a view to remove the clause now complained of in the contracts of lease.

Satisfied With Their Dealings

Rufus C. Holden, vice-president of the Ames-Holden-McCreedy Company, was an-

other witness. Mr. Holden said his concern had been thoroughly satisfied with the dealings it had had with the United Shoe Machinery Company. He thought one shoe machine company could handle the business of Canada, and that competition was not necessary. As a matter of fact, competition existed in the shoe machine market because English firms were selling machines here. His firm was not interested in them, however.

"Simply because you are not free to buy them," said the lawyer for the complainant companies.

Mr. Holden acknowledged that under the contract they had with the United Shoe Company they could not buy outside machines. Anyhow, they did not want them.

Mr. Holden was asked whether a man who invented an improved machine would have anybody else but the United Shoe Machine Company to whom he could sell it, and he answered: "I judge not."

"Is not the present situation likely to discourage inventions?" "It is merely a matter of opinion, but I think it would," said Mr. Holden.

Secured Outside Machinery

Geo. A. Fortin, of the Scout Shoe Company, Limited, was on the stand. He said that his company was operating throughout with machines secured from independent companies and that they considered they got better results in this way, because by buying the machines outright they were paid for within about four years, and their lifetime was approximately twenty years, while by doing business with the United Shoe Machinery Company they had to pay leases and royalties and never owned the machines. He considered that the cost was slightly higher to manufacturers by adopting the leasing system than by buying outright. But Mr. Fortin said that if the firm he had been getting his machinery from were forced out of business he would not know where to go for more, and his position would be pretty difficult. In fact throughout he declared that there was little competition in the business, and he had to pay higher prices for supplies for his factory than he thought was fair.

They Had No Choice

That the cost of manufacture of boots and shoes was raised from three to four cents per pair, owing to the system enforced over the Canadian shoe manufacturers, by the United Shoe Machinery Company, was the contention of O. Brunet, of the Eagle Shoe Company, who appeared before the board. That statement of Mr. Brunet was challenged by Mr. T. C. Casgrain, who insisted on the production of figures and all estimates, showing the foundation of the allegation.

Mr. Brunet, who was examined by Mr. C. Beaubien, K.C., stated that the Eagle Shoe Company had secured its machinery from the Duplessis Shoe Machinery Company, formerly of St. Hyacinthe, Que., and later of Beverly, Mass., now out of business. Some parts of the outfit were supplied by other firms, but when the Duplessis Company went out of business, the Eagle Shoe Company, feeling the need of a new machine, wanted to buy it from the United Shoe Machinery Company. The answer was that they had to get the whole

outfit of the United or they would get nothing. In such an instance, the shoe manufacturing company had no choice, and took the outfit. The compensation received for the old machinery taken by the United was \$1,000 in cash, and a discount of \$2,500 representing the cost of installation of the new machinery. The old machinery had cost over \$12,000, representing a net loss of at least \$8,000.

Cost Is Increased

When the whole outfit was changed, continued Mr. Brunet, the capacity of the shop was not increased, but there was a slight increase on the cost of production, which increase witness attributed to the royalty. Such an increase was from three to four cents per pair.

The particular machine, the need of which compelled the Eagle Company to deal with the United was a heeler. The same machine is now manufactured by Mr. Caron, of Levis, and is supposed to give just as good results. As a matter of fact, the machines were duplicates of the same model.

Mr. Brunet was examined quite extensively on the operations of the Duplessis Shoe Machinery Company, of which he was the head. He told the board that the Duplessis firm had been put out of business by manoeuvres of the U. S. M. Co., and that statement brought a protest from Mr. Casgrain. Mr. Casgrain claimed that the facts referred to by witness were not to his personal knowledge; that the alleged manoeuvres, as far as the witness stated, had taken place in the United States, that the board had no jurisdiction outside of Canada, and that there was no intimation that the alleged manoeuvres could be attributed to the Canadian United Shoe Machinery Company, which was a body absolutely different from the American firm.

The Board Interested

Chairman Laurendeau ruled that the board was interested in knowing why and how the Duplessis Shoe Machinery Company had been put out of business since its death was affecting trade conditions in Canada.

After that Mr. Brunet was allowed to state that law suits and injunctions, thirty-seven in number, had depleted the financial means of the company and compelled it to suspend operations. The paid capital of the company was \$800,000, and its indebtedness is yet \$200,000.

Other Witnesses

George A. Slater said that the company did not supply Canadian manufacturers with the latest and most improved types of machinery, and he gave a few examples of it. He claimed that a certain style of improved machinery had been introduced in the United States seven years ago, and that it was still impossible for the Canadian manufacturers to secure it from the company, though they were tied in such a way that they could not get the same machine from other firms.

Mr. Slater declared that he made it a rule to keep posted on the latest in shoe machinery and that it was during visits to the shoe manufacturers across the border that he saw the improved machines he could not get here. They were supplied by the U.S.M. Co. in the United States and the same company could not supply him here. At last he did secure two machines of the latest model and he considered himself very fortunate as other manufacturers could not get any at all, and will not be able to get any until the American market is fully supplied, or until the actual best

model is put aside owing to the invention of a better one.

Mr. Laflamme, in cross-examining Mr. Slater, asked if it was not true that the news models were first tested in the United States and placed in the market only after the experience had proven satisfactory. "That may be," replied Mr. Slater. "And," continued Mr. Laflamme, "if the latest models are not placed on the Canadian market, it is because the experiments have not been conclusive." "Say it is because the American demand is greater than the supply," retorted Mr. Slater.

Objected to Tying Clauses

Witness strongly objected to the tying clause of the leases, claiming that it was a real-restraint to industry. He did not agree with Mr. Laflamme, who claimed that the tying clause was a great inducement to the small manufacturer backed with small cap-

ital. As to the big manufacturer, Mr. Slater did not hesitate to say that it would be better for him to buy his machines outright. It would enable him to be always supplied with the most modern machines when he could afford to, because he would have the privilege of selling out any piece of antiquated machinery whenever a better one was on the market, while as things stood now, the manufacturer had to keep the old machinery until the company was ready to replace it. It was always possible to sell machinery to cheaper factories.

George A. Slater said, in answer to some questions that he had not come on his own initiative, but had been summoned, before the board, he did not know whether it was by the petitioners or by the attorneys of the company.

Mr. Casgrain then remarked that if there was an outcry such as was intimated by the petitioners, the mere fact that the

board is sitting would attract crowds of manufacturers anxious to give us facts, and we would not have to summons them.

To that Mr. Slater replied that if the manufacturers had not their own interests to protect, there would be such a crowd of them at each session of the board that it would be necessary to have some police present to prevent crushing.

Ralph Locke, of Dufresne and Locke, Limited, shoe manufacturers, of Maisonneuve, was another witness. The contention of that witness was that there was on the market many pieces of machinery that could be used with profit by the manufacturers were they not barred out by the tying clause in their contracts with the U. S. M. Co.

It would be possible also to be supplied by British firms, provided such firms maintained in Montreal stores for repairs, with a staff of men and the necessary outfit.

Rubber Footwear

Put Our Service to the Test

We have both the goods and the facilities. We are anxious to be of the greatest assistance to you in promptly meeting requirements and demands of your customers in rubber footwear of all kinds.

Success in rubber retailing is in having the proper goods at the proper time—not a day or two late—which often causes loss of sales.

Are you prepared for the coming thaw which Old Probs declares is due in a few days now?

Here is a pointer for you! Our goods are right to the forefront in quality and style. Our excellent reputation is at the back of our products. We ship all orders the same day as received. No delays, and, therefore, no complaints or lost patrons.

To the Shoe and Leather Trade

WE CALL the attention of the trade to the fact that we are the original and only manufacturers of Nubuck Leather. It is our invention. We spent our time and money perfecting it, introducing it and advertising it extensively to shoe manufacturer, shoe wholesaler and shoe retailer. It has become deservedly popular and well-known throughout the country, not only because it is a new thing in leather, but because of its downright merit.

Because of its merit and its popularity it is necessarily being imitated, but the imitations are not Nubuck, nor can they be represented or sold as Nubuck.

For the protection of those who are buying Nubuck and for our own protection we shall prevent by legal action the unlawful use of this trade mark name, and we warn the trade accordingly.

Not How Cheap, But How Good

Should be your motto when buying counters, because a shoe lasts no longer than the counter used in its construction.

GUAY'S Counters are not only the best—made of solid leather, solidly stitched, and meant to stand the strain—but they are really cheap.

Cost 3½c. to 4c. per pair. We also make Standard Board and Union Counters. Ask us for further details.

**Kimmel Felts
combine
Comfort and
Wear**

Kimmel Felt Shoes are extra well made from the very best grade of felt.

They are made in sensible, yet stylish shapes.

Kimmel Felts won't pinch the feet neither will they feel big and clumsy. They fit snugly but not tightly, giving the utmost degree of comfort. And being made so well and of such good material they give a maximum of wear.

Order from any branch.

**Stock Rubbers
that
your Customer
will ask for**

Granby, Maple Leaf, Dominion and Anchor Rubbers all had reputations for quality. More than that, they are being extensively advertised.

These things will impress your customer so that when he wants rubbers he will think of and ask for one of these four good brands.

If you can supply him with what he wants you will have made another friend. Besides it's much easier to sell a man what he wants. You can be supplied from any of our branches.

THE BEST

Everyday
SHOE

MAKE EVERY DAY
A BUSY DAY

Does every shoe you sell get out and hustle and bring back customers to your store?

If it doesn't you're handling the wrong line.

You're not handling the Everyday Shoe, that's certain.

For if you did, you would know they advertise your store.

They look good so long—keep their shape and wear so well and please your customer so much more than other shoes that he is compelled to speak of it.

Tell your jobber you have no room for "dead ones" on your shelves. Tell him you want "Everyday" Shoes. You'll not regret it.

T. SISMAN SHOE CO.

AURORA - ONTARIO

**Because Blouin's
Shoes bring your
Customers back**

When you sell a man a pair of Blouin's Shoes you are pretty well assured of his coming back to you when he needs a new pair. For Blouin's Shoes are made to give the utmost satisfaction.

The leather is tanned to give the maximum of wear. The shoemaking is of the very best. The styles are up-to-date and sensible, and the prices are very moderate.

Every wearer of Blouin's Shoes comes back for more because he appreciates the extra value they give.

That's a good reason why you should handle them.

Women's White Nubuck, 16 Butt. Welt

I can help you solve your Felt placing problem

With so many Felt Shoe manufacturers and jobbers singing the praises of their various brands I judge you have considerable difficulty in deciding on a line for next Fall.

Now, I want to tell you why I can help you make that decision.

You see I've bought felts for so many years and studied the field so closely that I've a pretty good idea of "what's what."

And in felts as in all other lines of footwear my aim is not so much to make a big profit as to make many profits. To do this I must buy the lines that are going to sell best—that is—the lines that you can sell best.

So you see the better I can buy for you the better I buy for myself.

And then you're always sure of getting the best in prices because of the large quantities in which I buy.

In choosing what lines of Felts to handle I have always kept in mind their value to you and to me as sales-improvers.

That my choices have made "good" with the Canadian public is shown by the extent of their sales in the past. I am not now asking you to rely on my judgment but on that of the people who have bought these goods and been satisfied.

These lines of Felts that have proven satisfactory to your customers are the lines it will pay you best to handle.

I have plenty in stock now for sorting.

Shoemaking Doesn't Harm This Leather

There's one thing about "Maple Leaf" that you'll find in mighty few Glazed Leathers—the process of manufacture doesn't harm it in the least. It comes out in the shoe just as smooth and fine looking as when in the skin.

That means that better looking and better wearing shoes can be made from Maple Leaf Leathers.

See that the Dongola Shoes you buy are made from "Maple Leaf."

THE TAYLOR MFG. COMPANY

82 QUEEN ST. NORTH
HAMILTON - CAN.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:—

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

Canadian Office: Manchester Building, Toronto - J. S. Ashworth, Canadian Manager

If you stock Linton's
Welts, you assure a
big repeat business.

And it is the repeat trade that makes
your profits — not the casual buyer.

If we could make better Welts than the
ones that bear the name "Linton," or
employ better leather or workmanship,
be sure we would do it, because—

We want your repeat trade.

Western retailers can order through our
Winnipeg Branch, in Winnipeg Rubber
Co.'s Building, assuring quick delivery.

“BLACKIT”
AND
“BROWINIT”

BRIGHTEST
AND
BEST

MADE IN THIRTEEN SIZES

A HEEL TO FIT
ANY STYLE SHOE

Every time you sell a tin of “Blackit” or “Brownit” you recommend your store as a place to buy reliable goods. Your customers will appreciate the value that is in a tin of these polishes. They give a brilliant and lasting shine—one that is waterproof. They won’t rub off on the clothing or, in application, stain the hands.

Remember too, that though the sale of polishes may not contribute a very large portion of your profits, it is pleasing in small things that good permanent customers are secured.

Ask us about our unexcelled polishing outfits.

MANUFACTURED BY

CARR & SON, London, Eng.

Makers of the most complete
line of Shoe Polishes since 1837

Revolite Jumbo Rubber Heels will stand wear and tear because they are made from the best of rubber.

That’s *your* best reason for handling them—and *ours* also. If they couldn’t stand the final test—on the shoes of your customers—there wouldn’t be any use of our advertising them to you, or of your selling them to your customers.

We know that if we sell you once we’ll sell you again—for Revolite Jumbo Heels give satisfaction every time.

Represented From Coast to Coast

Trickett's Slippers will be sold all over Canada
this year by Representatives of

JOHN LENNOX & CO., HAMILTON, ONT.

THE Trickett line of slippers is probably the most extensive line being sold in Canada to-day. Right up-to-the-minute in style and novelty and of genuine British manufacture, they are making an enviable name for themselves all over the Dominion.

John Lennox Co. of Hamilton, Ont., who handle these good slippers, have had such a growth in business that they are adding to their sales staff. Hereafter the whole of Canada from Halifax to Vancouver will be thoroughly covered by representatives of this progressive firm, who will be delighted to show you the advantages of handling Trickett Slippers.

It's up to you, now, to take advantage of this opportunity to increase your sales of slippers.

Wait for the LENNOX man.

SHOE DRESSINGS

—FOR—

Spring and Summer 1912

We beg to notify the trade that we have re-organized the business of the old American Dressing Co., and will in future manufacture all the shoe polishes and dressings formerly made by the concern.

We are especially well equipped to turn out the finest goods, and we can promise prompt delivery. You all know the high reputation these shoe polishes and dressings have enjoyed. It shall be our aim to enhance their good name.

Place your orders early for the spring and summer season. Prices and full particulars on application.

Clerk—Customer—Proprietor

All benefit through the National Cash Register because business transactions are handled through a machine which cannot make a mistake, which cannot forget, which insures fair dealing.

The Clerk Benefits because

No store system ever devised helps a clerk to earn promotion so rapidly. He can wait on more customers. Gets credit for all the sales he makes. Avoids mistakes. Avoids suspicion. Avoids being blamed for the mistakes and carelessness of others.

The Proprietor Benefits because

An accurate record is made of every transaction. Every detail connected with the recording of cash sales, credit sales, money paid out, money received on account, making change, is shown by the National Cash Register. This prevents mistakes, stops losses, insures honesty, increases trade and increases profits.

The Customer Benefits because

The National Cash Register guarantees accuracy in all money dealings. Printed receipts are given for money paid. Payments of money on account are faithfully recorded. Over-charge is prevented. Mistakes in making change are stopped. Prompt service is assured.

Learn more about the National Cash Register which is built for your business. Write for free booklet.

Does National Honor Count In the Shoe Trade?

Practice of Retail Salesmen in Undermining Prestige of Canadian Footgear Should Be Checked—Some Manufacturers Pandering to "American" Craze—How Faith in Canadian Enterprise Is Being Shattered

Who is to blame for the large amount of "American" shoes sold in Canadian retail stores to-day? What is causing the demand for "American" made goods? Are Canadian makers catering to it by stamping their shoes with names significant of American cities, history or association? Do Canadians, except in a very few centres, inquire for American goods in preference to the excellent product turned out by factories of the Dominion, who are specializing more and more, and manufacture women's and men's footwear that equals in style, fit, finish and workmanship the offering of American concerns. If the whole situation was analyzed it would perhaps be found that there are a number of contributing agencies.

It is difficult to attach the responsibility to any one in particular. Of course, in cities near the border there will always be more or less of a demand for American goods, which is perhaps natural, but in the West, in many large cities, as well as inland places, there are too many alleged "American" shoes sold.

The statistics of imports and exports for the last fiscal year, ending March 31st, show that there were imported into Canada \$1,768,122 worth of American boots and shoes, an increase over the previous fiscal year of \$428,358. From the United Kingdom the imports for the same period were \$314,401, an increase of \$233,447. The United States bought from Canada during the last fiscal year only \$17,439 worth of shoes (a fairly good order for one retailer to place), while there were exported to the United Kingdom only \$5,653 in boots and shoes. But the amount of spurious "American" made footgear that masquerades under titles or stamps, savouring of that country, and yet is the output of Canadian makers, is no one knows how great.

Is It the Right Thing?

It may be contended that Canadian manufacturers have the right to brand their wares under whatever name they like. There is no restriction of names (so long as the ones selected have not been registered), but the fact remains, is such a proceeding—that is, for a Canadian factory to turn out goods under an American cognomen—exactly the right thing to do? If the people believe they are purchasing genuine American shoes, why

deceitfully minister to an unpatriotic desire? If the imports of genuine American shoes increase from year to year, have not several of the nearly two hundred Canadian factories only themselves to blame for fostering the idea that American goods are more to the forefront in style and appearance, snappishness and individuality than our own Canadian product. Retailers alone cannot be censured for foisting pseudo "American" goods on the public if the makers themselves use American titles or stamps or the name of fictitious firms. Are Canadian manufacturers ashamed of their product? They should not be.

Clerks Convey False Impressions

A manufacturer, speaking the other day, condemned this practice in no uncertain tones. "I was in a retail store not long ago in Western Ontario," he said, "when a lady, fashionably dressed and evidently well-to-do, entered. The alert salesman, who stepped up to wait on her, did not know what business I was in, and probably mistook me for a traveler or a friend who had called to see the proprietor. The clerk at once said that they had a nice, nifty shoe with a short vamp, high Cuban heel, and raised toe, in a tan button. He explained its good points, and the lady, examining it carefully, saw a name—well, we will call it the "New Yorker"—stamped on the sole. She at once concluded that it was an "American" shoe, and the salesman allowed her to retain the erroneous impression. She bought a pair of No. 4, D width, and said that the shoe was shapely and dressy—just what she had been looking for. I knew the shoe was made in Canada, for the factory is located not far from mine. That salesman had let the customer depart under the conviction, first, that she had bought an American shoe, and also that he had not the right kind of foot covering in Canadian makes for her. Now, that woman would tell her friends what a choice line of "American" footwear B— kept, and that she could not get anything that would fit or suit her in Canadian shoes.

The Ruse of Some Makers

"Such an instance as the one narrated above does not occur occasionally but frequently. A little honesty, a little frank talk, a little loyalty would have converted that woman, who did not ask for 'American' shoes, into the knowledge that she could find what was *right* in Canadian goods. Who is the more to blame for the cropping up and flaunting of the cry of 'American' footwear than some retailers' clerks, for I blame them more than the manufacturer?" he concluded.

Another thing, there are scores and scores of shoes sold in departmental and big city shoe emporiums disguised as "Amer-

ican" shoes, which are the output of Canadian factories, and yet the people generally do not know it. One large firm brands its shoes—for variety sake they say—as Brown, Smith and Co., St. Louis, a purely fictitious creation. The head of one of these departmental stores told an amusing story the other day. "An American visitor called and asked for a gunmetal blucher, American make. He tried on the shoe, a No. 8, and, turning it over, noticed the name. 'Yes,' he said, 'I know the goods of that firm, and I always get the best of satisfaction, comfort and wear out of them.' I thought he was 'on,' but further conversation showed that he was as innocent as a lamb, and I did not take any pains to inform him that he was examining a Canadian shoe, otherwise he would not have bought."

Fooling the people may have serious consequences if this thing is to go on forever. Is it not time that a halt was called? If not, then some Canadian makers who yield to a passing desire to get rid of their product under a misleading name cannot complain if United States footwear finds an ever-growing market in the Dominion.

Why Persist In the Practice

Shoes made in Canada are just as good in expression, smooth shoe making, build, style, quality, durability, and materials as American goods, yet why do certain firms continue a deceitful practice? One manufacturer, when interviewed, said that he would be quite willing to stop it at once, but that others did it. If there is any unity of purpose, co-operation of interest, patriotic enthusiasm, and national well being and advancement the boot and shoe section of the Canadian Manufacturers' Association might take the matter up and reach some clear, definite understanding. It is time the fraudulent custom was checked, and checked effectively for the good of the manufacturers themselves and the shoe trade in general.

Another manufacturer remarked that he doubted if sixty per cent. of the shoes sold as "American" were not really made in Canada, and he based his estimate on inquiry and research covering a period of several months. Too much attention cannot be directed to the fallacy and shortsightedness of such a course. The state of things now going on in several of the larger cities and smaller ones too, is not particularly creditable to any one concerned.

Taught Salesman a Good Lesson

A Toronto traveler was in a store in Eastern Ontario not many weeks ago when the head clerk approached and asked him to use his influence to secure for him a job on the road. Now, that clerk had, a few minutes before, been talking about how he and his associates were pushing the T— shoe, made in an American city, as much better value for the money than anything that was produced in Canada. The commercial man grew hot at the audacity of the fellow, and told him that he should look to the Boston concern for a job, since that was such a fine enterprise, and could, in the face of a thirty per cent. duty, turn out such excellent shoes that no Canadian factory could compete at the same price.

Here is what he told the salesman in plain, unvarnished language: "No, you boom that junk there, talk it up to every man who comes in, and probably have been presented with a pair or two by the factory for your personal use for the sake of booming their goods. Yet, when wanting a job on the road, with my firm or some other equally representative house, you come to me. Our shoes are not good enough, not snappy or distinctive enough for you to handle in this retail shop, but you would, of course, change your tune if you thought you could secure a post on our traveling staff. No, sir, I'll be hanged if I would do anything for you if I could. Look to the factory across the border. If you are such an admirer of their wares why in thunder don't you negotiate with them for a berth. I like a man who practises what he preaches. Have a little honesty about you. You have recommended to your boss that my line be cut out. Never mind how I know, and yet you have the

effrontery to come to me asking if I cannot do something for you."

An Appreciation Of Our Own Merits

"Made in Canada" shoes are certainly right to the front in quality and finish. No branch of Canadian industry has made greater or more noticeable progress. And what is wanted on the part of the public is more appreciation of home products. Yet how can the public be educated up to this sense of estimating Canadian shoes at their proper worth and value if certain factories and some retail salesmen go on doing as they have month after month. The time for action seems to be at hand in the best interests of the shoe trade of the Dominion.

The Process of Making Shoe Strings

It is not often that one stops to think of the many processes of manufacture needed in the production of such a small, everyday article as a boot lace. Whether the lace is of silk, mercerized cotton, other silk finish quality or Egyptian glaze yarn, the making is equally interesting. The latter are dyed and polished, giving them a fast color and lustre.

One of the first processes is to wind the yarn on to large bobbins ready to be plaited on braid machines. A large number of these are needed to make even a single braid, as one can tell by trying to count the number of ends or strands in an ordinary shoe lace. The braids fall from machines into long, circular, tin receptacles, which, when filled, are taken to another department, to be wound on to a measuring wheel device, which automatically regulates the lengths required to be cut for laces.

The operation of putting on tags is interesting. In the case of lower-priced laces this is done by an automatic machine, a wonderfully ingenious invention. In the better class boot laces such extreme care is taken to have absolutely perfect work on each lace that hand-operated machines are insisted on, and work strictly supervised. The ends of the tags are then ground down and carefully inspected that no rough or sharp edges may be left to cut or scratch hands or boot. After being tagged the laces are folded and tied in pairs or dozens on machines, which gives an improved solidity and neatness of bunch. Following this comes the labelling and boxing department. The labels are works of art, being similar to those used on the best qualities of perfume bottles. They are lithographed in colors in extensive printing and litho works. These labels are used on both inside and outside of all boxes of the better qualities, and also wrapped round each separate pair of laces. The quality names and designs of labels are registered in every important country, and extensively advertised. The boxmaking department is very extensive, as all kinds of boxes are made, from the ordinary cheap carton to the dainty little boxes used for protecting separately each pair of silk laces. The final touch is given the package by wrapping it in silky transparent tissue paper, which allows all labels to be read through wrapper, at the same time protecting it from getting soiled in handling or from dust.

Progressive Canadian buyers are rapidly taking up these goods, as they realize that such infinite care given to detail means that better goods must result. The foregoing information was supplied the SHOE AND LEATHER JOURNAL by Brough, Nicholson & Hall, Limited, of Leek, England, who are among the foremost boot lace manufacturers in the United Kingdom.

Young Shoemakers' School

How Pupils of the Deaf and Dumb Institute in Belleville Are Given Practical Instruction in a Useful Trade—Many Graduates Are Employed in Shoe Factories or Running Repair Shops of Their Own—Turning Out Solid Hand-made Boots—The Working Hours and Benefits of the Training—A Post-Graduate Course

ALEX. MORRICE
Instructor 1903-1912

The shoemakers' shop of the Institution for the Deaf and Dumb, at Belleville, Ontario, is an interesting place. The shop was first opened as far back as 1874, and has been in steady operation since. Hundreds of deaf boys have passed through it and have been trained in the trade by taking part in its busy operations.

The first instructor was Mr. Jno. Flowers, who remained in charge until 1882, when Mr. Wm. Nurse took up the work, and

DR. C. B. COUGHLIN

The Superintendent of the School for the Deaf and Dumb, Belleville, Ont.

carried it on for twenty-one years, until 1903. He was then transferred to a more responsible department, handing the work over to Mr. Alex. Morrice, the present instructor.

In the early history of the shop, as many as thirty-five boys were steadily engaged, but at the present time, with more industries and a smaller percentage of lads old enough to learn a trade, only about fifteen are employed.

The Advantages of the Course

The objects of the shop are: To furnish useful employment to the boys after school hours, to train them in habits of industry and the use of tools, to draw out the mechanical abilities of the pupil, and, finally, to gain a livelihood when school days are over, if other and more profitable avenues are closed against him. When the shop was first opened there was much more shoemaking done by hand than at the present time, while the use of complete repair outfits has largely superseded the old methods.

There is no costly machinery in the shop to turn out work

wholesale, as it would not be wise to entrust it in the hands of the very young workers now employed. The shop aims to train old-time shoemakers that can turn out solid hand-made shoes, or neat repairing that will stand inspection. Those in control recognize that probably the boys may never be called upon to make up boots by hand, but that they will be better repairers for the training that they receive in all branches.

In preparing the deaf and dumb to become independent masters of a business of their own, shoemaking is second to no trade open to them. With a thorough knowledge one, who can do a neat repair job, can start a shop almost anywhere on very small capital, and, with industry, can soon work up a profitable business, for as long as shoes are made of leather, repairing will always be required, and is the best paying branch of the trade.

Found in Factories and Shops

The boys work in the shop for three hours every afternoon, and on Saturday mornings, and, after their school course is finished, they are allowed to return and take a post-graduate course, working all day under the same conditions as govern the trade outside.

The lads who have taken up the trade and succeeded are to be found in the shoe factories of Toronto, Hamilton, Berlin,

Teaching deaf mutes the art of shoe making

Georgetown, and other places, their employers considering them among the best and steadiest workers. Others will be found in repair shops of their own in Ontario and the West, earning comfortable livelihoods for themselves and families.

Some have made use of their preliminary training to enter the harness trade. Others engaged in farming, etc., find the training at school of great value in the repairs to shoes and harness at home. The training to hand and eye has helped many to

acquire, much more readily, skill in some other branch, to which they have been led.

Equipped for Life's Battle

Shoes are made by the boys for the 250 pupils attending the Institution. Last year over a hundred pairs were turned out in nailed and rivetted work, and the boots are sold to the wearers at cost. This is only one of the many important practical branches of the school for the deaf, where baking, farm-

ing, dairying, and other lines are successfully followed.

The aim of the Institute, under the progressive and capable administration of Dr. C. B. Coughlin, the superintendent, is to fit all the young in the province of Ontario, bereft of speech and hearing, so that, on graduation, they are able to make a good living, and follow useful, upright careers. Each graduate, fortified by the excellent course of instruction and application, is self-sustaining, and the work and worth of this splendidly managed seat of learning is recognized on all sides.

The Editorial View Point

COLD WEATHER DEVELOPS TRADE

January has turned out much more satisfactory than usual for all classes of trade. The steady cold weather that has prevailed has stimulated greatly the demand for all kinds of staple lines. Clothing, dry goods and fur dealers were very much disappointed at the close of the year at the results of the season's business, which, on account of the warm weather, were quite below the average. Since the first of January, however, movement in these lines has been quite active, though, of course, not what it might have been had seasonable weather prevailed before Christmas. Prices also have had to be reduced somewhat, and thus profits will hardly be as large. In other lines, business for the last two weeks of January has shown a marked improvement, for both spring and sorting, and payments are reported quite up to the average for the month, and perhaps a little better.

CONDITIONS IN LEATHER TRADE

Business is good in leather, a good deal of both upper and sole changing hands during the month. Leather manufacturers are getting their price for the most part, although in some cases slaughter prices on imported stuff have interfered to some extent with sales. A prominent concern reports a lot of light stock sold to an Eastern manufacturer at a figure at which it could not be produced and sold with a profit. There seems to be a disposition on the part of even large concerns across the line to clean up their stocks, to avoid interfering with their regular trade, and they are slaughtering in Canada for their goods, as in this particular case, anything that they are offered. There seems to be enough of this kind of thing being done to give occasion for government enquiry. In the meantime stocks in Canada are pretty well cleared up, and tanners are not grumbling much with regard to conditions.

CONDITIONS THAT ARE UNSETTLING

In Ontario, while business is good, and the outlook hopeful, there is considerable restlessness amongst retailers, as well as farmers, who seem to manifest a little discontent and talk of going out West. We are passing through a more or less critical condition on this account, as the talk of selling out is bound to have some effect upon business, as it becomes more or less general. This state of affairs is in no small measure responsible for the high cost of necessaries. Farmers' sons keep moving West and the fathers give up the farms to live in town, becoming consumers, instead of producers. These people invariably economize in their living, so that the business community does not profit by the change, and the volume of production is diminished to a certain extent. At all events, the uncertainty resulting from the prevailing feeling is becoming quite a factor in the business situation.

PREPARING FOR SPRING BUSINESS

Spring business is now well in hand, and both manufacturers and jobbers are busy getting out what they can. Sorting trade has been so good for the past two weeks that there has been some interference with the shipment of spring goods, but the results of the cold snap and holiday business will soon be fully met and dealers will be given a chance to look at their spring stocks in good time to get ready for the opening of the new season. Manufacturers are busy just now preparing their ideas for fall. The question that is agitating them very much is the cost of their goods. With the steady advance in the cost of materials there seems to be no way out of a further advance in prices of shoes all along the line. This question is discussed more fully elsewhere. In the meantime business continues satisfactory, both as to sales and payments.

WESTERN AFFAIRS ARE STEADIER

Business in the West looks good, although there is a disposition to go a little more slowly along some lines. There seems to be a lull in the speculative craze in some of the towns and cities, notwithstanding the reports that still prevail in some quarters of property changing hands at fancy figures. The banks in some places have put a crimp in the craze, and things are settling down to a more normal basis. Business in the large centres and with the larger concerns is good, and, altogether, the outlook is encouraging, but some who have been going it a little "too steep" are pulling in their horns and doing a little more figuring upon the future. There is every reason to expect another large influx of population this year, and this in spite of some of the drawbacks with regard to crops and prices the West will hold its own.

MORE CAUTION IN RUBBER MOVES

Naturally, rubber principals do not care to talk much just now, but all are looking with more or less anxiety as well as interest upon the approaching season. One thing may be said, there does not seem to be the disposition to "take the bull by the horns," that was manifest at this time last year. There seems to be a little more caution in the preliminaries at least. Without doubt, there has been more or less communication amongst the interested parties, and whether some tentative agreement may be reached, of course nobody can say. It is claimed that one concern has laid down its "ultimatum," but this does not seem to have created any serious situation. One thing is certain, all the companies are in much better shape to handle business this year, and no matter what scrapping there may be there will be some chance of getting goods in reasonable time.

A GOOD SELLING TALK TALLIED

C. H. Bedard, Montreal, Que.

A dapper and rather swagger youth, who was smoking a cigar with considerable relish, entered. He told me that he did not like to wear rubbers, but supposed he would have to, as it was awfully "sloshy" outside and he had a bad cold. He hated such kind of weather, and wished to gracious that spring would come. I told him that there were many persons who never wore rubbers, and that I myself had not had a pair on all winter, and yet my feet had never been wet or even damp. He said that all water or storm proof boots with viscolized soles looked so ungainly and clumsy that he believed he would prefer rubbers. I brought out several leather shoes, but not one seemed to appeal to him. He was uneasy, and declared that he knew the shop had nothing to satisfy him and that I had better fit him with a pair of No. 8 rubbers and let him go. Then I thought of a particular boot in black storm calf that I had not yet displayed. It was a plain lace bal on a narrow toe last, with a medium high heel, and heavy, full, double, waterproof sole. Now, this special waterproof boot retails at eight dollars. We carry only a few of them in stock. He took a notion to the shoe immediately and exclaimed: "Now, that is something like what I am after." He tried it on and it suited him to a dot. He inquired the price, and, on learning the figure, almost gasped. He observed that he had been carried away by his enthusiasm, and had never paid over six dollars "to be shod." I informed him, pleasantly, how that shoe was made of the very best upper and bottom stock, that it was in every sense of the word a shoe for well dressed men, and the firm at the back of it had a national reputation for superiority and pre-eminence in waterproof goods.

Finally, he remarked: "Well, what is \$2 extra anyway, if a fellow is satisfied and will get the wear out of the goods. Here's your money, I'll take the shoes." Now, that rather impetuous caller came to purchase a pair of rubbers retailing at \$1 or \$1.25 at most, and by instruction and good judgment I converted him into a pleased purchaser of an eight dollar boot. I did not destroy his confidence in our store or its goods the same as certain "sell-a-customer-in-any-event" establishments do, and then never see that patron again. He called two weeks later and bought a medium toe, patent pump, with small, flat silk bow, paying six dollars, saying that his best girl was going to give a dance in his honor.

CONFIDENCE AND COURTESY COUNT

A. S. Strachan, Calgary, Alta.

A lady came into the store the other day with a friend. She said that she wanted a combination polish outfit, which I sold her without much difficulty at fifty cents. She introduced me to her friend, who incidentally remarked that she had come to the city to attend a Masonic At-Home. We chatted pleasantly for a while, and she told me that Mrs. G. had insisted on her coming, as the event was one of considerable social significance,

and she had never been in Calgary before. She hoped no one would look at her feet during the dancing, as she had nothing stylish to wear. I asked her if she would like to look at some of our new creations in pumps, that we had received a late shipment with all the newest things about them and had disposed of a good many. She became interested, and said that she would. I explained that we made a specialty of women's dainty footwear, and she looked over several lines, some in mat kid, others in bronze, some satin and some brocade. She explained that she could never wear such a slipper with comfort, as she could not get a fit about the arch. She did not like such high heels. I secured a black satin pump with a full round toe and a 13-8 heel, with a small cut steel ornament, which she took a fancy to. She was prevailed to try it on, and added that that was really what she wanted, as she did not care for extremes in fashion. She asked the price and I told her six dollars. She said that she would take the pair.

Her hostess, who had been looking on all the time and studying the different styles, jocularly remarked that she was not going to be outdone by her guest, and inquired if I could fit her. I soon had her order for a pair, but with a slightly different ornament, a beaded satin bow, and they went away satisfied. Now, there was no particular salesmanship ability about this transaction, but there is a little story. I had taken infinite pains in the past to please the hostess, and she would wait to be served by me when coming into the store. She said that I always knew exactly what she wanted, and the fact that such a good record had been given me by her resulted in her returning when she thought of buying only a small article in the findings line, which I have always believed in featuring, as it leads to larger sales—in this instance to twelve dollars.

A PROFITABLE "IDLE" HOUR

W. A. Kearney, St. Mary's, Ont.

One day I was alone in the store. It happened to be at the noon hour, and I was not very busy. I took a walk to the front of the store and saw a gentleman looking at the window display. I immediately went outside and got in conversation with him. I tried to interest him in our shoes and pointed out some good values for him. I invited him in, and he came with me. Then I showed him a man's willow tan blucher, at \$5.00. He liked it very much, and immediately sat down and tried it on. It fitted him very nicely. I gave him a little talk on the good qualities of the shoes and he decided to take them. I conversed with him a little longer and started discussing cushion sole shoes. I said that we had Dr. Reed's cushion sole with a heavy waterproof sole and a light upper. I showed him this shoe, and he remarked: "There is the kind that I have been looking for." He fitted it on, and consequently I had no trouble in selling him the second pair of shoes at \$6.00. Now, this gentleman was a stranger to me. I had never seen him before, and by getting in conversation with him and inviting him to have a

look at our footwear, I not only sold him one pair of \$5.00 shoes, but also a pair of cushion sole's at \$6.00, thus making an \$11.00 sale, which my employer would never have seen if I had not noticed this gentleman gazing at the window display.

THE BEST IS THE CHEAPEST

W. E. McMonagle, Sydney Mines, N.S.

One night last week a young fellow sauntered in to purchase hockey boots. He said that he only wanted a cheap pair, as it was his first venture in this line. On looking over the stock I found we did not have a cheap pair in his size, so I showed him the best thing we carried, a lightning-hitch, selling at \$3.75. I emphasized the good points of the boot over a cheap one, in regard to style, durability, and value, telling him it would pay him to buy a good boot and leave it on his skates. I suggested he should try the shoe on, which he did. It fitted O.K. I also noticed a hole in his hose, and intimated, in a pleasing manner, that he should buy a pair of heavy worsted socks, which we were selling at 35c, three pairs for \$1.00. He purchased one dollar's worth. I next brought up the question of Sunday shoes. He declared he could not afford a new pair at present, although he needed them, but would call later, probably "the next pay." I said, "Well, how about a pair of rubbers till you buy your new

boots?" He consented to look at them, finally buying a pair at \$1.00. I then told him if he would bring in his skates I would mark them on the boots. He said that he would. He purchased the skates next door and brought them in. I marked them out. He paid me \$5.75, said "good night," and walked out. After supper he brought in a friend for a pair of boots the same as he got, remarking as they passed the window: "This is the place. There is a fine fellow in here—the best ever."

How Would You Start?

The salesmanship competition, which has been a monthly feature in the SHOE AND LEATHER JOURNAL for nine months, and aroused wide interest among clerks, has been discontinued for the present, and two interesting contests on going into the retail shoe business, on a cash capital of \$1,000 and \$2,500, are announced on another page. These competitions are well worth entering. The prizes are liberal, and a wide latitude allowed. Every ambitious young man has a desire to get into business for himself. The problem arises how to go about it. What lines should be stocked, and how should the available capital be divided. Any shoe merchant or salesman is eligible to enter. Send in your contributions, which must reach this office by March 20th.

The Value of a Good Name in the Shoe Business

Handling Widely Advertised Brands, the Merit of Which Is Recognized, Adds to the Prestige and Reputation of a Store—It Means Increased Sales and Selling Satisfaction—The Worth of a Trade Mark

One may ask what is in a name? A name, if of any real excellence, stands for something. It carries prestige and weight. A registered title, through judicious publicity backed up by quality and merit, is worth something—in some instances millions. It is a synonym for reputation, for augmented sales, for a ready market, for a growing demand, for good will and increasingly generous appreciation. It matters not whether the name is that of a firm or its product.

The thousands of dollars which have been and are being spent in creating reputations for certain well-known brands of footwear have resulted in giving them great names which alone stand for all that can be said of their quality. The name would become as synonymous with lack of quality if the shoes were not up to the universal conception of what good value is.

It should be self-evident, then, to you as a retailer that by handling goods which have a national trade name you are taking the sure way of making your own name a synonym for the reputation which these goods possess.

A certain clothing merchant, who by the way "saves" his customers money by giving them unadvertised goods, recently entered a shoe store and inquired for a certain shoe with a nationally advertised name.

The Name Did the Deed

"Haven't got that in your size," the shoe man told him, "but here's a new shoe made by the R— Company—the same concern which makes the shoe you want. This shoe is just out and hasn't been pushed much yet, but it's a good shoe."

The clothier tried the pair on. They fitted.

"I'll take them," he said. "If they're made by the R— Company they're good. The name alone recommends them."

Logic should have told him that the name did more. For one thing it was the cause of this particular shoe retailer getting his patronage.

Perhaps you wish to sell out your business. Inquiry elicits the fact that you have been in your present location for the past ten years and have worked up a good trade by fair dealing and honest prices. Inventory shows that you have about \$8,000

invested in actual stock, consisting largely of shoes possessing a universally known trade name. I offer you that amount.

"What!" you exclaim, "eight thousand dollars; why, I wouldn't even consider less than \$10,000 for the business."

"But the inventory shows barely \$8,000 worth of goods."

You are astounded at my density.

"That's my stock," you tell me, "but I'm selling you my

A TRAVELING QUARTETTE

From left to right are: A. W. Bradfield, J. C. Bryant, Horace Weston and W. G. Damer, who are on the staff of F. J. Weston & Sons, Toronto. Mr. Damer has been traveling for the firm over twenty years, and the others from seven to ten years. They are all "good ones."

business. I've been here for ten years, and have got a reputation; a trade; a name. That's the big part of my business, the prestige which the store has won and the class of trade it commands by reason of the handling only widely advertised branded lines. I am known in this city for handling the best shoes at right prices. This store has always lived up to its reputation—or in other words, its name. It's career has been the history of honesty and reliability."

Some Interior Views of Attractive Shoe Stores

The store in Barrie, Ontario, founded by R. Neill, sr., in 1866

The store in Woodstock, Ontario, opened in 1896

The Neill shoe business owns and controls nine retail shoe stores in Ontario "Honest Goods and a Square Deal" are the business principles upon which the largest retail shoe trade in Canada has been built up by Mr. Robert Neill, of Peterboro'. Stores are located at Peterboro', Lindsay, Barrie, Brockville, Guelph, Galt, Brantford, Woodstock and Chatham. Mr. R. J. Kidd is the general manager

The "headquarters" store in Peterboro', Ontario, established in 1885.

Uniform cartons and labels are striking features of the store interiors, all of which have imposing fronts. Cash and one price to everybody rule and all goods are marked in plain figures. Special attention is given to artistic window displays. All branch managers have been trained in the head store in Peterboro', where the buying is done, and outside orders sent in every week.

The Neill shoe store in Brantford, established in 1888.

The store in Lindsay, Ontario, opened in 1887.

Some Stray Shots from "Solomon"

Plan well. The man who does not plan well will make hash of anything he touches, let him be as smart as he may. Davy Crockett's advice, "Make sure you're right, and then go ahead," is good horse sense that is as much needed to-day as ever it was. But there is too much planning that forgets the French proverb, "Man proposes but God disposes." Don't leave the Almighty out of your figuring. Napoleon planned Waterloo, and, slapping Marshal Ney on the back exclaimed just as the engagement began, "Marshal, we have ninety chances out of a hundred." In the afternoon he was so sure of victory that, after giving an order for the advance of the Chasseurs to crush the English centre, he despatched a courier to Paris to announce the victory. But a mightier hand than that of the victor of Marengo had already ordered the disposal of the fight, and the confident planner became a dazed, broken fugitive. We are given brains to use, but we need to be taught now and then that brains are not all. "The horse is prepared against the day of battle, but safety is of the Lord."

Count up the things you have said, that you wish had been left unsaid; run over in your mind the evil effects you have come across in your experience in connection with wagging tongues. If the troubles caused by foolish and vicious talking could be cut out, the world would be a sight better to live in. "Whoso keepeth his mouth and his tongue keepeth his soul from trouble." Have you one of those unlatched mouths that are always ajar or banging? Get a hasp and staple for it and you will be money in pocket and have peace of mind besides. Of all the dangerous people who live outside the jails, the fellow with a loose tongue is about the worst. He runs amuck everywhere and no quarry seems too small or insignificant for his blunderbuss. The worst of it is there are some fairly decent people who do not seem to realize the damage they do themselves as well as others by setting their mouths going and walking off and leaving them. Get after that tongue of yours. See how much soul trouble you can save yourself in the next year by leaving other people's business alone and keeping your own to yourself.

You can only get out of a thing what you put into it. People play at business and expect to get success out of it. All work and no play makes Jack a dull boy, but all play and no work will make Jack a poor one. Nothing in this world worth having can be got without giving up. It is barter and exchange all the way through. The fellow who makes up his mind to have a good time as he goes along may occasionally, by bull-headed luck, make a success of his business, but ninety-nine out of a hundred successful men have got where they are by moderating their pleasures until they got where they could take them unmixed with anxiety. Pleasure and luxury have slain their tens of thousands. Most young fellows these days want to start where their fathers left off and forget that this very disposition is one of the most fatal to their success. "He that loveth pleasure shall be a poor man; he that loveth wine and oil (luxury) shall not be rich."

What are you worth? You have just taken stock and by now are able to set the commercial agencies right as to your financial standing. But what are you worth? What good are you to the people amongst whom you live? Would your family miss you any more than as a provider of the "needful" for daily expenses? Would your church miss you if you were put away in a six foot hole? Would the community be any the poorer if you went in and out amongst your business acquaintances and

fellow townsmen no more? What have you ever done for anyone but yourself or those you have to support? A man died in a town not far from this city a month or two ago who hadn't enough furniture in his house to liquidate the doctor's claim for the operation that carried him off. He was followed to the grave by the largest procession of mourners, young and old, rich and poor, religious and irreligious, that the town has ever known. Judge Harlan of the United States Supreme Court died recently and left an estate of \$13,000, of which \$7,500 was life insurance. He was known as well, if not better, than the President, and was honored much more than many of the executive heads of the nation. Men like this have not lived in vain, even if they do not leave fortunes. "He that followeth after righteousness and mercy findeth life, righteousness and honor." Don't be a money grubber.

If you haven't a tear for the misfortune of others, look out. That kind of humanity that goes through the world with its nose turned up and its pocket book shut is not the kind that was planted in the Garden of Eden. There are lots of pious folks who lift their eyes skyward and thank God they are not as other men are who will wish in the next world they had been less religious and more human. That kind of religion which shakes hands with itself and passes by want and misery on the other side is not worth a Jericho cut-throat's notice. "Pure religion and undefiled is to visit the fatherless and the widow in their affliction" as well as to "keep itself unspotted from the world." What have you done lately to staunch the cry of the oppressed that goes up day and night to heaven? "Whoso stoppeth his ears at the cry of the poor, he also shall cry himself and shall not be heard."

The sluggard is not the only brother the "great waster" has got. The hasty man is almost as great a nuisance to himself and society as the lazy man. He has no great advantage over his despised brother because he makes very little more progress in his work. "The thoughts of the diligent tend only to plenteousness; but every one that is hasty only to want." There are plenty of busy idlers—people who seem to be everlastingly at it but never seem to get anywhere. They make a rush at a proposition, and when they have knocked out any chance they ever might have had at the game they sit down and repeat the plaint—"saddest of all, it might have been." There is a vast difference between speed and haste. Speed is the result from well oiled engine with a man at the throttle who knows where he is at; haste is the work of a loose-jointed old shunter with a half baked engineer at the lever. "The more haste the less speed" is the modern translation of the Wise Man's aphorism.

Pay more and pray less, is advice that some business people need. There are men who are heard at the prayer meeting who will be heard at the creditors' meeting if they do not mend their ways. There are other ways of paying than discharging financial debts. There are some debts we owe to our families and neighbors that are often left unpaid while we join our voices with the brethren at the midweek service or with the congregation on the Sabbath. Until we get this larger vision of Christian obligations the millennium will continue to present a hazy, far distant perspective. "To do justice and judgment is more acceptable to the Lord than sacrifice," said Solomon to his Jewish subjects. To-day what the Almighty requires of us is to back up our praying with those virtues that are linked in the great commandment with worship—not only must we worship God, but love our neighbor as ourselves.

Credit Is the Toboggan Chute for Business Failure

You Must Keep the Practice Well Under Control, Declares Uncle Hy—There Are Three Classes of Debtors—How to Get Your Headwork In on the Different Species—Some Cheerful Philosophy

By H. M. TANDY

During a few moments lull one very busy afternoon, Uncle Hy picked up the Possum Centre "Budget," and, after carefully wiping his glasses, started to read.

"Hello!" he said, after a moment. "I see E. Z. Skinnem and family have left town. That's the end of my \$9.00 account. Gol darn it, I knowed that cuss was an N.G., an' now he's proved it. Billy, that reminds me of the story my ol' man used to tell of a storekeeper who allus had lots of customers an' lots of business, but never any money. Sounds funny, doesn't it?"

"One day I overheard a man tell his wife not to go to The Possum Centre Emporium for them shoes."

But the reason was he was so doggoned anxious to make a sale, he never stopped to think whether he would ever git his money or not. He'd allus take a chance on gittin' his money from anybody who wanted anythin' rather than see them go out of his store without it. Instid of being pretty sure aforehand that he'd ever git paid he'd do all of his worrying afterwards. An' now, Billy, this cuss Skinnem has moved out of town."

The P'int Is—He's Gone

"Won't he never pay us?" said Billy, in astonishment.

"Dunno," said Uncle Hy, musingly. "He may—but most likely he'll fergit. The p'int is, he's gone, an' my bill ain't settled. Billy, ye can't be too keerful about who ye sells goods to on time. An' another thing, ye wants to be keerful an' not let a man's bill git too high. Let people run into debt more'n they kin pay an' it'll keep 'em from yer store quicker'n a scarlet fever sign. I didn't realize this till one day I overheard a man tell his wife not to go to the Possum Centre Emporium for them shoes. 'We owe them too much already,' he says. Ye see, Billy, if I'd kept arter that feller an' got him to pay somethin' on his account now an' then, I'd a done better than by givin' him all the credit he wanted. Ye give the ordinary critter enough rope an' he'll hang hisself, an' ye give a feller all the credit he wants an' he'll hang yer business fer ye."

"Ye'd think a man ud appreciate getting a lot of credit, and give ye all his business," said Billy.

"Yer a young kid, Billy, with lots to larn yit. Thet ain't human nature. Mind Silas Pettibone, as comes in here? Yes. Well, Silas is a mighty good customer of mine an' a good friend. Silas, he comed in here one day mad as a hornet.

"'Hy,' says he, 'whatnalifax do ye mean by sendin' me a letter for to pay somthin' on account? I ain't never done ye out uv nothin', have I?'"

"'Silas,' says I, not gettin' mad er nothin', 'there wunst was a feller runnin' a general store business who was such a gol darned good feller and such a genuine favorite that everyone who ever traded with him was his friend. Friends is great things to hev—but this chap thought he'd lose his friends by askin' 'em to pay their bills. An' his friends fergot to pay. An' the chap went down the coal hole into the Down and Out Club.

An' his friends was sorry as the Dickens, an' some of them as helped put him there told him so, Silas, think of thet.' Silas secd the pint, laughed, and wrote me out a check fer his account in full. Ye hev got to use d'plomacy 'bout them things, Billy. I could hev made him mad jest as easy as not an' lost his trade fer good, but ye see I got the money an' kept his custom, too."

Credit Is Like a Mule

"Ain't it all right to give credit?" Billy asked.

"Th' world's run on it, Billy. An' credit's all right, too, but it's like a mule—it will pull fer you as long as ye keep the reins over it. But it kin kick like a fool. Yes, ye've got to be mighty keerful, Billy, an' no matter how keerful you be, yer goin' to hev to work like a nailer an' keep at it all the time to get yer money. I'll tell ye what I'm going to do, my boy. Some day I'm goin' to let ye go out an' do some collectin' fer me. Ye'll git lots of abuse an' dern little money, I'm thinkin', fer there ain't no more abusin' class of people in the world then them as owes ye money. It's sad, Billy, but it's true.

"Now that I'm talkin' to ye, I'm goin' to give ye some general advice about collectin'. Ye might say that there's three classes of debtors. There's the fellers that's jest slow pay by nature. They don't never try to beat ye out of nothin', but simply don't pay their bills till they git around to it. The way ye wants to do with them fellers, Billy, is to keep peckin' away at 'em perlately. They'll soon git ashamed of havin' ye come around, and'll settle up. Then there's the fellers that are perfectly honest, but allus a lcetle short. Here's where ye kin git in a little headwork, Billy.

"These fellers generally has about one dollar's worth of bills every time they git hold of 30 cents, so that about two-thirds of the creditors loses out every time. The fellers that git their money from Mr. Unfortunate are the fellers that git on the right side of him.

Get On the Right Side Of Him

"Sympathize with him, Billy. Explain that ye need the money to pay bills that are crowdin' ye. Treat him right. If he grows to like ye better'n the other fellers that are comin' around after their money, he'll make a special effort to pay ye first. An' if ye can't git it all git some. Ye'll soon hev the

"The chap went down the coal hole into the Down and Out club.

account worn down. An' then lastly, Billy, there's the mean cusses who won't pay when they kin git out uv it. It ain't good business to be kindhearted with these fellers, Billy—they don't appreciate it an' will only take advantage of ye. Don't coax 'em. Scare 'em. Make yourself a nuisance. Keep whackin' 'em over the head with a club. Tell 'em if they don't pay ye, ye'll show 'em up as gittin' goods without payin' fer 'em, an' they won't be able to git credit from other places. If ye hev to, Billy, sue 'em. A little experience collectin' will do ye a world of good."

COMPARATIVE PRICES OF LEATHER AND HIDES FOR ELEVEN YEARS

Table with columns for years (1901-1911), leather types (SOLE LEATHER, UPPER LEATHER, HIDES), and various grades (Satin, Oak, Kangaroo, Calfskins, etc.). Prices are listed in cents per pound.

Increase In Price Will Likely Be Five Per Cent.

More Canadian Manufacturers Give Explicit Reasons Why Figures For Certain Lines Must Go Up—Will Not Allow Quality to be Sacrificed—Retailers Should Learn To Charge Odd Prices

The strong probability of a raise in the price of many leading lines of shoes is still being discussed with considerable interest. Several manufacturers, who have specialized in men's, women's and children's foot covering, seriously declare that they will not allow their fall samples to go to the trade unless there is an advance of 5 p.c. in many of the productions, particularly in patent and calf skin.

A leading maker of men's fine Goodyear welts, in discussing the subject the other day, remarked: "While on my trip East I found that the price of leather had advanced over last season in both sole and upper stock, and that the tendency in Brockton and other centres was to raise the price of shoes. As it is, the \$4.00 shoe is in just about the same position that the \$3.50 was three years ago. Leather has kept on advancing in the last few years, so that it has almost put the \$4.00 shoe out of existence as one of quality. The present outlook is that the Canadian manufacturers of men's fine footgear will have to raise the price on fall samples. I am satisfied that the figure we are obtaining to-day makes our margin too close. The general tendency of the hide market seems to be scarce, and prices in the

spring will not be any lower, but will have a tendency to be higher."

An Interesting Tabulation

The SHOE AND LEATHER JOURNAL prints on the opposite page a comparative statement, which recently appeared in the Shoe and Leather Reporter, of Boston. This table, giving in detail the prices of leathers for the past eleven years, is well worth preserving. It will be seen, from a study of the figures presented, that not only have all classes of sole leather, but kangaroo, calfskins in various finishes, and hides of all kinds been increased in price. By following the variations much light may be shed upon the present situation.

A prominent firm, who specialize in children's, misses' and other lines, declare that it is two years since they have augmented prices. They propose to take action this fall, as not only have leathers of all kinds gone up, but the figures for threads, linings, and other materials are particularly stiff. The supply of various kinds of hides and skins has for some time been less than the demand. This has been brought about by the increased use of leather in automobiles, furniture and other lines. The

A DISTINCTIVE WINDOW IN A WINNIPEG STORE

The foregoing attractive horse show window captured second prize during the last horse show in Winnipeg. The back is formed of blue panels and gold pillars, blue and gold being the colors of the show. The fence and race track are made from cardboard, while the doll on the pony is dressed in show colors.

The window was one put in by H. W. Stark, Limited, shoe dealers, Winnipeg, who are the proprietors of the Slater shoe store. The firm do a strictly cash trade. They handle trunks, bags and suitcases, and conduct a well equipped repair department, which, they say, makes a valuable addition to their business and profit.

supply of cattle has also decreased, and a study of the United States returns of the total slaughter in the chief American markets shows that during the last year the number killed was considerably less than even four years ago, while, as already pointed out, leathers are being used in many more lines than a few years ago.

What Another Producer Says

"Yes, we will raise the figure of a number of our lines by at least five per cent., if not more," declared a member of the firm. "Labor costs us more to-day than it did a few months ago, and there are other considerations which make our operation expenses heavier. I have been asked for a detailed statement for the cost of making a shoe at the present time as compared with two or three years ago. This information will be of little use to the public, as the expenses of manufacturing differ widely, owing to local conditions and other considerations of help, shipping facilities, power, rent, and so forth. For instance, one line of shoes can be made in a certain place to better advantage and at a more economical figure than the same goods can be produced in another centre. There is no fear of any combine on the part of the manufacturers. The industry is of too widely scattered a character, and there are too many elements entering into the relationship of the shoe producers for any combination to be formed or any understood arrangement reached regarding prices. I may add that we will advance certain lines, but not all of them, and from what I learn, other manufacturers will do the same. We will not allow the quality or workmanship of our goods to deteriorate. Retailers should learn to charge odd prices. You cannot always make a shoe that will retail for \$1.50, \$1.75, \$2.00 and \$2.50, etc. The conditions entering into manufacturing to-day make it imperative that something should be done, and, no matter what our competitors do we will take action along the lines I have indicated."

Outside View vs. Inside Facts

A Residential Shoe Dealer Tells of His Long Struggle and Final Victory—Clerk Thought the Whole Thing Was Due to Luck and Happy Chain of Circumstances

"My, I wish I had a fine business like Bennett has up there on that street. I would be perfectly happy. In fact, I doubt if I would ask very much more in the shoe line in this world," remarked a salesman in a neighboring Canadian city.

"I continued my conversation with him, and he went on to tell me about what a lucky man Bennett was, how he had fortunately located on the right corner at the right time, and a prosperous growing section had sprung up all around, the trade of whose residents he has been able to hold, 'And,' added the salesman, 'He gets mighty big profits. I do not know of a man that really has a nicer, fatter time than Bennett. That chap's lucky and no mistake about it.'

"Now, that is the way Bennett's business and position appeared to an outsider. I happened to know Bennett very well, and was in his store a few days later," remarked the traveler who was narrating the tale," and, in the course of a conversation over buying, he opened up and told me his history, all that was back of the modest amount of success he had met with. It appears, long before the clerk who had been lauding this man to the skies as a fortunate son of earth came on the scene, Bennett has twice attempted to build up a shoe business in two sections of the city, and after a few months' struggle, had been forced to give up in the effort. He went out to Alberta and clerked for eleven years, and then the health of his wife being precarious, he had to return east. He leased a small shop in an outlying section, and paid fifteen dollars a month for it. Where the rent was going to come from he did not know. The first year was a hard uphill fight for existence. He saw that the district was growing, however, and he firmly determined to stay with the game. He kept open early and late, and, by studying the wants of his few customers and getting to know them all per-

sonally, he gradually strengthened his hold upon them. He added to his stock little by little, and sent out to a select list of customers, neat, illustrated booklets which were furnished by manufacturers. This list of names for mailing purposes was carefully gone over every three months, and every new caller at the shop, to whom a sale was made, had his or her name placed in the book. He first adopted the plan of giving a ruler to each school child who purchased a pair of shoes at his store, and, taking the initiative in many innovations, he gradually saw trade branching out and business, which he never expected to corral, coming his way. He never misrepresented a shoe, and took infinite pains to see that each customer was properly fitted and sent away satisfied. He had good selling talks for each line. He knew the merits of his goods, and what kind of footwear certain manufacturers excelled in. Whenever he could spare a few dollars he added a silent salesman show case or some up-to-date shoe stand or fixture for properly displaying his wares in the window. He believed that Rome was not built in a day, and by care, shrewd buying, a close study of what the residents in his section wore, what was the average price, and other details, he managed to attain his present standing and prestige. It cost him much thought, worry and application, but, when the tide had turned, there was no stemming it. Bennett to-day has one of the finest footwear establishments to be found in any city of the Dominion.

"That is the story in brief, but, to hear that glib, care free, young salesman talk, you would think that all these things came about by chance, that the business had been built up on sheer luck."

In the Manager's Office

To look at this picture you would think the occupant of the office is working—and he is. The industrious young man at the desk is L. B. Hutchison, manager of the Toronto warehouse of the Kaufman Rubber Company, of Berlin, Ont. He entered the employ of that company when it was started, and nearly two years ago was placed in charge of the Toronto warehouse. Pre-

viously Mr. Hutchison was with the Berlin Rubber Company for six years. He comes of a family that has long been associated with the shoe trade. His father, John Hutchison, is manager of the Breithaupt Leather Company's tannery, at Penetanguishene, Ont. A brother, E. E. Hutchison, is secretary of J. Eveleigh and Co., Limited, Montreal, with which firm he has been connected eighteen years.

Some News and Views on Snappy Styles

GLASS HEELS ON SLIPPERS

Word comes from Washington, D.C., that Mrs. Longworth (Alice Roosevelt), who is responsible for many innovations in dress and fashions, is astonishing her friends by wearing cut glass heels on her slippers. Mrs. Longworth created this Cinderella effect in connection with a gown with tulle shoulder wings, another Longworth fashion. The train was divided in two parts, and as she stepped it parted long enough to give a glimpse of sparkling heels. When Mrs. Longworth dances the effect is even more startling and more spectacular.

FANCY SANDAL SLIPPERS

A strong feature in footwear is the sandal slipper, which is having a great rage in Paris at the present time. These 3 and 4-strap sandals are being worn with afternoon and evening dresses. The straps are often finished with silver or cut-steel buttons. To aid the fitting, some of them have an elastic goring inserted between the quarters. These are worn in black patent leather, black velvet, and combinations of black and white.

Paris bootmakers are counting upon considerable use of antelope and brown dressed leathers. Owing to the revival of tan and champagne tones in dress goods footwear in these colorings will doubtless come into shoes prepared for the Riviera season. Medium dark tan dress leather is effectively combined with antelope in soft fawn shade.

BLACK AND WHITE

Black and white footwear is expected to have another season of great popularity. New models, also for the Riviera, show black patent leather and black velvet combined with white kid and white antelope.

Shoes and slippers of the Colonial type, with ornamental buckles of medium size, oblong and oval, are booked for a big season. The Colonial effect is shown with the dressy Louis heel and also with the military heel.

DANGERS OF HIGH HEELS

The high heels at present so fashionable with elegant Parisiennes do not meet with the approval of the French medical faculty, says a London despatch. It is asserted that they displace the centre of gravity and throw the weight of the body entirely on the forefoot, occasioning a contraction of all the muscles of the toes and the muscles of the legs, which eventually results in painful fatigue. Heels of an exaggerated height are also declared to be the cause of frequent accidents, owing to the "instability" of the wearer, and if long enough continued they cause varicose veins.

IN THE DAYS OF OLD

On another page is a boy's stoga. It was the thing in 1875. It is equipped with the old-fashioned copper toe and colored calf front, being one of the W. B. Hamil-

The "tiny tots" seen above are seventy years old, and belong to J. J. Farewell, shoe traveler, Toronto. It will be noticed that the tops are fabric and lace on the sides. The boots are hand-made, and no two in size. They were worn by a cousin of the present owner, and are somewhat of a family relic.

ton Shoe Co.'s best sellers 37 years ago.

SELL PEOPLE WHAT THEY NEED

Addressing a recent meeting of the Boston Retail Shoe Merchants' Association, And. C. McGowin, shoe buyer and manager of shoes for Wanamaker's big stores, gave an interesting and pointed trade talk. Speaking of old stock, he said that new stock is old after it is placed on the shelves if there is no demand for it, and that a buyer does not have to wait two, three or six months to find out

whether it is old stock. He urged the shoe men to sell customers what they need, rather than what they want, because if you sell them what they want and it does not come up to their expectations the chances are that customer is lost, whereas by selling what you know they need, and having faith in the wearability of the shoe, the customer is satisfied and becomes a regular patron. This is the policy Mr. McGowin follows in his shoe departments and which has made it possible for him to do fifty-two per cent. of his total shoe business on glazed kid shoes. This method of selling customers what they need is accomplished by intelligent attention and careful salesmanship on the part of the clerks.

A SLIGHTLY DIFFERENT METHOD

A shoe manufacturer tells an interesting experience of a retailer who bought a line of his shoes to retail at \$3.50 a pair. He feared that he could not sell this line to certain classes of trade, who had been buying cheaper shoes. When a customer came in and wanted a \$2 pair of shoes, he was treated as follows: He was fitted to the \$2 shoes. The shoes were done up ready for the customer to take out, and his \$2 was put in the cash drawer. Before he left the store, he was approached something as follows: "Before you leave, I want to show you our new line of \$3.50 shoes." Presenting the shoe for inspection, the salesman would say: "We believe that you will get more than twice the service out of this \$3.50 shoe than you can get out of the \$2 shoes. If this claim of ours doesn't prove true, come back to us and we will make a satisfactory settlement." The customer, after thinking the comparison over a moment, in seven cases out of ten asked to have the \$2 shoes he had already bought exchanged for the \$3.50 shoe. The principal weight of this argument probably lies in the fact that the retail dealer was willing to give the consumer what he called for, and did not at the outset try to sell him something else.

An important part of the business of some New York shoe dealers is making special shoes to order. The largest part of this business comes from women, who usually want a novelty style not to be found in regular shoe stocks. The style illustrated herewith is a custom-made novelty, original in conception and design, made by L. Miller, 1554 Broadway, New York, for a well-known society woman. Mr. Miller has named this style the "Congress Gaiter Boot." The circular vamp and quarter is patent kid, the top is of royal purple silk with gored sides, and an imitation button fly of purple silk and four small black pearl buttons, turn sole and Louis heel. A style of this character will never become popular, and is shown simply as an example of custom-made novelty shoes which dealers in high-grade footwear are often asked to make.

POOR CLASS OF TANS

In referring to the annual meeting of the shoe manufacturers, held recently in New York City, the Shoe Retailer says:

From all outward evidence, and not paying any attention to the stories that

have been circulated about what happened at the meeting of the executive committee, and at the executive session of the convention—for the trade paper representatives present were requested to leave shortly after the convention opened—nothing of great moment was accomplished except the adoption of a resolution on the tariff, and, to our mind, most important of all, the resolution on tan shoes.

The latter question really is important. Retailers everywhere have received complaints from many customers who purchased tan shoes and after wearing them a short time returned with the vamps cracked, or the leather peeling or chipped. This trouble is found almost exclusively in tan leather made by the

Boy's stoga with copper toe.

chrome process of tanning. The retailer has got no satisfaction from the manufacturer because he, in turn, had no redress from the tanner, who would not stand behind his product.

Chrome tan leather now is almost in the same class as patent leather. We feel that the association was warranted in passing a resolution almost as strong as the one treating of patent shoes.

The association will endeavor to have every shoe manufacturer making tan shoes—and that means practically all of them—place a copy of the association's resolution in every carton containing shoes made of tan leather as a means of educating the

A fancy sandal, ball slipper, made in Germany.

public to the proper care of tan footwear. By this method it is hoped to lessen materially the complaints from consumers and relieve the retailers from the many disagreeable experiences arising from the popularity of this stock.

New Fall Styles

The majority of shoe factories are now pretty well on the way with their fall samples. Several new lines will be exhibited. The showing in tans and patents will be strong. Button lines will have about fifty per cent. of the call. Vamps will still be short and tops high. Heels will in some instances be a little

lower. An effort has been made to displace bluchers and bring bals strongly to the front, but the attempt is not meeting with any great degree of success. The modified high toe will hold its own in women's. For men a straight last with receding toe and flat heel would appear to be gaining much in popular appreciation.

Permel Specific Lighting System

During the past year there was developed a system of specific lighting, for the purpose of economically lighting all kinds of small machines, where the operator's attention is to be centered on a small area, as on different classes of sewing machines. At first this system was developed particularly for machines used in the manufacture of shoes, such as stitching, eyeletting, vamping, embossing, skiving, etc. But it immediately created such an interest throughout the industrial world that it was soon extended to take in a broader field, until now this system is used on machines in connection with the manufacture of shoes, cloaks, skirts, gloves, overalls, etc. Although the system was brought to light only last year, yet it was in the course of development for a long time, and was evolved to fill a need.

Manufacturers in the textile and leather goods lines have realized that the old method of illuminating their machines and

factories was not the most efficient. In fact, any one who has observed the ordinary method of lighting the work on individual machines by the use of large glaring arcs, drop lights, etc., cannot but realize that this method of illumination is expensive at its best. It could be cheapened considerably if high efficiency Mazda Lamps were used instead of low efficiency carbon lamps, but even then it would be inefficient because of so much of the light being used to light waste space. There is no logical reason for lighting the ceiling, where no work is being performed. On the other hand, where the light is wanted, and in fact the only logical place to concentrate it, is on the work—right down at the needle point. It was to accomplish this very thing that the Permel System of Specific Lighting was developed.

Even the small amount of heat that is produced is removed from close proximity to the operator's head. Manufacturers are commencing to realize more and more every day that the size of their profits depends largely upon the efficiency of their operators, and the efficiency of those operators in turn depends to a large extent upon their health and general satisfaction. Therefore, any device which will save the operators' eyes, protect their health, and in general make them more satisfied, is bound to prove a profitable investment. The Permel Sales Co., N. Vine Street, Warren, Ohio, have developed and are selling this system. Their slogan is: Economy to the proprietor, and better light to the operator.

Have You System and Discipline in Your Store

Make Your Humblest Employee Feel That the Success of the Business in a Measure Depends Upon Him—Sound Advice on Delivery, Credit and Securing Mailing Lists—The "Sporty" Shoe Salesman

By "THE SALES MANAGER."

That S-Y-S-T-E-M spells success there can be no doubt when we think of the wonderful volume of business done annually by America's leading merchants, many of whom started in a very small way.

To what else can their success be attributed? Perhaps foresight, determination, coupled with unusual ability, even capital—but these splendid assets would not count for much without system. Many a man has begun business with capital and ended a complete failure, on account of the lack of system in his business.

To begin with, what could be better than to give employees certain responsibilities and duties, and make them feel that they are something more than to grunt at. The employer who tries to do everything himself, to insure its being done right, generally ends up in the poorhouse or the insane asylum. Why not make your humblest employe feel that the success of the business, in a measure, depends upon him? The small boy in knee breeches, who carries the shoe parcels, is not too small to recognize. Did you ever stop to think how much trade you lose through a poor delivery service? Your means of conveyance may be only a boy of twelve years or half a dozen delivery wagons. It makes little difference, such help is underpaid as a rule. These employes are looked upon as the "kid" or the "driver," and usually get the "dirty end of the rag," so to speak. Too often they are slightly referred to. The ranks of many of the most successful shoemen are, however, filled with former messenger boys and window cleaners, who could not be kept down.

Can Make or Mar Your Business

Mr. Employer, your delivery service is one of the most important features of your business, and can make or mar it. Are parcels always delivered to the right persons at the promised time? What happens when there is no one at home? Are they left in the porch or on the doorstep? I know of a case where a pair of \$4.50 shoes were left "inside the screen door" when the bell was not answered. The next day the gentleman called at that store and asked why his shoes had not been delivered. The "driver" was called and made the above explanation. The shoes had been stolen by someone, there is no saying whom, but that bit of carelessness might easily suggest "a cheap pair of shoes" to a crooked man. Of course, the firm had to stand the loss. I heard of another case, where a pair of chickens were hung on the doorknob to await the arrival of the owner, who was absent from the house. What a meal they would have made for a hungry dog. Luckily the owner arrived first. This last instance may not appeal to the shoe retailer, but they both go to show what kind of brains are employed by some up-to-date merchants. Can you afford a cheap man at \$8 or \$10 per week to do your delivering. Think it over, get "brains" and "judgment," if it does cost a few dollars more. It will pay you in the long run.

A number of prominent merchants, who have built up big businesses largely through system have a rule that every parcel must be signed for by the recipient before being left. Thus, even if a parcel should be delivered to the wrong house, it can be traced and handed to the rightful owner.

Entries in The Parcel Book

Do you do any credit business? How much money do you lose annually through forgotten charges? How very few of us are blessed with good memories. Many retailers use the fol-

lowing method. When the customer wishes to have the parcel sent, the name and address, salesman's number, etc., are entered in the parcel book thus wise:

Date Tuesday, January 2, 1912

Ck.	No.	Name	Address	C. P. or N. C.	Del. by
1	7	Mrs. H. Jones	Front St.	C	No. 2

The C.P. or N.C. column shows whether it was a charged, paid, or no charge parcel. The book is checked every evening, and if there should not be a charge for a parcel the salesman's memory is fresh on the matter, and the charge is made. This will be found a splendid system, as it not only is a precaution against forgotten charges, but it also gives a record of all delivered parcels, which can be referred to at any time. The used sheets are preserved in binders, just as carefully as original charges. When charged parcels are taken by the customer it is a good rule to enter the charge before the goods are wrapped. Sometimes a salesman is apt to neglect this in order to oblige a customer who is in a hurry.

Secure Good Mailing List

How do you handle your cash sales? If a customer disputes an article on his account as being paid for at the time of getting the same, can you trace it and be absolutely sure that he is right? If you cannot, there is a system provided that makes this possible. It is nothing more than the modern cash book used as intended, *viz.*, the purchaser's name should at all times be used in making out the slip. It is also necessary to mark the date plainly. The former rule is very little used, even in the larger stores. One reason is because of the little credit business done. This rule, of course, would apply more to the retailer doing a cash and credit business. All duplicate slips should be filed in order, so that they can be referred to at a moment's notice. Some will say, "Too much red tape," which is only a popular name for "system," after all.

Think what a nice mailing list those names will give you, and then you will be able to call your customers by name the second time they enter the store. Writing the name helps you to remember it. Calling your customers by name gives them the impression that you are specially interested in them, and your sale is half made before you have shown the first pair of shoes.

The Story Telling Salesman

Are your employes shoe salesmen or all-round athletes? The athlete is a splendid fellow as a rule. A sound body is essential to a sound mind, but salesmen who are continually discussing the popular sports of the day, such as hockey, baseball, etc., etc., during business hours, especially when customers are in the store, are not giving you value for your money, and should be allowed to try their skill at these games in a professional way. Judging from the knowledge that some salesmen seem to have,

they would undoubtedly "make good." The "athletic salesman" is by no means the worst kind.

There is the fellow who always has a new story of the "spicy" kind and cannot get his mind on his work until he tells "the boys." Some of these stories are a very good kind to get rid of, and they should be vomited on the dump, where the other refuse is put.

Mr. Employer, do you get the best out of your employes? Study them individually. Perhaps they have a talent sleeping, but not dead, that you never dreamed of. A kind word or a suggestion from you would be as oil to fire. About the only time some employers exchange a word with a junior clerk is when they refuse him an increase in salary. If you want your employes to respect you and give their best to your business, get in harmony with them, "draw them out," and forget this "bread and butter" talk

Simple Way to Locate Shoes

A shoeman in a central Ontario town, who runs his own store, but employs no clerk except on Saturdays and busy evenings, has hit upon a novel way. Said he "I have to go out of town once in a while and then my wife attends to the store. She often complained that she lost sales because she could never get onto the stock and find the goods that the people wanted. So I hit upon the scheme that you see before you. I had neat slips printed, pasted them on the shelves and classified my shoes accordingly. On the men's side I

had vici-kid bluchers, No. 7; gunmetal bals, No. 8; tan Oxfords, No. 6; patent button, No. 9, and so on. All the shoes of the size and of the leathers and style named were put on the shelves just above each printed slip as you see them there. The same plan was carried out with respect to the women's footwear. This arrangement has worked out first rate. My wife can now find any kind or size of shoe in stock in a few seconds and knows exactly what we have. Then this method is excellent for sorting and enables me to know what lines are not moving quickly. It may not serve for other stores but it does very well for mine."

The Month Shaped Up Well

Dealers are better satisfied with January than usual. Sales of seasonable goods, delayed by the open season before Christmas, have come with a rush since the first of the year, and it has kept the retail trade busy maintaining stocks intact in some lines. In rubbers and felts, of course, there has been a steady and profitable demand, while in skating and hockey boots, as well as in heavy lines of both men's and women's wear, there has been a good trade done. Money has seemed to be more plentiful than usual and accounts usually difficult to get in after the turn of the year seem to yield more readily to pressure. Altogether, the general opinion seems to be that January has been an exceptionally good month, and if February only carries its share of the burden, shoe stocks will be pretty well cleared up of winter lines by March 1st.

The Correct Thing to Wear in Shoes

A Handy Guide For the Retail Shoeman to Consult

WOMEN'S WEAR

DAYLIGHT

FORMAL—Wedding, formal call, matinee, reception, luncheon, concert, musicale.

Patent leather slippers to suit taste, conforming to gown. Suede calf or kid, white or colored. Patent kid slippers.

INFORMAL—Shopping, business, ordinary, morning wear, conventions.

Colored or black, calf or kid boots, moderate heels and toes; blucher, bal or button.

FORMAL—Church, promenade, afternoon formal functions.

Boots, or low cuts to harmonize costume in color. All leather or cloth tops. Dull or patent.

INFORMAL—Walking, automobiling, driving, recreation.

Heavy, colored or black, high or low cut. Rubber sole. Calf or kid, buck or cloth. Moderate heel and toe effects. Individual tastes.

EVENING

FORMAL—Wedding, reception, ball, formal dinner, theater, concert.

Reception slippers to match gown, leather or fabric. Patent or dull pumps.

INFORMAL—Home dinner, informal dinner, club affairs, informal gathering.

Boots or slippers conforming to costume. Dull pumps. Cloth tops, with dull or patent vamps.

MEN'S WEAR

DAYLIGHT

FORMAL—Wedding, formal call, matinee, reception, luncheon.

Patent leather, button or bal. Dull or cloth top, cap toes.

INFORMAL—Street, office, ordinary morning wear.

Calfskin, dull, semi-bright or tan. High shoe or Oxford. Button or laced, blucher or bal. A wider range of taste.

FORMAL—Afternoon reception, church, or other formal functions.

High shoe, patent leather, button or bal. Dull or cloth top, moderate shapes, cap toes.

INFORMAL—Walking, automobiling, golf, driving, recreation.

Heavy, colored or black, high or low. Individual taste. Rubber soled, buck, calfskin or cloth.

EVENING

FORMAL—Wedding, ball, reception, formal dinner, theater, concert.

High boot, patent leather button, cloth or dull leather top, plain toes. Patent and dull leather pumps.

INFORMAL—Home dinner, informal dinner, stag dinner or club affairs, informal gathering.

High boot, dull leather laced or button tops, dull leather pumps.

Changes as occasion demands.

Two Interesting Competitions!

1. How I would start in the shoe business on a cash capital of \$2,500

First Prize	-	-	-	\$10
Second Prize	-	-	-	7
Third Prize	-	-	-	5

2. How I would start in the shoe business on a cash capital of \$1,000

First Prize	-	-	-	\$10
Second Prize	-	-	-	7
Third Prize	-	-	-	5

Men already in business can use their own actual experiences as a basis for an article, telling how they would enter the field if they had to do it again with a capital of either \$1,000 or \$2,500.

The "Shoe and Leather Journal" should also have some good stories from young men who contemplate going into business, and who have, no doubt, figured how they would do it on a certain cash capital.

The question is: If you had \$1,000 or \$2,500 in the bank and wanted to start in the shoe business, carrying heavy, medium and special lines, rubbers, findings, etc., how would you go about it?

We thought first of specifying a particular set of circumstances to govern each competition, but decided against this idea when we considered how widely different in details are the problems which confront merchants in different localities when they begin in business.

We would much prefer that contestants take conditions as they exist in their own towns, or others with which they are familiar.

Tell just how you would spend your money on fixtures and stock, how you would go about your buying, what you would buy, and why; what financial accommodation you would desire and how you would arrange it; what amount you would invest in working shoes, walking boots, light goods, rubber shoes, novelties, findings, and the various other lines that would constitute your stock. What would you set aside for advertising, and how you would spend it, etc.

Don't imagine that it will be necessary to write your story out in fine literary style. We don't care much if you scribble it on wrapping paper, so long as the facts are plain. We'll attend to putting it into good newspaper form. Literary merit won't count for a fraction of a point when it comes to the judging of the entries.

These Competitions will close March 20

In addition to the prize-winning stories we will publish all others that possess sufficient merit, and for each one so used the "Shoe and Leather Journal" will pay \$3. This means that every contestant who devotes some little time and study to his story is pretty sure of receiving at least \$3 for his trouble, not to speak of the benefit that such thought and calculation will bring to him personally. For any further information you desire regarding these competitions write

On the Road

JUST A LITTLE TALK ON "TROUBLES"

"I see that shoe manufacturers are talking of increasing the price on some lines of goods, if not all," remarked a shoe traveler, residing in London, who has been on the road eighteen years. "They contend there is no line of business in which so much money is invested in both plant and in the individual product and on which there is such a small margin of profit. They may be right."

Then he mused for a time and went on smoking hard. "Say," he added, evidently in a rather confidential mood. "I have never been a welcher, or a squealer, I have never peddled my troubles and have always kept a still tongue in my head, no matter how luck or sales have resulted. I am pretty well known to the boys on the road, and enjoy the confidence of many who now and then come and pour out their woes to me. I never reveal these confessions. Then there are the other kind who are always informing you of how many thousand dollars' worth of goods they sold last year, how fat are their salaries or commissions, and what a snap they have disposing of certain lines. The samples will almost do all the talking; they are so shapely, attractive, snappy and fetching. I always take the talk of such men with a grain of salt. In the first place, if a road man is making big money, he rarely, if ever, tells it. People generally learn of these facts without their being published from the hill tops. You can double discount the tale of a man who jabbers about his earning capacity and speaks of thousands as glibly as the average fellow refers to hundreds.

Beware of the Boastful Talker

"The true state of affairs is that the average shoe traveler is not making what he should. If he is on commission the guarantee is too small or the territory which he covers, too restricted for him to pile up a large amount. The competition is fierce. You know nothing about it unless you have been up against the proposition, as I have for many years. It does not matter much whether you are on salary or commission or both. Circumstances hit you about the same way. I had represented an Eastern manufacturer for years and had a straight salary. The first year I did not earn it (based on the usual sale commission allowance of five per cent.) and the sales manager called me into his office one day and told me that I could have another year of it. If at the end of the coming twelve months I did not buck up to the mark, then I could look elsewhere for a job. Well, that year I considerably overran the figure and the firm were well pleased. The following year things were rather dull in Canada and worse across the line. Everybody was afraid that he would get loaded up with footwear and accounts, which for spring and fall orders had reached as high as five and six thousand dollars, fell off to less than half that sum. The end of 19— came and once more I had a seance with the sales manager. He told me frankly that I had not earned the amount they were paying me.

The Aggregate Did Not Count

"I informed him that based on the five per cent. allowance, and taking the three years into consideration, my total sales had a

surplus of some twelve or fifteen thousand dollars. He gave me one look and said that I must never go back—that the past did not count and, having established a record in 19—, and shown, a gratifying gain, I was expected to overtop it the last twelve months, which owing to the depression, I had failed to do. As he did not seem disposed to consider work in the aggregate, I saw that next year might go hard with me and that my course with this firm would, perhaps, be over. I secured another post on a strictly commission basis, and I am working under this condition to-day. I find it far more satisfactory as it is a kind of co-partnership affair. I mean by this that the more goods I sell the more money I make for both myself and the firm. There can be so many kicks coming.

"But here is the rub. In the commission selling basis I get only five per cent. on what goods are actually booked by me, shipped and paid for. Very often one of my customers will go to the city personally and buy, or he will send in a sorting order by mail or telephone, for which I get no credit whatever. Now, that is not fair. I maintain that all business which comes off my territory should count. I cannot be everywhere just when a merchant wants to give an order, but I have been, no doubt, influential in retaining that customer for the house and keeping up his connection.

Some Drawbacks to Commission Basis

"Here is another phase of the situation which some jobbers and manufacturers might very well make a note of. I have taken orders for ladies' tans, certain sizes, men's patent bluchers, satin pumps, youths', girls', and other lines on a popular last and heel, width or leather, and lo and behold, the house has not had these in stock, although they have not advised me of the fact. I took an order the other day for five hundred dollars' worth of two different lines. When I got back on Saturday, I was informed that they were out of that class of goods. There had been a run on them and they could not obtain any more. Now my allowance would have been twenty-five dollars, as that retailer was good pay. He would not accept any substitutes and the order went to another firm. What I have to say is this, if a firm is short on certain sizes, widths, toes, or patterns and cannot obtain them, they should notify the traveler at once so that he would not be placed at a disadvantage and, after booking business in good faith, be unable to 'cash in' on it. It is not fair to the road man to do business, bear his own expense, and then not tally in the matter of commission, through no fault of his, but solely owing to the house being unable to supply the goods. He should get a measure of credit at any rate.

Where and How Things Fade

"I say you have to sell a lot of shoes when you are out on commission to make a good living. Expectations are never up to realizations—at least very rarely. I know a traveler who went out a year ago last September with a nifty line of fall samples. He covered the Maritime Provinces for a Montreal manufacturer, who turns out some of the choicest stuff in Canada in the way of women's footwear. He booked that fall over sixty-five thousand

dollars' worth of business. He reckoned that he would have over three thousand dollars coming to him, less his expenses. Well, some orders were deferred, other retailers went to the wall, three big orders were cancelled from one cause or another, and then things were not running smoothly at the factory. Shipments were delayed weeks after specified and were sent back. Out of the sixty-five thousand dollars of spring placing orders, when the time for computation came, how much do you suppose that pile has dwindled down to—less than forty thousand. And mind you this is not an exceptional instance. You cannot count on one hundred per cent. efficiency or returns in any cause. Things go wrong and you have to take the bitter with the sweet.

They See Only the Glimmer

"Many a man 'on the pike' has to represent two or three firms to make anything like a decent living. Expenses of traveling such as hotel bills, rates for sample rooms, tipping, and other demands are going up all the time. The traveler has much to account for that is never taken into consideration, in the way of cancellations, non-delivery of goods, out of sorts, doubtful pay on the part of certain customers, and other difficulties. At the end of twelve months, after he has figured up his actual traveling outlay and what is coming to him on goods delivered and paid for by the retail trade, the net result is not so large.

"Now do not let any one who has not been on the road for years imagine that it is an easy, comfortable life, with orders awaiting you at every turn and nothing to do during the remainder of the day after you have called on two or three men who may or may not buy. I have numerous retail salesmen coming to me every week insinuating what a snap a traveler enjoys, how they would like to get out of the humdrum monotony of retail life, and take a position on the line with some live, reputable wholesale or manufacturing firm.

A Comparison of Conditions

"One young man remarked the other day, 'Here I have been working for B—— nine years, and am only earning sixteen dollars a week. It must be nice to sell shoes in two, three, six and seven hundred dollar lots at a crack instead of one pair at three or four or five dollars. My business is picayune, trivial, dribble, dabble, in every sense of the word. I tell you I am going to get on the road. It often takes as much talking and persuasive power to dispose of a single pair as you exercise in disposing of hundreds of dollars worth of footwear.'

"I told that young man a thing or two, and I hope his erroneous impressions have been corrected. He has his home life, family comforts, regular hours and meals, knows exactly what he is getting and does not have to catch trains at all times, put up with detestable accommodation, wait hours to see a prospect, meet with all sorts of disappointments, go out in every kind of weather, act as adjuster between contending parties, have some weeks pass when orders taken will not cover traveling expenses, and a thousand other things 'too numerous to mention,' as the auction sale bills read."

The Earliest History of Shoes

It cannot be stated with certainty how, when or where the wearing of shoes began. It can only be surmised that some contemporary of the Stone Age, finding his way beset with stones or strewn with thorns, thought to fasten about his feet the raw hide of the animal he had slain, and that then was born the germ of utility that through the centuries has evolved into the modern shoe. The earliest shoes worn in the northern part of Europe were undoubtedly shaped like the moccasin of the American Indian, and were made of raw hide with the hair outside. They covered the whole foot and partly enclosed the ankle, about which they were fastened with thongs that laced through slits in the hide. Such were the shoes worn by the ancient Germans and the Celts of Brittany. In sunnier regions the first foot apparel was probably a sandal of straw, palm, wood or hide fastened to the foot by a thong passing between the big and the

next toes and laced about the ankle. Sandals of this kind are not unlike those of the old Hebrews, the ancient Egyptians, and the Assyrians and Persians. The earliest mention of shoes in the Scriptures is in the 14th chapter of Genesis, (about 1913 B.C.), where Abram tells the King of Sodom he "will not take from a thread even to a shoe latchet," lest the king claim he made Abram rich. Again (about 1491 B.C.), where Moses is commanded to remove his shoes before the burning bush, for the ground upon which he stood was holy. The shoes that the traveler sees at the doors of mosques and Eastern temples point back to this act of early reverence, as well as does the custom of removing the shoes in the presence of Eastern potentates.

Section of holiday window put in by E. G. Trick & Bro., shoe retailers, of Winnipeg

Wooden Clogs in England

Are Leather Shoes Beyond the Means of the Ordinary Working Man To Provide for His Family?

An effort to substitute waterproof and practically indestructible wooden shoes, the sort worn by peasants in Holland, France and other Continental countries, for the cheap leather shoes worn by the school children of very poor parents was made in England some time ago, but was not a success. It has been revived this winter and evidence is accumulating that in parts of the country there is an increasing use of the cumbersome footgear.

The argument in favor of the clogs is that leather shoes are beyond the means of the average English workingman's family, while clogs are cheap and never wear out, generally speaking. Many school children of the poorer classes wear mere apologies for shoes, soleless affairs, with holes that let in water and lay the foundation for pneumonia and other diseases.

Several years ago when Sir John Kirk, director of the Ragged School Union and Shaftesbury Society, joined Lady St. Helier in an appeal for funds to supply poor children in the London schools with foot wear on the part payment system the suggestion was made that clogs be supplied these children as more durable and serviceable than leather shoes. According to Percy Gray, of Orlehar, Bude, North Cornwall, who wrote to Sir John Kirk on the subject, he was met with the objection that cockneydom would not wear clogs.

That objection seemed to have been well taken, for the effort to have poor school children in London adopt the wooden substitutes for leather shoes did not get very far. The renewed effort is finding encouragement in testimony of persons who have made the clog experiment with some degree of success.

Richard B. Martin, of Tewkesbury, is one of those who have reason to be pleased with charitable work of this character.

"Last winter," he says, "I gave a few pairs of wooden clogs to some children who have to come a good three miles to school through a wet and dirty lane. The clogs 'caught on,' and this year I gave away nine more pairs, and my wife over fifty pairs to one village school. They seem to keep the children's feet warmer than old and well worn leather shoes. I had the clogs from Warrington and they cost 2s. 6d., a pair; men's size, 3s. 6d.

Things That Are Going On In The Shoe Arena

Interesting Notes Gathered From a Variety of Sources and Put In Short Shape for the Perusal of Subscribers—
Personal Movements and Other Events That Help to Make Up the Round of Daily Life

B. Patry & Co., shoe dealers, Hull, Que., are offering to compromise.

G. Bedard, shoemaker of Selkirk West, Man., has gone out of business.

S. Reinhorn has embarked in the shoe and clothing business in Saskatoon, Sask.

Trudeau & Frere, shoe retailers, of Montreal, have made an assignment.

John Hufner has opened a new shoe store in Lethbridge, Alta.

Mr. Odell, of Fisk, Limited, Toronto, was in Quebec last week on business.

Messrs. Dowling & Creelman, of Brandon, Man., were in Toronto and other Eastern points on business last week.

H. B. McGee, of the Minister, Myles Shoe Co., Toronto, was in Quebec city last week on a business trip.

Campbell Bros., of Port Arthur, have disposed of their business to Kaufman and Humphrey.

Mr. Milton, formerly of the Arcade, Hamilton, Ont., has opened a shoe store on Barton Street, in that city.

The assets of Louis Spevack, shoe retailer, Winnipeg, have been sold to Phillips & Shore.

The shoe stock of John McCaughan, Montreal, Que., was damaged by fire recently.

W. C. Rising of Waterbury & Rising, St. John, N.B., was in Montreal last week on business.

The stock of W. G. Hicks, dealer in boots and shoes, Medicine Hat, Sask., was badly damaged by fire recently.

R. T. Aitkin of Galt, Ont., shoe retailer, recently made an assignment to Richard Tew, Toronto.

John Newell, dealer in harness, Creemore, Ont., has disposed of his business to Thomas Thurston.

D. G. Hardie of Hardie & Moore, Toronto, was in Montreal for a few days on business.

James Shrive, shoe retailer, Ottawa St., Hamilton, Ont., is enlarging his store and making other improvements to his premises.

Kentucky's proposed anti-tipping law passed the Lower House of the Legislature by a vote of 59 to 7. The bill provides a fine for tipping waiters and porters.

Among the visitors to the recent automobile show in New York were Clarence F. Smith, R. J. Younge, of Montreal, and R. E. Jamieson, of Toronto.

Marlatt & Armstrong Co., Limited, leather dealers, Montreal, expect to move into fine new quarters on William Street in that city in a few weeks.

A. E. Cudmore, 952 Gerrard Street East, Toronto, has opened a branch shoe store at 320 Danforth Road, which is under the management of Albert Chadwick.

A. L. Johnston, of Winnipeg, Western manager of Ames, Holden, McCready, Limited, has gone on a trip to the Old Country.

H. Clark, son of W. O. Clark, York St., Hamilton, Ont., has opened a new shoe store on Ottawa St. in the Ambitious City.

Mallette & Roy, wholesale leather, Mon-

treau, Que., have dissolved partnership. E. Mallette will continue the business under the style of Mallette & Co.

George Cain of Toronto, general sales-manager of the Miner Rubber Co., was in Montreal and Granby last week on business.

J. B. Kilgour of Kilgour, Rimer & Co., Winnipeg, Man., has returned to the West after a visit to Toronto, Montreal and other Eastern centres.

J. Jupp, Jr., 810 Queen Street East, Toronto, accompanied by his wife and son, has gone on a trip to Jamaica, and will be absent several weeks.

A. Weseloh and Co., shoe dealers, of Berlin, have sold their shoe business to F. Kiebler, of Listowel, who was, for some years, in the same line in that town.

C. Switzer, of Sunderland, Ontario, who has for a number of years conducted a successful shoe store in that place, is looking for a purchaser of his business.

The Dominion Repair Co., 99 James Street North, Hamilton, have added a nine-foot Goodyear repair outfit to their equipment.

The Boot and Shoe Workers' Union of Toronto has adopted a resolution protesting against any change in the immigration laws which would permit the Sikhs to enter Canada.

W. G. Langdon, commissioner for the city of Brandon, Manitoba, Canada, would be pleased to hear from manufacturers of tan rubbers and overshoes suitable for the Canadian markets.

William Oakley, shoemaker, of Brussels, Ontario, while walking the other day, slipped on the icy sidewalk and dislocated his hip. He will be confined to the house for some time.

George Hervey, 25 Spring Garden Road, Halifax, who has had twenty-five years' practical experience as a shoemaker, has recently renovated his shop and put in a fine new stock of boots and shoes.

William Garside of Garside & White, wholesale shoes, Toronto, left a few days ago for Florida, where he will spend several weeks. He was accompanied by Mrs. Garside.

W. Wareham, of the warehouse staff of Ames, Holden, McCready, Toronto, has been appointed to a position on the road and will look after part of Western Ontario.

George J. Henry, 926 College Street, Toronto, who is retiring from the retail business, intends going to Edmonton, where he will become identified with George Stock-and in the wholesale line.

Wilfrid Therrien, shoe dealer, Montreal, who conducted a business at 869 Mount Royal Avenue, recently made an assignment. His assets include the stock in trade, while the liabilities amounted to over nine thousand dollars.

Joseph Patrick, of Carp, Ontario, for the past eighteen years conducting a shoe-making shop in that village, was found dead in bed at his home on Saturday last. He was born in County Tyrone, Ireland, and came to Canada when a young man.

A. E. Snider, of the traveling staff of

Ames, Holden, McCready, Ltd., Toronto, was married this week in Trenton, Ontario. He is one of the most popular men on the road, his territory being Northern Ontario.

F. M. Cowan, of Chatham, Ont., has taken a position on the road with the Brandon Shoe Co., of Brantford. He was formerly on the staff of the Winn Co., of Perth. He is a brother of Geo. W. Cowan, shoe retailer, of Chatham.

M. Welsh, who, for a number of years, has been with the firm of Robinson and Kelly, shoe dealers, Gananoque, Ontario, is about to enter into that line for himself. He has secured premises, where he will open a first class boot shop.

A fire started by a customer lighting his pipe and carelessly dropping the match in N. Cohen's shoe store, St. Lawrence Street, Montreal, caused very much damage before the fire was gotten under control. Most of the loss is covered by insurance.

W. H. Adams, who for a number of years has been in the shoe line in Belleville, Ontario, has removed to a handsome and well appointed store. His new premises are on the opposite side of the street and about a block south of his old stand.

T. Switzer, Yorkton, Sask., dealer in shoes and men's wear, has removed to larger premises. Oak fixtures are used throughout and also counter show cases, which display to advantage the many lines carried.

At the request of Judge Dodge, of the United States District Court, the date for hearing on demurrer of the officials of the United Shoe Machinery Co. to the indictment of the government, set for January 31, has been postponed until February 14.

A. W. Ault, of Ottawa, was elected a member of the City Council at the recent municipal elections. He won a great victory in the Capital ward. Mr. Ault is head of the wholesale boot and shoe house of A. W. Ault & Co.

George W. Coleman, of Boston, who is at the head of one of the largest shoe businesses in the United States, and is the president of the Associated Ad. Clubs of America, was in Toronto this week, and delivered a stirring address before the Toronto Ad. Club.

W. Williams, shoe merchant of Acton, Ont., sustained a very deep and painful gash in the fleshy part of the thumb on his left hand one day recently, while repairing a shoe. Mr. Williams has been an active shoemaker continuously for fifty years, and this is the first serious cut he ever had.

Rev. George Sale, D.D., of Atlanta, Georgia, who was widely known among the Baptists of Toronto, died recently at St. Luke's Hospital, New York City, following an operation, at the age of 57. Dr. Sale was a brother of Julian Sale, leather goods merchant of Toronto.

The D. L. McGibbon Company, Limited, Montreal, Que., has been incorporated, with a capital of \$1,000,000. The company has power to deal in stocks and bonds, purchase industries, operate water powers, etc. Mr. McGibbon will be president of the company. He is also president of the Canadian Consolidated Rubber Co., Ames-

Holden-McCready, Limited, Goodwins, Limited, Montreal, and several other large organizations.

Last year Canadian bank clearings increased 17.8 per cent., United States clearings decreased 3.2 per cent. Canadian business failures decreased by 60. U.S. failures increased by 1.106. C.P.R. last year advanced 46½ points. Nearly all of Uncle Sam's stocks showed declines.

The inauguration of the Commercial Travelers' Club, at 91 Sherbrooke Street East, Montreal, took place recently, and was a brilliant function. Among those present and who delivered addresses were Sir Rodolph Forget, Mr. Godfrey Langlois, Alderman Robinson, Mr. O. S. Perrault, Lt.-Col. Labelle, and Mr. Jos. Gravel.

That an Eastern campaign is being contemplated by the executive of the International Organization of the Gideons, or Christian Commercial Travelers, is the statement of Fred Bruce Horn, a member of the Canadian executive and also of the Detroit Camp of the American Association, who is in Toronto on a short visit. The western Gideons are more aggressive, he says, than those in the eastern states.

The number of Canadian shoe retailers carrying leather and traveling goods is increasing every month. The investment is a profitable one. A show case in which the smaller articles, such as handbags, purses, dressing cases, etc., are displayed is favorite method of selling. They are great favorites as presents, are popular and command a ready sale all the year round.

A new industry for Moose Jaw, Sask., in the shape of a tannery is about to be consummated. Otto Jensen, proprietor of the Lisbon Tannery of Lisbon, North Dakota, will come to Moose Jaw and establish a tannery there. Mr. Jensen will move three carloads of machinery from Lisbon to Moose Jaw and will also bring a number of skilled mechanics.

Jobbers are busy shipping goods and there is considerable activity around the warehouses. Several retailers have all their spring stuff in stock ready for placing on the shelves as soon as the clearance sales, which some have been handling, are over. The season for hockey and skating boots has been decidedly brisk, and shoe men in all parts of the country have sent in heavy sorting orders.

W. J. Drysdale, of Lanark, Ont., lately with the Winn Co., Perth, has joined the traveling staff of Ames, Holden, McCready, of Toronto, and will cover the territory from Belleville west, which has for many years been looked after by J. C. Moynes. The latter is retiring to private life and a well earned rest after forty years of active, faithful work as a shoe traveler.

The store owned and occupied by John Green, shoemaker, Kingston, was destroyed by fire recently. Mr. Green and his wife had just time to get out of the building, and were not able to save anything except the clothes on their backs. The fire started from the furnace, and then went up through the walls, and then broke out in the main part of the store. The store is a total wreck. Mr. Green had money amounting to about \$100 in a drawer upstairs, and that all went up in smoke.

Alleged Fraud in Rubber Deal

A London cable says: Cornelius Vanderbilt, Robert Goelet, and John L. Elliott are accused by *Truth* of having made enormous profits by the sale of the New Jersey Rubber Company, said to be worthless, to an English company which they promoted.

Associated in the promotion was Marquis De Charnace. It is alleged that Vanderbilt and his two New York associates reaped a profit of \$5,000,000. The stock of the English company was boosted to \$7 a share until after the insiders had unloaded, when it fell to 50 cents a share.

Shoe Store Thief Convicted

Emmett Hurst was charged in the Toronto Police Court recently with breaking into A. Levy's boot store, at 260 Yonge Street, on December 29th. Mr. Levy stated that the cash register was damaged, and a constable testified to finding Hurst in the store. The representative of the Holmes Electric Alarm Co. stated that the entry of an intruder into the rooms of any of their clients is signalled at the offices by an alarm which rings until attended to. Hence his discovery of Hurst. The latter claimed he was drunk. He had two previous convictions, one for 1909, the other for 1910, and was sent to the Central for 18 months.

Western House Keeps to Front

The Johnston Big Shoe House, Limited, of New Westminster, B.C., are enlarging and making extensive improvements to their store. Ten thousand dollars is being expended in the way of alterations. When completed the store will be 132 feet deep and 33 feet wide, with basement and balcony, which will give the company one of the largest, if not the largest, footwear emporiums in Western Canada. All the fittings and conveniences will be of the most modern and attractive character. Their Vancouver store, at 409 Hastings Street, is also undergoing extensive changes, which will add very much to its appearance. The company report having done a splendid business during the last year, and are looking for greatly increased trade during the present one. W. B. Johnston is president, G. B. Johnston is manager, and Wm. Love, secretary-treasurer of company.

A Big Shoe and Its History

T. J. Mowat, manager of the Neill Shoe Store, Galt, Ontario, has in his possession a curiosity. It is a genuine, cowhide brogan, size eighteen. It has full triple sole, with diamond-shaped pegs all driven by hand. The boot is all hand-made and was turned out by G. W. Wentworth and Co., of Haverhill, Mass., in 1855. It was purchased by J. C. Holwell, of Brockville, at an exhibition held across the border over half a century ago, and passed through several hands, finally coming into possession of George McLean, of Brockville. When the latter sold out to Robert Neill, nine years ago, the shoe formed part of the stock. It was given to Mr. Mowat, and has been exhibited in windows in Peterborough, Lindsay, Berlin, Guelph, Brantford, Toronto, London, Galt, and other places. The brogan, which is unlined, is well made and has punched eyelets. When on display it never fails to attract a crowd, owing to its enormous size.

Poor Year for American Factories

Some figures have been handed out by the United States Census Bureau, dealing with the manufacturing industries of the United States and covering the year 1909, for which the thirteenth census was taken. The report does not consider statistics for factories having products for the census year of less than \$500.

The census bureau found in 1909, 268,491 establishments in operation, an increase of 24 per cent. over the year 1904. These establishments were capitalized at \$18,428,270,000, an increase of 45 per cent. The

total payroll, salaries and wages was \$4-365,613,000. Their miscellaneous expenses were \$1,945,676,000. The total value of products was \$20,672,052,000.

BUSINESS GOOD IN WINNIPEG

Western Retailers Had a Good Year—
Several Boot Shops Are Making
Extensive Improvements

Geo. C. Locke, who, some time ago, took over the Adie Shoe Store, at the corner of Portage Avenue and Edmonton, has had his lease cancelled, and is selling out at this stand. He has formed a limited company with local parties and others and will remove across the street from his present premises. The new home of the "Avenue Shoe Co.," after March 1st, will be in this new stand. Mr. Locke will be general manager of the new organization. Both the exterior and the interior of the premises will be handsome and inviting. The location is a good one, and Mr. Locke's friends in Toronto and other places will be pleased to learn of his continued success. He is an enthusiastic shoe man and a shrewd buyer.

The Hudson's Bay Company shoe sale was the largest of any department in the history of their Winnipeg establishment.

Mr. Balfour, salesmanager of the Regal Shoe Store, is very ill at his home in Portage La Prairie, Man.

Harry Stark is booming things this season at both his stores, showing his goods in a tempting manner. He reports an excellent season.

The Tom Stedman Company have already enlarged their spacious store, and at the old reliable corner now have one of the finest retail shops in the West.

The Yale shoe store is running a big dissolution sale at present. Mr. Geo. Nickle, the senior member of the firm, is retiring, and John Affleck will continue the business under the name of the Yale Shoe Store.

W. Devlin, of the Ryan, Devlin Shoe Co., is on an extended trip throughout the United States, visiting a large number of the most attractive and up-to-date shoe stores. He intends to obtain a number of pointers, and, on his return, will alter his establishment so that it will be one of the best and brightest in the West.

The Rannard Shoe Co. held their annual dinner at the Royal Alexandra Hotel a few weeks ago. The occasion was a very enjoyable one and will long be remembered for its pleasant associations. The past year has been the largest and most successful in the history of the house.

Business during the past month has been very good, and some of the stores have been holding clearing sales. Tan button boots for men, women and children are having a big run. Black is still strong in the button line. Trade has been really much better than usual at this season, which is generally considered a dull one.

W. A. Moyer is in the East buying for his new large store. He has converted his business into a joint stock shoe company. W. A. Moyer is the president and general manager of the organization, and Mr. Arbuckle, formerly of Toronto, is secretary-treasurer and sales manager. They will have one of the finest shops in Western Canada when the alterations are completed.

Rates Call for Protest

A petition is now circulating among the commercial travelers of the province, for presentation to the Ontario Government, protesting against the increase in hotel rates, which has followed the imposition of the Government tax on bar receipts and the lack of good accommodation, particularly in towns and villages where local option is in force. The petition suggests the appointment of the provincial inspectors to investigate accommodation.

High Honor for Mr. Pocock

Philip Pocock, head of the London Shoe Company, who is widely and favorably known to the trade in Ontario, was recently honored by the citizens of London by being elected a commissioner of the Utility Board for another two-year term. He had the honor of being chairman

of the board for the past two years, a position in the gift of that body. During his term of office the board has increased the water supply of the city and installed the hydro-electric in the Forest City, which undertakings entailed an expenditure of nearly half a million dollars. The re-election of Mr. Pocock is a tribute to his ability and faithful work in the interest of the citizens. Previous to forming the London Shoe Company, Mr. Pocock was in the retail line for a number of years, and was one of the most progressive and alert shoe men in the West. The same measure of success has attended his efforts in the wholesale arena.

Big Industry Enlarges

The Davis Leather Company by-law, to fix the assessments of the property of the company at \$20,000 for a period of ten years, was enthusiastically carried by the ratepayers of Newmarket. Although there was no municipal contest to incite the voters to come out, all the members of the council being returned by acclamation, the vote stood 496 for the by-law and only 14 against. The Davis Leather Company will now expend between \$50,000 and \$75,000 in additional buildings and plant, and double the output of their tannery, which has been unable to keep up with orders for many months.

Mr. Stark's Palatial New Store

A Vancouver paper says: One is greeted on getting off the car at Nelson Street, with a brilliantly lighted and lavish window display of footwear. This is Stark's new up-town shoe store, marking another epoch for this progressive shoe man. The one hundred and fifty feet of window display is perhaps the most ornate and greatest on the coast. It is lighted at night with Tungsten electric lights, making this one of the most attractive corners on Granville Street. The window, back and sides are all fitted with British bevel plate mirror and the floors of oak and mahogany parquetry. On entering this modern store one is pleased with the interior decoration, which is a marvel of neatness and comfort. The balcony, which is a new feature in a Vancouver shoe store, does away entirely with the unsightly stepladder and gives more space for reserve stock, which adds much to the stockiness of the store. Pure white enamel is the finish of the woodwork. Individual mission oak chairs are provided for ladies and gentlemen in separate aisles. Mr. Stark has certainly excelled himself in

thinking of the comfort and pleasure of his patrons, for shopping at the modern shoe store with all modern convenience will assuredly be much appreciated by the public.

Mishap of a Manufacturer

A prominent shoe manufacturer of St. Thomas, Ont., who is fond of telling his friends how skilfully he drove a stage coach in the Alaskan region some years ago, and never met with a mishap, although having three teams of horses attached to the conveyance at one time, undertook to pilot a traveler to the neighboring town of Aylmer the other day. He hired a single horse and cutter and off they started. They had not gone a hundred rods when, in crossing the car tracks, there was a grand "spill." The former coach-driver picked himself up all covered with snow and slush. Now his friends are all querying him regarding his intention of conducting a driving school and asking his fees for instruction.

May Teach Shoemaking

At the invitation of the chairman, Mr. Caspard DeSorres, a visit was paid to the Montreal Technical Institute, on Thursday, Jan. 25th, morning, by the members of the Montreal Boot and Shoe Section of the Canadian Manufacturers' Association. At a recent meeting of this section a suggestion was put forward that arrangements might be made with the Montreal Technical Institute for the installation of equipment for the instruction of boot and shoe workers in the new technical school. Hence, the visit which the boot and shoe manufacturers paid to the school, and after conference with the officials, the advisability of instituting the course is being considered. This inspection will undoubtedly result in practical benefit to the shoe industry. The official deputation of the section was composed of Messrs. Joseph Daoust, Geo. A. Slater, and Alf. Lambert, but several other boot and shoe manufacturers accompanied them. Although the fact may not be generally known, Montreal and Maisonneuve constitute the greatest shoe manufacturing centre in Canada. There are about thirty well equipped factories, with an employment of from twelve to thirteen thousand hands.

U.S.M. Co. Hearing Resumed

At the resumption of the hearing in Montreal regarding the operations of the United Shoe Machinery Co. by the Commission, Walter Smardon of the Smardon Shoe Co., said:

"Since the United Shoe Machinery Company has been established in Canada conditions have improved wonderfully, both in the quantity and quality of the work turned out by the machines. Although called as a witness by the opposition to the company, his evidence to a considerable extent was in its favor. He said he was not in favor of the leasing system, and would prefer to do without the tying clause, but on the whole he thought the system of business carried on by the company was all right. Under this system," he said, "he was able to get excellent service, and the best of modern machinery. There was, of course, an advantage in both methods of doing business, but under the plan adopted by the United Shoe Machinery Company the manufacturers were very well off.

R. Lanthier of the Kingsbury Footwear Co., Montreal, said he rather favored the system of leasing machines rather than buying them outright because it enabled the manufacturers to introduce improvements without too much outlay of money. The twenty-year contracts of the United Shoe

Machinery Company, he admitted, were rather long, but as a matter of business he was satisfied with the company's methods. "I find nothing objectionable in the tying clause of the U. S. M. Co.," added Mr. Lanthier.

At the resumption of the investigation on January 31st, F. W. Knowlton, Canadian manager of the U.S.M. Co., was on the stand for two hours. The next session of the board will be held in Quebec City on Monday, February 4th.

An Aggressive Public Servant

Ald. Jas. Robinson is one of the few men immersed in business affairs who make it a point to devote some of their time and talents to the interests of the great world about them. Although Ald. Robinson has enough to occupy most men of energy and ambition in his own af-

fairs he has for some years been in the City Council of Montreal. He is not one of those who accept office for the sake of the honor, but gives an amount of time to public affairs that astonishes his fellow aldermen. He has always been known as a good fighter, and in business has made a name for getting after crooked deals. Since he has been in the City Council he has had his hands full exposing and opposing civic graft. The roads and police departments have come in for a share of his vigorous attention, with the result that "jobbing" interests in its worst civic sense has learned to fear the redoubtable representative from St. Antoine. He has just been re-elected in St. Lawrence Ward. Here's wishing him every success in his good work, and hoping that his labors on behalf of the citizens may be so appreciated that he may be given the highest position in the gift of the city—the mayor's chair—in the near future.

Additional News Jottings

The shoe store of R. J. McIntosh, Chilliwack, B.C., was visited by fire last week and damage done to the extent of \$600.

S. R. Knapp, proprietor of the Albany Shoe Store, 522 Bloor Street West, Toronto, intends erecting an addition to his store in the spring.

G. A. Carmichael, who for years has been in the shoemaking business in Portage la Prairie, Manitoba, has been added to the staff of the Portage Industrial School, being appointed instructor.

A despatch from Malden, Mass., says: The Edgeworth & Fells mills of the Boston Rubber Shoe Company will be shut down January 25th for ten days. About 3,500 persons are employed by the two plants.

E. M. Thorne, the shoe man, has concluded the deal whereby he purchased from the Chisholm estate the west store now occupied by R. J. Young & Co., on Dundas Street, Toronto. The consideration is said to be \$30,000, or \$1,000 a foot frontage. The deal has been under consideration for some time.

Reg. Johnston and Ken Murray, of London, have purchased the stock and business of Mr. W. B. Lawson, 198 Dundas Street. Both these young men are very well known in London. Mr. Johnston was head clerk for Mr. Lawson, while Mr. Murray has been connected with the shoe business for years. The store is being remodeled, and the goods and appointments will be most modern.

WILL RUBBER PRICES ADVANCE?

Indications Are That New Price Lists Will Show Increase of About Five Per Cent.

—Present Figures Too Near Cost

The various rubber companies are now actively engaged in the preparation of their price list for the coming season. These lists are expected to be out in a week or two, and all salesmen will be on the road by March 1st, with many new samples. It is reported that one company will start their road men on the 15th of February. The new selling features, such as net price lists, prepayment of freight, cartoning all brands, etc., will be followed this season. It is understood that prices will not be reduced on any lines, but, on the contrary, would be increased about five per cent. on certain classes of rubber shoes. One or two of the companies are likely to give an early placing discount in order that as large an amount of business may be secured during March and April as it is possible to get. However, a week or two will likely bring forth some new phases.

The United States Rubber Company's price lists were issued on February 1st, and a general survey shows the figures to be from nine to ten per cent. lower than last year. A leading Canadian manufacturer remarked: "It may be asked why we may raise prices this season, when the United States Company are lowering theirs. Even if we advance our quotations five per cent. we will still be under them, according to the new list. Last year we were fully fifteen per cent. below. Things are now seeking a level. Across the line they were too high, and we were too near the cost mark here. If I do say it myself, provided our prices this year were higher than those of United States concerns—which they will not be—the expense of manufacturing in Canada is heavier as material is cheaper, the output much larger, distribution more economical, etc., over the border. It cannot be supposed that factories turning out say from 6,000 to 10,000 pairs a day—are in a position to make and market as cheaply as one producing from 25,000 to 30,000 pairs daily. Rubber footwear prices in Canada will be lower than those on the American market, even with the reduction just made there. I expect Canadian lists will be out early next week. We will give no discount for spring placing orders, as has been rumored, I do not care what others do. We will follow our own course in this matter. The early order discount is open to all sorts of abuses and misconception. We will not revert to it."

There has been a revision in the prices of tennis shoes and sporting goods. Two Canadian companies last week raised their figures from 7½ to 8 per cent., withdrawing all former quotations. The new lists will hold good for some time, it is expected.

Shoe Retailers at Dinner

The Montreal Branch of the Boot and Shoe Merchants' Section of the Retail Merchants' Association of Canada, Inc., held their annual dinner on January 25th, at the rooms of the Canadian Club, on Lagauchetiere Street, about fifty retail shoe men sitting down to an exceedingly pleasant and satisfying repast. Among the members present were eight stalwarts from Quebec city, representing the branch in that city: A. Boisjoli, J. B. Belanger, J. H. Mercier, Art Voyer, O. N. Shink, J. Plamondon, J. Charland, L. T. R. Falardeau. The following toasts were proposed very gracefully by J. A. Beaudry, provincial sec-

retary of all branches: The King, the Dominion Board, the Provincial Board, the Quebec Branch, Sister Sections, and responded to eloquently by different members and officers. President Thos. Dusault occupied the chair in his customary modest manner, and the spirit of co-operation and good fellowship was everywhere evident. The annual election of officers took place on January 31st.

He Comes of Good "Stock"

One of the men, who left the retail business to take a position on the road a few years ago, and has made good, is L. M. Stock. He has had experience in both Ontario and the West. He spent three years in the retail game with Robinson and Co., of Winnipeg, and David Spencer, of Victoria, B.C. He then came to Toronto and for five years was manager of the Slater shoe store, 528 Queen Street West. He made his first trip on the road for the Sovereign Shoe Company, in the fall of 1908. Three years ago he joined the traveling staff of Walker, Parker and Co., Toronto, and, having the good gospel name of Luke, it is proper to speak of his "parish" as extending from Port Arthur to the Coast. This he covers twice a year, and, having gone over it six times now, he knows it pretty thoroughly. Mr. Stock is an enthusiastic shoe man, a good salesman, and a genial companion. He resides in Hamilton. His greatest hobby is work and lots of it.

Shoe Retailer's Civic Career

Ald. Hubert Ashplant, of Hubert Ashplant and Sons, shoe retailers, of London, Ont., has been a valued member of London City Council since 1910. His son, W. J. Ashplant, is secretary-treasurer of the London Shoe Retailers' Association, which is a well organized and progressive body. Mr. Ashplant, Sr., during his first two years in office, held the position of chairman of the Fire and Light Committee, and is at present serving on the same committee of the 1912 council. The question of auto fire apparatus for the city has been one in which he has been keenly interested. He is a member of the directorate of the London and Port Stan-

ley Railway (the civic road to Lake Erie), of the City Hall Building Committee, and of the Manufacturers' and Reception Committee of this year.

IN THE ANCIENT CAPITAL

What Is Going On Among the Factories of Quebec—Some Plants Being Extended and New Lines Taken Up

R. W. Milzner, of the Cotton Threads, Limited, Montreal, was in Quebec recently.

E. P. Mullarkey, superintendent for the William A. Marsh Co., who was ill for over a month, is able to be out again.

The shoe factories are all busy, and some of them are ready to show their new samples for fall and winter.

R. C. Rochette, Les Saules, Que., will continue to make leather board and fibre. He will also start a laundry in Les Saules.

Alfred Poirier, of the Poirier Shoe Co., was in Montreal last week on a business trip.

M. B. Stein and Alfred Lambert, of Montreal, were in Quebec recently, looking for samples. They placed a few orders.

The Solid Shoe Co. have adopted new lines of felt and hockey shoes, and are improving their heavy solid leather shoes.

J. A. Scott, leather merchant, was in Montreal last week. He has been elected mayor of Breakeyville.

L. Faucher, Les Saules, is starting a shop in which he will make duck shoes and slippers and a few lines of dory shoes for misses and children.

The L. Gauthier Co. are putting in new lines and lasts for men and women. These will be ahead of anything ever turned out by the company.

E. Thivierge is putting in a lockstitch machine for a special new line of shoes, which will be made for the trade in general. The factory is very busy and looking for more help.

There was a small fire at the Wm. A. Marsh factory last week. The blaze started in the pipes through which the dust passes. The factory had a close call. The damage by smoke and water amounted to only a few hundred dollars.

Mr. Perkins, representing the J. Spaulding Co., of North Rochester, N.H.; J. A. A. Sequin, traveler for John MacPherson Shoe Co., Hamilton; D. Duquet, of the Hudson Bay Knitting Co., Montreal, and J. F. Sharp, of Toronto, traveler for J. B. Drolet & Co., were in the city last week. Drolet & Co. are very busy on patent leather and tan calf shoes.

With Some Canadian Shoe Factories

All Are Busy On Fall Samples Which Will Be Ready Early Next Month—New Factory Will Be Launched in Petrolea—Several New Lines That Will Be Presented to the Trade—Some Changes in Management Made Recently

The Regal Shoe Company of Toronto have installed a number of new machines lately, including a Goodyear rapid lock stitchee.

A fire in the factory of Scout Shoes, Limited, Montreal, did some damage, partly by smoke and water, but will not interfere with the output of the firm.

P. J. Hogan of the United Shoe Machinery Co., Montreal, was in Toronto and

other cities last week on business.

The Dominion Shoe & Slipper Co., Berlin, which recently started in business, have received several good orders. The firm make high standard warm felt footwear, which is appealing strongly to the trade. They report prospects as very bright for the coming year.

Samuel Friendship was stricken with heart failure while at work at Sterling

Brothers' shoe factory in London, and died instantly. He was in his 76th year.

The Toronto office of the United Shoe Machinery Co. has been moved to 122 Adelaide St. West, where two floors are occupied. The new quarters are attractively fitted up and afford the occupants much additional room.

The McKellar Shoe Company of Berlin, Ont., have recently put in two treeing machines and full set of trees for the entire line. The company have also some very snappy lasts which they will soon present to the trade in connection with their fall samples.

The New Hamburg Felt Boot Company of New Hamburg, have completed the first of their new factory buildings, and are moving into their quarters, which will afford them much more room and enable the factory to greatly increase its output.

Kirvan-Doig, Limited, of Montreal, have just completed arrangements to erect a large three-storey shoe factory on Desjardins Avenue in that city. They expect to move into their new and enlarged quarters in September next.

The extension of the factory of the T. Sisman Shoe Co. at Aurora, Ont., has been completed and considerable new machinery installed. The output will be increased by about one-third and employment given to several more hands.

John Williams, a brother of Wesley Williams, shoe manufacturer of Milton, was caught in the shafting at the factory one day recently. He had his arm broken, and was severely bruised and cut about the head. He is progressing favorably.

E. E. Donovan, vice-president and general manager of the Cook-Fitzgerald Co., London, Ont., has returned from a successful trip to Boston, Rockland and other leading shoe centres where he picked up all the latest pointers regarding styles, patterns and lasts.

An action for \$1,999 damages has been taken by Edward Metayer against the C. E. McKeen Shoe Company, of Quebec. The plaintiff was employed in the factory and some time ago received injuries through the fall of an elevator. He is now seeking damages.

A. Brandon, managing director of the Brandon Shoe Company, Brantford, Ont., has returned from a visit to Boston, Brockton, Rockland, Campello and other eastern shoe centres. The company have a fine range of new lasts for their fall samples and report business as being very brisk at the factory, which is running to its fullest capacity.

W. E. Wilson, late foreman of the Good-year and turn department of Getty and Scott, Limited, Galt, Ont., who left a few days ago to take an important position with the Nursery Shoe Co. of St. Thomas, was presented by the employes of his department with an appreciative address and a gold mounted umbrella.

Getty & Scott of Galt, Ont., are preparing to show numerous new lines for fall. A waterproof grain, puritan calf for youths, with full, double viscolized sole, extension heel seat, blucher cut, Goodyear welt, straight foxing, Baltimore extension edge, oak insole and heavy canvas lining is one of the many classy and distinctive creations that the firm have turned out.

For the use of its machines and keeping them in constant working order, the returns received by the United Shoe Machinery Co. from shoes made all over the United States amount to 11-3 cents per pair on over two-thirds of the production,

and from 4¼ to 5¼ cents per pair on the remaining one-third production.

The Robert Taylor Co., Limited, Halifax, are now occupying the new addition to their factory which will give them several thousand feet of additional floor space required to take care of their ever increasing business. This addition will not be large enough in a very few years, judging by the way that their business is growing. Several further improvements are promised during the present year.

Petrolea, Ont., is in a happy mood over the fact that the town is likely to secure a shoe factory. The initial output of the industry will be about one hundred pairs per day. Stock subscription lists have been opened and it is understood that the re-

F. S. Scott, of the firm of Getty & Scott, Limited, Galt, was recently elected mayor of his native town, being chosen unanimously for that position. He has been a valued member of the council for five years.

quisite amount to secure the concern has been raised. The factory will be operated by a company who are now running one in Windsor. The capital stock will be \$40,000. When the factory gets well under way it will employ from 50 to 100 hands.

The Reliance Shoe Co., Limited, of Toronto, with a share capital of \$40,000, has been granted a charter to carry on the business of boot and shoe and rubber manufacturers. The incorporators are Thomas Hubert Wilson, Robert Verity, John Woodhouse Ferrier, Mary McQuillan, and Mabel Sarah Bartlett, all of Toronto. A portion of the premises of the former Victoria Shoe Co., 122 Adelaide St. West, Toronto, has been secured. The output will be boys' and youths' nailed work, and McKays. The process of manufacturing has started.

The work on the reconstruction of the tannery at Camrose, Alberta, has been proceeding so well that the first batch of leather from the new plant will be placed on the market by the end of this month. Within the past week a new 60 h.-p. engine has been installed. This will furnish sufficient power to meet the requirements of the tannery and shoe factory machinery, which will soon be put into shape.

Nearly all the employes of the Avalon Shoe Factory, St. John's, Nfld., who had been laid off during the New Year holi-

days, resumed work last week. During the vacation the machinery was overhauled, and two new machines were installed. The factory has had a most prosperous year, as was shown by the annual report of the directors, submitted to the shareholders. A dividend of 7½ per cent. was declared. The old board of directors was re-elected.

An Oshawa, Ont., paper says: The T. Eaton Co. are contemplating the establishing of a boot and shoe factory here that will give employment to 125 people, providing they can secure houses for their working men. It is up to Oshawa to make it possible for these people to locate here, by in some way securing more houses for workmen. It would be a great boon to at least one Oshawa factory if the town could secure this factory. The Robson Leather Co., one of the largest finished leather companies in Canada, would then have a market for their produce right at their door.

The Williams Shoe Company, Limited, Brampton, Ontario, will in the course of a few weeks open up a western branch in Brandon. This company, being one of the largest staple manufacturing houses in Canada, has found it necessary to establish a branch to supply their increasing western business. W. G. Dowling, who has had charge for the past number of years of their western business, has just returned from the East and he, knowing the advantages of Brandon as a distributing point, was successful in having this warehouse located there. W. G. Dowling & Co. will manage and be western distributors for the Williams Shoe Co.

The A. P. Cimon Mfg. Co., Montreal, are putting up a new factory, 150 ft. by 45 ft., three floors and basement, on upper St. Denis Street, which, when completed, will have a capacity of 200 cases per week. The new factory will handle men's and women's wels, and women's McKays, and will enable this firm to handle a big jobbing business. At the recent annual meeting of the firm the following officers were elected: Pres., A. P. Cimon; vice-pres., J. B. Morin; sec., L. Z. Renaud; directors, the above

WANTED.—Live salesman carrying a line of women's shoes, to carry a line of workmen's shoes as side line in Ontario, from Niagara to Windsor; excellent selling, well-advertised line. Apply Box 25.

WANTED.—Live salesman to carry the Arthur A. Williams' workmen's shoes from Winnipeg to Alberta, inclusive; liberal terms to right man. Apply The Clark Shoe Co., Brantford, Ont.

WANTED.—Situation by steady Englishman, age 34, in leather and shoe finding warehouse, good references. E. H., 89 Swanwick Avenue, East Toronto.

officers, S. Morin and P. E. Houde. The capital was raised to \$100,000.

A recent despatch from Washington says: Representative shoe manufacturers and tanners from various parts of the country appeared before the Tariff Board to give their views as to the best methods of conducting the investigation of the board into the leather schedule. In addition to consulting with the shoe men and tanners, the board will send its own agents into the field to study the industry and gather statistics upon which to base its conclusions.

Goff Brothers, boot and shoe manufacturers, of Charlottetown, P.E.I., wish to issue a challenge for long-term employment connected with their factory. The following are the names of employees, and

years of service: Thomas Howatt, 28 years; Walter McGregor, 27 years; James Kelly, 26 years; George McInnis, 25 years; Daniel Lane, 17 years; Robert Wakeland, 16 years; Seymour McInnis, 12 years. This record speaks for itself, and shows the good-will that has existed between employer and employes. At the present time the above firm are conducting a tremendous "Removal sale," on account of Moore & McLeod purchasing their store from the Heard estate.

A despatch from Vancouver says: A large tannery equipped to handle every kind of work in that line, may be built on Lynn Creek, North Vancouver, during the coming spring, if the plans of Mr. J. A. Brocklesby of Toronto mature, and the negotiations now under way for a site are carried through. Mr. Brocklesby is an

expert tanner and furrier, and represents eastern capitalists who are prepared to put up one of the finest institutions of that kind in Canada. An initial outlay of \$100,000 is planned in the erection and equipment of this tannery, as everything will be on a big scale. However, should business warrant it, the plans provide for the capacity to be doubled by the expenditure of another \$80,000.

The Amherst Central Shoe Co., Limited, has been incorporated with a capital of \$100,000, and head office in Regina. This is a subsidiary company, designed to serve as a distributing company for the Amherst Company for western Canada. The incorporators are: P. C. Black, C. S. Sutherland, T. N. Campbell and E. N. Rhodes, M.P., all of Amherst, and Sherman Rogers, of Halifax.

How We Have Grown—and Still Growing

We want every Dealer, Jobber and Manufacturer to help us make our Black Cat as large as possible for 1912. We will be pleased to furnish without charge any electroplates to use for catalogue work or any other advertising.

CAT'S PAW CUSHION RUBBER HEELS

Cat's Paw Rubber Heels have all the advantages of ordinary rubber heels and—besides—the Patented Friction Plug—in the back part of the heel—just where the wear comes—keeps you from slipping on wet sidewalks, and also makes the heels wear much longer than the old-fashioned kind.

*Insist Upon Cat's Paw Heels.
Your Customers are Asking for Them.*

A FEW INSIDE FACTS

ABOUT EYELETS

BETWEEN two shoe eyelets that present the same appearance in the shoes, there may be a world of difference in the wear. One can resist wear only to the extent of its none too reliable coating of enamel ; underneath is the inevitable brass of the brassy eyelet. The other kind (if it is a Fast Color-eyelet) is constructed as shown above, and by the way, there is only one kind of eyelet that is Fast Color. They are all made this way, with celluloid tops of solid color and nickel non-corroding barrels. It is impossible for them to wear brassy. They preserve their bright, new appearance throughout the wear of the shoe.

You will readily realize the importance of establishing the identity of these two classes of eyelets and there is a sure way.—Fast Color eyelets have a small diamond  trade mark slightly raised on the surface of each eyelet. No others do. Just fix this fact in your mind, and you will be able to avoid mistakes. No diamond  trade mark—no Fast Color.

WHY DIAMOND FAST COLOR

Nothing so cheapens a shoe as a brassy eyelet. In most instances it is more conspicuous than a break in the leather and even more difficult to remedy. But there is a sure way to protect your patrons from any annoyance in this connection. Diamond Fast Color Eyelets cannot wear brassy, they always look new and help to preserve the appearance of shoes throughout the longest wear. There is also a positive way to tell whether the shoes you purchase are fitted with them. Just look for the little  diamond trade mark raised on the surface of each. It is inconspicuous but very important. Your customers realize it. It is your guarantee that the eyelets are genuine Fast Color, for only the genuine Fast Color have the  trade mark.

Specialization Has Improved the Saleability of

McCREADY SHOES

The McCready line is a very complete line. In fact it is so complete that it cannot be made successfully in one factory. That is why there are three factories making McCready Shoes. One makes Women's, Misses', and Children's, another Men's, Little Gent's Good-year Welts, and another Pegged, Standard Screwed and McKay Sewn goods.

This specialization improves the quality of each grade of shoes without increasing the cost as is being amply proven by the McCready shoes this season. And quality at the right price is the best salesmaking factor there is.

The McCready Shoes are not sold by jobbers but are kept in stock at seven cities. Write or wire the nearest one.

THE STEEL SHOE MAN

More Profit from better Work Shoes

No. 011, black, 16 in. - \$5.00
No. 012, tan, 16 in. - 5.00

THERE is about to be commenced in the best periodicals and newspapers of Canada a gigantic advertising campaign. The subject of this campaign will be Ruthstein's Steel Shoes, "The Better Work Shoes."

These advertisements will tell every farmer, miner, prospector, woodsman, hunter and laborer of the merits of Steel Shoes. They will increase your sales of work shoes. They will create in these men a desire to purchase. They will come to your store asking for Ruthstein's Steel Shoes, and will not be satisfied with any other. Are you going to let this opportunity of gathering the shekels pass by?

Steel Shoes will advertise your store because every pair gives entire satisfaction. They are durable, comfortable, economical. Besides, they earn a good profit. Figure this out:

Number one quality sizes 5 to 12.

No.	Description	Cost Price	Retail Price
03	Men's 6 in. black	\$2.65	\$3.50
04	Men's 6 in. tan	2.65	3.50
07	Men's 9 in. black	3.75	5.00
08	Men's 9 in. tan	3.75	5.00
09	Men's 12 in. black	4.50	6.00
010	Men's 12 in. tan	4.50	6.00
011	Men's 16 in. black	5.00	7.00
012	Men's 16 in. tan	5.00	7.00
0103	Boys' 6 in. black	1.40	2.50
0107	Boys' 9 in. black	2.65	3.50
0108	Boys' 9 in. tan	2.65	3.50

Better be prepared to reap the benefit of this advertising. Better send in your order to-day.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:—

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

Rubbers for Nineteen-Twelve

If I were to make the statement that "Kant Krack" and "Dainty Mode" Rubbers are the best made, you might not believe me. So I'll just keep that opinion of them to myself, and ask you to consider these brands as you know them.

You know they have been on the market for some time, and if you are in close touch with the rubber situation, you will know that they have always met with phenomenal success.

This success has not been of the mushroom variety either. It is steady, far reaching and growing.

Kant Krack **Dainty Mode**

Nothing but quality could bring a success of this nature. There must be in "Kant Krack" and "Dainty Mode" Rubbers the value necessary to make it worth while for dealers to handle them.

If other dealers have found it advantageous to sell "Kant Krack" and "Dainty Mode" Rubbers, why shouldn't they be worth at least a good trial from you?

I would like to see your name on my order book this season, and when my salesman calls on you, I trust you will give him a good chance to show you why Kant Krack, Dainty Mode, Bull Dog and Royal are the best brands of Rubbers for you to sell.

JAMES ROBINSON

You'll have no "dead" stock with the Doctors Shoe

This is the mark that is stamped on the sole of every Doctors Shoe.

It is your guarantee—and your customer's. Always look for it.

THE TEBBUTT SHOE & LEATHER CO. Limited

MAKERS OF
PURPOSEFUL SHOES
FOR MEN

THREE RIVERS - QUEBEC

The sale of the Doctors Antiseptic Shoe is affected very little by the sales of other shoes.

You see, the Doctors is a shoe apart. It has a different reason for its existence—a better reason.

Its object is to make walking pleasant and to prevent men's feet getting wet or cold in bad weather.

And it's because it accomplishes this object that its sales keep increasing.

Ever since its introduction the sales of the Doctors Shoe have been getting bigger. And they'll continue to do so because the same quality that made them popular at the first is being put into them to-day.

The Doctors Shoe isn't a shelf warmer. It's a mover. And it never moves without its full profit to you either.

All the big wholesalers handle the Doctors Shoe.

Mr. Shoe Manufacturer

Industrial peace and uninterrupted production are promoted by shoe manufacturers operating under a Union Stamp Arbitration Contract.

The Union Stamp is a selling factor, the influence of which is equivalent to the work of one or more road salesmen, according to the amount of territory covered by the manufacturer. Wages are fixed upon a competitive basis; the volume of output is largely increased in every Union Stamp factory, thereby reducing manufacturing fixed charges and giving employees more weeks' work in the year.

The Union Stamp is the emblem of peace, which means more business even in dull times.

Manufacturers desiring further information should correspond with the undersigned.

WHEN YOU SEE THE
TRADE ◁ MARK
YOU KNOW IT'S FAST COLOR

THE BEAUTY IN A DIAMOND FAST COLOR EYELET

WHILE everything else about a shoe grows dull and unsightly with wear the beauty of Diamond ◁ Fast Color Eyelets does not change; they retain the same bright, new appearance throughout the wear of the shoe; in fact if it were practicable to transfer them from one shoe to another a Diamond Fast Color Eyelet would outwear several pairs of shoes. As they cannot wear brassy their bright, new appearance adds wonderfully to the satisfaction of shoe wearers, millions of whom are learning every month just what the little Diamond ◁ Trade Mark means, and knowing will certainly want Fast Color. They should be in every good shoe. It's for you to say whether you will have them in yours. Just specify Diamond Fast Color when you order.

SOMETHING NEW

The So-Cosy "Marilla" Insole

is another PROFITABLE addition to your finding lines. Ask your jobber about it. If he can't supply you, write us.

NOW ABOUT IT

The "Marilla" Insole was designed and patented by a woman. It is made of velvet, and does away entirely with the slipping forward of the foot in PUMPS and OXFORDS, and the heel-piece prevents slipping at the heel. Can be applied with ordinary paste or glue in THREE minutes, and after drying half an hour ARE ready to wear. They cost you \$2.00 per dozen pairs in single pair cartons, and may be retailed at 25 cents, giving you 50 per cent. profit.

The Hurlbut Co. Limited
 Preston, Ontario Canada

Not How Cheap, But How Good

Should be your motto when buying counters, because a shoe lasts no longer than the counter used in its construction.

GUAY'S Counters are not only the best—made of solid leather, solidly stitched, and meant to stand the strain—but they are really cheap.

Cost 3½c. to 4c. per pair. We also make Standard Board and Union Counters. Ask us for further details.

EUGENE GUAY

TO give glazed kid a finish that will pass through the processes of manufacture unharmed is still a problem to most makers of leather. This problem has, however, been solved in the production of Maple Leaf Glazed Kid, which looks just as good after being made up into shoes as it did before. It requires a special process, that cost considerable thought and money to evolve, but it doesn't cost you any more than the ordinary kind.

See that the Dongola Shoes you order are made from Maple Leaf Glazed Kid. It'll mean bigger sales for you.

Will Canadian Shoemen Sell Goods at Odd Figures?

Arbitrary and Artificial Standard Prices Slipping Away—Retailer Must Protect Himself if Footgear Advances—Quality Should Not Be Sacrificed and Profits Are Wrongly Computed by Many—Some Arguments Pro and Con

Will Canadian shoe dealers sooner or later adopt the practice of selling goods at odd prices? Will the old-time methods and long-established system of marking shoes at two, two fifty, three, three fifty, four, four fifty, five and six dollars be departed from? It is hard to break away from tradition, for, after all, man is largely a creature of habit, and the customs of the past prevail to a greater extent than any of us care to acknowledge. New selling methods are being constantly introduced, novel features embodied, and fresh ideas taken up, but, in the retail shoe line, things go on pretty much the same, particularly in the smaller centres of population. It is only by the constant hammering home of new principles and practices that changes are wrought. But progress is being made and signs are abundant that the next few years will witness radical departures in shoe retailing, particularly in the matter of obtaining higher profits and adopting more elastic and up-to-date methods.

The question arises, why should shoes be sold arbitrarily at fixed half-dollar and dollar prices. In other lines of merchandise things are disposed of at odd figures, but in the matter of footgear, the shoe man continues asking \$2, \$2.50, \$3, \$3.50, \$4, \$4.50, \$5, \$5.50, \$6, and so on. The cost per pair may be raised from ten to fifteen cents by the manufacturers, but the retailer makes no change, or, if he makes a jump, it is fifty cents per pair.

If the quotations go up five or ten or fifteen cents, why should he persist in selling at the same old figure or seek to have the goods made down to a certain price, and perhaps have the quality sacrificed? He replies, "Oh, my customers have been in the habit of paying so and so for this particular kind of a boot, and they will not give any more. Who told him? He only thinks so, and he trembles at the thought of asking a few cents more, for fear that he will lose a patron or two. He would rather bear the deficit himself than have a customer walk out of the shop.

The Limit of Buying Prices

There seems to be a certain limit. For a shoe that sells at three dollars, he will not pay any more than \$2.30 to \$2.40; for one retailing at \$3.50 he will not go above \$2.65 or \$2.75; for a \$4 boot the limit is \$3; for a \$4.50 the utmost is \$3.25; for a \$5 shoe the margin is \$3.60 to \$3.75; for one going at \$5.50

the top-notched quotation is \$4.10, and for a \$6 production the most that he wants to give the manufacturer is \$4.25 to \$4.50. There is talk of a general advance in nearly all lines of footwear this fall, and if the figures should ascend five per cent., is the retailer going to continue disposing of his wares at the same hard and fixed prices, the same rigid standards? Why should he have to make up the difference? He cannot afford to if he is in the business to make money, and yet he is apprehensive of the public.

The cost of doing business to-day, like the cost of living, is annually increasing. Wages are advancing, rents are higher, raw materials cost more, advertising rates are stiffening, yet the price of shoes, so far as the public is concerned, remains practically the same. If sugar, tea, cotton, fruit, beef, flour and other lines ascend, the dispenser of these commodities reimburses himself by charging the public more, but the retail shoe men will stick and stand by the old-time figure for the general range of shoes. He thinks that he can make a living even when he has to pay a few more cents per pair, and therein he grievously errs.

One Man Has the Courage

"No, I am not afraid of odd prices," writes a Western Ontario retailer. "I have followed the custom for years, and I have not lost any patronage by it. I do not care what others do; I have run my own show for thirty-one years, and am making money, but I have seen others go down and out. I sell shoes at \$2.85, \$3.15, \$3.40, \$3.70, \$4.35, \$4.65, \$4.85, \$5.15, \$5.45, \$5.60, \$5.80, and so on. I have one fixed price, and it does not savor of the bargain style, which you read of in departmental stores where the figure is \$1.99, \$2.98, \$3.49. The matter of dropping a couple of cents, or even five cents, below the dollar looks like catering to seekers after cheap footwear, but I have never resorted to this practice or flamboyant style of doing business."

There is one concern in Canada which about a year ago started to sell shoes at what they thought they should be disposed of, and not what custom, usage or tradition called for. It was an innovation, but it has worked out well, and is gaining favor. The Regal shoe stores were the first to institute the practice. They sell shoes at \$3.85, \$3.95, \$4.25, \$4.75, \$4.80, \$4.85, \$4.90, \$4.95, \$5.25, \$5.85, etc. On the soles are stamped, "Cost plus five per cent.," and then the price in plain figures. Before this plan was instituted the company sold at the conventional figures, the same as other concerns. The net profit on the shoe is five per cent. In a neat brochure, entitled "Why We Did It," the company says, "The actual cost of making these shoes is figured and certified by public accountants. To that cost is added five per cent. profit and an allowance to cover the cost

of getting it to the customer. The resulting figure is stamped on the soles at the factory, and is the price of these shoes wherever sold. We pay no attention whatever to the old arbitrary prices. They used to represent definite standards of quality. They represent them no longer. This is not a price-cutting plan. Five per cent. net profit on our total business is all we ever got, or shall ever ask."

Some "Freaks" That Have Stayed

There are reforms to inaugurate yet in shoe retailing, but progress, while it may be tardy, is certain. Better conditions and simpler methods are coming to the front. There are many shoe men in business to-day who remember when half sizes were introduced, and when shoes were stamped with a certain name, the branded shoe as it is known to-day. Then cartons appeared, and also the stamped price on the goods, like \$3.50, \$5, \$6, etc. Opponents of every forward move scoffed at the idea, but where is the live retailer to-day who would think of selling shoes without having them cartoned, without having half sizes in stock, without having branded lines, without making attractive window displays, having silent salesmen show cases for certain fine lines, store mirrors, carpet in front of settees or chairs, etc. The old idea of having goods in bins, drawers and boxes has departed, and now we see the uniform carton system, the universal label, the rest room, the slipper room, the writing desk, the hosiery department and other up-to-the-second features. Will odd prices such as those referred to, and not the two or three cents reductions such as bargain houses and some departmental stores affect, come into general use?

Afraid of His Competitors

The subject is worthy of consideration and discussion. One progressive merchant, who has adopted most of the up-to-date selling plans, said that he would institute odd prices, but he was afraid that others would not follow, and if he charged \$3.15, \$3.65, \$4.35, \$4.90 and so on, people might think that he was asking fifteen to thirty-five cents above the usual half-dollar or dollar prices.

Another retailer said, "The reason I would or could not adopt odd prices is that in a country town like this the women buy most of the footwear for the family, and the extra ten or fifteen cents on a pair would look large to her. If I asked \$2.15 for a pair of shoes she would think that that fifteen cents was put on merely to 'throw off.' She would sooner pay two dollars or two and a half for the same pair as she has been accustomed to for a generation or more. The few extra cents seem big to her, and the majority of people have to make every penny tell in these days of high living expenses. Now I do not see why the plan might not be adopted in a men's store, for men are not so particular if they get what satisfies them. I know that we often have to pay makers more for certain lines, and lose the little extra, and if we are forced to jump prices instead of going up ten or fifteen cents (which would let us out with the usual margin of profit) we advance the shoes half a dollar."

The Thought Amused Him

One jocular shoe man remarked that it was a good idea, and he was seriously thinking of charging odd prices and going in for lines that would sell at \$2.85, \$3.35, \$3.90, \$4.85 and so on. "I will adopt this line of talk," he went on, "and tell the people that the shoe at \$2.85 is a regular three-dollar line, and the one at \$3.30 is a regular \$3.50 line, but as I have exceptional buying arrangements, or secure special concessions on them, I am able to cut the price on these goods from fifteen to thirty-five cents as the case may be. I will tell them that they are securing shoes that sell elsewhere at the dollar and half-dollar figure at from fifteen to thirty-five cents per pair less.

There is one thing certain, and that is, it would be better for the shoe men to adopt regular prices than to sacrifice their profits or the quality of the goods if the Canadian makers advance the price of several styles from five to eight per cent., as they are contemplating doing this fall.

"If prices do not go up with us we are going to have less

profit than ever," declared an Eastern shoe man. "Everything is ascending, and the footwear dealer gets less net profit than he did five years ago, when wages, rent, taxes, etc., were much lower. What is ruining the business to-day is that so many are afraid that the other fellow is going to undersell them; that they will lose patronage if they ask what a shoe is really worth. The people will pay a good price for a durable article, but we do not seem to be able to educate ourselves up to this conception of things. All the workers are making more money, and are in a position to purchase better and more snappy shoes at a higher figure than ever. Then so many retailers are deceived in themselves, and their profits. They think if they buy a shoe at three dollars and sell it at four, they are making thirty-three and a third per cent. profit. So they are on the cost price, but all profits, it has been proved time and time again, should be computed on the selling figure. In this case the one-dollar profit represents only twenty-five per cent. on the turnover, and it is on the turnover that money is made.

Where the Difference Comes In

Twenty-five per cent. on the cost price of a shoe is equal to only twenty per cent. on the selling price; thirty-three and a third per cent. on the cost figure equals only twenty-five on the selling, and fifty per cent. on the cost amounts only to thirty-three and a third on the selling. It is on the selling (which means the total money that comes in over the counter, that all calculations should be based), for out of this sum total you have to deduct the bills for wages, rent, light, taxes, advertising, losses, heat, etc. It does not come out of the cost price. Here is where so many make mistakes. You have to have at least thirty-three and a third per cent. on the selling, if you want to come out clear at the end of the year and take into account all the unsaleable stuff that has to be sacrificed, and other unforeseen setbacks. This means that you should mark up your goods fully fifty per cent. on the cost price, and that a shoe which costs three dollars should sell for four and a half, and one that costs two dollars should be disposed of for three, and others in like proportion. I have merely taken these even figures because they are easily contemplated. Add fifty per cent. every time, and in the end you will only be getting thirty-three and a third per cent. on the cost price, providing every shoe is disposed of at the figure marked, and you know that is impossible, so you see you had better be sure than sorry."

Would You Believe This?

Talking to a Toronto manufacturer, he observed that in no business was there such small profit made as on the shoe line from the factory right through the jobber and retailer down to the customer. "I know that certain concerns talk of big margins, but take it from me, that if a factory cleans up two per cent. net on its total annual output it is doing remarkably well. Now that is a fact. More factories to-day are running along without making any money than those that are. I mean two per cent. above all charges, administration, selling, operating, accounting, investment, collection, etc. Where is there another business that does not show healthier results, and the shoe men themselves are to be censured. They should advance prices to a fair, honest basis, and quit scheming, scamping, cheeseparing and blustering. The time has come for an advance, and it will surely arrive sooner or later, but like the matter of charging odd prices, which, I believe, retailers will have to do to protect themselves, producers go on paying more for leather, supplies, wages, rent, power, etc., and hope by some magic means to come out ahead at the end of the year. Well, it cannot be done, and we are going to cease mortgaging the future to realize on the present."

Honest workmanship, good linings, solid leather, good skins and neat stylish lasts are things that count. To deteriorate the product, to lessen the quality and undermine values in order to keep goods down to a certain price because they have sold at that figure for years, is a grievous error, and one that will have to be remedied instantly in the best interest of the trade.

Some Progressive Ideas of a Western Shoe House

Admirably Arranged Store in Winnipeg and Its Interior Conveniences—An Unusually Wide Range of High Grade Shoes Carried—Sales-Manager Rewarded for His Efficient Service During Past Year

Among the most progressively managed shoe houses of the West are those of the Rannard Shoe Company, of Winnipeg. The company operate two stores, one at 330 Portage Avenue, and the other at 536 Main Street, corner of James. The accompanying illustration shows the interior of the former store in the Enderton building which was opened on January 1st, 1910. The interior fittings are handsome and the premises right up-to-the-minute in appointments and conveniences.

The store is 96 feet deep and 18 wide. The show windows are admirable ones. The location is at the corner of Portage Avenue and Hargrave Street, and the front part of the picture gives some conception of the side windows, which extend thirty-six feet on the latter street, and are finished in golden oak. The site is right in the centre of the fashionable shopping district, and a high class trade is done. The stock is most comprehensive and well selected. Mr. Rannard believes in having shoes for the whole family, and carries widths in women's up to AAA; and sizes from 1½ to 8½ in most styles. The side, where the two ladders are seen, is forty-one shelves high and on the opposite side there are twenty-seven.

Previous to the plans for the store being carried into effect, Mr. Rannard, who is the sole proprietor of the business, took an extended trip through the United States as far east as Boston and New York, and gathered all the latest ideas in fixtures and lay-out, which he embraced in the present quarters. The premises are brilliantly lighted and there are several chain electroliers, each equipped with four sixty candle Tungsten lamps. The carpets

are of a very pretty pattern and were manufactured by a firm in Guelph, the name "Rannard" being worked in them.

Mr. Rannard is a young man, but he has made a big success of the shoe business, and at the recent annual dinner, which has become an important function in connection with the house, there were twenty-one men who sat around the festive board and enjoyed the good things provided by the Royal Alexandra Hotel. Mr. Rannard gave a bright and instructive address on Winnipeg shoe trade in the pioneer days as contrasted with the business of to-day.

The Bulwarks of Big Business

Mr. Rannard attributes his success in the shoe business to four cardinal facts or principles—value, quality, style and service. Special attention is directed to artistic trims, and full advantage is taken of the space afforded by the imposing windows. The proprietor buys only from the best makers, and has given some very large orders to travelers who are fortunate enough to secure a share of his patronage.

M. B. Clint, who is the sales manager of the Portage Avenue store, is now on an extended trip to St. Paul, Chicago, Cincinnati, Toronto and other wide awake centres. Mr. Rannard believes in encouraging salesmanship and originality and this outing has been given Mr. Clint as a mark of appreciation for his efficient service during the past year. He is calling upon all the live retailers in the cities visited, corralling new ideas and pointers as well as buying some of the latest novelties for spring.

Inviting interior of Rannard Shoe Company's Portage Avenue store, Winnipeg.

The Editorial View Point

THE COLD WEATHER AND TRADE

Those who have been wishing for an old-fashioned winter have had their longings pretty well satisfied in the past six weeks, during which we have had more cold weather than even the "oldest inhabitant" can recollect for the same period. January went a goodly number of notches below the record for over half a century, and February has so far held its own with its predecessor. The result has been good for certain lines of trade, although not as propitious perhaps for others. There has almost been a famine in fuel, and some lines of foodstuffs, while merchants have had the supreme satisfaction of seeing winter staples pretty well cleared up without much inducement being necessary in the matter of prices. A striking feature in general trade has been the scarcity and high prices of produce, notably of provisions, and there seems to be no immediate prospect of relief. The general demand for necessaries has been substantial, and business therefore good. In fact, in all lines there is unwonted activity for this time of the year. Money seems plentiful, although farmers claim it has been too cold to market their grain or other produce.

DEAR HIDES AND DEAR LEATHER

Manufacturers of footwear are practically at the end of the spring season, and are not in the market to any great extent, except to complete what orders they have on hand. Buying is not very active therefore in this quarter, although with some of the larger concerns a great effort is being made to get in line for next season. Tanners are firm as to prices, and are holding out fairly well against the demand for special inducements on large lots of staple leathers. Irregular competition from the other side of the line is having some effect on the market in specialties, but in general lines the tone continues firm. Hides show no disposition towards easement, although the grubby season is on and naturally the hides are not as valuable. All that come in are picked up at ruling prices. The general shortage on the kill is apparent on this side of the line, as well as across the border, and unless there is some impetus given to the cattle trade from the high prices of meat, and cattle raising becomes more popular than it has been in the last half-dozen years, there will be no chance for permanent relief. All the signs point at present to dear hides, and therefore dear leather.

THE ABSURDITY OF SHOE SEASONS

Some manufacturers have their fall samples already in hand, and in a couple of weeks distant parts of the Dominion will have an opportunity for looking at the coming season's productions. The desirability of having one season follow so closely upon the heels of another has been discussed from time to time in these columns, and notwithstanding the general feeling amongst manufacturers as well as retailers that selling next winter's goods before this one's stock is disposed of is absolutely absurd, no one seems willing to let the other fellow have a monopoly of the absurdity. This year the number of "early birds" will be larger than usual, and the chances are that they may find the field more promising than usual on account of the large retail sales of winter goods that have been made this season. Dealers are hoping that the steady cold that has characterized the past two months may mean an early spring. It is safe to say, however, that for another month there will be no robins seen on the lawns. Easter comes rather late this year,

which is an encouraging feature, rather than otherwise, as little chance is left for cold weather to interfere with sales. At all events everybody seems to be looking forward to a much better season than last year.

WHERE BUSINESS IS NOT BUSINESS

One has only to pick up the daily papers these days to realize what party government means in cost to the country. Whole days are wasted in our legislative assemblies in recounting incidents and arguments given on the hustings and in politicians seeking to put each other in the wrong. If ordinary business were conducted for a month on the line which seems to be regarded as inevitable in national affairs there would not be much business to legislate about at the end of the period. It is a pity that discussions on purely political issues cannot be confined to definite times and seasons, and even at that restricted so as to preclude the unnecessary waste of time, energy and money that result from present cat and dog methods of debate.

PERPLEXITIES IN WESTERN OUTLOOK

Rather serious conditions have developed in some parts of the West on account of the lack of facilities for moving the crop. In some cases through snow and frost almost the entire production for the season will be lost, and so serious is the situation that it will be necessary for the government to do something to help out the settlers. To the disinterested spectator the situation presents itself in two aspects. In the first place there seems to be a good deal of over-reaching on the part of farmers who put in more crops than they can take off or care for. The business is too much of a gamble. On the other hand, railroads that are more interested in cutting "melons" for stockholders than providing transportation facilities for the community ought to be brought to book in some way. To lose hundreds of thousands of bushels of grain through not being able to get it to market is a calamity that needs a better excuse than those that seem to be forthcoming.

RUBBER CONDITIONS AND PRICES

The issuance of the American list on the first of the month will be taken as a precursor of the policy to be followed on this side of the border, as it has always been the claim of manufacturers here that they have followed the lead of their big neighbors. This year, however, there might seem to be reasons why this custom should not be followed so abjectly. Prices were supposed to have been put upon a war basis last year, and while there may be some excuse in the fluctuation of raw rubber for a further variation this year, manufacturers here will hardly care to go down "into their dip" again unless they have to do it. The reason for the reduction on the other side of the line is without doubt the unsatisfactory state of business generally. Last year was a lean one for the rubber factories, and they are evidently determined to help matters out by offering substantial inducements.

CANADIAN MAKERS MUST BE ACTIVE

As has been already pointed out, Canada is being exploited just now more than ever by American shoe manufacturing concerns, on account of the dullness of trade south of the Great Lakes. This, with the plenteousness of money in this country, makes the American shoe attractive beyond its merits. Induce-

ments in the way of price added to the natural desire of the retailer to be able to talk specialties largely give the American shoe traveler what hold he appears to have. In the meantime it is up to the Canadian manufacturer to put his best foot forward. With thirty per cent. protection and the dumping clause properly applied he ought to be in right with regard to price.

The keenness of competition ought to put him on his mettle and put ginger not only into his lines, but his methods. It is no use to sit back with the conviction that his goods are equal to the foreign-made product—as they undoubtedly are in most cases—but he must do a little more pushing of their merits in the trade press and elsewhere.

How to Use Script Style of Lettering

It Is the Most Difficult of All to Balance Properly—Some Common Errors Illustrated and Analyzed—The Capital Letters are the Most Difficult to Execute — Should Not Be Employed on Any but Fancy Cards—Ninth Lesson in Store Card Series

By R. T. D. EDWARDS, The Robert Simpson Co., Toronto

Copyright by the Acton Publishing Co. Limited

Nowadays the original style of script lettering is seldom used by card writers. Some years ago a script similar to that seen on engraved cards to-day was employed. It proved hard to read at a distance, and for this reason was abandoned. Since that time, however, adaptations from the original have been produced, which are more practical and can be easily read. As well, they contain the desirable ornamental features of the former alphabet.

The style of lettering introduced in this issue is known as card writers' script. A great many of the fine lines, which appeared in the original script, and were useless for all practical purposes, have been dispensed with, and the main body of the letter is made much stronger.

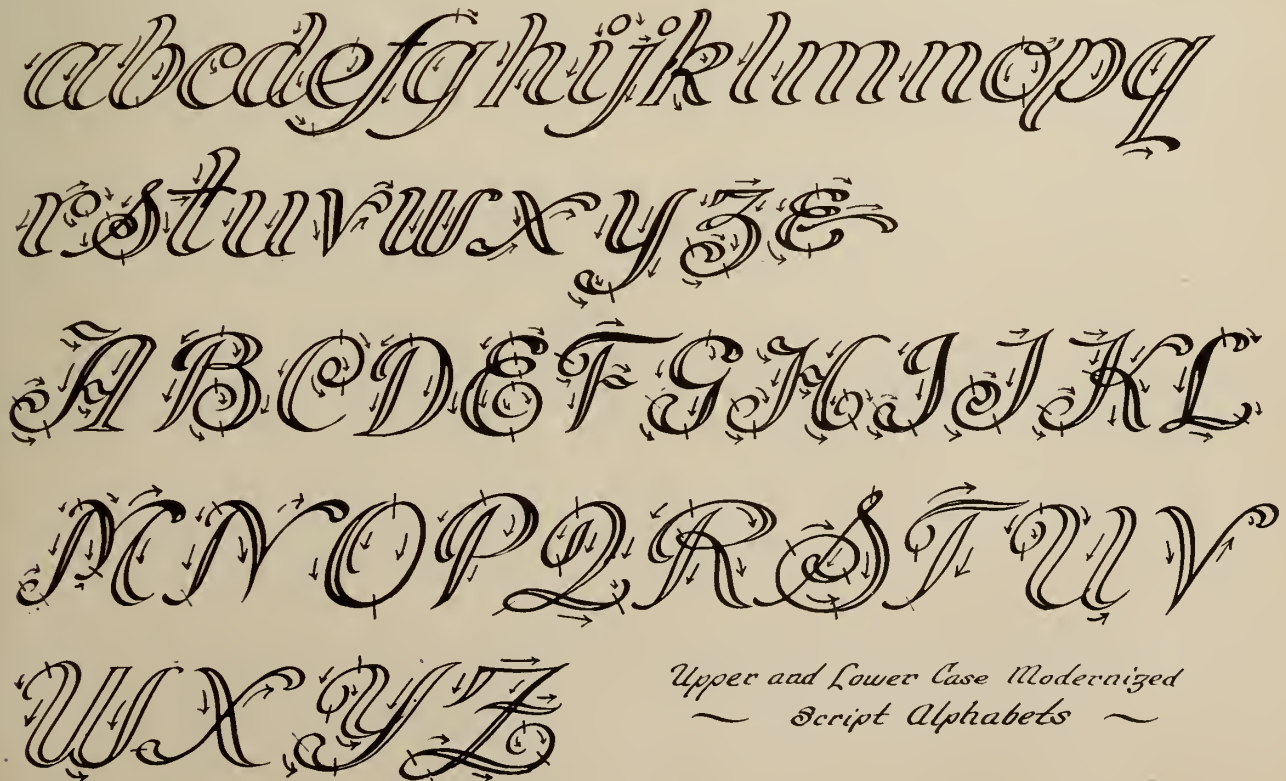

The Uses of Script

The uses of this type of lettering are quite limited. Being of a fancy nature, it should not be utilized on any but fancy cards. It would certainly look much out of place on a bargain sale ticket, where a letter of the opposite character—a bold, flat letter—is

required. And it should not be used on a card which is to be seen only from a distance. The chief utility of this lettering, then, is for special display cards and those which are to appear in connection with lines of goods. It may be used on cards relating mostly to women's and children's fancy footwear, but should be applied sparingly to cards dealing with men's shoes except slippers or pumps. The card writer should keep these facts in mind, so that serious mistakes may be avoided.

Practise the Exercises

If the reader has worked faithfully on the preceding lessons, by this time he should be able to master the elementary lines and curves with comparative ease. The conscientious practice of the exercises is, as your experience has doubtless taught you, absolutely necessary, and no matter how perfect you have succeeded in getting previous ones, practise the exercises. Every line and curve in Fig. 1 goes to make up some part of some letter, and the perfectly

*Upper and Lower Case Modernized
— Script Alphabets —*

Fig. 2

formed letter will be more easily attained if the separate strokes have been practised over beforehand.

About Your Materials

Don't neglect to keep your color in good working order. You cannot get a good clear line if your paint is too thick. Use a No. 2½ Soenneken pen for this alphabet, making the letters about an inch and a half high.

Draw the guide lines as in previous lessons and assure yourself that they are perfectly parallel. Lay out your work in lead pencil

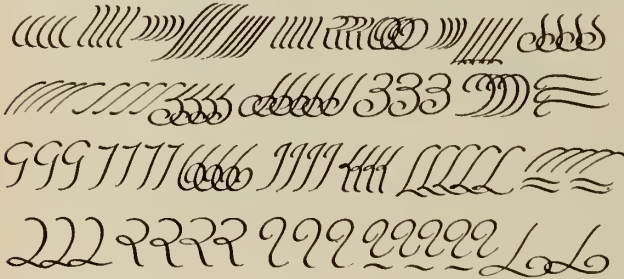

Fig. 1

before any pen work is done. Don't press too heavily on the lead pencil or it will leave an impression that cannot be erased.

The Alphabet Itself

The lower case alphabet is quite easy and requires little explanation, as the majority of lines have a similar curve to them. The main point to be watched in connection with it is to have all your upright lines at one angle. Do not have a letter look as though it was dependant on its neighbor for support. Bring the curve of each letter just to the guide line in each case, so that the whole will present an evenly-balanced appearance.

A glance will reveal the fact that the upper case, or capitals, present a much more difficult task. Here the majority of beginners make serious mistakes, which can only be overcome by studying a perfect letter and practising until it can be made correctly. The ends of some lines may be finished differently from the style illustrated in Fig. 2, but keep to the general formation.

The letters require no individual explanation. The arrows indicate the direction in which the lines are drawn, and the cross strokes indicate where strokes begin and end. Always start at the top of a letter to the left and work downward and to the right. Follow this rule and you will not be so liable to smear work already done.

Ability to Balance Up

The inability to balance up a word or line is often noticed in card writers, even after good, clear lines are executed by them

Fig. 4

This condition is often due to uneven guide lines and poor spacing, but in the majority of cases, and particularly in script lettering, to poor letter formation. The script letter is the hardest of all to balance properly, and, as a means of assisting our readers to overcome some common mistakes, a special chart has been prepared, which shows where mistakes in formation often occur. The illustrations in Fig. 3 may appear to be seriously exaggerated, but,

nevertheless, the errors shown are common and worse cases are often to be seen.

Defects of Some Letters

A brief explanation of each letter will show its defects so that they may be guarded against.

The cross-bar of A is too low.

The tops of B and C project too far to the right, and thus present an overbalanced appearance.

The widest part of the loop of the D is too low.

The loop of E is not strong enough and should project farther to the right.

The loop of G should come down to about half the distance between the guide lines.

The upper stroke of K does not come out far enough.

M is too much spread. The outer strokes should be at equal distances from the centre.

The left stroke of N does not correspond with that on the right.

The opening in O is too wide. One-eighth of an inch is sufficient for a two-inch letter.

The loop of P should not drop below a point equal distances between the guide lines.

The upper and lower loops of Q are too close.

The tail of R does not balance the top.

The top loop of S is too large.

The top stroke of T does not project a sufficient distance to the left of the upright stroke.

The top of U presents too much of a closed-in appearance.

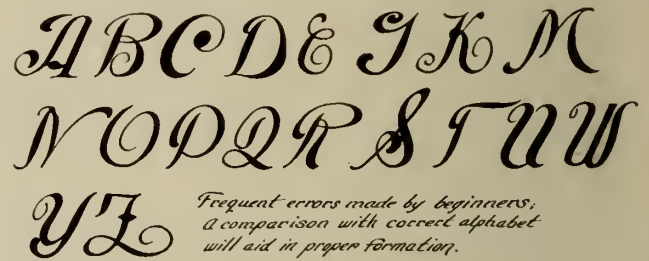

Fig. 3

The middle stroke of W should be equal distances from the outer strokes.

The upper loop of Y is too low.

Z is too much spread.

Just a Comparison

By studying the mistakes illustrated and described here, and comparing them with the perfect letters in Fig. 2, the reader should be able to overcome many faulty letters. The two cards, with special display wording in Fig. 4 illustrate how the mistakes appear on a card and how neat and effective a correctly lettered card is.

WOULD NOT BE WITHOUT IT

Enclosed will find renewal subscription for the SHOE AND LEATHER JOURNAL. Am very much pleased with your paper, and would not care to be without it. Wishing the JOURNAL every success for 1912, I am

Yours truly,
Petrolea, Ont., Jan. 17th, 1912. J. A. Taylor.

HE LIKES EVERY ISSUE

I am very much pleased with the SHOE AND LEATHER JOURNAL for the past year and hope that you may continue your spicy articles which appear in it from time to time. Enclosed please find one dollar (\$1.00) for subscription for the year ending Dec. 31, 1912. Wishing you a prosperous New Year, I remain

Yours truly,
Ottawa, Jan. 20th, 1912. W. A. Gravely.

Should Factories Supply Packing Cases Free?

Opinions Pro and Con About Charging the Retailer for Shipping Cases—Should the Manufacturer Bear the Expense
—Some Interesting Views on a Much Discussed Trade Topic

"Why should I be compelled to put up 50 cents for every packing box holding 30 pairs of shoes received from the manufacturer?" writes a Sarnia retailer. "Is there any reason why such cases should not be supplied to me in the same way as are the shoe cartons themselves? If I order the shoes, I should say it is up to the manufacturer to see that I get them, without saddling me with any cost beyond that of the shoes themselves."

THE SHOE AND LEATHER JOURNAL receives an odd letter after this style, every little while from some retailer with a real or fancied grievance, and sometimes the comments therein, regarding the alleged grasping nature of the manufacturer in general, are quite heated. In pursuance of its policy of discussing all questions of interest to the trade, the above remarks are herewith made the subject of a short discussion.

Two Sides to This Question

It is always a good policy to try to see the other fellow's side of the argument as well as one's own. It conduces to breadth of view, and an appreciation of what the other man has to contend with, that is illuminating at times. Take the instance in point. The boot might easily be shifted to the other leg, and the question asked, "Why should the purchaser of a pair of shoes pay for the pair or two of laces that go with the shoes?" Now the average retail shoeman these days does not throw in extra laces, at least, if he does, he is beginning to see the folly of giving away something for nothing. He has to pay extra for the laces, and this additional charge should be passed on to the customer, rather than be taken out of the retailer's profits, and there are more and more shoemen acting on this policy as the days go by.

Case Expense a Large One

Well then, the manufacturer is in exactly the same position as any protesting retailer will see after a few moments' consideration. He has to pay for every packing case, and this item of expense alone runs into several thousand dollars a year in many factories. Every year there is much skirmishing around among box manufacturers to secure the lowest price possible for the goods needed. In fact, in centres where there are several box making firms in existence, shoe manufacturers rarely have this work done by the same firm two years in succession, solely because a lower price is offered them for the same by a competing maker anxious to land the business.

What Some Manufacturers Say

One manufacturer put the situation in this way: "We cannot be expected to lose the money we thus expend every year. To many retailers, it may seem "small business" to make such a charge; and such an interpretation of it is natural enough, if the retailer considers merely the few dollars he may thus pay in a season as compared with the size of the manufacturing firms with whom he does business. But he forgets that his small charge is but one of hundreds of such amounts, which, taken in the aggregate, mean much to the profit or loss account of the shoe manufacturer. In these days there is a constant struggle to cut down the cost of production, and every little saving is a step toward better management and the stoppage of leaks. In justice to everyone, we must charge all retailers alike, and not play favorites, as we cannot afford to abrogate such charges."

Another manufacturer put it this way: "I may as well be blunt about it. If the retailer is not charged openly for the cost of the cases, be sure that this charge is included in some other way. No manufacturer makes a cent on such case charges; on the other hand, he does not intend to lose anything. This is a big item for us every year, and it would be included in the list price of the shoes if not otherwise arranged for. Any retailer can readily see the

reasonableness of this stand after a little reflection."

It was stated by another manufacturer that in some instances when such a charge is made, the manufacturer pays the freight, which would amount to probably the same figure, on the average. Or perhaps the procedure might be reversed, and the freight instead of the case cost, charged. Even if such were not the outcome, the retailer, who keeps his cases in good condition, should get at least 25 cents for them from people who are always in need of such boxes, as they are reasonably well put together.

Retailers Differ as to Matter

Questioned as to his views regarding this matter, one retailer hazarded the remark that he was perfectly satisfied that the charge in question was a correct one, as the manufacturer did not make any profit thereon, and the item for cases was one that ran up into considerable money every year. "I feel this way about it," said

Interior of shoe store of Rowland Hill, Richmond St., London. Mr. Hill is the energetic vice-president of the London Shoe Retailers' Association.

he: "If I try to meet the average manufacturer in a give-and-take spirit, he will do the square thing by me, nine times out of ten. And when this charge is made by manufacturers I consider perfectly square in their treatment of customers, I pay it without question. This is indeed one of the lesser evils. If retailers had nothing to worry about, other than this, life would be a lot easier for him than it now is."

Other retail shoemen were of the opinion that the shoes were ordered by them, and they were no use to them unless they arrived at the store safely. It was "up to" the manufacturer to see that they got there, and hence the cost of the cases was no concern of the retailer. This is the other side of the problem, and THE SHOE AND LEATHER JOURNAL will be glad to hear from retailers either for or against, giving reasons for the stand taken. It is another of the little problems of shoedom that a free discussion might help to get around satisfactorily to all parties.

LIKES THE SEMI-MONTHLY EDITION

Permit me to congratulate you on the great improvement that you have made in the SHOE AND LEATHER JOURNAL. I like the idea of the semi-monthly edition, and hope you will be able at no distant date to make your excellent publication a weekly one—L. J. Wright, Leamington, Ontario.

1. How would you start a Boot and Shoe business on a cash capital of \$1,000 ?

Cash Prizes of \$10, \$7 and \$5 for the best answers

2. How would you start in the same line of business on a cash capital of \$2,500 ?

Cash Prizes of \$10, \$7 and \$5 for the best answers

Men already in business can use their own actual experiences as a basis for an article, telling how they would enter the field if they had to do it again with a capital of either \$1,000 or \$2,500.

The "Shoe and Leather Journal" should also have some good stories from young men who contemplate going into business, and who have, no doubt, figured how they would do it on a certain cash capital.

The question is: If you had \$1,000 or \$2,500 in the bank and wanted to start in the shoe business, carrying heavy, medium and special lines, rubbers, findings, etc., how would you go about it?

Tell just how you would spend your money on fixtures and stock, how you would go about your buying, what you would buy, and why; what financial accommodation you would desire and how you would arrange it; what amount you would invest in working shoes, walking boots, light goods, rubber shoes,

novelties, findings, and the various other lines that would constitute your stock. What would you set aside for rent, advertising, and "a nest egg" account.

We thought first of specifying a particular set of circumstances to govern each competition, but decided against this idea when we considered how widely different in details are the problems which confront merchants in different localities when they start in business. We would much prefer that contestants take conditions as they exist in their own towns, or others with which they are familiar.

Don't imagine that it will be necessary to write your story out in fine literary style. We don't care much if you scribble it on wrapping paper, so long as the facts are plain. We'll attend to putting it into good newspaper form. Literary merit won't count for a fraction of a point when it comes to the judging of the entries.

These Competitions will close March 20

In addition to the prize-winning stories we will publish all others that possess sufficient merit, and for each one so used the "Shoe and Leather Journal" will pay \$3. This means that every contestant who devotes some little time and study to his story is pretty sure of receiving at least \$3 for his trouble, not to speak of the benefit that such thought and calculation will bring to him personally. For any further information you desire regarding these competitions write

Some Queer Retailers That I Meet On My Trips

Vivid Word Pictures of Their Peculiarities, Pleas and Pretences—Experienced Traveler, Able to See Through All Of These, Engages in a Frank Discussion of Merchants Who Cannot Say "No"

"It takes all kinds of people to make a world, and if you do not believe it, get out on the road a few years and you will speedily discover the truth of what I say," remarked a traveler for a Montreal shoe manufacturer the other day to the *SHOE AND LEATHER JOURNAL*.

"I have covered Ontario now for my firm for seven years, and am particularly strong in the western section of the province. Now, selling shoes may seem to be easy, but you have to dig and scrape, persuade and plead, talk, plan and discuss, and perhaps, in some cases, use a mild kind of forceful argument to get business. The reason is that there are so many salesmen on the road, and, of course, each represents 'the best line made.' He does not see why Jones or Brown should give an order to a rival factory in preference to his. There is competition a-plenty in the selling game. Now travelers may have their weakness and peculiarities. I have no warrant to speak for the road men as a body, but there are certainly some eccentric retailers.

Leading the Traveler On

"Personally I like a man who can say "No," frankly but firmly. He need not be unkind in his refusal to give me an order. Honest, open confession, a straightforward reason, goes farther with me any day than the miserable dodges and subterfuges of all kinds that some retailers resort to to avoid coming to a definite decision.

"'Stave the fellow off' is the motto of a good many. You often hear persons say, 'Oh, I am not afraid to speak out what I think; I never go around to the back door to air my opinions, but I give them right from the shoulder.' I always believe that a clean, sharp cut is less painful than a jagged wound, and heals sooner. All this sort of talk is heard from many men, yet the chap who rants in this style is one who frequently has no definite opinion on anything. He will side with the next man in his views and change them to suit the third fellow.

"Dodging responsibility and duty, evading being caught in any important issue that may arise, and agility to get out from under, is what some men regard as clever, and seem to delight in. But I am talking around my subject, and will get down to particulars.

"Here are a few types of retailers found in Western Ontario centres, and I have no doubt every traveler will encounter the same kind in whatever territory he covers. I do not refer so much to regular customers of mine who have dealt with me for years, but to retailers who now and then give me an order or upon whom I call in the hope of opening new accounts.

The Old Cry of "Full Up"

"When I started out last October on my trip with spring and summer samples—the finest line the house has ever had, by the way—I was not the earliest on the road, and the city that I landed in first was Hamilton. I called upon a certain shoe man, who met me blandly and told me that he would be over to the hotel in an hour to look at my samples. At the end of two and a half hours he presented himself without any apology, and proceeded to look over the lot rather gingerly. 'Yes, they are very nice,' he remarked, after I had carefully explained all their features. 'But to tell you the truth, I am full up, and just placed an order the other day for ninety pairs in your line. The next time you come around I will see what I can do for you.' He had, I learned later, not placed a single order for spring stuff.

"In Guelph there is another man who will spend hours talking with you on general topics, but when you mention shoes he becomes exceedingly busy, and declares he is so rushed that he

has no time to look at your samples this time. 'Call around again when you are in town.' All this, mind you, at the end of three-quarters of an hour conversation, in which not a single customer had entered the shop, and the clerks were standing around. Too busy, just think of that!

"In Stratford I found one retailer who tried to bluff me that my line was no good, that he knew all about them, and they were not as good as those made by Mr. ——. He positively refused to come over to the hotel to look at the samples. 'In other words, you will not give me a show,' I remarked. 'You are evidently afraid if you come over that I will sell you some-

The attractive interior of Slater Shoe Store, Winnipeg.
H. W. Stark, Limited, proprietors.

thing, or that you will be in a way committed to giving me an order.'

"'Never mind, sir, I have told you that I cannot go, and that ends it.'

Give You An Order Next Time

"Going down to St. Thomas I called upon a footwear merchant in whose shop I had never been before. He was genial and full of plausible talk. 'Yes, he was very glad to see me, had often heard of me and my line; could I call around in a week or ten days, and he would have an order for me, sure.' I said all right, that I would be back on my return trip. Well, sir, when I got there he began to complain that he was not feeling well, and what do you think he did? Rather than come out straight, and acknowledge that he was only giving me hot air and elusive promises—merely leading me on—he stayed away from the shop all the afternoon and had his wife 'phone down that he had a chill, and would not be to the store for a couple of days. I saw that there was no use wasting time or attention on him, and left the city. This man, like many others, was a prince of good fellows until you tried to sell him goods. He lacks determination and decision.

"There is a rather gruff shoe dealer in Woodstock—mind you, it would not do to give you names—but if you get on the right side of him he will look at your samples. He gradually thaws out, and before you depart, he places a fairly good order.

Then he goes back to the store, gets cold feet, or thinks that business is going to the dogs, and writes a letter which runs in this fashion: 'I find that I have ordered far too much stuff, and that I am already overstocked in your lines. I desire to cancel Nos. 678, 435, 296, 351, etc.' He is always carried away when he sees fine goods and then recants or retracts and cancels. Far better if he had not so much optimism in the sample room, and a mind that did not change with every trade current that blows.

The Retailer Looking for a "Cut"

"Then there is a retailer in London who will listen to every plea put forward by rival travelers, and tries to satisfy every one with a little piecemeal order with a 'I'll do better next time.' In Windsor there is a shoe merchant who absolutely refuses to look at samples in the daytime, no matter at what hour you call, but when he does come around you may get a good booking. Then when all is said and done, you total up your sales. He starts in quietly to enquire your discount and terms of payment. He leads up to his stand gradually, and demands better rates than the other fellows have received, and when you refuse, it is all off. In Chatham there is a boot and shoe man who will never give an order unless the traveler will split his commission, and as I have never done this, I, of course, cannot secure business from him.

The Other Houses Are Cheaper

"Another man in Owen Sound will give you a big order, only he tells you that he can buy the same style of oxfords and button boots from a rival house for less money. He would really like to give you the preference, but does not see how he can readily do so in the best interest of himself. This fellow takes this means to beat you down, and hopes by saying that certain other houses (which he names) sell cheaper, that you will give him a sacrifice. It does not work with me, and I know that it does not with other men.

Bring Your Samples to the Store

"One more type of a retailer who is met with occasionally is the chap who declares that he has no time to go around to your sample room, but that he will look at your stuff if you bring it around. He does business in Brantford. Now carrying from one hundred and fifty to three hundred samples, as I do, how on earth is one going to cart his goods around to this man's store just to suit his own convenience. It is not a fair request to make of the traveler, as a few lines do not adequately represent all that he has, and taken out of the display do not look as well as when ranged alongside others.

"I know another dealer, and he lives in Collingwood, who is in the habit of ordering freely from every traveler. Each man gets business, and he probably gives an order for so many button boots, so many oxfords, so many pumps, and so many tans. Then he goes back to his office, checks over the lists—say, of pumps. He finds that he has ordered from four or five firms, and he begins straightway to ponder. Now I will cut out Binks entirely, and I guess that I do not need those goods that I booked with Bennett, and perhaps I can do without those that were given to Hillman. That will confine my order for pumps to Smith and to Cooper. Thus out of five travelers who got business, three on returning to the factory find to their dismay that the orders have been canceled. This man makes a practice of doing this.

"I know one traveler for a jobber, who called and got an order. He wired into the firm with instructions to send the footwear at once, which was done next day. The result was that the road representative got ahead of the retailer, for he had not time to follow his usual procedure of 'looking over his order sheet' and send in a countermand. Perhaps it will teach him a lesson.

"I heard of another fellow in Berlin who is tied to a certain house who are practically carrying him, yet to hear him talk you would think that he was the freest man on earth. He boasts

that he can buy where and when he likes, and on just what terms he pleases, but somehow or other he never gives me an order, although he admits my goods are all O.K.

"Some retailers will promise everything, and stick to nothing, others will give you the glad hand, lots of hot atmosphere and a good hearing, but will advance all sorts of excuses for not placing an order.

A Few Choice "Stock Excuses"

"Some of the choicest of these pleas are: 'Full up,' 'Called just a week too late,' 'Am going out of your line,' 'Thinking of retiring from business,' 'Will see you next time,' 'Do not want to open any new accounts,' 'Can secure better values from the house direct than you are offering,' and all this kind of dope.

"Then you meet the bluffer, the jollier, the four-flusher, the dodger, the artful one, the smooth fabricator, the gushing one, the chap who seeks to praise you personally, but who has no use for your house, and is sorry that you are not with some other firm. There is the merchant who says that last year's goods were not up to sample, but he has never made a complaint to the house, and waits to vent his grievance on you, which is only another method for refusing you an order.

"Oh, the woods are full of all kinds and conditions of humans, from the business man who is willing to see every traveler and look at his samples, to the one who looks upon each road man as an intruder, and thinks that he should be prosecuted for having the audacity of calling.

Finding a Common Meeting Ground

"You have to approach different men in a different manner. Some want to get down to business right off, others want to talk an hour, some like the latest story, and a few are looking for a drink and a good cigar before being mellow. You have to talk politics to some, religion to others, horse-racing to a few, and hockey to more. You make full enquiries about the wife and family to another kind, who like to speak of how clever their children are, and some want to know if you have called upon any of their rivals, and how many of them have bought, what lines, etc.

"Again, several want the exclusive right for their city, and yet will not give you a good-sized order. When you refuse, they turn you down. The man who can say 'No' and give his reasons in an open, candid style is a rarity. The majority dodge and shift and beat around the bush, offer miserable pretexts or some 'con.' They are afraid to say 'No.' They do not want to offend, and believe in temporizing, in bluffing, in cajoling, in good fellowship, or in staving you off. They will not tell you frankly why they do not want to or cannot give you business. They prefer to let you think that it is better to go away with glittering promises and high hopes; that you got pretty close to them, but not close enough for an account. Next time they will certainly do something.

Be Open and Candid

"Other fellows will tell you that they are going to cut out So and So, and when they do they will give you a good slice of business. I know of only half a dozen men who deal straight from the shoulder in a pleasant, firm style, and have the fortitude to say 'No' without leaving a sting.

"It seems to be the way of the world to give evasive replies or some encouragement. If you apply to the average house for a job they will agreeably explain that they have nothing just at the moment, but call around again in a week or so; or they will bear you in mind, and give you a chance at the first vacancy. You call around again and again, and keep on calling, and yet you are no nearer securing employment from that house. They like to wear down your time and patience. If the first vacancy does come around it is probably filled by another, and you get the bland answer, 'Why, we really forgot all about you, but we assure you that it will not occur again.'

"The matter of fact was that this man has been with us

before, or he had a relative in the store, or he is only on temporarily; any other ostensible excuse for overlooking you. Far better to tell an applicant at once that there is no vacancy, either present or prospective. There is altogether too much hypocrisy, jollyng, shilly-shallyng, pretence, cant and plausibility in many business matters of to-day. Why cannot men tell you squarely and fairly there is no chance, that they do not like your house or goods, can do better elsewhere or cannot submit to your terms. Holding out half-hearted promises, evading the

issue by hook and by crook, twisting, scheming and juggling words and actions are too prevalent. Give me the man in business who knows what he wants, says politely what he thinks, is final in his judgment, and prompt in his decisions."

In the next issue the SHOE AND LEATHER JOURNAL will present a reverse picture. A number of retailers will be given their innings, and will tell of the faults, fads, frailties and fussiness of certain travelers who are bound to "sell at any cost, and will not take a refusal."

Branded Shoes Work to Best Interest of Retailer

Lack of Co-operative and Helpful Spirit on the Part of a Few Manufacturers Has, However, Made Certain Shoemen Unsympathetic—Sidelights on Reasons for Avoiding Sale of Shoes Not Bearing Retailer's Own Name

Some retail shoe men are very much opposed to selling branded shoes, peculiar though this may seem. It might naturally be supposed that all retailers would readily see the advantages accruing to them from handling lines whose merits the public have become thoroughly familiar with, through constant publicity in one form and another. The market is already made for them. People know about these branded lines, and in many cases they know *why* they should be worn.

Moreover, the manufacturers of such lines are nearly always ready to supplement their usual publicity efforts by various kinds of advertising ammunition suited to local conditions, such as ad. copy and illustrations, show cards, window display materials and suggestions, as well as other helps along the same line.

It may fairly be argued that it takes considerably less salesmanship and expense to sell branded shoes than to sell shoes whose quality is not assured in this way. No manufacturer dares to skimp the quality of the lines upon which his present reputation and volume of business have been built—and the public know this well.

Why Some Retailers Taboo Branded Shoes

Then why this reluctance on the part of many retailers to sell such branded or trade-marked shoes? It is quite true that price enters into the situation to a certain extent. The retail shoe man feels better when his name is stamped on the sole of every shoe sold by him. He feels that every boot disposed of by him stands for something definite and personal, that his position with his customers is enhanced with every sale, and that he is something more than a mere distributor for the manufacturer. But these are only incidental reasons after all, in the majority of cases. There are deeper motives than these.

Be it understood that the SHOE AND LEATHER JOURNAL believes—opposition to the contrary—that branded lines work to the ultimate benefit of the retailer, as well as to the good of the manufacturer. There can be little doubt of this. A brand is a protection against misrepresentation and an assurance of quality and fair dealing, both to the public and to the retailer. It can be pointed to as "foot insurance," and hence the shoe can be more readily sold. And it is because of this conviction that the writer here points out some of the stumbling-blocks in the way of the more complete use of trade-marked or branded shoes. A better appreciation of these forces by retailer and manufacturer alike can result only in good.

A Specific Instance

A retailer who is a large buyer and whose opposition to all branded lines is well known was asked for the reason of his peculiar attitude. He gave them forcefully and frankly, and illustrated by concrete examples. Here are his remarks: "I used to be a firm believer in the manufacturer who had faith enough in the quality of his shoes to put his stamp on them as equivalent to a certificate of value, and then to use all forms

of publicity to acquaint the public with the excellence of said lines. I could not see where I would be anything but the gainer if I got on the 'band wagon' and rode to my destination as a result of the other fellow's effort—backed, of course, by my own—rather than to do all the walking myself. And I acted on that theory, until I got thoroughly well 'stung' in two different instances.

"In one case I was given the agency for a well-known make of American shoes, and I succeeded in working up a very nice demand for them after a year or so of effort. People began to come back, and would not take any other line if they could help it. True, the shoes had much intrinsic worth, yet, if I had been selling any other similar line, my personality and salesmanship ability would have accomplished the same result, I am quite sure. But early in the second year, I was one day notified that the firm had decided to open a branch of their own in the neighboring city, and therefore were reluctantly compelled to withdraw the agency from my hands, as they would cover surrounding territory direct by mail order.

Where He Was Cast Out

"Was I sore? To get such a 'throw-down' after a year and a half of faithful work, and to feel that this firm would reap where I had sown so faithfully and intelligently? Just what you could notice! But even that did not teach me wisdom. Upon the earnest solicitation of a traveler for whom I had the highest regards, I had ordered a line of low-priced women's shoes, to retail at \$3. I had a class of trade that would, I knew, appreciate the neat appearance and medium price of this boot. I advertised it extensively, and got what help I could in this line from the manufacturer. They sold like hot cakes, and were profitable to me as well as to the manufacturer.

What Happened Again?

"The first year I stocked these shoes, they cost me \$2 per pair, leaving me a fair net profit, when sold at \$3. But lo and behold! when I again ordered my spring supply the next fall, I was told that the price had been raised to \$2.15—just 15 cents off my former profit! Still I kept on, as I had worked up a fine demand. I felt I couldn't afford to drop the line. But next year the price went up to \$2.25. Then I quit. Demand or no demand, I felt that pretty soon I would be working for that manufacturer for nothing. Pulling other people's chestnuts out of the fire at personal risk never did suit me.

"Now it made no difference to me whether such a price advance was justified by increased manufacturing expense or whether it was an effort to take the cream and leave me the skim milk. In either case, I was working for next to nothing, and was sure to lose some trade which liked that particular shoe, and which could not understand the change of front shown by my not handling it. I couldn't sell it for more than \$3. The educative effort required to secure an increased price would be

better spent on using my popularity and selling ability to introduce some new line.

Results: No Branded Lines

"I did this, but in every order I now give my name is stamped plainly on the sole. If a customer asks for a branded shoe with which he has become familiar through constant publicity, I reason with him this way: 'If I sell you a branded shoe, and it is not satisfactory, will you go with your complaint to the manufacturer, or will you come to me?' The latter every time. Therefore, I sell you a shoe that I know will give you just as good, or better satisfaction than the one you ask for, and it is guaranteed by my name on the sole. If it goes wrong, the loss is mine. I generally make the sale. No, sir; in future I work for myself, and make my own terms. I can't be held up any more. The boot is on the other leg, now, if I choose to get exacting."

This Case Typical

This case, stated at considerable length, is but typical of many others that every shoe man knows of, either by experience or observation. And there are many other instances that could be quoted, in which the manufacturer, finally thinking that the retailer needs his goods and his help, has grown arbitrary and discourteous, frequently turning down reasonable requests and claims very abruptly.

Now, does this constitute a case against branded shoes? *Not at all*; but it does stand as a revelation of the feeling prevalent among many retail shoe men, that makes it hard to get them to see *the undoubted advantages of pushing branded lines*. Such methods of marketing cannot be a final success unless backed up by the fair play spirit. There must be more of a determination on the part of the manufacturer to secure the retailer's sympathy and co-operation.

Said another shoe man, "I greatly prefer a manufacturer to tell me his story through the columns of my trade paper, than to go to the public first with a view to creating a demand that I *must* satisfy. I can be reasoned with, but not clubbed into a course of action." There is the kernel of the difficulty.

The SHOE AND LEATHER JOURNAL believes that much of this prejudice against branded shoes is short-sighted; but it is there, undoubtedly, and must be met with open eyes by the manufacturer in a half-way spirit. Of course, there are some retailers who deserve little consideration, but the ones usually feeling the way mentioned here are of the better class.

Every retailer who feels strongly one way or the other on this question, will help himself and the shoe trade by furnishing the SHOE AND LEATHER JOURNAL with a synopsis of his views, and the reasons for the position that he takes.

A Clerk's Tact and Courtesy

How a Winnipeg Shoe Salesman Managed to Sell a Hibernian Caller a Costly Pair and Send Him Away Satisfied

By D. J. DeVine

On a recent Saturday evening two fine looking Irish gentlemen came in to our store to join the busy crowds. Being at the front I met and soon had them seated. I proceeded to draw up a stool and reach for the measuring stick to take the pedal size of one of the callers, but I was halted.

The younger man remarked "Old chap, you have a job ahead of you now." I replied that "I liked a job," and he seemed pleased with the answer, for he smiled and said, "I was in a shoe store last Saturday evening for two hours and fifteen minutes and tried on nearly every pair in the place. Only one of the whole lot came anywhere near fitting me, or, at least, suiting me, and some had a good many nails in the sole."

I inquired the name of the store and he told me. I added that it must have been lasting tacks that he felt, as I did not think that he would buy a nailed shoe, and I was sure that the shop, which he mentioned, did not carry any shoes except Goodyear welts.

At any rate, he said that the clerk who was attending to him took a shoe to the back shop to remove the tacks, and the speaker explained that he got tired of being served in that manner. He put on his old boot and departed.

Now our store was crowded. So far all had been talk and nothing much done in the way of effecting a sale. I saw others waiting to be served, whom I felt that I could satisfy right off the reel. However, I decided to exercise a little forethought and tact and stay with my man. I found that I had to win his confidence and remarked pleasantly, "Well, I will try to both fit and suit you. I do not want you to take anything that does not satisfy you, and I certainly will not keep you here two hours."

He put his foot on a stool and I drew off his old shoe, at the same time examining his foot and taking a careful glance at the boot that he was wearing, its quality and general features. His foot was a nice, straight one. He told me that his shoes were Old Country make, and that they had cost him \$4.50 of Canadian money.

"I do not want to pay more than that," he added. I said, "Very well, but I am afraid that I cannot fit you nicely at that figure." He observed, "Go ahead, and, if you fit and suit me we will consider the price after."

I said, "Thank you" as cheerfully as I knew how, and went for some shoes. Luckily for me, we were admirably fixed on straight lasts in his size, 6½ B, and I came back with four shoes; usually I do not bring more than one or two. I put one shoe on, buttoned it and he took a look at it in the mirror. He said not a word but resumed his seat. I took the first boot off and fitted on another and still another, but still not a murmur from my probable purchaser. A friend of mine came in and spoke to me, and "my hard customer," as he described himself, remarked "Fix up your friend, I'll wait. I'm in no hurry." I soon sold my friend a pair of tan buttons, and, when I had finished, my Irish caller said, "All these shoes fit and suit O.K." I saw that I had him part way on the road toward closing a transaction.

"What is the price?" he inquired.

"Six dollars a pair."

"That's too much for me to stand," was his rejoinder.

"Very well, I will fit you the best that I can in a cheaper line."

"No," he added, "I will think over these for a few minutes."

I waited on another man, and, when I had finished with him, I got a pair of specials which I was positive would fit my "hard customer." I inquired if he would buy a better pair if they fitted and suited?

"Not by a long chalk," he replied. "I do not want to go a cent beyond six dollars."

I was afraid that I might overstep the mark and lose my man altogether, but I asked him to try on the special line at any rate. He did and remarked to his companion, "Why did we not come to this store before, where they employ courteous and experienced clerks, and have the goods?" He turned to me and inquired if this particular shoe fitted better than the others which I had shown him. I replied, "No, but it will always be a fit, being much better made and of more costly material." I next showed him some of the fine points in connection with its workmanship, how it was made, the maker's name, etc. He asked the price, "Nine dollars," I said. He wanted to know if I would fasten the buttons so that they would be sure to stay on, "If you do, I'll take this pair, and you can fix up my old ones."

He then handed me over ten dollars and fifty cents for the new shoes and the expense of repairing his old ones, and said that he would send his friends to our store in future. Thus you see tact and courtesy, with the right goods, will nearly always win.

I have opened a retail shoe shop at 761 Notre Dame Avenue. I have great hopes of doing a very nice business here, and consequently I need the SHOE AND LEATHER JOURNAL.

Yours very truly,
Winnipeg, Feb. 12th, 1912
A. C. GARDNER

A Wider Appreciation of Canadian Made Shoes

They Possess Style, Worth and Workmanship Sufficient to Merit the Patronage of the Most Exacting Buyers—Catering to an Alleged Foreign Demand is a Short Sighted Policy—Some Retailers and Manufacturers Opinions

"Permit me to compliment you on that excellent article which appeared in the last issue of your paper on 'Does National Honor Count in the Shoe Trade?'" writes a Stratford shoe dealer, who has been in business for many years. "You have certainly struck the right keynote. Keep it up. The trade is with you. There is altogether too much pandering to an alleged foreign desire in Canada, and I only hope that the press, both local and city, will take the matter up, and seek to educate the people to a broader Canadianism. By that I mean some appreciation of what the country affords in the shoe line. We have just as skilled, stylish and graceful footwear made in this country as in any land under the sun. We need a little more patriotism and self-respect, a livelier estimate of what we can produce right here in our own country. I am not a 'little Canadian.' The offerings of Canadian shoe manufacturers are good enough for me. You are on the correct line."

Just Reverse the Picture

"Yes, I read with a great deal of interest your remarks of how so-called 'American' shoes are often palmed off on the public, and it is time that the practice should cease," declares

an Ontario manufacturer. "If I turned out a shoe, stamped it 'Made in Canada,' and sent my travelers across the line to get business, they would receive decidedly cold treatment, and no orders. The matter of invading the American market has been tried, and with no success or encouragement whatever. We are specializing more and more every day, and no industry in the last decade has made more rapid progress on the road to perfection and supremacy than our own factories. We want a little more confidence and self-esteem. If we do not have faith in our own products and powers others will not."

"I have been in business twenty-seven years," writes a Peterboro retailer, "and I do not handle any American goods. I find that there is no necessity for so doing, and that others who have stocked them have been trying to create a wrong impression and to foster a taste on the part of the public that does not exist. I do not have one customer in a hundred ask for American shoes, and if one does, I speedily convince him or her that we offer just as good style, work and worth as any foreign-made article. Here is a woman's tan calf, button boot, short vamp, high toe, Cuban heel, with snap and individuality, that I buy from a Montreal factory for \$2.65, and yet the very

The imposing front of the Quebec Shoe Co.'s store, Winnipeg, of which Wm. C. Allan is the proprietor.

same American shoe, with no better linings, leather, shoemaking, finish, or trim, would cost me \$3.15. That thirty per cent. duty does not add anything to the value of the goods. Some one has to pay it, and you can rest assured that it is the consumer every time. I have here a man's willow calf, double sole, blucher cut, high arch, extension edge, which I buy for \$3.10, and sell readily. The same style of last and build of shoe from the other side would cost me \$4.00, and the wearer would not get any more comfort, durability or satisfaction out of it. I could show you dozens of similar ranges from my shelves here, and I do as select a class of trade as any retailer in any similar sized city in the province."

Blames Some Manufacturers

"I do not object to legitimate American shoes so much as I do to the fraudulent practice of certain makers using 'American' names for their branded goods, or the actions of a few retailers in seeking to convey the impression that an American shoe is worth more money, that it has a something about it that a Canadian shoe has not," writes a Hamilton man, who has been in business for sixteen years. "I know there are lots of genuine American shoes sold in this city, and I am not inveighing against that so much as I do the practice of which I speak. I have only a few lines of American goods, and I can name you a dozen factories in Canada that turn out products equal, if not superior, to what many houses across the line charge from a dollar to two dollars more per pair. I know there are certain retailers in the Dominion who complain bitterly that residents of their towns and villages will not buy footwear from them, but send to departmental store and catalogue houses, where they obtain no better value for their money than they do at home. I was talking to one of these merchants the other day, and he informed me that he sold some American shoes. I asked him why he did not buy all his men's, women's and children's lines from local concerns. He told me that he scarcely knew." "Then what are you grumbling about?" I asked. "Why do you not exercise the golden rule? Here you give some good Canadian firms mighty small encouragement, and yet have a grievance because citizens of your town go to Toronto, Hamilton and other places to purchase shoes. Practice what you preach, and see that you set the example of patronizing Canadian factories."

Do They Come In Undervalued?

"I am thoroughly acquainted with the whole matter, and of the two million dollars, roughly speaking, of American shoes sold in Canada last year, we got many left-overs, or what is 'on the floor.' We are used as a dumping ground," writes a Quebec manufacturer. "Factories across the line have to seek an outlet; business is duller over there than it has been for some years, and with the Presidential election coming on, matters are not likely to improve for a long time. Now large plants have to be operated at a certain fixed output, keyed up to a certain production pitch, so to speak, and to keep the cost of manufacture down to the lowest notch, what cannot be disposed of at home must be sold abroad at cost or under. We get the surplus, and thousands of dollars of shoes are passed through the Customs at undervaluation. A huge plant will stand to lose rather than curtail part of its output. One New England visitor remarked that they had to have business no matter where they got it. The factory turned out 8,000 pairs daily, and on their basis of computation, everything was bought administered, operated and marketed, in order that these fixed charges might prevail. "We can afford to make an actual cost for Canada or even less, if things are kept running. Of course our customers over the line do not know at what figures we sell here, and it is nobody's business but our own," was his candid confession.

It's Different Away from Home

"The same thing is done in shoes as in other matters. I went to Buffalo once to buy some heel nails from a firm," said

a factory proprietor, "and was quoted a certain price per hundred for the nails. I told the firm that I was from Canada, and had to pay duty on the 5/8-inch nails. I asked if they would give me any concession." "Wait a minute," said my man, and he walked back into the office. "Pretty soon he reappeared and named a quotation less than half what he had asked me at first. I would not have been surprised if he had reduced the price less the duty, but he got away below that. This is what he said: 'You are not a customer here, and do not interfere in our trade, and we can quote you a much more favorable rate. Our patrons need not learn the figure, and we can do business with you at practically cost if you get all your supplies from us.' Now that is the way with certain manufacturers in the United States. They want Canadian business at any figure, and will lose in order to keep the factory operating. I do not say that all firms will do so, but a number will. They hope to recoup themselves by charging higher prices where they do business. The shoe business is like a paper-making machine, and must be kept running all the time if the producer expects to make ends meet or show a net profit."

Canadian Shoes for Canadians

"How many firms ever think of buying American rubbers or felt shoes? The thing is almost unheard of, except in a few cities along the border, and yet in leather goods we are just as far advanced and skilled, and with a little practical talk and loyalty there should be fewer American shoes come into this country," said a King Street dealer, Toronto. "The people over the line love us mightily so long as they can sell us three dollars to every one we sell them, and then they take principally raw materials, as the trade returns will show, something they have not at home. We want to believe more in ourselves, more in our ability, brains, energy and resources. To say that we have not equally as neat, attractive and classy shoes right here in the Dominion as are represented on the other side is misleading. With the insight and study of styles, development and expansion of the Canadian shoe industry, such as I have given, I dare not make such a statement and hope to retain my reputation for veracity."

"I can soon convince anyone that we have a product which, at the price, cannot be beaten anywhere on this continent," observed a Montreal maker of women's goods, "and we have facilities, workmen and material that are not surpassed. This desire for foreign shoes is all a fetish that will sooner or later be shattered. We are just beginning to waken up. 'Canadian shoes for Canadians' is a good slogan. We have the enterprise, spirit and progressiveness to back it up in every respect."

A Specimen of Scant Courtesy

A former shoe traveler who retired from the road a few years ago, and is now in another line of business, walked into a store in London, Ontario, the other day to purchase a pair of shoes. He stood around a few minutes, and at the back of the shop the proprietor was talking leisurely to a clerk. After tarrying a reasonable length of time, the former road man shouted, "Don't you wait on customers here?"

"Certainly," replied the proprietor, as he stepped forward, prepared to serve the caller. "But we thought that you were a traveler. What did you want, sir?"

"What do I want?" rejoined the visitor in his most icy tones. "I wanted a pair of patent leather button shoes, but thank you, I can get them elsewhere. If you can not treat a traveler decently you cannot treat a customer decently," and out he went.

Happily there are few business men who give this sort of reception to traveling representatives. Speaking of the incident afterwards, the caller remarked, "I went up the street a little way and entered another shoe house, where I was promptly and politely waited upon."

General Price Increase In Shoes Looks Inevitable

A Summary of Conditions as They Exist—Some Plain Statements of Facts—Question is One Not Likely To Be Kept in Cold Storage But Definite Action is Expected at an Early Date

Are shoes going to take a jump in price this fall? In the last two issues of THE SHOE AND LEATHER JOURNAL have appeared statements of conditions, and tendencies among shoe manufacturers that seem to answer this question in the affirmative. Further inquiries along the same line have but strengthened the impression that a general price increase is inevitable.

As previously stated, there are several reasons for this. One of the most cogent of these was given in the last issue of THE SHOE AND LEATHER JOURNAL. On page 38 was a complete table giving the comparative prices of leather and hides for the last eleven years. It will be noticed that practically all kinds of sole leather have advanced decidedly, and many kinds of upper leather and hides as well. The advance in hides, due to increased consumption, and factors affecting their production in Canada, the United States and foreign countries—which factors are, of course, beyond the control of the tanners—has compelled many of the latter to jump their prices.

As an instance of this fact, one manufacturer advised a SHOE AND LEATHER JOURNAL representative this week that one tanner from whom he secured most of his calfskins had notified him of a seven per cent. increase in price. This manufacturer was away short on calfskins, so after other inquiries, he decided that the best thing to do was to accept the increased price. "But," he said, "I cannot add that increased cost onto an already over-large cost of production without endeavoring to recoup myself by raising the selling price." In addition to the increased cost they have to pay for the raw hides, the tanners point to the higher wages and constantly increasing cost of leather production. They state that they have not been getting a fair margin of profit in the past, and that the time has come for a decided increase in leather prices.

How This Hits the Manufacturer

Again, present conditions make this stand of the average tanner a more or less serious one for the manufacturer. The latter, for a long time back, has been buying leather largely on the hand-to-mouth basis, always waiting for a more favorable price opportunity, which frequently has not come. Taking manufacturers as a whole, they have been letting the tanners carry the stock, hence at present many of them have not much leather on hand. With prices on the up-grade, their profit is just that much lessened. And, of course, it is the lines most in demand upon which the price increase will be greatest, which makes the pill all the harder to swallow. Patent and gunmetal calf are strongly in demand. They are "going up." Sole leather is especially firm—and it will be firmer. These days the harder, heavier leathers are being mostly used for uppers, and they all feel the tug of the price increase tendency. Leathers like dongola and glazed kid which at present are not overly popular, will feel the advance very little.

Other Factors In Increased Cost

But it is not only in leather that the manufacturer is feeling the pinch. Prices on practically all the accessories have stiffened. Here are a few of them; counters, box toes, insoles, heels, linings, trimmings, threads, eyelets and hooks. To keep the quality up, all these accessories must be of the best. How long will an otherwise good shoe last, if the counter or the box toe is of poor quality? Just about long enough to "queer" a good customer for the retailer—and the latter probably will vent his spleen on the manufacturer.

Keep the Quality Up

There is a general disposition among the manufacturers to see that the quality of present-day shoes is kept fully equal to or better than, those of the past few years. Rather than scamp the quality, they will raise the price. This is by far the lesser of the two evils, in their estimation. Many of them advertise, making strong claims

for the wearing quality and appearance of their product, and it would be suicidal for them to lower the quality to keep prices at the same level as heretofore.

Competent Help Scarce

Still another problem that tends to increase the manufacturing cost of shoes is the scarcity of competent help, and the steadily increasing wage bill, due both to this scarcity, and also to the constantly growing cost of living. Many factories have the greatest difficulty in securing enough expert help, especially in the cutting, lasting, fitting and finishing rooms. In such cases, "green" hands have to be "broken in," even while being paid practically the regular scale. The number of pairs of shoes spoiled in a week during the busy season by some of these "green" ones mounts up to a considerable sum in a year—all of which increases the expense of production. And it seems almost impossible to avoid such conditions, because during periods of commercial prosperity, expert help is scarce and very independent. Then, as well, rents, power, taxes, shipping facilities, share the general increase. It is easily seen, therefore,

A Trio of Veteran Travelers

The accompanying picture represents three shoe travelers who were "taken in a group" by Charles Bonnick, Toronto, manager of Ames-Holden-McCready, nearly twelve years ago. On the left is E. A. Chalk, who has been with the firm twelve years, and covers Northern Ontario as far as the Soo. In the middle is Andrew Jackson, who now lives in Montreal. He represented

Ames-Holden for about forty years, and for a long period covered Western Ontario from Toronto to Windsor. He was superannuated some four or five years ago, and to-day is in the enjoyment of a life pension from the house. On the left is W. G. Simpson, who formerly traversed Northwestern Ontario, and was with the firm for thirteen years. He left the road to enter the real estate business, and is now a member of the firm of Simpson and Waddington, 2197 Queen Street East, Toronto.

that the road the manufacturer has to hoe is not an easy one—in spite of a rather widely held opinion to the contrary. And this is no apology for the manufacturer either—merely a statement of facts.

Changing Styles and Lasts

Here is another factor that is giving the manufacturer anxious thought. He frequently blames the retailer for the heavy expense involved in "scrapping" old lasts so frequently, to make way for changing styles, often of a freak nature. This is hardly just, as these changes are, more correctly speaking, due rather to the stress of manufacturing competition and the effort to outdo the other fellow. And yet, whoever is to blame, such changes help greatly to add to the outlay for shoe production. There are far too many of them.

Will the Increase Be General?

It is doubtful if the advance will be general, as the cost of making all kinds of shoes is not going up in the same ratio. As previously stated, some classes of leather that are not much in demand, will increase little, if any; again, there are some manufacturers who will hesitate long ere they ask augmented prices, owing to the strenuous present-day competition for trade. They may seek to take a lesser profit on a considerably larger volume of business.

But these manufacturers will be in the great minority, if expressed sentiments are an indication of real intentions. While no concerted action has been taken in the matter—and there probably will be none, as such—yet it is quite likely to be discussed informally in shoe manufacturers' meetings in different centres, and a general consensus of opinion arrived at. Such a pertinent subject is not likely to be kept in cold storage very long where even "two or three manufacturers are gathered together."

What Will Be The Ratio of Increase?

According to indications, anywhere from three to eight per cent., averaging possibly five per cent. This is the figure mentioned most often in such discussions, and it would not be an embarrassing one for the retailer to handle. Some may even exceed this figure but it will be pretty safe for the average retailer to count on that percentage of increased cost in his fall buying. If he escapes, he is just that much better off. A few short weeks will tell the tale.

A Busy Repair Department

The repairing department of a live shoe house is an important branch of the business. Among the enterprising emporiums of the West, who have recently installed a complete shoe repairing outfit is the Yale Shoe Store of Winnipeg, located at 328 Hargrave Street,

of which Mr. Affleck is proprietor. The equipment is directly opposite a large plate glass window, and crowds stand and watch the workmen daily. It has proved a decidedly paying investment and the operations are a source of much interest to the uninitiated. W. R. Goodey is in charge of the department, and his assistant is P. Bloor. Both are seen in the picture, and are experienced workmen. The Yale Shoe Store believes that a competent repair branch is one of the most remunerative portions of a retail store, when

properly directed, and the business done since the Champion No. 20, outfit was installed, has been growing each week to very gratifying proportions.

He Is One of "The Regulars"

This is John Huxley as he appeared a number of years ago when starting out on his spring trip for the W. B. Hamilton Shoe Co., of Toronto. Times may change and conditions alter, but John Huxley never. He is sometimes known as the "Professor" by reason of his namesake, Thomas Henry Huxley, the celebrated English biologist, who was a lecturer for many years at Cambridge University, and President of the Royal Society. He was the author of "An Introduction of the Classification of Animals," etc., but, while not so world famous, John Huxley is an authority on the "classification of shoes." He knows as much regarding them as the learned Englishman did of species. John was in the retail boot business in Brampton before he took a job on the road. He was first with the John Ritchie Co., of Quebec, and twenty years ago came to Toronto. For nineteen years he has paid almost weekly visits to the Niagara Peninsula, going as far west as Windsor and other points. Large of limb and firm of muscle, he weighs about 240 pounds avoirdupois, and is still growing. He is a genial, whole souled salesman with no family cares, for he is a confirmed bachelor. He likes the shoe game and makes firm friends with all upon whom he calls in the interest of the Toronto house.

The Jobber and The Retailer

"Yes," remarked a Montreal jobber, "that was a timely and educative article which I read with much interest in a recent edition of the SHOE AND LEATHER JOURNAL, but you overlooked two or three essential points. If it was not for the jobber not more than half the retailers who are in business to-day and making money would be engaged in the trade. In the first place they would have to buy goods in much larger quantities than they do, carry three times the stock and purchase months ahead. This is all done for them by the jobber at the present day. Besides the retailer would have to command many times the amount of ready cash that he does nowadays to go into or carry on business. Here is a case in point. We are shipping our hockey boots. Here is one eastern man who has ordered two pairs of fives, one of six, three of seven, and five of eights. If he runs short he will telephone or write us, and we can send at once further orders. The result is that, when spring comes he will have no hockey shoes on his hands to carry over for another season, no money locked up, no anxiety and no worry. He gets along on a few sizes whereas if he has to purchase from the manufacturer direct he might not be able to get what he required, he would have to 'speculate' on all sizes, run all manner of risks and wait for weeks perhaps for his supply. The same applies to rubber shoes, felt boots, oil tans, moccasins, leggings and other lines, the sale of which depends on the severity of the weather, the fall of snow, the early or late formation of ice and many other climatic conditions. The jobber saves him all this worry, annoyance and expense, and yet from some of these men whom we accommodate, we get little or no thanks."

More Timely Comment On Retail Shoe Ads.

Showing the Value of Good Position, Proper Cuts and Type Styles and Arrangement—Specific Examples Discussed—
Good Display a Matter of Proper Contrast—All Black Type Not Good Display

The John Murphy Co.'s ad. is an excellent example of up-to-date shoe advertising. In the first place the ad. is very attractive, and catches the eye at once. That is the first step gained in the assault upon the prospective purchaser's favor—the entering wedge. Then it is placed in a very favorable position. No shoe store outside of the very largest could profitably use "left-hand corner, top-of-back-page" space in a city daily, but if many town and village shoe men would pay a little more to get favorable position in their own town papers where rates are low, the money would be well spent.

Another thing that gives distinctiveness to this ad. is the excellent line cut used. Why more shoe men do not use *passably decent* cuts in their efforts to catch the public favor is a real mystery. Possibly lack of acquaintance with engraving processes explains it. In most cases such a line cut would cost the manufacturer about \$4.50, including the cost of the drawing. From this cut any amount of electros can be pulled off at anywhere from 25c to 50c each, the price depending upon

The John Murphy Company Limited

"Queen Quality" Shoes

DISTINCTIVE IN STYLE—
COMFORTABLE IN WEAR

The Spring models of "Queen Quality" Shoes we have just received include the most perfect specimens of modern shoe-making. They have a distinctiveness all their own, and for comfort are unequalled. The specially pliable sole which gives with every movement of the foot makes "Queen Quality" the most restful shoe made. Moderate prices ranging from \$4 to \$6

(Sole Agents in Montreal)

A 5-inch double column Montreal ad., a model of good shoe publicity.

the engraver doing the work and the quantity taken. Many manufacturers will send out these electros free of charge to any retailer interested enough to ask for them. Even if they have to be paid for, a dozen of them representing new and stylish shoes, would be well worth having, and would pay for themselves many times over.

Coming back again to the ad. under discussion, it will be noticed that the style and arrangement of type used in both heading and body matter carries out still further the effect of daintiness in the whole ad. Type can be most effectively employed for this purpose, but in the average town or country careful newspaper typographical display is almost a lost art. Unless the shoe man knows the proper kind of type to use to create the impression he is after, and insists upon compositors following it out as closely as possible, with the resources at their disposal, he will get but an indifferent display at best. And for the same reason given in speaking of the cost of cuts, in all such cases it will pay the shoe man to buy for his own use *only* a special font of type and a distinctive border or two. These would also serve as an identification of his ad., no matter where placed.

Note the unusual position of the firm name, and the date

at the bottom of the ad. Here are two more unusual features—small in themselves, but each adding to that distinctive appearance. The copy is very good, except that possibly too many superlatives are used. It does not look well to be too dogmatic or positive in statements made. But good selling points are introduced and a range of prices is given.

A Special \$3.50 Boot

When Ingrahams intimate a special boot at a special price the public are never disappointed—the boots are always there. Here are three decidedly excellent values:

Sizes—There is no foot we cannot fit.	Patent Chrome Blucher Bal, dull top, McGill last	\$3 50
	Tan Calf Blucher Bal, McGill last	\$3.50
	Velour Calf Dull Top Blucher Bal, McGill last	\$3.50

A. D. INGRAHAM

Agent for the Slater Shoe for Men and Women—318-320 Charlotte Street

A 7-inch 3-column Sydney, C.B., ad. Good display in large space.

A. D. Ingraham's ad. is a very good publicity effort. Large space is used, and the heading, as well as the copy, is very definite. The latter is to the point, and mentions three different lines on sale, giving prices. If the body type had been a little smaller, more selling points could have been introduced, with good results. The heavy black lines above and below copy are better not used, as they give a sort of mourning effect to the ad. as a whole. A good cut could also be introduced into this ad. with benefit and an impressive effect.

When You Think Shoes—Think Campbell's.

Ladies' Gun Metal Calf

**BUTTONED
BOOTS**

\$3.00

A PAIR

OUR SPECIAL
DAINTY OUGNESS BRAND

H. S. CAMPBELL
SHOEMAN

A 5-inch double-column Fredericton, N.B., ad., which a good line cut would improve.

making it appear more compact. This copy would also be better if all but the headline were set in light type. More selling points could then be given, and with better effect. The cut does not look well, as it is a fine half-tone of much too good a quality for rapid newspaper work. A good line cut would show more detail, and look far neater.

H. S. Campbell seldom uses a border in his ads., and he always uses that slogan at the top, "When you think shoes think Campbell's." As the public have become thoroughly used to that line by this time, it would be a mistake to take it out. It serves as an identification mark. But a light border, about 3-point, would greatly improve this ad., by

Ins and Outs of the Shoe Trade During February

Interesting Notes Gathered from a Variety of Sources and Put in Short Shape for the Perusal of Subscribers—
Personal Movements and Other Events That Help to Make Up the Round of Daily Life

J. H. Hill, shoe merchant, of Ottawa, has sold out his business to Charles Emery.

The stock of A. J. Boyer, shoe dealer, of Montreal, has been sold.

Spaner Bros., of Edmonton, dealers in boots and shoes, have gone out of business.

Jos. Garrett has bought out J. M. Barrett's shoe business in Wapella, Sask.

C. Weigand, of Wallaceburg, has started a boot and shoe repairing business.

Sofio and Sgroi, shoe dealers, Montreal, have dissolved partnership.

E. Rizzo, shoe retailer, Ottawa, suffered a small loss by fire last week.

E. E. Code, manager of the Ottawa branch of the Kaufman Rubber Co., spent a few days in Toronto last week on business.

Fred R. Foley, shoe retailer, of Bowmanville, was in Toronto last week, calling upon the trade.

Baker Bros., of Hastings, Ontario, have bought the stock of J. J. English in that town, which was recently damaged by fire.

Harry D. McKellar, of Berlin, was in Toronto last week for several days, with a full line of felt samples.

R. A. Briscoe, of Galt, has purchased the shoe stock of R. T. Aitken, of that town, who recently made an assignment.

L. R. Kent, of the Kent Shoe Co., Truro, N.S., was in Boston for a few days recently.

R. French, of Lucknow, Ont., has disposed of his shoe business to J. J. Reid, who has taken possession.

Hugh White, of Garside and White, Toronto, spent a few days in Ottawa last week on business.

Louis Plante, dealer in boots and shoes, and men's furnishings, Montreal, passed away last week.

David Vine, of the Barrie Tanning Co., Barrie, was in Montreal last week on business.

John Abernethy, of D. D. Hawthorne and Co., Toronto, spent several days in Kingston last week on business.

E. E. Donovan, vice-president of the Cook-Fitzgerald Co., London, was in Toronto this week on business.

Stubbs Bros., formerly of Collingwood, Ont., have opened a retail shoe store at 896 Bloor Street West, Toronto.

C. H. Dimock, of Windsor, N.S., shoemaker, who has been ill, is able to be around again.

In a recent fire in New Glasgow, N.S., the shoe store of D. S. Fraser was destroyed.

A small blaze occurred in the shoe shop of P. Dugal, of Walkerville, which did some damage to the goods in the window.

Duncan McLean, of Victoria, B.C., who was formerly a shoe salesman, died suddenly from heart failure in that city.

S. Miller, 337 Elgin Street, Ottawa, has opened a new shoe shop at 586 Bank Street in that city.

Shore & Paff are now located in their new premises in the Oddfellows' Block, Downie Street, Stratford.

Max Clement, of Max Clement & Sons,

tanners, Quebec, was a visitor to Toronto last week on business.

J. D. McCrimmon, shoe retailer, of Stratford, Ont., was in Toronto this week calling upon the trade.

C. J. Miller, tanner, of Orillia, and Geo. McQuay, of the McQuay Tanning Company, Owen Sound, were in Toronto this week calling on the trade.

C. E. Stevens has established a complete repair shop at 599 Richmond Street, London. Mr. Stevens has had over twenty years' experience in the shoemaking trade.

Starks, Limited, who operate stores in Vancouver and Victoria, have announced their intention of establishing a branch shortly in New Westminster.

The Union Shoe Co., of Toronto, will shortly open up business in the St. Pierre Block, North Bay, recently occupied by the Thomas Company.

George Chambers, head salesman of the Regal Shoe Store, Toronto, who has been spending a few weeks in the Porcupine district, has returned.

P. J. Sarginson, who intends locating in Western Canada, has sold his boot and shoe business in Campbellford, Ont., to B. I. Gibson, of Hastings, who has taken possession.

Henry Proctor's shoe repairing shop at the corner of Bathurst and Nassau Streets, Toronto, was partially destroyed by fire recently. The flames did about \$400 damage.

T. W. Beamish, of Hamilton, has leased the Brooke Block in Georgetown, Ont., and opened up an attractive shoe store. He handles trunks, suit cases and various other lines in leather.

George Hodgkinson, 759 Queen Street East, Toronto, recently installed a complete Goodyear repair outfit and stitcher. His sign now reads the "Rapid Shoe Repair Co."

William Kew, late foreman for the T. Sisman Shoe Company, of Aurora, and Henry Brown, late foreman of the turn department of the Nursery Shoe Co., St. Thomas, have resigned.

B. Axler, formerly of Bracebridge, Ont., has branched out in the shoe business at 1206 Bloor Street West, Toronto. His brother, Mier Axler, has opened a boot shop at 258 Royce Avenue, Toronto.

Fire broke out a few days ago in the Carlton Shoe Repair Company, 237 Carlton Street, Toronto, and before the flames were extinguished, about \$500 damage was done. The loss is covered by insurance.

H. McCausland, shoemaker, of Macleod, Alta., has moved into a new stand. Mr. McCausland writes that he started off the new year with only one resolution, which he is keeping, and that is "to turn out all work when promised."

Charles T. Cahill, advertising manager of the United Shoe Machinery Co., was doing militia duty at Lawrence during the strike among mill operatives. Mr. Cahill has seen considerable service and is considered very efficient in military matters.

G. Knechtel, of the Williams Shoe Co., Limited, Brampton, Ont., is making a special trip with the Williams Shoes through northern Saskatchewan and Alberta, for

W. G. Downing & Co., Brandon, Western distributors.

Fred Kibler, of Listowel, who bought out the shoe business of A. Weseloh & Co., Berlin, took possession Feb. 1st. Weseloh & Co. will devote their whole time to the dry goods and clothing business which they opened up nearly three years ago.

The stock of M. R. S. Stewart, the well-known St. James Street, Montreal, shoe retailer, was somewhat damaged on Feb. 13th in a fire which originated in the cellar of the building in which his store is situated.

L. W. Johnston, who was in the shoe business in Galt until three years ago, has opened out again in that town. The old G.N.W. Telegraph office has been remodeled. The interior of the store is attractive.

The stock of Trudeau and Frere, shoe dealers, 220 Centre Street, Montreal, who recently made an assignment, has been sold. The assets consisted of: Stock, \$1,437; fixtures and furniture, \$485, and book debts, \$151.

Grey Hodges, who has conducted a successful shoe trade on King Street, Chatham, has decided to dispose of his business. He will locate in the West, where he has important interests. Mr. Hodges, who is conducting a clearing sale, expects to leave Chatham about April 1st next.

Hon. George A. Cox, whose half century of active connection with the Canada Life Insurance Co. was recently signalized in Toronto by a dinner and presentation to the veteran capitalist, began his wonderful career by cobbling shoes in a little shoemaking shop in the village of Colborne, Ont., where he was born. He soon after drifted into telegraphy and life insurance.

David Mendelsohn has opened a new shoe store at 423 St. Lawrence Street, Montreal. He was formerly with the Slater Shoe Company, and later with the Regina Shoe Company, Montreal, covering Western Ontario. He has a thorough knowledge of the footwear business. He intends opening up on St. Catherine St. in the near future, and will carry a representative and select stock.

A. C. Gardner, who for the past fifteen years has owned and operated the Twentieth Century Shoe Repair Shop at 496 Main Street, Winnipeg, recently disposed of the enterprise to Peter Johnson. Mr. Gardner is now devoting himself exclusively to his retail shoe business at 761 Notre Dame Avenue, where he owns a building, and expects to work up a fine trade in that district of the prairie capital.

In a very practical manner comes the information from Vancouver, B.C., that Robert Rogers, of the Philip Jacobi Co., Toronto, is enjoying good business and health, says an exchange. "Bob," as he has been known to the traveling fraternity for many years, is perhaps the oldest drummer in point of service with the same firm on the road to-day. Many of the youngsters now out have him to thank for wise counsel given to a timid starter.

Canada's original Louie, the Shoeman, Montreal, was in Boston last week, says the Shoe Retailer. The Canadian Louie is

Louis Edelstein, a well-known retail merchant of our Canadian city, who has been in Boston on business. He says that the weather is great up in Canada at the present time, and that business prospects are steadily improving. Mr. Edelstein handles the Burt & Packard, and Walker & Whitman shoes for his American lines, and does not carry women's footwear at all.

J. S. Ashworth, of Toronto, Canadian manager for Sir H. W. Trickett, of Waterfoot, England, leaves this week on a business trip to Winnipeg and other points West. He will, after visiting certain important centres, take a trip to the Old Country, where he goes on an interesting mission. Since the Canadian headquarters were opened in Toronto the sale of the famous Trickett's slippers has greatly increased in all parts of the Dominion.

McGoughan's boot store, situated on St. Lawrence Boulevard, Montreal, was the scene of a hot fire recently, and although fireman managed to keep the blaze from spreading, the store where the fire originated and two stories above were completely gutted. The loss is placed in the neighborhood of \$20,000. Mrs. Sperber, who lived upstairs, had a narrow escape, being overcome by smoke. She was rescued by firemen.

Fred Renworth, for many years a traveling salesman for the Ames-Holden Shoe Company, has arrived in Prince Rupert, B.C., to establish permanent headquarters for his company. Owing to the large business expected from Rupert, Skeena River and Buckley Valley points during the year, and in order to be in close touch with the trade, the Ames-Holden Company are following the lead of other big wholesalers by making Rupert the headquarters of operations for northern British Columbia.

During the first two weeks of February trade with many of the shoe dealers in the country and even in the cities, was rather quiet, as the weather was too cold for visitors from the rural sections to come in, and citizens did not venture out any more than they were compelled to do. With milder days business is resuming its normal condition. Wholesalers report that sorting orders have been a little quiet for the past fortnight. They are busy, however, shipping out spring goods. Many retailers have all their available reserve space taken up with spring lines, and are ready for the season. Shoe factories are busy on fall and winter samples, and will have them ready in a few days. Travelers will be out on the road with fall lines before the end of March and some of them are preparing to start at the beginning of the month.

Mr. Landon from London

H. E. Landon hails from the city of London. He is a young man, but has had many years' experience in the shoe business, nearly twenty-two in all, and yet to look at his countenance, you would say that he is not much older than twenty-two. His first job on leaving school was with the London Shoe Company, and he has stayed with them ever since. In 1894 he was taken out of the warehouse and placed on the road. He has represented the firm continuously for eighteen years

throughout Western Ontario. He resides in London, and is a live exponent, first, last and always, being one of the top-notch salesmen of the company. He is thoroughly familiar with the shoe business, and makes friends of all retailers upon whom he calls. There are few better liked or more respected members in the traveling ranks to-day than Mr. Landon.

The Wearing of Shoes

Do not wear a pair of shoes continuously. From the point of view of economy it pays to have two pairs of shoes and to wear them alternately. Continuous wear of a shoe takes the life out of the leather. The heat of the foot also causes perspiration, which, if it does not have time to dry, rots the lining. When the lining is gone the perspiration comes in contact with the leather, and begins to affect this in the same way it did the lining.

Plumage on Her Shoes

The lady of fashion will shun plumage on her hat this year, but will be allowed to display a radiance of feathers on her shoes, according to advices from Paris. The very latest note of elegance in footwear is declared to be shoes covered with bird's plumage of the most elegant hues, gummed on to the leather. Buckles will be concealed by little pivots of aigrettes or feathers. The price of the new shoes will, of course, be enormous.

Mr. Thurston was Cautious

Another bogus cheque episode has come to light in Guelph, in which W. J. Thurston, shoe dealer, is again concerned. This time, however, he is not the victim, but the Bank of Commerce. About two weeks ago a young man, giving his name as Clark, a stranger in the city, walked into Mr. Thurston's store and selected a pair of boots, in payment for which he tendered a cheque for \$20, drawn on the Port Arthur branch of the bank. Warned by his recent experience, Mr. Thurston refused to accept it, and told the young man to go to the bank with it. As it was after 3 o'clock, and the bank was presumably closed for business, Mr. Thurston telephoned up, and when Clark made his appearance, he was admitted, and the cheque cashed readily, as Clark said he worked in a Port Arthur bank. The cheque was sent to the Port Arthur branch, and has been returned here stamped "No funds."

Too Much Hockey Talk

A well known traveler remarked recently: "I have occasion to call on many retailers each week, and now that the hockey season is on, I notice many things than might otherwise escape my attention. There appears to be a general lack of business atmosphere in many of the small towns and villages, and even in the cities. 'Business is business,' and, to my mind, should be done in a dignified, courteous manner at all times. Clerks who are forever discussing the chances of the success of the hockey team in their town, the main features of the last game, the prospects of winning the district championship, etc., especially when customers are in the store, should be read a severe lecture or else released and allowed to devote their time and attention exclusively to the great winter game. Only the other day a friend told me he entered a certain shop in a Western Ontario burgh, which seems to be hockey mad, and heard three or four salesmen jangling over the respective merits of two local players. He had to stand around fully five

minutes before anyone offered to serve him, and it was only as he turned to leave that a young man rushed up and plausibly excused the inattention, remarking that he had not noticed his entrance. Such experiences are altogether too common."

Progressive Vancouver Shoeman

A former Toronto man who has "made good" in the West, is W. H. Leckie, son of John Leckie, a widely-known resident of the Queen City. In the year 1896 W. H. Leckie went out to the Pacific Coast and located in Vancouver, joining his brother in the management of the branch of the J. Leckie Co. At that time only nets, twines and general fishing supplies were handled. The trade was confined to a few months in the year, and it was decided to broaden out. The company went into the handling of shoes, and took the agency for the J. D. King Co., of Toronto. A few years later they embarked in the shoe manufacturing business themselves. Fine progress has been made, and their factory in Vancouver now turns out over three hundred pairs daily. The company also represent several Eastern Canada shoe houses on the Coast, and their sales reach nearly a million dollars every year. W. H. Leckie is one of the owners and managers of the house. Besides his identification with the firm which he has done so much to bring to the front, he is vice-president of the British Columbia Refining Co., a director of the Burrard Land Improvement Co., and interested in many other ventures. He is an ardent devotee of boating and golf, and an enthusiastic believer in the great future of his adopted province.

An Enterprising Westerner

W. A. Moyer, of Winnipeg, returned recently from a trip to the trade centres in the east. Mr. Moyer visited Chicago, New York, Boston, Montreal, Toronto and other principal trade points. Mr. Moyer feels confident that the Moyer Shoe Store will show the most comprehensive line of fine footwear for men, women and children to be found anywhere in Winnipeg or the West this spring. The Moyer Shoe Store will be enlarged, the contract has been let, and the work has commenced. Mr. Moyer was fortunate in securing the lease on the store adjoining his present one, and the two stores will be ready in a very short time. When these alterations are completed the Moyer Shoe Store will be one of the largest in Western Canada.

Capable Clerks in the Shoe Store

A manager of the shoe department of a Western Canada departmental store writes the SHOE AND LEATHER JOURNAL: "Where are the future clerks to come from—the good ones, I mean? To-day we can get all sorts of second and third rate men, but first class ones with real ability and of good character are like hen's teeth—very scarce. This brings me to the question, Whose fault is it? Should not the junior or understudies receive more attention and better training at the hands of the bosses? Not enough interest is taken in them, and very often a bright, intelligent lad is allowed to go because he has asked for a dollar or two more wages, or because he is kept hustling parcels, and sweeping out the

premises for months and months, before being allowed to take a position on the floor. He grows tired of waiting for promotion, and leaves at the first opportunity that presents itself. If a boy or youth is of the right sort give him a chance and speak a word of encouragement to him now and again. The training of competent and satisfactory shoe store help is a problem to which I would like to see more attention directed."

Thirty Years in the Business

It was away back in March, 1882, that Chas. H. Firth began his connection with the shoe trade. His first position was an invoice clerk with C. S. Hyman & Co., of London, who were then in the boot and shoe business. He spent three years pouring over invoices, and was transferred to the shipping department, where he was for two years; then he went on the road for a year. About 1888 the business changed hands, and Mr. Firth linked up with the firm of Sterling Bros of London. He has been with them continuously ever since. He travels between London, Sarnia and Windsor. As a reward of faithful service, seven years ago he was admitted as a partner of the house, but is still on the road staff. He likes traveling, and no wonder, for he has a wide connection, and as a salesman has few superiors.

Veteran Shoeman Passes Away

One of the original pioneers of York County passed away on February 10th in the person of David Stewart. He died at his daughter's residence, in Owen Sound. The late Mr. Stewart was in the shoe business for the remarkably long period of over sixty years, and had attained the ripe age of 97 years. He had resided in Owen Sound three years, coming from Woodbridge, where he was in the shoe trade for forty-one years. He was born in County Monaghan, Ireland, and when very young came to Canada. Locating in Toronto, he learned shoe making, and was afterwards in business in St. Andrews and Weston, where he was a large employer of labor. Mr. Stewart's remains were interred in Pine Ridge Cemetery in the family plot, beside those of his wife, who predeceased him twelve years. The funeral service, which was largely attended, was conducted in Woodbridge Methodist Church. Eight sons and six daughters survive.

Higher Prices For Coarse Shoes

R. D. Taylor of the Robt. Taylor Co., Halifax, says that the only ripple in the trade among shoe men since the first of the year was caused by the enforcement of the advance in prices of heavy and coarse lines of shoes. New prices are five per cent. more than the old ones in this special class of shoe, and the change is due to the recent advances in heavy leather. Mr. Taylor says that while the trade may demur about accepting the new conditions, they must come to it as there is nothing else the manufacturer can do. The advance in heavy leather is about ten per cent., so in proportion the advance in coarse shoes does not seem too much. Finest lines in which kid are used have not been affected by recent advances.

A Progressive St. Thomas Man

A recent industrial edition of the St. Thomas Journal contains an excellent cut of the front of Charles E. Raven's shoe

store, together with the following appreciative reference: "In St. Thomas there are business men who are eminently successful through possessing the best trade, and among these is Mr. Chas. E. Raven, boot and shoe merchant, who is located at 655 Talbot Street. We feel confident in saying that there is not to be found a better stocked shoe store in Western Ontario than that under the management of Mr. Raven. He is thoroughly up-to-the-minute in all his dealings and his modern, splendidly stocked store is testimony of the high class nature of his trade. A leading feature of the business is his large and constantly increasing trade in trunks, bags and suit cases."

Montreal Shoemen Elect Officers

On February 1st the annual election of officers of the Montreal Branch, Boot and Shoe Merchants' Section of the Retail Merchants' Association of Canada, Inc., took place at headquarters, 80 St. Denis Street. Owing to it being the night before the municipal elections, the attendance was rather slim, though decidedly enthusiastic over the prospects for an excellent year.

When the election came up, J. G. Watson was appointed chairman pro tem, which office he filled with his usual pleasantries. J. A. Beaudry, provincial secretary of the Quebec section, acted as secretary pro tem, and the Montreal editor of the SHOE AND LEATHER JOURNAL as scrutineer.

The following officers were elected: President, J. E. Deslauriers; first vice-president, D. Demers; second vice-president, Mr. Boulerice; treasurer, Mr. Marrier; secretary, J. A. Alain; auditor, J. G. Watson. These officers were then installed into office and exhorted by Mr. Watson to double their membership during the year. The present membership is 125. There are about 322 shoe stores in Montreal, hence the figure aimed at, viz., 250, should be capable of accomplishment with concerted effort.

Before the meeting adjourned the retiring president, Thomas Dussault, and his fellow officers, were cordially thanked for their unstinted efforts on behalf of the branch during the past year. The incoming executive was also empowered to investigate the question of an excursion next summer.

The New Half-High

One of the new showings in fall styles by a number of Canadian firms is the new Half-High or Semi-High, as it is called.

It is a medium between a pump and oxford and a high-cut boot of sixteen or eighteen buttons. It has seven or eight buttons, or if of lace stock, possesses about the same number of eyelets. It comes just above the ankle, and carries a moderately high heel and arch. With a medium short skirt it has the effect of a full button

lace shoe, and at the same time allows the wearer the ankle liberty of an oxford. A firm in Boston claims the distinction of having originated the pattern. The Semi-High may become popular among women wearers of distinctive footwear who welcome a decided novelty.

DOWN IN BUSY QUEBEC

What Is Going On in the Shoe Line in the Ancient Capital—Recent Activities Among Manufacturers

J. H. Hamilton, of J. B. Blouin, Limited, Quebec, was in Montreal last week.

Art. Rochette, Les. Saules, will shortly start manufacturing heels of all kinds.

M. H. Bonner, of the Bonner Leather Co., Montreal, was in town this week on a business trip.

O. Goulet, shoe manufacturer, was in nomination for seat No. 2 in Jacques Cartier Ward.

M. L. Routier, shoe manufacturer, was also nominated for seat No. 2 in St. Valier Ward.

Lucien Borne, Quebec, was away for a few days' rest at his camp in the Lake St. John district in February.

The shoe retailers report business rather quiet during the past few weeks owing to the very cold weather.

M. Alf. Marois, J. A. Scott, Elie Jobin, Art. Richard, W. Richard, F. Blouin, Geo. Bilodeau and P. Ouellet recently returned from an enjoyable hunting trip.

Marier & Trudel have changed their lasts, style and finishing of their shoes. Orders are coming in every day, and present capacity is taxed to the limit.

Alf. Rainville, of Levis, manufacturer of moccasins, will build an extension two stories high. It will be 50 feet long. He has put in four new machines.

A. E. Cloutier, of Montreal, will during the coming season be the representative of the Quaker Shoe Company, of Levis, for the province of Quebec.

J. B. Blouin, Limited, of Levis, will have several new samples to show the jobbing trade. The company have put in a new perforating machine. Their office space is also being extended.

Quebec firms are very busy at present. Among others, Duchaine & Perkins and L. Gauthier are working night shifts in the cutting room to catch up with their orders.

L. Emond, foreman of the William A. Marsh Company stock room, was elected by acclamation for a second term as alderman for the second seat in St. Sauveur Ward.

Tourigny & Marois are turning out two hundred cases a week, and have orders enough for three hundred cases. Rumor states that this firm will soon build to increase their capacity.

Among the visitors in the city last week were J. A. Walker, of Toronto; L. S. Odell, of Fisk, Limited, Toronto; L. H. Dupre, of the Independent Box Toe Company, Montreal, and H. C. Parker, of the Dominion Supply Co., Montreal.

Quebec manufacturers tendered Luc Routier, for many years president of the association, a complimentary dinner this week, the twenty-fifth anniversary of his marriage. "Luc" is a good fellow, and very highly thought of by his fellow workers in Quebec.

THE U.S.M. INVESTIGATION CLOSES

Several Shoe Manufacturers Heard at the Concluding Sitzings of the Commission—Verdict will be Rendered Soon

The investigation which has been proceeding for some weeks into the United Shoe Machinery Company case, has been concluded by the Judicial Commission. The board will take the evidence into consideration and it is expected that a decision will be handed out at an early date regarding the "alleged combine."

The Judicial Commission has been presided over by Mr. Justice Laurendeau. W. J. White, K.C., looked after the interests of the U. S. M. Co., and J. C. Walsh for the manufacturers and consumers.

The commission, which was appointed by the Federal Government, at the request of several shoe manufacturers in Quebec, held numerous sittings in Montreal, Quebec, and Levis.

Mr. Knowlton in the Box

At the final session in Montreal F. W. Knowlton, Canadian manager of the U. S. M. Co., spent two hours on the witness stand.

On his first appearance before the board, Mr. Knowlton had been requested to produce a list of all the patents now held by the company. The number of patents was shown to be 35. Mr. Knowlton was asked by Mr. Falconer to describe how and where each of the patents was used in the machinery supplied by the company. The witness did not have time to go very deeply into the technical explanations which were required in the matter, as objection was made by Mr. Brown. Mr. Falconer claimed that he wanted to show that the company had patents without manufacturing any of the apparatus covered by such patents, and that these patents were held only to prevent the manufacture of more modern machinery.

Commissioner White remarked that if such was the case, it was rather for the consideration of the Exchequer, as the board was not appointed to look after the observance of the patent law. The Exchequer Court or the Department of Agriculture only had authority to intervene. On the other hand, it was maintained by Judge Laurendeau, that the fact of detaining patents in order to prevent the manufacture of newer and more modern machinery in this special case was a problem now before the board.

Mr. Falconer stated that if he could not have the information wanted of Mr. Knowlton, the board would have to appoint an expert, who, with the list, would inspect the machines and report on the use and the abuse of patents.

The Hearing in Quebec

At the conclusion of the sessions in Quebec, Judge Laurendeau and Messrs. White and Walsh were on the Bench, while Hon. T. Chase Casgrain appeared for the United Shoe Machinery Company. Messrs. Falconer and Beaubien were in attendance for the complainants.

A large number of witnesses were heard during the day and while all acknowledged that the United Shoe Machinery Company's machines gave satisfaction yet there was an objection to the "tying" clauses and lease system.

J. A. Duchaine stated that with these two clauses eliminated the machinery would be satisfactory, though he thought that the

price of wire charged was too high. A. E. Marois, of the firm of Tourigny and Marois, thought that it would be more satisfactory if the "tying" clauses were abolished.

H. V. Gale stated that he did not consider the royalty too high, and he did not think that the price of production had been increased.

John Ritchie, who was then recalled, stated that he had nothing to add to his former evidence.

William A. Marsh, of the Marsh Company, Limited, gave evidence. In the course of his evidence he stated that he thought that the United Shoe Machinery Company could still be in business and doing well even if they cut out the objectionable clauses in their contracts. He thought the bigger companies paralyzed the little ones because of their capital. He agreed that there were numerous calls for repairs to machines, and that these parts could not be got from any one but the company. Before the United Shoe Machinery Company took charge there was no staff of experts to direct repairs to the machines. He had never been forced to take any machine he did not want, nor was he refused any machine he wanted.

Against Tying Clauses

Mr. Trudel, the next witness, declared himself against the tying clause and the lease system. He had been forced to take out a Canadian machine, which he had paid for, but he turned it over to the United

Shoe Machinery Company and was allowed certain privileges.

Mr. Duchaine, recalled, said that the Boot and Shoe Manufacturers' Association was composed of some 19 or 21 members. At the meeting at which the debated resolution had been passed there were ten members present, and the motion had been passed unanimously.

Mr. Gale, recalled, brought up the list of machines used in his factory. He preferred the lease system at the time. On general principles he believed in buying machines outright, but under the circumstances that the firm had been compelled to increase its factory and equipment a number of times he preferred leasing.

Had Used Canadian Machinery

J. E. Sampson, of the Rock Shoe Manufacturing Company, said he had two Canadian machines when he started. There was a bit of argument over the suits taken in regard to infringement of patents, during which Mr. Casgrain asked: "What was the trust?" the remark having been used during the debate. He was satisfied with the Caron machines and thought that they were more economical.

O. Goulet stated that he used the United Shoe Company's machinery exclusively. He was satisfied with things. Cross-examined by Mr. Beaubien, he said he had used the Caron machines for two years, whereupon he was asked if he had not received a bonus of \$1,550 for five years when he abandoned them.

With the Shoe Makers and Tanners

What Is Happening in the Trade—Factories Which Will Make Some Extensions—Changes in the Position of Foremen—New Tannery will be Erected in Aurora—A Survey of the Active Manufacturing Field

C. A. Marlatt, of Marlatt & Armstrong Co., Oakville, Ont., was in Boston and Salem last week on business.

J. E. Pare, of Dufresne & Locke, Maisonneuve, Quebec, was in Toronto last week calling upon the trade.

Peter A. Doig, of Kirvan-Doig, Limited, Montreal, was in Toronto last week on business.

H. E. Burnham, late of Buffalo, has been appointed foreman in the factory of the T. Sisman Shoe Co., of Aurora, and has entered upon his duties.

Charles Cruickshanks, an employe of Hyman's tannery, London, while at work was caught in the shafting and severely injured before he was released. He was taken to St. Joseph's Hospital in that city.

B. L. Kennedy, late of the Berlin Shoe Manufacturing Co., has taken charge of the pattern designing, cutting and stitching room in the Kimmel Felt factory in Berlin.

At the annual meeting of the New Hamburg Felt Boot Company, New Hamburg, it was decided to add another large addition to their three-storey brick structure.

George Fortier, of the Scout Shoe Co., Montreal, has been in Boston this week. Mr. Fortier's factory is doing a very successful business, and is equipped almost entirely with machines made in England and Germany.

W. E. Wilson, who has been appointed superintendent of the Nursery Shoe factory, St. Thomas, has instituted a number of changes, and carried out many improvements. The factory will shortly add some

new machines, and is considering the erection of another storey in the spring.

It is understood that Toronto men are seeking to secure control of the Logan Tanning Company, Pictou, N.S. S. Morley Wickett, of Wickett & Craig, Toronto, was in Pictou recently, and it is learned, says the Pictou Advocate, that he is one of the number anxious to obtain control of the Logan Tanning Company.

The Berlin Trunk and Bag Co., Limited, has been incorporated with a share capital of \$100,000, to manufacture, sell and deal in all kinds of trunks, suit cases, hand bags, purses and leather goods. The incorporators are I. Holman, J. Stoner, H. D. Huber, A. L. Breithaupt and A. W. Augustine, all of Berlin.

C. S. Sutherland, manager of the Amherst Boot and Shoe Co., Amherst, N.S., left recently for Regina, where the company is establishing a subsidiary company, to be known as the Amherst Central Shoe Co., Limited, to distribute their goods in the West. The company's business has increased over \$200,000 in the West during the past five years.

W. J. Baggs, of the Anglo-Canadian Leather Co., Toronto, and S. G. Amero, of the United Shoe Machinery Co., Toronto, have been elected members of the Berlin Club, of Berlin, and the Commercial Travelers' Club, of London. The Berlin Club is erecting a fine building. Among its leading supporters are the leather and felt shoe manufacturers and tanners of Berlin.

Andrew Newton, the founder of the Newton Tanning Company at Elgin Mills,

Ont., died recently in his 75th year. Of late years Mr. Newton had lived retired. He leaves a wife and son. In politics Mr. Newton was a Liberal, and in religion a Presbyterian. His remains were interred in Mount Pleasant Cemetery, Toronto.

Wholesale Shoe Findings Association which was formed some time ago in Toronto to correct certain grievances and to bring about a better understanding among the members of the trade, is making good progress. President W. G. Parsons reports that a general meeting will be held at an early date.

The annual ball and social reunion of the employes of the Minister, Myles Shoe Co., Toronto, was held in the Forum Hall, on February 9th, and was a decided success. About seventy-five couples were present. All the members of the firm were on hand, and among the invited guests were Alfred Haire, S. G. Amero, W. Allan and E. D. Pretty, of the United Shoe Machinery Co., Toronto. The event was most enjoyable and splendidly managed throughout.

The stamp of the Boot and Shoe Workers' Union is growing in marked popularity among Canadian shoe factories. There are several prominent Canadian and American manufacturers now considering the introduction of the stamp into their factories. Recent American firms taking on the stamp include: D. A. Donovan's Sons, Lynn, who have established a new factory for making misses' and children's Good-year welts exclusively, and the Beals & Torrey Shoe Co., of Watertown, Wisconsin.

A despatch from Fredericton, N.B., says: John D. Palmer, of the Hartt Boot and Shoe Company, was on a trip to Ottawa, Montreal and other Upper Canadian cities. The shoe factory is enjoying the most prosperous season in its history, the output, number of employes and pay-roll being the largest ever known. Two carload lots of Hartt shoes have been shipped to the Canadian West during the present run, another car is now loading, and there will probably be several more carload shipments to the West before the end of the run.

C. Knoll, of the Humberstone Shoe Co., Humberstone, Ont., was in Toronto last week on business. The factory is very busy, and is turning out three hundred pairs of sandals every day. Additional machinery, including a Fortuna skiving machine, was recently installed, and the company, which is composed of C. and P. G. Knoll and C. A. Neff, intend making extensions in the spring. It has not yet been decided whether an addition will be erected or an entirely new building put up. The Humberstone Shoe Co. has outgrown its present quarters.

H. D. McKellar, sales manager of the Consolidated Felt Co., which embraces the Berlin Felt Boot Co., the Elmira Felt Boot Co., and the Kimmel Felt Boot Co., Berlin, says the Railway News, is in Winnipeg and the West, calling upon the wholesale shoe trade. Harry will still be remembered by many of the boys, who will be glad to know he is just the same Harry, notwithstanding his strenuous duties, as besides the above position he is president and manager of the McKellar Shoe Co., Berlin, makers of solid leather staples, president of the Berlin Bedding Co., and vice-president of the Berlin Asbestos Co., Robertson, Que.

A Lindsay paper says: "It is understood there is some talk of the R. M. Beal Leather Co. turning their larrigan factory into a harness factory. The market for

larrigans is perceptibly decreasing year after year—rubbers and felt goods taking their place as the lumbermen recedes to the farther North, whereas ready made harness always has a market. If the change is made, it will mean a much larger staff of workers, and although the average wage will not be so high, it will be much easier to get the class of men necessary. A first class harness factory would employ anywhere from 200 to 500 men, and as the Beal Co. make a specialty of tanning harness leather, there is no reason why a harness factory should not be a success from the start."

A new tannery is likely to be located in Aurora, Ontario. The ratepayers will vote on a by-law on March 4th granting a bonus of \$10,000 to the Collis Leather Company. The company agree that before any portion of the bonus is paid to the company they will erect a building costing not less than \$25,000, fully equipped, and have \$75,000 bona fide stock subscribed. They also agree to execute an agreement to the effect that they will employ and have on the roll from fifty to one hundred employes within six months after the buildings have been completed and equipped, and the following year from seventy-five to one hundred employes. The company fully expect to employ more than that number before that time, but do not care to bind themselves. The officers of the company are: T. Herbert Lennox, K.C., M.P. P., president; Walter Collis, vice-president and managing director; and W. C. Fisher, Toronto, secretary-treasurer.

Speaking of a recent visit to the factory of the Standard Manufacturing Co., of Sackville, N.B., the Maritime Merchant, says: "James Smith is at the head of the company. He is the second of his name to be at the head of a Sackville shoe factory. His father started the business in 1865. He was a tanner, and in those days there were few, if any, factory-made shoes in the Maritime Provinces, particularly in the country places. When the head of a family wanted long-legged boots for his boys, or laced boots for his girls, he purchased a side of leather and the necessary quantities of sole leather, liked the family along to the shoemaker, who took their measure, and in the course of time produced the finished article. They were not as stylish as the lines one sees displayed in the shop windows now-a-days, but they were serviceable, and as everybody wore the same kind, nobody could find fault with any other body's appearance. It was in those days that the senior Mr. Smith saw the opportunity of co-operation between the tanner and the shoemaker, and so, with a view to obtaining a market for his leather, as well as the hope of a manufacturing profit on his shoes, he engaged half a dozen shoemakers and located them in a nearby place. Out of this small beginning the business has grown, and to-day it is sufficiently important to need the services of four travelers. The lines sold by the Standard Manufacturing Co. are boots and shoes, tanned moccasins, larrigans, shoe packs, lace leather and harness."

Montreal Notes

J. A. Adams, of Rideau Shoe Co., was in Boston recently on a business trip.

J. I. Chouinard, of Regina Shoe Co., spent a few days recently on a hunting trip.

C. H. Firminger, advertising manager for the Slater Shoe Co., intends deserting the shoe trade for the mail order business. Success to him.

Edmond Mallette is now head of the

firm Mallette & Co., successors to Mallette & Roy, leather merchants, which firm recently dissolved by mutual consent. The new company is carrying the same lines as heretofore, viz.: side, kid and sole leathers, and is doing business as usual at the old stand.

Montreal factories are as busy as usual, with the added burden of new fall styles, which are now being seriously proceeded with by many firms. A few samples have been made, but not enough to get much idea of whether many changes will be noticeable or not. Some firms have not yet begun work on styles or samples, as they claim that it is a tactical error to send travelers out too early. Others will send their men out in good time, on the principle of the early bird catching the worm.

This man is well known among Montreal shoe retailers, and manufacturers as well. Twenty-one years ago L. J. C. Gagnon entered Henry Morgan and Co.'s shoe department as salesman under Manager W. H.

Stewart, who was then, as now, noted for his ability to make good shoe salesmen out of inexperienced material, while doing it tactfully and kindly withal. For five years Mr. Gagnon sold shoes—and gained experience in the process—as a result of which he was promoted to be manager and buyer, which position he acceptably filled for seven years. He then transferred his allegiance to Geo. G. Gales, acting in the same capacity in the latter's St. Antoine Street store, which was such a landmark in former days in Montreal shoedom. For eight years he remained with Mr. Gales, and some time after the latter moved into his present handsome St. Catherine Street store, Mr. Gagnon took the position of manager of Fogarty's shoe store, another well known landmark. Of late, however, the call of the road has been getting stronger every month, and as a result, he has entered the employ of Kirvan-Doig, Limited, whom he will represent in the Province of Quebec, outside of Montreal. Such a combination as Mr. Gagnon's experience and personality, coupled with "Good Sense" shoes, is sure to be a winning one, and his many friends bespeak success for him in his new venture.

EXPERIENCED SHOE SALESMAN—29 years of age, desires position (traveling or retail) in or near Toronto. Has AI references as to character and ability. Address Box 28, SHOE AND LEATHER JOURNAL, 59-61 John Street, Toronto, Ont.

SHOE SALESMAN—English speaking, for Province of Ontario. Fair knowledge of leather, 12 years experience as salesman, open for engagement March 1st. Box 26, SHOE AND LEATHER JOURNAL, Toronto, Ont.

SALESMAN, now covering Ontario and Quebec with shoe findings, desires a good side line. English speaking. References furnished. Headquarters, Montreal. Box 27, SHOE AND LEATHER JOURNAL, Toronto, Ont.

In the Hall of Fame

It is hardly too much to say that practically every retail shoe man west of Port Arthur knows him for a jolly good fellow. Perhaps the phrase so often used in such cases, though trite, would best express the general feeling towards him, "a mighty decent head." He broke into the shoe business in 1890 with Ames-Holden, with whom he remained until 1892; then the next three years were spent with J. and T. Stevens. He joined the ranks of the retailers from 1895 to 1900, but could not shake off the lure of the road, identifying himself with the staff of the Walker-Parker Co., Toronto, from 1901 to 1908, at which time he became connected with the Kingsbury Footwear Co., Montreal, with whom he is at present. He has the reputation of covering ground like a small cyclone—and he cleans everything up behind him in just about the same way. There is little in the business line overlooked. And he's a sport—in the best sense of the word. He can play a mighty good game of billiards, he's some "punkins" at golf, lawn bowling and curling, and he has been known to put up a creditable game at hockey and baseball. But as long as there are any orders lying around loose, he's too busy for these gentle relaxations. Lastly, he can "toot" the cornet. Doubtless you have him placed by this time—if you haven't, well, he's W. E. Short.

Additional News Jottings

F. Ludwig, shoe retailer, Montreal, is offering to compromise.

Victor Coulombe, shoe merchant, of Quebec, has made an assignment.

The shoe store of S. Walker, of Hamilton, was somewhat damaged by fire last week.

David S. Fraser, dealer in boots and shoes, New Glasgow, was burned out recently.

Fred Tite has opened a new repair shop in Swift Current, Sask., which is known as the Waukerz Repair Shop.

E. Rizzo's shoe shop, at 64 Metcalfe Street, Ottawa, was damaged to the extent of \$500 by fire.

The shoe store of L. E. Chamberlain, of Sherbrooke, Que., was badly damaged by fire last week. The upper portion of the block was gutted.

W. G. Berscht, of the traveling staff of McLaren & Dallas, Toronto, is laid up at his home in Guelph with an attack of typhoid fever.

Charles Emery, who bought the shoe business of J. H. Hill, Bank Street, Ottawa, is putting things into shape, and is now ready for business.

W. E. Murray, harness and leather goods manufacturer, Hamilton, has opened a factory and sales room at 123 West King Street, in that city.

C. R. Yost, of Milverton, Ont., died on February 7. He learned the trade of a shoemaker early in life and followed it for a number of years. He leaves a wife and four children.

The Amherst Boot & Shoe Co., of Amherst, N.S., did about \$870,000 business last year. The Amherst Central Shoe Co., of Regina, which will act as a distributing concern for Western Canada, has been formed.

Shoe Manufacturer's Defalcations

A. W. Shaw, founder, president and general manager of the A. W. Shaw Corporation, of Freeport and Boston, shoe manufacturers, has absconded, says a despatch from Portland, Maine, and is a self-confessed defaulter of a large sum from his company, according to an announcement made by receivers, who were appointed today. In a letter sent from Boston to J. Amick, of Freeport, his partner for twenty-two years, and the heaviest stockholder, Shaw wrote that he intended to commit suicide in mid-ocean. Shaw's letter to his partner was dated New York, Feb. 1, but was mailed in Boston, Feb. 6. Shaw wrote that a year a half ago he made \$300,000 in the stock market and lost all in an attempt to make more.

Kant Krack

Let Quality be your

If you expect to be in business when the next rubber season rolls 'round you'll look carefully to your buying this season.

Not to the end that you may get the biggest profit now, but that you may build surely for next season's business.

It's going to take quality rubbers to so build your business. And that's where I come in. I can supply those quality rubbers. Their names are Kant Krack, Dainty Mode, Royal and Bull Dog—and they're all good, sound "as-represented" business boosters.

These rubbers (samples of which my salesmen will be showing you soon) are made by the

JAMES ROBINSON, 182-186

Dainty Mode

first consideration

Independent Rubber Co. at Merriton, Ont. This Company has gained a reputation for producing high grade goods, and their line for 1912 is certainly the best yet.

I am preparing you to expect a great deal of these brands, because I know that the more critical you are in the inspection of the samples the better pleased you'll be with them.

I feel confident that if you give Kant Krack, Dainty Mode, Royal and Bull Dog Rubbers a good, square examination you'll find them the best for your business.

Put it up to me to show you why.

McGill Street, MONTREAL

Four shoes that have careful construction

Doctors
ANTI-SEPTIC
SHOE PAT 1908 1909 NON
PERSPIRO

For a rough weather shoe you can't beat the Doctors Anti-septic. It is thoroughly waterproofed, both soles and uppers, and not the slightest drop of moisture can get into it. Besides this it has three soles that keep out the cold.

But the Doctors is not only a rough weather shoe. It is just as comfortable in fine weather for it is not a heavy shoe, but a fine looking, comfortable, weather proof shoe.

THE Professor
PAT. N^o. 119409
GOLD CROSS
SHOE

Because the Professor Gold Cross Shoe fits the foot instead of forcing the foot to fit it it has found favor with owners of tender feet. Being made of soft kid that moves with the foot there is no chafing to produce corns and bunions.

And then its medicated cushioned inner sole gives ease of movement and a light, springy tread.

The Professor Shoes are certainly easy on the feet.

THE TEBBUTT SHOE

THREE R

Good claims to your Satisfaction

Most of the young fellows in your town play hockey, a little. But they don't play enough to warrant their buying shoes solely for hockey. They want a shoe that is light enough for skating yet strong enough and well enough protected for hockey.

You can satisfy them with the 2 in 1 Hockey and Skating Shoe. This shoe is fitted with our patent aluminum steel toe protector and padded tongue and is strongly built. Not too heavy for pleasure skating but strong enough for hockey.

The Double Laced Hockey Bal. is expressly built for hockey players. Every bit of leather in its makeup is of the best and the stitching is given extra attention. It will certainly stand hard usage and lots of it. If desired you can secure it with our patent aluminum steel toe protector.

The upper is made in two parts, an inner and an outer. Strips of felt can be placed between these two uppers in such a manner as to protect any part of the foot. Every player who wears a Double Laced Shoe can protect his feet to suit himself. We have patented this shoe. You can get this shoe with the ankle protector as well.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:—

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

Another "Wireless" Triumph

The Magdalen Islands connected with the mainland by Marconi system. Fifteen hundred words to be sent weekly. No longer are they cut off from the world during almost 6 months of winter.

SPECIAL DESPATCH TO SHOE-DOM.

(Through our own paid space)

Ottawa, March 1st, 1912—The Canadian Government has opened its weekly "Marconi" news service to the Magdalens. It is not generally known just how great a boon this will be to the inhabitants of these Islands.

For centuries, owing to the impassable condition of the St. Lawrence River and Gulf, these people have been almost entirely cut off from communication with the outside world for the four or five winter months.

Those used to the service of two telegraph companies and numerous daily and weekly newspapers can hardly imagine the awful longing of those cut off from the news for months at a time.

If wars were declared, kings died, empires were disrupted, world peace established, new monarchs enthroned or great catastrophes registered these people were kept in utter ignorance until early spring. We in the centre of civilization cannot even imagine such a condition.

PELLETIER CHANGES CONDITIONS.

Now, however, through the efforts of the Honorable Pelletier, Postmaster-General of Canada, this condition is a thing of the past.

The Honorable Pelletier has been insistent in his demands that the people of the Magdalens be given what was their fair due, and after a great deal of manipulating, has been able to announce that every week these citizens will receive the news of the world in condensed form by means of the wireless system.

WIRELESS USED.

A prominent Quebec newspaper man has been engaged by the Government to summarize the events of importance from all over the world. The summary will occupy about fifteen hundred words—not much, but so much better than no news at all. This summary will be handed to one of the wireless stations closest to the Islands, which is commissioned to give this news letter right of way and precedence over all other messages. These letters will be received, written out by the operator at Magdalen end and copies placed in the hands of every ecclesiastic, both Protestant and Roman Catholic.

READ NEWS FROM PULPITS.

At the close of the sermon the clergy will devote the necessary time to reading these bulletins to the assembled congregations.

This will be a great boon to the inhabitants of the Magdalens, and is the first and only instance where wireless is employed to give such full news service.

TRICKETT'S ANNOUNCEMENT.

No doubt the man in Quebec will be flashing forth the good news in the next summary of international episodes, that Trickett's slippers are now heavily stocked all over Canada, and that the latest samples are the choicest and smartest ever presented to the trade.

The advent of a Felt Year in which Trickett's productions play so prominent a part, is hailed as one of the outstanding events of the Canadian shoe trade, and so will doubtless be recorded in the Magdalen Islands, and all other parts of the country that appreciate warm, comfortable, and satisfying slippers in every leading color and style.

Trickett's organization is as world-wide as the wireless; Trickett's service is even more valuable to the shoe merchant, and Trickett's reputation is behind every pair of their world famous Felt Slippers. Of course, all shoe merchants know that Trickett's slippers are made by Sir H. W. Trickett, Limited, of Waterfoot (near Manchester), England, and that the Canadian headquarters of the firm is at the Manchester Building, Toronto, Ont. J. S. Ashworth is the Canadian manager.

After Another RECORD

And They're Going to
Make it Too!

IF you knew of the remarkable record made by these brands of shoes during the past season you would wonder at our making this statement.

And it was remarkable and it doesn't phase us a bit. We have learned, through long experience just what good shoe-making will do towards building a reputable business and you may rest assured we are going to benefit by that knowledge.

And you, Mr. Merchant, you are to benefit also—a fact you will recognize when you see the strong line of Fall styles which comprises the very newest lasts which we are preparing for your inspection. They have the style which is surely backed up by the right quality—the quality that will make them stand out strongly as a top-notch line of Men's fashionable and reliable footwear.

Our travelers are now on their respective grounds, prepared to show you. For the sake of your own best interests, see the samples before placing your order.

RUBBER

1912 = SE

RUBBERS

From crude rubber to duck lining, every step in their making is a scientific process, and with materials used, is calculated to produce an unusually long-lived rubber that no steady grind and wear can soon destroy.

To give you rubbers that will please your customers because they fit their shoes and wear comfortably and long, is our desire. To supply you with a range varied enough to answer all requirements, has meant much effort, but we have the goods. You will like them, as will your patrons.

Sell Rubbers With National Reputations

Nationally-known rubbers that are being extensively advertised throughout the whole Dominion are the rubbers for which you will be asked the oftenest.

It is only natural that your customers will want Granby, Maple Leaf, Dominion or Anchor Rubbers when they hear and see so much of them.

These brands were favorably known all over Canada even before the present advertising campaign was commenced. The added prestige which this publicity will give them will certainly mean much in the way of increased sales to the wise merchant who stocks these good brands.

Remember, it's much easier to sell a man what he wants than to convince him that something else is "just as good." Besides it's better business.

Drawing
the
Trade

20th Century Welts

These are shoes that draw the trade to your store. Carefully made shoes for men and boys, to retail at \$4.00, \$4.50 and \$5.00 for men, and \$3.50 and \$4.00 for boys.

Every shoe is the product of a specialized factory, and it has behind it the 20th Century reputation for style, workmanship and wear.

No merchant can fail to build up his trade if he builds on a solid foundation of *real merit*—100-cents-on-the-dollar-value—like 20th Century Shoes.

WATCH FOR FALL SAMPLES
TWO BRAND NEW LASTS

Our travelers are now out. You will like our range for fall 1912. Nicest lot of samples yet shown by our house—and the shoes we will deliver will be up to samples!

THE C. E. McKEEN CO. :: QUEBEC

JUST now your jobber is busy stocking up with the styles of Surpass Shoes that he knows will best suit your trade.

One of these days, soon, your jobber's salesman will call on you with Fall Samples.

Be prepared to give him a good hearing for there's money for you in Surpass Shoes.

He'll have with him some mighty fine examples of shoe craft, and he'll be enthusiastic about them, that's certain.

And you'll be enthusiastic, too, if you look carefully into the merits of the Surpass line.

For the Surpass line is a line of sellers—and the sales are built on quality. And sales built on quality bring repeat sales. And repeat sales mean success. And success means profits. And that's what you're after.

Give the Surpass samples for Fall 1912 a thorough inspection. You'll not regret it.

BRIGHTEST

and

BEST

There's plenty of satisfaction and profit in selling Carr's "Blackit" and "Brownit" Shoe Polishes. And it's satisfaction and profit that you share with your customer.

For when you sell your customer a tin of these polishes you are satisfied that you have drawn him closer to your store through the satisfaction he will receive from the use of the polish.

It will profit your customer to buy Carr's Polishes because they give such good, lasting, waterproof shines and so many of them, and it will profit you to sell them, because, besides making money you please your customers. Remember Carr's Snowflake for white boots, belts, etc. It will not rub off.

Manufactured by

Carr & Son, London, England

Makers of the most complete line of Shoe Polishes since 1837.

If "Revolite" Jumbo Rubber Heels weren't made of the best rubber and thereby able to stand wear and tear and give good satisfaction they wouldn't be **guaranteed** by the makers.

And the guarantee is as valuable to you as it is to your customer. It shows conclusively that the quality is put into "Revolite" Jumbo Heels.

It's a guarantee that will help the reputation of your store, besides helping you sell more rubber heels.

"Revolite" Jumbo Heels are made in thirteen different sizes.

RUTHSTEIN'S STEEL SHOES

What they are and---Why

Ruthstein's Steel Shoes are made of one piece of seamless steel from toe to heel, into which are set adjustable steel rivets. These rivets prevent slipping, and as they can be replaced easily when worn, greatly lengthen the life of the shoe.

Water or cold cannot penetrate these shoes. They are a sure preventive of wet feet and consequent ills.

Steel Shoes effect for their wearers a great saving in footwear bills, as much as \$20 being saved in one year.

N. M. RUTHSTEIN
The Steel Shoe Man

Send to-day for free literature on Ruthstein's Steel Shoes.

Learn all about these best of all work shoes. Learn also the prices. You'll find they make a very interesting study.

If your jobber doesn't handle steel shoes write us direct. We'll put you in touch with one who does.

No. 09, black, 12 in. - \$4.50
No. 010, tan, 12in. - 4.50

In the bush, in the mountains, on the farm, in the foundry—in fact, wherever a shoe is put to the severest tests, Ruthstein's Steel Shoes have made good. They have been found the safest, most durable, most comfortable, and most economical workshoes made. They stand up under wear and usage that would quickly ruin leather shoes. Rocks, mud, snow, water, rough or slippery surfaces, are all alike to the wearer of steel shoes.

The confidence of the makers in the future of Ruthstein's Steel Shoes is shown in the large amount of money they are spending in Canada to create sales for the premier work shoes. You have the opportunity to benefit by this. Send in your order to-day and be ready.

Safely Guarded

If the eyelets in the shoes you purchase have the little diamond  Trade Mark on the surface, as shown above, they are the genuine Fast Color, the only kind (and we want particularly to impress this fact)—the only kind that can't grow brassy, and always look new.

None but the genuine Fast Color Eyelets have the diamond  Trade Mark. They have been placed there to safeguard the shoe wearer as well as the shoe dealer from every possibility of deception. They are one of the most prominent earmarks of a good shoe. Millions of magazine readers are learning each month of Fast Color Eyelets and the method of distinguishing them. We will gladly mail descriptive booklet and samples on request.

NORTH BRITISH RUBBERS

SEASON 1912

Distribution: "Factory direct to you, Mr. Retailer" has always been our policy in marketing our now well-known rubbers, viz: **North British and Elephant Brand**. Our salesmen will soon call on you to show you British quality rubbers, right up to the minute in style. Our lasts have been designed to make rubbers to fit the prevailing Canadian shoe shapes of to-day.

Rubber selling, Mr. Retailer, can be made profitable to-day if you buy a brand that is not sold by every shoe dealer in your town. North British Rubbers is the brand you will most likely buy, after you have seen all others. Our Dreadnought Duck Lumbermen's Rubber will out-wear two pair of ordinary rubbers.

Dreadnought Duck is a specially woven English duck controlled by our company and used exclusively in making our brand of Dreadnought Duck Lumbermen's. It is almost impossible to stub, crack or break this duck after it has been thoroughly coated with Para Gum.

Elephant Brand Rubbers: so like other makers firsts that they are acknowledged by the trade to be the best. Each pair is carefully examined and packed in a carton, and being made on the same lasts as firsts, command almost as high a price retail.

Mr. Retailer, you can very greatly increase your rubber sales by placing your rubber order for 1912 with us. We have the stock in our Toronto Warehouse to fill all orders same day as received. Wait for North British Rubber Salesman.

NOW ABOUT IT

The "Marilla" Insole was designed and patented by a woman. It is made of velvet, and does away entirely with the slipping forward of the foot in PUMPS and OXFORDS, and the heel-piece prevents slipping at the heel. Can be applied with ordinary paste or glue in THREE minutes, and after drying half an hour ARE ready to wear. They cost you \$2.00 per dozen pairs in single pair cartons, and may be retailed at 25 cents, giving you 50 per cent. profit.

When You Counted Your Money Last Night Were You Sure That You Got It ALL?

Or did you guess? Even the best men make mistakes. Money is lost in retail stores in many ways. You know them only too well.

You can stop these losses, positively insure that you get every cent that belongs to you and *hold* it. A National Cash Register does all this for you—and more.

It prevents errors in change—enforces a proper record of cash paid out and cash received on account. Increases your profits by increasing business from customers you now have, and draws new customers as well.

And then it totals each clerk's sales, and tells you the amount outstanding on your books each day. Advertises your business. Enables you to do without a cashier. Protects your interests when you are away from your store. Think, Mr. Storekeeper, what all this means to you.

You will not have to stay in your store after closing time worrying about striking a cash balance.

With A National Cash Register there is ALWAYS A Cash Balance

It can be seen at a glance, with full details of every money transaction that takes place in your store. At a glance, mind you!

This machine *pays for itself* out of the extra profits it makes for you. And so, you see, you can get all this valuable protection, this saving of detail, this insuring of accuracy, FREE. You'll be interested to hear of our plan that enables you to

Latest Style Tendencies in Fall and Winter Shoes

In the More Expensive Lines Receding Toes are Presented—Straight Custom Lasts—The Overgaiter Boot for Women Discussed—Showings in the Rocker and the Semi-High—Features in Various Offerings

What are the *tendencies* for fall trade in manufacturing shoedom? The word "tendencies" is used advisedly, because the man who sets up as a sure prophet on coming shoe styles will soon have about as much opprobrium heaped on him as the weather man usually gets for his (frequently) misapplied science—and he will not hit the nail on the head nearly so often.

Numerous visits of the SHOE AND LEATHER JOURNAL representatives to shoe factories in various centres do not reveal any startling divergence from spring styles already known. The fall season is becoming more and more an echo of spring styles modified in the direction of slightly heavier upper and sole leathers—and more of the latter, of course—to ward off the ill effects of damp and sloppy streets.

Enquiries reveal, however, that gun metal leather will have the call, and strongly at that. Even in spring and summer shoes this leather will be more worn than tans, and from the present outlook, manufacturers expect its popularity to continue. "There's a reason." Gun metal is always a dressy-looking leather, and least of all affected by untoward weather conditions, overhead or underfoot. And it is easily cleaned and kept in that state. As an evidence of their faith in its popularity, manufacturers are taking steps already to assure a sufficiency of this leather, even before the travelers have begun their season's rounds.

Tans Will Be More Plentiful

Patent leather will, of course, be much worn, as is evidenced by the styles so far on exhibition. And tans for fall

wear will be even more plentiful than usual, in keeping with the growing tendency to wear tan leathers, both waterproof and otherwise, at least through the late fall, and often all winter.

In shapes, high and medium high toes will rule, although many of the lower toes are shown in the samples so far presented. But the high and medium high toe effects will be undoubtedly very popular during the fall season. But just a word of warning here! The SHOE AND LEATHER JOURNAL would advise every retailer not to count too heavily on this style condition. The hint has mysteriously passed from lip to lip among the trade that *receding* toes are again coming into vogue—not so much during the coming fall season, nor perhaps very extensively in the spring, 1913, season, but slowly and surely the flat receding toe is coming back to its own—to the

popularity it had a few years ago before such "efforts" as high toes and gingerbread effects hove in sight.

The reason is not far to seek. When one gets down to hard facts, there is no doubt that the high toe is responsible for a lot of discomfort and financial loss all along the line, from the manufacturer right down to the wearer. The former finds it almost impossible to secure leather that will stand the strain necessitated by stretching it over the high toe during the lasting process. At least a good many pairs of shoes per day are spoiled in every lasting room by these high toes, and often when finished the leather cracks or splits at the least shock. The wearer frequently finds these high toes just as unreliable for the same rea-

Fashion's latest dictate to women is to wear their lovers' photograph on the point of their pumps, just below the buckle. The custom originated in Boston.

son. Moreover, the tightness of the leather over the box toe soon causes discoloration and consequent impaired appearance, particularly in tans, of course.

High Toes Gradually Disappearing

Furthermore, these high toes are very uncomfortable. There is frequent cramping of the toes just where the toecap joins the vamp, and such shoes not kept in trees—and few shoe-wearers have such necessary luxuries, if this term be permissible—soon lose their shape and appearance when not in use.

Allied to high toes are the “gingerbread” effects, so com-

The new overgaiter for women, with flat receding toe and Louis heel.

mon among manufacturers at the present time in spring lines. While the process will take considerable time, these effects are doomed to much less general use than at present. This tendency will be somewhat apparent in some fall lines, but not so much so as to cause any great comment. It will be well, however, for the retailer to keep his eye on these future tendencies and not stock up too heavily on extreme high toe styles for fall, that while perfectly saleable at present, may prove a “white elephant” if still on his shelves next year.

The tendency is toward a shoe without perforations of any kind, and a fairly flat receding toe. This is comfortable and attractive-looking in a quiet way. Just the kind of shoe that any prosperous well-dressed man or woman is pleased to wear. The whole effect is almost like the custom shoe, and the narrow, unobtrusive stitching helps to carry out the resemblance.

The Receding Toe Styles

Of course the SHOE AND LEATHER JOURNAL does not prophesy that this change is coming very suddenly, nor that when it does come, all shoes will be made after this general tendency. Far from it! Human tastes in varied form must be consulted and gratified, and all lines will be in evidence then as now, but the new fashion will *predominate* among stylish and up-to-date shoe wearers. Even for this fall season, many travelers will show evidences of the “coming events that cast their shadows before” in the shape of isolated receding toe lasts in their sample cases. In the United States, visiting manufacturers from Canada in search of style tendencies have found this evolution clearly in evidence.

The Overgaiter for Women

As is usually the case in every season for the coming fall there will be a few more or less freaky styles presented by manufacturers for the approval of the retailer. One of these will be the “gaiter boot,” in women’s shoes only. This peculiar creation apparently hailed from France originally, and it

is just about as freaky as many French importations usually are. These “gaiter or overgaiter boots” are made to give the effect of a leather overgaiter, in different colors, although the top is more frequently of cloth than of leather, at least in the samples so far seen in Canadian factories. When made of leather, the material is usually some light flexible kid or calf of good quality.

The top is stitched fast to the vamp, and instead of the line of buttons running in the usual curved fashion toward the front of the shoe, the buttons run straight down the side, in some cases almost to the shank. Now there is a reason for the curved line of buttons on the ordinary shoe. When any changes are made in the position of most of the buttons, there is a downward as well as backward pull thereupon. In this new over-gaiter line, the only pull is backward, hence less adjustment can be made, and the boot soon begins to look sloppy—and there is nothing more inelegant than a badly-fitting button boot. Also these buttons run down over the ankle bone, which is almost sure to cause not only discomfort in use, but also bulging and distortion. This is likely to happen when cloth instead of leather tops are used—and cloth seems to have the call so far.

In fitting this boot, difficulty is likely to be experienced just because of the characteristics above spoken of. It is a hard boot to get the foot into, and a still harder one to keep it in comfortably. While such a boot may be successful in custom shoemaking with every foot measured exactly, it will be very difficult to duplicate this success in the standard sizes. The manufacturers themselves recognize this, and will not push this over-gaiter boot hard. These comments are given to warn shoe retailers against *injudicious* over-buying of any such novelties, no matter what inducements may be offered. It is not a boot for “repeat” trade—decidedly not.

Pump Without Straps

In women’s low footgear for fall, especially in pumps, the tendency is to do away with tops where the “gap” is especially noticeable. This will be seen in spring styles, but even more so in fall pumps. This “sloppy” appearance over the insteps has always been a serious fault in pumps especially, but lasts

Another style of the overgaiter shoe, with moderately high toe and Cuban heel.

are now being made so that the leather hugs the foot all along the top, and holds its place perfectly. For this reason, the tendency is toward doing away with ankle straps, leaving the perfectly plain pump itself. The effect is quiet, but in excellent taste, and will be especially appreciated for evening wear.

As previously stated, these tendencies are quite evident, although they will not drive out many of the usual styles or

(Continued on page 66)

How Do You Figure Your Profits on Shoes?

Are You Making As Generous a Margin as You Should—Cost Price of Article Is Not a Thing To Be Added To—
It Is a Per Cent. of the Selling Price—Some Pertinent Examples

Why are you in the shoe business? You must have some definite object in following the trade, or your mission in life is a peculiar one. Most men enter the boot business with one or two objects in view. The first one is to make a living; the second to make money, and the happy merchant is he who accomplishes both.

The thing of most vital concern to the average retailer is how to sell more goods at a greater profit, and to turn over his stock more frequently. It is on the turnover that the largest profits are made, consistent, of course, with a reasonable sized stock and good selling methods.

In the SHOE AND LEATHER JOURNAL from time to time articles have appeared giving advice and suggestions on how to buy properly, profitably and economically. While good buying may be one of the first steps toward success in a mercantile career, it is by no means the only element that will carry you on to the high road of prosperity. After the right kind of goods are placed

on the shelves, the next most important matter is to see that they are properly sold and that the margin obtained is a satisfactory

Where Retailer Is Astray

Now, it is just in this matter of profits wherein the average footwear dealer falls down. He imagines that he is making so much money clear when he sells a shoe at so many cents over what he paid for it, but therein he grievously errs. He is thinking more of gross profit than he is of net, and possibly has no accurate idea of how much it costs him to dispose of every dollar's worth of goods in his establishment. He should know to a nicety the overhead expenses, his relative losses, his unforeseen reverses, and other setbacks that are incidental to a retail career.

The main thing, therefore, outside of the fact of selling good goods and satisfying customers is to see that a fair, legitimate profit is made. How many retailers know exactly where

ONE OF QUEBEC CITY'S LIVE SHOE HOUSES

they stand in the matter of profits? They go on doing business from year to year, and in the end possibly find that they have not cleared up a competence or have been forced to assign. They thought all along that they were making money, whereas they

not realize it. Any jay can do business at a loss, but it requires a prudent and even shrewd retailer to make money nowadays.

Mr. Leever says in part:—

A manufacturer of store equipment recently caused a ques-

RULE

Divide the cost (invoice price with freight added) by the figure in the column of "net rate per cent profit desired" on the line with per cent it cost you to do business.

EXAMPLE:—If an article cost.....\$60.00
Freight..... 1.20

\$61.20

You desire to make a net profit of 5 per cent.
It costs you to do business 19 per cent.
Take the figures in column 5 on line with 19 which is 76

76) 61.2000 (\$80.52 = the selling price
608
400
380
200
152

The percentage of cost of doing business and profit are figured on selling price.

have been really doing business at a loss, but have not been able to discover the weak spot or trace the cause or source of the leak.

Wrong Basis of Figuring

The following opinion on the matter of profits and the way they are figured, which is supplied by Mr. W. E. Leever, will, therefore, be read with much interest. It shows how many different views may be entertained on the one subject, and how easily it is for a shoe dealer to lull himself into the belief that he is making money, whereas, he is merely doing business and making both ends meet, or perhaps, with the growing cost of rents, light, help, advertising, and other branches of the trade, he is really coming out at the small end of the horn, and does

tion to be printed, designed to find out what percentage of retailers figure their profit right.

The question had to be printed, of course, as an advertisement, even though it was not advertising in itself. Under the question was an offer to send a "48-page book for retailers" to any retailer who told how he figured the profit problem. Each retailer who answered the problem was also given another little book on the "Right Way to Figure Profits."

The answers aggregated about 1,000, of which 750 were wrong. It is hardly believable that 75 per cent. of all retailers do not know how to figure profits. Some of the readers of this publication will doubt the possibility of such a condition.

Here is the question: A certain article costs \$1 wholesale. What will it have to be sold for to allow a profit of 10 per cent.,

after allowing 22 per cent. for cost of doing business?

Seventy-five Per Cent. Erred

It is a very simple question—one that every retailer has to answer in his own business every day. But 750 out of 1,000 retailers answered it wrong.

The answers ranged all the way from \$1.10 to \$1.60. The majority gave the selling price as \$1.32 or \$1.34, allowing a profit of one per cent. or less, notwithstanding an explanation at the bottom of the question that the answer was not \$1.32.

A retailer in Dallas, Texas, answered like this:—

"In answering your question, will say that if you had not stated that \$1.32 was not correct, I would have put that price on the article, for I do not charge any profit on overhead expenses. But if you do, I cannot see any other way of figuring but to charge \$1.34 on selling price. Will you please send me your book and please tell me what your selling price is, and oblige."

Is there any wonder that this man was not making money? He was on the straight road to bankruptcy and going fast. But he has slowed up now, and will soon be going in the right direction.

Perhaps some of the readers of the SHOE AND LEATHER JOURNAL will think that there would be a profit in the article at \$1.34, and to make sure that they will understand this merchant's state of progress, it is well to explain why and how he was losing money instead of making ten per cent. profit as he thought.

The Right and the Wrong Way

If the wholesale price is \$1, and the cost of doing business 22 per cent, \$1.34 does not allow 10 per cent., but only 1.4 per cent. profit. On a gross annual business of \$15,000, he will clear \$150 a year, or a little better than \$12 a month. He said that if the ad. had not stated that \$1.32 was not correct, he would have put that price on the article. Selling the article at \$1.32, he would lose almost 1 per cent. instead of making 10 per cent. His trouble was that he figured his profit and the amount which he wanted to take out for the cost of doing business, or his percentages, on the cost price instead of on the selling price.

Instead of adding 32 per cent. on the wholesale cost to the wholesale cost he should have added 32 per cent. of the selling price to the wholesale cost. The wholesale cost is not something to be added to, but a portion of the selling price, in this instance, 68 per cent. of the selling price. If the wholesale cost is 68 per cent. of the selling price, then the selling price is evidently \$1.47; instead of \$1.34, or \$1.32.

Where Difference Comes In

If the cost of doing business is figured on the selling price, that is, 22 per cent. on the gross amount of business done during the year, the cost of selling the article is not 22 cents, but 32 1-3 cents.

If 10 per cent. profit is desired on the selling price, it is not sufficient to add 10 cents to the cost price. Instead, 14.7 cents, nearly 15 cents, must be added.

To prove this, take 22 per cent. of \$1.47, which is 32.34 cents, and 10 per cent. of \$1.47, which is 14.7 cents. Add these to \$1 and you have \$1.47.

A druggist in Alabama said: "If my cost of doing business is 22 per cent., and I wish to make a sale to bear 10 per cent. profit, I should figure it this way:

Cost and cash.....\$1.22
 Profit at 10 per cent..... 12.02

Selling price\$1.34

"I would, therefore, sell for \$1.34 all articles invoiced at \$1 for 10 per cent. profit. Am I correct?"

He is incorrect. As stated before, instead of making 10 per cent. profit he would make a fraction over 1 per cent.

A Canton, Ohio, dealer in clothing and furnishing goods

figured the problem in exactly the same way, with the same result. So did a boot and shoe house at Goshen, Indiana.

A dealer in a town in Illinois gave a little different solution, getting very near to the correct method. He deducted 22 from 100, leaving 78. This 78 he construed as being 78 per cent. of the selling price, less his profit.

Figuring It Two Ways

If \$1 is 78 per cent. of the selling price, the latter, of course, would be \$1.28, which he labeled as the selling price to cover the cost of doing business.

Then he deducted 10 from 100, leaving 90, and labeled \$1.28 as 90 per cent. of the selling price to cover profit. \$1.28, of course, is 90 per cent. of \$1.42, which he gave as the answer.

He made the mistake of taking his percentage for the cost of doing business out of one sum and his profit out of another. He should have taken both percentages at the same time.

Here is a letter from the manager of the McAlister Company of Oregon, Ill.:—

"We always figure our profit on the selling price, which is the only proper method, as follows:

"From 100 deduct the percentage of profit desired, and divide the remainder into the wholesale cost of the goods.

"The quotient will be the selling price.

"In this case we desire to make a profit of 10 per cent. over the cost of doing business at 22 per cent.

"We take 32 per cent. from 100, leaving 68. Divide this into 100 and we get \$1.47, the selling price, which will show you the desired per cent. of profit."

Result Was a Revelation

A letter from A. D. Hogan of Glen Village, N.Y., reads:—"Your question, entitled, 'What is the Selling Price,' attracted my attention.

"I picked up my pencil to work it out, but it did not come. Then I took a sheet of paper and went at it with the result given below. It was a revelation to me.

"The figures applied to everyday sellers in my own stock proved that many articles were only returning a bank interest profit. It was a surprise to me."

Then he goes on to figure it out for us in the following very sensible way:

Let the selling price equal..... 100 p.c.
 Deduct for cost of doing business..... 22 p.c.
 Deduct for profit..... 10 p.c.

Cost is 68 per cent. of selling price.....68 p.c.
 Then 68 per cent. is.....\$1.00
 1 per cent. is..... .0147
 100 p.c. is 100 times .0147, or..... 1.47

"I wish to thank you for bringing the matter of profit to my attention in such a forcible manner."

The cost price of an article is not a thing to be added to. It is a per cent. of the selling price.

FILLED WITH GOOD POINTERS

Please find express order, \$1.00, to cover my statement for SHOE AND LEATHER JOURNAL, 1912.

Allow me to compliment you on the splendid paper that you are now turning out. I am looking forward for each copy, as I always find some good pointers that are helpful to me as a traveling salesman.

As a favor, I would ask you to send my copy care of Canadian Consolidated Rubber Co., Ltd., Saskatoon, Sask.

Yours respectfully,

Thos. J. Spence.

Saskatoon, Jan. 22nd, 1912.

The Editorial View Point

A STEADY TRADE OUTLOOK

Business for the past two weeks has slackened off in some lines amongst dealers whose stocks are now fairly well cleaned up in staple lines. Travelers report an active demand for "sorting up" lines, and those who have been out for fall orders claim that the amount of trade is somewhat ahead of the same period last year. Money is not quite as plentiful in some quarters, although the movement of grain has been rather better. Snow blockades have interfered to no little extent lately with business conditions, and while everybody seems satisfied with the "old-fashioned" winter, there will be a general satisfaction when spring begins to open up.

TOO MUCH SPECULATION EVIDENCED

With the quick fortunes that are constantly reported as being made these days by speculative ventures, business men are more persistently tempted than ever to leave the path of steady business endeavor for the uncertainties of real estate or stock enterprises. The unsettling effect of present conditions can hardly be over-estimated. Dissatisfaction and uncertainty are taking hold of old as well as young and proprietors as well as employes are finding ordinary business "stale." People seem to forget that where one man makes a "strike" in these side schemes a score or more "get in wrong," to use a common expression. We need just now in Canada a little plain talking on the fever of speculation that is taking hold of business people.

THE TENDENCIES IN FALL STYLES

Some houses are out with fall samples, but most of the manufacturers as well as the jobbers will not be ready for some time yet. No remarkable features have developed so far, although some modifications and innovations are noticeable in the samples. As we predicted some time ago, there is a decided tendency towards English shapes amongst women's as well as men's goods, with quite a sprinkling of fancy welts and upper ornamentation. In fact for fall lines the disposition towards novelty and even freakishness is more marked than many would wish. Manufacturers and wholesalers generally report a good sorting trade, and quite a few additions to spring orders on account of the depletion of retail stocks. Payments for February were up to the average, but not as good as some manufacturers hoped.

STARTING IN THE SHOE BUSINESS

A good start in the shoe business is often the secret of success. To stock up heavily with various classes of goods and to assume too burdensome obligations at the outset is frequently a serious handicap. It has been said that goods well bought are half sold, and it may, with equal veracity, be asserted, that a favorable beginning is equally as important. Two competitions on how to start a boot and shoe business on a cash capital of \$1,000, and also a capital of \$2,500, for which valuable prizes are being offered by the SHOE AND LEATHER JOURNAL, are arousing much interest among the trade in general. The conditions of the contest appear on another page, and all who take part should have their contributions reach this office not later than March 20th. It is desirable that retailers, salesmen and others should do some thinking along the lines indicated and tell the public how they would enter the trade if they had to make a

start on a cash basis of the amounts named. A number of entries have already been received. These show that thought, originality and judgment have been brought to bear on the subject. We would like contestants to take affairs as they exist in their own towns, or in others, with which they are familiar. We desire ideas and pointers, rather than literary style or attractive essays. The matter will be put in good newspaper shape, and when it comes to awarding the premiums, those efforts, which are the most helpful, instructive and practical, will be given preference to ones of a too general and non-committal character. Get down to details, and tell how much you would invest in the various grades of shoes, rubbers, findings, etc., as well as what sums you would expend for rent, fixtures, advertising and window displays.

WILL LEATHER GO STILL HIGHER?

There has been a good movement in leather on account of the finishing up of the season with manufacturers, and quite a few contracts have been made for fall requirements. While shoe manufacturers admit that the market is strong, they claim in some instances to have been able to close at satisfactory figures. Tanners, however, stoutly maintain that they are getting what they ask, and are intimating that the market is not yet as high in some lines as it will be. Taking it altogether, leather conditions are decidedly firm, and there seems little chance for any immediate relief so that manufacturers of shoes are all figuring on higher costs. Hides have been contracted for well ahead at the ruling prices, so that it looks as though tanners had given up hope of easing conditions.

FIRMER PRICES FOR RUBBERS

Manufacturers expected to be out with the new season's lines before this, but doubtless have been holding off to find what their competitors were about. The reduction of between nine and ten per cent. in the American list was rather a "stunner," and had no little to do with holding back actual operations here. It is urged by manufacturers here, however, that comparatively speaking, our prices are lower than the American, taking into account the increased cost of materials and production on this side of the boundary. Be that as it may, the consensus of opinion seems to be that prices should go up rather than down in Canada, and the new quotations show about five per cent. raise on the average. The local manufacturers seem to have reached a more or less satisfactory understanding on this score.

ARRANGE FOR SPRING OPENING

Retailers who are alive to the opportunities and necessities of spring trade already have their plans well matured for a vigorous campaign. The spring season is the most important in the year for the shoe retailer, as a very large proportion of his trade is done in the next three months. It does not do these days to leave possibilities of such a period to haphazard methods. With window displays, store arrangements and advertising methods to get in shape, aggressive dealers have found February a month of quiet activity and the first warm weather is eagerly awaited to inaugurate operations. With the steady cold weather that has prevailed, there ought to be an early and decided ushering in of spring.

Blaming Shoe Retailer for Getting an Improper Fit

Certain Persons Secure Goods on Approbation and Censure the Merchant—Some Views on Trade Matters by a Live Western Shoeman—A Thorough Believer in Premiums and Judicious Use of Printer's Ink

"The approbation business is the bane of the average shoe retailer, and we do not encourage it," said Mr. Wm. C. Allan, proprietor of the Quebec Shoe Company, Winnipeg, "still we are forced to send three or four pairs out on approval sometimes. As a rule such goods are used roughly, and the customer does not get fitted properly, and then the store is very often blamed for the imperfect fit, when the members of the staff really have had nothing to do with the fitting at all.

"We practically do a cash trade with a very limited credit.

a year, and certainly not less than two and a half times. He thinks in the matter of profits, that the percentage should be based on the selling price, especially as you take into consideration rubbers childrens' and infants' shoes, felt goods, and other lines on which the profit is often cut considerably. The firm believe in advertising liberally, but think that such expenditure should have judicious oversight. They use space in the daily papers, and also in five weekly papers of a foreign tongue, which are printed in Winnipeg. At different times during the year the Quebec Shoe Co. always have

An interior view of the Quebec Shoe Company's store in Winnipeg.

but we have decided to extend no more credit, except to those who were on our books at the beginning of the year. Our business year begins on February 1st. Trade has started off with a very satisfactory promise with us, and we believe that our record for the coming twelve months will exceed that of any preceding period for the same length of time."

The premises of the Quebec Shoe Co., are attractive and inviting. The length of the store, which was established early in 1908, is 110 feet, the width is 25 feet, and the ceiling 17 feet. The front, a cut of which appeared in the last issue of the *SHOE AND LEATHER JOURNAL*, is an effective one and well adapted for display purposes. In this issue is presented a view of the interior of the establishment.

Mr. Allan believes that stock should be turned over three times

something useful for the boys and girls, which they give away as premiums. They find this kind of publicity very profitable. At the end of each year they also send a dainty hand-painted calendar to their customers.

Four special sales are held during the year, which help to get rid of all odds and ends, or "stickers" as they are frequently called. These sales are successful, because the firm do exactly as they state, and never misrepresent any of the lines contained in the announcements. They do just as they advertise. "I believe," said Mr. Allan, "if a house cannot or does not live up to its advertisements, it would be far better for it not to advertise at all."

Travelling goods of all kinds are handled, and a fine trade has been worked up. These requisites are neatly displayed and yield the store a good profit.

Clerks Should Be Taught Anatomy of the Foot

The Cause and Cure of Bunions—Over One-third the Population Suffer From Distorted Toes—Badly Fitting and Improperly Shaped Boots Responsible—Exaggerated Heels a Contributing Cause.

By W. M. SCHOLL, Orthopedic Specialist.

Leading shoe dealers in Canada are now having their clerks educated on anatomy of the foot, so that when customers come with their deformities, such as bunions, with the proper appliances and devices on hand, relief can be secured at once and a handsome profit made on the sale. Soon a reputation is gained by being able to overcome instantly the pain and annoyance of the bunion and curing it permanently.

The bunion is one of the most common and troublesome ills brought to the notice of the shoe man, which is authoritative by those who come in direct contact with the feet and take enough interest in their work to notice the different kinds of feet to be fitted. To one not afflicted and not accustomed to making foot examinations, it is a matter of considerable surprise to learn that over 50 per cent.

of the population of Canada, who have not attained their majority, are troubled to a greater or less extent with enlarged toe joints, and over one-third of the population are absolute sufferers from bunion or distorted toes. The majority of such sufferers are not confined to persons who have reached middle life or to those of advanced years, as it may seem, but include many children of school age.

Here, we arrive at the cause of the bunion in a majority of cases. It is not inherited, as a great many persons say. When asked about their bunions, they advise: "Oh, I was born that way." That concludes that the deformity is inherited, but by referring to authoritative medical works, we find that there is but a small per cent. of the bunion deformity inherited.

The Cause of the Bunion

Bunion, or Hallux Valgus, is a deformity of the foot caused by subluxation outward of the great toe, as the figure here plainly shows. I find in my professional work that very few persons really know the first meaning of a bunion, many thinking that it is merely a corn or a slight external gathering or growth. The great toe is crowded over towards the center of the foot and greatly interferes with the other toes. It crowds either over or under the second toe, the former most frequently in the writer's experience. This deforming continues sometimes gradually and continuously, until finally an inflammation sets in at the joint or the bones of the great toe, the phalangeal, joined with the bone of the instep, the metatarsal, the bunion forms over the inner side of this joint, the cartilage is affected, and the bursa is inflamed and enlarged. The inner lateral ligaments are then greatly lengthened, while the outer ones are contracted, thus the ligaments and tendons do not respond and are therefore unable to draw the great toe to its natural position. When the bunion is once formed, the motion at the great toe joint is very much limited, and in advanced stages the flexible one is changed to a form of awkward shuffling.

Strange to say, the deformity occurs mostly in women. It is also most noticeable, not only in the middle classes and those who buy cheaper footwear, but also among the classes who have patronized to a greater degree custom boot makers.

A vast majority of cases are undoubtedly due to badly

fitted and improperly shaped boots or shoes. Fitting the shoe too narrow, so as to interfere with the natural action of the inner lateral ligaments, or the tendons' natural action and position of the great toe seems to be the most prevalent cause. Narrow toed or pointed toed shoes have done and are still doing their mischief by preventing the toes of the foot straightening out as nature intended, and on the other hand, by compressing the fore part, weakening the controlling tendons and really distorting the shape by actual pressure. I have actually seen shoes stretched away out of shape because the toes were too wide, and effected too much pressure on the upper leather and lining. Only where the upper was reinforced by the stitching of a toecap would it hold the natural shape of the shoe.

Effect of Exaggerated Heels

High and exaggerated heels worn on pointed shoes have done their damaging work. Each step the person would take this high heel jams the foot forward, and practically the entire weight would be borne on the tiptoes. Persons with large feet would often buy and be fitted with shoes one to three sizes too short, and it is not infrequent that I find high grade shoes fitted two sizes short, simply because that special foot required a long, narrow shoe, which the dealer at that time did not carry in stock in the particular style.

Very often bunions are associated with flat-foot. A big majority of bunion feet are flat-footed, and I can only account for this by the fact that the controlling muscles and tendons are affected, weakened, stretched or shortened by the structural change in arch—the shortened tendon draws the great toe outward towards the center of the foot. In walking the ball of

the foot is forced forward and out and the shoe not properly made or fitted will cause a pressure or irritation that will soon develop inflammation and swelling that will start a bunion. A bunion once started grows with a great rapidity and soon produces a deformed and unsightly foot, unless the proper correction is immediately brought into action.

The Cure For The Evils

The usual treatment for bunions is to apply a medicated plaster, salve, ointment, or a soft pad with a round hole opening. Experience has taught most of us that such treatments are wholly inadequate and perfectly useless, and, in fact, in many cases really harmful. The reason for this is easily arrived at, and before the effect can be removed the cause must first be done away with. In our orthopedic work we endeavor to remove the cause and then endeavor to correct the trouble. At first the sufferer must be induced to wear a suitable shoe. What I mean by a suitable shoe is plenty of width across the ball and bunion joint—then, with sufficient width at the toe, and with the inner side of the shoe on a straight line with the centre of the heel, will give you plenty of room for the great toe to resume its natural position. It is unfortunate, however, that persons afflicted with bunions have a weakness for wearing tight shoes and too narrow at the toe, and I find it very difficult to induce them to make a change. The seriousness and importance of wearing proper shoes should be properly brought to bear upon the mind of the sufferer of the bunion.

Should Wear Proper Stockings

Then, the next step to be taken is to see that the proper stocking is worn. It seems strange how manufacturers of hosiery are forcing upon the public narrow toe, pointed sole sock or stocking, which in itself is apt to cause deformity if worn short. Bunion feet should wear right and left hosiery if possible, but still better, with a separate toe for the great toe, the same as the mitten for the hand. Then by using wadding between the great and second toe, to give a slight outward pressure to the great toe, endeavor to induce it to a somewhat normal position. I have found it so difficult to have my patients use cotton or wadding that the invention of a "Bunion-Right" was brought about.

The device, as shown in illustration, is made of a pure para rubber, has a top and bottom shield and two cylinder discs or tubes, and when placed in position the tubes cause just enough pressure to give the toe an opportunity to straighten. The top and bottom shields prevent the device from working out of place, and it thus can be worn during the day in the ordinary size shoe. As the cure progresses after a few weeks' wearing of the device a sponge rubber filler is inserted in the tube to afford more pressure and correction. After this is worn for some time, a second correcter of a solid material is inserted in the tube. This is for correcting the cause of the bunion, the crooked toe.

Wearing Appliance at Night

In addition to wearing this device during the day, the person should wear at night the orthopedic appliance, known as an "Anti-Bunion Spring," as I find in a great many cases where the deformity is of long standing, and has existed for considerable time, a more corrective measure is required in bringing about a permanent cure. The "Anti-Bunion Spring" is, therefore, the article to be worn at night, and is worn as illustrated. This mechanical appliance acts as a lever in drawing the greater toe to its position.

It consists of a light German silver spring extending from a point forward of the scaphoid bone back of the bunion along the inner side of the foot, to the end of the big toe. Opposite the joint a hole is made in the spring to avoid pressure on the bunion, and the entire spring is padded with pure, soft wool felt. There is a strap for fastening the spring to the foot about the instep, which should be drawn quite snugly to compress the me-

tatarsal joint. At the point of the toe is a small strap with lacing so that it can be adjusted from time to time, and more pressure brought in drawing the great toe over to its position. This device is to be worn with a loose, comfortable shoe, and will give great relief in that manner.

Will Resume Natural Position

It is especially recommended that the "Bunion-Right" be worn through the day and the spring appliance worn at night. No time is lost in that manner, and the tendons and ligaments will resume their natural position, but fitting the deformed foot with a shoe is a very difficult procedure, and in most cases a most unsatisfactory one, especially so, where there is a large bunion or growth at the joint. It soon misshapens the shoe, making a very unsightly appearance and the pressure of the upper leather on the apex of the joint causes great pain and suffering.

For these cases, I recommend the use of a "bunion-reducer." This is made of a pure para gum and comes from virgin trees along the Amazon, the texture of this gum being much finer and more delicate, and said to contain none of the by-products which cause the heating of most rubber. This is then compounded with refined medicaments and vulcanized into a shield properly designed, after many plaster paris casts had been taken from various degrees of deformity and different sizes.

Do You Live Up To Your Guarantee?

If you make a guarantee live up to it by all means, no matter what business you are in. If you state satisfaction assured or money refunded see that you do not digress. The prestige and reputation of a shoe store rests in living both in letter and spirit up to the guarantee. There is a moral in this.

Two travelers got talking over the matter the other night and one told of how money was refunded by a certain firm and no questions asked if the buyer desired to return the goods. There was no obligation at all about the thing, and the rebate was cheerfully complied with in every instance.

"I know that it's true of a certain tailoring house," remarked one man of the grip. "I saw flaming advertisements in the press, and a friend of mine said that he was going to order a suit there, as the clothing concern make it a part of all contracts—money back if not satisfied. He ordered a tweed of a kind of pepper and salt pattern, and, when he got the goods home he did not care for the appearance of the garments. They fitted all right, but he determined to test the guarantee to see if the firm really meant business. Now, this company send out inquiry cards after each sale, asking if the clothes were delivered on time, if they fitted right, if they were satisfactory in every particular, etc. He answered that they were not satisfactory, and the adjuster came up to the house the next evening.

"What is wrong, and can we be of any service in rectifying matters?" he inquired. The purchaser said that he did not want the clothes and would volunteer no further explanation.

"The adjuster said, 'All right. Here is an order for you to present at the office and get back your money. We will send up for the suit to-morrow.'

"This was done, and when the dissatisfied buyer came home with the cash his wife was astonished that they had not tried to sell him another suit or replace the goods with something else.

"Speaking of the matter my friend said: 'I know that it was a rather scurvy trick, but I made a mistake in the selection of that abominable pattern. I was not going to admit the error to anyone. Then I had a sinister motive in view. I desired to test their widely advertised guarantee and see whether it was all buncombe and bluff or whether they lived rigidly up to what they proclaimed. I found that the warranty was genuine. Since, I have repented of my first act and have ordered two suits and an overcoat from the firm who stand by all they advertise.'"

Some Stray Shots from "Solomon"

Judgment is one of the choicest gifts that can be bestowed upon a man. When Solomon asked for wisdom we are told that the Lord gave him the other blessings of wealth and power which he had not sought. Wisdom is a rare jewel and proclaims the king among men. Yet the gift is not unaccompanied with danger. A man is apt to "set store" by his wisdom and discount the knowledge and ability of others. When wisdom gets set in its ways it becomes a menace to its possessor and to others. "Every way of a man is right in his own eyes, but the Lord pondereth the hearts." There is something needed to counterpoise wisdom and give it an even swing. Wisdom without heart may be dazzling to look upon, but it is dangerous to handle or to sit under. Not only be sure you are right before you go ahead, but see when you start you are not bumping into the Almighty or running over your fellows.

Are you one of those who rub their hands when a good man goes down? There are plenty always to gloat when a clergyman makes a false step or to say "I told you so" when some man who has been a "pillar of the church" falls before some temptation. You can tell what sort a man is from the way he reads the morning paper or picks up the gossip of the street. There are harpies who actually wallow in the misfortunes of others and who are never so happy as when they see their neighbors floundering in difficulty or disgrace. "The soul of the wicked desireth evil, his neighbor findeth no favor in his eyes." The prison and the gallows don't get half the scoundrels and murderers that walk the streets. There are men in respectable garb who, if they only dared, would hit their neighbors on the head or feed them prussic acid. "As a man thinketh in his heart, so is he." It is a crime to hate.

There are respectable thieves that despise the thug and the contrabrander. It makes a great difference in this world how and what you steal. A man was sent to prison the other day for giving a bogus cheque for a horse. There are men in the same community who by lying and cheating in stock deals are filching thousands of dollars from their fellows. We have financial nabobs in this country who smile with amusement and disgust as they read in the papers of the boat braving the Niagara river to smuggle a few Chinamen into the promised "land of liberty," but sit down with a cigar and pencil to figure how they can beat the honest game of giving value for dollars, and make a haul out of some manipulator of stocks or merchandise. "The getting of treasures by a lying tongue is a vanity tossed to and fro of them that seek death." They are in the same boat with the smuggler.

There is a big difference between hustle and bustle. Some men in business seem to put half their steam up through the exhaust. If fussiness, noise, change and bull-headedness might be considered essential, some men ought to succeed beyond all peradventure. The thing in business is to make every lick tell. It is not only necessary to hit the nail on the head but drive it. There are men as well as women who try to drive four inch nails with a tack hammer, and the process is as annoying to those around them as it is hopeless for themselves. Diligence in business does not necessarily mean getting down before breakfast and quitting at bed time. There are people who do this sort of thing year in and year out, and never seem to be any further ahead. The right kind of diligence is a combination of brains and muscle that knows when to quit as well

as to begin. "Seest thou a man diligent in his business? He shall stand before kings."

Probably down to the last tick of the clock of time there will be those foolish enough to "back" friends to their own hurt. Good nature may be all right and it may be the sign of a "good sport" to give a man a "leg up"; but the fellow who risks his name, his means and his family's happiness for the sake of being a "good sport" is worse than a fool. "Be not thou one of them that strike hands or of them that are sureties for debts." When backing a note is made a matter of friendship, better let the friendship go. A friend whose friendship depends on this sort of thing is not much use to anyone. You can pick up friends of this kind on the street when you run short. When a man gets into a hole his creditors are the ones who should help him out. They have made money out of him.

The man who is always giving way to temper is not a safe friend. "Going up in the air" is the sign of a shallow, selfish nature, and the man who gives hot heads and cranks a wide berth will have peace of mind and be money ahead. Besides you are likely to get the disease and sure to get some of the reputation if you associate with this ilk. Anger is as poor a counsellor as fear, and many a man can look back to listening to hot-headed advice as his ruin. "Make no friendship with an angry man, and with a furious man thou shalt not go." Every man who amounts to anything has a temper, and it will break bounds now and then, but there are those who nurse spite and encourage hatred until they become what is known as paranoiacs. They get the idea that everybody is after them to "do" them. Keep away from this kind of lunatic. Murder is the logical end of the disease.

Are you a good listener? The man who has learned to listen has caught the secret of a successful and happy life. You can pick up a few ideas worth while almost any day if you keep your eyes and ears open. The fellow who keeps his nose on his own plans and doesn't watch or listen to observe what others are doing, will get a few bumps as he goes along, and although bumps do some people good, they never shake a fellow of this type out of his rut. "Bow down thine ear and hear the words of the wise." Bend that stiff neck of yours and listen. Get it into your head that it is the mark of wisdom to consider other people's thoughts. More men have been ruined by this false pride of opinion than almost any other thing. When a fellow learns that it is as manly and wise to take ideas as to give them he has discovered what is more use to him than a lot of the education he spends money to get. "Wisdom is with the lowly." Put that down.

Life is full of pitfalls, and few of them are as well tagged as that of which the wise man says, "He that is abhorred of the Lord shall fall therein." "The mouth of strange women is a deep pit." The man who wrote that ought to know if anybody in this world ever did. He fell in and made a mess of one of the greatest lives a man ever had the chance to live in this world. King Solomon was wise, good, rich, powerful, far-seeing, and in every way successful until he met and fell for the wiles of the "woman in scarlet." The man who trifles with this kind of temptation is playing with death. There is more hope of a fool than of him. Give her plenty of side-walk. Better wear your boots out going six blocks out of your way than to fall into the pit which the same authority says is "full of dead men's bones."

Rubber Price Lists for 1912 Show Some Increase

The Advance Has Been Principally on Light Shoes—Higher Quotations in the West than the East—
Features Introduced in Selling Methods Last Year Continued—No Discounts for Early Placing

The new rubber price lists for 1912 are out. The quotations on the whole show an average increase of about five per cent. when every line is taken into consideration.

West of Port Arthur the figures are from two to three per cent. higher than in the East. This departure has been made owing to the heavier freight rates and augmented cost of doing business in Western Canada.

The reason for the advance in light shoes is that material and labor on this class of goods is very much higher than formerly. Many new lasts made necessary by the high toes and heels new being worn have made the item of last expenses mount up very decidedly. Moreover, the class of labor required for making these goods is very scarce and wages in many cases have advanced twenty-five per cent.

The Canadian Consolidated Rubber Co., who announced their schedule of prices on Feb. 27th, say that two new features for 1912 are a bonus for volume of business done by the retailer and increased discount for prepayment. All the moves introduced last season, namely, net prices, prepaid freight, all lines cartoned and guaranteed prices, are continued.

Owing to the difficulty which most of the factories had in getting out sorting and other orders in time during the months of October and November, when hundreds sent in and wanted rubbers at once, a special effort will be made this season to have shoe merchants place their business during March and April. The factories will then know where they are at for the remainder of the season, and can be better organized for the work required of them.

Prices this season show an advance in some of the finer lines which run on an average of about from 8 to 10 per cent. On the whole, the increase will possibly average around 5 per cent.

The Canadian Consolidated Rubber Co. announced their prices on Feb. 27th, and salesmen were sent out from the various branches to call upon the trade. The independent companies also issued their price lists during the past week, and are covering the field. All the companies doing business in rubber footwear in Canada, have practically the same quotations for nearly all lines, while some goods may differ from two to three cents per pair. On the average, on a large bill of goods the net results would be about the same. Reports so far indicate that orders are coming in very well, and the various factories look for good spring bookings.

Canadian vs. American Figures

One company will allow 5 per cent. for early placing orders, but it is understood that when this discount is deducted their prices are no lower than those which have just been issued by their rivals.

On Feb. 1st the United States Rubber Co. issued their new rubber price lists for 1912. There were no great reductions in the prices of rubber footwear, and decreases were confined to heavier goods such as first and second quality boots, lumbermen and arctics, while the prices on light wear goods remained practically the same with the added incentive of a 5 per cent. reduction on first and second quality orders placed before July 1st

next. The decrease on heavy goods was somewhat irregular, ranging from 7 to 8 per cent.

Higher Figures in the West

In connection with the price list which was issued by the Canadian Consolidated Rubber Co., a new departure is made in that on all the quotations supplied, a new price list goes into effect for the territory west of Port Arthur. From two to three per cent. more will be charged in the West in order to cover the heavier freight rates and long hauls of goods.

In the heavier goods, such as lumbermen's boots, gum stock, snagproofs, etc., the quotations are about the same as last season. In a few lines there has been an increase of one cent or two cents a pair. In the medium lines the advance has been about 5 per cent. over last year's figures, while in the very fine goods

Interior of the shoe house of the R. Tanner Co., Limited, Pictou, N.S., one of the most progressive of Eastern concerns.

made of the very best rubber, the augmented figures will be about 10 per cent. For instance, last year men's first quality, fine, plain over-rubber, which was quoted at 66 cents, is this year put down as 73 cents, in the East and 75 in the West, while women's fine croquets that went for 50 cents last year, this season are disposed of at 54 cents. Boys' rubbers, best quality, that sold last season for 48 cents, are 53 cents this season.

Summing Up of the Situation

Summing up generally, it may be said that the advance has been principally in light goods, which require the heaviest expenditure for labor, and material. Prices in Canada for these lines are below what prevail on the other side of the border. Rubber footwear was sold in the Dominion last season at a less figure than it had been any time for many years, and it is understood that some of the companies grew tired of a struggle that was unprofitable. This year business will be conducted on a basis calculated to yield a fair return on investment and labor.

It is said that there will be no price-cutting, and that each concern will seek to get business purely on the merit and quality of their goods and other arguments which may be advanced to present their claims.

The system of net prices seems to be very favorably re-

garded, and while the lists now issued show an advance of 5 per cent. generally, still changes in quotations are liable to go into effect without notice, and it is rumored that there will be another advance.

It is reported among the trade this revision of an upward character may take place before many weeks are over. In the meantime, retailers who place their orders are guaranteed delivery of goods at present quotations.

Concessions on Bulk Business

Some concessions have been made by the Consolidated Co. in the way of discounts, there being a one per cent. discount on a purchase of \$1,000 or over; two per cent. on \$2,000 or over; three per cent. \$5,000 or over, and five per cent. on \$10,000 or over, which terms have been followed by the other companies. The ordinary terms of payment are two per cent. within 10 days of Nov. 1st dating, all goods shipped during the summer months being dated Nov. 1st. Net terms are extended until the end of the year.

First and Second Qualities

Some changes in classification have been made this year by the Consolidated Rubber Co.; Jacques Cartier, Granby, Merchants and Daisy are included in first quality, while the Maple Leaf brand is placed in a separate list, and is somewhat lower than the first four mentioned brands. In the second quality are Dominion and Anchor, while Challenge forms the third grade. The independent companies have issued price lists and terms practically the same as those prevailing in the first quality, and in the second quality brands quotations are much alike.

Other features have been adopted, but there are no radical departures from last year, and in the meantime, all the rubber manufacturing concerns are making a strenuous effort to get business. It is not expected that anything exceptional will crop up, and if all the concerns adhere to their prices as indicated each is likely to get a fair share of business going in rubber shoes for the season of 1912.

Does the Commission System Pay?

Some retailers strongly believe in the P.M. commission, or "spiff" system, among their sales people as a means of reducing stock at certain seasons and getting rid of odds and ends.

"It works out admirably," remarked a London shoe merchant. "I have small discs in different colors pasted on the labels. They are very small and their meaning is known only to my clerks. Take that dark red one there. If a sale is made, of that pair of men's shoes at the price printed on the carton, the seller is allowed a quarter; dark green signifies fifteen cents; blue ten, and yellow five. We take stock here twice a year and after our inventory is complete, we know what stickers should be cleared out, and the colored discs go on the boxes. The plan proves a strong incentive for my clerks to make some money on the side or a little extra cash. They are cautioned to use fair judgment and intelligence, to study their customers, and not foist any of the P.M. stuff on persons who will buy high-priced, stylish footwear. To every establishment there come callers who are always looking for a snap, a bargain or a reduction of some kind, and, if some sound sense is shown, I do not see the slightest objection to the commission proposition. It works out in a mutually advantageous way here."

Another shoeman in the same city, when asked his views, said he never believed or encouraged such a practice. "I do not countenance the plan and for this reason," he added: "It has a tendency, in my mind, to induce a clerk to work off something on a customer which that person may not want, as the salesman knows that he may make a little money on the side. If there is anything displeasing it is to have an article foisted on you that you do not like or have cause to regret that you have bought. The chances are that you will not come back to that establishment again. We prefer to allow customers the widest latitude in the matter of selec-

tions and not urge them to buy by specious pleas or other means something they do not take a notion to. We reduce prices on lines that are stickers, sell at a fair margin, but keep things moving."

Give the Traveler Fair Treatment

"Yes, some merchants take particular delight in keeping a traveler hanging around a store for an hour or more, thinking that a traveler's time is of no value. Now, with me," said a Winnipeg shoe man, "I always give a road man prompt attention and listen politely to what he has to say. If I want anything, I go and look at his goods, but if his proposition does not appeal to me, I tell him so in a gentlemanly manner, and allow him to go about his business while I go about mine. There is no sense, honor or square dealing in keeping a traveler awaiting your pleasure or whim when you are not busy. It is far better to give him a hearing at once. I was on the road myself for a number of years before branching out in the retail line, and I know how to use a selling representative politely and considerately; at least I hope I do, and that is more than I can say of some fussy, irritable, consequential individuals upon whom I used to call in the interest of the Quebec house that I represented. If a boss treated some of his sales force in the abrupt, peremptory manner that he does certain traveling men, the former would not stay with him twenty-four hours.

An Enterprising Firm

The accompanying illustration shows the interior of the shoe department of Ludlow Bros.' new furnishing store on Dalhousie St., Brantford. Charles H. Ludlow has been in the shoe trade for six years, and is a good judge and salesman of footgear. His brother, Austin Ludlow, supervises the men's clothing and fur-

Interior of Ludlow Bros. store, Brantford.

nishing branches of the business. Their premises are 72 feet deep and 33 feet wide, being divided in the centre by a partition which runs about half-way to the front of the building. The firm carry a representative line of trunks, valises and traveling bags. The men's shoe department is to the front of the premises, and the ladies' at the rear. A well selected stock fills the shelves. The firm are in the pleasing position that, when a customer steps inside, they are able to clothe him completely from head to heel. Since removing to the larger quarters in May last the shoe turnover has been doubled.

They Should Practise The Things They Preach

A Roadman Tells of How Some Retail Clerks and Certain Commercial Men Fail to Appreciate the Worth of Canadian Made Shoes—An Incident in a London Hotel Which Proved Somewhat of an Eye-opener

"I was in a shoe store in Western Ontario," remarked a traveler for a well known Montreal factory, "when the clerks were discussing the small salaries paid by Canadian retailers in comparison to what some salesmen got on the other side of the line where the reward is double and even treble of what is handed out to the average clerk in Canada.

"One young fellow spoke up and said that he was at a loss to understand it. It was not fair, and he had a purple grouch.

"I will tell you what is the matter," remarked I. "The whole source of the complaint which you are airing is that you sell and recommend American shoes, on which your boss does not make a large profit as he would if you disposed of equally good Canadian stuff. He has to pay thirty per cent. duty on every pair and that does not count in the margin of profit. If you would hustle a little more for Canadian footwear your chief would make more money; his customers would be equally as well satisfied, and he would then be in the position to give you more generous salaries."

"I guess that you are right," remarked the young fellow after some thought. "It never occurred to me in that light before."

"I was in the rotunda of the hotel in the same city—London—and a traveler for a Toronto carpet house came up to me and said, 'Hello Tompkins, selling shoes still?'"

"I answered that I was trying to."

Read Him a Severe Lesson

"Well," he inquired, "can you tell me how it is that, as I go to Windsor and call over to Detroit every two or three months, I can get a good nifty pair of patent colt shoes there for four dollars. Yet if I buy a pair in this city I am charged by any retailer five dollars for the very same boot."

"Well, you get a five dollar shoe here," I answered. "In Detroit you get a four dollar shoe. You obtain just what you pay for."

"Nonsense," he answered. "It is equally as good value." I soon showed him that it was not. Then I sailed into him. "What are you squealing about anyway? You should be the last man on earth to talk up American goods. Why, I have just bought new coverings for the floor of my Toronto house. I paid your firm nearly two hundred dollars and made no kick. Here you are running around boasting you have saved one dollar on a pair of shoes, and a man of your standing too! Until you know as much about shoes, their build, make, quality, and wear as you do regarding carpets, you had better keep quiet."

Lays Blame on Travelers

"I made that fellow sick of his argument in a short time. I had my ire up and there were twenty-seven travelers in the rotunda at the time. It was about seven o'clock in the evening. They all traversed Western Ontario, most of them going as far as Windsor. Selling Canadian goods as they were, I wanted to test their loyalty. I went around and remarked to each man: 'Pardon me, but just to settle a certain argument, whose make of shoes do you wear?'"

"I found out of the twenty-seven men twenty-three were wearing American-made boots. To-day I venture to say that fully three-quarters of the road men, who go near the border selling various lines of goods, buy American footwear. They talk up Canadian stuff in their own arena but fail to practise what they preach.

They Think it Enterprising

"I was talking to a leading Woodward Avenue shoe merchant in Detroit some time ago. He told me that he had received a notice from a foremost Canadian shoe factory that they were going to send over one of their travelers to sell him some of their goods. They thought there should be a fine market for Canadian shoes in

Detroit owing to several thousand former residents of the Dominion living in that city.

"Do you know," he added, "that I could not sell any Canadian shoes here, even if I filled my window full of the very best lines. The people would say, Oh, I guess that our own make is good enough for us, and I would lose all my select trade."

"Yet how many Canadian stores are fond of sticking out a sign, 'American footwear.' They regard such an announcement as enterprising. Would that Canadian people were a little more loyal and appreciative of their own home products, energy and progress. They do not have to take a back seat with any in the shoe or any other line."

An "Old Timer" on the Road

There are few men in the shoe business in Ontario, and even beyond its borders, who are not acquainted with C. E. Fice, better known as "Charley." His first engagement as a traveler

was in 1886, with the late Joseph Bonnick, Toronto, who then represented the Granby Rubber Co. He was with Mr. Bonnick two years, and joined the staff of the W. B. Hamilton Shoe Co., Toronto, with whom he remained eleven years, covering the territory east of Toronto. He next went with the John McPherson Co., of Hamilton, for a number of years and devoted his attention to the Maritime Provinces and Newfoundland. Twelve years ago he became identified with J. & T. Bell, of Montreal, and has ably looked after their interests in Western Ontario from Toronto to Windsor. Prior to going on the road Charley was, in the early eighties, with Marshall Field and Co., in Chicago. He was born in Col'ourg, but for many years has resided in Toronto. He is genial and gentlemanly, and well liked by a host of friends. He can curl and bowl, and is an enthusiastic member

of the Granite Club, of Toronto. A good story is told of him. He was once in Seaforth and was about to take a train. It was raining heavily, and he gave his grip to "Billy," a very industrious porter, who never was slow about looking after road men, especially if there was a quarter hovering around. The 'bus driver was also mail carrier, and had halted at the post office opposite to receive the mail bags. Two men, rather roughly dressed, were standing outside of the hotel waiting for the conveyance along with "Billy," who held Mr. Fice's grip. Owing to the descending moisture, Mr. Fice remained in the corridor with the door partly ajar waiting for the vehicle. The driver shouted across:

"How many have you got for me to-day, Billy?"

"Three," replied the obsequious porter, "two gentlemen and one traveler."

"Just think of that compliment," remarked Charley, "and after me handing him a quarter, for him to insinuate on the public street that I was 'no gentleman.'"

The accompanying picture affords a lifelike representation of Mr. Fice in 1896.

1. How would you start a Boot and Shoe business on a cash capital of \$1,000?

Cash Prizes of \$10, \$7 and \$5 for the best answers

2. How would you start in the same line of business on a cash capital of \$2,500?

Cash Prizes of \$10, \$7 and \$5 for the best answers

Men already in business can use their own actual experiences as a basis for an article, telling how they would enter the field if they had to do it again with a capital of either \$1,000 or \$2,500.

The "Shoe and Leather Journal" should also have some good stories from young men who contemplate going into business, and who have, no doubt, figured how they would do it on a certain cash capital.

The question is: If you had \$1,000 or \$2,500 in the bank and wanted to start in the shoe business, carrying heavy, medium and special lines, rubbers, findings, etc., how would you go about it?

Tell just how you would spend your money on fixtures and stock, how you would go about your buying, what you would buy, and why; what financial accommodation you would desire and how you would arrange it; what amount you would invest in working shoes, walking boots, light goods, rubber shoes,

novelties, findings, and the various other lines that would constitute your stock. What would you set aside for rent, advertising, and "a nest egg" account.

We thought first of specifying a particular set of circumstances to govern each competition, but decided against this idea when we considered how widely different in details are the problems which confront merchants in different localities when they start in business. We would much prefer that contestants take conditions as they exist in their own towns, or others with which they are familiar.

Don't imagine that it will be necessary to write your story out in fine literary style. We don't care much if you scribble it on wrapping paper, so long as the facts are plain. We'll attend to putting it into good newspaper form. Literary merit won't count for a fraction of a point when it comes to the judging of the entries.

These Competitions will close March 20

In addition to the prize-winning stories we will publish all others that possess sufficient merit, and for each one so used the "Shoe and Leather Journal" will pay \$3. This means that every contestant who devotes some little time and study to his story is pretty sure of receiving at least \$3 for his trouble, not to speak of the benefit that such thought and calculation will bring to him personally. For any further information you desire regarding these competitions write

Public Spiritedness on the Part of Shoe Merchants

Busy Retailers, Who Devote Some Time to Interest of the Community, Do Not Suffer According to Uncle Hy's Opinion—He Tells What He Will Do as Mayor for the Business Concerns of the Town

By H. M. TANDY

"I'm much honored to see ye, gentlemen," said Uncle Hy, emerging from the back of his shoe store as three of the town's foremost citizens, headed by Silas Pettibone, came in the front door in a body. "What kin I do ye fer," he added facetiously.

"We be a committee of three," spoke up Silas Pettibone. "waitin' on ye at the request of the free and independent voters

"We be a committee of three waiting on you to offer you the nomination for Mayor of Possum Centre."

of this 'ere community to offer ye the nomination for mayor of Possum Centre."

Uncle Hy's jaw dropped in astonishment. "Well, well, this is a mighty big surprise, boys. How does it come about, anyway?"

"Wall," began Silas Pettibone, "we bin noticin' that you seem to know somethin' about runnin' a store, and as we wants a live feller fer mayor, someone suggested you, so here we be."

Chock Full of Ideas

"Much obleeged to ye, gentlemen, fer the compliment, an' I won't keep ye waitin' fer my decision. I'll run, an' by ginger, I'll git elected, too, if you fellows will help. I got some idee on runnin' a town, boys. They may cost some money at the start, but we wouldn't be spending it, we'd be investin' it. There's a heap o' difference. I certainly am proud of the honor ye be conferrin' on me, gentlemen, an' want ye to hev a drink on the house." So saying, Uncle Hy went behind the counter and soon reappeared with four mugs, one of which he handed to each of the committee with the remark, "I allus keeps some of this cider on tap, so as I kin ask my customers to hev a drink without leavin' the premises."

"Yer health, Hy," said one.

"Good luck," said another.

"Here's to the future mayor of Possum Centre," said No. 3.

Uncle Hy responded with "Much obleeged," and the committee took its leave.

Go to a Busy Man to Do It

"What d'ye think of that, Billy?" asked Uncle Hy, turning to his assistant, not without some show of pride, it must be admitted.

"Of course, it's fine to think of you running for mayor, Mr. Brown," replied Billy, "but won't it take a lot of time, and you're a busy man?"

"Billy my boy," said the old man, impressively, "here's a tip from the boss. If you want anything done go get a busy man to do it fer ye. The other kind hev no time. That's what's known as a paradox, but it's jest as true as yer a foot high."

"It will be a great honor for the store, Mr. Brown," Billy continued.

"It will that—and unless I lose my guess it ain't going to make the receipts fall off any," replied the proprietor. "Here's my platform—As mayor of Possum Centre I will allus do everythin' I kin to serve the people in every way possible. Ev'ry good citizen of this 'ere community will allus find me ready to lend a hand.

And as proprietor of the Possum Centre Shoe Emporium, I will be glad to welcome any extra trade that may be attracted here by the fact that I am the High Mogul, so to speak.

Trade With the One Getting On

"It's human nature, me boy, fer people to want to trade with the man that seems to be gittin' on. There's some people as would trade here whether I was mayor or not—but there's some will think as soon as I git to be mayor, God willing, that the shoes we sell will look finer and wear longer than they used to afore I was elected. Ain't it strange?"

"Mighty strange, Mr. Brown," responded Billy. "But when you're elected you'll get a chance to start some of those improvements you have been telling me we needed in Possum Centre."

"You bet yer life, Billy, we'll improve this old town some. First thing I do, I'll hev the main street paved. Goodness knows it's needed it fer years, but none of the town officials seemed to hev life enough to git it done. An' we'll put in some more street lights, so as people kin see what's goin' on at night an' want to come down town. An' we'll sprinkle the streets an' keep 'em clean. I'll git arter the merchants to paint their places up an' slick 'em up so as they'll look like somethin'. If I hev my way we'll show the natives that a town don't hev to be as big as Toronto or Montreal to be alive." Uncle Hy walked up and down with the excitement of his plans showing plainly in his face.

Would Benefit the Retailers

"It will cost something, Mr. Brown—the taxes I mean," suggested Billy.

"Yes, sure it will," replied the boss, "but it'll come back to the storekeepers by sellin' more stuff. Folks won't buy much from catalogs when they kin walk down a nice lookin' street, into bright

Uncle Hy's first civic improvement—paving the main street.

and spick an' span shoe stores, and see the latest up-to-date footgear on the shelves at reasonable prices, no siree. An' people will find their buildin' lots goin' up in price, fer people like to come an' live in a town like ours is goin' to be. An' farmers is goin' to come in with their crops, because this will be a good place to sell stuff, an' then they'll do their tradin' here. Why it's as simple as—as—runnin' a store," said the old shopkeeper.

In the Role of Chief Magistrate

"There's just one thing that I can see that stands between us and Spotless Town," said Billy.

"What's that?"

"The election hasn't come off yet."

"Well, we'll see, Billy. But as the city fellers say 'I got a hunch' that the next mayor of Possum Centre an' the proprietor of the Possum Centre Shoe Emporium is one an' the same person.

You Should Have a Definite Buying Policy

Showing the Value of Buying in Larger Lots From Fewer Manufacturers—Cold Business Logic, Not Personality, Should Decide Issue—Good Stock-Keeping System Essential to Knowing How Much to Buy.

In a few weeks the "knights of the grip" will begin to spread out all over Canada with fall trade samples. The shoe retailer will soon have to exercise his judgment many times monthly in selecting from the great number of samples offered him, styles and qualities of footgear suitable to his trade, and his surroundings. In this task judgment is required fully as much, or even more than, experience. And this judgment is a very hard thing to acquire if the store is run on the happy-go-lucky methods only too common in all parts of Canada to-day.

Common Sense, Plus Knowledge

After all, buying judgment is simply common sense plus a minute knowledge of even the slightest details of stock movement from day to day. The shoeman who knows at any moment what is selling, why it is selling, and the minor details of the daily sales movements, is not putting nearly the same strain on his judgment as is the man with the "by-guess-and-by-gosh" methods that some shoemen, as well as other retailers, still see fit to employ. And he cannot have this detailed knowledge unless he employs some stock-keeping system that is elastic enough to record daily sales as they take place, as well as all buying that is done. And such a system must, above all else, be *accurate*. An erroneous entry here, a poor figure there, a total placed in the wrong column may mean the difference between profit and loss on a certain line, because, acting on such information the retailer may make purchases absolutely unnecessary, thus loading up his shelves with excess baggage, so to speak, and heaping up trouble for himself in future.

Simple Stock-Keeping Essential

Stock-keeping systems have been repeatedly discussed in previous issues of the SHOE AND LEATHER JOURNAL. Suffice it

to say here that one of the main essentials of such a system is a stock book—or even several—that are not unwieldy; that can even be slipped into the pocket if necessary, thus saving time in case a quick buying trip be planned at any time. While on the train, or in a spare moment on the trip, calculations can be made, and the retailer may know exactly where he stands on each and every line in his store. Of course, this presupposes careful and accurate entries of all purchases added to stock and sales taken therefrom. The reader will find such a system of stock-keeping thoroughly discussed in the December 15th issue of the SHOE AND LEATHER JOURNAL. Such a system is easily imitated, and every retailer who is in any doubt as to where he stands should remove such doubt by adopting some accurate method like this before this fall buying begins. It will probably necessitate a thorough stock-taking as a starter, and a careful record made from the results ascertained, after which it will be fairly easy to keep close track of every sale made and purchase added.

Do You Buy Scientifically?

Let us suppose that you know exactly where you stand as far as your stock is concerned. This is but one factor in the situation. Do you adopt scientific buying methods? Plenty of talk is heard these days about the principles of salesmanship—and no one needs applied salesmanship more than many shoe retailers—but on the principle that goods well bought are half sold, correct buying is even more important. And right here is where 50 per cent. of all retail buyers "fall down." Some place business solely on account of the personality of the traveler; some try to give as many small orders as possible to different firms on certain competitive lines, somewhat on the principle of an advertising manager, who splits his appropriation for certain publicity purposes into as many small amounts as possible in an effort to satisfy all the hungry solicitors who want to see the color of his money.

But is this a wise policy? The up-to-date ad. man will reply most emphatically in the negative. He studies long and carefully, picks out the mediums that reach the class he wishes to reach in the best and cheapest manner, and gives them the business. Now, why on earth should not the shoeman follow out this principle and act likewise? Forget Tom, Dick or Harry for the minute! They are all nice fellows, and they all want a slice of your business, but get away from all such considerations and down to brass tacks. What company makes the shoes that seem to suit my trade the best; that sell the easiest; that leave me the most profit, and assure me a solid repeat business? Go through your stock in order. Ask this question in connection with infants' lines, with boys', girls', misses', women's and men's shoes. Be thorough in this effort to arrive at accurate information, and be guided only by cold business logic, even if you have to shut yourself up in a cyclone cellar while you are pondering on the problem.

Big Orders Gain Consideration

When you have finally decided on your buying policy, and on the firms to which you will give your orders in the different lines, stick to your guns. It takes cold nerve in these days when so many houses are on the keen hunt after business, but as you wish for the highest success do not "split your appropriation" any more than you can help. If you buy 90 pairs from one firm rather than six 15-pair lots from six competitive firms, you will gain the good will and attention of the one firm, and you will not lose anything in the estimation of the other five, for in these days of big things, the 15-pair man is likely to receive scant con-

In Business to Make Money

It is becoming more generally recognized that the basic principle of trading is to please the customer. This attitude is, perhaps, the outstanding feature of modern development. Recent remarks from the largest retail organization in Canada and across the line read somewhat as follows, "We are in business to make money, but aside from that, and as the means of doing that, we have one sole object, to please the consumer?"

This is merely a happy phrase to many concerns rather than the bedrock of business.

Once a shoe retailer firmly recognizes this principle of the rights of the customer he can work backward. He reasons how to give the customer what is wanted in agreeable surroundings; how to maintain, protect and develop these means of service.

The idea is to make the most perfect, most efficient, most economical machinery possible.

To our mind this policy of service explains changing conditions in retailing. Distribution economy will continue to go on. It often means fewer stores in the community, but larger and better ones.

sideration in a time of business rush or delayed orders. That is only human nature.

Results of This Policy

This policy should be carried out fearlessly with every line handled. It will result in fewer left-over sizes, odd styles and bargain sales. It will also make sorting orders many times easier, and it will decrease the book-keeping and correspondence in just the proportion that the number of firms are decreased. When any concessions are to be gained, the shoeman who hands in good-sized initial and repeat orders is sure to get them. That also is human nature. It simply means that the shoeman adopting this policy makes himself more or less of a power with five or six firms, or less, as the case may be, instead of a nonentity with two or three times that many.

Knows When to Quit

One more thing is worthy of note. Even when this kind of buying policy has been decided on, it is well indeed to know just when to quit. Some shoemen let the travelers decide for them—a foolish proceeding; and then they have to resort to cancelations later on, or what is worse, hair-splitting claims as

to inferior quality goods, in order to avoid tying up unnecessary capital on their shelves. To know just what one wants in any one line, both in quality and quantity, and then to carry out that policy with every line handled, is correct buying, and hence selling success.

Beneficial to Everyone

It may be objected that such a buying policy would be injurious to many manufacturing firms, as many would be cut out of present business. Not at all. That is a very superficial way of approaching the question. There are no absolutely *best* firms for all retailers in any one line. Some houses may turn out a product that suits a certain class of trade much better than others doing competitive business; the next man may suit still another retailer with different problems to handle much better, and so it goes, in all lines. Every manufacturer would get about the same business as now, but he would get it from fewer retailers in larger lots.

The SHOE AND LEATHER JOURNAL believes that a policy of this nature is in the interests of every one concerned, and will be very glad to hear from any interested party, whether manufacturer or retailer, at any time, upon this important matter.

ST. VALENTINE IN THE REALM OF SHOES

Artistic and attractive Valentine window of G. G. Gales & Co., of Montreal, which attracted a great deal of favorable comment, and was full of evening footwear suggestions.

Latest Style in Fall and Winter Shoes

(Continued from page 50)

shapes. High toes and short vamps are not going out in a hurry; but slowly and surely the flat receding toe appears to be coming back, and in his fall ordering the retailer will do well to keep his eye on this prospect. When it is a fact actually accomplished, and when "gingerbread" effects such as big perforations, freak toe caps, etc., are a thing of the past, both manufacturer and retailer will be better off—the former because of decreased lasting expense and increased output; the latter on account of better wearing qualities and increased comfort.

The "Rocker" Line Shown

One of the things that may catch on to a certain extent this season is the new "rocker" shoe. It may prove popular with a certain number of buyers, but most manufacturers have only a few samples of this production, and these are simply used to brighten up the line. One peculiar thing about the "rocker" is that a moderately high toe when built on this last looks re-

One of the newest and nattiest of men's shoes

markably elevated. The extreme point of the sole is in many cases $\frac{3}{4}$ inch higher than it is at the tread of the foot, and the concave surface of the sole is of such a nature that it is about $\frac{1}{8}$ of an inch higher at the edge than in the middle.

The Semi-High Effect

The new half-high or semi-high shoe may be described as a go-between the extreme high-cut and the oxford. It is called by some manufacturers an "eight-button oxford," and comes up just above the ankle, while the front has a very full effect, and to all appearances a button boot is being worn.

Some very high-cut button boots for women are being shown in tan and cloth, as many as twenty buttons being seen on several of these offerings. The height ranges from 10 to 12 inches. Many shoes possess viscolized soles and are generally much more substantial than what is being offered for spring and summer.

Bals Replacing Bluchers

In both men's and women's lace boots there is a tendency for the bal to replace the blucher, particularly in the more expensive lines. On all models with the receding toe, heels average about an eighth of an inch lower than last season.

The SHOE AND LEATHER JOURNAL will go further into the subject of style tendencies for fall in the next few issues, giving

illustrations and concrete examples of what the various firms are turning out. Incidentally, it will pay every retailer to note carefully what manufacturers are offering in fall styles in the advertising columns of this paper. You will thus get into immediate touch with firms that can fill your trade requirements early and satisfactorily.

Attached are presented brief descriptions of some of the lines which a few Canadian firms are featuring for fall and winter. Certain factories have not yet completed their samples, but a summary of their presentations will be given in succeeding editions of this paper.

Soft Superior Creations]

The Minister, Myles Shoe Company, of Toronto, are exhibiting a very representative range, which includes all the novelties of the season. In feminine footwear they are showing a tan eight-button oxford with high toe of the semi-high pattern, which is a very fetching creation. Another offering is the over-gaiter shoe for women, with patent forepart, nubuck quarters and lapped vamp, receding toe and Cuban heel, fancy ivory buttons straight down the side. Another of the over-gaiter effects is a button with melton top, lapped quarters and 12-8ths heel. It has a receding toe. Still another offering is a melton button shoe with rubber sole and heel with a fairly high toe, fleece lined, with leather back and front strap. It is twelve inches tall, with twenty buttons. Another line is ten inches high, with two straps and buckle at the top, made of winter calf, with viscolized sole, blucher cut, unlined, with rope stitching. In men's shoes there are several with the receding toe and flat broad heel. Samples of the "rocker" and other novelties are displayed. The better lines all carry lower toes, but the bold high toe has by no means been abandoned, and a number of models are made after this fashion. There is a liberal showing of both bals and buttons in gun metal calf, velours calf, tan Russia, winter calf and patent. The firm report that the showing in patents will be in about the same proportion as last season. Button boots for men will be strong favorites, at any rate their popularity is likely to advance.

Several Choice Novelties

The McDermott Shoe Co., Montreal, are showing a fine range of new samples in women's shoes, two new lasts, a medium high toe, with a medium high heel, and a medium high toe, low heel. A nice innovation is a McKay, 13-button Gypsy cut in dull kid, vici-kid and ooze calf. Another is a 16-button in patent, gun metal, tan calf, matt calf and black velvet top. A combination lace and button shoe in tan will doubtless be popular. It has 13 buttons and 6 eyelets, and is ribbon laced. They are showing several samples of the gaiter shoe, those with black and grey cloth tops, being especially tasteful. A good selection of kids is shown. Their variety in pumps, satin, corded and other styles is as great as ever. Another neat line is a tan calf blucher with a wing tip.

Men's High Grade Specialty

The Hartt Boot and Shoe Company, of Fredericton, N.B., write that they thoroughly endorse the policy which was suggested in the SHOE AND LEATHER JOURNAL to the effect that retailers should sell at uneven prices instead of advancing figures by half-dollars and dollars. The company declare that footwear merchants should adopt odd prices, and the sooner it is done the better it will be for all concerned. They say that it seems plain that shoe manufacturers, who wish to continue making goods up to the standard as in the past, must obtain a greater price for their products as all the makers have to bow to the inevitable, and pay more both for upper and sole stock, as the result of periodical advances since last season's prices were made. The firm declare that their policy has been for several seasons to produce a high grade specialty shoe for men only, and that

this policy will be maintained. Under no circumstances will they skin the product for the sake of producing a shoe at a price, but rather aim at a higher standard if possible, as to the quality of their creations. George H. Ferguson will represent the Hartt Company in the far West; Walter M. Jardine and L. Farewell in the central West; Harvey Graham in Western Ontario; John G. Settle, Eastern Ontario and Quebec; C. Hazen McGee and A. Fenton Kierstead in the Maritime Provinces.

A New Shoe for Boys

The Tebbutt Shoe and Leather Company, of Three Rivers, Quebec, report that they have had the best business season in the history of the firm. They have had to increase their output during the past year in order to keep pace with the "Doctor's Antiseptic" and "Professor" shoes. For the fall they report they have something new for their "Doctor's" shoes, the American and Canadian patents of which have been applied for. In hockey bals. they have some original as well as their regular lines, which are now recognized as being among the best in the Dominion. They report that the best sellers for fall and winter will be tan and black winter calf and gun metals. In boys' boots the Tebbutt Company say they are getting out a line that has been long sought after, a shoe that can not be kicked out by the average urchin. They now claim they have acquired this.

New Cushion Soles Shown

The W. B. Hamilton Shoe Company, Toronto, are showing several select lines for both men and women, leather lined and with viscolized soles. A new departure is a genuine cushion insole, made of the finest piano felt, for women, in dongola and gun metal leathers. The company are also manufacturing cushion soles for men in velours, gun metal and other leathers. A blucher box calf for men with plain quarters and tip of scalloped design with double perforations is attractive, and commanding considerable attention. Edges have wheeled effects and rope stitching on a number of productions. Gun metal, willow calf, storm calf and patent are displayed in pleasing patterns and the usual representation of buttons is seen. Toes for the most part are fairly high, with heels inclined to be a little lower and vamps about the same length as last season. Some new lasts have been acquired and all the models embody much the same characteristics as last season with soles heavier and a more liberal representation in wetproof footwear suitable for fall and winter.

Nice Things For Growing Girls

Kirvan-Doig, Limited, of Montreal, have a very representative line for fall and winter, and are showing a new range in growing girls' sizes, in gun metal calf, with cloth top, and in patent with cloth or leather top, which they expect will prove big sellers. Another choice line in growing girls is witnessed in gun metal pumps. In little gents', misses' and children's warm goods, fleece-lined, they are showing several new lasts in different leathers and trims. The firm have never presented to the trade a better or more artistic collection than they are doing at the present time. They will move into a new and commodious three-storey brick factory in Maisonneuve in August next, which departure has been rendered necessary by the constantly increasing volume of the business of this progressive house.

Graceful Fall Showings

The C. E. McKean Company, of Quebec, report that they are putting in several new lasts of the latest type and most up-to-date pattern. They are making a specialty of young men's welts, sizes from 3½ to 5½, inclusive, and are very positive that these will make a big hit with the trade. They believe that tan calf will be very popular for fall wear, and are looking for a big season in this line. C. E. McKean and Wm. Clark will carry the firm's lines west of Port Arthur; S. G. Best will represent them in Western Ontario, and J. A. John-

ston in Eastern Ontario, while N. F. Tanner and H. D. Lewis will carry their goods in the Maritime Provinces.

Some Nifty Specimens

The Macfarlane Shoe Company, of Montreal, are displaying a fine white nubuck range in infants' and children's, with square toe. In welts there are some effective offerings in infants' and children's with low heels and high cut. One particularly catchy selection is a child's red dongola top with patent vamp. In women's slippers suitable for evening wear there is a classy range, and in pumps with cross straps and 1-8 heel a good showing is made in all the leading leathers and widths, especially in vici kid, patent and white buck. The firm are also presenting a complete range in little gents', youths' slip soles, college girls' patent blucher bal. with dull calf top, misses' patent whole foxed button and other equally attractive makes.

Neat Feminine Footwear

Walker, Parker & Company, Toronto, are showing a large number of high-cut buttons for women in gun metal and willow calf, the majority carrying an 11-8-inch heel, with extension edge ornamented with cross rope stitching. Many of the high-cuts carry seventeen and eighteen buttons. Toes generally are a little rounded and wider than last year, with an absence of the swing effect and built on straighter lasts. Heels, generally speaking, are one-eighth of an inch lower, and vamps about the same length as last season. A number of buttons are shown, with black and tan melton quarters. In the new overgaiter lines there is seen a patent with cravenette top and straight side button, with back strap and toe cap, while another of the same

Will the Razor Toe Come Back?

The foregoing is an old-timer—at least it looks so—but this style of shoe was worn by many ladies and even men in Canada about ten years ago. It is a genuine razor toe and no mistake. The leather is an olive green kid and the heel is a modified French or concave. It is said that an attempt is being made by certain last makers to revive the razor toe for next spring, but as they are prolific breeders of corns and other pedal ailments, it is doubtful if the effort will meet with any measure of success. How would you like to sport a pair these days?

type with tan forepart, melton top and lapped quarters is decidedly neat. Soles are inclined to be rather heavier. Another noticeable offering is a patent fourteen-button boot on a stage last, with tip and single sole. Extreme effects are eschewed, and plain, neat shapely models are observable in all the autumn lines.

Some Neat Offerings

Lachance & Tanguay, Quebec, are showing a woman's McKay patent, short vamp, $\frac{3}{4}$ fox, Milo button, velvet top. This is a very nice shoe, with a $1\frac{1}{2}$ -inch heel, extremely natty. A new last just put in for men and boys is particularly nice, patent blucher, short vamp, high toe, dull calf top. They should strike the taste of men and boys wanting a comfortable shoe. They are strong on hockey shoes, in which they have changed all their patterns. One new hockey shoe has two straps instead of one.

In the Heavier Lines

C. B. Dayfoot & Co. of Georgetown, Ont., say that among their special lines for the coming fall season they are giving most prominence to their high cut Goodyear welt boots for surveyors, prospectors, hunters and all others who require a welt boot which will stand the hardest wear, and keep the wearer's feet dry in the wet service which that class of footwear is so often subjected. For the far north and prairie trade the firm are also featuring a line of Goodyear welt shoes with felt soles, which contain a number of decidedly new and unique features in that class of footwear.

Style Not Fads

J. A. & M. Cote of St. Hyacinthe, Que., write that they have added Goodyear welts in men's work on two staple lasts, one medium toe and one narrower. The retailer who will buy these lines will have the advantage of style without the disadvantage of fads. All of their Goodyear lines are stamped "Yamaska" Brand, which means that they are all made with solid leather heel, counter and box toe. These Goodyear lines are made in 10, 12 and 15-inch sporting bluchers, and in cotton and leather lined low cut bluchers. Apart from their new lines in Goodyear welts, they expect their regular trade in staples, in pegged and standard screw and lock stitch work, including long boots, sporting bluchers, and medium cut bluchers. A feature of fall samples is heavy sole lines in men's and boys' for the British Columbia trade, made at the suggestion of Mr. M. L. Savage, who has been attending to that trade for this firm of late years.

Some Stylish Button Lines

The Relindo Shoe Company, of Toronto, are showing among their varied lines an eighteen-button boot for women in nubuck on stage and pup lasts, with bird's eye buttons. The selections for fall and winter evidence an increasing number of button boots. A tan overgaiter with tweed top on a stage last and a patent leather overgaiter with moire silk quarters on a knob toe are fetching samples of good, stylish shoemaking. There is also an eighteen-button boot with a two-inch heel in gun metal, tan and other leathers. A matron's shoe, in Goodyear and McKay, with cushion insole and flexible sole is something new and neat. Another shoe of distinction is a patent with inlaid pearl buttons and short fore part, with black and white stripe top and white thread stitching. A grain kip Napoleon blucher with scalloped top is a winner. A patent leather button with white buck top, and a black ooze button are among the other snappy lines for miladi's wear. A preponderance of the offerings for fall are in button and tans, with the usual average of other leathers.

Classy Custom Shoemaking

The Regal Shoe Company, of Toronto, who have completed their fall samples, certainly show some classy custom shoemaking. Naturally, the models for fall are of the heavier type. The salient points are lower, broader, receding toes, and heels of 10, 11 and 12-8ths; 14 and 15-8ths heels will not be

numerous. The samples for the most part show the straight, custom-shaped last with all frills and furbelows left off. Many have slip soles, and others full double soles. The Regal Company have four new lasts, and the distinctive difference is in the width of the toes. The showings for fall are in smooth king (gun metal effect), board king, patent, and the usual number of tans which are not too light in color. A large proportion of the showing will be in buttons, and the remainder in bals. Comparatively few bluchers will be turned out by the factory here. All the lines for fall evidence smooth shoemaking and possess straight whole vamps or full plain quarters. The conservative medium, quiet effect is noticed in all the Regal creations.

Roomy Toes For Boys

Williams & Son, who are now established in their new factory at Milton, have got well under way, and are turning out attractive samples in little gents', youths' and boys' shoes. They have put in several new lasts, one of which has the swing effect, with fairly high toe while another is of the orthopedic type with broader toe. Some new perforations are shown in their fall samples. The firm make only rivetted and McKay work. They also turn out a number of girls' shoes. The showings for fall are in velours, box calf, kangaroo, dongola and pebbled leathers.

Look For a Good Season

The Fraserville Shoe Company, which has been 27 years in business, was promoted by Mr. A. Lemieux, who first represented Z. Lapierre, of Montreal, in the Maritime Provinces for seventeen years, and then went into business as a jobber. In 1910 he formed the Fraserville Shoe Company, of Fraserville, Que., and was appointed manager. They have put in some new lasts which do not differ radically from the styles of last fall, being on a broad, common-sense principle. Their brand for women is the New York style, and for men the Albany. Their travelers for the coming season will be: M. M. McDougall for Cape Breton, and W. F. Tanner, Prince Edward Island; H. Lewis for Nova Scotia; A. Lemieux, Jr., for New Brunswick, A. H. Dionne for South Quebec, and J. Lessard for North Quebec.

Unjust Claims on Manufacturers

"The other day we had a pair of patent leather shoes returned to us by a retailer who asked that we make good the pair. We found," remarked a Toronto shoe manufacturer, "that the fault complained of us was not ours at all. The boxes in the toe had gone soft owing to excessive perspiration. The wearer, we learned on inquiry, had suffered from intense sweating of the feet all summer, and the water had literally oozed through the leather, rotting it. Naturally, the boxes, being made of sole leather, would undergo the same thing as sole leather does when placed in water—become soft. The shoes had been worn at least three months, and we did not see our way clear to replace them. The cause of much of the trouble and misunderstanding of to-day results from the retailers lacking back-bone. A customer goes into them and has a grievance which is frequently not a just one. The dealer, fearful of losing a good patron, blandly remarks, "Leave the footwear with me. I will send the goods back to the factory and think perhaps I can secure a new pair for you." If factories granted all the claims made upon them they might as well go out of business at once. Shoes are subjected to all sorts of strain, stress and hard usage, and, while a moiety of the demands may be just, there is much that the manufacturer is in no way responsible for. We honor all reasonable claims, but do not guarantee that shoes will last forever and a day."

Because a customer does not see things as you do is not necessarily evidence that he is wrong.

The scrappy salesman may win some arguments, but he will win mighty few customers.

Shoe Traveler Who Tried to Please Everybody

How He Landed in a Western Ontario Town, Sought to Stop at Two Hotels, Had to Act as a Porter, and Get Down on His Haunches to a Retailer—He is "Wiser" Now.

"Yes, I have had some funny experiences on the road," remarked a Toronto traveler who has been selling shoes for close onto thirty years. "Our firm got word from a man some years ago, a resident of a town near Berlin, Ont., who was about to open a shoe shop. He asked that our traveler call on him. We could not get in connection with our regular man, and accordingly I had to make a special trip. I was unacquainted with the town. I did not know the hotels and had no chance to ask any one what was the house at which the 'boys' usually stopped.

"When I got off at the station, I heard a lusty chap shouting out a certain hotel which I will call the Standard. I went up to him and asked what was the commercial hotel of the place.

"I keep it," he rejoined, "come right along with me."

"I went with him but soon doubted the wisdom of my course. This incident I vividly recall. When I got inside and signed the register, I inquired if Jones, our regular man, stopped there. The proprietor hesitated and finally said that he did.

"Has he been here lately? I asked.

"Yes," he answered, "only a few days ago."

I Knew He Was Lying

"I looked back over the register but could not discover his signature. I believed the fellow was lying at the time, but I did not care to say so. The house was an old ramshackle one and I thought, now that I am here I will have to make the best of it. I went up street and called on the new retailer, telling him that I was taking the place of our regular man whom we could not locate. Just then he asked me where I was staying, and I told him at the Standard. He said all right and told me to get my samples unpacked and he would be down after dinner to look them over.

"On my way back I passed a fine, new, neat-appearing hotel, and outside stood a traveling friend of mine.

"Hello, Thomson," he called, "are you lost up here?"

"No," I answered, and told him my mission.

"Where are you staying?"

"At the Standard."

"Good gracious! How did you happen to land in that joint?"

"I informed him how it came about. He remarked: 'Come in here. This is the spot. I will introduce you to the proprietor, who is a friend of mine.' I went in, became acquainted and looked at the sample rooms, which were clean and attractive.

Consented to Change Hotels

"I finally said that I had registered at the Standard, but had my checks for my trunks in my pocket and my grip was down in the office.

"Look here," I observed. "If you care to go down and get my grip from the Standard and make arrangements to haul my trunks up here I will gladly change."

"The proprietor of the new hotel said he would, and I became a guest at the Royal.

"The Royal boniface went down to the Standard, and after a lively altercation, got my grip, but he almost had a scrap to secure it. My trunks were soon up from the depot and I had my lines all unpacked ready to show Jennings, who was to call in the afternoon. I enjoyed dinner and went out for a short walk. I met Jennings and another man, to whom he introduced me, going down to the Standard. I then told them that, since making the morning call I had changed houses and my samples were over to the Royal. Jennings and his friend held a whispered consultation, and finally the former said:

Between Two Trying Positions

"Well, I will never go into that hotel—the Royal—I have no use for the place. You should have remained at the Standard.

No sir, if you want me to inspect your shoes bring them down to the Standard, or no order from me. That is final.'

"Now I did not want to lose the business of this new shoe retailer, and I was in a quandary. It seems that the man who was with Jennings was a relative of the landlord of the Standard. He had been in the shoe business once himself and was going to help Jennings make his selections. He had induced him to utter his ultimatum about not going to the Royal—for you know that blood is thicker than water.

"We threshed the whole thing out on the street for nearly an hour, but Jennings was obdurate. I saw that I would have to remove my trunks back to the Standard or go home without any business. I finally went back to the Royal, and explained to the proprietor the peculiar predicament that I was in. He listened but was not sympathetic. I then went down to the Standard and told that hotelman that I had changed my mind and would stop with him after all. He was angry at my leaving in the first instance, and declined to send for my trunks, and the rival hotel also refused to help me to take out my paraphernalia.

"There I was between two fires and could not engage a rig of any kind. I knew not what to do, but finally I discovered an old farmer. He had brought some produce into town and I told him if he would take over my trunks from the Royal to the Standard I would give him a dollar. He was rather reluctant in regard to undertaking the task, but eventually replied that if I would help him he supposed he could do the job.

Traveler Held Farmer's Horses

"It was raining at the time and we drove up to the Royal. I had to hold the horses by the head while the farmer went into the sample room and hauled out my trunks, which I had repacked. Finally we got them into the democrat wagon and went down to the Standard where, we had to carry them into an old, dingy, dirty room.

"Then Jennings came down, but it was late in the afternoon. There were no electric lights or gas in the building. I begged a light from the proprietor. He gave me an old, smoky, greasy coal oil lamp and an evil smelling lantern. Then the retailer and myself examined shoes for some hours by the misty rays of the lantern and lamp, on tables that were about to topple over and amid surroundings of the stuffiest and most unhealthy kind.

"I secured a very good order from Jennings, and took the first train back to Toronto. I never went to bed for fear that 'bed bugs' would eat me alive, and a madder, more unnerved man you never saw after my experience.

"I was green and impressionable in those days, but I have changed my tactics now and select what hotel I please. If a shoe merchant does not care to come there and view my samples he can stay away. I want no such a trying, brow-beating experience as I had in that Western Ontario village. One dose of that kind is enough for me. I know what hotel I am going to stay at now before I land in a town, and there I remain. I do not act as porter, cartage agent, transfer man, apologist, and general helper in order to make a sale of shoes."

The Best Sellers in Soft Soles

Velvet shoes and white buck shoes are reported to be the best sellers in infants' soft soles, according to one manufacturer. The pinks, once so popular, are now about out, and white and patent combinations have largely taken their places. Baby blue is a popular leather. Some factories make white shoes with white soles.

Things Heard Among the Shoe and Leather Trades

Interesting Notes Gathered from a Variety of Sources and Put Into Short Shape for the Perusal of Subscribers—
Personal Movements and Other Events That Help to Make Up the Round of Daily Life

R. C. Boyes has opened a shoe shop in Mission City, B.C.

Alex. Epstein has opened a shoe shop in Morris, Man.

Mathieu and De Villers, shoe retailers of Montreal, have dissolved partnership.

The Fenlin Leather Co. of Montreal have dissolved partnership.

Mde. Moise Pierre & Son, shoe retailers of Montreal, have dissolved partnership.

George A. Slater and W. P. Hodges of George A. Slater, Limited, Montreal, were in Toronto last week on business.

D. Lorne McGibbon of Montreal was a visitor to Toronto on Monday and Tuesday last.

William Arnold, 834 Somerset St., Ottawa, died last week. N. A. Arnold, shoe retailer of Ottawa, is a son.

R. M. Northgrave of St. Mary's, Ont., has removed his shoe business to the R. T. Gilpin stand, a few doors east.

The premises of Richard George, shoemaker of Port Hope, were destroyed by fire recently.

The Marshall Shoe and Leather Co. of Hamilton were visited by a fire which did small damage.

William Chamberlain, of Galt, was in Toronto last week attending the big automobile show at the Armouries.

W. J. Honeyford, of Collingwood, is having some improvements made to his boot and shoe store.

George G. Lennox, wholesale footwear merchant, Winnipeg, was in Toronto and Montreal last week.

J. E. Wentworth has taken over the controlling interest of the Victor Shoe Manufacturing Co. of Victoria.

T. J. Lang of Millbrook, Ont., was in Toronto calling on the shoe trade last week.

I. B. Brook of Melita, Man., was a visitor to Toronto last week. He is one of the live shoemen of the West.

George E. Boulter of Toronto has returned from spending a few days in Montreal.

James Robinson of Montreal was in Toronto for a couple of days last week on a business trip.

Philip Pocock of the London Shoe Company, London, was among the visitors of the trade in Toronto last week.

D. D. Hawthorne of Toronto is spending a few days among the shoe factories of Montreal and Quebec.

Jacob Kaufman and wife of Berlin, Ont., who have been spending several weeks in Cuba and Florida, have returned home.

J. T. Walters, shoeman, 209 George St., Toronto, has had a severe attack of la grippe.

J. T. Parker of the Walker, Parker and Co., Toronto, has returned after spending a few days at Atlantic City and New York.

John Readman, dealer in dry goods and shoes, of Harrow, Ont., was burned out last week.

Fire did some damage to the premises

of Dechene & Co., dry goods and shoe dealers, Quebec City.

R. H. Greene, manager of the shoe department of the Gutta Percha and Rubber Mfg. Co., Toronto, was in Montreal last week on a business trip.

Thomas Ryan & Company, who'sale shoes, will erect an addition to their building, corner of Bannatyne Ave. and King St., Winnipeg, at a cost of \$10,000.

H. G. Hodges, shoe retailer of Chatham, Ont., has disposed of his business to Turrell & Dell. Mr. Hodges will locate in the West.

Fred Walker and Robert Wishart, of Portage la Prairie, Man., have bought out the boot and shoe business of L. O. Whisler, of Stettler.

J. J. Duggan, manager of the Montreal branch of the Kaufman Rubber Co., was in Toronto and Berlin last week on business.

A. Angus, assistant sales manager of Ames, Holden, McCready, Limited, Montreal, spent a few days in Toronto last week on business.

Porter and Robbins of Yarmouth, N.S., expect to make some additions and improvements to their shoe store at an early date.

Wm. Garside of Garside and White, who, with Mrs. Garside, has been spending some time in Florida, returned to Toronto last week.

R. J. Younge, general sales manager of the Consolidated Rubber Co., Montreal, was in Hamilton, London and Toronto on a business trip last week.

W. H. Miner, vice-president and general manager of the Miner Rubber Co., Granby, Que., was in Toronto last week on business.

C. A. Davies of Blachford, Davies and Co., Toronto, was in Montreal and Quebec last week inspecting the fall and winter samples of Eastern factories.

J. Garden of the Garden Clothing Co., Calgary, was in Toronto last week calling upon a number of members in the shoe trade.

Mr. Welsh, who has had considerable experience as a shoe clerk, has leased the store lately occupied by H. E. Austin of Gananogue and will open out for himself.

Mr. Saunders, corner of Bloor St. and Brunswick Ave., has opened a new repairing shop near the corner of Spadina and College Street, Toronto.

W. E. Short, Western Canada representative of the Kingsbury Footwear Co. of Montreal, left last week on an extended tour of the Prairie Provinces.

L. M. Stock of the Walker, Parker and Co. staff of salesmen, left Toronto this week on his semi-annual business trip to the West with fall and winter samples.

W. A. Hamilton of the W. B. Hamilton Shoe Co., Toronto, spent a few days recently among the trade in Montreal and Quebec.

Johnston and Murray, who recently bought out the shoe business of W. B. Lawson of London, have put in an attractive new front and have given the premises

a general renovation. The new firm seem to be making a good start.

J. G. McDiarmid left Toronto last week after spending a few days in Kingston, for Western Canada, in the interest of the Cook-Fitzgerald Co. of London.

Robert Paynter, who has been instructor in the boot and shoe department in the provincial penitentiary, Kingston, has sent in his resignation. He may start business for himself in that city.

P. J. Losier, who has had charge of the shoe department of the McKinnon Co. at Weyburn, Sask., for the past five years, has embarked in the boot business in that town.

William W. Williams, of the firm of Williams, Clark & Co., of Lynn, Mass., and one of the largest shoe manufacturers in the United States, died at his home recently in Boston.

Lewis Godbolt, of Winnipeg, Western Canada representative for J. & T. Bell, of Montreal, has been spending some weeks with his wife and family in Los Angeles, Cal.

H. E. Wettlaufer, Western Canada representative of Charles A. Ahrens & Co., Berlin, has gone on his semi-annual western trip to the coast with fall and winter samples.

Bachrack Bros., Limited, of Toronto, have taken out a permit for the erection of a four-storey warehouse on the west side of Bay St., near Richmond, to cost \$20,000.

Hardie & Moore, who have had sample rooms in the Pacific Building, Scott St., Toronto, have removed to 189 Church St., where they have larger and more attractive quarters.

J. A. Walker of the Walker, Parker and Co., Toronto, was in Walkerton last week attending the funeral of his brother-in-law, W. M. Dack, ex-M.P.P., registrar of Bruce County, who was a former editor of *Kin-cardine Reporter*.

Only one boot and shoe firm in the city submitted a tender to the Board of Control when the latter called for four hundred pairs of boots to be supplied to the Montreal fire department, and this one was rejected.

On March 11th the ratepayers of Aurora will vote on a by-law to grant a bonus of \$10,000 to the Collis Leather Co. to assist them to establish a tannery. The industry agrees to employ 50 hands and \$25,000 will be spent in buildings and machinery.

W. G. Hardie, Western Canada representative of the Minister, Myles Shoe Co. of Toronto, left this week for the West in the interest of his firm. J. A. Shibley of Saskatoon, Sask., who also represents the same house in the West, was in Toronto last week for his fall and winter samples.

Fire started in the shoe store of F. C. Taylor, 48 Rideau St., Ottawa, the other evening and caused \$100 damage to the shelving and stock. A moving picture proprietor across the street noticed the blaze and running across with a chemical extinguisher, put out the flames.

C. S. Hyman and Company, leather goods manufacturers and tanners of London, will

shortly locate in Calgary. This firm has written the city with regard to purchasing some municipal properties in East Calgary for the purpose of building a large wholesale warehouse.

J. A. Viaux has been appointed representative of the W. B. Hamilton Shoe Co., Toronto, for Montreal city. W. H. Jardine, L. S. McKinsey and C. H. Smith, Western Canada representatives of the firm, have started on their trips with new fall samples.

The Milwaukee Lace Paper Co., manufacturers of laces of all kinds, Milwaukee, Wis., have secured larger quarters for their New York branch. The address of the firm in that city is now 44 Barclay St. Much better facilities are afforded the company in their new premises for caring for their rapidly increasing trade.

The many friends of W. G. Berscht of Guelph, who is on the traveling staff of McLaren & Dallas of Toronto, will be glad to learn that he is recovering from his recent attack of typhoid fever. While in the hospital Mr. Berscht received the good news that a young shoe salesman had called at his home and was going to stay.

The Miner Rubber Co.'s goods are being handled this season by the followings firms: Jackson and Savage, Montreal; F. Maranda, Quebec; R. B. Griffith and Co., Hamilton; Coates, Burns and Wanless, London; W. A. Marsh Co., Western Limited, Winnipeg; Dowling and Creelman, Brandon; and J. M. Humphrey and Co., St. John, N.B.

"Jim" Sutherland's hockey team in Kingston was defeated in the two contests for the senior O.H.A. championship by the Eatons of Toronto, the score being 16 goals to 12 in favor of the latter. H. E. Wettlaufer refereed the game in Kingston, which went to the Frontenacs by 8 goals to 3, but as they were beaten in Toronto by 13 to 4, the Toronto exponents captured the senior cup.

The famous Mendelssohn choir of Toronto, which has been giving such signally successful concerts in Boston, New York, and Buffalo, under the capable direction of Dr. A. S. Vogt, has been winning unstinted praise for its excellent work from the American press. Dr. Vogt is a brother of

Oscar Vogt, manager of the Great West Felt Co. of Elmira, and is a former resident of that enterprising burgh.

J. H. Brundle, Western Ontario representative, and J. Birss, Eastern Ontario representative for the Williams Shoe Co., Brampton, have just returned from the Winnipeg curling bonspiel, where they not only had a swell outing, but brought back some of the jewelry. Out of twenty games played their rink won sixteen, this being the best showing ever made by an Ontario rink in twenty-four years.

R. W. Matheson, who for the last three years has been manager for A. Levy, shoe retailer, 260 Yonge St., Toronto, left last week for Edmonton, Alta., where he takes the management of the shoe department of the Hudson Bay Company's store. Mr. Matheson has had some eighteen years' thorough experience in the footwear business, and many friends will wish him every success in his new position.

The North British Rubber Co., whose Canadian headquarters are at 43 Colborne St., Toronto, E. L. Kingsley manager, are handling the rubber footwear trade this season in Eastern and Northern Ontario direct from the Toronto office. In Western Ontario the Clark Shoe Co. of Brantford are their selling representatives; in the Province of Quebec; Frank Stafford and Co. of Montreal, and in the Maritime Provinces the R. Tanner Co., Limited., of Pictou, N.S.

Miss Josephine Patton, of Baltimore, Md., bought a pair of shoes, which she wore for several days. Their tightness caused a slight irritation on the little toe of her right foot. Miss Patton thought it would wear off in a few days, but it developed ulceration. The foot began to swell, and then the leg. Miss Patton applied for treatment at a hospital, where the case was diagnosed as a gangrenous affection. The foot was opened and the wound sterilized, but it became more virulent, and recently the leg was taken off just below the hip.

A New Use for Plumes

It is said that the use of plumage will be inverted this year, and the woman of fashion will wear it upon her feet instead of on her head. Beautifully shaded, irides-

cent feathers will be glued to the shoes, and buckles will be composed of masses of ostriches or other plumage. But a certain Western lady of great wealth has devised an even more extravagant scheme in the jewelled slippers she wears. They are made of cloth of gold, with diamond buckles, and many large diamonds set in the high French heels.

No Rush for Shoe Tenders

Although the city of Montreal is Canada's biggest shoe manufacturing centre, only one tender was received for the 400 pairs of boots to be supplied to the fire department, and after examination that one tender was rejected as being unsuitable. A year ago, at about the same date, the contrary happened. There were many tenderers when tenders were called for boots for the police department, and the Court of Appeal is still busy with a case against the city arising from alleged illegal tampering with tenders. The lowest tenderer was Mr. W. West, but the next lowest tenderer, Mr. L. P. Robitaille, was allowed by the council, to revise his price and meet Mr. West. As a consequence, an action was entered against Montreal by Mr. West, who lost in first instance; he is now in appeal. The scarcity of tenders is attributed to the action of the council last year.

Jolly Time at Dinner

The employers and employes of Waterbury & Rising, Limited, St. John, N.B., had their annual celebration last week. Hitherto it has been customary to have a drive and dinner, but this year to make it possible for the travelers to be present, this custom was departed from and the dinner alone was held. The slight change in plans, however, in no way affected the success of the celebration. The attendance was large, and the feeling of goodfellowship which this firm boasts of was always in evidence. Prior to the dinner, representatives of the wholesale and retail departments had a bowling match in which the latter pulled out a victory. The bill of fare was most elaborate, as was also the souvenir menu cards on which it was printed. The toasts of the evening brought forth many bright and witty speeches, in which E. L. Rising, the president, R. J. Walsh, R. G. Haley, W. B. Tennant and others were heard. Mr. Rising, in his address, took occasion to refer to the rapid strides which the firm have made in their business, and which he attributed to the happy co-operation on the part of the employers and employes.

Wears Diamond Heeled Shoes

Mrs. C. H. Anthony, of Muncie, Ind., who recently astonished Washington society, has a passion for expensive clothes. She was also lately in New York. She has twenty-five evening gowns, with hats to match. Her shoes are a revelation. She has six pairs studded with diamonds, one pair set with turquoises, bronze shoes covered with beads of solid gold, and two massive golden anklets brilliant with gems. Mrs. Anthony is probably the only woman in the world who keeps her shoes in a bank vault. One pair is of cloth of gold with big diamonds embedded in the heels; another pair is of duchesse lace, even to the heels, upon which diamonds sparkle like drops of dew. Slippers of silver and gold brocade, of blue and pink, their heels all set with diamonds, are an array fit for any Cirderella. One especially handsome pair of street boots in bronze are covered with gold beads, while another pair of white doeskin have jeweled buttons. The

The Home of Blackit and Brownit Boot Polishes

The foregoing picture affords a view of the extensive factories of Carr and Son., London, Eng., manufacturers of the famous Blackit and Brownit boot polishes. The firm were established in 1837 and have built up a very wide connection. The selling agents for Canada are John T. Rigg and Co., 32 Church St., Toronto, who carry a large and representative stock of their goods as well as Carr's Snowflake for white boots, belts, etc., Carr's Imperial Boot Cream and Carr's Blackit and Brownit

polishing outfits. These polishes contain no acid, do not crack the boots and impart a clear, brilliant shine that is waterproof and will not rub off on the clothes. Messrs. Rigg and Co. are also Canadian selling agents for the guaranteed "Revolite" Jumbo rubber heels, which come in thirteen different sizes, and are made by the Revolite Co., Limited, of Manchester, Eng. These heels are of the finest quality of pure Para rubber, and have already commanded a big sale in the Dominion.

other day Mrs. Anthony wore red buckskin shoes with sardonix buttons. She startled the other guests at President Taft's reception to members of Congress by wearing shoes with diamond studded heels.

Quarter of Century on the Road

A quarter of a century on the road and as good a man as ever is the record of F. W. Laskey, of Montreal. He knows the Maritime Provinces like a book and numbers scores of retailers among his personal friends.

He started in the shoe line with Waterbury and Rising, of St. John, N.B., and was with that firm for ten years. His next position was with the Colonial House, of Montreal, with whom he remained eight years. In 1905 he joined the staff of salesmen of the Tetrault Shoe Manufacturing Co., of Montreal, and his territory is the Maritime Provinces, where he is widely known. Mr. Laskey is a genial and companionable man, a shrewd salesman, and one who likes the road. He has made a success of his work, and covers ground thoroughly and rapidly, leaving no stones unturned.

One of Canada's Finest Stores

The interior of the Regal Shoe Store of Winnipeg, Man., S. T. Bates, proprietor, has been entirely remodelled and renovated throughout, thus giving the store a men's depot, in which all the fittings are of solid oak, while the walls are beautifully decorated. The Regal has also placed at the disposal of the fair sex of Winnipeg a beautifully fitted apartment in mission oak, for high cut shoes only. Upstairs the slipper and hosiery depot is finished in white and gold, very artistically arranged, and Eastern travelers who journey from Halifax to Vancouver have remarked that it is now one of the finest shoe houses in Canada. In fact, the management do not know of anything more inviting to be found in the United States. To be fully appreciated a visit to the store is necessary, and Mr. Bates is to be congratulated on his enterprise and spirit of progress.

Spring Goods Being Shipped

The shoe trade throughout the country has been only fairly satisfactory during the past two weeks, owing to the roads being blocked by heavy snow drifts, while the stormy weather has proved a deterrent. The jobbing houses are busy shipping out spring goods, which are being marked up and placed on the shelves by a large number of shoemen in the anticipation of a remarkably good season preceding Easter, which this year falls on April 7th. Travelers report that the one special feature which characterizes the demand is a large number of enquiries for women's tan button boots with the high toe, short vamp and Cuban heel. The average number of buttons is about 12 to 14, while there are some enquiries for high cut stock of the type which is sometimes known as $\frac{3}{4}$ length or the Langtry cut. Several travelers have left for the West with fall and winter samples, while others will be out in a few weeks. In Ontario all the manufacturers practically have their fall showings ready and during the coming month representatives will tour

the provinces in all directions, presenting to the eye of the retailer some very neat creations in the way of fall footwear.

Travelers Want Better Accommodation

The requiring of all hotels in local option municipalities to take out licenses, thus bringing them under the general license law, and the appointment of additional provincial inspectors, will likely result from the call made upon the Ontario Government last week by the representatives of the commercial travelers of Ontario. The deputation presented the case for better hotel accommodation in two parts; one dealing with conditions in licensed hotels, and the other with conditions in the local option centres. The long list of grievances of commercial men was set out in detail, together with a number of suggested reforms. Some of them were not received with favor, but from the comments of the Provincial Secretary the two referred to may be given effect in the liquor license act when it comes before the Legislature.

Mr. Joseph Zammers, who dealt with the licensed hotels, stated that the Association had circularized its members and had obtained a complete record from which to prepare its case. The matters most complained of were unsanitary conditions, poor heating and insufficient bed clothing, as well as meals of doubtful quality. The sample-rooms were often cold and dirty.

Among those present were Mr. Robert

silk half hose, 35 cents a pair (sold here between December 21st and January 5th), 750 dozens of these socks had already been sold by other stores at 50 cents a pair, when we took over the balance from the manufacturer, and offered them at 35 cents. Finding now that these socks did not give satisfaction in wear, we ask that all that were purchased here be returned at once, and we will refund the money or exchange them for other socks."

A store that treats its customers like that is building up a reputation for fair dealing that will prove a very valuable business asset

Proposal to Tax Mail Order Houses

At the annual meeting of the Ontario Associated Boards of Trade, held recently in Toronto, an interesting topic to all shoe retailers came up for discussion in the matter of the "Taxation of Mail Order Houses."

R. Home Smith of Toronto suggested that it be given a hoist, and the Executive Committee be allowed to consider it and submit it to the next meeting. He said that it could not be given proper consideration as the convention had been depleted in numbers by the fact that a large percentage had gone home. Seemingly, the chief objection to the mail order business was that it did serious injury to the trade of the rural merchants.

The resolution as presented by the Goderich Board of Trade said in part:

The attractive front of Charles E. Raven's shoe store, St. Thomas, Ontario, who is one of the go-ahead retailers in Western Ontario.

Gemmell, president of the Commercial Travelers' Association of Canada; Mr. J. W. Moodie, chairman of the Hotel Committee; Mr. H. W. Lynd, vice-president of the Ontario Association; Mr. A. Robinson, secretary of the Ontario Association, and Mr. James Sargant, secretary of the Canadian Association.

John Wanamaker's Way

This is how John Wanamaker deals with customers who have bought goods at his store that prove unsatisfactory. He buys them back again. This is proven by the following, which is an extract from the regular newspaper advertisement of that store: "In this case we believe in the recall. To those who purchased men's shot

"That this board is satisfied that the large departmental stores and others which carry on business by the system known as the retail mail order and catalogue system, are doing a serious injury to the merchants throughout the province, and as they contribute nothing toward the upkeep of the various municipalities, an effort should be made to remedy or to mitigate this evil." It was suggested that the Legislature pass an act making it compulsory for a house carrying on the mail order business to pay a fixed annual fee to each municipality in which goods are sold and delivered, or pay an assessment on the value of all goods sold and delivered in each municipality other than the one where the place of business was situated.

Ontario Shoe Manufacturers Form an Association

**Energetic Body of Officers Elected—Constitution and By-Laws Drawn
Up—Several Companies Make Additions to Equipment—
Consolidated Rubber Co. Has Prosperous Year.**

A representative gathering of the boot and shoe manufacturers of the province was held a few days ago in the offices of Canadian Manufacturers' Association at the Traders' Bank Building, Toronto, when an organization which will be known as the Ontario Shoe Manufacturers' Association, was formed. A preliminary gathering took place some few weeks ago. At the session on Feb. 16th plans were completed, officers elected, a constitution and by-laws drawn up, and other important matters attended to.

The following officers were elected for the coming year:—

President—Alex. Brandon, Brantford, Ont.

Vice-President—J. A. Walker, Toronto.

Sec.-treas.—G. M. Murray, Toronto, (Secretary of the Canadian Manufacturers' Association).

Board of Directors—J. S. King, Toronto; Chester B. Hamilton, Toronto; Alfred Minister, Toronto; E. J. Getty, Galt; J. A. McPherson, Hamilton; and E. E. Donovan, London.

The date of the annual meeting was fixed to take place in February of each year, and special meetings will be called at the direction of the Executive Committee.

The organization starts with bright prospects, and with practically all the manufacturing firms in Ontario as members. The object of the body is to discuss and consider matters of mutual interest and concern, and to take action on any trade and manufacturing problems that may arise from time to time.

The organization will be both of a social and business character. The members will seek to become better acquainted with one another, and will form a section of the Canadian Manufacturers' Association. No attempt will be made to regulate prices, but problems of administration, selling methods, style tendencies, shipping facilities and other questions will likely form live issues.

The newly-organized body has aggressive officers and will work along lines similar to the shoe section which was recently organized by the manufacturers in Montreal.

The tanners of the province may also shortly form a section of the Canadian Manufacturers' Association, having recently been granted permission to organize.

Big Profits of Consolidated Co.

The annual meeting of the Canadian Consolidated Rubber Company was held on Feb. 29th in Montreal. The total net profits were \$415,310.52, and after allowing for bond interest, preferred and common stock dividends amounting to \$405,842, leaving the sum of \$9,468.32 to be carried forward to credit of profit and loss.

Mr. D. Lorne McGibbon, the president, made the following statement:—

"The operations of your company for the year 1911 have resulted in an increase of over 22 per cent. in the sale of general rubber goods, and although, owing to reductions in prices, the returns from sales of footwear have been less than in the

previous year, the actual number of pairs sold have been greater.

"The year has been a most important one in the footwear division of your business, as evidencing that the retail shoe trade of this country has appreciated and availed itself of the opportunity—first presented on a large scale by your company—of buying rubber footwear direct from the manufacturer.

"The success of this method of marketing a great proportion of your goods has now been demonstrated, notwithstanding the many difficulties and extraordinary expenses inseparable from the establishment of a large number of new branches and the organization of a greatly enlarged selling, shipping and accounting force.

"The total number of branches at which stocks are now carried is 27, exclusive of the stocks of footwear, which, under a contract recently entered into with Ames-Holden-McCready, Limited, are carried by that company in eight of the principal cities of the Dominion.

"The total manufacturing profits of the subsidiary companies amounted to \$489,465.32, from which has to be deducted the sum of \$74,154.80, being the net cost to the Consolidated Company for marketing the products of the subsidiary companies, in excess of the commissions to which it was entitled under its selling arrangement with the subsidiary companies. It was necessary to fix an arbitrary commission for the first year, which commission, although not sufficient to meet all the expenses for the first year, your board believe to be a fair one, as in future the Consolidated Company will not have to incur the extraordinary expenses already referred to in connection with the establishment of its new organization to act as selling agents for the subsidiary companies. The total net profits of the Consolidated Company and its subsidiary companies for the past year amounted to the sum of \$415,310.52, and the payments for bond interest, preferred and common dividends amounted to \$405,842.

"During the past year, extensive improvements and additions have been made by your manufacturing companies to both their equipment and buildings, costing \$742,650.81, and with the increased facilities thus provided for the manufacture of their various products and the greatly augmented efficiency of the selling force, your directors feel justified in confidently expecting that the present year will produce results which will be most acceptable to the shareholders."

In and Out of the Factories

Joseph Pruneau, shoe manufacturer of Quebec, has made an assignment.

A. J. Kimmel of the Kimmel Felt Co., Berlin, spent a few days in Montreal last week.

Mr. Smiley of the Merchants' Rubber Co. of Berlin, Ont., spent a few days last week in Montreal on business.

The G. V. Oberholtzer Co. of Berlin have installed a rapid standard screw and other

machines, and report the trade outlook as promising.

George Rumpel and Oscar Rumpel of the Berlin Felt Boot Co., Berlin, were in Montreal last week on business.

Charles A. Ahrens & Co., Berlin, have recently added a U. S. M. gearless sole cutter, and other machines to their factory equipment.

Moose Jaw expects to have several new industries locate in that city during the coming year, among them being a new tannery.

It is learned that the shoe factory, which was to have located in Petrolea, will be established in Stratford, where the necessary capital stock was raised within a few days.

It is understood that Calgary, Alberta, will shortly have a boot and shoe factory locate in that city. It is expected that the industry will locate there early in 1912.

R. Dack & Son, 71 King St. West, Toronto, have recently installed a Miller twin treeing machine, and are enlarging their manufacturing department. The output of the firm will be considerably increased.

The Berlin Shoe Manufacturing Co. of Berlin have placed in their factory an Ensign lacing and royal power perforating machines, and finishing shafts. They have recently made extensive improvements to their office and sample rooms.

The firm of J. B. Blouin, Limited, has been formed at Quebec to take over the business of J. B. Blouin & Fils, shoe manufacturers of Levis, Que. The capital of the company is \$100,000, and its chief place of business will be at Notre Dame de la Victoire, Que.

Christian Merner, one of the oldest and earliest settlers of New Hamburg, Ont., passed away recently in his 81st year. He had resided in the village since 1837. He was a relative of E. Merner, president of the New Hamburg Felt Boot Co., and a brother of the late Senator Samuel Merner.

The Robert Taylor Co., of Halifax, N.S., have completed a four-storey addition to the south side of their shoe factory, and have installed considerable new machinery. Everything is now running smoothly, and with the increased facilities the firm expect to be able to keep up with their orders.

The Petrolea, Ont., Topic says. It is quite possible that the Dunford Shoe Company will not establish a factory in Petrolea. Sufficient stock has not been subscribed to warrant the company establishing here. But a few hundred dollars are needed and it is to be regretted that the necessary capital is not forthcoming. Every industry which locates in Petrolea makes it easier to secure another, but every industry which is lost to the town makes it that much harder.

The United Shoe Machinery Co. are gradually removing to their new factory in Maisonneuve. The work is being done by departments so that the company's service to manufacturers will not be interrupted. The greater part of the business will be conducted from the new place early in March. Mr. Knowlton states that the company will retain a store in the centre of the city to serve expeditiously manufacturers who are not in Maisonneuve.

A sitting of the Judicial Commission, which for some weeks has been inquiring

into the alleged combine of the United Shoe Machinery Co., and hearing evidence in Montreal, Quebec and Levis, was to have been held in Toronto a few days ago, but was postponed for a week. The adjourned sitting should have taken place on Thursday last, but none of the members of the judicial body put in an appearance.

All the shoe factories are very busy and many of them have fall samples ready. A large number of visitors from outside points have been in during the past few days inspecting the new lines.

The warehouse of the John Hallam Co., hide merchants, 111 Front St. East, Toronto, was partly destroyed by fire, entailing a damage of \$5,000 to the stock and \$1,000 to the building. The fire broke out in the rear of the office on the main floor, and had made considerable headway before the alarm was sent in. The fire burned furiously for half an hour among the large stacks of hides, and finally worked its way through the ceiling to the second floor, where a quantity of fur was stored. The loss is covered by insurance.

The annual meeting of the Winn Co. of Perth was held last week. The Perth Courier states that none of the Winn brothers, all of whom were directors, were present. The financial statement of the past year's operations, in printed form, was distributed among the stockholders. Various important documents were read, including one from the Winn brothers, jointly resigning their positions as manager and foreman, and the president intimated that Messrs. Winn had sold all their shares to three members of the company, Messrs. Hall, Balderson and Sewell, and were paid their money. The president informed the meeting also that the Winns had caused an injunction to be issued restraining the company from passing a proposed by-law reorganizing the company and changing its name. They also repudiated their resignation. The meeting elected a new board of directors; namely, Messrs. Hall, Balderson, Hanna, W. A. Meighen, Mendels, Foy and Sewell. Mr. Osler, barrister, Toronto, was present on behalf of the company. Mr. Biggar of Hamilton represented Messrs. Winn. The meeting adjourned for two weeks.

The 45th annual meeting of the Amherst Boot and Shoe Company, Limited, was held a few days ago in Amherst, N. S., and was attended by a goodly number of shareholders. The president, Percy C. Black, was in the chair. The reports submitted by the directors and officers were of a most gratifying character and on motion were passed. The company last year paid a semi-annual dividend of seven per cent. on the preferred stock, and at the annual meeting it was decided to pay a dividend of five per cent. on the common stock. The growing trade of the company in Western Canada has led to the organization of a subsidiary concern to be known as the Amherst Central Shoe Company, Limited, with headquarters at Regina. This company will be used as a distributing agency for the products of the present concern in Amherst. The output for the year totalled \$856,000, which is about the same as last year, but the proportion of boots and shoes directly manufactured by the concern is much greater than in any previous year. The directors and officers for the ensuing year are: President, Percy Black; vice-president and secretary-treasurer, T. N. Campbell; manager, C. S. Sutherland; the directors, with the above, are T. S. Rogers, K.C., and E. N. Rhodes, M.P.

QUEBEC TRADE IS BUSY

Several Visitors to the Eastern Shoe Centre —Banquet Held by Retailers—Lively Time During Mardi Gras Week

O. Blouin, shoe dealer, suffered a loss of a couple hundred dollars by fire.

Jas. Muir, Sr., is spending a few days in Montreal on a business trip.

John Perkins, of Duchaine & Perkins, has returned from a trip to the West.

J. B. Drolet was in Montreal last week on business.

Mr. Kilgour, of Kilgour, Rimer & Co., Winnipeg, was in Quebec recently on business.

Joseph Pruneau, shoe manufacturer, and V. Coulombe, shoe retailer, recently assigned.

D. R. Sutherland, of the Sutherland Shoe Co., Pictou, N.S., was in Quebec, attending the Mardi Gras carnival. He placed several orders while in the city.

The Advertising Club held a meeting in the Auditorium recently. J. J. Morgan of the Pilgrim Publicity Association of Boston gave an interesting address on how to properly advertise a town.

J. H. Goyer, representing H. B. Johnson & Co., Toronto; C. S. Pringle of the Canadian Blacking and Cement Co. of Hamilton; and E. A. Whitley of Frederick Whitley & Co., of Montreal, were in Quebec during the past few days.

Among recent callers on the trade here were: Wm. Linklater, of the Boston Blacking Co., Boston; S. W. Vermilyea, of the Belleville Shoe Co., Belleville, Ont.; R. Taylor, of the Robert Taylor Co., Halifax, N.S.; J. J. Gallagher, representing Benj. Moore, of Boston; and Mr. Percival, of Percival Bros., Montreal.

The twenty-fifth anniversary of the marriage of Mr. and Mrs. L. Routier, was celebrated recently and they were the recipients of many evidences of esteem and good will. An address from the leather merchants and the shoe manufacturers was read by J. A. Scott, while an address from the relatives was read on their behalf by L. Ph. Maily. Mr. Routier's nieces, Yvonne Drolet and Marcelle Jolicoeur, presented nice sheaves of roses. The shoe manufacturers and leather merchants gave to each guest souvenir flowers. Mr. Routier was much surprised at the many manifestations of appreciation, and in suitable terms returned thanks to his friends and confreres. Mr. Routier, who is one of the leading shoe manufacturers of the ancient capital, was honored by his employees, who gave him a very nice silver fruit and flower stand. A jolly banquet was held during the evening and all the visitors will long remember the pleasant associations of the occasion. Among the presents received were silver cutlery, a handsome clock, fruit knives, a silver crucifix, a nice bronze representing Joan of Arc, and other gifts.

A Progressive Quebec Retailer

Operating three boot and shoe stores in Quebec, two years president of the Shoe Retailers' Association, and occupying to-day the second vice-presidency, Quebec Council of the Retail Merchants' Association of Canada, L. S. Deschenes, of Quebec city, has had a highly successful career. Mr. Deschenes was born at St. Pacoma, Kam-

ouraska County, Quebec, in June, 1868, and obtained his education at St. Anne's College and Dufresne's business school, at St. Thomas, Quebec. Starting his mercantile career with Talbot and Girard, Fraserville, in 1885, he came to the ancient capital in 1887 and worked as clerk in a number of stores until 1890, when he entered the office of Nap Matte, one of the leading assignees of the city. He remained with him six years and gained a valuable experience in taking stock in many insolvency cases.

Thus he became thoroughly acquainted with the shoe and leather business, and, during a couple of years of depression in trade, he was kept busy making inventories in numerous failures that occurred. He took out a license as auctioneer in 1892, and four years later started in business on his own account as a shoe dealer. He still holds his auctioneer's license. Mr. Deschenes, who is married and the father of six bright children, is an enthusiastic shoe man and has made a success of the footwear trade. To-day he does one of the largest turnovers in the province, and carries a stock of about \$60,000.

Jolly Gathering of The Trade

On Monday, February 19th, the shoe merchants of Quebec City met in the Auditorium Cafe, to take part in a magnificent banquet. They also had the pleasure of having a number of Montreal friends with them. The gathering on the occasion was one that passed off most cheerfully. The merchants and their friends seemed to enter into the spirit of the occasion, and they represented a harmonious gathering. Mr. M. A. Voyer, president of the Boot and Shoe Association, presided in an acceptable manner. Mr. P. J. Cote, federal president of the Retail Merchants of Canada, as well as Mr. M. R. Lasalle, ex-president of the Boot and Shoe Association of Montreal were present. Toasts were drunk to the King, "Our Hosts," "Our Confreres," "The Merchants," "The Travelers and Their Confreres of Quebec" and "The Ladies." The different toasts were proposed by Mr.

A FEW
INSIDE FACTS
ABOUT
EYELETS

BETWEEN two shoe eyelets that present the same appearance in the shoes, there may be a world of difference in the wear. One can resist wear only to the extent of its none too reliable coating of enamel; underneath is the inevitable brass of the brassy eyelet. The other kind (if it is a Fast Color eyelet) is constructed as shown above, and by the way, there is only one kind of eyelet that is Fast Color. They are all made this way, with celluloid tops of solid color and nickel non-corroding barrels. It is impossible for them to wear brassy. They preserve their bright, new appearance throughout the wear of the shoe.

You will readily realize the importance of establishing the identity of these two classes of eyelets and there is a sure way.—Fast Color eyelets have a small diamond  trade mark slightly raised on the surface of each eyelet. No others do. Just fix this fact in your mind, and you will be able to avoid mistakes. No diamond  trade mark—no Fast Color.

United Shoe Machinery Co'y of Canada

OFFICE AND FACTORY: Lagachetiere and St. Monique Sts. - MONTREAL, QUE.

M. A. Voyer, L. S. Deschenes, O. N. Shink, Jos. Plamondon, A. Boisjoli and J. B. Belanger. The responses were happy and practical, and were given by Mr. P. J. Cote, R. Lasalle, L. F. Falardeau, ex-president of the Boot and Shoe Retail Merchants of Canada; J. E. Deslauriers, president of the Boot and Shoe Merchants' Association of Montreal; Jules Gauvin, president of the Dry Goods Merchants' Association of Quebec; Octave Feuiltaut of the house of J. H. Begin; Louis Beaubien, E. Darveau, Ouellet and Brown of Quebec; W. Lessard, commercial traveler of Montreal; Larue, Deschenes, Shink of Quebec; and L. P. Robitaille, secretary of the Retail Boot and Shoe Association of Quebec. Messrs. Deslauriers and Boisjoli contributed patriotic songs. The banquet was one that will be of decided benefit to all those engaged in the business, as not only will it tend to create a better interest among the different men engaged, but will also be the means of protecting the interests of those concerned in the retail shoe business.

A Live Man in the West

From Newfoundland to Saskatchewan is a long jump, but "Harry" Adams, who is selling for the Slater Shoe Co., in Saskatchewan, comes from the Island colony, and for the past three years has spent most of his time in the

West. Harry knows quite a bit about the retail business, for he sold in the retail store of McCrudden & Thompson, St. James St., Montreal, for quite a while. He is popular with his customers and his firm thinks a whole lot of him. "Harry," these days, is wearing a happy smile, which though he has been using it steadily for four months, is not less bright. There is a secret, which we will whisper—Harry is the father of a bright boy that may some day be a fine salesman.

Shoe Prices on the Ascent

"It seems that there will be a general increase in prices of shoes," remarked a jobber this week. "Frequently when I send in an order for certain lines I am told by the manufacturers that it cannot be filled unless the figure is raised from two and a half as high as seven cents per pair. In staples there appears to be more of a tendency than in some of the finer grades. Nearly all the manufacturers are taking action on certain makes and the shoe retailer will have to pay more for his wares. I thought all this talk regarding advanced prices was rather alarming at first and without much foundation, but I am now convinced that there is more than mere hearsay in the predictions."

He Believes in Publicity

"I see that you give much good advice to shoe merchants in general, and I have picked up a number of valuable pointers in reading your paper," writes an Edmonton retailer. "I believe thoroughly in advertising and in giving it the right amount of attention. Do you know that the secret of profitable shoe merchandizing is in keeping your stock clean and turning it over often? I know that advertising, if carefully directed, brings people in more ways than one. If your windows are

properly and artistically dressed with the lines that you advertise, you have a double pulling power on the public. All this will induce persons to enter your store to buy. When I hear a merchant declare that advertising is no good I feel like asking him why he displays a sign over his door or why he decorates his windows, as both are forms of publicity. Then, again, I have heard shoe men object to advertising on the ground that it "costs money." Anything of value in this world does. If advertising costs money so does rent, and if objection is conscientiously taken to the former on this basis, then why pay rent?"

Some New Inventions

The following information has been specially compiled for the CANADIAN SHOE AND LEATHER JOURNAL by Mr. George Hughes, R.P.A., editor of *British Machinist and Patents*, 55 Chancery Lane, London, W.C., England.

19839. Overshoes. J. H. Brown and D. A. Berry, Northampton. A foothold constructed properly to fit the boot or shoe, and to admit of repair, consists of a three-quarter upper, which is shaped over the actual boot, with which the foothold is to be worn and secured by cement to an insole positioned on the boot sole, an outer sole, which is secured by stitching or cement, and adjustable back and instep straps. The foothold extends into the waist of the boot, where a tight joint is secured by the provision of a yielding rib.

19915. Heel Protectors. E. Penton, London. Countersunk metal tips of the type comprising a body portion and integral thin lugs furnished with tangs are provided with holding points, which are located on the body portion on each side of the screw hole.

19965. Lasting. A. Bates, Leicester. Lasting machines of the type described in specification 14453, '07; are provided with a tool for pressing the upper into position, and with a second tool for beating the upper. The presser and the beating tool are carried respectively at the front ends of levers which are normally moved into operative position through a cam by the movement of the knee lever, which throws the plaiting mechanism into gear. The presser is moved horizontally over the shoe bottom by a plunger actuated from the cam shaft while the beating tool receives its movement from a hammer secured in an offset portion of the driven bar. The invention is particularly adapted for use in welted work.

20094. Sole and Heel Protectors. Rickmann, Limited, and F. H. Cann, London. Wedge-shaped protectors are formed with an annular barb projecting towards the tread surface. The inner surface of the protector may be similarly shaped, or provided with two or more retaining lugs. The invention may be applied to hob-nails.

20473. Slippers. Trickett, Limited, O. H. W. Eatough, and A. McAuley, Waterford, Lancs. A slipper or shoe with an upper of a shrinkable material, such as wool, cotton, or the like, is provided with a padding of wool or the like between a felt insole and an outer sole. A skeleton last is placed in the shoe, and steam is passed in, causing the sole to swell. The shoe is then dried on the last by hot air.

20586. Leggings. D. T. Harris and H. F. Cox, Birmingham. Leggings are built up of a number of separate pieces, etc., of leather, canvas, or other material, cut to shape and secured together so that they overlap. Suitable facings and fastenings are attached. The pieces composing the

legging may be disposed vertically or obliquely.

18647. Foot Rests. D. C. Hannah, Glasgow—A footstool for use in fitting on boots and shoes, is provided with an inclined rocking footboard pivoted to the side members. The rocking motion is limited by stops and a cross bar, and the footboard is returned to the normal position by a spring, or by a balance weight. The base may be extended and provided with a kneeling cushion. The underside of the base is covered with canvas, ribbed rubber, or other material to prevent the stool from slipping. Instead of using a pivot rod and eyes, pivot pins may be secured to each side of the footboard or formed integrally with a rod secured to the back of the footboard.

Shoe Business Bred in His Blood

Hailing from the Emerald Island, James Smith Lovell is the son of a shoe retailer, who did business in Bandon, Cork County, for many years. He grew up in a boot shop. Thirty years ago he "abandoned Bandon" and came to Canada. He was for some time with the firm of Smith and Cooper, of Toronto, and then joined a house in Quebec, which made a general line of men's and women's shoes. He represented the firm in the British Isles, and believes that he was the first traveler from Canada who found a successful market in the Old Country for footwear from the Dominion. Mr. Lovell was one of the organizers of the Victoria Shoe Company, Toronto, with which concern he was seven years. For the last year or more he has been with Ames, Holden, McCready, Limited, and covers north-western Ontario. He resides in Toronto, and is one of the veterans of the road. His friends—and they are legion—say that he has the gift of perennial youth, for he does not look any older at the present time than he did twenty years ago. His insight into the shoe business has been a thorough one.

A Modern Factory for Them

The new shoe factory of Kirvan-Doig, Ltd., of Montreal, will be erected on Desjardins Ave. The company expect to move into their commodious quarters in Sept. next and work will be rushed. The new structure will be three storeys high, 100 feet long and 50 ft. wide. The output of the firm, which was established about two years ago, will be trebled. Kirvan-Doig, who have added to the number of their travelers, have been making great strides. The company make the "Good Sense" and "Kirdo" brands of shoes for children, boys, girls, misses and little women, which command a very large trade.

WANTED—A situation in a leather and shoe finding warehouse by a steady Englishman, age 34, good references. E. HARRISON, 89 Swanwick Ave., East Toronto.

FOR SALE—Shoe store fixtures, chairs, tables, mirrors, signs, etc.; also four drawer cash register. Chisholm's Shoe Store, 1687 Dundas Street, West Toronto.

THE BREITHAUPT LEATHER CO. LIMITED

BERLIN - ONTARIO

PENETANG SOLE continues as popular as ever with Leather Dealers, Shoe Manufacturers and Shoemakers from the Atlantic to the Pacific. For wear and water resisting qualities it is unsurpassed, as it is tanned in the old fashioned way, with long time in the vats, (not in wheels or any other quick-tan process.)

EAGLE, (Mellow) Union Oak Tannage, close grain, suitable for both sewed and pegged work. A popular line, *WILL CHANNEL*.

LISTOWEL, non-acid, continues in favor.

Our CUT SOLES and COUNTER department is busier than ever. We solicit your trade.

To the Shoe and Leather Trade

WE CALL the attention of the trade to the fact that we are the original and only manufacturers of Nubuck Leather. It is our invention. We spent our time and money perfecting it, introducing it and advertising it extensively to shoe manufacturer, shoe wholesaler and shoe retailer. It has become deservedly popular and well-known throughout the country, not only because it is a new thing in leather, but because of its downright merit.

Because of its merit and its popularity it is necessarily being imitated, but the imitations are not Nubuck, nor can they be represented or sold as Nubuck.

For the protection of those who are buying Nubuck and for our own protection we shall prevent by legal action the unlawful use of this trade mark name, and we warn the trade accordingly.

FASHION SHOES

WILL
ANSWER
ALL
HER
QUESTIONS

Ever notice how a woman sizes up a shoe?

She does not ask many questions, but she does a great deal of thinking.

She asks *herself*: Is it stylish and dainty? Will it look neat and "go" with her pretty dress? Will it fit comfortably and wear well?

She decides as the shoe appeals to her.

Make sure of your sale by having FASHION Shoes—which will satisfy the most exacting. They appeal on every score.

Mr. Shoe Manufacturer

Industrial peace and uninterrupted production are promoted by shoe manufacturers operating under a Union Stamp Arbitration Contract.

The Union Stamp is a selling factor, the influence of which is equivalent to the work of one or more road salesmen, according to the amount of territory covered by the manufacturer. Wages are fixed upon a competitive basis; the volume of output is largely increased in every Union Stamp factory, thereby reducing manufacturing fixed charges and giving employees more weeks' work in the year.

The Union Stamp is the emblem of peace, which means more business even in dull times.

Manufacturers desiring further information should correspond with the undersigned.

W. L. DOUGLAS
"The World's Greatest Shoemaker"

IMPORTANT ANNOUNCEMENT

Owing to the increasing demand for **W. L. Douglas Men's, Women's and Boys' Shoes** in **Canada**, we have decided to give the **Exclusive Agency** to one **live dealer** in every town.

W. L. DOUGLAS SHOES need no introduction. For over a quarter of a century they have been the most extensively advertised, easiest selling shoes in the world and to-day they are the standard of quality everywhere. They are sold by over 11,000 shoe dealers, as well as through a chain of 78 Exclusive W. L. Douglas Retail Stores, situated in 45 of the principal cities of the United States.

If interested, drop us a postal, and we will give you full particulars relative to the Exclusive Agency for W. L. Douglas shoes and also make arrangements to have a salesman call at your store with our complete line of samples for the coming Fall and Winter trade.

W. L. DOUGLAS SHOE CO., 203 Spark St., Brockton, Massachusetts

FACTORIES OF W. L. DOUGLAS SHOE CO., BROCKTON, MASS., U. S. A. CAPACITY, 17,600 PAIRS A DAY.

The season for "Maltese Cross" Rubbers opened March the fourth.

There are twenty-four selling agencies to distribute this well-known line and some of their travelers will soon be calling upon you.

Wait for them. You don't really know what the Rubber market has to offer till you've looked over the Maltese Cross line.

A FEW
INSIDE FACTS
ABOUT
EYELETS

BETWEEN two shoe eyelets that present the same appearance in the shoes, there may be a world of difference in the wear. One can resist wear only to the extent of its none too reliable coating of enamel; underneath is the inevitable brass of the brassy eyelet. The other kind (if it is a Fast Color eyelet) is constructed as shown above, and by the way, there is only one kind of eyelet that is Fast Color. They are all made this way, with celluloid tops of solid color and nickel non-corroding barrels. It is impossible for them to wear brassy. They preserve their bright, new appearance throughout the wear of the shoe.

You will readily realize the importance of establishing the identity of these two classes of eyelets and there is a sure way.—Fast Color eyelets have a small diamond  trade mark slightly raised on the surface of each eyelet. No others do. Just fix this fact in your mind, and you will be able to avoid mistakes. No diamond  trade mark—no Fast Color.

United Shoe Machinery Co'y of Canada

OFFICE AND FACTORY: LaGauchetiere and St. Monique Sts. - MONTREAL, QUE.

A Variety of Style Varie

If you want variety in your stock of Rubber Footwear you'll buy "Independent" Rubbers.

For if you lay in a comprehensive assortment of Kant Krack, Dainty Mode, Royal and Bull Dog Brands, you will be able to supply the rubber footwear needs of any person.

Now it's a mighty good thing to be able to supply everybody. You don't have to turn anyone away disappointed.

But it isn't such a valuable thing that you can afford to sacrifice quality to get it. For quality, if the price be right, means value and value means satisfaction, and satisfaction means sales.

But—when you can get a big variety of styles and prices with a variety of values—get it by all means.

Kant Krack

JAMES ROBINSON

nd Prices, but no Value

Independent " Rubbers give you a complete range of styles and prices but only one standard of value -full value.

Even if your customers range in station from the navy and the lumberjack to the millionaire you will be able to suit all purses and all requirements.

And the navy and the lumberjack and the millionaire will each be satisfied with the same thing, value.

And value, with "Independent" Rubbers, means more than quality of rubber and workmanship. It means also, fit, comfort, style. And no matter what the price the value is always the same.

Let my salesmen show you why Kant Krack, Dainty Mode, Royal and Bull Dog Brands will increase your sales of rubber footwear.

Dainty Mode

McGill St., MONTREAL

No. 131

No. 133

No. 0155

Three fine-value trunks just added to the "Eveleigh" range

No. 131.—This is a very strong trunk at low price. The box is full size—has fibre binding—angle steel edges (this is not the ordinary tacked-on strip of sheet iron, but heavy gauge angle steel)—long hinges which overlap cover and act as knees—valance clamps—dowels, strong bolts and corners and good lock. Three slats on bottom—leather straps. Lined with printed paper. Tray 7 in. deep. Note low prices: 32 in., \$7.80; 34 in., \$8.15; 36 in., \$8.50.

No. 0155.—A steamer trunk companion to 131—regulation berth height. Same materials and finished identically with 131. 34 in., \$6.75; 36 in., \$7.05; 38 in., \$7.35.

No. 133.—A big roomy trunk very strongly made—front and back cover, edges protected with heavy vulcanized fibre—three slats all around body—four on bottom. Extra strong dowels, bolts, corner and valance clamps, hinges, etc. Heavy leather straps. Linen lined. Tray 7 inches deep with folding cover. 34 in., \$10.75; 36 in., \$11.45.

These new lines are already popular—both the styles and prices are right.

SOMETHING NEW
The So-Cosy "Marilla" Insole
 is another PROFITABLE addition to your finding lines. Ask your jobber about it. If he can't supply you, write us.
 NOW ABOUT IT
 The "Marilla" Insole was designed and patented by a woman. It is made of velvet, and does away entirely with the slipping forward of the foot in PUMPS and OXFORDS, and the heel-piece prevents slipping at the heel. Can be applied with ordinary paste or glue in THREE minutes, and after drying half an hour ARE ready to wear. They cost you \$2.00 per dozen pairs in single pair cartons, and may be retailed at 25 cents, giving you 50 per cent. profit.

Why the Name "Linton" will Always Stand for Quality

TO you there is no virtue in the name "Linton" itself—it's what it stands for that makes it of value to you and your customer. Because Linton Welts have always been high grade in style and in quality of workmanship and leather, the name "Linton" has come to mean reliable footwear.

And because we desire to retain this meaning of the name we cannot afford to allow any fluctuations in "Linton" value.

You'll find that Linton Welts are *always* high grade.

News and Views on Shoe Styles for Fall Wear

The Dome or Round Toe on Women's Lines Shown by Many Makers—Tans and White Goods Likely to be Popular
—The Custom Last for Men—Less Tendency to Far-Fetched Effects—What the Trade is Presenting

Fall styles—what will sell and what will have the call? Opinions are as varied as they are on the majority of debatable and speculative subjects. In pursuance of its promise, the SHOE AND LEATHER JOURNAL presents some further observations on an interesting and timely topic, and in the next issue will give still more information on this engrossing trade proposition.

Canadian manufacturers are presenting their samples for fall, and all the models evidence splendid advance in workmanship, material and style. There has not been anything offered to retailers in a long time that will equal in fit, finish and snappy appearance the productions of the leading shoe makers of the Dominion.

Naturally they disclose a wide range, but certain predominant characteristics are noticeable. In the better lines of shoes the low receding toe asserts itself to a certain extent over the sharp, high and bold one that has held sway for some time. There is some tendency to make more bals. than bluchers while the button boot for men will reign as a strong favorite.

The swing effect is gradually disappearing from a number of models, and the low, flat heel coming to the front. The costliest creations of the trade for males reveal sensible, conservative lines, with no fancy or gingerbread effects, but a neat, stylish and effective boot that can be worn on any occasion. The principal leathers will be gun metal and velours calf, tan russia calf and patent colt. There will, of course, be a few box calf shoes, and some dongola kid, for a certain element of the masculine persuasion always insist upon having this kind of leather.

The button shoe for men has seven or eight buttons, and will be made in a number of shades of tan, principally of the darker hues. It is not to be supposed, however, that the high toe has disappeared, for many manufacturers say that it will be particularly popular among young men, and that like the fold collar in haberdashery, or the stiff hat in headgear, it has come to stay—at least for a length of time. However, there is no doubt that in the more expensive ranges, so far as men's footwear is concerned, the pendulum is swinging back to simpler lines, the custom last, and less eccentric patterns.

Round Toe for the Ladies

In women's fine goods there are several new offerings, and the high or round toe will, to a large extent, prevail, as during the past season. Vamps show but little tendency to increase in length. They are likely to remain about as they are for some time, owing to the fact that most women like a shoe with an abbreviated fore part, as it possesses a smartness that is not characteristic of a long vamp.

More bals. are being shown this season by manufacturers

of women's fine goods, but the button shoe will still be a decided favorite and command a large share of patronage. The prevalence in women's goods is toward slightly lower heels on those lasts which have a receding or round toe, while the tops in many instances are cut a little higher than last season, being of the slant type.

The new over-gaiter shoe is being featured by a number of manufacturers, with cloth tops, and some very nice creations are shown with lapped quarters and lapped vamp. The straight side button effect is artistic. Many fancy buttons are used to

Feathers now on your feet instead of on your head. Feathered feet is fashion's latest fad. It is called the Mercury shoe, made by fixing on the leather the finest ostrich tips.

adorn fabric tops. Heels run from 11-8ths to 13-8ths.

Nubuck is likely to be a popular make of shoes during the season which will commence at Easter. The material has made quite a hit with the consumer, and the coming summer will enhance its popularity. Most of the manufacturers with any variety in their range are showing some samples of nubuck footwear. This is a line that will be generally worn, and because it is new it will be bought by those women who must have the latest.

This is a line that a wide-awake merchant should make money on. Shoes of this sort from reputable factories will cost

The new overgaiter oxford.

the retailer something more than the average run, but will the price the fair wearer pays be correspondingly high? Not if one may judge by past experience.

Whites and Tans the Go

It is stated that the coming summer and fall will be a strong season for tans and white goods. White footwear appears to be on the gain in appreciation for warm weather and early autumn wear. Some manufacturers are talking of low toes for women, but the models shown are for the most part rather full or round. Rope stitching with wide edges is said by a number of makers to be forging in the front.

Oxfords buttoning straight down the side are being shown by a few makers, but whether they will prove big sellers remains to be seen.

A recent despatch from Lynn, Mass., in reference to the custom or English style of footwear is given as representing certain views on styles:

"The custom style in footwear imperils the Lynn shoe trade, because it is a style set up by foreign designers. The New York custom shoe makers favor custom styles. It is very natural for them to do so. They use only a few lasts and make only a few shoes, for which they get much money. The more custom styles are talked about, the better their business will be.

Invasion of English Styles

"But the grave danger to the Lynn shoe trade in pushing custom styles in footwear is the fact that the American custom style shoe corresponds to the prevailing English style in women's footwear. Now the English shoe manufacturers are seeking to gain admission to American markets, and the only thing that keeps them out is the fact that their shoes are not as stylish as American shoes, particularly shoes made in Lynn. But if the American trade drifts back to the conservative styles, then the English manufacturers will readily sell their present style shoes in American markets, because their styles correspond to the American custom styles. It is a great deal easier to keep English shoes out of the American market than it is to drive them out after they are once admitted."

Attached are presented brief descriptions of some of the

lines which a few Canadian firms are featuring for fall and winter. Certain factories have not yet completed their samples, but a summary of their presentations will be given in succeeding editions of this paper.

Showing Round Toes

The Smardon Shoe Company are showing a natty-looking new round toe pump last in turns. They are also displaying a medium round toe last, used more for strap slippers than otherwise, and an exceptionally neat narrow-toed last for stylish evening pumps. In slippers, three distinctive styles are noted, as above: narrow, medium and round toes. One excellent model was noticed; a medium high toe last in tan, with a whipcord cloth top, Cuban heel. In button boots they are featuring high cuts of 13, 15, 17 and 20 buttons in various leathers. These natty creations will be sure sellers. In heavy lines were noticed high-cut bluchers, of winter calf, with buckle and strap at the top. These come in tan and black. The regular high-cut blucher is also revealed. An extremely pretty pump is shown in narrow toe patent, with leather buckle of self leather, cut right into the shoe, instead of in usual Colonial style.

English Lasts to the Front

The Eagle Shoe Company, Montreal, have an entire new set of fresh, bright samples. Three new lasts for men have been added, which include a "Rocker" for the young trade, a new English last for custom trade, and a fac-simile of Hanan's "London" toe. In women's, two new lasts are seen, one of which is the up-to-date round toe, and the other the English custom last for ladies of fashion. The company are showing a strong line in buttons for both men and women in gun metal, tan calf, patent, and storm leathers. The presentations include many "wet-proof" sole lines. W. J. Gard will cover the Maritime Provinces and Newfoundland for the firm. E. A. Marchildon, Montreal city and Quebec province; John F. Heenan, Eastern Ontario; Frank W. Slater, Western Ontario; John Scott and John A. McLean, the prairie provinces and the extreme West.

A Good Line for Boys

Jackson & Savage, Montreal, are featuring in connection with their celebrated "Boy Scout" brand of boys' and young men's shoes, Hyman's Metallic Chrome Sole, which, it is claimed,

The latest in semi-high shoe

will outwear two ordinary oak-tanned soles, is used. They are adding to the already large "Boy Scout" line two new "Scout" lines, viz: little gents', sizes 8 to 10½; young men's, sizes 6 to 8. They are also carrying a big line of young men's boys' and youths' Goodyear welts for fall selling. These shoes are very natty in appearance, and of the latest styles, high and medium toes being prevalent, although other shapes are well represented. J. P. McNamara will represent the house in the Maritime

(Continued on page 52)

Effective Easter Windows

Exceptionally attractive windows for the Easter festivities are presented by H. & C. Blachford, Yonge Street, Toronto. The decorations are in good taste and simple in effectiveness. One window is devoted to men's footwear and the other to ladies'. The flooring is of white sateen, and the background of white crepe paper, paneled, with rope borders of purple. A large basket of white hyacinths flanked on either side with pots of choice Easter lilies, is displayed, the latter resting on oak pedestals. The upper mural decorations consist of pictures of rabbits bearing baskets of violets. They adorn the part of the background above the paneling, while the price

cards attached to the men's shoes are in the form of "bunnies." The accessories show the different men's lines of shoes, exhibited on neat metallic stands, to decided advantage.

On the other side of the main entrance are women's and misses' shoes. The arrangements are somewhat similar, with a basket of Easter lilies in the centre of the background, and on the wall pictorial baskets of violets. The decorations above the purple and white paneling are of a similar character. For price cards shells, and in some cases, chickens emerging from the egg, are employed. The window is not filled to overflowing, but plenty of space is afforded to exhibit various types of pumps, bluchers, balmorals, buttons and oxfords. There is also a pretty array of silk and lisle thread hosiery. Many shoe men make the mistake of trying to crowd their windows with numerous lines, whereas if ample space is allowed, the goods are seen and shown to much better effect. There is no sense of stuffiness and congestion in the Blachford windows. The firm have avoided a too common shortcoming in window dressing.

The Editorial View Point

GOOD OPENING FOR SPRING TRADE

Spring business in most lines shows a disposition to open up early, and already there is a good movement in such staples as hardware, building supplies, dry goods, wearing apparel, and shoes. People seem to be inclined to buy earlier, and perhaps a little more liberally than usual, although high prices in some lines, and the increased buying involved by the severe winter have shortened some pocket books. Most lines of produce are still dear, notwithstanding importations to meet higher home costs. Money is fairly plentiful, although payments within the past two or three weeks have not been quite up to the expectations of wholesalers. Altogether the outlook is very cheering, and both wholesale and retail departments of trade evidence great hopefulness.

FALL ORDERS COMING IN WELL

Those who are out with fall goods report encouraging conditions. The fact that winter stocks are pretty well cleared up accounts for the report that retailers seem more inclined than usual at this early stage of the game to look at samples. Sorting trade has simmered down, as retail stocks has been opened up, and dealers seem to be inclined now to wait and hope for the best. Everybody seems to be confident of a good season's business, claiming that the long steady winter weather which has enabled rubbers and overshoes to cover all kinds of footwear sins is now practically over, and people will have to face the inevitable. Already dealers are putting forth early spring announcements, and within the next couple of weeks business ought to take on a serious movement. Some say that already sales for March show up better than for the same period last year.

EARLY RUBBER ORDERS DESIRABLE

Those who are out for placing orders claim that they are getting satisfactory encouragement in spite of the conditions that prevail. The fact that rubber stocks have been well cleaned up this winter coupled with the delay last season in shipments, attributable more or less to the holding back of orders, has undoubted influence upon buyers who will hardly be as much inclined as at this time last year to play a strong waiting game. From a retail standpoint, the past season was a good one, although prices were cut in many places, and dealers are more inclined to anticipate next winter's needs. The advance in price has not proven any serious drawback, as it seems fairly certain that the untoward features of the competition last year will hardly be repeated. Early placing is mutually advantageous to retailer and manufacturer.

TESTING THE LEATHER MARKET

It is more or less between seasons still with shoe manufacturers, who are not inclined to test the market to any great extent. Tanners report a fairly active enquiry on account of the prospective opening of the fall manufacturing season, but the shoe men content themselves with testing the market with tempting orders, some of which appear to be sufficiently attractive to leather men to be considered. There is considerable activity in the competition from across the line, where they seem still to have more leather than the requirements of their market call for. Prices are firm in staple lines of upper and sole, and in the former the limited character of the stocks in hand point to further enhanced values. In light lines of upper, this is particularly true.

WEST IS LOOMING UP WELL

Notwithstanding the disquieting reports from the West, reports

from that section seem to indicate a satisfactory opening for the season. Fall samples have been out for some time, and the common report seems to be that there will be no impairment of the demand for staple footwear. In luxuries such as furniture, jewelery, and similar requirements, there may be a lull, although salesmen in these lines claim that apart from a little caution in some of the larger centres, they are doing a good trade. Already the tide of immigration has set in from the United States and Europe, and this is bound to help out. It is to be hoped that complications resulting from the coal strike may not interfere with the movement of settlers.

PEOPLE SHOULD HAVE A SAY

The conditions brought about by the coal strike in England in the past few weeks form a startling indication of the tremendous issues involved to-day in the withdrawal of labor from certain fields. It is not difficult to conceive what widespread disaster may result and what untold hurt may accrue to those least concerned in the immediate trouble, when such basic industries as fuel production and transportation are affected. It proves that the people who stand in such jeopardy should have a hand in such disputes through the government. It should be made impossible to declare a strike in such cases without reference to arbitration. A government which does not realize the necessity for protecting the innocent subject from the evils of labor embroglions should be put out of business.

SETTLING DOWN TO BUSINESS

Now that we know definitely that the South Pole is at the exact spot at which it was supposed to be, we will no doubt settle down to the even tenor of an ordinary mundane existence. It has been interesting to learn, of course, that there are mountains, plateaus, and glaciers, at the southern apex of the earth, but we were led to believe in the plateau theory when at school we were told that the earth was "slightly flattened at the poles like an orange." Now that the Pole business has been definitely settled, both north and south, and there is found to be no land or water worth grabbing, the money that has from time to time found its way into glory expeditions that can accomplish little for God or man will be turned into more useful enterprises. There are ways of winning renown and doing good at the same time that never seem to commend themselves to those who thirst for undying fame of the Arctic type.

COURTESY AS A FACTOR IN TRADE

"A true capacity for courtesy is a high gift," writes a shoe retailer from Halifax. "Courtesy is an important business detail, a great asset in getting under the buyer's skin. To my mind, amiability and a fine discernment of the wishes of the individual customer are the only real weapons with which the small business man can hope to beat his bigger competitor. Courtesy goes farther and does more to hold the buyer than bargain sales. I find that people would rather deal with a small but amiable, accommodating trader than with some of the bureaucratic machines of a vast establishment.

"Courtesy as an asset in the success of a business man cannot be under-estimated. It makes for loyalty among employes, it attracts trade, it generates respect and good-will. It is one of the principles of scientific management in shop, factory or store, and the higher the quality of courtesy extended the greater will be the reward from those who are the recipients of it."

China Dinner Sets Free To Biggest Shoe Buyers

Novel Plan Adopted by Chatham Retailer to Attract Trade—How Contest Is Conducted—Successful Method of Handling Travelling Goods—Timely Advice In Advertising Shoes to the Trade

"I do not see why more advertisers in the SHOE AND LEATHER JOURNAL do not quote prices on their various lines of goods. The mere fact that illustrations are presented and a general description given does not arouse the interest of the average retailer to a point sufficient for him to sit down and write a letter asking for figures. Now, I notice that trade publications and shoe firms in the United States take special pains to state at what prices their lines are selling. I am glad that a few advertisers in Canada are waking up to this fact. The old excuse, that it would not be well to quote figures in print, as a competitor might come along and offer the same article a few cents less, is, to my mind, a weak argument, as such tactics are possible in any selling game. Supposing one line of shoes, pumps, oxfords or colonials is quoted at a lower figure than that of a competitor, I am to be the final judge of the quality, style, and value. It may be a little point outside of price itself that determines my choice in the matter. By all means advertisers should quote prices in order to enlist the interest of retailers."

So spoke George W. Cowan, of Chatham, Ontario, who, this fall, will celebrate his silver jubilee in the boot business. Mr. Cowan has built up one of the largest trades in Western Ontario, and started to gain his experience in 1880, with the late Chas. Poile, of Chatham. Seven years later he embarked in a footwear venture for himself, which has turned out successful.

To-day he has two stores in the Maple City, one having been opened recently opposite the market, which he uses as an outlet for certain lines from the larger quarters. The main establishment is 100 ft. long by 20 ft. wide, and is filled with goods right up to the ceiling. The basement is used for storage purposes, and on the second floor is a large trunk room, reached by a separate stairway. Here some of the heavier lines of rubber and leather boots, as well as a first-class variety of trunks, are carried. In the centre of the store is an octagonal table, which is sectionalized. In each section various shoes are placed and large price tickets put on them. This presents some thing interesting and gets rid of slow selling goods during odd seasons. Twice a year a big reduction sale is held.

Interiorally, the store has a hardwood floor and metallic ceilings, and is well lighted. The windows are of the showcase type, with luxfer prisms above and bird's eye maple flooring. The entrance is tiled.

Signs Alongside the Road

Mr. Cowan believes in making his windows back up his advertising, and the two working together to the best advantage. He is a liberal patron of the newspapers, and thinks such expenditure, when rightly directed, yields him good returns. He favors displaying the catchy lines in the window at the proper time, and in connection with his advertising of spring goods (which appeared in recent editions of the Chatham papers) he had his windows filled with the latest and freshest offerings. A few days ago he had about 1,000 metallic signs of dark blue surface and white lettering tacked up for miles around Chatham. The words on each sign are, "Wear Cowan's Shoes." This slogan has become so well known that when anyone in Kent County thinks of shoes the name "Cowan" is immediately associated with the idea.

Some years ago Mr. Cowan started a cash business and stuck to it rigidly for a long time. He practically does a cash

business to-day, and the amount of money on his books at any time is very small. One price and all goods in plain figures rule. He has very little trouble with the approbation practice. "Of course," he said, "a shoe man is bound to encounter a little of this, but we minimize it as much as possible. A shoe stock, to my mind, should be turned over three times a year, and should always be well assorted. I do not think that there are too many styles at the present day, as it affords a discriminating buyer a chance to exercise his personal judgment. It also results in giving the people what they want in the line of footwear. We are handling less and less American shoes all the time, as Canadian factories have been making great improvements in their models. The people do not call for as much American foot clothing as they did some years ago, and we present styles and lasts that are right up to the minute in attractiveness and smooth shoemaking."

Goes Over Stock Every Week

Mr. Cowan says that he has no regular system of stock-keeping, but that every Monday morning the stock is carefully

Interior of the Cowan shoe store, Chatham.

gone over and an inventory of the sizes required taken. This means that each clerk gets to know the goods thoroughly, and when a salesman or saleswoman intentionally acquainted with what he or she has to sell much valuable time can be saved and customers fitted more expeditiously. On each pair the cost, make, number and selling price is marked.

Dinner Dishes for the Ladies

Mr. Cowan has long been a public-spirited citizen of Chatham. He served four years in the City Council, and was in the Mayor's chair for one term. He is popular with all classes, and now is pulling off a stunt that is making him even more talked about than when he held the office of chief magistrate. Each week he is giving away a dinner set of 42 pieces absolutely free. He has obtained 30 of these beautiful hand-decorated sets, and the system of distribution is rather unique. Every time you make a purchase at the store amounting to \$1.00 or over, the total amount of the sale is punched on a contest card. Each week, on Thursday afternoon at 3 o'clock, these cards are to be presented in person at the store. The holder presenting the one which shows the largest amount in purchases punched out receives, absolutely free, the dinner set. If a card does not entitle the holder to one set of dishes at the first award, the card may be held for subsequent distribution, and

may be the highest the next week. When a card secures a dinner set it is marked "cancelled" by the firm and returned to the fortunate possessor, who retains it, as there is another big prize to be given away in a few weeks, which is a handsome, quarter-sawed oak china cabinet. It should be mentioned that only one dinner set can go to a family, but that all persons have a chance to compete for the oak cabinet. The donation of the attractive dinner sets has aroused great interest, and every woman who receives one, of course, will talk about the good luck she has had and publish the fact among her friends and relatives. Mr. Cowan looks upon this scheme as an excellent one to bring trade, and the contest is now in its fifth or sixth week. Various other plans have been tried from time to time and worked out with splendid results.

There are two cash carriers in the store, as well as a parceling counter, and at the front is a silent salesman showcase for the display of findings and fancy lines of evening footwear.

Handling Trunks Advantageously

Mr. Cowan handles trunks, valises and traveling requisites of all kinds. He has done so for years, and says the profits are equally as good as those received on shoes. He thinks that these are good lines for any retailer having ample room. He devotes special attention to featuring these goods by window displays, advertising and other means.

Speaking of a sale of these articles, he said, "I generally have them where they can be conveniently inspected. You know, the shoe merchant gets his customers in a little different position from what most other merchants do, in that they are sitting, and while they are looking around their eyes are apt to fall upon a trunk, suitcase, or club bag. They become interested, and in this way many sales are effected. I do not think that this class of trade should be handed over by the shoe retailer to the harness man or the general store. The shoe man, in the first place, is in just as good a position to stock these as any harness man. Shoe houses are generally cleaner and more attractive and their general surroundings more conducive for ladies to enter than is a harness shop. It is for this reason that a footwear dispenser has a great advantage.

Good Profit in Repairs

"We also conduct a repair shop, and find that it pays very well. It yields us a profit every week, is a convenience to the public, and results indirectly in drawing trade to the store. We are not troubled much with requests for free repairs. Running outside with every little job that comes in is not a very satisfactory means of attending to this part of the business, which people in general have come to recognize as being associated with the boot trade—the matter of repairs.

"I think there are good profits to be made in findings, trunks and valises, and a repair department, if these are given the same close study and careful oversight as other lines of the business. I believe in marking all shoes at a fair figure and estimating the profit on the selling price, and not on the cost price, which is a mistake that many retailers make. In the end they find that they are not earning any money and possibly discover they are at the small end financially before many years have passed."

Pulling Off a Fool Stunt

"There is always some one in this trade pulling off a fool stunt," remarked a Nova Scotia shoe man, who was in Toronto last week on a visit. "Why, down in my town, during December, when trade is good and buying brisk, and we expect to make a nice profit and so end things nicely for the year, what did one of the firms do? They advertised a big reduction sale in the holiday period, and declared that prices were reduced greatly on all Christmas novelties and regular lines. Now this house

was not in the habit of rushing things in this precipitous fashion, but one of the partners lost his head because there were a few mild days and business held aloof for a short time. Of course, you can not control certain irresponsible moves on the part of your competitors, but there is no sense in any merchant who wants to do business legitimately, 'cutting off his nose to spite his face.' To my mind all shoe men should have a tacit or friendly understanding that so many stock reduction sales should be conducted each year, say two—the first in January or February, and the second in July or August. If these do not suffice and a man cannot by enterprise, proper displays, effective advertising and sound merchandising methods, sell sufficient goods at other periods there is something radically wrong with him or his offerings. I believe that shoes should be sold on their merits except certain accumulating odds and ends, and to apply the knife during the harvest time season, is a short-sighted and unreasonable practice. Any individual, two degrees above an ignoramus, can cut prices and slash in all directions, but to sell an article on its merit and at a fixed price—one that will yield a fair profit—is salesmanship and good business from the drop of the hat."

"Reliable Footwear"

Rowland Hill, shoe retailer, 189 Dundas Street, London, has a boy who has set the sale of shoes to a lively rhythm. The lines have been published in connection with some attractive literature issued by the store, and are deemed worthy of reproduction. They are:

We often think, if people thought,
On everything before they bought:
And when they need a pair of shoes,
Are careful of the pair they choose.

For Women Folk, with dainty feet,
Our "EMPRESS" shoe cannot be beat;
The latest style, the best of make,
This "Classy" shoe is sure to take.

We also have the "AVENUE" shoe.
We have a pair just made for YOU,
Just try a pair, and you'll be glad,
The "AVENUE" shoe is not a "FAD."

For men our "RIDEAU" shoe is fine,
From heel to toe it's right in line
With all the latest styles for spring,
They comfort to your feet will bring.

"INVICTUS" is the best shoe made,
The leather is the highest grade,
From early spring to latest fall,
This "BEST GOOD SHOE" outwears them all.

Our "DREADNAUGHT" shoes boys can't wear out,
The leather's strong, the stitches stout,
Each schoolboy knows, it gives him joy,
This shoe was made just for a BOY.

For your little son or daughter,
We have a shoe called "LITTLE TROTTER,"
This shoe was made for growing feet,
It's comfort sure, and looks so neat.

So call around, it's worth your while
We'll fit you with the latest style,
You'll be well pleased, we know you will,
So buy your shoes from ROWLAND HILL.

A TRIBUTE FROM ABROAD

"Will you please send me copies of the SHOE AND LEATHER JOURNAL of November 1st and 15th last, containing the excellent stock-keeping system which you published. I am desirous of putting in a good system, and the one outlined by Mr. A. E. Edgar, of Windsor, Ontario, is the best which I have run across. Thanking you for your trouble. I remain, with best wishes, sincerely yours.—George H. Stoebener, 6227 Penn Avenue, Pittsburgh, Pa.

Why I Do Not Buy From Some Shoe Travelers?

Retailer Tells Why He Refuses To Give Certain Men Business—Cajoling, Bluffing or Coercing Do Not Carry Weight With Him—The Faults of Some Road Representatives Frankly and Fully Outlined

"I see that the travelers had their innings in 'showing up' a number of the shortcomings and idiosyncrasies of certain retailers," remarked a Hamilton shoe merchant this week to the *SHOE AND LEATHER JOURNAL*. "Well, as you say, there are two sides to every story, and it is well to hear the party of the second part. I spent ten years on the road before going into this line, and I can bear out what you published about the excuses of divers kind for not giving commercial representatives an order, 'jollyng them along,' as it were, but the blame is not all on the side of the buyer. Very often the seller cannot call the pot black. I have been in business now for sixteen years, and, in that time, have met some quaint characters among travelers, the majority of whom are decent, earnest, and self-respecting fellows; but not all. Here are some types that I recall:

The Raw End of a Deal

"There is the man with a grouch, who complains that you are not using him right, and that he is getting the dirty end from you. He declares that you do not give him or his goods a fair chance, and that you must have an unreasoning prejudice against his house for not buying. I never like to talk to a fellow who appears to find everything in creation out of tune or joint, and would sooner that he would get rid of his jaundice before he enters my door.

"The reason a traveler does not sometimes sell me goods is because he gets off that old song regarding coming over and having 'a look at my samples, and you know that I do not expect you to buy.' He talks as if your visit was more in the nature of a social call. He is trying to jolly you, and he cannot blame the retailer if he attempts to work off the same kind of coin. Now, no man is on the road merely to hand out cigars, funny stories, and warm air to merchants. He is out to sell goods, and beating around the bush is not the most direct or effective method of doing so.

"I have in my mind one fellow from an Ontario factory who came bustling in last fall, and when I told him that I could not see my way clear to open any more accounts, he began blustering and telling me how to run my business, that I should keep niftier stuff, or I would soon become a back number. He even went so far as to say that I could not get along without his brand of shoes, and that, if I did not buy, he would sell a certain retailer on King Street, who would secure my trade, and that I would be left in the lurch. In plain, unadorned language he sought to inform me that I was blind, and did not know my own best interests, and that, if I did not stock his stuff, I might as well make up my mind to close up shop at an early date. I soon told that fellow what was what, and that he could not bulldoze or cajole me. The door for him.

Trying To Sell on a Pull

"Then I have had other fellows, who try industriously to work the sympathy plea, the lodge membership pull, the religious racket, Church associations, political affiliations, family connection, and all such junk. Well, I would not buy shoes from my own brother unless I felt that he was giving me equally as good style and value as any other house. With me business is business, and there is no compassion or condolence about it. I generally listen to what every traveler has to say, and accord him a gentlemanly reception, but when he gets too persistent, too prosy, or too blustery, then I come out flat-footed. No knight of the grip can bombard or bamboozle me.

"Then there is the salesman who has no patience, who wants to butt in, no matter what you are doing, or upon whom you are

waiting. Happily, this number is small, and I can only recall three instances of where a commercial man has poked his nose in when he should not do so. The vast majority use discretion, good judgment, and tact.

Where Both Are At Fault

"I see that a few retailers are accused of not keeping their appointments, and offer no apologies. Now, that is not right usage. If I tell a man that I will be down to the hotel at two o'clock to look over his line, I endeavor to keep my word, and, if I cannot get there, I telephone at what hour he may expect me. I have had travelers, on the other hand, make appointments, and, when you arrived, they were away trying to sell someone else, and offered very flimsy excuses for not being on hand. Others have sought to use the telephone too much to make dates, rather than coming around personally, and a few have tried the old ruse of promising certain concessions, which are never fulfilled, and then swore on the next trip that they had never promised anything of the nature regarding payments, discount, delivery, and other things.

"A young man came into the store last spring, and I told him that there was nothing doing, and that I meant every word

When Did the Clock Stop?

A. Weseloh & Co. of Berlin recently disposed of their footwear stock to Fred Kibler of Listowel after being sixteen years in business. They conducted a big reduction sale before the transfer. It possessed some unique features and the accompanying illustration shows a portion of a Saturday crowd. A clock was in the window and with every ten-cent purchase a ticket was given entitling the holder to guess at what hour the time-piece would stop. There were three prizes, \$3, \$2 and \$1, offered each week. The sale lasted several weeks, and the clock was unveiled every Saturday. A placard was placed on the front announcing the exact minute of "when the clock stopped." Weseloh & Co. will continue in the clothing and dry goods branches.

I said. He coaxed and pleaded to have me give him a small order, and when I had told him half a dozen times that I did not want any more goods in his line, he became profane and abusive, and remarked that he had thought that he was calling on a live shoe man, but that he was now convinced that I was a dead issue, and that my stock showed that he was right in his observations. I soon told him that he was a cad and that the sooner he got outside the better for him. I have been abused and browbeaten, told that I did not know my own mind, was a poor buyer, a loose stock-keeper, that I did not recognize what my customers wanted, and all that sort of thing. I will allow a man to say a good deal when it is a case of matching wit and wisdom against wit and wisdom, but I will not permit any veiled insinuations that I am a fool, a knave, or a back number. Neither will I stand for being accused of partiality, lack of foresight, close-fistedness, or footwear ignorance. I had a fresh Alex offer to bribe my head clerk, if he (the head clerk) would wheedle the boss into giving an order, and another of the same breed, who was on the road for a couple of seasons, made himself particularly obnoxious by hanging around the store and flirting with my cashier and one of the sales ladies when he thought my back was turned. He regarded himself as decidedly smart. This smooth heart-crusher sought to curry favor with them by promising one a pair of satin slippers and another a pair of superb tan walking shoes, if they could land the boss for an order.

No Regard for Others Feelings

"One fellow used to come in with his breath so odorous that you knew he was approaching half a block away. Another was too blasphemous, and one more was fond of smoking, and when I remonstrated with him one time he told me I was mighty particular, and that tobacco would not injure my trade, and that others did not object to him enjoying a cigar. He grew insolent and unbearable in his attitude. Needless to say that he received no order from me.

"If a man will not live up to his promises and will make all sorts of verbal agreements, which neither he nor his firm will implement, if he will show a tendency to cut prices, and if he will promise me exclusive control of a certain line, and then do a little side business, I want nothing more to do with him. I want a traveler to stick to his word, to hold out no false hopes, to never misrepresent his goods, and to learn to take 'No' for an answer when I have given him a decided reply.

Putting It Over on the Retailer

"I have known representatives to meet and boast of how they put one over on Robinson, how they made Thomson come across, how they hoodwinked Anderson and bluffed Hill. I do not want to do business with a man who uses me or my order to get business from another man, who is a competitor. I have had fellows come to me and tell me that they had sold Burch up the street so many pairs of this line, and Burritt so many oxfords on such a last, and that the reason they informed me was so that I would be on the same keel, and not get left. I know that a man who imparts to me how many men's button boots my opponents have bought will convey the same intelligence to them regarding my purchases. I have found that a tale bearer is invariably a tale carrier.

Telling About the Other Fellow

"Now, using the business of one retailer as a club or lever to pry an order out of me or somebody else is not to my liking and way of doing things. I know a number do not look upon this matter in the same light, but I do not want a traveler to tell my rivals what lines I have ordered. I do not particularly care what other shoe men in this city have bought. I have always found business enough around my own shop to engage my time and attention, and I do not seek to run the affairs of

my competitors. They can conduct their own circus, and they have as much right to be in the trade as I have.

"The fellow who is always spying on another, watching who enters his shop and neglecting those who enter his own, generally winds up quickly in his mercantile career. I desire no traveler to use my name or order to get trade from another house, and I trust that others expect the same thing. Perhaps this is a pointer that some visiting salesmen have not given enough thought to. The few exceptions I have pointed out do not hold good with the vast majority of men who call on me, but I wish you to understand that while there may be some queer retailers there are also a few queer travelers. Those who have been on the road for years know their business pretty well, respect your calling and your confidence, and live up to their word. They prove that by the accounts they open up, the connection they retain, and the esteem in which they are held.

Denouncing the Old Firm

"One more instance and I am done. I know a traveler from Toronto who called on me for years and from whom I bought goods every season. I was satisfied with what the factory sent me, and I made good profits on this ready selling line. Well, last fall he turned up as representing a new concern, with whom I had never dealt, and began telling me that the old company was a sneak aggregation, that they were fakirs from the word go, that they did not know how to use the trade or their employees, and that he was glad to get rid of such a contemptible outfit. The house he was now with made good, honest goods, right up to the minute in quality, worth and wear, and were away ahead of the old one.

"Did I order from him on the score of personal friendship? Not a bit of it. I suppose that he thought, by reason of long association, he could swing all the trade he had in the past, but I soon discounted his story. He had, it appears, had some grievance with the sales manager of the former company over his accounts, had become peeved, and left in a huff, and boasted that he would show them that he could use the knife. While he may have tried to do so, he did not make any incision on me. I detest the chap who has earned a living with one firm for years, and then because he severs his connection with them, goes around knocking and backbiting, slashing and hacking, and acting as a revengeful sleuth. Far better if that fellow had kept his mouth shut, and I might have given him an order. I cordially hate the man who wants to kick down the shanty which has sheltered him just as soon as a storm is over.

"If the shoes that that salesman had recommended and sold me for years were honestly made, well built, and good value, they did not change in a night, as he would have me believe, simply because he had a personal altercation over the matter of commission, and jumped his job."

Some Basic Principles

JUDICIOUS ADVERTISING, a monthly Chicago publication, had an extremely valuable editorial in a recent issue, explaining the common sense view point of all forms of advertising. Part of this is reproduced.

"Novices in advertising look on it as something marvellous, hypnotic, fearfully and wonderfully complex.

"Exactly the reverse is the fact.

"It is built on a few basic principles—merely the application of common sense to a knowledge of human nature.

"Yet how few grasp it.

"How few are able to discard the mass of clogging form and tradition with which it has become surrounded.

All human needs can be divided into two classes—sustenance and amusement.

"Into one of these two divisions everything that is for sale can be placed."

How To Sell Children's Shoes To Best Advantage

The Average Retailer Should Give Them More Attention—Special Department and Head for It Are Desirable—
Juvenile Profits in the Aggregate Total As Much As Those on Adults

By WILLIAM BRYANS

There are many shoe dealers in the Dominion who do not give to children's footwear the attention that this portion of the trade deserves. This is evidenced by the complaints frequently heard from parents, who bewail the fact that their regular dealer has little to offer them in children's shoes. While it is well that a great deal of attention be given to supplying adults with boots, the trade of the younger generation should not be forgotten nor neglected.

Of course, there are merchants who believe that they have a good argument for this oversight. They say that it takes just as much time to sell a pair of children's boots at a small price and a corresponding small profit as it does to sell a pair to adults'. They point out that when you sell the head of the house or his better half a pair of shoes you have really something on the sales sheet to show the fact, while with children's shoes the energy is just as great, and the sales price and profit much smaller.

This may be correct, but there is also another side to the question. The grocer does not push the sale of sugar, flour and salt in sacks and neglect the smaller articles he carries. The hardwareman, while he would much rather sell a stove, does not look with disdain upon a purchase of a pound of nails or a pair of hinges. They sell as much of the dearer articles as possible, and they also sell just as much of the smaller lines as possible. It should be the same with the shoe man.

Children Need Shoes Oftener

While an adult may require a pair of boots every six months, the youngster needs them much oftener, so that the total sales and the total margin on the juvenile trade may amount to as much in a year as with an older person. Another point in favor of carrying them is that they attract trade in other lines. The writer was in a home not long ago when the housewife was going out to buy shoes for herself and also for her little boy. "I guess I will go down to Fennel's," she announced. "He has a good assortment of children's as well." Thus did the attention to children's shoes bring the other trade also.

It would be well, if the merchant finds it is possible, to have a special department for children's footwear. At least, the stock should be separated from the other lines, and a clerk devoted to that one department will bring better results. He would thus learn the whims and fancies of the children and become more efficient in catering to their wants.

Quality Shoes for Them

There are certain points which should be remembered in the conduct of the children's department. Quality is the most important, and quality shoes for the children should be strictly adhered to. It is indeed wonderful how soon the schoolboy or girl can "qualify" even the best boots for the junk heap, and if the wearing qualities are lacking, some other store is liable to get a call next time. They will be most certain to enquire if that will wear good. If the clerk assures them that they will, and they do not, that store is in danger of not only losing the next sale of the child's boot, but perhaps the whole family trade.

A plain statement of your idea of the wearing qualities of the different lines is perhaps best. Act as adviser on customers' purchases. I remember a case in point. A gentleman came in to get a pair of boots for his son. I showed him several kinds, and, at last, he thought a certain pair rather cheap in price would do. Now, I could have parcelled them up, and there

would have been no more about it. I believe in building for the future, however. I looked at the boy and I knew by his appearance that the boots selected would be very short-lived with him. I advised the gentleman not to take them and urged the purchase of another pair, higher in price, but which, I pointed out, were well worth the extra money.

Acted On His Advice

"I don't like to pay a high price, because nothing seems to wear him. He goes through a pair of boots every month." He bought as I advised him, however.

It was over two months before I saw him again. He came up to me and said: "Those were the best pair of boots I ever

Two Enterprising Brothers

The illustration shows the new men's wear and shoe store of Ludlow Bros., of Brantford, Ont., who are doing a thriving business in the Telephone City.

bought. They were well worth the money." Then he pointed to four young fellows, who followed in his wake, and said: "I want you to fit them all up."

The clerk in the children's department has to possess special qualities. He is in somewhat of a more difficult position than other sales people. He generally has two persons to please, the parent and the child. Perhaps a liking for children would be the most valuable quality he could possess. Patience is a virtue, of which he should have a good supply. There will be trying times, but he should attempt to wear a smile through it all. But let the store work to put the juvenile department up a notch.

Suitability to the purpose for which a thing is designed is as necessary to its success as suitability of a person to his calling.

How Do You Train Your Help in the Shoe Store?

What Are You Doing for the Junior or Understudy Besides Paying Him Wages—Tell the Lad Straight What You Expect of Him—Give Him Some Instruction and Encouragement

By J. A. ROLLAND

Because thorough-going senior employes are at a premium, I am constrained to look around me and inquire after the causes. For this dearth of senior employes of the right stamp surely comes under the law of cause and effect.

Employers and managers might well call a halt and ask themselves a few questions, to see if they really are taking the junior seriously, for, believe me, the junior is taking them seriously. These questions might run like this: What am I doing for the boy besides paying him his salary? Let me add here that a junior's pay is low because of his inexperience, thus he is actually paying you to be taught, very much the same as if he went to a college. You are the teacher, he is the pupil. What are you teaching him and how are you teaching it? Are you giving him any technical knowledge? Do you ever have him be salesman and you customer, and lead him out? Do you criticize his effort kindly and make clear to him how his method of approach could have been improved upon, that he lacked resource, or that his efforts, though sincere, were aimless, and that he was doing too much guess work? If you do this, say, once a week, you will see a junior getting keen on sales, becoming very observant of his seniors. His eye will brighten with visions of some day being a manager or employer. "The thoughts of youth are long, long thoughts."

Some Timely Questions.

Did you ever set an examination of say ten questions pertaining to the stock and trade, and have him write on it as he would at school? Try it. Here is one that has been actually tried with very good answers, and followed up next day with a host of questions as to the why and wherefore.

1. If you had even chances to sell a pair of 1371 or 1370, both at \$6.00, which would you sell, and why?
2. What would be your main selling points or arguments with line No. 526?
3. Name one or more instances wherein a Balmoral cut is preferable to a Blucher cut?
4. Why is it not good policy to make your first question to a customer "What size?" Outline a better way.
5. Describe, as you would to a customer, the good qualities of No. 1020, and in what way is No. 4391 superior?
6. What length is a size, and what is the difference between, say, D and E widths.
7. What does the name "Dolge" stand for in the felt trade?
8. What advantage has sun-dried over steam-dried felt?
9. Why is No. 640 a \$6.00 shoe and No. 526 a \$5.00 shoe? Both are velours calf, same styles of upper, and on same last.
10. If a customer has a large foot and a small one, how would you proceed to make a sale?

Let me take points from real life, in fact my own experience as a junior. I was from the country, and, of course, green to the ways of a large town. I cannot recall my employer ever saying anything pleasant to me or asking how I was getting along, what plans I had for the future, or if there was anything I wanted to know about the stock. On the contrary, he would never let me see the SHOE AND LEATHER JOURNAL, or let me learn of shoes, or what they cost. Anything in

the shape of trade knowledge was studiously kept out of sight. I do not know why. I was going to night school at the time and doing my best to be something in the trade, but no thanks to my employer.

"To Drive" Is To Spoil.

Now, another thing more glaringly unjust, was being called down for lack of information that was never given, and which should have been given. The surest way to spoil a junior is to "drive." The minute you have to try to sell from the standpoint of fear of being called by your employer, your influence with your customer is gone, unless he be a man with large heart, and buys to save you. But he will never darken the door again. Just count up and see how many you know who have tried to sell you with the fear of the boss behind them, and I venture there will be just the same number of stores into which you never go.

Now, on the other hand, I would not advise any lax methods. Juniors should try and try hard to sell, and each week should see some new resource. He should be told first thing, if he finds he cannot sell, to drop out gracefully and give someone of more experience a chance. Then, if he can take in his senior's procedure without his presence being noticed, he will likely note points wherein he failed. If a sale has been made, show him where he failed, but do not rub it in. Thus he will be helped for the next effort.

A Few Things To Be Remembered.

Here are a few plain things a junior should be told, just as soon as he gets his hat off, and is ready for work, that will not take many minutes of his employer's time, and will pay him (the employer) a hundred fold.

1. Don't stand around glowering at someone else selling. Remember, the third party never helps to make a sale.
2. Use as good language as you know. All classes of people appreciate it.
3. Your conduct in the store and out of the store is your employer's business.
4. Be loyal. If you cannot think well and speak well of your employer, be too proud to take your wages. Find a man you can respect.

Many more might be added which will suit the particular kind of boy.

No Use Mincing Matters.

Juniors, we know, are not perfect, and indeed sometimes are far wrong, and these things, unpleasant as they are, must be dealt with kindly and firmly—no mincing of matters. I venture to say, if this is faced and dealt with, and the boy made to see clearly the wrong, you will have a better boy, one who will respect you the longest day you live. It may hurt him to be caught and told, but in his quiet, sane moments he will thank you in his heart. This, I believe, will hold good in almost every case, for 90 p.e. of our boys are honorable. There is no need that they fall just because they slip.

Speaking on this very subject with a prominent business man the other day he told me that he had a boy go wrong. He never made any particular enquiry, but felt sure the boy was wrong, and, to use his own words, "I told him to get to h—out of here." I would not make light of matters like this, and I believe if a boy were taken kindly and firmly in hand he could be taught an everlasting lesson.

How to Write Old English Alphabet

It Has Been Considerably Modified and Made Less Complicated for General Store Work—Very Attractive Where Dignified Effect is Desired—With Practice the Letters can be Made Quickly—Tenth Lesson in the Instructive and Interesting Series

By R. T. D. EDWARDS, The Robert Simpson Company, Toronto
(Copyright by Acton Publishing Company)

The cardwriter's list of alphabets would be incomplete without Old English. For headings on some cards, and for

Fig. 1

wordings on others, where a stately, uncommon appearance is desired, this alphabet is very useful. In this lesson we will deal with it.

The impression most people entertain regarding Old English is that it is a style of lettering very complicated in construction and hard to read. In its original state it is such. In this complicated form, however, it has its purpose for signs, engravings, etc., and is sometimes used by cardwriters. But for general cardwriting, it must be modified considerably. The purpose of this lesson is to give our readers an alphabet that contains all the general formation of the original Old English, but one that can be executed rapidly and easily read.

The capital *W* illustrated in Fig. 1 is a good sample of the original type. Compare it with the *W* in Fig. 3, and the changes will be easily seen. It will be noted that many of the fine lines and decorative curves have been eliminated. While these lines and curves have a decorative value, and, as previously stated, are sometimes desirable, when a cardwriter's time is considered they are a disadvantage, if the same general effect can be obtained by omitting them. In making the old style a small brush must be used for the fine lines, and in the revised types but one brush is necessary.

The foregoing will give you a glimpse of the general char-

Fig. 2

acteristics of the alphabet under discussion. It is of a stately character and must be used with discretion. It is most suitable

on cards where a certain dignity is desired. It should always be arranged in straight lines. Your attention is drawn to the cards illustrated in Fig. 4, in which the straight line effect is exemplified.

Old English may be employed to produce some striking color effects by means of shadings, panels, etc. In the cards illustrated the shading on the light card is of the same color as the card itself, but a few shades darker. The other card is dark lettered in white and shaded in black. In actual use this lettering is often associated with goods of English manufacture.

Practice Work

This revised alphabet is one of the easiest and quickest possible to construct. With practice it can be made even more quickly than brush-stroke Roman. It is composed of a series

Fig. 4

of brush strokes as illustrated in Fig. 2, and if the reader desires to reach a stage of efficiency in letter formation the strokes must be practised until they are all executed with comparative ease.

Materials

Use a chisel-shaped brush. One of the regulation style will answer, but in the writer's experience he has found that a brush slightly shorter than usual is desirable for Old English lettering. It is more chisel pointed and not so liable to vary in width as one with longer hairs, and it is essential that all strokes be of an equal width.

The Alphabet.

After the practice strokes have been correctly made, begin the lower case alphabet. It is simpler than the capitals, and by taking it first, better progress will be made. The formation of the letters in the lower case requires little or no explanation. It will be noticed that the majority of lines are straight and few curves are used. Mark out all letters with lead pencil before brush work is attempted, until you are acquainted with their formation. Draw the brush in the direction indicated by

Retailer Distributed 5,000 Scibblers

"The best advertising scheme that I ever pulled off," remarked a Western Ontario shoe man the other day, "was when I had distributed five thousand scibblers in all the schools around. I left enough books at each school for the teacher to present one to every child and I had a racy advertisement on the cover. It stated that each boy or girl who purchased a pair of school shoes at my store would receive free a pencil box.

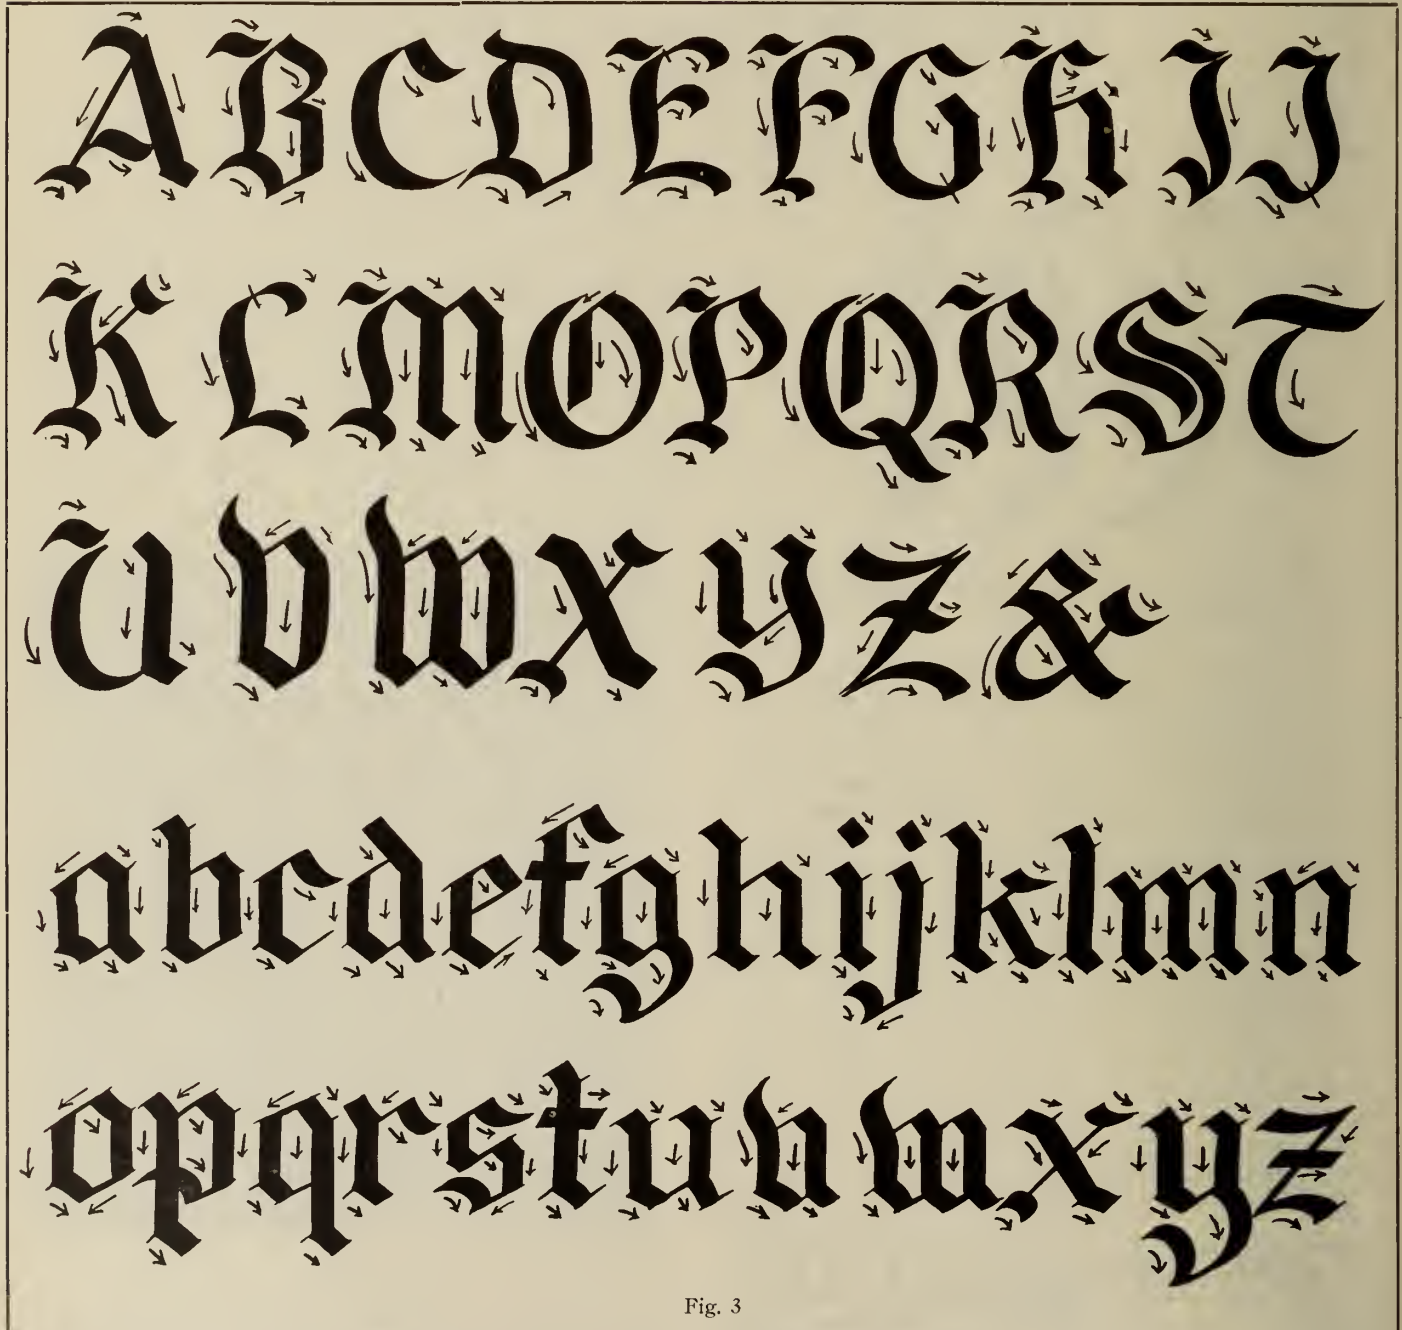

Fig. 3

the arrows, using a free-arm movement. Keep your brush well filled with ink, drawing it to a chisel point on a waste piece of cardboard before the stroke is made. The wide strokes are made with the flat side of the brush, and the narrow ones with the edge. A point to be carefully watched in this alphabet is to see that lines are parallel when they should be. One slanting line will spoil a whole line of letters.

The upper case (capitals), unlike the lower, is constituted mostly of curved lines, and it will, therefore, require a great deal more practice than the lower case.

These boxes cost me about five cents each, and the response was encouraging. People came into my place of business who had never traded with me. They said that their "kids" kept constantly at them to secure one of the pencil boxes. I gained a number of new customers by this means. Although the cost of the scribbler, the widespread distribution, and the pencil box amounted to about ten cents each, still I was willing to sacrifice this profit on each pair of school shoes for the amount of publicity that I received. I have tried various plans, but the scribbling book worked out to the most permanent advantage.

Overhauling the Trunk Department of Your Store

Getting Rid of "Stickers"—What is New in Spring Styles—Wardrobe and Steamer Fibre-Covered Trunks
Not Much Change in Bags and Suit Cases—Ordering From Catalogue Direct Saves Capital

Ere the average shoe man is aware of the fact, the spring season will be upon him, and buyers will be coming in asking about trunks, suitcases and traveling bags. In order to be able to anticipate such demands the months of March and April are none too soon for the shoe man to get busy and cull out the "stickers" in his stock, ticketing them at bargain figures, as their room is better than their company, and they take up room that is expensive, both positively and negatively—space that can be better occupied by bright, new goods.

Such culling can best be done by a few forceful window displays, stating truthfully *why* the reductions are made, and preferably showing the articles in use. This publicity should be backed up by informative advertising, calling attention to the window displays. No article that has any intrinsic worth at all can fail to be cleared out, if priced at bargain figures. But *right now* is the time to do this planning and work.

New Spring Ideas in Trunks

The stand-bys in the old stock once disposed of, the shoe man is confronted with the question, "What is going to be in demand for this spring in trunks, valises and traveling bags of all sorts?" The SHOE AND LEATHER JOURNAL, unfortunately, is unable in the current issue to give illustrated information *re* new styles, owing to manufacturers' cuts being all tied up in catalogue work at present, but in the issue of April 15th several illustrations will be shown. In the meantime these can be described in cold print.

The Wardrobe Trunk

One of the latest innovations, described only briefly here as its cost places it beyond the reach of the average retail demand, is the *wardrobe trunk*. This piece of baggage has undergone a gradual perfecting process, until now it has reached about the limit in scientific arrangement, compactness and carrying capacity. The majority of these trunks are 45 inches high—or long, as the case may be. This is the limit allowed by railroad regulations without extra charge. For every inch over this length an excess weight of 10 lbs. is charged, therefore manufacturers are careful to keep within the prescribed limit.

When one of these trunks is opened up—quite a process, as they are so well fastened—a veritable profusion of drawers, hat boxes, skirt hangers, etc., is disclosed, and the interior can be changed about to accommodate practically any commodity. But, as stated before, only the city stores could find a ready sale for such trunks, although it is well for every shoe man, no matter what his surroundings may be, to keep in touch with latest developments, as he never knows just when he may be asked *for* such articles, or *about* them, and ignorance is no recommendation to any inquirer.

New Ideas in Smaller Trunks

The fibre trunk has come to stay. It has passed the trial stage, and this season there are very many of these trunks on the market. "There's a reason," as our friend from "Wellville" would remark sapiently. These fibre trunks look better than the ordinary wooden, burlap-covered trunks; they wear better, which is even more important. The fibrous covering is almost as hard as granite, and it has somewhat the appearance of a light steel covering—in different colors, of course. Retailers will do well to bear these fibre trunks in mind when ordering new supplies.

Steamer trunks are going to be in large demand again this season. They are light but strong, and occupy little space; can be slid under a berth while traveling, or easily handled to and

from hotels—yet, withal, they hold a fair-sized wardrobe. One feature about many better-class trunks now on sale is that instead of being bound with sheetiron strips, angle steel is being used for this purpose, which increases strength with no increase in weight.

Not Much New in Bags

Fashions in traveling bags, suitcases and valises do not change in the same startling fashion as they do where women's handbags are concerned, hence for the coming season there is not much worthy of special note in these lines. Fitted bags are sure to be in strong demand as soon as the traveling season opens, as their convenience is undoubted, and so evident that they are well worth the extra cost. Splendid displays can be made with the help of these and other fitted traveling goods. They appeal to all and are readily sold to discriminating buyers.

Little Actual Space Required

If the shoe man will keep a sharp lookout for the latest in buying and selling methods, he need keep little capital tied up in his trunk department, and the space occupied will be very small. Trunk manufacturers all over Canada are now working on their spring catalogues, which will soon be ready for mailing to any interested retailer. By the intelligent use of these catalogues, and a careful study of their contents, retailers can do a big trunk and leather goods business practically on an agency basis. By this statement is meant that practically no stock need be carried, at least not more than enough to give a fair idea of the actual appearance of closely related lines of goods—one sample will do for several lines. With such a sample before him, and the vivid and accurate descriptions and illustrations in the catalogues, the shoe man can in very many cases get the buyer's order ere he places his own order with the manufacturer. And practically every manufacturer has well-stocked distributing depots situated at strategic points, so that retail orders can be filled almost in a couple of days' notice. This is nearly always satisfactory to the customer. In this way, only enough stock is carried to care for actual emergency orders.

Manufacturers of leather goods and trunks are only too ready to help shoe men develop their trunk departments, as they feel that the latter are losing money by not being alive to popular trade demands. And these goods are merely a varied form of the leather trade, and fit in splendidly with shoes.

What About Umbrellas?

Some enterprising shoe men also stock umbrellas in spring with good results. Rubbers for the feet and umbrellas overhead make a good combination. It looks reasonable on the face of it, and the outlay is not worth thinking over. Why not try it? Now is the time to get ready for a good spring business in all these lines.

Things the Clerk Must Avoid

Putting the end of a string into your mouth when tying a bundle.

Allowing your attention to be taken by any employee while waiting on a customer.

Wearing a hat in the store.

Speaking across the store.

Allowing a customer to wait impatiently without a word of recognition.

Speaking disrespectfully of a superior working for the same wages you are getting.

Lights and Shadows of the Boot and Shoe Trade

What Is Going On Among Retailers, Travelers, Wholesalers and Other Interests—Personal Paragraphs of Interest—Business in All Lines Is Most Promising—The News in Short Shape

Wm. Evans is erecting a boot and shoe shop in Victoria Harbor, Ontario.

W. L. Wilson has purchased the Blue Store, in North Lethbridge, Alta.

L. P. Caron, shoe dealer, of Granby, Que., is giving up business.

J. E. Poitras, shoe retailer, of Montreal, recently assigned to Chartrand & Turgeon.

J. S. McDowell, of Perth, dealer in shoes, recently assigned to J. J. Hands.

B. Matte, shoe merchant, Montreal, has assigned for the benefit of his creditors

The American Leather Goods Company, of Montreal, has been registered in Quebec.

S. Voisey, 950 Queen Street West, Toronto, has installed additional equipment in his shoe repairing shop.

James Donovan and Wm. S. Gremley have opened a shoe repair shop in Newcastle, N.B.

A recent fire in West Lorne, Ont., destroyed the shoe shop and residence of C. E. McCrimmon.

Patrick Stone, aged 90 years, who was a tanner for several years, died recently in Dundas, Ont.

E. A. McMurdie, late of Clark & Co., Battleford, Sask., has taken a position with a leading shoe house in Edmonton.

R. T. Hayes, of J. M. Humphrey & Co., St. John, N.B., was in Montreal last week on business.

John Sinclair, manager of the Barrie Tanning Company, Barrie, was in Toronto last week on business.

J. I. Chouinard, of the Regina Shoe Co., Montreal, has been spending some time in holidaying in the Southern States.

J. Lefton has embarked in the men's furnishing and shoe business in Port Arthur, Ontario.

William Garside, Toronto, spent last week among Montreal and Quebec factories on a buying trip.

E. L. Rising, of Waterbury & Rising, St. John, N.B., paid a business visit to Montreal last week.

W. F. Martin, of Kingsbury Footwear Company, Montreal, spent a few days recently in Toronto on business.

J. A. Adams, of Rideau Shoe Company, Montreal, is at present in Toronto on business.

The Carey Shoe Company have decided to remain in Barrie, Ontario, and have completed arrangements to this end.

Charles W. Sharp, of Burk's Falls, Ont., was calling on the shoe trade in Toronto last week.

F. H. Shier, of Sault Ste. Marie, Ont., has recently added a line of boots and shoes.

Ed. L. Lynch, of London, has joined the traveling staff of Garside & White, Toronto, and will cover Western Ontario.

M. McPherson, manager of the Neill Shoe Store, Brantford, was calling upon the trade in Toronto last week.

Frank Perry, representing Hoag & Walden, of Lynn, Mass., was in Toronto and other cities on a business trip last week.

R. J. Hanna, shoe man, 440 Spadina

Avenue, Toronto, will shortly remove into new quarters, at the corner of Spadina Avenue and Oxford Street.

Fire broke out recently in the apartments over Woolway's shoe store, in Stratford, Ont., but there was no damage done to the stock.

J. Jupp, Jr., shoe retailer, 810 Queen Street East, Toronto, has returned from a holiday trip to Panama, Jamaica and Costa Rica.

Alfred Winn, late of Perth, has joined the traveling staff of George A. Slater, Limited, and will represent the Invictus shoe through Western Ontario.

Mr. Osborne, of Hamilton, has rented the store at No. 7 George Street, Brantford, and opened a new boot and shoe store.

Lyons & Thompson, of Steelton, Ont., have disposed of their shoe business to Stubbs, Hyland & Co. Mr. Lyons will devote his attention in future to real estate.

L. T. Falardeau, the well known St. Roch's shoe merchant, has been elected president of the Quebec Retail Merchants' Association.

Charles C. Cummings, proprietor of the Slater Shoe Stores, Toronto, will leave next week for Atlantic City, where he will spend a few days.

E. O. Weston, of Toronto, left this week for Montreal and Quebec, where he will pay his semi-annual visit to the shoe factories.

John Smith, representing D. D. Hawthorne & Co., Toronto, left this week for Western Canada. He will go through to Vancouver before returning.

Robert Rogers, representing P. Jacobi, Toronto, has returned from a successful and extended business trip through the Western provinces.

Samuel Jeffery, of Blackstock, Ontario, was a delegate to the recent annual gathering of the Order of Canadian Home Circles in Toronto.

C. N. Candee, secretary of the Gutta Percha and Rubber Manufacturing Co., Toronto, who has been laid up with an attack of grip, is able to be around again.

Mr. Stanley, Jr., of the office staff of the William A. Marsh Co., Quebec, is leaving for the West. He will engage in fruit farming in British Columbia.

W. Hern, who has been in the shoe business in Goderich, Ont., for some years, has sold out to Mr. McClinton, of that town. Mr. Hern will embark in the grocery trade.

G. H. Wilkinson, shoe retailer, of Windsor, Ont., who, some months ago, established a branch in St. Thomas, has disposed of the latter business to Saunders & Creswell.

J. F. Wilding, shoe retailer, of Wainwright, Alta, is going to England on a trip for his health. While there he will undergo an operation. He will be accompanied by his wife.

Fred Cowan, of Chatham, Ont., has left on a business trip through Western Canada in the interest of the Brandon Shoe Company, of Brantford, Ont., and the

McDermott Shoe Company, of Montreal. He will be absent several weeks.

Thos. Clegg, who was formerly in the boot business in Orangeville, Ont., has leased the Grand Central Hotel in that town, and will conduct it as a temperance house.

E. H. Lanthier, president, and Raoul Lanthier, secretary-treasurer of the Kingsbury Footwear Co., Montreal, have returned from a holiday trip to Cuba, Florida, and other southern points.

Daniel McTavish, buyer, and George Bettz, assistant buyer of the shoe department of the T. Eaton Co., Winnipeg, were in Toronto last week on a buying expedition.

W. C. Meyers, of Toronto, representing the Rideau Shoe Company, has been spending a few days in Montreal, and leaves for the Prairie Provinces in a few days with fall and winter samples.

John V. Budd, late manager of the shoe department for S. R. Willinsky, 350 Queen Street East, Toronto, and formerly of Renfrew, has opened a shoe shop on Gerrard Street East, Toronto.

E. H. Lightford, formerly of the Riverside Shoe Co., and other factories in Montreal, has been appointed manager of the Winn factory at Perth, Ont., and has entered upon his duties.

R. H. Greene, manager of the footwear department of the Gutta Percha and Rubber Manufacturing Co., Toronto, left a few days ago for Pinehurst, North Carolina, where he is enjoying a well-earned holiday.

The retail shoe dealers of Hamilton, along with the haberdashers and clothiers, are working energetically on a by-law which they hope to have passed by the City Council, to close the shops at 6 p.m. the year round on Tuesday, Wednesday and Thursday nights.

George J. Scott, of Toronto, is now representing the following firms throughout the Western provinces, the A. P. Cimon Manufacturing Company, Montreal; Valentine & Martin, Waterloo, and the Adams Shoe Company, Toronto.

Among the jobbers handling the Miner Rubber Company's footwear this season are Blachford, Davies & Co., Limited, Toronto. Their name was accidentally omitted from the selling agents for Canada in the list mentioned in the last issue.

Recently burglars broke into the Grand Trunk freight sheds, in Galt, and stole a number of fine shoes from a case shipped to F. L. Hamilton & Son. The burglars gained entrance to the shed by forcing open a side door, and the box of shoes was the only thing tampered with.

Weiss Bros. have started in the shoe business in Napanee, Ont. E. B. Weiss, the head of the firm, spent some five years with H. & C. Blachford, Toronto, and had charge of the window dressing department for men. He is an energetic shoeman, and many friends will wish him every success in his new enterprise.

The Slater Shoe Store, Hamilton, is removing from King Street East to King Street West, and will occupy the building lately tenanted by the Gerhard Heintzman

Piano Company. They expect to open out about the middle of next month, and P. Rowan, late manager of the Slater Shoe Store, Toronto, will be in charge.

The newly-organized Rena Footwear Company, of Montreal, will be represented on the road by the following travelers, with fall samples: Mr. Senez in the Maritime Provinces (who will also handle wets for the Drummondville Shoe Co.); Mr. Stevens in Ontario; Mr. George Macsan in Quebec province, and Mr. Amond in Montreal city.

George W. Cowan, of Chatham, Ontario, who recently purchased the stock of Matthew Side, of that city, and the stock of Harry J. Brisbin, of Midland, has opened a second establishment in Chatham, which is known as the Market Shoe Store. Wilfrid Venton, who, for several years, was with H. Ashplant and Son, London, is manager of the market store, which is doing a large trade.

To protect the wholesale merchants a bill has been introduced into the Ontario Legislature by W. D. McPherson, M.P.P., Toronto. It is aimed to prohibit retailers from disposing of their stock in bulk for cash without first supplying the intending purchaser with a list of his creditors, and obtaining the consent to the sale of a majority of the creditors. This is in order to put a stop to the practice of a retailer selling out in order to avoid paying his creditors.

Recent fashion notes in various papers have reported that the latest fad and novelty in footwear was feathered slippers. In New York R. H. Macy & Co. displayed evening slippers made of small soft feathers on apparently a satin foundation. One pair shown had the pheasant breast colorings, shaded from black to green. These slippers had French heels and were trimmed with small round rhinestone buckles.

H. G. Hodges, who has been in the shoe line in Chatham, Ont., for ten years, leaves in a few days for the West. He will locate in Mortlake, Sask., where he will enter into partnership with his father in the implement business, and also take up land. He is a son of John Hodges, who was for some years in the boot business in Chatham and Aylmer, Ontario. Mr. Hodges, Jr., disposed of his stock in Chatham to Mrs. D. Turrill and Frank Dill, who have assumed possession. Many friends will wish him every success in the West.

H. B. Ohort, of the Relindo Shoe Company, Toronto, left last week for the West with fall and winter samples. He will proceed as far as the Coast. George Grills is covering Eastern Ontario, Quebec and the Maritime Provinces, and Fred Jackson Western Ontario. George Cowling, formerly city traveler, is now doing the district around Toronto, and William Candy is looking after the city. Frank E. Rousseau, who met with such a distressing accident a few months ago, and has been at his mother's home in Hamilton for some time, is being fitted with artificial limbs, and expects to resume his old ground for the house on May 1st, when Mr. Jackson will be transferred to Northern Ontario.

Prices Are Still Soaring

The Department of Labor's wholesale prices record up to date shows a still higher level for February than for January, notwithstanding that the latter month was reported as having seen the highest prices since 1882-4, and possibly since 1873. The

index number rose during February from 121.4 to 134.3, these being percentages of the average level of prices during the last decade of the last century. The upward movement was largely the result of advances in grains, animals and meats, dairy products and potatoes. Retail prices were also upward, especially in the food products derived from the lines above mentioned.

He Is Scotch to the Core

This man is Scotch, and he does not care who knows it. For twelve years F. J. Lashbrook has been with Getty & Scott of Galt, and sells the "Classic" line in Western Canada. Previous to that he was with the Stratford Shoe Company of Stratford. He has made twenty-four trips throughout the West, and he knows the ground accurately. When he is not on the road he has a number of hobbies in which he indulges, and one of them is raising chickens. A fellow traveler, speaking of him the other

bring it back. We consider it to our interest to satisfy every customer who comes to the store, and will gladly exchange the goods or refund you your money. In addition to this we will consider it a favor if you will report any misrepresentation, incivility or inattention on the part of employees."

A Hint to Shoe Advertisers

J. W. Deegan, of North Bay, Ont., writes: "I consider the SHOE AND LEATHER JOURNAL a valuable adjunct to the trade. I would not be without it for twice the amount that it costs. The semi-monthly publication is a bright and progressive feature. I think your journal would be made better and more instructive if you could induce your advertisers to use quotations in connection with the various lines presented, or in other words, they should give prices in connection with the goods they advertise. Business in the shoe trade here is good, and has been for some time."

Danger of Run-Down Heels

A humorous editorial in a recent magazine asserted that many a woman showed her character in the rear view of her heels, but many who laughed over it, and at once became uncomfortably conscious of their own, have yet to realize that what heels often do betray is the state of the wearer's health. Any woman who observes herself for a time will notice that the tendency to run over the heel toward the inside decreases when she is in thoroughly good health, and becomes noticeable at once if she is deficient in vitality. It is a danger signal to be heeded by those whose physique is not strong.

If running over is a matter of weak ankles it can be cured by exercise and temporary supporters. The woman whose ankles turn easily should be careful how she indulges in low shoes, especially at times when she has to be on her feet much. She can also be helped materially by being strict with herself in the matter of having the heels corrected at the first and slightest sign of unevenness. Once a heel has begun to wear off it affects the gait instantly and most unfavorably. It also ruins the shape of the shoe in a manner that no mending, however skilful, can remedy, as it twists and pulls the whole rear half of the shoe out of position. When that has once happened the wearer will find that the shoe itself "pushes" the ankle over. Better to preserve the fit of one's pretty footwear by untiring vigilance in this matter, as even a day or two may distort its comely lines past remedy.

Big Demand for Tans

Many retailers throughout the country are displaying spring goods in attractive window trims, and in their announcements are calling attention to all the modish creations. Jobbing houses are kept on the move sending out light weight footwear, and in some centres sorting business in spring lines has already begun. Retailers are looking forward to a big Easter business, and are making preparations accordingly. The travelers who are on the road with fall samples declare that orders are being placed more liberally than last year, and the general outlook is promising. All the factories expect to be busy on fall and winter runs until July next.

One wholesaler said that half a dozen firms in the East informed him that no matter how large an order be placed now they could not guarantee delivery of the goods before June. There has been an advance of 2 to 5 cents per pair on many

day, said that he recently got a letter from Mr. Lashbrook in which he referred to a certain breed of poultry known as Wyandotte, and the word was written Y&. (Y and dot.) He believes in brevity and speedy methods. That is why he is an ardent automobilist, for he drives two cars of his own. Prior to his removal to London some years ago, he resided in Toronto and was a prominent member of the 48th Highlanders, holding the rank of sergeant. The reader will observe that he appears at ease in kilts a la Harry Lauder.

A Guarantee With the Goods

The following is printed on the back of all sales slips in a large Western store, and speaks for itself: "This sale-slip is a positive guarantee that the goods which you have bought will give good service. It is as binding on us as if it bore the written signature of the firm. *Save this slip.* If by any chance your purchase does not prove as perfect as the price would warrant, or in any way fails to please you,

staple lines, and prices are stiffer on some of the finer grades in men's and women's. The one thing talked about in all trade centres in Canada is the way that tans are selling, and the universal call for them in both button and lace.

"Everybody seems to want a tan boot not too light in color," remarked one of the leading retailers of Ontario. "I find great difficulty in securing a suitable shade. Several manufacturers have told me they cannot get the skins from the tanners. Nice, bright nifty tans—why, they are all the go. I am looking forward to a big season in white footwear. Just wait until the really warm weather is here, and you will see that my prediction proves correct. I am certainly going to go strong on tans and whites, particularly for women and misses."

Two Handsome Shoe Booklets

Two of the most attractive and distinctive shoe catalogues that have been issued this season by any Canadian manufacturing house are presented to the trade, owing to the enterprise of Ames-Holden-McCready. There are two separate editions: one for Ames-Holden, and the other for the McCready range of footwear. Each issue is one of the brightest and most artistic that has been seen in a long time. The Ames-Holden catalogue, which comprises 68 pages, is 8x12 inches, and bound in a neat Kaiser cover of Silver Cloud. The half-tone cuts, all produced from drawings of original styles, are superbly executed and appear on a double brush finish, Scotch coated paper. Representative lines of chocolate and tan shoes are displayed to excellent advantage by means of a double-tone effect. At the top of each page is an ornate design in yellow, bearing the inscription, "Ames-Holden," while between in a circle is "Good Value Shoe." At the bottom is a heavy border in yellow, which balances the page. The letter press work is admirably executed. The illustrations show the numerous and varied lines carried in stock by the company, which are the product of the largest shoemaking organization in Canada. This valuable booklet will prove of great assistance to the trade for sorting purposes.

The McCready catalogue is very similar in execution and conception, and marked by the same outstanding features. The cover is Whitehouse Brown, and as in the preceding catalogue, displays an embossed men's button shoe. "McCready Shoes" is also embossed. Every live retailer should have one of these elaborate catalogues, showing shoes for all seasons and classes of people. The issue is an encyclopaedia of facts, styles and general footwear information. A copy will be gladly sent upon request by dropping a post card to any of the warehouses of Ames-Holden-McCready, Limited, in Montreal, Toronto, Calgary, Winnipeg, Edmonton or St. John, N.B.

In a Lighter Vein

A young lady was trying on a pair of shoes and asked the clerk if he didn't think one of her feet was larger than the other. "No," he replied diplomatically, "I should say that one was a trifle smaller than the other."

"You know," said a smart young man to a girl, "someone has said that if you want a lasting pair of boots, make the soles of the tongue of a woman." "Yes," replied the girl, "and for the uppers you ought to take the cheek of the man who said it."

WINNIPEG RETAILERS PROGRESSIVE

Several Handsome and Elaborately Fitted Stores as Result of Recent Improvements—Presentation to Geo. Nickle

The new Avenue shoe store, of which George C. Locke is the proprietor, will open in a few days. It is a fine, bright and imposing establishment.

E. G. Trick and Bro. recently made a very fine display of children's shoes, and the Classic line was featured in a way that brought forth a very gratifying trade.

The Rannard Shoe Co. have erected a large and handsome electric sign which is another stroke of enterprise on the part of this firm.

The Tom Stedman Co. have large cards in every street car in the city with cuts of a nice shoe for men and women. Good results have been obtained from the attractive announcements.

The W. A. Moyer Shoe Company now have one of the most inviting and attractive shoe emporiums of the West. It has been greatly enlarged, and all the latest ideas adopted.

L. M. Stock, representing Walker, Parker and Co. of Toronto; J. G. McDiarmid of the Cook-Fitzgerald Co., London; and W. E. Short of the Kingsbury Footwear Co., Montreal, were in Winnipeg recently with splendid lines of fall and winter samples.

George Nickle, late of the Yale shoe store, has purchased the shoe business of Harry Stark at 273 Portage Ave., and is now conducting a clearing sale. He will have the premises remodelled and all the latest accessories installed. Mr. Nickle is also most familiar with the manufacturing of shoes, having commenced as a cobbler and subsequently worked in all departments of the shoe factories. Previously to coming to Winnipeg he was engaged in the retail shoe business in Philadelphia, and his large and practical experience has made him one of the most successful shoe merchants in the city.

In 1908 S. I. Bates bought the lease and stock of the Regal Shoe Store at 289 Portage Ave. Several improvements have been made, but the latest alterations have been the most extensive and impressive. The unusually high ceiling made it possible to double-deck the ladies' department, which just multiplies by two the space at the disposal of the fair sex. The ground floor has been entirely repanelled and redecorated, it will be known in future as "The Mission Room," for ceiling and walls are panelled in this restful finish, while the entire fittings have been changed so as to afford perfect harmony throughout. Quiet and comfort are the keynote of the mission department. In the white room upstairs daintiness is dominant. Nothing here but white and gold, and in this dainty setting nestles all the pretty slippers which delight the fastidious woman's heart; and hose of all shades to harmonize with gowns and foot covering.

The accompanying picture is that of a progressive Winnipeg shoe dealer, John Affleck, at his summer home, "The Billiken," at Sturgeon Creek. He was born on a farm in South Essex, Ont., in 1878, where his father still resides. After graduating from a business college in Chatham, Ont., he journeyed West to pursue his fortune. His first job was as a farm hand at Portage Plains, and after a year's experience in plowing and harvesting, he secured employment at Brown's, Limited, Portage la

Prairie, Man., as a general handy lad. In two years he had gained a place as salesman in the shoe department, which was the inception of his career in the footwear line. Later he took a position with James Rea of Vancouver, B.C., and shortly joined the forces of the benedicts. Coming to Winnipeg, he went on the road for the Ames-Holden Co. He was on the lookout for a good opening in the retail boot line all the while, and, having cleaned up a nice little pile in real estate transactions, he heard of George Nickle, 328 Portage Ave., who had launched a boot business and desired an active partner. The firm of Nickle and Affleck was formed, in June, 1907, and the establishment was known as the Yale shoe store. The second year the premises were enlarged, and the basement occupied for reserve stock. The present depth is 136 feet, and the width 19 feet, while the

shelving is fifteen cartons high. The top row can be easily reached from the floor. The third year trade came faster and more help was taken on. To-day the staff consists of fourteen experienced and alert salesmen, who are kept busy all the time. Five years ago the stock carried was three thousand dollars, and to-day it is around the fifty-thousand mark, and includes everything the foot requires. Mr. Affleck has a cosy summer home and the picture represents him with one of his favorite pets, a two-months' old chicken, and his faithful dog, who looks after things in the absence of his master. The cottage is located nine miles from the store, but the proprietor is down to work every morning before eight o'clock, except when he has some weeds to pull or hoeing to do, for he is an enthusiastic gardener and raises about one hundred bushels of potatoes each season in addition to all kinds of vegetables and flowers. Many members of the traveling fraternity can vouch for his industry and activity as a horticulturist. Last month Mr. Affleck purchased Mr. Nickle's interest in the business, and is now the sole proprietor of one of the largest shoe concerns in the Dominion. On the occasion of retirement, Mr. Affleck presented Mr. Nickle with a handsome gold watch suitably engraved, as a token of appreciation of five years' partnership. The staff presented Mr. Nickle with a valuable gold locket and chain. Afterwards, the company proceeded to the Angelus Cafe, where they were entertained as the guests of D. J. DeVine

The Shoe Factory and the Tannery

Ratepayers of Perth Will Vote on Bylaw to Give Bonus to Winn Co.—New Factories and Extensions—Eastern Tannery Changes Hands—Veteran Official Resigns—Other Notes

The firm of Elie Turgeon, tanners, of Quebec, has been dissolved. The business will be continued under the same style by Z. Turgeon.

The Council of Port Dalhousie has decided to apply to the Hydro-Electric Commission for a power supply, because of the Maple Leaf Rubber Company's refusal to sell its power plant to the village.

The contracts have been awarded for the new factory of the A. P. Cimon Shoe Manufacturing Company, on De Fleurimont Avenue, Montreal. The building will be of solid brick, three stories and basement, and in dimensions 45x150 feet.

The ratepayers of Owen Sound recently carried a by-law by a large majority to provide a five-acre site and a fixed assessment of \$20,000 for the establishment of a Canadian branch of the Aetna Rubber Co., of Cleveland, which will locate in that town.

The Eagle Shoe Company, of Montreal, intend adding a couple of stories to their factory as soon as the spring rush is over. The company have been turning out five hundred pairs a day since the first of December, and expect to keep up this output until June next, and possibly later.

Several attempts of an incendiary origin have been made within the last few weeks to burn the premises of the Great West Saddlery Company, of Winnipeg. The losses have been about \$1,500. The police department of the city have offered a reward for the arrest and conviction of the fiend.

D. Pretty, who has been with R. Dack & Son, King Street West, Toronto, for the past twenty years, tendered his resignation recently, having started in business for himself. On the day of his departure the firm presented him with a beautiful club bag as a token of their appreciation for services rendered.

The Aurora Banner is pleased at the recent verdict of the ratepayers in favor of a bonus of \$10,000 to the Collis Leather Company, to erect a tannery there, and says the present prosperity of Aurora is due to granting bonuses to the Underhill and the T. Sisman Shoe Company to locate in that town. Both factories are very busy, and are operating to full capacity.

The factory of the Miller Tanning and Extract Co., at Millerton, N.B., resumed operation recently, after the plant being shut down since October. Messrs. W. G. Thurber and Randolph Crocker, have been operating the mill very successfully for the liquidators. Messrs. A. A. Davidson and James Beveridge are again in charge.

E. M. Gallagher, foreman of the packing room of the A. A. Durkee Co., Limited, of Truro, N.S., has gone to St. Louis to take a similar position with the Hamilton Brown Shoe Company. Mr. Parker, foreman of one of the departments, met with a painful accident a few days ago by slipping on the sidewalk and spraining his leg.

Alex. R. Drysdale, secretary of the John Ritchie Co., Quebec, with which firm he has been connected for thirty years, left last week for British Columbia, where he will engage in fruit farming. His wife has

been in poor health for some time, and Mr. Drysdale resigned in order that his family might live in a more agreeable climate. J. E. Warrington is the new secretary of the company, while the sales work will be looked after by B. W. S. Martin.

Business has been good with the shoe trade in the cities during the past fortnight. Almost every shoe merchant is wiring to manufacturing centres for tan button boots for women, for which there is a great call. The demand from men and children for tan shoes is brisk and some retailers have been caught short-handed, not anticipating such activity in this line.

A by-law granting a bonus of \$10,000 to the Collis Leather Company was carried by Aurora ratepayers on March 11. The poll was 327 for to 32 against, and was the largest vote ever polled on a money by-law. The Collis Leather Company will build a factory 150 feet long, 50 feet wide and four storeys high, with a basement. The bonus is not to be paid until the building is erected, the works in operation, and fifty employes upon the payroll.

Four out of five counts in the two indictments against the officials of the United Shoe Machinery Company, charging conspiracy in restraint of trade, were dismissed at Boston by Judge Putnam of the United States District Court. The four counts referred to charged criminal conspiracy to monopolize and restrain trade in violation of the Sherman Anti-Trust Act. The remaining count, which stands, charges monopoly through the system of leases on patented machinery.

The Logan Tanneries, Limited, is the latest company to be formed in Pictou, N.S. This company is for taking over the plant and business of the Logan Tanning Company, which has been in difficulties this winter on account of want of capital, caused by the fire which destroyed the company's plant last year. With the splendid new plant erected after the fire and the company's reputation for high class goods there was nothing necessary to continue its success but lack of capital, but it was feared for a time that this could not be obtained locally and that the industry would pass to the control of Toronto tanners, who were known to be after it.

The Fredericton Gleaner says: Considerable amusement as well as consternation was caused at the Queen's Hotel Bowling alleys on Saturday evening, when, after two games with Collector Macnutt and President Palmer, of the Hart Boot and Shoe Co., as leaders, the time came for the last roll of the rubber. The Collector's team was thought to be impregnable in the lead when the big President came up to the final encounter and swung a couple of ponderous rolls, smashing all candlepins down at both strokes, and winning the victory. President Palmer got the glad hand all around with storms of applause.

Will Make Women's Shoes

The ratepayers of Perth, Ontario, will vote on a by-law to loan the Winn Shoe Company the sum of \$25,000 for fifteen years. It is a part of the by-law that the company (which are now composed of

local capitalists, the Winn brothers having withdrawn all claims, transferring their stock and having no further connection with the concern), must first dispose of \$30,000 in bonds before the town pays over a part or the whole of the loan. The company agree to pay back the sum in fifteen annual payments, without interest. About \$50,000 is required to meet liabilities, and to give them a fair working capital. Mr. Lightford is the new manager, and comes highly recommended to the shoe trade. There are over ninety shareholders in Perth who are endeavoring to save the industry. Money was lost in the making of children's footwear, and it is proposed to convert the factory product into women's shoes, on which a larger profit can be made. The new manager says that the company will specialize, and manufacture six hundred pairs a day. The factory was erected about a year ago at a cost of \$21,000, the machinery is valued at \$8,000, and the fixtures at \$2,000. The company covenant to employ 150 hands, over half of whom will be males, and to expend in wages \$50,000 annually. The press of Perth is supporting the passing of the by-law in the interest of the town. Voting will take place on March 30th. Perth people subscribed \$50,000 a year or more ago to land the factory, which was removed from Milton, Ontario. The firm name will likely be changed to the Perth Shoe Company, Limited.

Last Tribute to a Manufacturer

Louis Gauthier of the Louis Gauthier Co., Limited, shoe manufacturer, Quebec, passed away on March 6th. The funeral, which took place to St.

Roch Church, on March 9th, was largely attended, and manifestations

of sorrow were numerous. Interment was in St. Charles cemetery. The late Mr. Gauthier was born in Mascouche on Feb. 19th, 1855. After a few years spent in Toronto, and in various cities across the border, he came to Montreal and entered the G. T. Slater & Son's factory as manager. Twenty-four years ago he removed to Quebec City to take charge of the Wm. A. Marsh Co.'s factory as superintendent, with which firm he was associated for a long time. Seven years ago, under the name of the L. Gauthier Co., he began manufacturing on his own behalf. In 1908 the concern became known as the Louis Gauthier Co., Limited, which is widely and favorably known in all parts of Canada. He was progressive and enterprising, and his death is much deplored by all his confreres, his associates and employees. He was an expert shoemaker, and had a wide connection. Mr. Gauthier was married on Feb. 25, 1879, and leaves eight children, four sons and four daughters. The sons are Louis, James, Wilfrid and Ernest. Among the mourners at the last rites were Damase Gauthier, brother; F. Parent, son-in-law; J. E. Plamondon, J. A. Langlois, M.P.P.; Hon. G. E. Amyot, Wm. A. Marsh, John Ritchie, A. E. Marois, Eugene Thivierge, A. Duchaine, John Perkins, E. A. Samson, J. H. E. Laroche, H. Gale, T. Trudel, James Muir, and many others. The factory of the company resumed work on March 11th, and everything will go on in the usual way.

Tanning Is One of Hamilton's Lost Arts

Early History of the Trade in the Ambitious City—Birth of the Beardmore Business
—Some Interesting Observations on the Present Processes of Leather-Making and Price of Shoes and Hides

Referring to the fact that the tanning of leather is a lost art in Hamilton, Ontario, a writer in the Spectator says that it was a profitable business in the early days.

Hamilton tanners then had a good record for the quality of the leather they made and sold. Between sixty and seventy years ago the business began to lose favor, probably because of the cost of bark and the scarcity of hides in this vicinity, and the number of tanneries dwindled down to two—one on Catherine Street north, and the other on Tyburn Street and Spring. You know the old stone building on the corner of Catherine and Robert Streets, now used by the D. Moore Company as a moulding shop? That was built by George L. Beardmore for a tannery away back in a time that the oldest inhabitant can't even remember. Beardmore did a good business so long as the stock of hides was gettable, but in time the cattle business went off into the bush, and there were not hides enough brought to this market even to keep one tannery busy. One night, about sixty years ago, the fire department had a run down to Beardmore's tannery, and as there was no water to be had save the little in cisterns and wells, the firemen had to stand and look on at the roof and inside of the tannery being consumed. Probably George Beardmore looked upon that fire as a providential means of letting him out of the tanning business, for he never rebuilt the old tannery, and opened up a shop on the corner of John and King William Streets as a wholesale and retail dealer in leather. He remained in business here till early in the sixties, when he moved to Toronto, and later started a tannery in some country town, where his descendants are still carrying on the business.

Was Not a Money Maker

Away back in the early forties William P. Moore and a partner named Clement owned a tannery on Tyburn and Spring Streets. The business never was a great money-maker in itself to the several firms that afterward owned it in a tanning way, though some of the later managers did pretty well in handling hides for the American market. Probably one reason for the decline in the business was the new inventions in tanning leather, which required new plants, the old methods not being profitable. When they used to make honest leather it required four or five months to tan a hide before it was ready for the shoemaker. Then the tanning liquid was distilled from oak and hemlock bark, and it was waterproof and solid for the soles of shoes. Now the tanning liquid is made from weeds, epsom salts and other chemicals, and the water soaks through the soles and gives the wearer of the shoes wet feet in a short walk in wet weather. A hide of sole leather can be tanned in about as many days now as it used to take months in the former times of oak and hemlock liquid. Away back in 1848, when Moore and Clement were running the Tyburn Street tannery, hides were scarce around Hamilton, so Mr. Moore started out on a voyage of discovery and found one man down at Chippewa who had seven

hides to sell. Off went Mr. Moore to make the purchase, and great was his glee when he wrote back to his partner, Mr. Clement, care of Weeks' Hotel, that he had secured the hides, and requesting Mr. Clement to send down a team and wagon to fetch them home, and that he would wait and see them weighed and turned over to the wagon driver. There were no railroads in this part of Canada in 1848; and, indeed, there was only about fourteen miles of scrap iron road in all Canada at that time, and that was between Laprairie and St. John's.

Got Busy on Seven Hides

When those seven hides arrived at the tannery, it took about four months' labor to turn them into first-class sole leather. Moore and Clement sold the tannery to Lymburner & Torrey, and they turned it into a sheepskin tannery, and ran it for a few years, then selling it to Hiram & King. In 1867 Humphrey & Newberry bought the tannery, and did quite a profitable business as partners till 1894, when Mr. Newberry sold his interest to Mrs. Humphrey, and it was carried on till 1898 under the firm of N. Humphrey & Co., and after the death of Mr. Humphrey his wife conducted the hide business till a couple of years ago, when she sold out to D. Galvin, who is now the manager, under the title of Galvin Hide Co. The old tannery has been a thing of the past for a number of years, the property selling for about \$5,000, after it had been on the market for a year or two. The block is now covered with fine brick residences, and the land alone to-day is assessed at many times \$5,000. Mr. Galvin began to work for Humphrey & Newberry in 1870, and has been connected with the business down to the present time. The tanning business is now a lost art in Hamilton, the nearest thing to it being Petts sheepskin mat factory. About the year 1869 the old Tyburn tannery had a baptism of fire which partly destroyed it.

Depression in the Trade

For many years there was a depression in the tanning business in Canada, and the United States became the market for the larger output of Canadian hides. Calfskins and sheepskins were admitted to the United States free of duty, while there was a duty of fifteen per cent. on cattle hides; but the price paid in the American markets being so much higher than that obtaining in Canada, even with the duty added there was a profit to the Canadian butcher and farmer to ship them over there. The American tanners and shoemakers, irrespective of party, besieged Congress to take off the duty on hides, promising as a result cheaper leather and cheaper boots and shoes. Almost simultaneously with the repeal of the duty the price of leather and shoes advanced, and the dear people had either to pay the advance or go barefooted. There was a revival of the tanning business in Canada, and the hides were kept at home. But all the same, the people are paying more for leather and shoes in both countries than they did before hides were put on the free list and the leather duty was reduced.

Not the Famous Bandsman

The man at the books, who can keep thousands of accounts running smoothly, has his work cut out for him. Fred C. Godfrey, accountant for Philip Jacobi, which shoe findings house has been in business for nearly half

a century, accomplishes the task without loss of sleep. For eleven years he has been closely associated with E. A. Scott, head of the financial department. Mr. Godfrey is better known by his fellows as "Dan," a title which was bestowed upon him at the time of the visit of the famous Old Country band leader to Toronto some years ago. This cognomen was handed out, as there are three employes of the house who own to the Christian name of "Fred," and it was desirable to avoid confusion. There are half a dozen on the staff who have been with the firm for over twenty years, the longest in point of service being able to review a record of thirty-eight years, but Mr. Godfrey is not one of them—just yet. He is well known to the trade, and has but one hobby—work. He can wade through an immense amount in record time.

THE HAPPENINGS IN QUEBEC CITY

The stock of V. Coulombe, Quebec, was sold last week to T. Coulombe at sixty cents on the dollar.

M. Godbout, shoe retailer, suffered some damage to his stock from water and smoke in a recent fire.

The stock of Joseph Pruneau, shoe manufacturer of this city, was sold last week.

J. H. Hamilton of J. B. Blouin, Limited, Levis, was in Toronto last week on a business trip. J. A. Scott was in Montreal a few days ago.

The many friends of Omer Clement of Max Clement and Son, will sympathize with him in the loss of his wife, who was burned to death by an explosion of a gas stove.

L. S. Odell of Toronto, G. G. Parker of the Dominion Supply Co., Montreal; R. T. Hayes of J. M. Humphrey and Co., St. John, N.B.; E. L. Rising, St. John, N.B.; Paul Tourigny, Montreal; and F. W. Knowlton, Canadian manager of the United Shoe Machinery Co., Montreal, were among the visitors to the Ancient Capital last week.

Business in the shoe line generally is fair and steady. Some retailers have been holding special sales, but others appear to be getting along fairly well and doing a nice business without resorting to this expedient. They do not believe that it is good policy to cater to "bargain hunters" alone, when that class of purchasers is out in full force. Tans are selling well in both men's and women's. In feminine foot gear buttons still have the bulk of the call, although some bluchers are good sellers. Button boots for men have not caught on to the extent that it was thought they would.

SHOE SALESMAN and ad. writer is open for position in a first class shoe store; capable of taking charge, good references, sample of ad. writing will be sent upon request. Apply to 610-7 St. A East, Owen Sound, Ont.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:—

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

Individuality makes for the ease

There are in all shoes of the Tebbutt Line special features which are not found in other shoes and which add considerably to their usefulness and comfort.

These special features have not been embodied in Tebbutt Shoes simply to make them different from others, but to appeal to shoe wearers in a different manner and thereby gain sales.

This difference in Tebbutt Shoes—this individuality—can be made a mighty powerful sales inducing feature for you.

Remember, the Tebbutt is not a new line.

Kant Krack

How will your stock of this se

WHEN you buy rubbers (or anything, for that matter), you should take into consideration the experience of the past, the requirements of the present, and the expectations for the future.

With the live merchant, anxious to expand his business, this resolves itself into avoiding mistakes that have been made and making a fair profit through the sale of high quality rubbers that make friends for his store.

Now let us look at Kant Krack, Dainty Mode, Royal and Bull Dog Brands of rubbers from these standpoints.

JAMES ROBINSON, Wholesale Disr

Dainty Mode

n affect your sales of next?

IF you have sold these brands in the past, you'll sell them again this fall. That's certain. If you haven't yet handled them you couldn't wish for a better season to start.

For these four brands of "Independent" rubbers have been increasing in quality each season, always keeping out at the front with up-to-date styles and fair prices and terms. The sales and profits of a dealer handling them are assured.

And these rubbers build for future business. They satisfy their wearers so that when they think of rubbers they think of one of these brands.

Judge them by their past records and buy them for your present profit and your future will be safe.

r, 182-186 McGill Street, MONTREAL

WHY DIAMOND FAST COLOR

Nothing so cheapens a shoe as a brassy eyelet. In most instances it is more conspicuous than a break in the leather and even more difficult to remedy. But there is a sure way to protect your patrons from any annoyance in this connection. Diamond Fast Color Eyelets cannot wear brassy, they always look new and help to preserve the appearance of shoes throughout the longest wear. There is also a positive way to tell whether the shoes you purchase are fitted with them. Just look for the little  diamond trade mark raised on the surface of each. It is inconspicuous but very important. Your customers realize it. It is your guarantee that the eyelets are genuine Fast Color, for only the genuine Fast Color have the  trade mark.

UNITED FAST COLOR EYELET COMPANY

UNITED SHOE MACHINERY CO. OF CANADA

Lagauchetiere and St. Monique Streets - - MONTREAL, QUE.

When Sales To-day Mean Repeats To-morrow

Getting customers is good business, but holding them is better.

It is not the customer who comes to you occasionally for a "bargain," but the one who comes to you regularly for "quality" that puts you farthest on the road to prosperity.

Getting and holding customers for children's shoes is easy when you handle "CLASSIC" shoes.

"CLASSICS" have the style that brings custom to your store in the first place, and they possess the quality that brings trade back always.

Try "CLASSICS" and see.

The Solid Leather Line for Fall, 1912

Williams samples for fall, 1912, are now being shown. They are a goodly lot of real leather wear resisters, and should meet with your approval. You'll not find anything that is "sissyfied" or "freakish" in the Williams samples, but you can rest assured that every style shown will prove a seller. Williams sales have been made and will be made on the quality of leather and workmanship and on wearing qualities rather than on styles and shapes. ∴ Wait for the Williams man. It will repay you.

**Order Shoes
that bear
this brand**

**They'll make
you happy
in the Fall**

When you place your order with the Yamaska salesman for fall goods, you assure yourself of a profitable business in the fall. For every "Yamaska" is a seller. That's what built their reputation, and its because of this reputation for saleability that

La Compagnie, J. A. & M. Cote
ST. HYACINTHE, QUEBEC

are so careful to exclude all "freaks" from the Yamaska line.

And while the line is always kept right up-to-date, it never runs to extremes. The energy that is generally wasted in evolving freak styles, is in the case of the Yamaska line, occupied in improving the quality.

Try "Yamaska's" this fall.

Every Shoe just like the sample

When you examine the Surpass samples you see exactly the same good points that you will see when your order arrives in the fall.

Surpass samples are not made up special to attract your trade. They are merely the first finished shoes sent out for your inspection and approval.

Because you like Surpass samples you will like Surpass shoes. They're just the same.

Have no fear. Order what styles look good to you as samples. They'll be just as good as stock in your store.

SOLID LEATHER
ALL THE WAY
THROUGH.

LASTS AS LONG
AS THE
SHOE.

You take no chances with the Guay Solid Leather Counter

No matter how good you make your shoes you need have no fear that Guay Solid Leather Counters are not good enough.

They are made of select stock that will stand up under wear as long as the shoes themselves.

Many shoe manufacturers have proven this to their own

satisfaction and profit, and now use them in their best grade of shoes.

It doesn't cost much for you to prove it. They only cost 3½ and 4 cents per pair.

Give them a good trial. You'll be well pleased with the results.

Are you prepared to benefit by the Greatest Shoe Advertising Campaign ever launched in Canada?

Steel Shoes are worn all over the world

Steel shoes are not in the experimental stage. They have "taken on" with the public in no uncertain manner, there being over 500,000 pairs in use at the present. Lumbermen, trappers, hunters, miners, prospectors, farmers and laborers of all kinds have tested Steel Shoes in all kinds of weather and in all kinds of country. Steel shoes have stood these tests, and now a big advertising campaign is inaugurated to tell every workman in Canada of the advantages of Ruthstein's Steel. Are you going to benefit by this campaign?

They make money for you quickly.

Not only will you be helped to make many sales, but you will get a mighty good profit on each sale. Look at this table of prices.

No.		Cost	Sell
		you.	you.
03—Men's	6 in. black	2.65	3.50
04—Men's	6 in. tan	2.65	3.50
07—Men's	6 in. black	3.75	5.00
08—Men's	9 in. tan	3.75	5.00
09—Men's	12 in. black	4.50	6.00
10—Men's	12 in. tan	4.50	6.00
11—Men's	16 in. black	5.00	7.00
0103—Boys'	6 in. black	1.90	2.50
0107—Boys'	9 in. black	2.65	3.50
0108—Boys'	9 in. tan	2.65	3.50

The N. M. Ruthstein Steel Shoe is being advertised throughout the length and breadth of Canada. This will start a stream of buyers toward the nearest store handling these comfortable, wear-resisting work shoes. These buyers will want to buy Ruthstein's Steel Shoes and no others. Are you going to watch this stream flow past your door?

The advertising will be continuous. It is convincing, vigorous and truthful. It shows the workmen of the Dominion just why they should buy Steel Shoes.

You take no chance, but make a sure, safe and profitable investment when you stock Ruthstein's

STEEL SHOES

Be prepared to accommodate the first man in your locality who asks for Steel Shoes. Get the people in the habit of coming to you for Steel Shoes. Stock now.

You need not fear that Steel Shoes will hurt your other sales. You'll find that you sell many more pairs of them than of any other work shoes in your stock. Besides, every Steel Shoe gives satisfaction and is a recommendation to your store.

I Want a Position Behind Your Counter

I have had experience in many thousands of retail stores for 25 years. I have been steadily improving myself until to-day I believe I have about reached perfection, when it comes to taking care of the details in a retail store.

Nobody knows the troubles of the store-keeper as well as I do, for I have been right up against some of these difficulties.

I know how hard it is to avoid mistakes—how ready customers are to accuse you of being dishonest if you make an error in their accounts.

I know the value of giving every customer a printed receipt with every transaction.

I know how to prevent the petty mistakes and losses that make such a big leak in your profits.

I can tell you when your clerks make mistakes in change or other costly errors.

I can show you a quick way of balancing your cash and tell you whether it is all there.

I will promise to make every clerk in your store a better clerk.

I believe you could well afford to pay me \$3 a day, but I am very modest. All I ask is that you pay me 75c. or \$1 a day for about a year.

After that I will work for you as long as you are in business and won't ask for any more pay. Will you give me a position?

I will be glad to explain more fully the things I can do for you if you will write for the booklets which describe my capabilities. This information costs you nothing. Write for it to-day

Starting in Shoe Business on Cash Capital of \$1,000

Prize Winners in the Contest Tell How They Would Go About It—Where They Would Locate, What Lines They Would Buy and When They Would Begin—Division of the Funds In Hand Outlined

The two competitions on "How would you start a shoe business on a cash capital of \$1,000?" and "On \$2,500?" which have been conducted by the SHOE AND LEATHER JOURNAL, have closed. Numerous responses were received from all parts of Canada, and the contests evoked lively interest among the trade. A large number of the replies evidence much thought, study and business insight. They abound in timely pointers and helpful hints for any man, young or old, about to embark in the footwear line for himself.

In this issue the names of the winners in the first competition—starting business on a thousand dollars capital—are announced. In the April 15th number the results in the \$2,500 proposition will be made known. The judges have had no light task in deciding the awards, a task rendered all the more difficult by reason of scores of entries. The contributions of the prize-winners will be published first, and the stories of those who were not successful in landing a premium, but whose productions are deemed worthy of publishing, will be given in later editions to the readers of this paper.

The awards have been made solely on the basis of practical points scored. Literary merit did not count. Information of a direct instructive character has been the goal aimed at and it will be found that the winners have got down to "brass tacks" and details of the problem.

Victors in the Competition

The successful ones in the \$1,000 cash capital competition, the prizes being ten, seven, and five dollars respectively for the best efforts, are:—

- 1—A. E. Edgar, Windsor, Ontario.
- 2—F. A. Robinson, Saskatoon, Sask.
- 3—Miss Jessie Cumming, Fergus, Ontario.

The names of the winners in the \$2,500 cash capital competition will as already intimated be announced in the next edition of the SHOE AND LEATHER JOURNAL and their contributions printed. The articles by the victors in the first competition are here-with presented and are, in every way, worth perusal and study:—

Stock and Location Are Everything

By A. E. Edgar, Windsor, Ont.

Starting in business is a serious thing. Starting in the shoe business with a small capital is a more serious thing. Starting on a capital of \$1,000 is a most serious thing.

Ten or fifteen years ago it would not have been as difficult a feat as it is to-day. One reason why it is more difficult is

found in the customer's unwillingness to accept anything but the exact style called for. Another is because there are far too many styles. But the fact that one must carry lines in both tan and black, lace and button, and in several leathers, besides a sprinkling of white thrown in for good measure, makes the difficulty surmountable only by the man of determined character and almost infallible judgment.

Still it is not an impossible achievement under favorable circumstances, as the writer will try to show. Of more value almost than the amount of stock he has on his shelves, is the merchant's location. For that reason it should be as near the center of trade in the locality in which the merchant desires to do business as circumstances will permit. However, the man with but a thousand dollars cannot always be the chooser and must go according to the means at his disposal. If he can secure a centrally located store it will pay him to agree to a higher rent provided he can make arrangements whereby his landlord will be lenient and assist him in every way in getting a start.

The man with a little thousand has his choice of going into a general shoe business or in specializing in some class of shoes. The location he secures must largely determine this. No matter what his inclinations are he must conform to conditions and circumstances as far as necessary, and then strive to mould these into a better state as he goes along.

In a city he might specialize in children's shoes. This is a field that is altogether neglected and the live man who takes this up in any locality that has a clear advantage over all who follow.

Again, he might handle only men's, or only women's shoes. In this field it is unusual to run to shoes retailing from \$3 to \$5. A thousand dollars might purchase a sufficient stock of these to open up with; but this class of trade is very fastidious, and the man with so small a capital is soon in a precarious situation.

Still again, a man might successfully specialize on lines retailing at \$2 and \$2.50. The man with a small capital will do better here. Or, lastly, he can open up a general shoe business in which after all, the chances for success are far greater. A family trade is preferable any time to merely an individual trade, and especially so for the beginner on a small scale.

Having selected a suitable location and decided to stock a general line of shoes, the prospective "merchant prince" must get out his pencil and pad and do some figuring.

Rent may be arranged for several months in advance on a credit basis. If this cannot be done he must figure on paying this from his business, the first month being probably payable in advance.

Next is the fitting up of his store. The shelving is usually

found to be supplied with the shop; if it is not already shelved the landlord may be induced to shelve it at his own expense; failing which, he may agree to shelve it and allow the merchant to pay for it, a few dollars each month until it is settled for in full.

Then he must have some furniture. Let us say he can get along with two settees seating four each, costing about \$30. A half dozen wooden chairs at \$1.25 each will help out. A second-hand counter may be purchased for, say, \$10, or failing this, a fixture having a counter top, and capable of holding shoe cartons below, may be made at a cost of, say, \$20. Besides these, at

outlined will have to go to a jobber to secure his stock. The one great reason for this lies in the power of a large account in securing credit. The other good reason is because it is easier for a man with a small capital to arrange his finances with a single firm than with several, who are each trying to secure better arrangements than the others. As his business grows he can spread out his feelers and gradually take in other lines and buy from both manufacturer and jobber.

The arrangement being completed, he walks into the sample room to select his stock. Unless he has previously figured out what he is likely to require, he will be at the mercy of the man

In the table "lace" refers to the method of fastening. Some bluchers must be found in this stock, but in the better lines especially, more straight lace will be found to be in demand at present rather than bluchers, at any rate this seems to be the tendency of the day. Locality makes a great difference in the requisition for certain styles.

least one silent salesman showcase should be purchased, so that the newer novelties might be shown to all who enter. This is an investment that will pay for itself in a very short time.

He must have several necessary tools, a hand button fastener, a pair of nippers, a knife, a stretcher, a hammer and nail puller are among these. He must also have some stationery and a set of blank books. It is hardly possible that he can secure these for less than \$125, which will leave him \$875 cash. If he takes \$75 more for traveling expenses, freight and other incidentals that must be cared for before he opens up, he will have \$800 to flash in some wholesaler's eyes. Not a very dazzling pile it is true, but a roll of any size is usually an "open sesame" to the abode of credit.

A man who has a clean record and who has a knowledge of business can secure a line of credit that will practically double his capital. Unless a man has had experience in the shoe business and likes it, he had better keep out of it, and invest his money in some other way.

Of course, the one who opens up such an establishment as

who is to take his order. He might mean well in offering his advice along certain lines, but it would always be in favor of his own goods.

Before giving an abbreviated list of the lines necessary to make a start we might say that the new merchant must make up his mind to watch his stock carefully and keep track of his sizes accurately and order weekly, if not daily. He must introduce some system that will make this work as easy as possible. Then he must make up his mind that he is going to miss many sales of goods asked for but not in his stock, and keep track of these demands, and stock the lines most called for as soon as possible. The following division of his stock is suggested:—

Infants' soft soles, assortment	\$ 25.00
Infants' turn, lace and button, black and tan..	65.00
Infants' M.S., sizes 5 to 7½, lace and button, black and tan	75.00
Children's sizes, 8 to 10½, lace and button, etc.	100.00
Misses' sizes 11 to 2, all styles	125.00

(Continued on page 55)

Historic Shoe Establishment Tells of Its Methods

Progressive Welland Firm Believes in Artistic Window Decorations, the Cash System and Spending Money on a Good Front—Too Many Styles To-day Without Corresponding Increase in Business

"A good deal of the advertising done to-day by the retailer and wholesaler is simply money wasted. We often wonder why the advertisers in the Shoe and Leather Journal scarcely ever quote prices. A nice cut of a shoe appears with a full description. This catches your eye, and you are at once interested. The shoe might be just what you want, but you look in vain for the price. You are not sufficiently aroused, however, to sit down and write the maker for the price, but if the figure was quoted in the announcement, mutual benefits might result."

So remarked J. McCaw, of D. McCaw & Son, of Welland, Ontario, when discussing shoe styles and publicity plans. The business which is conducted by him is one of the oldest retail establishments in Canada. The founder was D. McCaw, who settled in Welland in 1850, carrying on the trade of a custom shoemaker. In the year of Confederation—1867—he embarked in the retail line, putting in a stock of shoes ordered principally from George Forbes, of Montreal, and Damer, King & Brown, of Toronto. Thirteen years later he took his son into partnership, and the firm became known as D. McCaw & Son, under which name it is doing a flourishing business in the aggressive

industrial centre of Welland. It has had forty-five years of honorable and progressive history, which can be reviewed with pride. In 1902 the founder died at the advanced age of ninety-two years. During the last ten or fifteen years he did not take a very active part in the business, preferring to go and come as he pleased.

The establishment was well managed by his son. One of the peculiar characteristics of the late D. McCaw's method of doing business was his aversion to signing notes for goods. He always insisted, when ordering, that a copy should be marked "no note," preferring to pay the bill when due with cash.

Front That Cost \$500

The store is 65 feet deep and 17 feet wide. It is situated on a corner, and has a fine large show window with a door at the side. Four years ago a handsome modern front was installed, replacing an old-fashioned one, with two small windows and the entrance in the centre. The alteration cost about five hundred dollars, but the expenditure soon paid for itself in increased business, which is attributed by the firm largely to the nature of the window, which has a paneled background, five feet high, with glass above. A five-foot mirror at the end has the effect, when looking from the side street, of making the window appear twice the length, and displays all trims to excellent advantage.

"Although we do some advertising, we find it difficult to trace direct results," said Mr. McCaw, "but we continue it for nothing

The neat and inviting front of the McCaw shoe house, Welland, Ont.

more than to keep our name constantly before the public. My personal belief is that a good show window, kept clean and bright, attractively dressed with exhibits changed frequently, is almost as effective in the line of pulling trade as an expensive advertisement, but you must have the goods to back it up."

Credit Business Means Loss

Speaking of cash versus credit the proprietor said: "It has been our aim for years to do a strictly cash business and cut out all credit. We believe that a cash basis is the ideal one, but it requires nerve to introduce it in an old-established business. If you extend credit you are bound to lose, no matter how careful you are. We are seriously thinking of adopting the cash method exclusively in the very near future."

The style problem is one that every retailer gives more or less consideration to, and Mr. McCaw thinks that the number

Interior of the McCaw shoe store.

at the present time is too numerous. He declared they should be cut down. The retailer nowadays is obliged to carry too many lines, without the corresponding increase in business, resulting in the accumulation of a lot of odds and ends which are hard to get rid of, even at a sacrifice.

Want Family To Have a Say

D. McCaw & Son, while they do not approve of the appropriation practice, find that they have to do some of it, but they do just as little as they can. They seek to impress upon every customer the advantage and desirability of fitting him or her in the store; but there are always a few people, who want to take their shoes home so that the whole family can pass judgment and comment upon them. The firm find no bad results, however, and oblige this class, comprised mostly of women.

Sales are held twice a year to reduce stock and clear out "shelf warmers." No repair shop is conducted in connection with the store, and while necessary, small repairs are attended to gratis, the firm using their discretion in this matter; should a larger job, such as half soling or heeling, be required, where the shoe has proved defective and the case is a deserving one, the work is attended to outside, paid for by the house, and the cost charged to the manufacturer. Mr. McCaw believes that a repairer can make good when he does the work himself, but when a man has to be hired to do it, it becomes a different problem, and he does not think that it pays.

Use Good Cuts When Advertising

Would you attempt to dress a window attractively without suitable shoe stands, a pleasing background, proper material for covering the floor, and other accessories? If you did, you would have to be a genius to show off the shoes to the best advantage and arrest the eye of the public. Yet there are numerous shoe retailers who are paying out money for newspaper space

and are vainly seeking to draw the attention of readers to their announcements without employing good cuts. Pictures tell a story more vividly and impressively than columns of descriptive wording or fine phrases, and leave something distinctive in the mind. It has been difficult in the past for many retailers to secure serviceable and up-to-date cuts of prevailing styles, and perhaps some have had a good excuse for not illustrating their advertising matter to catch the people's attention.

To meet this drawback, which has prevailed to a certain extent the SHOE AND LEATHER JOURNAL, through its efficient art department, has instituted a first-class service in shoe cuts of all leading patterns and models, which will be found a decided convenience of the trade. These cuts, a number of which are illustrated in this issue, are made especially for newspaper work, and will add to the effectiveness and pulling power of retail publicity. The cuts have been made from drawings of original styles by the members of the art staff of the SHOE AND LEATHER JOURNAL, and all dealers who wish to make the most striking use of their announcements in the daily and weekly press, will find this branch of much advantage and direct benefit. Just as a well-dressed man or neatly-appeared lady commands respect and attention, your advertising will prove a feature of the mediums that you use, and drive home the salient points in the shoes that you handle if you use good illustrations. It will be found profitable to order a number of the cuts presented in this edition, along with the borders and designs, which are appropriate and inviting.

Suggestion About Mate-Numbering

P. J. Galvin, manager of the Hub Shoe Department, Madison, Wisconsin, writes the J. & K. Shoe News as follows: "A mate and size number system that is very simple and tells you at once when the shoe was purchased, is shown by the following:

In upper number "1" indicates the first month of the year; "2" the year 1912,

the final "1" your first pair.

"35" indicates size 3, "2" width C.

The next pair would be marked 122, etc."

121
35
2

Mr Galvin writes: "We use this system on all our shoes. As soon as a line comes in it is inspected, then the sole of the shoes are mate-numbered and size-marked as above with a pen. We have found that the printed slips that are sometimes used, fall off, and are worse than none at all."

Some Advice on Foot Fitting

"I believe that customers should be fitted in the store before leaving," said a Stratford shoe merchant last week, when discussing this matter. "I know it is not always easy to get a caller to be seated and try on certain lines of footgear. A woman will often refuse, and say, 'Let me see what you have got first.' But generally I endeavor to persuade her to take a seat. If you can do that and tactfully remove her shoe, then you have gained your first point. It is not wise to enquire what size she takes. If you have studied matters closely you can perhaps get a look at the size marking in the old shoe, and if not, your eye should be so trained that you can give a fairly accurate guess regarding width and size. I am a strong advocate of the use of the measuring stick. Then fit the wearer from one to two sizes larger than indicated. Here your judgment has a chance to exercise itself. The use of the stick creates a favorable impression with particular patrons. It imparts the idea that you know your business, and are going about the matter of fitting in a scientific and expert manner. These little attentions never fail to please. Small points count immensely in effecting a sale. I admit that I often forget myself, and ask, 'What size, please?' when a woman enters. It is all right, generally speaking, to enquire the size when selling children, or perhaps men, but women are different, you know."

Take Time To Do Your Buying Intelligently

Do Not Follow the Hop-In-Hop-Out Style—Keep Your Appointments With Travelers—Too Much Consideration to Flying Foreigner—Canadian Shoe Enterprise Should Be Encouraged

The trouble with too many shoe retailers at the present day is that they will not take time to buy goods properly. They will not devote enough intelligence, care and attention to their purchases in which concentration should at all times be a predominant characteristic.

The retailer rushes down to a sample room, gives one hurried survey over the ranges displayed, makes a grab here and a pull there, asks prices with lightning rapidity, and then makes a scoot for the door—in other words, he hops in and hops out again like a bellboy. He thinks he has saved a great deal of time, when in reality his experience may cost him more than he is aware of. Buying must be done earnestly, calmly and studiously. There is no truer saying to-day, than "Goods well bought are half sold."

Another matter that many retailers might give heed to is, that time spent in buying is well spent. "I claim," said a prominent shoeman of Ottawa, "that if you have the proper goods any dash fool can sell them, but it requires more than an automaton to do the buying. Herein lies one of the chief elements of success."

"I went to a neighboring city the other day," he said, "and purchased \$8,000 worth of goods. I suppose the average man would think that two or three hours would be ample for making this selection, but let me inform you that I spent exactly two and one-half days in that burg, and I regard the hours as well invested. It is because men do not buy right, do not ask questions, exercise discrimination, and practice discernment that they have so many stickers on their shelves, stuff they can't get rid of."

Shabby Treatment from Retailers

Speaking of buying, a Montreal traveler said that he thought Toronto was one of the worst cities for retailers breaking their appointments. "Why," he added, "I had an engagement yesterday with four men at different hours, and not one of them showed up. Still more, not a single person had the courtesy to telephone me as to why he did not present an appearance. I call this shabby treatment, and I hope that you give some retailers a pointer on the virtues of punctuality and verbal integrity. The man who keeps his appointment, and if he cannot, advises me of the fact, is as rare in Toronto as a pearl in an oyster. Another thing that I have to complain of is, the dealer who will not take time to come down and look at my samples. Well, I am not out for my health, and cannot live on prospect, but I will not truckle to any man who asks me to bring some of my lines.

"It is neither just to myself, the retailer or to the house that I represent. Why, I cannot take more than ten or twelve samples in a tray, and when I get there he is sure to ask for some things that I have not taken along, but which are down at the hotel. If a retailer cannot spare the time to come here and view the exhibit as a whole, embracing, as it does, between two and three hundred samples, I certainly think that he is not only short-sighted, but very crude—even dirty—in his treatment to a man on the road. One fellow told me the other day that he was too busy. I wanted him to present an appearance in the morning, and he declared that he could not get away. I said, 'You have two or three clerks here, why cannot they look after affairs?' and he answered, 'Why, I could not trust them. It is up to me to be Johnny-on-the-spot all the while.'"

No Confidence in His Clerks

"Now, if a man has that kind of a staff about him, salesmen in whom he cannot place confidence or upon whose shoulders he cannot thrust momentary responsibility, the sooner he

gets rid of them the better. He is no use to those under him in the way of developing an efficient staff, and his staff is of little benefit to him. There is no co-operation, no progressive spirit, and no effort to pull together."

A conversation overheard by the writer in a Montreal hotel the other day where a traveling representative for a leading Canadian shoe firm was staying, is reproduced, and throws a flood of light on the subject of buying. The spirited thrust and parry discussion was of a variety not often heard, and needs no

Attractive front of E. R. Gavin's shoe store in Fort William. Mr. Gavin also conducts a successful business in the same line in Port Arthur.

comment. Barnet will do for the traveler's name, and the retailer will be known by Cluff.

Don't Be in Such a Rush

Stepping to the telephone, Barnet called up Cluff, who promptly answered, "I am down here, Billy, on my semi-annual visit with as fine and select a line of women's and children's goods as has ever been turned out. I would like you to come down and see my samples. I can give you an appointment for this morning or this afternoon, or any time to-morrow that may suit your convenience."

"Oh, you will be here for some time," answered Cluff. "I will catch you some day next week; very busy just now."

"Why not come down this afternoon or to-morrow if you are busy now?" queried Barnet.

"You know that you are going to be here for several days, and there is plenty of time, and no hurry," was the cool rejoinder.

"There is where you are mistaken," replied the traveler. "You might at least come down and look over the line. I heard that you were here yesterday inspecting some women's stuff presented by a couple of American travelers, and placed some orders; why in thunder can't you give me the same consideration? We are trying to build up Canada, and place this country on the shoe map, and yet you would keep me lolling around here for days."

No Honor in Native Country

"Oh, well," answered the dealer, "you know these other fellows have very long distances to come, and are only in town for a few hours, but surely you do not expect to do Montreal in a day or two, do you?"

"No," quoth the shoe representative, "but if I paid atten-

tion to all the whims, and suited the convenience of a lot of you fellows, I would be here two months."

"That's not my funeral," was the retort.

"Perhaps not. I am going to do a little plain talking, and I do not give a hang whether you do anything with me or not, but you are going to hear some straight trade gospel. Every time you place an order with a Canadian house you are helping to build up the Dominion, and the money so spent goes to Canadian places of industry. There is nothing on the continent that surpasses the line that I have here, and you would say so too if you would only have a look. You seem to think that a man can wait around the hotel day in and day out without any expenses, whereas the outlay is from \$6 to \$10 every day.

Makes Selling Cost High

"Now, it is just this, Mr. Cluff, that makes our selling expenses high. I am not a tightwad, but neither am I a Croesus. It does not cost an American traveler more than 1½ per cent. to sell goods right here in this city whereas it is costing many a Canadian representative twice and three times this amount, simply because you will not give me proper attention. You think it is a smart thing to keep me idling here for days at a time. Now, nobody wants to rush matters, but it would seem when a fellow with a foreign line bobs in, rings you up, and goes off like a scidlitz powder, you are here on the keen jump, but with me I consider your conduct is decidedly unfair, so do many other representatives of Canadian houses."

"Oh, well," answered Cluff, you know that we can get at you any time, but the other fellows cannot stay long."

"You see it from a narrow, selfish viewpoint. You know full well it is on Canadian goods, such as I handle, on which you make your money, and on which depends the stability of your trade. Out of pure cussedness or some other reason, you make it a pain rather than a pleasure to sell you. A chap from across the border who happens to have a few splashy lasts, but whose goods will be found to contain fibre boxes and counters with thin skived insoles or a kind that will not hang together without canvas backing, gets your consideration. You will pay the thirty per cent. duty, and think you have got something superior in fit, finish and style, whereas you know that the products have been scamped, and every farthing taken out of them in the making. They are all front and no body."

The Spell of Things Abroad

"It is just like this: To-day it is snowing and blowing and cold outside. If you asked your wife how she would like to go for a little trip to Albany or Troy, I guarantee that she would be very nice, and comply, but I bet you that it is blowing, snowing, and just as disagreeable under foot and over head in either of those cities as it is right here in Montreal. Another case of 'Far away fields look green.'"

"Oh, I do not know about that," replied Mr. Cluff. "I think that I get just as good value on the other side as I do here, perhaps a little more so. Anyway, you cannot tell me how to run my business, and moreover, I do not intend to let you. I won't stand for it."

"Now," answered Mr. Barnet, who was now on his mettle, "you have a few things to learn yet. It is the people of this city from whom you get your trade; very little of it comes from tourists or from outsiders. When we get a line that beats anything we have ever undertaken for appearance, quality, style and smooth, expert shoemaking, which many of the best American factories cannot touch, you try to give me the go-by. You are all the time preaching loyalty and talking of what a fine country Canada is. The other day you told a friend of mine that it was not necessary for any chap of genius and perseverance to go abroad. You seem to have fallen under a spell.

"Personally I have no complaint to make against you more than many others of your trade, but when a fellow having charge of the samples takes his factory superintendent, visits all

the great style centres and leading manufacturing spots and persuades his company to turn out something that is the very acme, the latest word in shoedom, well, it is mighty small encouragement that we get from some of you fellows. You would not like me to go to your store to buy a pair of shoes, keep you talking half a day, not look at your shoes, and then walk out, telling you that Robinson was a better retailer. Just reverse the picture and gaze at it now from a travelers' standpoint."

"Oh, well, I am not going to argue further with you. Perhaps a good deal of what you say is right. I will be down to see your samples to-morrow morning at nine o'clock."

Removing Feeling of Prejudice

"All right, see that you come. I tell you that if fall orders are not placed now, a big mistake is being made. Hasty selections often mean repenting at leisure. When you give ample time to do justice to what I have to show you here (if you have seen anything this season that beats, or even comes up to what I have), I am willing to rest my case on your judgment. Comparing values, fit and finish, you will find that Canadian shoes are right there every time. Our factory is delivering the goods."

Nine o'clock next morning Cluff presented himself, spent two and one half hours with the traveler, placing an order for \$4,000 in children's misses' and women's footwear. One thing to his credit, he was open to conviction, and was not long being convinced when he saw the shoes. He said frankly, "That was hot dope you handed to me yesterday, but a good deal of it is true. I see matters now in a little different light." They shook hands and parted.

How to Display Infants' Soft Soles

No other specialty the retail shoeman handles so readily lends itself to attractive displays as infants' soft soles and moccasins. Dainty in color and design, these goods, when neatly arranged in a show case or window, are certain to attract the attention of every lady patron.

The shoeman who carries a good line of soft soles and makes this fact known to his patrons, will do a considerable business. Of course, one of the easiest and least costly methods of advertising is by keeping a good display in a well lighted and well polished show case. Some little taste should be exercised in arranging this feature, and where lady clerks are employed, this duty should be assigned to the one who shows the greatest liking for it. Velvets, whole skins, etc., make attractive back-grounds, and with the footwear infants' hosiery should always be shown. Particular care should be exercised in choosing colors for background that will contrast with the soft soles shown. This is one of the severest tests of decorative ability, and whoever looks after the displays, whether of soft soles, hosiery, or any other specialties, should cultivate good taste through careful observation of the results secured by leading decorators.

Combination boxes, pairs of baby moccasins, and soft soles with stockings of silk to match, are good sellers at almost every season of the year. They afford patrons an opportunity to remember the baby at its birth, christening, and on holiday and other occasions, while the infant is too young to appreciate any other gift, and nothing else of usefulness, or that will show good taste on the part of the donor, can be procured.

Occasionally the shoeman's newspaper announcements should call attention to the infants' footwear department, and lady patrons of the store should always be encouraged to inspect the latest novelties in this line.

ONE FROM AFRICA

Enclosed please find payment for one year's subscription to the Shoe and Leather Journal. We find this a very useful and instructive journal, and look forward to receiving same.

Live Shoemen Should Know the Human Foot

How the Intelligent Retailer May Minister Successfully to Pedal Ailments—The Importance of the Foot as Applied to Shoes—How It Is Injured and Distorted in Many Ways—An Instructive Discussion

By WM. M. SCHOLL, Orthopedic Specialist

Wm. M. Scholl.

known as pes planus, weak foot, weak arch, splaw foot, broken down arch and flat-foot.

I have found from personal interviews with leading orthopedic surgeons, shoe manufacturers and the layman in general, that but few are thoroughly conversant with the anatomy of the human foot, especially as applied to the importance of footwear, and for this reason there are many different opinions on the cause of abnormalities to these useful members. Through educational measures only, has the subject of anatomical construction been brought to the person who comes in direct contact with shoe fitting and the doctoring of foot ills.

I am going to show how the human foot is frequently injured, distorted, and made uncomfortable, also cause and cure of the most prevalent and distressing ailment,

The Bones of the Feet

The foot consists of twenty-six articulated bones and joints, each being joined to the other by highly elastic membranes known as ligaments, and in addition to these ligaments the strength sustaining muscles and tendons passing from the leg and heels, forward to the forward portion of the foot and toes. The frame work of the human foot is so arranged as to permit considerable movement to each joint.

These bones, commencing at the Oscalsis (heel bone) forward to the Metatarsal and Phalangeal articulation, represent the arch. The Oscalsis is the largest bone of the foot. This measures about $2\frac{1}{2}$ inches long and is quite thick. Next to this is the Astragalus, Scaphoid and Cuneiform, and forward of the internal cuneiform is the Metatarsal.

The five Metatarsals articulate

Fig 1—Skeleton of left foot, inside view.

forward with the Phalanges (bones of the toes), fourteen in number. The weight of the body is conducted to the foot through the tibia and fibula, which articulate on the Astragalus and Oscalsis. The Astragalus (keybone of the arch) carries practically the entire weight of the body.

To promote the elasticity of the foot and to enable this collection of bones thus articulated, to properly support the weight of the body, they are so arranged in the form of an arch and held together by the ligaments and muscles and long tendons of the muscles in the calf of the leg, that free action is procured and in place of the foot being rigid in action, it is springy and highly elastic.

The structure of the foot, from a mechanical point of view, is perfect, as each time the weight of the body is thrown suddenly on the foot, the highly elastic muscles and ligaments act as a bow-

string to the bow, and draw the articulated bones back in their true position, as quick as the movement is made, as in jumping, running and walking, etc.

What Flat-Foot Is

When the elasticity and strength of the muscles becomes impaired, a condition will result known as "pes planus" or flat-foot. This deformity, strictly speaking, is not only flattening of the foot, as most people think, but consists of a dropping and twisting of the bones of the arch. The weight itself is carried to the inner side. If you look at a skeleton of a human foot from behind, it is quite apparent how the entire weight is carried to the inner half of the arch, which then forces the Astragalus (keybone) forward and down. The balancing of the body's weight through the Tibia, is maintained by the Fibula, alongside the Tibia, and the strong supporting muscles holding up the inside of the foot. Cases of flat-foot, weak foot and weak arch have steadily and rapidly increased, and statistics compiled show that three out of every five adult persons are victims.

Many persons suffer with every symptom of flat-foot when, upon ordinary examination of the foot, the appearance of the foot is normal. A person having this trouble usually complains of pains and aches in the feet, tiring after short walks, and a desire to rest by removing the shoes and elevating the feet. Callouses on the sole, cramping of the toes and a general burning sensation, also pains in the back and spine, and nervousness, are frequently found to be caused by this condition. In later stages, the muscles have become so weakened and relaxed that the weight of the body crushes down the arch structure.

In the more advanced stage of flat-foot the patient often attributes the pains to rheumatism. This not only manifests itself in the feet, but also in the ankles, knees and to the hip. Soreness in the heels, similar to stone bruise, and pains in the arch and cramping of the toes, are also symptoms of this trouble. Distorted toes, bunions and painful callouses are also results of a weakened arch.

In advanced cases of flat-foot the patient's gait is changed from that of gracefulness

to a clumsy shuffle. In any case, the elasticity of the normal foot is lost, and the patient soon notices an incapacity to do much work. Shoes worn by the person are soon devoid of their original shape, the shank being flattened out, heel uneven, and the shoe in general assumes a very untidy appearance.

Fig. 2.

Cause of Flat-Foot

It is interesting to note the many cases of flat-foot, and the differences, though small, have some strange and marked features in comparison. There are many causes of this condition of weakened foot, flat-foot or broken down arch, tenderness and distortions, as noted above.

The first cause is shoes of an improper shape or size. Second, the wrong last or shape for the individual foot. Third, fitted short, narrow, or so shaped that all exercise and action of the foot muscles is lost, causing relaxation and wasting and weakening of these muscles. Fourth, shoes that have been worn too long or too large. Fifth, the heels have a very material effect upon the muscular control of action, as they are invariably built too high for the patient's peculiarly constructed foot, or for the last upon which the shoe

is built, causing an unnatural balance and throwing the weight unevenly upon the controlling and supporting muscles.

On the point of heels, I may say that the effect upon the arch of the foot or the foot itself is by no means the only wrong that

Skeleton of right foot, outside view.

the spine, at the base of the brain, is articulated in its true and natural position. If the heels are too high and the body is tilted forward, it will have an ill effect upon the internal organs.

Walking Healthful When Properly Shod

Just compare this human body and the internal organs hung to the frame, to the pendulum of a clock. If it is not plumb and true it will not properly do its work. Hence, the heel should be broad and not too high and the equilibrium of the body maintained as when standing in stocking feet. Walking, providing correct foot-wear is used, is one of the most healthful exercises. It does not tend to weaken or injure the foot muscles, but, on the contrary, develops and adds greatly to strengthening the weight distributing points.

The class of people who do more standing than walking and wear shoes that compress the forepart of the foot, undoubtedly become victims of flat-foot from the compression and inability to use the muscles which cause the weakness. Another fact is, people whose feet are encased in shoes not giving sufficient toe room are always endeavoring to favor them, which throws considerable more weight to the side of the foot.

Other causes are weakness or insufficiency of the muscles resulting from illness, or especially following confinement. Not having the foot muscles in use for some time and the general debility resulting from a serious illness, weakens the muscles so that when the body's weight is thrown upon the foot, the arch immediately assumes a flattened position—prolonged standing or constant walking on hardwood floors or stone pavements—sudden change of occupation of a person who is accustomed to a position where the feet are constantly at rest then suddenly is compelled to do continuous standing or walking—rapid growth in children, where the muscles are not yet developed and bone formation slow—radical increase of weight in adults. Growing boys and girls between the age of nine and fourteen years take on weight suddenly and with their usual activity frequently break down the arches or complain of weak ankles. Weakness of ligaments, muscles and bones of a child's limb and foot is frequently present at birth, and soon after commencing to stand flat-foot develops.

Many Ailments Originate From Feet

Much space could be consumed in showing that whatever may be the cause of weakened foot or flat-foot, the condition is also responsible for other foot ailments and many ills, aches and pains in the human body. Ofttimes the effect of flat-foot has brought on nervous disorder, spinal curvature, knock-knees, pains in the legs, thigh and knee joints, and the most common diagnosis has been rheumatism. Thousands of sufferers, not knowing from where the trouble originates, use internal rheumatic cures, liniments, elastic bandages and even resort to surgical operations for relief. No one thoroughly appreciates what perfect harmony and comfort of the human foot is until incapacitated for walking.

Proper Correction

First of all, nature must be assisted. The princi-

ples of the treatment which lead to a permanent cure of weak, depressed and deformed feet are practically the same, although application varies.

ples of the treatment which lead to a permanent cure of weak, depressed and deformed feet are practically the same, although application varies.

The object is to change the contour of the weakened foot to normal position and tend to bring back its natural function. This is accomplished by properly supporting the body's weight at the arch in a natural, elastic manner, because of the inefficient muscles and ligaments, and until they have quite resumed their natural action and strength necessary to carry the weight put upon them. Should the bones of the arch be lowered, it is evident that the plate applied must have enough shape and strength to replace gradually the depressed bones and articulations to the normal position.

This is especially so when the first symptom of flat-foot occurs, such as tiring, slight aching in the heels or ankles, feverish condition, etc. In the more advanced stage of flat-foot the most that can be expected from mechanical aid or artificial support would be to relieve any extra strain or pressure that is thrown upon it. If the misshapen or deformed foot is to be made more normal only a surgical operation would be of benefit.

Success in overcoming the difficulties depends upon having the proper supporting appliance, giving the right size as to length and width, giving the right pressure and elevation to the individual foot.

To get best results, a careful study of the human foot and its construction is necessary. An examination of each should be made before deciding thereon. Clerks in stores, as well as the proprietors, should secure a specimen of the human skeleton of the foot, and study the movements of each bone. It will enable them to properly demonstrate and explain the need and the action of support in each case. Mild cases require the same conservative application as the aggravated case, and remember, as I have stated above, "An ounce of prevention is worth a pound of cure."

Arch Support Fitting

The stocking foot can be accurately and conveniently fitted, so it is only necessary to remove the shoe. Examine the jointed movements as in the ankle, through the instep and arch and the position of the great toe, taking hold of the heel part with the left hand and with the right hand slightly twist or manipulate the forward portion to see if there is any inflammation or extreme sensitiveness in the arch. If so, care must be taken not to cause too much pressure at this portion when fitting the appliance.

Have the patient stand in stocking feet and notice if, when the weight is thrown upon the foot, the arch does not tend to lower itself or slightly rotate inwardly.

Then select the support which you decide for the particular case, taking special care to choose the proper weight support for the weight of the person.

Be careful to get the right length of supporting plate from the heel, forward to a point just back of the ball of the foot. It is best to judge the size of the support according to the size of the shoe, in width as well as in length, although not infrequently the patient with flat-foot may wear a shorter size shoe than would be required by the measurement of the foot, owing to the flattened condition of the arch making it longer from the heel to the ball. Put the supports in the shoes and the patient will no doubt be able to tell whether the length of the plate is proper.

Exercising the muscles of the foot also has a very good effect upon strengthening the muscles and ligaments, and this is best done by standing in bare feet and gradually raising to tip toes to the very limit, then sinking or returning slowly from fifteen to thirty times every morning. Daily massage is of great importance, but should not be used too severely to cause irritation. If this is used lightly, it tends greatly to stimulate the local circulation and strengthens the foot muscles. Allowing cold water from the faucet to flow with full force upon the instep and arch of the foot daily, also has a tendency to bring about circulation and strengthens the tissues. If there is tenderness in the foot and skin, sponging the feet with equal parts of alcohol and cold water will greatly toughen the skin and remove soreness. A little study and experimenting will enable you to get big results and soon have a reputation as a great foot specialist.

Any "Chump" Can Sell Shoes at Cut Rate Prices

It Requires a Salesman However, to Keep a Stock Alive and Fresh—How Should Odds and Ends Be Cleaned Out—An Analysis of Different Methods—Frequent Bargain Cries Destroy Confidence

By JAMES R. BUSHE

A problem that every shoe retailer has to meet is how to avoid loss through the accumulation of stock, how to get rid of odds and ends, and clear out slow selling lines. It is my opinion, after a boot has been in the store two years, at the very outside, it has begun to "eat its head off," so to speak, and is not worth its keep. What is the best method to steer clear of drawbacks through bad stock? Does the special sale pay, and if not, what effective means can be adopted to have only "live" goods on your shelf?

These are questions on which many opinions will be found. Each shoeman may have to solve the problem personally as befits his location, the class of people that he caters to, his method of doing business, the size of his stock, and the number of times that he turns it over. Some of the practices employed are perennial bargain tables, special Friday or Thursday sales, commission or P.M. plan among salespeople, and the premium campaign. The semi-annual reduction sales (usually conducted in the quiet months of January or February, and in July or August), and the disposal of all unsaleables in a lot to some dabbler in jobs or a bankrupt stock promoter, thus getting "rid of all junk at one fell sweep," are other ways.

Frequent Shouts Never Convince

All these plans have merit, and what may prove successful and satisfactory with one man may not do so with another, and therefore it is difficult to lay down any hard and fast regulation. The incessant cry of "sale," "sacrifice," "stock reduction," "going out of business," "fire," "forced payment" and other expedients that have run the gauntlet in days gone by have lost their charm and potency to-day. The yell has been heard so often, and the dodge worked to the limit that other means must be followed. It can be safely assumed that frequent special sales are injurious, and the public have little faith in the broad arguments and sweeping statements presented. The hip, hip hurrah order, the big rallying get-together chorus, the flaring announcement in press and poster, preposterous and extravagant pretensions often fail to score.

Now it may be safely assumed that below cost sales are very rare, and if too many bargains are offered at periodical times people naturally wait until then to purchase their footwear. If they are regular customers they are soon converted and educated into bargain chasers. Once people get the opinion that you are always holding out something marvelous you will not get the patronage of that great and growing class who desire stylish shoes of fit, appearance and durability, and are willing to pay a good figure for a reliable and worthy article in the line of foot covering. The customer who is willing to concede that a shoe retailer has a right to make a fair profit on his goods, who is willing to live himself and let others live, and knows that in this world "something for nothing" is not a paying game, is the best friend of the merchant. The results of such transactions keep the commercial machinery of the present day in motion.

There Is Always Tail to the Kite

The shoeman's business differs from the majority of other merchants in that there is always a dribble, a rag end, a few

pairs that stick and hang, odd sizes and widths, that accumulate in spite of all that can be said and done. A line can rarely be sold out to the last one at regular prices owing to changing styles and season, new lasts and patterns, varied tastes and freakish demands. If I buy a dozen shovels, a score of hammers, a gross of hinges, a barrel of sugar or a hundred pounds of rice, all these commodities may be sold to the last pound, or pair, as the case may be, but with shoes it is a different story, except in a very few staple lines. These things must be taken into consideration in the control, oversight, management and turnover of a stock.

But I am getting away from my subject. I believe, after an experience of nearly a quarter of a century, that it is absolutely necessary for every shoe dealer, no matter how good a buyer he is, or how clever a student of what will sell, to clean up his stock at certain odd periods. A reputable retailer, however, could have so many sales, on various pretexts that his better class of customers would become offended or place no reliance in his methods.

Just how to clean up stocks is, however, a policy for each retailer to figure out for himself. Personally, I am of the opinion that special sales, if honestly and not too frequently conducted, if the truth, and nothing but the truth, is told, consti-

One of the Real "Old Timers"

On the road for thirty-seven years and still at it! That is a record, especially when this long period has been spent in the service

of one house. William A. Griffiths resides in Barrie, and is the son of the late William Griffiths, who was a veteran representative of the W. B. Hamilton Shoe Company of Toronto, which firm began business away back in 1860. The son took after his dad and drove sleigh for him when several towns had to be visited by means of driving. This was the boy's first job after leaving school. He traverses the territory north of Barrie, and he does it thoroughly. His sales have for a number of years mounted over \$100,000 annually. Covering the same territory for the same house for thirty-seven years is a career which is not probably paralleled in the history of shoe salesmanship in Canada. Mr. Griffiths is a great worker. He is always on the job. He is a large shareholder in the firm and owns considerable property. He has few

hobbies, but once upon a time he undertook to raise chickens and purchased an incubator. He started in bravely, but the whole batch of costly eggs went wrong and he gave up the attempt. The accompanying cut shows him in the act of starting out with spring samples in 1896, and gives a fair idea of how road representatives appeared some fifteen or sixteen years ago.

tute a favorable factor in lubricating the machinery of business and keeping things in motion.

Men Are Different to Women

Men are different from women—remem' er this. They are not so much given to bargains and bargain hunting. Keep this fact in mind, and do not cheapen your business through holding too many sensational cut-rate campaigns, no matter what your competitors do. Any chump can sell footwear below cost or at reduced prices, but it requires business ability, salesmanship, aggressiveness and confidence in yourself and your goods to command what they are worth, retain the esteem of your clients and make a fair return upon your investment.

There are many men calling themselves "shoe merchants" today who are not worthy of the title. You can find them in nearly every city and town in Canada. They are of the "has-teen" or "never was" type. Legitimate sales are good, but they are spoiled by this class of dealers who persist in hurrahing too freely about reduced prices. When a shoeman says he is selling goods below cost, below manufacturers' prices, etc., there appears to be something wrong. The best way is to reduce slow lines during the selling season. It is possible for some stores to offer inducements that some others could not. I do not believe in placarding a store after the fire sale idea. A feature of too many special sales which I detest is that some stores use them to bamboozle the public to an almost unlimited extent. Take, for instance, a store I know about which held a tire sale. They were not content with selling shoes that were in the store at the time of the fire, but went out to wholesalers and bought job lines, which were added to the stock. This type of sale is very injudicious, not only to that particular store, but to others. Personally, I would like it if no stores advertised special sales. They are all right for large department stores, as they bring people to the establishment, but for a shoeman to be continually harping on the special sale idea must bring injury. If they are indulged in too freely, all faith that the public has in special sales will be lost.

Public Are Skeptical

The public are skeptical about something for nothing. You have heard of the man who sat at one end of London bridge and offered gold sovereigns for one penny. He sold two in one day. This illustrates how suspicious some people are of the word "bargain." On the other hand, there exists a class of people who are never satisfied with goods at regular prices. They want reductions, and are caught by special sales. These people would rather buy a \$3.50 shoe for \$5 if the salesman told them it was worth the latter figure, and was just giving it to them for \$5, than to purchase it at regular price.

Be Honest, Frank and Fair

When prices of goods are to be reduced some definite, legitimate reason must be advanced for the reduction. Be honest about it. Most shoeists are afraid that if they are honest in pointing out the faults of shoes, or why they do not sell, it would make them unsaleable, whereas if a man or woman is told what is wrong in a frank manner he or she will think a great deal more of your store.

I do not believe in the "Hurrah" business. Many stores are killing the quality of their business by such methods, and are also injuring merchants who desire to use legitimate means. The store that only quotes one price, will sell three times as much as the store which quotes its selling price and what an article was previously worth. Mark all your goods in plain figures, have but one selling price to all, be patient, but firm, on this point, and you will win in the end.

As a general thing, it is the younger clerks who do not treat children with the kindness and courtesy that fosters their confidence.

Place Your Fall Orders Early

"There is one thing that retailers should remember," remarked a prominent shoe salesman this week, "and that is, for fall and winter goods they should place their orders early if they expect deliveries on time. This is no pipe dream as factories have only half the while at their disposal to turn out the stuff that they have with spring orders. The time between now and August and September is short and the early bird is the man who will reap the harvest. The shoe man who will not take the opportunity now to give an order will not need the time to sell his fall goods a few months from now as he will not have them. Factory capabilities are limited and they cannot do the impossible. In connection with spring goods they have seven and eight months to turn out the stuff, but in the matter of fall bookings they have only three and four months. It is not advisable or prudent for the shoe merchant to delay and remark, "Oh, I will see you next time," as that may be too late. Now is the time to place all fall and winter orders to ensure prompt and satisfactory delivery. Any factory or traveler will tell you what I say is correct."

An Evidence of Senseless Slashing

"Shoe men, if they formed local associations, would obviate much misunderstanding and petty jealousies," remarked a retailer doing business in a Western Ontario city of about eleven thousand people, where there are nine exclusive shoe stores, besides others which are carrying footwear as a side line. "The result of senseless price cutting here," he continued, "is that no man in the business is making money. We are cking out a living, and that is about all, and we carry stocks averaging from ten to twenty thousand dollars each. Take the matter of men's overshoes, third quality, which cost us 90 cents. Now, this shoe should bring us at the least \$1.25, but one man immediately after January cut the figure down to 97 cents, another followed down to 96, and a third came out next day and featured them at 92 cents each, just two cents profit on each pair. Then again in children's rubbers (seconds) that were bought for 25 cents, and should have been disposed of at 40 or 45 cents, the same state of affairs prevailed. The price was slashed to 27 cents a pair when the demand was in full blast. How long can a shoe man thrive on such cut-throat methods as I have outlined? The trouble is that one is afraid that another is going to get ahead of him, and thus the iniquitous practice goes on. I have mentioned these two lines merely to show you how senseless and preposterous are the plans adopted by so-called business men in this city to catch a cheap class of trade, and not one of us has had the backbone to stand up against it."

Take His Talk With Mental Reserve

"Prices on many lines of shoes are from five to fifteen cents higher this season than they were last fall, owing to the advancing figures for leather, linings, wages, etc.," remarked a Montreal manufacturer this week. "When any traveler remarks that his prices are no higher than last year and you ask him if the stock is equally as good and the shoe as well made, and he answers 'Yes,' well, all I can say, do not place too much reliance in his goods or confidence in his word. Shoes of the better class, and even many cheaper grades cannot be produced for the same money as a year ago, and the manufacturer make a living profit. We have had to raise our quotations on several lines, and do not deny it. Our travelers do not live on snowballs, and a man who keeps his plant in operation at a loss is a fool. The price of everything has gone up, and it is as well to be candid and frank about this matter. Trying to deceive or hoodwink the retailer is a shifty game, and will only act on the part of those who try it like a boomerang."

From Pins to Peak Caps—and They All Bring Trade

Novel Advertising Schemes of a Chatham Retailer—How He Gathers In the Business of the Artisans—Dealing With the Approbation Practice—One Customer Kept Shoes for Two Months

"Yes, the approbation practice is one that every shoeman has to contend with, it seems, and there appears to be no effective remedy for it. It is not fair to him, as when shoes are carried home, if they are kept, and do not fit, the dealer is blamed for it all, when he has had really no say or decision in the matter," remarked J. L. Campbell, who has been in business in Chatham, Ontario, for sixteen years, and carries a large and representative stock. He sells considerable American footwear, as he contends that on many lines of Canadian goods he cannot get what he needs in the matter of widths.

"However," he remarked, "Canadian manufacturers are waking up, and have made great progress, particularly in men's goods, and there is less and less call for American lines. But, reverting to approbation, let me point out an example to you. Now my books here show that a ladies' lutton boot was taken out of the shop just two months ago, and the pair was returned to me yesterday. What better evidence do you require than this regarding how shoemen are imposed upon. This lady is a good customer, too, but she has kept the boots eight weeks. I am a crank on proper fitting, and think that every retailer should be allowed to suit his customer if at all possible. It is his business, and a satisfied customer, as has often been said, is the best asset."

Mr. Campbell has a store 90 feet deep, 18 wide, and a full-length basement, as well as two stories above, which he uses for reserve stock.

In the matter of repairs he attends to all small jobs, such as tacking a sole or stitching a rip, on the premises, but if new bottoms are required, he generally sends out such work. He does not think that it would pay to employ a shoemaker all the time on the premises. He has a boy whom he is training in operating the stitcher and other machines at the rear of the store.

The Craze for Styles

"Yes, there are too many styles in shoes, particularly in rubbers," remarked Mr. Campbell. "The fact that tan and white rubbers are now being made loads up the shoeman with too many kinds, as he must keep various shapes to fit the different heels and lasts.

"I think that is carrying fads too far. The craze for white goods has resulted in a demand for white rubbers. In the marking of shoes I always endeavor to obtain a fair price, and if I make a particularly good purchase at a special rate, and the shoe is a good looker, that is my own affair. I endeavor to obtain a higher figure for that boot. The public will pay the quotation if the goods have the snap and appearance. A longer profit on them helps to preserve an equilibrium, so to speak, on ranges which have to be sold pretty close."

The Power of Publicity

Mr. Campbell is a strong believer in publicity rightly directed, and employs various means of advertising. One plan was to distribute on the market a small paper of pins with his name and business printed on the paper. He made use of another scheme some time ago, when he scattered court plasters, which were

kept, and eagerly sought after, the package containing several small sheets of different colors. Another plan was to hand out small cards, which read as follows:

"Special free offer! Boys, in order to become better acquainted with you, we are making this free offer. To any boy buying a pair of shoes worth \$2 or upwards, and presenting this card, we will give free of charge a two-bladed, nickel-plated, razor steel knife, worth at least fifty cents. Remember the place, J. L. Campbell, shoe store, 94 King Street West, Chatham, Ontario." The knives were soon run out of, so ready was the response.

None Had To Go Bareheaded

The proprietor thinks that the best plan which he has adopted out of many is the cap scheme. These caps, which come in all sizes, are bought by the thousand, and cost on the average about seven and one-half cents each. They are made of silkoline, suitably lined, and have a generous sized peak. The color is black, and on the front and back in large white letters are the words, "Wear Campbell's shoes." He had a few of these distributed at the various factories, and, of course, the men fortunate enough to secure a suitable light headgear for working in the shop, soon attracted the attention of the others. The result was an application from hundreds for the caps. The mechanics called at the store, and were given caps whatever size desired. Now practically all artisans in the busy industries of Chatham wear during

Interior of Campbell's shoe store, Chatham, Ont.

the hours of labor one of these neat-fitting caps, constantly reminding them of Campbell's shoes.

Mr. Campbell handles all kinds of trunks, traveling bags and suit cases. He considers this a good line and the profit satisfactory. He holds sales twice a year—in the winter and mid-summer—and has bargain tables on which certain odds and ends are cleared out. He says that he does not experience much difficulty in getting rid of slow-selling goods. He has never tried the commission or spiff system of allowing clerks a certain percentage for clearing certain styles. He thinks that, rightly directed, the plan has much to commend it.

First Attract—Then Sell

His store has a fine double plate glass front, and he goes in strongly for effective window displays. "You must attract the attention of a buyer before you can hope to sell him. The impression that you make upon the people with your show windows has much to do with effecting or losing a sale. The store front is one vital part to business. It creates sales, and rightly attended to, is one of the best means known to draw people into your establishment. They become interested through what they see, and once inside, it is your fault if you cannot sell a caller. As an advertising and selling element the store front has a compelling power, but, of course, a front or window display is not everything; it must be backed up by a reliable stock, a progressive policy, an efficient service, polite attention, and earnest co-operation," concluded Mr. Campbell, who is an enthusiast over window adornment.

Some Stray Shots from "Solomon"

Someone has said that the reason for the high cost of living to-day is the cost of high living. We are not satisfied with the food we were accustomed to ten or twenty years ago. Our palate has to be tickled with new fancies and our appetite encouraged with strange culinary concoits. We ape our neighbors, especially our bigger neighbors, and, like the Athenians, are constantly seeking something new in the eating, as well as other lines. We go to the table of some "ruler," eat of his "dainties," and afterwards order up some of the dishes for our own humble board. There is great need of the injunction of the wise man, "Put a knife to thy throat if thou be a man given to appetite." Cut out a lot of this fancy eating, and you will be happier, healthier and richer. There is not really the necessity for the high cost of living that some people think, and there would be an easier market in some lines of eatables if people would be content to let others have them for a while.

HIGH LIVING

Most people are in the moneymaking business, more for the excitement of the game than money itself. Nevertheless, there is a lot of toiling and moiling for gold that leaves men poorer and uglier in heart than a navy or a drain digger. There is a man down the street who has struggled and scraped until he is worth perhaps a quarter of a million, but his eyes have become like hawk's, his mouth as hard as a vulture's, and his fingers like the talons of a bird of prey. "Labor not to be rich." The man who gets his eyes on money stands a poor chance of seeing anything else in the world. It is a Medusa that turns heart and soul to stone. A rich man died the other day and those who were with him say that a knock came to the door. He recognized the voice as that of a man whose note was due. "Let him in," said the dying man faintly, "he has come to pay his note. We might as well take the money while we can." He expired an hour or so later.

MUCK RAKE

True wisdom bows to the wisdom of others. It is only the blatant fool or the conceited ass who thinks his own wisdom the only sort worth considering. "Cease from thine own wisdom." You have begun to be wise when you have learned to listen to what other people have to say. This does not mean that you should chase up every opinion or listen to everyone who has advice to offer. Get it into your head that it is not possible that the last word can be said on any question by any man, no matter how smart he may be. Especially when you have tried out your own ideas and followed your own wisdom with lack of true success, set about discovering where you are wrong and don't be above listening even to a messenger boy when he stands a chance to know anything about a subject you are interested in. Cease from wisdom that is mere pig-headedness.

LISTENING WISDOM

Shun the company of the man who has the "evil eye." There are men who seldom have a clean, wholesome thought about anything or anybody. When they do a favor it is with the object of some secret advantage to be gained. "Eat and drink, he saith to thee, but his heart is not with thee." He is after the main chance first, last and always. A man like this pollutes the very atmosphere in which he lives, and destroys in those who run with him the divine spark of unselfishness that separates

EVIL EYE

man from the demons. "Eat not thou the bread of him that hath an evil eye." Don't have fellowship with the man who proclaims the doctrine, "The greatest good to the greatest number, and the greatest is number one." He will get you at last.

Respect for the rights of others is one of the oldest and best of the common laws of humanity, and the man who breaks it is an enemy of society, out and out. Men seem to be willing to do anything to get around the law, and things are done along this line sometimes that narrowly miss the lock-step. Human selfishness given its fling will stop at nothing short of the chain gang or gallows. "Remove not the old landmark and enter not into the fields of the fatherless." Beware of sneaking your way into unjust gain and taking advantage of the defenceless. "For their Redeemer is mighty and shall plead their cause with thee." You will have to reckon on God at the other end.

OLD LANDMARKS

To-day more than ever men need the warning, "Let not thine heart envy sinners." It does look often as though crookedness and oppression counted, while truth and unselfishness simply played into their hands. There is a tendency amongst the younger generation to look upon those who amass wealth or attain position through modern "aggressive" business methods, as examples of the commercially heroic, and it takes a goodly amount of "sand" to keep a fellow content with the slower and more trying methods of succeeding in business; but let us remember that there is something infinitely better than mere money-getting. The man who does not accumulate character with his money has "missed the mark" in life, let him count his gains in millions if he will.

BUY IT

Make all you can, but take care that in the making of money you are not unmaking yourself. "Buy the truth and sell it not." One grain of truth is worth a ton of gold. One atom of character is worth all the money you can throw into the other side of the scales. There are men who have not a dollar beyond their daily needs who rank in the community as princes; there are men who write their cheques in four or five figures, who haven't enough soul to put into a black fly. How much truth have you accumulated in your brief experience? This is more important than the question, how much money have you invested in stocks and bonds? Truth is the specie that counts at the other end of the line. Sell it not.

Those fellows that you are fond of supping, dining and drinking with will never be any use to you. They hinder you now making of yourself what you ought, and when the time comes that you need them or someone else they will not come within forty yards of you. It is all right to be sociable and friendly, but the man who spends much of his time enjoying himself and helping his friends to a good time will wind up at the small end of the horn. "Be not among wine bibbers; among riotous eaters of flesh." If you have been in the habit of running with those who think of life as one long joy ride, cut it out. If you don't you will get to a part of the road where there is no turning and where the riding is not as full of pleasure as it seemed to be at the beginning.

JOY RIDING

Business Man Is Dead Who Cannot Be Taught

What Canadian Credit Men's Association Is Accomplishing—Legislative Progress and Work of the Organization Across the Line—Good Effect of Bulk Sales Act—Co-operation Needed

"The broad-gauge man is the one who is doing business to-day, and making progress. The narrow-gauge fellow is the one who is standing still, and if he is standing still he is going backwards.

"It pays to be open and above board, honest and frank. Give a square deal, and you will get one in return. If you don't you won't.

"That business man is dead who cannot learn from another. Co-operation is the spirit of the day, and the merchant who will not give and take is better dead; for he is dead already.

"You cannot legislate a dishonest heart into an honest one, but you can by legislation curb his nefarious work."

Such were some of the timely and pertinent observations of Alfred H. Burt, of Buffalo, in a "Plain Business Talk from a Plain Business Man" before the Ontario section of the Canadian Credit Men's Association at the last regular gathering in Toronto.

Secretary L. J. Ball reported that the Ontario division, which was organized three months ago with ninety-five members, to-day had a membership of 142, and was growing rapidly. Mr. Burt is the president of the National Candy Company, of Buffalo, and for five successive years was president of the Buffalo Credit Men's Association.

He said that the Credit Men's Association stood for legis-

lative and educative work. The association was first organized in Toledo, Ohio, in June, 1896, and would hold their annual gathering in Boston this year. To-day there were associations in seventy-eight cities in the United States, with over fifteen thousand members. The convention last year was referred to by the press as "The greatest organization of business men ever assembled in the United States representing all lines of industry." When seven or eight thousand, representing the best interests of the largest firms in all branches of commerce got together, no organization on this continent wielded as much influence through its affiliated associations. When better credit conditions were aimed at they were promoting commerce and trade of the country.

Working of Bulk Sales Act

Mr. Burt briefly sketched what had been accomplished in this direction. A national bankruptcy law has been adopted by Congress whereas various laws in different states had prevailed before the passing of this measure. In both voluntary and involuntary assignments there were now no preferences under the bankruptcy law. Through the National Association the Bulk Sales Act had been passed, which had overcome much fraud and losses. Now if John Jones wanted to sell out to Jim Smith, John Jones must furnish Jim Smith and all Jones' creditors, five days in advance of the intended transfer, with a full list of all

A PLEASING PICTURE OF SPRING STYLES

A distinctive and effective display made by Geo. G. Gales & Co., Montreal.

his creditors, and the amount due each. These "skip-by-light-of-the-moon" transactions were thus prevented. The buyer was made responsible, as well as the seller, and, if this provision was not complied with, both could be held on the charge of fraud.

Then there was the fictitious name law such as a business being done under the title of the "Palace of Fashion," "The Up-to-date Shoe Store," etc. Jones and Smith might formerly be doing business under the name of the "Palace of Fashion," and both be responsible parties according to the commercial agencies' reports. Matters might go well for a time, but should a reverse come, Jones and Smith might quietly get out, and the creditors wake up some morning to find that the "Palace of Fashion," to whom they had extended credit, was in the hands of worthless and deceitful parties. Now, under the law, the names of the persons trading under fictitious names such as the one spoken of, had to be filed with the county clerk, their financial standing, etc. If a change took place, the names of the purchasers, their rating and other details, had to be first filed, so that creditors got a straight and direct line on those behind the enterprise.

Cannot Go Through on Appearance

Another useful measure was the false statement law. The man who picks your pocket is a thief, and can be convicted, and under the false statement law, he who robs you of your goods by means of a fraudulent financial record was regarded in the same light. Other measures of much benefit and protection were the filing of chattel mortgages, bills of sales and a record of goods bought on the instalment plan, such as shop fixtures and fittings, showcases, scales and general mercantile equipment. A merchant who might in other days have made a favorable showing, and on appearances and surroundings be given a line of credit, could do so no longer, as all particulars of fixtures, etc., bought on the instalment plan had to be filed with the county clerk. Wholesalers knew that a man who had bought his shop equipment on the instalment idea was not in as favorable a position financially as he would lead travelers to suppose.

Helping Retailer Means Something

Another law of importance in New York State was the Garnishee Act. If Robinson ran up a bill with a grocer, dry goods, or boot and shoe merchant, and then left him without paying his account, and went to another merchant and did the same thing, and so on until he completed the circuit, recourse could be had. Any retailer could sue, and if the debtor was earning twelve dollars a week or over, the court could order that he pay ten per cent. of his weekly wages toward the wiping out of the bills that he had contracted and sought to escape.

The Credit Men's Association has been instrumental in having this act passed in the interest of the retailer, as they believed that in assisting the retailer to collect his accounts, they were benefiting themselves, as then the wholesaler could secure payment of his claims. "In case a dishonest man gets into financial difficulties, but is paying your bills all right, you fancy that he is doing it on the score of personal friendship. Beware!" said the speaker, "he is probably doing so for a purpose, and only awaiting an opening. When the proper time comes, he will sting you too. I know whereof I speak, for I have suffered from this kind of a crook. No broad-gauge business man working for better conditions should refuse to give ledger information to another under the working of the Association."

Mr. Burt spoke highly of the good being done by the Credit Men's Association in Western Canada, and favored the work they were carrying on along insurance lines, especially in the matter of appointing an insurance adjuster.

Leading Houses All Belong

Secretary Ball said that it had been reported that many of the leading houses in Western Canada did not belong to the Credit Men's Association, and that the dry goods merchants and the boot and shoe jobbers were not identified with it. This was not the case, as from the Great Lakes right through to the

Rocky Mountains they were all members of the Canadian Credit Men's Association. Another criticism that he heard leveled against the association was, "Oh, you ask me to tell my competitors how much I am selling Mr. So-and-so, what business I am doing with him, and all inside facts." This was a narrow view to take, as generally competitors had a fair idea who was behind certain men, and how much he was buying from others in the same line. One branch of wholesale trade, of which there were four members, had an association of their own in exchanging reports. Many merchants carried more than one line, and such an arrangement was not effective, as other houses were catering to the same man. These jobbers were not getting the general information that would be of most benefit to them. Of

An effective window card for Easter decorations.

course the clearings (trade reports) could be sent separately to such men, but it was much better that they should have the complete information, especially as many merchants dealt in various lines. Even tobacconists were to-day carrying sundries.

Rendering a Good Service

It was service that the Association was seeking to render, and not to make money or profit. He was certain that the work as it developed along the lines laid down would be better understood and appreciated. It was a disadvantage to have the clearings confined to one single line. The full ledger reports were much better and of greater value and protection to the members and the man who would not furnish them in confidence was not acting in the best interests of himself or others.

A BIG DOLLAR'S WORTH

It is with a good deal of pleasure I loosen my grasp of a lone dollar for your valuable journal for another year. I don't think I get anything like the value for any other dollar I spend in my business.

Sincerely yours,

ROWLAND HILL.

London, March 19th, 1912.

Starting in Shoe Business With \$1,000

(Continued from page 37)

Women's high-cut shoes, all styles.....	250.00
Women's low-cuts, pumps, slippers, etc.....	300.00
Little gents'	25.00
Youths', 11 to 13	40.00
Boys', 1 to 5	100.00
Men's high-cuts	335.00
Men's low-cuts	125.00
Men's work shoes	35.00

\$1,600.00

It would extend this article too long if the writer should attempt to show just how each of these amounts should be subdivided, but to demonstrate how good an assortment can be secured at these figures, let us take one item, say, men's shoes.

Men's sizes range from 6 to 10, sometimes to 11. A man with a limited stock cannot afford to carry a lot of out sizes. In buying he can make his assortment much better and larger for ordinary purposes by leaving out some sizes in certain lines. It is not necessary, it is not good policy, it is not good judgment to buy a dozen when nine, ten or eleven pairs will give equally as good an assortment of sizes. Every pair not absolutely required to make the assortment complete is dead stock.

In the table prepared it will be found that in 145 pairs of shoes there are twenty-three distinct styles and kinds represented. At a glance it will easily be seen that there are ample sizes to suit and fit most customers. A business in special pairs may have to be done, and the merchant stand the express charges. This will prove his loss, but it is far better for him to make but little on a pair of shoes than to lose the sale of them and the customer as well.

See Banker and One Wholesaler

F. A. Robinson (with F. R. MacMillan & Co.,)
Saskatoon, Sask.

In writing on this subject, I am ready to back up my remarks with actual experience of a score of years.

Let us first look up a location. We can hardly set any given amount for rents, because it varies so much in different places, but with the exception of booming western towns or large cities, the rent should be kept down to \$600 per year, or even as low as \$350. In any case, have a good location, even at an expense of \$100 per year more. The logic, if you want to catch fish you must go where the fish are, holds good in the shoe trade. Have some distinguishing feature about the store that will make it known from all the others. For instance, if your neighbors' fronts on both sides of you are painted the usual dark shades so common in business fronts, paint your front white, and keep it white. One coat each year will keep it fresh and clean. You can have the interior clean and attractive, with very little expense. Some good chairs and suitable tables, a screen or two and fitting stands, according to the number of salesmen employed. Other things can be added when profits will justify.

Do not oil your floor to keep the dust down. Scrub and keep it clean, and the dust will not bother you. Nothing you can do will add so much to the appearance of your establishment as a clean floor. Oiling makes it dark, and affects the whole place. Soap and water are cheap, and you can supply the labor once a week, after you close. An hour at most will do it.

Next have a confidential chat with your banker. Most bank managers are men worthy of your confidence, or they would not be in that position. Tell him how much you have, outline your policy, and keep nothing back. There is no one so foolish as the man who attempts to deceive his banker. The line of credit you will get as time goes on will depend on your own merit very largely. Do not abuse your credit. Treat it as almost sacred.

The next best thing to ready money is good credit. Do not try to dodge your banker if you cannot meet your obligations; tell him straight, because it is right, and pays.

Now, having settled the store problem, and seen the banker, let us turn our attention to the stock. On such a small capital the greatest care must be exercised, or serious trouble will come before your business can celebrate a birthday. Pick out a first-class jobbing house, and write or phone if you live near enough, for an appointment with the proprietor. Here, again, be perfectly frank and honest. Tell him how much you are putting into the business, and outline local conditions. It is quite likely he will discount some of your calculations, and set aside some of your fondest hopes, but you can well afford to suffer these things, for you are getting the very essence of his experience. This man has probably dealt with hundreds of cases just like yours, and can point out every rock and shoal. If you will really take your chosen jobber into your confidence and make yourself worthy of his, I know of no surer way to spell success. You may ask, Why select a jobber instead of a manufacturer? The reason is simple. Because of your very limited capital you cannot have more than one account and play safe. There is no manufacturer from whom you can get all your supplies for a whole year's trade. From a good jobber you can buy everything, and at closer prices than you could command had you ten times the capital. Then again you get the best of maybe fifty or sixty factories, selected by men who know. These again are examined and discussed, one by one, by the firm's travelers, and by the time the samples are ready for the road, I venture to say, you have more good sellers and a better representation of the season's needs than you could possibly get from any five manufacturing houses.

Your interests are now mutual, and even though you know quite a lot about shoes, you can afford to be guided by your jobbing house as to what lines will be safe and what will not. Their men have been over the country, and they know what sold. Do all the thinking you like, but you may bank on it, the wholesale man would not load you if he could.

There is another side of very great significance in dealing with one house, and that is your financing. Your capital will go much further with one than spread out over half a dozen. If trade is ever so quiet and you owe just one house, you can always pay a fair amount, and there is no uneasiness; but say you owe a half dozen houses, and trade is slow, if you are not grey-headed to start with, you soon will be. In cases like the latter very few even weather the storm unless some one house will take hold of them and carry them while they get clear of some of the others, but, even if you are so fortunate, you have lost both time and money. For your sure financial safety and peace of mind "Get all your eggs into one basket," so to speak.

No stated amount can be given as to what credit you will receive from your banker and your jobber. I should say, however, that your banker would give you from \$200 to \$300, and your jobber will probably give you \$500. Use the wholesale credit, but keep any your banker gives you in reserve until your business is actually running, and even then do not use your credit until you must. By so doing you will keep your business well in hand, and your jobber will appreciate the fact that his account is your only liability.

Now about buying the stock. I would say that you buy \$1,400 or thereabouts. Pay \$900 in cash and take the discount, which will be two per cent. To some this may not seem very large, but let me remind you that it is on 60-day terms, equal to 1 per cent. per month, or 12 per cent. per annum, an item not to be despised. This first discount will buy you some window fixtures or pay the freight on your opening order. Possibly your stock will not look very large. Never mind. If it is well selected and saleable the size will not matter. Figure out how many pairs your shelving will hold, then when you have finished buying, see what space will be still unfilled, and buy empty

I should say start early in the spring by all means, as you cartons for the balance.

can carry on business with less expensive stock than beginning in the fall. Felt stock may be left out altogether, and \$50 or \$75 worth of fine over rubbers with sorting will let you do a nice trade. If there is lots of snow buy freely, if not, buy sparingly. By starting in the spring you should be in a position to command a larger line of credit by fall, when your stock will need to be large, because of fall and winter lines added.

Your locality will determine what proportions you should have in your men's, women's and children's shoes. I would say put in \$500 men's, \$400 women's and \$200 misses' and children's, \$100 for boys, youths and little gents, and \$75 for rubbers. You will need laces, polish, findings and shoe store accessories that will use up most of the balance of the \$1,400. If you have not run the limit of your credit I would put \$50 to \$100 in trunks and bags. These are ready sellers if well shown, and make a good appearance in your store, particularly when your stock is small and you want it to look bulky. These again you can generally buy through your jobber.

You are ready for home and have \$100 left, and the credit your banker may give you is still to the good. With this \$100 you can pay the first month's rent and any expense in painting and cleaning up.

Last, but not least, *Advertise*. You can well afford to make a dark brown study of this. Avoid all programme, score card and such schemes. Put your money into good newspaper space. Do not write such matter as may be discounted as "trade talk," but give good straightforward talk such as your store and stock can back up, and be sure you *back it up*. Take a small space in a good position and use it well, and your money will bring results. Your best and cheapest advertising, however, is your window. See that it is always clean and bright.

This is as far, perhaps, as our subject, "How I would start a shoe store on \$1,000," takes us, but I would like to add a few words of warning that you might pin in your hat.

Do not, for at least a year, let another house sell you goods, no matter what terms or dating you are offered. You cannot afford to play with your credit, and always keep in mind what you told your banker and your jobber. No offer is sufficient inducement to break these confidences.

Sell your goods for cash, or do not sell. You cannot afford to take any chances, and people wanting credit are very plausible and easy to sell, but getting the money when you want it is not so easy. Be firm on this point. Goods on the shelf will appeal to your banker better than doubtful accounts.

Do not allow shoes out on approbation. They never come back in as good condition, and while these shoes were out you probably lost a sale, and worse still, a customer.

Do not sacrifice your dignity. No matter how discourteously you are treated, be a gentleman. If you must resent, do it coolly and in a dignified way. Nothing is gained by going "up in the air." Do not grovel for a dollar. Do not break a promise with a customer on any account. This gets to be easy with some men, and differs but little from deliberate falsehood.

Do not feel hurt all day because a customer gave you a throw-down. When the customer is gone, forget all but the lesson.

Do not be afraid to sort up by express, even if it costs more than freight. It will save you many a sale and many a customer, and by so doing you can have a larger turnover on a smaller stock.

Get the Men's Town Trade

By Jessie Cumming (with H. L. Harrison), Fergus, Ont.

Hearing of a little town of 800 people, with a good opening for a shoe business, I have decided to invest my \$1,000 in stock. There is a good farm country round this little place, and one general store carries boots and shoes.

Never having had a shoe store in this community, the people have been buying at this general store, and for this reason I have

bought women's, misses' and boys' in 9-pair lots, as they (country women) will still do a little trading, but in men's lines I have bought in 12-pair lots, as I expect to get the men's town trade.

There is no local paper in this town, so I have invested \$2.50 in 800 hand bills, which I shall distribute in the place and in farmers' wagons; the other \$2 I shall use in writing postal cards, as this is a good means of drawing trade.

I shall only have one show window, so my \$5 will be spent in several kinds of floor coverings and curtains, which I shall use to good advantage.

My surplus in the bank is not a large one, but I expect by giving a statement of the business, I will secure a line of credit which, if I need later, I can invest in more stock, but I hope to work up a good business with the amount I have invested, as by careful management and attention to business I believe that I will be successful in my venture.

Here is what I would buy on a cash capital of \$1,000:—

MEN'S.	
24 pairs patent (2 styles), \$2.40	\$ 57.60
12 pairs calf, \$2.40	28.80
12 pairs calf, \$2.00	24.00
24 pairs dongola (2 styles), \$2	48.00
12 pairs buff, \$1.25	15.00
12 pairs box kip, \$1.50	18.00
12 pairs split, \$1.20	14.40
12 pairs grain, \$1.60	19.20
12 pairs English kip, \$2.00	24.00
6 pairs long 12-inch boots, \$2.50	15.00
12 pairs leggings, \$1	12.00
12 pairs tan oxfords, \$2.50	30.00
12 pairs patent oxfords, \$2.75	33.00

The foregoing is a picture of the complete Goodyear repair department of A. E. Cudmore, 952 Gerrard Street East, Toronto, which was recently installed by him. The repairer on the right is John Harrison, and his assistant is Albert Chadwick, who has since been managing Mr. Cudmore's branch store at 320 Danforth Avenue. The repair outfit consists of a stitcher, edge trimmer and grinder, bottom, shank and finishing rolls, heel breasting, scouring wheel, bottom, shank and heel-finishing brushes,

heel scouring and bottom buffing rolls, and a Cortell edge setter. Mr. Cudmore this week sold his Gerrard Street shoe business to William Howarth, who has for some years been identified with F. J. Weston & Sons, Toronto, as a bookkeeper. Mr. Howarth takes possession in a few days, and will add a full line of traveling goods to the stock. Mr. Cudmore will devote his attention to his store at 320 Danforth Avenue, where a good trade is being developed.

A General Review of Fall and Winter Shoe Styles

Medium and Drop Toes Are Likely to Replace the Extreme Ones—Buttons for Women Exceptionally Strong—Tops are Cut Higher—Many Fabrics are Seen—Tendency to Lower Heels

Perhaps it might be very timely at this juncture to sum up the general features most worthy of note in the new fall styles, as seen by the SHOE AND LEATHER JOURNAL representatives in many visits to factories in the main shoemaking centres. These are as follows:

Features in Toes

High toes still have the call, but not exclusively so. In fact, it might be safer to state that a noticeable reaction in favor of the medium toe has taken place. And among the extreme high toes, few examples of the freak variety, such as the sharp-nosed

The new receding toe on the "City" last, by Cook-Fitzgerald Co.

"rhinoceros" upturn, will be seen. It is doubtful if in any part of Canada high toes in all their glory are seen in so many different forms and styles, as in the province of Quebec, where the French element of the population, especially the young men, have demanded them almost to the exclusion of other styles. Elsewhere in Canada, although popular, they have not had quite so wide a vogue. Of course, there is a basic reason for the popularity of this style. With the high toe usually goes the high heel—in fact, this is nearly always the case—and the high heel fits in much better with the turned-up cuff at the bottom of the trousers, that is so much worn by the young men of today. Hence, while there are young men of "sporty" tendencies, the high toe high heel effect will not pass entirely.

The medium toe will be much seen, especially in women's shoes, which have never gone in as much for the extreme high toe. They did not seem to look very "chic" for ladies' wear, possibly because high toes tend to get higher with wear, and because the *average* women's last is not of the right proportion to show a neat appearing shoe when the high toe is used.

On both men's and women's shoes, especially on the former, the so-called "custom toe" is considerably in evidence. As yet, it is not so popular as the high toe, but it is a sure "comer." And there are many examples of the flat, round, comfortable-looking toe for the person preferring comfort to style. Nevertheless, these shoes are very stylish withal, and will be strong sellers with a certain class.

Leaders in Women's Shoes

Button boots are vastly in the majority. In spite of all

that manufacturer or retailer can advise the public about the superior fit of the laced over the button boot, especially after a short period of wear, the demand for buttons will not down; in fact, it is on the increase, especially in women's lines. Some manufacturers are going to find themselves short on these lines, through inability to gauge the demand. And retailers will do well to heed the dictates of Dame Fashion in this regard. The pendulum will not swing back to laced boots this season, although many of these latter will be worn.

Another thing worthy of note is the high tops. They run from 14 to 16, 18 and even 20 buttons. The *standard* height in women's shoes is about seven inches, in place of about six inches a year ago. And slanting tops with the slant upward to the front, are quite frequent. We would say to the retailer in this connection—beware the slant upward to the back. Such a boot is very often a poor fitter, due to the peculiar conformation of the back of the leg where the swell of the muscles is. If a straight top be not bought, better stick to the boot with the upward slant to the front, which is easy to fit.

Fabric Tops Numerous

This applies not only to the gaiter boots already mentioned, but also to many other styles. And these fabrics vary from whipcord to satin finish, with the former predominating.

White Nubuck will also be worn a great deal. In buying this line, the retailer should assure himself of the quality of the leather used therein, as there is Nubuck and Nubuck. Some will stand washing frequently, are made to, in fact; others look badly dilapidated after a slight wash. Imperial, or fawn colored

Gun metal seamless bal. on New York last, by The Hart Boot and Shoe Co.

Nubuck boots, will be also somewhat worn, although they do not wash quite so readily as the white leather.

With the flatter, round and custom toes, a lower walking heel is in evidence. One and a half inches is about the correct height. Of course, with higher toes, the high heels are in evidence. Vamps will be short, practically unchanged from spring styles; edges will be medium in width, and a great deal of rope stitching will be in evidence. Toe caps will run to plain effects.

In street wear for inclement weather lace boots will be

more in evidence than is the case for inside wear. High tops and heavy viscolized soles will be much worn.

What's Doing in Men's Lines

Buttons again. Already many retailers are beginning to make things uncomfortable for manufacturers who are holding back on *spring delivery* of button boots. The latter hardly expected such a spring demand, and it will be just as great for fall. This fact is worthy of special mention.

The receding custom toe is also in evidence, but it will not displace medium or high toes from the pinnacle of popularity for fall wear. The advent of this custom shoe, however, has made itself felt in the almost complete absence of "gingerbread" effects in perforation or stitching. Plainness is apparent almost everywhere. Every retailer can stock a fair amount of these custom-effect shoes, with the assurance that they are gradually "coming in" again. For this reason, the bal. is gaining in favor. Bals' go better with the custom effect. Fewer bluchers will be worn. Also heels are lower; many are only one inch in height on custom shoes, and some are of the flange variety—certainly a big departure from military heels.

Edges are of medium width, except in heavy fall viscolized sole boots, where they are wide. Vamps are fairly short, except in the longer, narrower toe shoes, that are slightly in evidence.

The Popular Leathers

For both men's and women's footwear, tans will be popular for fall—more so than was expected. Patent leather will, of course, be used as usual for strictly dress shoes, and will be very strong. Gunmetal is also popular. Velours calf and patent kid will be strong; even dongola kid will be more popular than for a long time past for better priced shoes.

Shoes for the Young People

The majority of the ranges for the younger set, including growing boys' and girls', misses' and infants' footwear, show fairly staple lines. The greatest advance is in the new styles for young misses and growing boys. These follow more closely the adult styles, and hence depart more than other lines from staple styles. Fabric tops with moderate toes and heels will be strong, and the same leathers as in the case of men's and women's lines will be very popular.

No Style Absolutely Certain

No one can predict the extent of the vogue of any of the particular styles or tendencies that have been discussed here. It is pretty much like a horse race—they all start at scratch, but they don't all get there; some "break" before the first turn is reached, and fall by the wayside. So it is with shoe styles, and all that any discussion such as this can do is to give the retailer some hints, that his own knowledge of trade conditions and his common sense can use to advantage. If he does not study his own local conditions very carefully and draw upon his past experience for help, he will likely "fall down" in buying. It is well to remember in all buying that new and novel styles always bulk large and force themselves upon the attention of the retail buyer to a greater degree than their real value warrants. Therefore, do not lose sight of the tried and true conservative lines when doing fall buying.

What Manufacturers are Showing

The Slater Shoe Company, Montreal, are showing a choice line of heavy goods for prospectors, miners, explorers, etc.; also a complete line of waterproof boots with viscolized soles, for fall city wear. A great many new lines are in evidence for high class town wear. One especially fine shoe is a patent colt with medium high heel and toe and swing sole; also a gunmetal panel cut blucher with high swinging toe and high heel. Several high-priced gunmetal or patent leather samples, custom effect,

with receding toe, are shown. These come in button, blucher or bal. Many handsome, flat, round toe lasts are also in evidence in all leathers. In women's lines staple shoes, both lace and button, are presented, as this company do not specialize particularly on women's lines. Deliveries are being made *on time* in every case, it is stated.

Tans Are Very Strong

W. A. Marsh Co., Quebec, report that buttons are in great favor for women, and possess a fair measure of favor with men. Tans were never stronger than they are to-day, while gunmetal and velours calf are popular leathers. Patent productions, however, are not in quite so active requisition. The company are featuring some new lasts for men and women of the high toe type. They are showing for fall a number of shoes for winter wear, in waterproof leathers, for both men and women, with viscolized bottoms, as well as rubber soles and heels. Another line which promises to prove a lively seller is felt soles. These productions are taking immensely well in the province of Quebec

The diamond embedded pumps, worn by Mrs. C. H. Anthony of Muncie, Ind. Her bejeweled footwear has proven a revelation in Washington and New York society.

for fall and winter wear. Many ranges for fall are leather-lined and have slip and double soles. The firm believe that bals. are gradually replacing bluchers, and that longer vamps, flatter toes, and lower heels will come into general favor in the higher priced lines before many months.

Showing Samples in White

The Cleo Shoe Co., of London, believe that there will be a big demand for white, nubuck buttons, and three-button ox-

fords of the same leather. They are also making a liberal display of tans and gunmetals, both blucher and button, with high toe, short vamp, and 15/8 heel. The overgaiter shoe is being shown, one in patent with grey serge top, with lapped vamp, and another with lapped quarters of grey serge and a patent strap, with buckle, extended around under the shank, completely simulating a real tailor-made gaiter. Both of these overgaiters are on the stage last. The firm believe that there will be a big demand among women for lace and button shoes with rubber heels and soles, or viscolized bottoms. Many offerings have short vamps, slant cut top and rope stitching. The line is being shown through Ontario by M. Schwartz.

A Comprehensive Showing

Ames-Holden-McCready Limited, of Montreal, are to the forefront with about two hundred fall and winter lines, combining all the most popular leathers for the colder seasons. These include gunmetal, velours calf, tan Russia calf, box calf, and patent colt. Nearly all the samples carry medium and heavy soles. There are seen a number of waterproof shoes with viscolized soles, and lined with duck, calf and cordovan. The styles are principally button and blucher, with a number of bals., which appear to be coming into favor. Several shoes have the O'Sullivan rubber soles and heels, and it is expected the sale for them will be very large. In women's buttons the high cuts are a feature of the range, some being ten inches in height, the number of buttons being fourteen, sixteen, eighteen and even twenty. The high toe is well represented in both men's and women's, but the medium and drop toe are also shown. The whole selection evidences the highest skill and craftsmanship, combined with style, fit and finish.

Some Nice Things For Men

The comprehensive and artistic fall lines shown by the Cook-Fitzgerald Co., of London, Ontario, eclipse anything ever presented by this enterprising firm. The range this season may be divided into three parts, one-third for the more conservative, year-round wearers, one-third of the nifty, high toe, gingery class for young men (in which a huge success has been scored), and one-third devoted to the new drop toe, English effect; so that all classes of wearers have their needs abundantly catered to. The new President last is decidedly of the English type, with low heel, broad shank, and receding toe; the City with pronounced drop toe type, large flange heel and generous shank; and Happy Days, another of the English style, somewhat after the Waulkenphast last of German style, so popular twenty or more years ago. All these carry wide shanks and low heavy heels. The new "trump" tip perforations on a number of the shoes is meeting with favorable comment. A nice button range with cloth and vesting top effects, which are now so much in vogue across the line, is seen. There is also a good representation of Astoria and Liberty shoes in winter weight tans, gunmetal and other leathers. Button and bluchers are strong, and there are some catchy bals in the plain English type—so decidedly English as to be without 'ooks or h'eyes. Among the high toes It's It and the Tickler still lead the way, and are pronounced the busiest lasts in the factory. The new sand finish is observed on a large number of drop toes, giving them a thoroughly English custom appearance. The presentations this season are all right up to the mark in style, fit, finish and variety.

Classy and Clever Creations

In factory "B," which Getty and Scott, Limited, of Galt, have established for the making of women's fine footwear, some of the snappiest and strongest productions ever seen in Canada are being presented. All the newest features in feminine foot covering are shown. There is the high cut "Hussar" button, with Ogee curved top slanting to the front made on the "Squab" last. Another is the "Harem" shoe, with short leg, seven but-

tons, and swallow wing top. This is turned out in all leathers, including Imperial smoked buck, and tan calf. The "Tramp" shoe is made of heavy tan calf, elk and other leathers. It has seven buttons and heavy sole, and carries a 14/8 heel. It is bound to be popular with business women and girls who love outdoor exercise. It is made on the "Chicken" last, and the "Harem" on the "Beverley" last. There is also seen an English last with low receding toe. The overgaiter shoe is seen with whipcord effects in the quarters, and fancy trimmings. A gunmetal with black cloth top is another of the side-button family. A women's patent button on a theatrical last, with striped silk whipcord effect and white calf trimmings is a winner. In the heavier goods tan calf and pearl elk are much in evidence, with nice perforations and heavy viscolized soles. In high storm buttons, a 14-eyelet tan with plain quarters and heavy viscolized sole, two straps and buckle, together with a street car pocket and dome fastener is attracting much attention. This shoe comes in all leathers. In children's, one of the features is a Goodyear welt, with extension heel. This type is an exceptionally strong line in the United States. The new classic "Skuffer" last is shown, in tan, elk, and pearl elk. In young women's is a great variety in high cuts, with buckles, in both welts and McKay's. In misses' and children's, with high storm legs, in all shades, in elk, calf and patent leathers, the display is fetching. Something that is taking freely is the side button in misses' and children's shoes. These come with whipcord tops and a variety of leathers. In the infants' department a select line is noticed in white, heliotrope, pink, blue and red calf, with white pearl buttons and springy, soft sole stock. Side buttons are also seen in this line, which consists principally of turns, while the shapes are orthopaedic. In the growing girls' department there are several new lasts in both welts and McKay's. One last is a perfect model of a growing girl's foot, and the styles are being received with appreciation by the girl who likes a shoe with a short forepart and blunt toe. A number of extreme high cuts are presented in all leathers, buttons predominating

A Fine Range for the Young

The Nursery Shoe Co., of St. Thomas, have a select range in babies', infants', children's, misses', little gents' and youths'. They are going this year strong on McKays, and the models presented in the various lines since Mr. W. E. Wilson became superintendent of the factory, are decidedly pleasing. In babies' and infants', chocolate, all patent, and other productions, with fancy tops in white and blue, both button and lace, in natural shapes, are all much admired. In children's, gunmetal in button and lace, and a fair number of patents, are meeting with a ready demand. Many have slip sole for fall and winter wear. Little gents' and youths' are shown on natural shape lasts. There is a strong showing in misses' buttons in willow tan, velours and box calf. There are some choice models with matt calf and cloth tops with heels about an inch high. The Nursery Shoe Co. have been making splendid progress, and this season's samples exceed in variety, workmanship and completeness anything previously offered. Two or three novelties are seen in little gents' Russian boots. One of these has horsehide quarters and vamp and red kid collar, with lining of the same material. Another has a patent vamp, with horsehide quarters, six-inch patent collar, and lined with red kid. They have rather high toes and broad, flat, riding heels.

Some Splendid Offerings

The Rideau Shoe Co., Montreal, are showing about forty lines in women's and sixty for men, all welts, for fall and winter wear. The display is a complete and attractive one. In extreme high cuts, they are showing sixteen and seventeen-button, with slant tops, in patent, with matt calf upper, tan, gunmetal and other leathers. The range in Imperial and nubuck is decidedly smart. The new overgaiter is seen in these leathers.

A woman's gunmetal button, with ooze cloth top, and a patent button with corded silk top are favorites. A velours calf blucher with full double sole and chocolate kid lining, is a neat offering. Overgaiters in patent with nubuck top, and a gunmetal with Imperial (somewhat similar to the former leather, but of a champagne shade) are pleasing productions. In the men's lines three types of toes are observed—the high, the receding, and the medium. In sporting bluchers there are storm calf, elkola and pearl elk, with straps and buckles. The overgaiter has made its appearance for men, with cloth top and tan vamp, and in a gunmetal with whipcord top, in both medium and receding toes. Another offering is a patent with an Imperial leather top. Buttons are well represented in Russia, storm and winter calf, as well as in patent and gunmetal. New lasts include two receding toes and one medium, with wide, flat heels, and half and full Baltimore extension edges. Perforations are smaller and heels lower than last season. A gunmetal with tan stitching, full double sole, tan eyelets and hooks attracted considerable attention, while cushion soles are good sellers. The line in men's and women's is the most ambitious ever shown by the firm, which have been turning out over six hundred pairs daily for some months.

Showing Several Fabric Tops

The John McPherson Co., of Hamilton, are showing the most compact line of fall samples they have yet presented to the trade. In men's, the rocker is displayed, with a large number of patents in gunmetal, velours and other leathers, with cloth tops. They are showing several new lasts, including the English custom effect, medium wide, foot form, puff, high and wide toe. In tans, patents and gunmetal the line is about equally strong. There is also a fair representation of dongola. Most of the offerings carry medium or military heels. There are several leather-lined boots with viscolized soles, double row of aoft stitching. The company are making a feature of men's hockey boots, not only of the lightning hitch make, but also what is known as the professional hockey, which is made of French calf with tan facings. Another is of white calf with black trimmings, for either men or women. In women's the high toe prevails to the largest extent, although there are some productions with round and medium effect. Cuban heels are generally seen. Buttons are strong. There is a fine display in white buck buttons and pumps. A particularly smart offering is a gunmetal, 16-button shoe, with grey tweed top, laced down a portion of the front seam. A woman's patent leather with melton top and tan buttons also catches attention. An overgaiter shoe is noticed with patent vamp and foxing. There is an imitation strap at the arch, which adds to the gaiter appearance. A number of bals in button tan, gunmetal and patent button, with cloth top, are striking offerings. There are no freaks presented, and the whole range evidences good shoe making, up-to-date patterns, and snappy styles. The line is being handled in Toronto by George E. Boulter.

A Fine Line For Men

The Murray Shoe Co., of London, have a strong representation in men's shoes, with high, medium and receding toes. Buttons are leaders this year, and promise to be good sellers. Gunmetal and tans are popular. Many are leather-lined, and for fall wear some attractive showings are seen in black and tan, heavy waterproof leathers, with full double soles. There promises to be a big demand in certain sections for rubber soles and heels. The company have placed six new lasts in this season. Two are of the straight English custom effect, with drop toe and flat, broad heels. Another is of the conservative type, with short vamp and full fitter. Others are a broad and high toe, and still another is extreme in its height and carries a high Cuban heel. A storm calf bal with blind eyelets, leather-lined, and carrying a medium toe, is a leader. Perforations for the

most part are neat, and there are several varieties of tips as well as bottom finishes, which include the water wave finish, the natural oak finish, light tan, and three-quarter part black on shank. Shanks are wide and the tread natural. One novelty shoe is a patent button, circular foxed, with white silk stitching, high toe and tan welting. Another is a patent, circular foxed with seven brass buttons, brown stitching and brown matt calf top. Many shades of tan are being seen in the range, and there is a growing demand for men's bals. The company are

Mrs. Anthony, of Muncie, Ind., who wears slippers with diamond studded heels

also presenting their well known cushion soles, with modified and broad toes, low heels, and wide shanks. In sporting boots, twelve to fifteen inches in height, the showings are in black and tan, storm calf and pearl grey elk.

Nice, High Toe Last

The Rowen-Ogg Co., of Guelph, are showing a particularly nice high toe last, stage effect, as well as several lines of water-proof goods in women's, misses' and children's. In small women's shoes 12 and 14 button styles are attractive, while their storm button auto cut should interest the trade. One shoe especially is adapted for fall wear, and comes in tan, gunmetal and box calf. It has a full double sole and is leather lined. The company are showing a varied and interesting range of buttons in tan, and gunmetal calf, and their line is the best and most representative that has been presented to the trade by this house, which is rapidly coming to the front in the production of women's footwear.

What Shoemen are Doing in the Early Spring Days

What Is Going On Among Retailers, Travelers, Wholesalers and Other Interests—Personal Paragraphs of Interest—Business in All Lines Is Most Promising—The News in Short Shape

The Boston Shoe Co., of Saskatoon, Sask., have gone out of business.

The Amherst Central Shoe Co., of Regina, have bought out the Prairie Shoe Co.

Ald. James Robinson, of Montreal, spent a few days recently in New York City.

Joseph Nixon has opened a boot and shoe repair shop in Macleod, Alberta.

John Dima has opened a new boot repairing establishment in Port Hope.

The shoe stock of D. Rosner & Co., Montreal, was sold by bailiff last week.

Albert Epstein has started in the shoe business in Morris, Man.

F. Easton has opened a shoe repairing shop in Rocanville, Sask.

H. S. Fenton has sold out his boot and shoe business in Shelburne, Ont., to Mr. Halbert, who has taken possession.

H. Shayler's shoe repairing shop was destroyed by fire recently in St. Mary's. The loss was protected by insurance.

George St. Leger, Jr., 542 Queen Street West, was in Rochester and other cities last week on a business trip.

T. J. Lancaster, of Borden, Alta., is now occupying a fine store, and has greatly enlarged his stock.

Wilson & Wilson, of Balgonie, Sask., have sold out their business to W. W. McRae, late of Moose Jaw.

White & Co., of Wapella, Sask., recently disposed of their business to A. T. Morrison & Co.

R. W. Eady has opened a shoe repairing shop in Renfrew, Ont. H. M. Carvie is in charge.

J. Heffering, of Toronto, representing the Tetrault Shoe Mfg. Co., has returned after spending a few days in Montreal.

B. Hoffman has opened a shoe repairing establishment at 65 Quebec Street West, Guelph, Ont.

James Osborne, late of Hamilton, has embarked in the boot and shoe line in Durham, Ont.

M. Dubois, representing Charles K. Fox, of Haverhill, Mass., was in Toronto last week on business.

Charles B. Davis, representing Burt & Packard, of Brockton, Mass., was calling on Toronto retailers last week.

John K. Campbell, dealer in men's wear and shoes, 824 Granville Street, Vancouver, recently made an assignment.

H. R. Stephens, 892 Dundas Street, Toronto, has put in a 12-foot model B Good-year shoe repair outfit.

Earl Stewart, of T. H. Stewart & Son, shoe dealers, Owen Sound, was calling on the trade in Toronto last week.

Mr. Trudeau, representing A. Corbeil, Montreal, was in Toronto last week on business.

Mrs. E. A. Guimont, who conducted a shoe store in Montmagny, Quebec, has made an assignment.

Mission City, B.C., will soon have another industry. It is known as the Sampson Harness and Trace Company.

Archie McNab, late with W. J. Detweiler, of Sault Ste. Marie, Ont., has been ap-

pointed manager of the new boot and shoe business opened in that town by Mr. Shier.

W. K. Best, shoe dealer, of Sackville, N. B., has sold out to Edgar Amos, who has taken possession.

H. E. Buchanan, a well-known boot and shoe merchant, of Liverpool, N.S., passed away last week.

E. C. Scarrow, shoe dealer, of Owen Sound, Ont., was calling on the trade in Toronto last week.

J. C. Earle, representing J. M. Humphrey & Co., of St. John, N.B., is now in Western Canada in the interest of his firm.

Gerald Murdoff, of Trenton, Ont., representing the Thomas G. Plant Co., Boston, was in Toronto last week on business.

J. P. Leger, of Bathurst, N.B., has sold his shoe business to F. M. LeBlanc, of North Sydney, C.B.

F. Ethier, of Montreal, has been made foreman of the treeing room of the Murray Shoe Co., London.

Robert Wilson, of Chicago, formerly of Toronto, has been visiting Toronto, Hamilton and other Ontario cities in the interest of his firm.

Charles Bonnick, Toronto, manager for Ames-Holden-McCreedy, Limited, who has been ill for some time, is able to be around again.

J. J. Kilgour, of the Kilgour, Rimer Co., Limited, of Winnipeg, who has been spending the past two months in California, has returned home, accompanied by his wife.

Gordon McClellan, who has been connected with the R. Neill shoe store in Peterboro, has taken a position in the Neill store in Galt, Ont.

J. O. Kueghler, representing the Moore-Shafer Shoe Manufacturing Co., of Brockport, N.Y., was in Toronto last week on business.

K. Whipple is visiting many of the leading towns and cities in Canada in the interest of the W. L. Douglas Shoe Co., of Brockton, Mass.

George Cain, of Toronto, general sales manager of the Miner Rubber Co., is on an extended business trip to the Maritime Provinces.

Jas. T. Sutherland, of Kingston, representing the Cook-Fitzgerald Co., London, was in Toronto for ten days, showing a splendid range of fall lines.

The commercial travelers of the Ottawa district have a fine club at No. 51 Sparks Street, Ottawa. Its secretary is William Macdonald.

Miss Edna Harcourt has returned from Aurora to Brampton, and will take charge of one of the departments of the Williams Shoe Company.

Fire broke out in the shoe shop of M. Metin, 69 Prince Arthur Avenue West, Montreal, but was extinguished before much damage was done.

Wm. Chamberlain, representing Getty and Scott, of Galt, was in Toronto during the past two weeks, and did a record business in fall and winter lines.

George H. Wilkinson, of Windsor, who, about a year ago, opened a branch store

in St. Thomas, has disposed of the stock to A. G. Saunders and Thomas Creswell, who are well known to the shoe trade. Mr. Wilkinson will devote his entire attention to his business in Windsor.

A. Chisholm, 1703 Dundas St., Toronto, has removed into his handsome and admirably fitted up new shoe store, a few doors east of his old stand. The premises are up-to-the-minute in every particular.

G. B. Farmer of Perth, Ontario, has moved into his new shoe store, which is modern in every respect, and has an imposing front. The location is one of the best in the town.

Wilton Bros., of Huxley, Alta, have found it necessary to double the capacity of their store at Knee Hill. At the latter place, as well as at Huxley, the firm are doing a big business.

H. E. Liesemer, of Carstairs, Alta., who was burned out some time ago, is now occupying a fine new establishment with imposing plate glass front, and has put in a select stock of boots and shoes, as well as men's furnishings.

G. P. Fry, representing the Smardon Shoe Company, Montreal, left Toronto last week for Western Canada with fall and winter samples. He will be absent several weeks on his semi-annual tour.

The assets of J. E. Poitras, 1895 Notre Dame St., Montreal, who, some time ago, made an assignment, will be sold on April 3rd. The stock consists of general lines amounting to \$6,226.

John P. Thompson, a well-known resident of London, who was at one time connected with the shoe business, died recently. He was for years associated with Pocock Bros., when that firm conducted a large retail business on Dundas Street.

In a recent fire in the Logan Block at Niagara Falls, Ontario, which was completely destroyed, the Toronto Shoe Co., J. J. Connors, manager, met with a heavy loss. The stock and fixtures were valued at \$6,000, and the insurance was only half this sum.

Mr. Perron's bill to determine the salaries of such men as fail, for convenience sake, carry on business in the name of their wives, profess to receive no salary, and yet cut a big dash with automobiles and other luxuries, passed the Quebec Legislature at its recent session.

Frederick Beattie, who had lived for a number of years in Rochester, N.Y., where he followed the occupation of a shoemaker; died last week at the home of his father, Thomas Beattie, 121 Niagara Street, St. Catharines. He returned to the latter city some time ago owing to ill health.

The Rideau Shoe Company, Montreal, are represented on the road this year by Frank Power in Eastern Ontario; J. J. Duggan, Maritime Provinces; O. Poirier, Quebec; F. B. Hull, Northern and Western Ontario; Joseph Laurin, Montreal City, and W. C. Meyers, the Western Provinces.

A new shoe store, catering to a high-class trade, has been opened in Edmonton. The proprietors are A. McLeod, formerly of the Hudson's Bay Stores shoe department, and W. F. McQleyn, of Winni-

What Some Shoe Factories Are Doing

All Are Now Busy Starting on Fall Runs—Further Extensions and Improvements—Plans for Big Addition to Newmarket Plant—New Machinery Installed—In and Out of the Work Shops—Business Opening Well

Beardmore & Co., 39 Front Street East, Toronto, have recently put in a No. 4 automatic heel compressor.

C. S. Hyman & Co., of London, have put in a sole cutting machine in their bottoming department.

The Regal Shoe Co., Toronto, have recently added a duplex eyeleting and other machines.

A. E. Medcalf, of the Nursery Shoe Co., St. Thomas, was in Toronto last week on business.

Adam Bros. Harness Mfg. Co., Toronto, have installed a Pluma skiving machine, model C.

H. B. Johnston, of H. B. Johnston & Co., tanners, Toronto, has returned from a business trip to New York.

The Harbor Grace, Nfld., Boot and Shoe Company have declared a dividend of 8 per cent. for the past year.

A meeting of the citizens of Springhill, N.S., was held recently to consider the project for a boot and shoe factory.

Harbor Grace, Nfld., has two flourishing shoe factories, and a company in that city are contemplating the erection of another factory.

A quarterly dividend of one and three-quarter per cent. has been declared to shareholders of the Canadian Consolidated Felt Company.

J. D. Palmer, president of the Hartt Boot and Shoe Co., of Fredericton, N.B., was in Toronto, Hamilton and London on business during the past week.

At the annual election of the officers of the Boot and Shoe Workers' Union in Hamilton, J. Gimblett was elected president.

Abe Griesman and Jacob Goldstein, proprietors of a leather factory, at 20 Francis Street, Toronto, were each fined \$5 and costs for working on Sunday.

The Nursery Shoe Co., St. Thomas, will shortly begin work on an addition to their

factory, which will be 150x60 feet, and increase their capacity to 500 pairs a day.

Williams & Harlock, of Brampton, have recently acquired more floor space, and are doing a big business since they began operations a few months ago.

Fifteen hundred operatives in twenty-three shoe factories struck in Lynn, Mass., in support of the demand of the McKay stitchers, numbering about 125, for an increase in pay of two cents a dozen pair.

Mrs. Osgoode, lately with a leading company, Brockton, Mass., has removed to London, Ont., where she will have charge of the treeing and dressing room in the Cook-Fitzgerald factory.

C. S. Sutherland, of the Amherst Boot and Shoe Co., Amherst, N.S., has returned from an extended trip to the West and south, where he was making a study of shoe styles.

The Davis Leather Co., of Newmarket, Ont., report a very active demand for colored calfskins. Beardmore & Co., at their tannery in Acton, are producing a fine line of black calfskins.

Frank Smith, aged 25 years, employed by the Humberstone Shoe Co., of Humberstone, Ont., blew his head off last week, deliberately placing a gun between his feet and pulling the trigger with his toes.

The voting on the by-law to loan the Winn Shoe Company, of Perth, the sum of \$25,000, which was to have taken place on March 30, has been postponed until April 13th owing to some changes being necessary in the by-law.

Fire recently destroyed the big mill of the Milton Leather Board Company, and caused a loss that will total \$100,000, partly covered by insurance. Fifty employes are thrown out of employment by the blaze.

E. E. Donovan, vice-president of the Cook-Fitzgerald Co., London, returned from a visit to Boston and other New England style centres, where he picked up

This is the proposed building of the Collis Leather Co., Limited, who were recently voted a bonus of \$10,000 by the ratepayers of Aurora, Ont. The money is not to be paid over until the works are in operation and fifty employes on the pay roll. It is expected the factory will be completed in July. The building will be one hundred and fifty feet long, and fifty feet wide, with four stories and basement. It is so planned as to be complete in every detail, and

calculated to be as convenient for its use as any factory of its kind in Canada. The capacity will be eighteen hundred calf skins per day. The company realize that for the first year they will not require so great a capacity, but they have wisely taken into account the rapidly growing demand for calf skin leather, and believe that within a comparatively short time they will not only need all the room they will have in this building, but may require to enlarge.

peg. The premises have been newly renovated, and present an attractive appearance, being up-to-date in every particular.

F. R. MacMillan & Co., who some months ago bought out Currie Bros of Saskatoon have put in an entirely new front, and have three magnificent show windows on Second Avenue. The interior has also undergone a complete transformation, and new fixtures of an attractive design have been installed. F. A. Robinson, who is one of the shrewdest buyers and most experienced men in the business, has full charge of the shoe department.

Before the Railway Commission at Calgary, the jobbers of Alberta protested against the eastern rate to the Rocky Mountains, permitting Montreal and Toronto wholesalers to ship broken lots as cheap as car lots, thus injuring western jobbers. They asked that the minimum on shipments less than car lots from the East be raised. The same protest applies on shipments from St. Paul and Minneapolis, after they cross the Canadian border.

The Marshall Shoe and Leather Company, of Hamilton, whose premises were visited by fire about a month ago, the damage to stock and property being about \$15,000, resumed work some time ago in the manufacturing department where the loss was not very great. In the retail department trade has been interfered with to the extent that the firm will lose considerable spring business, otherwise the fire will not affect them much. The company's damage is covered by insurance.

A. D. Weber has been appointed to take charge of the stocks in all the factories and warehouses of the Consolidated Rubber Co. Mr. Weber is a Berlin boy, and started his career some ten years ago in the mill of the Berlin Rubber Manufacturing Co., and later joined the selling staff. He afterwards became identified with the Merchants' Rubber Co., Berlin, and was promoted to the position of assistant manager. Previous to his recent advancement to Montreal, he was manager of the shoe department of the Consolidated Rubber Co.'s branch in Toronto.

Operations have been commenced on the fine large departmental store of J. F. Cairns Co., at Saskatoon, Sask. The structure will be fireproof throughout, and have five floors. It will have a frontage of 100 feet on Second Avenue, and 120 feet on Twenty-third Streets. There will be entrances from both streets, and swift passenger elevators to take the people to all parts of the building. The ceilings will be very high, and the furniture and fittings of the most modern character. Mr. Cairns, who started business a few years ago on a very small scale, has been making great strides.

In connection with the brands of rubber footwear sold by the Canadian Consolidated Rubber Co., it was stated in a recent edition of this paper that the Maple Leaf was in a separate list, and was "somewhat lower" than the four other first quality brands. Ames-Holden-McCready, Limited, are the exclusive agents for the Maple Leaf brand in Western Canada, where these rubbers are sold at the same figure as Jacques Cartier, Granby, Merchants and Daisy, and are of the same quality. The paragraph in question might have led some to believe that Maple Leaf Rubbers were lower in quality, but it was price, not quality, in connection with which the word "lower" was used, and these remarks had reference to the situation east of Fort William.

all the latest ideas in connection with the preparation of spring and summer samples for next year.

It is understood that Getty & Scott, Limited, of Galt, have under consideration the proposition of going more extensively into the manufacture of women's fine shoes and may erect a large addition to their factory at an early date.

A quarterly dividend of one and three-quarters per cent. on the preferred shares of the Canadian Consolidated Rubber Co., Limited, has been declared. A quarterly dividend of one per cent. on the common stock has also been paid.

Napoleon Dion, a former well-known shoe manufacturer, of Quebec, who had been ill for some months, died last week. He had been employed for some time in the Customs Department in the Ancient Capital.

Nearly all the shoe manufacturers report that spring orders are coming in remarkably well, and the prospects for big fall and winter runs are bright. The outlook generally is encouraging, and some factories are working overtime to take care of the business in hand.

The Dunford Shoe Co., of Windsor, will shortly remove to Stratford, where the premises formerly occupied by the old Stratford Shoe Co., but of late years used by a clothing company, have been secured. The firm manufacture nailed work, including miners' and prospectors' boots, but may branch out in other lines.

If Ottawa can meet certain conditions, such as a free site, a boot and shoe factory may be located there. The industry would have an annual pay roll of about \$50,000, would employ some 150 hands, and be capitalized at \$30,000. The Publicity Board of the city have the proposition under consideration.

The tannery at Camrose, Alta., of which Francois Adams is the proprietor, will increase its output to 200 hides per week, and will go into the manufacture of moccasins and shoe packs, for which there is reported to be a big demand in British Columbia. The tannery is turning out harness, bridle and saddle and collar leather. Robes and furs are also being attended to, and in the process of curing are seen beaver, moose, sheepskin and buffalo hides.

Messrs. Fisher, Collis and Gillespie, of the Collis Leather Company, were in Aurora last week, and agreed on a site for the new tannery. The site selected is Mr. Mitchell's brick yard, west of the Electric Light Power House. There are five acres and three-quarters in the property, consequently the company will have ample ground.

John H. Pearce, who was recently appointed general superintendent of the shoe factories of the Canadian Consolidated Rubber Co., entered the employ of the Canada Rubber Co., Montreal, forty-two years ago. After remaining with the concern eight years he went across the line, and was with the Boston Rubber Company, of Boston, the Lycoming Rubber Company of Williamsport, Pa., and L. Candee & Co. of New Haven, Conn. He was with the latter organization some twenty-seven years, resigning the position of superintendent to return to Canada. He is to-day one of the most experienced and clever men in the manufacture of rubber footwear engaged in the business.

Wm. A. Marsh, of Quebec, was in Toronto last week calling upon the trade. He is one of the busiest of shoe manufactur-

ers, yet he devotes considerable time to the interest of the people of the Ancient Capital. Mr. Marsh is the new president of the Quebec Board of Trade, a member of the Harbor Board, the Jeffrey Hale Hospital, and other public institutions, as well as a director of several financial and industrial organizations.

E. W. O'Dell, organizer for the boot and shoe workers, was a visitor at the Ottawa Building Trades Council meeting recently to urge the members to ask for union label footwear. He gave a lengthy resume of his union label work, and thanked the Ottawa trade unionists for the awakened interest in asking for the label goods. Some few years ago, he said, Ottawa dealers were apathetic as to whether they handled the union-made shoes, but a change of front was readily seen by him by the cordiality in which his visits were now received in marked contrast to past years.

A recent despatch from London, Eng., says: Although business has been good in the boot and shoe trade, and there has been an increase of 3 7-10 per cent. in the amount of wages paid, as compared with a month ago, there has been an increase of 3 2-10 per cent. in the number of unemployed. A half-yearly financial statement of the Boot & Shoe Operatives' Union has just been issued, and it states that the trade federation has decided, owing to demands upon the federation funds, to put into force the rule whereby double contributions must be paid by the affiliated societies, which would mean \$10,000 per year extra to be paid the federation from the funds of the Boot and Shoe Operatives' Union. The total funds of the union now amount to \$669,000, which is a gain in the past half year of \$23,000. The membership of the union is 32,928.

Indebted to Several Factories

Malcolm R. S. Stewart, shoe dealer, Montreal, has consented to abandon his property for the benefit of his creditors on a demand of \$325.85, filed by John Krausman. Assets, including cash on hand, stock and book debts, total \$6,239.60, while the liabilities total \$19,249.85. The following are the principal creditors: Canadian Consolidated Rubber Co., \$589.68; Plyde Shoe Co., \$520.40; Mrs. M. R. S. Stewart, \$10,000 and \$956; W. H. Stewart, \$100; Tetrault Shoe Co., \$126.75; John Krausman, \$325.85; Minister-Myles Shoe Co., \$959.37; J. D. Climie (approx.), \$300.75; J. M. O'Donnell, \$225.00; Kaufman Rubber Co., \$151.83; Hartt Boot and Shoe Co., \$2,109.10; Hurley Shoe Co., \$981.77; Murray Shoe Co., \$600; Cook-Fitzgerald, \$600; A. Touchette, \$245.

Davis Leather Co.'s Enterprise

The contract has been let for the new buildings of Davis Leather Co. to Mr. J. L. Young, says the Newmarket Era.

This contract covers supplying all the material, doing all the work and turning the buildings over completed to the firm, everything to be done with the best quality of material, and first-class workmanship. The walls of the building will be cement and steel, the floors, etc., of the best class of mill construction.

The additions are as follows: To one of the north wings will be added a building 160 by 50 feet, one storey. To another wing of the present building there will be an addition 45 by 65 feet, one storey. Then to the south of the present plant the contract provides for the erection of an entirely new plant, the area covering 75 feet wide by 200 feet long, four stories high,

and also a good-sized basement.

The present plant is the largest of its kind in Canada, and probably a better idea may be obtained of what these additional buildings mean when it is explained that the floor space in the new additions is equal to all the floor space in the present plant, and about 50 per cent. more, and will give a working capacity of from six to ten thousand calfskins per day, according to size.

On the completion of these buildings the firm will probably have sufficient capacity to supply all Canada with its present demand for this class of goods, and, therefore, may not be able to use these additions to their full capacity immediately. It will, however, place the firm in a position to take advantage of any growth in business that may come from an increase in population, and at once on its completion they will have so many conveniences for economical manufacturing that they will be able to produce at less cost and of the very best quality. It will make their position unique in this country in so far as competition is concerned.

In addition to Mr. Young's contract there are contracts yet to be let for a complete sprinkler system for the new plant, shafting, belts, pulleys, etc., complete outfit of machinery for manufacturing purposes, additional boilers, electric lighting, power elevators, etc. The total cost for all these contracts as nearly as can be figured out now, will be from \$80,000 to \$100,000. Everything is to be pushed forward as rapidly as possible.

NOTES FROM QUEBEC

Ald. James Robinson, of Montreal, was a visitor to Quebec a few days ago.

Alf. Lambert, of Montreal, was in Quebec last week on business.

Alfred Dupere was in Montreal last week, where he was a witness in a civil case.

Marier & Trudel, Limited, are making new samples in imitation of Goodyear work.

Lachance & Tanguay have put in a new welt attachment, automatic stopping, Puritan machine.

Gale Bros. are still busy on their winter run, and are planning their new spring lines of samples.

A. E. Marois has acquired a property on St. Foye Road. Some renovations are being made to the building, which will be ready by May 1st.

Tourigny & Marois have made a new line of men's, women's misses' and children's. Jobbers who have seen these lines have bought good quantities. Several new machines have been added.

POSITION WANTED—Salesman wants position traveling for shoe firm; six years' experience. Apply P.O. Box 335, Amherst, N.S.

WANTED—Live traveler wanted at once to cover Western Canada for progressive wholesale shoe house; state experience and qualifications; splendid opportunity. Address Box 361, SHOE AND LEATHER JOURNAL, 59 John Street, Toronto.

FOR SALE—We are discontinuing manufacturing boys' shoes, and offer our outfit of three boys' up-to-date Goodyear welt lasts, patterns, etc., at a reasonable figure. If interested, correspond with Geo. A. Slater, Limited, Montreal, Que.

Commission Holds Sitzings in Toronto

Several Ontario Manufacturers Give Evidence, Service and Treatment of the U.S.M. Co. Commended by Some—Others Object to the Tying Clauses and Terms in the Lease—Experiences with Other Companies.

After a series of postponements, the Royal commission appointed to inquire into the alleged violation of the Anti-Combines Act, on the part of the United Shoe Machinery Co., of Canada, held sittings in Toronto on Wednesday and Thursday of last week. A number of manufacturers were on the stand. Judge Laurendeau, W. J. White, K.C., and J. C. Walsh are the members of the commission. T. Chase Casgrain, K.C., of Montreal, and A. J. Brown, K.C., were the attorneys for the U.S.M. Co., while Alex. Falconer, K.C., appeared on behalf of the commissioners. The inquiry was held in the King Edward Hotel. Among the representatives of the U.S.M. Co. in attendance were W. B. Farr, attorney, of Boston; F. W. Knowlton, of Montreal, Canadian manager of the company, as well as several representatives of the Toronto branch.

Among the shoe manufacturers present were: Alex. Brandon, Brantford; F. S. Scott, Galt; Fred W. Weston, of Campbellford; N. Detweiler, Berlin; G. L. Williams, Brampton; K. H. Phillips, Preston; Charles Ahrens, Berlin; E. E. Donovan, London; E. A. Medcalf, St. Thomas; J. A. McPherson, Hamilton; F. Underhill, Aurora; Jas. Valentine, Waterloo; J. S. King, J. A. Walker, Alfred Minister, Chester B. Hamilton, D. Inrig, Toronto, and others.

The weight of evidence would appear to be in favor of the arrangement and service of the U.S.M. Co. Some objection was taken to the "tying clauses" inserted in the leases of the company's machines. None of the manufacturers found any fault with the amount of royalty charged for the machines or with the machines themselves, which were declared the best obtainable. Some expressed the view that they would like to be in a position to buy machines from whom they pleased.

Mr. J. A. McPherson, of the John McPherson Co., Limited, Hamilton, was the first witness. They had used United Shoe Company's machines for twenty-five or twenty-seven years. The only grievance he had was against the tying clause, inasmuch as it created a monopoly for the United Shoe Company, by preventing the shoe manufacturer from buying any other Goodyear machinery that they might desire to purchase.

They had bought United machines "outright," but they were not the owners, as they had had to sign a lease. No machines could be purchased from the United Shoe Company without signing the lease.

"We ought to be able to buy our machinery anywhere where money could buy it, which we are unable to do under the tying clause," he said.

Mr. Casgrain pointed out to the witness that the United Shoe Company was not formed until 1899, so that the witness could not have leased machines from them, and the witness admitted that it might have been from Goodyear's that the machines were obtained at that time.

Questioned as to whether his business had ever suffered injury because of the tying clause, Mr. McPherson replied that while they were prosperous now it might

be that they would be more prosperous if they were allowed to buy the machinery. He acknowledged that the machines of the United Shoe Company were up-to-date.

Satisfied With Conditions

Mr. Alex. Brandon, of the Brandon Shoe Company, Brantford, was perfectly satisfied with the conditions imposed by the United Shoe Company. The petition circulated against the company had been offered to him for signature, but he had refused to do so without taking the trouble to read it.

Replying to Mr. Justice Laurendeau, Mr. Brandon said he had machines both on the royalty and leasing basis, but he had no fault to find with the tying clause. The duration of the lease, which is twenty years, was also satisfactory. To buy machinery he would have to have a much larger capital. Another advantage was that the machines were kept in repair by the United Shoe Company.

To Mr. Falconer, Mr. Brandon admitted that if he at any time wished to instal other Goodyear machines, he would have to equip a separate factory.

To Mr. Casgrain, the witness said that if he had been compelled to purchase machines outright he would not be making shoes to-day.

No Complaints to Make

Mr. J. S. King, of the Relindo Shoe Co., of Toronto, had no complaints to make, either as to the service given by the United Shoe Company or the royalties charged. The tying clause was a restraint upon manufacturers, he thought, to which they would not willingly assent. They had no option but to take the machines on the terms of the company. Mr. King admitted that his company had sustained no injury from the tying clause up to date, but he could not say as to whether it would be more prosperous if other machines could be installed because they had no facility of making comparisons.

Mr. C. B. Hamilton, of the W. B. Hamilton Co., Toronto, said he thought shoe manufacturers should have the option of choosing their machines.

Mr. Frank S. Scott, of Getty and Scott, Ltd., of Galt, gave it as his opinion that competition among shoe machinery manufacturers would improve conditions in the shoe trade. The effect of the tying clause meant that if an inventor came along with a machine, the shoe manufacturer could not try it out.

Thinks Well of Them

Mr. E. E. Donovan, of the Cook-Fitzgerald Co., London, said he had no objection to being tied up by the Shoe Machinery Company.

Mr. Falconer: You love your bonds?

Mr. Donovan: I think more of the United Machinery Co. than I do of anybody else except my mother. (Laughter.)

Mr. Donovan went on to say that the growth of the shoe industry in Canada was almost entirely due to the progressive

policy of the company at all times and in every circumstance.

Mr. George Williams, of the Williams Shoe Co., Brampton, testified that shoes were made better and cheaper in Canada than formerly.

Broke Business Principle

Mr. Noah Detweiler, of Berlin, manager of the G. B. Oberholtzer Co., said he had to break one of his business principles in signing the lease, because he did not believe it wise to put so much power into the hands of one with whom he dealt. This stifled and tended to remove competition. Return charges were "a very sore matter" with his company. The twenty-year period he considered too long for the lease; it took out the best part of a man's business life.

Mr. A. E. Medcalf, proprietor of the Nursery Shoe Co., St. Thomas, thought the tying clause would prevent facility of repairs to machines put in by other companies, but he could not suppose it possible to get better ones. He admitted that competition was good for business, but he did not think or believe that the United Shoe Machinery Company was a monopoly. The only field, however, for any other manufacturer of machines, he said, would be that of new shoe manufacturers starting business.

Advantage of Competition

There were other makers in Germany, France, England, also in Quebec, and in the United States, and he admitted to Mr. Falconer that the advantage of competition was that it kept down prices and kept up standards of products. Asked by Mr. Walsh if he knew of any other business using machinery in which there were similar conditions, Mr. Medcalf mentioned one or two which he thought were affected by monopolies, but he did not think this a monopoly.

"Why should they bind you to do what is obviously in your own interest to do," asked Mr. Walsh. "It is not necessary in my case," replied witness.

D. Inrig, of Toronto, took exception to the tying clauses of the U.S.M. Co.'s leases.

Satisfied with the Company

Alfred Minister, of the Minister, Myles Shoe Co., of Toronto, said he was perfectly satisfied with the way in which the United Shoe Machinery Company treated his company. He believed the tying clause was reasonable, and thought that if a much better machine were invented that was not controlled by the United Company, the latter would permit the shoe manufacturer to install it. The effect of the United Shoe Machinery Co. on the shoe making business had been to improve the product without increased cost to the consumer. Labor had also benefited, inasmuch as a man who was earning \$12 a week lasting shoes before the advent of the "laster" controlled by the United Company, could now earn from \$15 to \$20 a week with less manual labor. He admitted, however, that fewer men were needed now to do the same quantity of work as before. An advantage in leasing a machine over buying it was, he said, that in the former case the company were still interested in the upkeep of the machine. He would not go back to the old system of independent machines, even if he could.

Quality does most of the talking

As "deeds speak louder than words," so does real quality count for more than mere style and appearance.

The shoe business that is built on attraction (i.e. style and appearance) is only as strong as that attraction, and once that attraction is removed the business falls flat. Unless there is something beyond attraction, business gained by it cannot be held.

In the beginning of the Rideau Shoe business the founders of Rideau Shoes realized this. But they realized also that there must be attraction.

And, because they succeeded in producing men's and women's shoes that had the necessary style and up-to-date appearance, backed up by

RIDEAU SHOE COMPANY, L

ing that sells Rideau Shoes

quality of leathers and workmanship, Rideau Shoes have earned a reputation and a sale out of the ordinary.

As these illustrations show, Rideau Shoes have the necessary style to produce sales. But more than that, they have the quality that produces more sales from your present customers.

Rideau Shoes for fall, 1912, are now being shown by the "Rideau Boys," and certainly merit from you a close inspection. You will find in the Rideau samples just the proper styles for your class of business. They are all advanced enough to be attractive and sensible enough to be saleable.

You'll like the Rideau line and so will your customers.

LIMITED, MONTREAL, CANADA

Slater Shoe Announces Quick Deliveries Now

Every Shoe of our Spring Orders will be shipped from the Slater Factory before April 15th.

It's a Record in Volume and a Record in Prompt Delivery.

**30-Day Delivery
of Repeats**

Factory re-organization and far-away planning was required to do this—but we now have our double-size factory working as smoothly as a well-oiled piston rod.

We can take care of Repeat Orders—and assure our customers of delivery in 30 days from receipt of order at the House.

**Ready-to-Ship
Orders**

The Slater travelers are all out with their Fall models—and as one of our veteran salesmen remarked, "They are the most enthusiastic lot of samples we have ever carried!"

To Shoe Merchants who would like to test the pulling power and prestige of the Slater Shoe—its stamped price and the "Sign of the Slate"—we offer some prove-up orders all ready-to-ship—in selected lots of the 12 best sellers, \$4, \$5 and \$6 lines in assorted sizes.

Send for particulars of best sellers in lots of about \$500 or \$1,000. To any town where we are not properly represented this offer is made.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:—

- | | |
|--|------------------------------|
| 2 Split Bottom Buffing Rolls | 1 Heel Breast Scouring Wheel |
| 2 Flat X-Ray Heel Scouring Wheels | 1 Pin Wheel Pad complete |
| 2 "C" Shape X-Ray Heel Scouring Wheels | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:—

- | | |
|--|-------------------------|
| 2 Corrugated Rubber Shank Finishing Wheels | 2 Heel Brushes |
| 1 Corrugated Rubber Heel Finishing Wheel | 1 Stitch Cleaning Brush |
| 1 Corrugated Rubber Bottom Finishing Roll | 1 Levelling Roll |
| 2 Shank and Bottom Brushes | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Full information furnished promptly on request.

A FEW INSIDE FACTS

ABOUT EYELETS

BETWEEN two shoe eyelets that present the same appearance in the shoes, there may be a world of difference in the wear. One can resist wear only to the extent of its none too reliable coating of enamel ; underneath is the inevitable brass of the brassy eyelet. The other kind (if it is a Fast Color eyelet) is constructed as shown above, and by the way, there is only one kind of eyelet that is Fast Color. They are all made this way, with celluloid tops of solid color and nickel non-corroding barrels. It is impossible for them to wear brassy. They preserve their bright, new appearance throughout the wear of the shoe.

You will readily realize the importance of establishing the identity of these two classes of eyelets and there is a sure way.—Fast Color eyelets have a small diamond  trade mark slightly raised on the surface of each eyelet. No others do. Just fix this fact in your mind, and you will be able to avoid mistakes. No diamond  trade mark—no Fast Color.

Two Hundred New Lines ::

There has never been shown in Canada a more representative line than that being shown by McCready travelers.

Every shoe has a snappy appearance and a quality behind its looks that makes

“McCready” Fall Footwear

the line for the wideawake retailer to “tie-up” to.

The goods are shown in such leathers as Box Calf, Velours, Gun Metal, Patent Colt, Tan Calf, and Tan and Black Storm Calf.

The lasts are the latest, and in our medium and high grade goods will appeal to you in a particular way.

MONTREAL WINNIPEG

**A
Perfectly
Tanned,
Perfectly
Waterproofed
“Endural”
Calf Skin**

**Makes
Absolutely
Waterproof
Fall and
Winter
Shoes**

“Endural” is a heavy chrome tanned calf that’s made especially for Fall and Winter Shoes.

And because it is made to be worn in bad weather, it is made absolutely waterproof. Water can’t get through “Endural” Calf.

And it’s even in color, too. Every skin is precisely the same shade as its neighbor. You will have no trouble in matching.

“Endural” answers every purpose of imported viscolised leathers—and costs you about 4 cents less on every foot you cut.

It is made in two colors, No. 22 and No. 44, and in 4 weights for men’s and women’s shoes.

Try “Endural” Calf and prove that it’s best for “bad-weather” shoes.

Five New and Snappy Lasts for Fall

Five new lasts have been added to the Murray Line for Fall, 1912.

These new ones are right up-to-the-minute profit-producers and have a snap and go about them that will appeal to well dressed men.

They embody many improvements in shoemaking and have special features that add greatly to their saleability.

You are going to miss many opportunities for profit if you fail to stock this up-to-date line.

Wait and talk it over with the Murray salesman.

THE MURRAY SHOE CO., LIMITED

LONDON, ONT.

Why you can sell the Doctors Shoe

In relation to the other lines of shoes you handle the Doctors is not exactly a competitive line.

Its distinctive features give purpose to its existence, and make it a line out of the ordinary.

It sells not because of catchy shapes and fancy-tickling styles, but because it fits men's feet and keeps them warm and dry.

No manner of moisture can reach the foot incased in a Doctors Shoe for it is perfectly waterproof. Hot pavements or cold do not affect the foot—the Doctors has three soles that prevent that.

You see, the Doctors Shoe has sales-making features that make it a good proposition for you.

The Doctors is a Goodyear Welted Shoe and is made in Tan Winter Calf, Chrome Box Calf and Chrome Black Storm Calf. It has three soles—the inner sole is antiseptically treated, the centre sole is of thermal asbestos, and the outer of thoroughly waterproofed leather. The uppers are also waterproofed and the linings are antiseptically treated.

The Doctors is a truly waterproof, antiseptic, weather defier.

THREE RIVERS, QUEBEC

Meet Us at Boston

JULY 12th, 1912

☞ Last year, over seventy Canadians attended the Shoe and Leather Fair in Boston.

☞ Most of those who went were agreeably surprised at the completeness of the exhibits.

☞ The Fair Manager, whom the Canadians met at the Lynnway Club, has shown us proof that this year the Fair will contain just three times the interest of last year's exhibition.

☞ Further, our Canadian bunch, that came from as far west as Calgary—Oh, you Foster—and as far east as Newfoundland—Mr. Janes—thought it was well worth while.

☞ It will be even more worth while this year, as a special day, July 12th, has been set aside as Canadian Day. Will you meet us there? You can make the Shoe Journal your headquarters.

The Shoe and Leather Journal

SPECIAL CANADIAN DAY

Friday, July 12th, 1912

AT

**The Sixth National Shoe and Leather
Market Fair, Mechanics Building,
Boston, Mass., U. S. A.**

Make your plans to visit Boston so that you can meet your friends at the Fair, in Mechanics Building, on the

SPECIAL CANADIAN DAY, FRIDAY, JULY 12th.

This day has been set aside for the Canadian Shoe and Leather Trade, with special features for their entertainment.

Shoe retailers, shoe manufacturers, tanners and leather merchants are cordially invited.

Visitors will have an opportunity to see, under one roof, in a brief space of time, exhibits of the latest creations in footwear and leathers, also shoe and leather machinery in operation, and shoe and leather supplies of all kinds.

The Fair and the National Shoe and Leather Week, extends over a period of eight days, beginning Wednesday, July 10th, ending Wednesday, July 17th.

This will give Canadians an opportunity to combine business with pleasure, and enjoy the many beautiful sea-side resorts and ocean beaches around Boston.

For exhibition space, or information regarding railroad rates, tickets of admission to the Fair, or Boston Hotels, write:—

The Greater "Classic" Line

Surely, the "Classic" Line is growing.

Originally "Classic" Shoes meant misses' and children's only. Today they include women's as well.

And, there's a reason and a cause for this expansion. Demand is the reason and quality the cause.

The unfailing, "always-present" quality of "Classic" Children's Shoes has caused a demand for

Women's Shoes of the same calibre. "Classic" Women's Shoes is the answer.

And "Classic" Women's is meeting with the same reception as has always been accorded "Classic" Misses' and Children's. They're selling fine. And they're selling best where "Classic" Misses' and Children's sell best. That shows that they have the real "Classic" qualities.

GETTY & SCOTT, Makers of

or Fall Nineteen-Twelve

assured that "Classic" men's Shoes are of the same quality that has made the "Classic" mean so much in men's and Children's Footwear.

are going strong on this new line for Fall, 1912, but we're not limiting our original lines to do this. There are some dandy new styles in each line, and they're selling well. A few are shown on these pages.

You can't go wrong in choosing from the "Classic" samples. Every one of these samples represents a style that will be in demand next Fall and they all have the reliable "Classic" wearing qualities.

Wait and see the "Classic" salesman. He has the goods that will surely interest and profit you.

CLEO SHOE COMPANY

LONDON - - - CANADA

Mr. Shoe Manufacturer

Industrial peace and uninterrupted production are promoted by shoe manufacturers operating under a Union Stamp Arbitration Contract.

The Union Stamp is a selling factor, the influence of which is equivalent to the work of one or more road salesmen, according to the amount of territory covered by the manufacturer. Wages are fixed upon a competitive basis; the volume of output is largely increased in every Union Stamp factory, thereby reducing manufacturing fixed charges and giving employees more weeks' work in the year.

The Union Stamp is the emblem of peace, which means more business even in dull times.

Manufacturers desiring further information should correspond with the undersigned.

AVAGE
MONTREAL

Buying right is simply

Keep up your stock of good sellers

How is your stock of good sellers to-day?

I suppose you have by now commenced to feel the Spring rush, and your stock will need a little filling up in some lines.

It won't do to get behind in the better selling lines. You'll need to keep your stock of them in good shape all the time.

Better be a little ahead of time than a little behind. It may mean quite a few sales to you. Go over your stock to-day and note what lines you are low in. Then send your order to me. It'll be carefully attended to and shipped promptly. You can rely on that.

James Robinson, 182-18

...ing at the right place

Make sure of good business this Fall

The buying season is the right time to prepare for a profitable fall business. For on the discrimination and business acumen you display now, depends to a great extent the amount of money you'll make during the selling season. The more profitably you buy the more profitably you'll sell, that's certain.

I've a stock here that you can buy from profitably. I bought it carefully, both as to quality and price, and you'll find it very representative in regard to shapes and styles and prices.

My representatives are now showing samples from this stock, and I feel certain that if you give them a fair hearing you'll be pleased to give them an order.

Minister Myles Shoe Company, Limited, Toronto

A Sign which brings grist to the Retailer's Mill and has been the means of the introduction of many a sound account

Business is a Fierce Fight. A Slater Agency puts you on the winning side and makes your position impregnable

Twelve Square Facts—Here they are:

- 1—You want no BUREAU OF COMPLAINTS in so far as Footwear is concerned if you take up a Slater Agency. Try a ready to ship order, if we are not represented in your town.
- 2—Each ready to ship order is composed of 144 pairs of the BEST SELLING LINES IN POPULAR LASTS AND LATEST STYLES as follows:—36 pairs of \$4. shoes, 3 styles; 84 pairs of \$5. shoes, 7 styles; and 24 pairs of \$6. shoes, 2 styles.
- 3—You are "King of the Castle" in your particular town when you adopt a Slater agency. The franchise is exclusive.
- 4—We stand by our agents. The infallible firm does not exist, but we are reasonable.
- 5—When matters go right business becomes an even greater pleasure. A Slater agency helps towards this end. Try a ready to ship order.
- 6—Past results are the surest guarantees for future success. That is why we are able to talk with so much confidence, and again advise a ready-to-ship order.
- 7—We do not transact business on the "get there, never mind how" style, but we attain our object all the same. OUR OUTPUT LAST SEASON WAS THE GREATEST IN THE FIRM'S HISTORY. Two potent factors which contributed to this end were our prestige and good will. We are not likely to sell our hirthright for a mess of pottage.
- 8—Fashion has revealed many secrets, and yet her folder seems to contain an unlimited supply. The Slater Company has first call upon her best designers—hence you are kept a point in front of your rivals.
- 9—A satisfied customer is a living advertisement for your store. We pull the customer to you—the goods and you do the rest. Try a ready to ship order.
- 10—Our travelers are "qui vive" men and being in constant telegraphic communication with them we can soon put you in touch. We await your commands.
- 11—One new agent writes:—"Hoping soon to reap mutual benefits from a line of goods I have always known were the real thing, as, personally, I always wear your shoes." The proof of the pudding again. Become an agent.
- 12—Pardon our seemingly undue persistency, but we ourselves are daily learning something new. Try a ready to ship order.

A Slater Shoe Agency acts like a

If not represented in your district send us a post-card for particulars of our Exclusive Agency and ready-to-ship orders, and they shall be mailed per return.

We help the go-ahead man to expand, and give him a strong send-off in advertising. Write us at once and get ahead of your competitors.

THE SLATER SHOE CO., LIMITED - MONTREAL

The Columbus Rubber Company of Montreal, Limited.

We beg to announce to the trade of Canada the formation of the Columbus Rubber Company, of Montreal, Limited.

This Company has been incorporated by Mr. J. I. Chouinard, proprietor and president of the Regina Shoe Company, Limited, and of J. I. Chouinard (Jobbing House) Montreal, who purchased the plant and business of the Corona Rubber Company.

The plant has been thoroughly overhauled and placed in first-class shape. With additions to be shortly completed, 5,000 to 6,000 pairs of rubbers a day can be turned out.

New patterns and lasts, the very latest American designs, have been secured, and a complete range of rubber boots and shoes will be made—"Columbus" and "Minto" brands, first and second quality, respectively.

Mr. J. I. Chouinard will be president and general manager of the new company, Mr. Jos. Gravel, assistant manager and general sales agent; Mr. R. E. Coughlin, superintendent.

The trade are assured of high grade rubber footwear, scientifically made, and up-to-the-minute in style.

Sensible, Saleable Surpass Shoes

Surpass Shoes make their appeal to you and to your customers on service rather than on style.

Style is considered of course, but is provided not so much as a feature of Surpass Shoes but more as a help to sales.

Surpass Samples for Fall 1912 will please you with style because there is just enough of it to make selling easier, but not enough to make the shoes freakish.

As for shoemaking—there is over fifty years experience in one of the best factories in the Dominion behind every Surpass Shoe.

Be sure you see the Fall samples.

Making Good in Rough Places

Prospectors, miners, surveyors, contractors, farmers, river drivers, etc.—the men who wear Dayfoot boots and shoes—subject their footwear to a strain that only honest leather and honest shoemaking can withstand.

The unsurpassed reputation of the "Dayfoot Shoe" has been won by almost seventy years adherence to their motto, "Solid leather clear through."

The climax of this long development is the Dayfoot range of high cut Goodyear Welts. Every line has special points that produce water-repelling and wear-resisting results above the ordinary.

How Ambitious Shoemen Would Start In Business

The Way In Which They Would Invest \$2,500 Capital—Location, Stock, Fixtures, Rent and Buying Arrangements] Discussed—Prize Winners Go Thoroughly Into the Whole Situation—Various Appropriations

"How I would start in the boot and shoe business on a cash capital of \$2,500" was answered by retail shoemen and salesmen in various parts of the Dominion. The replies demonstrated that the contestants devoted much thought and study to the problem and went thoroughly into all phases of the proposition. Some dwelt particularly on one element, and others featured totally different aspects of the question.

The task of arriving at a decision was therefore no light one. The prizes are \$10 for the first, \$7 for the second, and \$5 for the third, and have been awarded as follows:

- 1—A. L. Wright, Peterboro, Ontario.
- 2—D. J. M. McGeary, Saskatoon, Sask.
- 3—John Maw, Ormstown, Quebec.

In addition to the above, a special prize of \$3 has been awarded Arthur L. Wilson, of Hamilton, Ontario, for his excellent contribution. The replies of several others who are not among the winners will be published in later editions of the SHOE AND LEATHER JOURNAL.

Much interest was aroused in the contest, and responses were even more numerous than in the \$1,000 competition, the results of which were announced in the April 1st edition. The sub-joined articles are full of instruction and suggestions to the trade, and will be found worthy of careful examination, and even preservation for future reference.

Be Sure You Are Right; Then Go Ahead

By A. L. Wright, Peterboro, Ont.

We will suppose in starting that I am located in a manufacturing town of ten to twelve thousand population, and that the surrounding district is a farming one, which makes the town its centre, and thereby supplies a good country trade to my town. Also suppose I have been for several years with one of the representative shoe establishments of the town, and have become well known and liked by the shoe buying public. Then I decide, having \$2,500 in the bank, to open up for myself. After ascertaining that there is trade enough to warrant the support of another shoe store, and having been fortunate enough to find a good stand on the main street (rent to cost me from \$35 to \$40 per month); I secure my lease, and am ready for a start.

After making arrangements for remodeling, painting, etc., I would fill the windows with large "placards," announcing the opening of the store on May 1st, with a well selected line of "high-grade" footwear, also a grand opening display of novelties in spring and summer footwear from the big "fashion

centres." Then four or five large billboards throughout the town would carry the same for two or three weeks previous.

One week before opening I would have distributed in town and outside, 5,000 circulars, well illustrated with cuts, and promising a really sensational showing of good, honest footwear, and altogether different from the lines usually seen, and "fair" in price.

Having secured the agency for the famous "Invincible" (made in Toronto) shoes for men, to retail at \$5, \$5.50 and \$6, and women's "Patricia 1912" (Montreal made), \$4, \$4.50 and \$5 line, I would divide my capital as follows:—

Men's boots and oxfords, to sell at \$5 to \$6, including buttons and bals, gun metals, tans, patents, vicci kid	\$850.00
Men's gun metal, tans, patents, bluchers, buttons, and oxfords, to sell at \$3.50 and \$4	250.00
Men's box calf, kip and grain bluchers, from \$1.75 to \$3	150.00
Women's gun metal, tan and patent, button and bluchers, to sell at \$4, \$4.50 and \$5, including oxfords in all three leathers, but at one price only, \$4	250.00
Women's G.M. and tan button and blucher (one line of patents), to sell at \$3 and \$3.50....	185.00
Women's popular priced oxfords, \$1.75, \$2, \$2.50, \$3, including three lines of slippers.....	200.00
My boys' lines would consist of:—	
One gun metal blucher balmoral, at	\$4.00
One tan calf blucher balmoral, at	4.00
One box calf blucher balmoral, at.....	3.00
One box kip blucher balmoral, at.....	2.25
One grain blucher balmoral, at.....	2.00
One dongola blucher balmoral, at	1.75
	130.00
Youths' grain, box calf and box kip bluchers, at \$2.25, \$2, \$1.75 and \$1.50, respectively.....	85.00
Misses' box calf, dongola and pebble bluchers, at \$2.50, \$2, \$1.75 and \$1.50, respectively..	100.00
Children's and infants' lines, box kip, tan calf and chocolate and dongola balmorals and buttons, including soft sole lines	100.00

Total cash for shoes

My balance of cash would be applied as follows:—

One second-hand cash register	\$ 40.00
One silent salesman, showcase	40.00
Stock of men's and ladies' hosiery	60.00

Note.—Every shoe customer to be solicited to buy hosiery with shoes.
Then, finally, my findings, including "polishes" (best Canadian only), laces, brushes, lifts, trees, arch supports \$ 60.00
\$2,500.00

My next move would be to notify my numerous acquaintances among the jobbing trade of my prospective venture, telling them squarely my capital, standing with the trade, prospects, etc., and after inspecting their samples, placing my orders for medium class lines, buying few lines, but plentifully of same, terms 60 days, net. This system of short dating would give "close prices," and still time enough to turn a portion of stock into cash, thereby giving me a steady working capital, which if handled properly, should be ample financing. My rubber order would only have to be placed now, in order to insure shipment by October 1st, following, payment for same due January 1st following.

I should place order for rubber goods, overshoes, etc., to amount of \$800.

My Financial Accommodation—While it would certainly safeguard me to have recourse to a certain amount of cash, say, from \$1,000 to \$1,800, which I could borrow in necessary sum at a nominal interest of 7 to 10 per cent., for purpose of taking advantageous discounts, etc., and giving security on my capital invested in stock, I would be very cautious about using this means except in exceptional circumstances. Still, this would have to be arranged as an important and necessary accommodation.

My Advertising—I would figure to cost \$10 per month, \$7 for an eight-inch, single-column space in the leading daily paper, and balance for 3,000 circulars per month, also electrotypes, most of which would be supplied by me by the makers of my best lines.

Finally, I would bind myself to four resolutions, and stand by them, each for success.

1st—To have and maintain the best dressed windows in town.
2nd—To ask a fair profit on every line sold, and "one price" only, always being able to look my customers in the face with a clear conscience in the matter of quality.

3rd—To be always "on the job" in working hours, "away from it" in all other hours.

4th—Systematize, plan, lay out my work, buying, help, service, etc., systematically. Then "Dig in for all I'm worth."

Watchword: "Success."

Do Medium Priced Trade in the West

By D. J. M. McGeary, Royal Shoe Store, Saskatoon, Sask.

In starting a shoe business on a capital of \$2,500, first of all I would choose a growing town in our great Canadian West, and would endeavor to do a nice medium-priced trade, avoiding as much as possible the cheaper goods, which is much easier to do out here than in the East. It would be necessary to have a good stand, and be sure to pay attention to style and wearing quality. My capital, according to these plans, is to be \$2,500; therefore every cent must be made to count, and only the greatest of care used in buying. The fewer number of houses bought from ensures better terms and service, and also prevents duplicating lines.

My plans would need to be made in the fall some time, to open business with the spring season, which is the better time of the year. It will be necessary to get in touch and in confidence with a good banker, and obtain from him a line of credit to the extent of about two thousand dollars, on condition that I take all the discounts possible, and also pay off the overdraft at least twice a year. Thus my financial strength would be all I could need for the first couple of years, and then more credit could be arranged, as I would have more of my own money in it.

My first buy would come to a total of about five thousand

dollars, to be ready to open up for business March 10th.

The proportion in the West would be about the following, viz.: Men's boots, \$3,000, consisting of a good staple assortment of men's medium and good working boots, then a good selection of dress shoes, a few lines well chosen and of good quantities.

Women's boots, \$1,250, in medium priced and dressy boots, all good style, with a fair assortment of staple goods.

Children's, misses', boys' and youths' boots, to the extent of \$500.

Rubbers to the extent of about \$175.

Findings and accessories to the value of about \$75.

I would set aside \$500 for fixtures, and by paying cash for them would obtain the full value coming.

As to rent of store, I would judge that about \$75 per month would be correct to obtain a good desirable stand. Now this bill of \$5,000 worth of goods to open up on would need a little extra dating for a start, which, of course, would need arranging. In the regular way good terms are May 1st, two per cent. ten days. By having a month's extensions on the dating and the notes arranged one, two and three months, viz.: June 10th, \$3,000; July 10th, \$1,000; and August 10th, \$1,000, the sales would not need an overdraft.

Now respecting oxfords and slippers. I would buy about \$1,500 worth, to be shipped in April, proportioned as follows: Men's, \$500; women's, \$700, and children's, \$300. As I was doing all the buying, I could from one or as few houses as possible, I believe I could arrange this \$1,500 to come due on Sept. 10th.

An allowance for advertising should be about \$300, and should include everything that could be classified as publicity.

As to salary paid myself and any help I should need, would be about \$175 per month. For fall I should buy about \$6,000 worth, to be proportioned as locality, conditions of trade and stock would suggest. From the plan outlined, at the end of twelve months, I should have a balance in the bank of \$350, and a stock that at invoice value should be \$2,633.33.

Figuring out the amount to be added to invoice or selling price to be fifty per cent. above invoice price: Thus a total buy of \$5,000 plus \$1,500 plus \$6,000, equals \$12,500; plus fifty per cent. is \$18,750. At the rate shown, sales estimated are \$14,500 for the twelve months. Thus \$4,250, less percentage, would leave stock on hand at inventory price to be \$2,633.33. Therefore a profit percentage of eighteen per cent. is declared, viz.: \$2,633 plus \$350 cash in bank, is \$483 net profit on the \$2,500 invested.

Estimated sales for the year from March 10th to March 10th, \$14,500.

Rent, \$75 per month.

Salaries, \$175 per month.

Advertising, \$300 per year.

Freight, \$200 per year.

Sundries, \$100 per year.

Notes coming due to the extent of \$12,500, and at stock-taking at the end of the year we have a cash balance in the bank of \$350. As I figure it stock on hand at invoice value is \$2,633. Making a gross net profit of \$483 on a cash capital of \$2,500 leaves a net percentage of eighteen per cent.

Careful Buying Means Success

By John Maw, Ormstown, Que.

"How I would start in the shoe business on a cash capital of \$2,500," may at first thought seem a simple problem, but the question requires thought, experience and good judgment in buying, and selection of goods suitable to the wants of the people in the locality in which one would start. In the first place it is supposed that one has secured a suitable business stand on some good business street, and that the building is ready to receive your stock and fixtures.

Now, how shall I spend my \$2,500 cash for goods to start my

(Continued on page 57)

Figure From the Selling Price, Not the Cost Price

It Is Advisable for the Shoeman To So Mark His Goods That He Will Know How Much of Each Dollar Taken In Belongs To Him As Profit—How To Do It—Should Keep Record of Sales Made Each Day

By J. C. WALKER

There has been considerable discussion recently in various trade papers on the all important problem "Do Retailers Figure Their Profits Right?"

Some criticism has been expressed regarding a widely read article which appeared lately in the *SHOE AND LEATHER JOURNAL*. It is well to state in the beginning that there may be more than one correct method of figuring profits. It is not contended that the old method of using the cost of the goods as the basis from which to figure the percentage of profit and the cost of doing business is mathematically incorrect. All arithmetics teach that the cost of an article should be the basis from which to start figuring rates of percentages. However, the same results may be obtained in another way, that to our mind, is much more satisfactory, more easily figured, and much safer for the merchant.

For instance, we will assume that a merchant's volume of business is \$100,000 a year. His expense of doing business is \$20,000 per year, and his profits are \$10,000 per year. This leaves the cost of the goods sold at \$70,000, or in other words!—his expense of doing business is 20% of his sales; his profits are 10% of his sales and his cost of goods 70% of sales.

Figuring It In Another Way

This problem may be figured just as correctly by using the \$70,000 as a basis and dividing it into the \$20,000 and \$10,000 to get the prospective rates of expense of doing business and profits. But this is what frequently happens, using the same figures as above for volume of business, expense of doing business and profit, he

figures as we have above that it costs him 20% to do business and he wishes to make 10% profit or \$10,000 profit on \$100,000 volume of business—then he marks his goods in a way that he believes will bring him this profit and this 20% plus 10%, which is 30% of the first cost of his goods.

If a fitted club bag cost him wholesale \$10.00, he will mark it at \$13.00, figuring that 20% or \$2.00 will cover the expense of doing business and 10% or \$1.00 will give him his desired profit. As previously shown, these profits were determined on the selling price of goods and it therefore costs him 20% of \$13.00, or \$2.60 to sell the bag, leaving him only 40c. as profit.

What Becomes of the Difference

If all of his goods are marked in this same manner, instead of having \$10,000 profit at the end of the year, he will have just \$4,000, and he wonders what became of the difference between the \$4,000 that he has when he closes his business for the year and the \$10,000 which he thought he provided for when he marked his goods.

What he should have done was to have added together his 20% expenses of doing business, and 10% profit, making a total of 30%. This, subtracted from 100%, would leave 70%, which represents the cost of goods. Divide this into the \$10.00, the cost of the bag, and we find that the selling price of the goods should have been \$11.29; 20% of this would be \$2.86, which would be the expense of doing business and \$1.43 would have been left for profit.

This same result could have been obtained of course by using the \$10.00, first cost of the goods, as the basis, but in that case

ONE OF ONTARIO'S MOST ATTRACTIVE SHOE STORES

The C. E. Clement shoe shop in Chatham, Ont., is one of the brightest and roomiest in the province. It is 125 feet deep, 24 feet wide, with 12 foot ceilings. The shelving runs up only 8 feet, uniform cartons are used, and traveling goods are handled to the best advantage. Flowers and potted plants add to decorative scheme. There are beautiful mirrors in every third section of the fittings.

his rate of expense for doing business would have been 28 6-10%, and on a basis of 10% of the selling price for profit, his rate of profit would have been 14 3-10%.

How Much of Each \$1 is Profit

It is certainly more satisfactory for a man to mark his goods so that he will know how much of each dollar taken in over the counter belongs to him as profit and how much must be set aside to cover the expense of doing business and how much represents the first cost of the goods.

To use the foregoing illustration on the basis of \$100,000 volume of business, out of each dollar taken in over the counter, 10c. belongs to him as profit, 20c. must go toward paying the expense of doing business and 70c. must cover the cost of goods sold.

By figuring in this way, he is enabled at any time to determine from a recapitulation of his sales just what his profits to date should be. It also enables him to determine whether he is keeping the expense of the business within the 20% which he estimated should cover all items properly chargeable to the expense of handling the business. Seventy per cent. of his sales should also represent the cost of the goods sold.

Daily Sales Record Needed

You will see from this how simple a matter it is to secure all

of these figures from a daily sales record where much time and effort would be required to secure the same data if you had to go back to the cost of the goods.

There are a number of advantages in figuring from the selling price rather than from the first cost of the goods, not the least of which is the fact that you always have before you the selling price of the goods sold and scarcely ever the cost price.

We do not wish to be understood as saying that this is the only correct method of figuring profits. In fact, it is simply reversing the percentages in order to make it easier for the merchant to know from day to day or from month to month whether his business is realizing the profits that is anticipated when marking his goods.

Don't fail to "hook up" your window displays with your advertising. They should pull together.

Don't forget that the window, like newspaper advertising, is intended to bring results.

Don't ever dress the window for any purpose other than as a means to advertise your goods.

Don't allow your window display to shut off the view of the inside of the store.

Don't fear people will think you have not the stock just because it is not all in the window.

A CAPTIVATING STORE FRONT COSTING \$1,000

One of the most attractive of the new store fronts recently put in is that of George Naylor & Company, Ingersoll, Ont. A good illustration is given herewith.

This front cost \$973.57, after using all the glass from the old one. This amount does not include the inlaid hardwood window bottoms, the bills for which had not yet been received.

The work was all done by day labor, and not by contract. Estimates were received from two firms, and were thirty to fifty per cent. higher than the actual cost. The woodwork outside

is of the best quality pine, and inside of the best quality chestnut. The entrance is tiled, and there is a fourteen-inch shelf in each section of the windows and across the back.

In these windows it is possible to show seven distinct trim without using the shelves, the display of shoes being in the second section on the left. The whole effect is very attractive. The idea was adapted from a drug store on Yonge Street, Toronto. The layout is such that a passer-by gets the impression that the store is much larger than it really is.

Make Your Windows Pay the Rent of Your Store

Some Pertinent Remarks on Window Dressing and Card Writing by A. A. Daoust—Show the Spring Spirit Now in Displays—Spend Your Money to Good Advantage and Fine Results Will Follow

Going along the street and observing the different windows on display in any town or city, it is surprising how very few of the different displays seem to bring out the spirit of the season. For instance, many people do not seem to understand what spring decorations should be like.

Everything in the spring should be light in color. This rule is more in evidence by its abuse than its use. Very many merchants will use as dark colors as in the fall. This makes everything about the display very heavy-looking. This is especially noticeable in very small windows.

Show the Spring Spirit in Displays

The spring spirit is something different from sombre effects. Every display should be worked out in pale colors. To harmonize with the sunny days of spring, all display materials should be light in color and bright in appearance.

It is hard to understand why otherwise good business men will give so very little careful attention to their store fronts. Shoe men are especially lax in this regard, judging by appearances. You can pass some of these stores every day in the year, and never see anything but a commonplace display, and the only reason such stores stand up to the strenuous competition of today is because so many other stores are in the same class. No man is going to take much interest in a store that does not take enough interest in him to make a good display to attract his attention.

Money Not Spent to Advantage

On the other hand, some merchants who *do* spend a little on their windows do not seem to put their money to good advantage. For instance, I have noticed fall artificial flowers in spring. This may seem rather ridiculous to the reader, but it frequently happens, showing a lack of judgment and good taste. Of course, good display taste is to a certain extent a gift, but it is surprising how it can be cultivated by making a careful study of the different display subjects as they come up from day to day. If the trimmer will put his heart into his work, the effect will be quite evident to the most casual onlooker.

Anyone can put in a window display that looks as if it had been thrown in, but to put in a nice, well-balanced trim requires much more thinking than one would imagine. Much of this thought is necessarily expended on the problem of how to make a small expenditure go as far as possible, also in using care that everything harmonizes so as to bring out pretty and striking effects.

The Wrong View Point

Many merchants look at window dressing from the wrong standpoint. They will spend, for instance, \$50 for a few newspaper ads., but if they were to spend the same amount on window decorations, they would expect them to last for a year. Of course, all decorations should be used again in different settings, providing they are still good, but it is too much to expect that they should last for an unlimited time. The ad. itself that the city merchant paid, let us say, \$25 for, probably was inserted but once. If business were good the day after, he undoubtedly was satisfied; therefore why should the same amount of money spent on window trims be considered askance, especially when this expenditure will often suffice for a month or more?

Coming right down to "brass tacks," window trimming is advertising, just as much as is newspaper advertising. It should be so considered. The newspaper instructs the public that you

are at a certain spot, and that you have certain goods to sell. Now, when the public gets as far as your window, the display therein should bring out what you have to sell to its best advantage. It is almost useless to advertise, unless you have good displays to back up your newspaper talk.

The Part Show Cards Play

Do not overlook the value of show cards as a valuable component factor in all displays. A window without a card is like a store without a salesman. A pile of shoes in a window does not tell the passer-by much that he already does not know. He receives no incentive to buy, he is given no reasons why he *should* buy. The card lends point to the display, and helps to arouse the onlooker to action—at least to enter the store, and then it is "up to" the salesman.

Never put in a trim without a card. It answers any unspoken questions in the prospective buyer's mind, and saves the salesman's time, because if the former is not interested, he will not bother with the latter.

A Broad Field for Shoe Salesmen

Many young men in shoe stores have a few hours every now and then that they can put to advantage by learning card-writing. Personally, I do not consider that a man needs a correspondence course to become an expert card-writer. A set of brushes and a few shoe box covers will do for a start, and he will be surprised at the progress he will make in three or four months. It is all *practice* and taste; the former means work, and the latter can be gradually acquired, if not naturally inherent. I had three brushes, and used an old cardboard to start with. I *practised*. That tells the story. I would be terribly ashamed to look at those first efforts now, but the start has to be made, and no one should allow himself to become discouraged over seeming failure at first.

Displays Pull—Here's the Proof

Some time ago an American firm spent a considerable sum on window improvement. As a proof that they are on the right track, note a little incident that took place during the alterations. While these were going on, of course no shoes were displayed. But one day the men failed to show up, and on this day the firm had just received a new lot of fall styles. They cleaned out the windows and displayed these styles for that day only. With what result? Twenty-six pairs of these new styles were sold just from that one day's display in a window undergoing alterations: they were not advertised in any other way. That firm believed enough in window dressing to spend equal money for that purpose and for newspaper advertising.

Does Not Favor Novelties

"Undoubtedly the average shoeman loses more than he makes on novelty shoes, or lines than cannot be considered as staple sellers. I have talked to retailers in centres from coast to coast, and I have found that invariably, the merchant who is not a careful buyer and a man who gets a good price for his goods, loses money."

This is what an experienced salesmanager remarked recently in discussing profits in shoe retailing. There is food for considerable thought in the few words. It is surprising how many lines are sold by the average shoe merchant at prices which enable him to make very little profit. The fear of competition, the lack of backbone enabling a man to conduct his business as he knows it should be conducted, is often the reason of failure to sell at a profit.

Some Stray Shots from "Solomon"

There are some people who seem to think there is a sort of virtue in what they call "standing pat." A certain statesman of bygone years is reported to have said that the sort of friend he appreciated was the one who stood by him when he was wrong. There is too much of this "standing pat," even for friendship's sake. "He that saith unto the wicked, thou art righteous, him shall the people curse." The man who "stands pat" in the crookedness of another is worse than the evildoer himself, for he endorses wrong without even the excuse of directly benefiting. There are men in this world, however, who are so crooked in the grain themselves that they glory in the twists they see in others, and will call black white or crooked straight any day to promote the cause of evil. When once the world finds him out its fury against the endorser of evil is tenfold more bitter than of the man who actually does it. The man who finds himself making excuses for crookedness or "standing pat" on the side of wrong had better look out. There is ahead of him a reckoning time.

Justice is pictured as blindfolded to indicate impartiality that may not be turned aside by sight. Most of us are weak enough to be biased in judgment by appearances. "It is not good to have respect of persons in judgment" and yet, almost every day, we are moved in our judgment of things and persons by our feelings and prejudices. It is rarely the case that we are found administering the same impartiality to the Italian laborer or Jewish peddler that we do to the influential politician or the powerful capitalist. It is said of Diogenes that when Alexander the Great visited him he found him silently occupied with his tub. "What can I do for you, Diogenes?" asked the mighty monarch. "Get out of my light!" promptly replied the philosopher. It is astonishing how busy we are when some timid woman calls to ask a subscription for an orphanage, and on the other hand how much time we can spare for our big friend on the hill who wants to discuss with us golf strokes or chicken raising.

Constant change is as dangerous as running in ruts. There are people who imagine that "enterprise" means always doing something new. Change for the sake of change is bad policy. "Off with the old and on with the new" only when you are certain that the new is better. "Meddle not with them that are given to change." The fellow who is everlastingly changing everything from his hat to his whiskers drops his friends and his principles as easily as he sheds his coat or his opinions. These lightning change artists, whether in church, lodge, business, or politics, are the fellows who keep everything messed up. One salesman of this sort in a shop will upset the whole establishment in less than a month. A certain amount of change is necessary and healthy, but confidence is destroyed in most cases where one never finds the same thing twice in the same place, or the same thing done again in the same way. The Latin races on this continent, in Mexico, Central and South America are apt illustrations of the Wise Man's warning.

There is more or less dissatisfaction and unrest amongst business men to-day with regard to the ease with which some men acquire wealth and position. With this comes a certain amount of envy and fretting against the conditions of ordinary business life, and this is finding expression amongst the younger generation of business men, particularly amongst clerks and salesmen. "Fret not thyself because of evil men neither be thou envious at the wicked," and again: "Fret not thyself because of him who prospereth in

his way, who bringeth wicked devices to pass." We need held up to us more than is being done the joy and gladness of duty done without respect to the financial reward. We need to have impressed upon us the fact that "man shall not live by bread alone," and that life "consisteth not in the abundance of the things that a man possesseth." If you are plodding along at the old stand—"fret not." If you are making enough to keep the wolf from the door and are helping to keep the devil out of your own home and that of others "fret not." If you are doing something more for your day and generation than gathering coin and wearing jewellery, "fret not."

When Aeschines was leaving Athens to fulfil his sentence of banishment, the result of the splendid but scathing arraignment of Demosthenes, the latter insisted on his enemy accepting a monetary gift. There is such a thing as magnanimous clemency, and there is the other kind. There are men who pride themselves on never "letting up" on a foe until they have seen him bite the dust. "Rejoice not when thine enemy fall the and let not thine heart be glad when he stumbleth." It is one thing to fight like a hero; it is another to war like an Indian, who, after killing his foe, takes his scalp. Are you a savage who gloats over spilled blood rather than over victorious right? Have you a heart big enough to sympathize with the man on the losing side, even where he has been your determined foe? Every time a man encourages the dog in him he becomes that much less a man. There is that in every one of us which, if given its fling, will bring us to the level of an Eskimo husky.

"In the multitude of counsellors there is safety." There may not always be wisdom but there is certain to be discretion. The salvation of the State as well as an organization lies in the man who says "Go slow." Even if the others do not go as cautiously as he wants them to, they are usually the better for the restraining advice. The "one man" organization is all right, if the right man be at the helm, but even he, to be successful, must realize like Rockefeller, Carnegie and others, the necessity for gathering those about him whose counsel is worth considering. There is not as much of the "one man" success about as people imagine. Of course in a multitude of "moss back" counsellors there may be stagnation, but the wise man is he who knows how to listen well and then go ahead with a few spare ideas besides his own to fall back upon. The man who said the best committee to handle a proposition was that of three with one down with typhoid and the other with a broken leg, was evidently one of those "one man" cranks who believe in doing things "off their own bat." Two heads are better than one, even if one be a wooden head.

One of the scourges of life is the fellow who sneers at everything. He never says or does anything worth while himself, but is always unloading his criticisms with regard to those who are trying to do something. The "seat of the scornful" is usually the seat of the lazy, as well as the wicked. There are two classes of people who find fault: those who are too lazy or stupid to do anything themselves and those with a disposition to envy those who attempt things. It is an easy thing to become a "critic," and the step from decent criticism to mean scolding is not very great. When you catch yourself occupying a back seat weighing the motives and actions of others give yourself a shake. "The scorner is an abomination to men. You will not be long in the back seat until you are cast out by me as good for nothing but throwing dirt on those that are better than you are. Get into the habit of looking at the best side of everything!

Fancy Trimmings and Freak Styles Add to Cost

Not Possible to Make a Leather Shoe of Equal Quality and Style To-day at the Same Price As It Was a Year Ago—Reasons Why the Manufacturer Turns to Fabrics

Why shoes and leather are higher in price and the market conditions as they are to-day is succinctly explained in the following letter received by a well known Canadian shoe traveler, from August H. Vogel of the Pfister & Vogel Leather Co. of Milwaukee. Mr. Vogel says:—

"The manufacturer or merchant who finds it necessary to advance his prices at the present time does so with considerable hesitancy. He realizes that general business for various reasons is none too profitable or satisfactory; that the percentage of unemployed is large, and that throughout the world there has been a great outcry against the high cost of living. Under these conditions it is quite natural that a manufacturer should hesitate to mark up his prices when he fully realizes that even at the old prices business has been slow and that in spite of an increased selling force he has been unable to maintain the volume of his sales. If in spite of these adverse conditions he advances

his prices we can rest assured that he must have good and sufficient reason for so doing.

Buff Hides and Calf Skins

"Let us see how this applies to the leather industry. During January and February, 1911, buff hides ranged from 10c to 10½c, and Chicago city calf skins between 16c and 16½c. This year these same hides and skins are selling at 13¼c and 18½c, or at an advance of approximately 33 per cent. on hides and 15 per cent. on calf skins. Certainly such advances in raw material justify tanners in raising their prices, and in consequence we see chrome calf skins selling on an average of 3c per foot higher, chrome and vegetable tan cowhide leathers about 4c per foot higher, and sole leather 3c per pound more than at the corresponding time last year.

"From some of the interviews which have appeared in the

The foregoing is an illustration of a very bright and striking window, which was recently put in by J. D. McArthur, shoe retailer, of Guelph, Ontario. The framework is covered with pale blue sateen, while the background and sides are formed with Madras. The flooring is of white felt and the shoe stands are draped with green. The display is made all the more effective

by an artistic window card, calling attention to the spring lines, by a liberal distribution of flowers, and the use of neat price tickets. On a ledge just above the background traveling bags and suit cases are effectively shown. They are seen to excellent advantage along with several artistic cards directing notice to the representative lines which this store constantly has

press the public has gained the impression that the increased price of leather was not sufficient to necessitate an advance in the price of shoes. If these statements are true then the tanners of this country have certainly not had their fair share of the profit of the leather and shoe industry. I believe, however, that such interviews are given out for a purpose, that they are misleading and of considerable harm to our industry.

Give People True Facts

"The public should be given the true facts, and if this is honestly done no serious opposition to advances need be feared. *shoe of equal quality and style to-day at the same price as a year ago.* If this fact is firmly established then let us proceed to offer the consumer either the same shoe at an advanced price, or if he insists that at present conditions force him to economize, less style and fineness of leather, but equal durability.

"A large percentage of leather produced is constantly graded down, not because of inferior durability, but on account of slight grain imperfections, affecting only the appearance and not the wear. If there is a real serious need with us to reduce the present high cost of living why should the consumer not be taught the fact that fancy trimmings and freak styles add to the cost of a shoe; that extreme fineness of grain in the upper of shoes or pure white bottoms are not a necessity for service? These are essentials for some of us, but for such as the shoe pinches they are not.

Less Cattle Being Raised

"The public should also understand that the entire industry is dependent on a by-product, and that statistics clearly show that the production of beef, and with that hides do not keep pace with the increase of population. For instance, according to the last United States census of 1910, the total range and farm cattle are 61,225,791 head against 67,719,410 for 1900, a decrease of over 10 per cent., while the population for the same year is 92,174,515 for 1910, and 75,179,940 for 1900, an increase of over 21 per cent. If we consider in connection with these figures the constantly increasing demand for leather outside the shoe and harness industry, we must realize that the present prices cannot be temporary, but are tending upward rather than the reverse.

"We may have temporary depressions in business which will affect leather and shoes like all other commodities, but under normal conditions values must necessarily rule higher if the present ratio of beef production to population continues. The extensive use of fabrics last year already indicates in what direction shoe manufacturers are likely to turn to keep down the cost of shoes and provide substitutes for leather."

Shoemen Who Can Play Ball

The accompanying cuts show the healthy countenance of the boys who sell Classic shoes in London, and those who make the shoes in Galt. The relationship between baseball, Classic shoe-making and selling appears to be a fortunate one when it comes to contending for honors on the diamond.

The following was the standing of the clubs in the Merchants' League of the Forest City for the season of 1911:

	Won	Lost	P.C.
Classic Shoe Clerks.....	13	1	9.28
Butchers	9	5	6.43
Grocers	5	9	3.57
Bakers	3	11	2.73

The players in the Classic shoe nine from London are: Standing from left to right—W. Venton (business manager), C. Read, Frank S. Ashplant (manager), N. Wanless, F. McGilivray, W. Graham (captain), D. Coates (secretary-treasurer).

The champion "Classic Shoe" team of London, 1911

Bottom row—R. Goshaw, J. Pigeon, Ernest Cooper (manager), C. Legg and T. F. Stewart (league president).

In Galt in the Manufacturers' League the position of the contestants at the close of the series was:

	Won	Lost
Getty & Scott	8	2
Goldie & McCullough	6	4
Gardiners	6	4
Canadian Machinery Corporation.....	5	5
Galt Robe Co.	5	5
Canadian Brass Co.	0	10

The Classic shoe clerks and the Getty & Scott nine will soon be organizing for the coming season. Many admirers will hope that as successful a career may attend their efforts as during last year. Here's congratulations on past achievements and best wishes for future honors from the SHOE AND LEATHER JOURNAL.

Does It Pay To Hide Your Light Under a Bushel?

Shoe Manufacturers Discuss Important Matter Regarding Inspection of One Another's Plants—The Man Who Is Willing To Give Generally Gets Something In Return—A Few Experiences

It is not always the small man, be he retailer, wholesaler, or manufacturer, who is narrow-minded, blinded by prejudice or circumscribed by jealousy. Many who consider themselves "big fellows" have lessons to learn, through the open door policy. They regard themselves as leaders in their line, yet they evidently belong to that class who wish to acquire everything and yield nothing.

Several Ontario shoe manufacturers were recently discussing the attitude of members of the trade, one towards the other, when a maker of a certain line of goods spoke up and said:—"When I first started, I called upon one of the proprietors of a leading factory and asked him if I might have the privilege of going through their plant. They knew I was to be a competitor, and instead of adopting a short-sighted narrow view, they gladly welcomed me, and the superintendent escorted me through all branches of the business. He was accompanied by one of the proprietors. During the course of our rounds in the various departments, I enquired of a member of the firm if they always showed as much courtesy and attention to those engaged in a similar line. He said, "Yes, our doors are open to members of the trade. We are not afraid of having any of the workings of this place viewed by anyone, and we believe that in showing strangers through, we get as many pointers as we give.

"There is mutual exchange of ideas and suggestions, and the result can not be anything but beneficial. If a competitor going through our shop, can carry away more information than we can glean from him, he is welcome to any knowledge that he may acquire. We answer all questions (not of a strictly private nature), fully and completely, and as you generally get what you give in this world, the same consideration is extended to us in return."

Give and Take Principle

This is the principle of give and take—the golden rule. A well-known business man, speaking at an important gathering the other day, said:—"The merchant or manufacturer who can not learn from others might as well be dead, for he is dead already." This is one side of the picture of the open door—a broad-minded, wide-gauged view.

Here is an experience of a Canadian manufacturer who went over to Lynn a few years ago. As he was engaged in making children's footwear, he naturally wanted to see what machines and improvement in equipment were in use in that great manufacturing centre of shoes. Not knowing personally the managing director of the plant that he desired to visit, he applied to the United Shoe Machinery Co., and they provided the entre for him to be conducted through the industry. The Canadian, taken in hand by one of the subordinates, was escorted up to the lasting department where some lasters were at work. He was then hustled through a couple of corridors and shown down to the office, without having seen any other operations of the plant. Once in the office, the managing director began to fire queries at him about the cost of material in Ontario; the prices at which he sold shoes; the prospects of a United States firm doing business in this country, and other questions of trade interest. This was certainly a case where one firm wanted to harvest much and sow nothing, or in other words, get all, but part with as little as possible.

One Manufacturer's Experience

Another spoke up and said that two years ago a shoe manufacturer from Switzerland came to Montreal and desired to be conducted through an establishment. An official of the United Shoe Machinery Co. took him over to the office and introduced him to the president, who cordially welcomed and personally made with him the tour of every department of the immense structure. The Swiss was delighted, and before going, expressed his thanks

for such consideration. He invited the Montrealer to call on him, should he be taking a trip across the water, and he would do all in his power to reciprocate. Now, it so happened, the following year that Mr. — had business in Europe, and being in the neighborhood of Switzerland, he went to see the friend who had called upon him the summer before. They chatted informally and the foreigner, not offering to show the Canadian through the plant, the latter naturally suggested that he would like to see some of the methods employed, but the Swiss footwear producer spoke up firmly and said: "You will pardon me, sir, but we never conduct anyone through our establishment. We have never done so. You will understand, of course, that no exception is being made in your case and all requests are treated alike." The manufacturer left for home and on his arrival called up the gentleman who had introduced the Swiss visitor to him some months previously. He was in no amiable frame of mind and declared this was the last time he would allow anyone who came from abroad to go through his factory. He said that on several occasions he had received nothing but a wet blanket for his kindness and he was going to end the thing once for all. From that day to this, no foreign caller or competitor has been allowed to inspect the plant.

The Broad Gauger Gets There

There may be reasons why one manufacturer in any line will not allow another to visit his plant, but such cases are isolated. No man in this world can patent an idea, segregate a thought, or cabin and confine a proposition. He must be willing to learn of others and let others learn of him. The progressive factory of to-day is not run on the principle of a lodge room, guarded by tylers, where only those possessing the password and making the proper sign are admitted within the portals. A factory should not be barricaded like a penitentiary or surrounded with a high fence and iron spiked gates like an asylum for the insane. It would seem that such a day had passed and the manufacturer willing to extend the courtesies of his establishment to members of the trade or even competitors, seeking to hide nothing, is the one who is making the greatest progress and leading all others in the race to higher achievements, increased products, bigger ideals and wider markets.

Quote Prices By All Means

There have recently appeared in the SHOE AND LEATHER interviews with a number of leading retailers, stating that the announcements of manufacturers on the advertising pages are full of interest and instruction, but that they lack the one essential feature of price. There is scarcely a dealer who to-day in dressing his windows, does not use neat price tickets with good effect. It has been demonstrated that they have great drawing power and awaken the attention and interest of the passers-by to such an extent that they enter the store, make enquiries and thus sales are secured. In the same way it may be said that greater concern might be aroused in many lines of publicity, particularly with shoe manufacturers, if prices were given. In trade publications across the border, it is the rule rather than the exception, for advertisers to mention prices, and Canadian factories will, sooner or later, come to the same broad idea. A shoe man may be very interested in a line, the last, style or pattern. He gets all the information about the new product except the one most vital to him, and that is the price. He may not take time to sit down and write a letter, but if the prices were mentioned, his desire would be stimulated in many instances to such an extent that he would send in an order. It is the manufacturer to-day who quotes prices on his product or in other words, gets down to "brass tacks," that reaps the widest measure of benefit from his paid announcements.

Some Timely Observations for Alert Retailers

Plain Figures Carry Conviction

"Yes, sir, I like to sell a shoe that has the price stamped on the soles as well as having the registered or branded name there. I prefer disposing of trade marked goods to any other kind. I tell you I find that footwear which bears the price on the bottom has the advantage in the matter of commanding the confidence and admiration of buyers. They know that a retailer then charges one price to all, that everybody is treated alike, and they have faith in the value that they are receiving. It instills respect in the quality and make of the line, and if the goods do not come up to representation, purchasers have recourse in getting satisfaction from the manufacturer. Plain figures on all boots and only one price—never varying a cent for anyone—has had to do very much with my success in the shoe trade," declared a St. Thomas retailer when speaking of a feature of his business the other day which aided him so materially on the high road to trade.

An Attractive Store Front Pays

"It pays every time to have an attractive store front. I induced my landlord to install that exterior which you so much admire. He said that he would do it if I gave him ten dollars a month more rent for the place," remarked a London shoeman the other day. "I hesitated a long time, and finally I told him to go ahead and we renewed the lease on that basis. Well sir, after the change was wrought, business began to pick up, and I have never had cause to regret my increased expenditure. It has yielded me a handsome return, and I would advise all retailers to present a neat appearance so far as their shop will allow, be it ever so small. It should be looked upon as an investment. Windows are the great and efficient means of drawing public attention to your goods. See that you use the space wisely and well. I change my trim at least once a week, and make it a practice to do so, very much on the same principle that it has been a habit of my life to shave every morning before I come to work. It is so customary now that I do not mind the task at all, and would as soon think of leaving off my collar and tie as to present an appearance down town without my face being neat and clean. These personal remarks, which may seem trite and commonplace, are equally as important in a business sense in the matter of window adornment."

The Experience of One Manufacturer

"There is a certain shoe dealer in Eastern Ontario who thought that he could control our line exclusively, and many others at the same time," observed a leading manufacturer the other day. "Our traveler called upon him for a season placing order. He gave him all manner of excuses, saying that he was not prepared to buy just then, that he would have to consider a number of matters, and that he would see him again. Once more the traveler went around, and the same story was forthcoming. We found out by inquiry, that the retailer was seeking to control not only our goods, but that of several other factories as well.

"We stood this for one year, and when our representative called back next season, he was told by the retailer that he was not giving up our line, and that he intended to place his order later on, but that he could not do so at the present time for various reasons. The traveler informed him plainly that if he did not do something, right off, he would give the line to another man as the shoes had to be represented in that town. Then the retailer became huffed, and told the salesman that he would like to see him undertake to

carry out his threat, and that he would soon put the kibosh on any contemplated move of that character. He would write the house and tell them just what threats the traveler had made. In the afternoon, our man returned, and was given several plausible pretexts for delay, none of which appealed to him as valid. So our man went over to another store and explained matters. On promising to give the competitor exclusive control, he secured a fifteen hundred dollar placing order. Then he informed the other fellow of what he had done. How he fumed and fussed, and went up in the air completely. He wrote warmly into the house, but he got mighty little satisfaction from me. We informed him that he had been trying to 'hog' everything, and do justice to no particular line. We replied that we had grown tired of his subterfuges and dilly dallying. There the matter ended.

"Why, that retailer was a caution. We sent him some road signs, 'Wear — shoes, sold by —.' What do you think he did when he received them? He pitched them all into the cellar and used the material for kindling the furnace. He remarked to one of his clerks that he was not a fool to put up a sign benefiting the company. He was not working in their interest, for he overlooked the fact that his name appeared on all these signs, and that he would reap as much publicity and benefit from them as we would. He was extremely short sighted. I hope that we taught him a useful and salutary lesson."

Do Jobbers Fail to Protect Retailers?

"Fair Play" writes the SHOE AND LEATHER JOURNAL as follows:—

"As you invite your readers to assist your journal in matters pertaining to the welfare of the retail trade, kindly grant me a few lines to air my views and experience on a matter of great interest to the trade.

"Have you ever stopped to consider the injustice that is being practised on you by those who should protect the trade, namely, the wholesale houses, who are making their money through the retailer, or, rather, a part of it. Now, sir, do you think it is a square deal for a wholesale house to sell to the public and to you at the same price? You go to the jobber and you buy from one to sixty-pair lots, pay the price, less two per cent. ten days, and you are ready to leave the house in half an hour. But stop. Before you depart, go back in the warehouse. There you will find a nice little apartment for the purpose of fitting the public. Perhaps your next-door neighbor, who pays just the same price as you, Mr. Retailer, is there. No, he does not get the two per cent off. Is that fair?

Now the travelers in many cases are as much to blame as the heads of the house. Travelers and men in the warerooms who live in your district, invite their next-door neighbor to come to the warehouse when they want their next pair of shoes, and they "will get them at cost for them." Now, of course, Mrs. T— goes, and who can blame her? But the next time she goes she takes her friends, and so on until it is an endless chain. Now, there are many thousands of dollars' worth of boots, shoes and rubbers sold by the wholesale houses to the public at large, the profits of which, you, Mr. Retailer, should have.

Did you ever have a would-be customer come into your store and say that they could get that shoe at the wholesale house, and name the price which you paid for it? Yes, that is common. Now, if you say anything to Mr. Wholesaler about the matter, he will say he knows it is not fair, but he does very little of it. Well, he does all that comes his way. Now Shoe Dealers, let us hear from you through this valuable journal."

Planning Spring Publicity To Catch The Trade

Showing the Value of Seasonable, Catchy Illustrations, Even Though These Be Only Eye Catchers—Harmony Between Copy, Illustrations and Occasions Essential—Concrete Examples

Every progressive shoe retailer in Canada is now planning his spring advertising campaign. Of the several factors he will have to consider in this connection, none are more important than illustrations, and the relation they bear to copy.

Two Classes of Illustrations

Roughly speaking, illustrations may be divided into two classes: first, those faithfully depicting the goods advertised; second, *eye-catchers*, or illustrative effects supplied merely to give a unique appearance to the advertising, or to catch the eye. If such eye-catchers are used regularly, they serve as identification marks, enabling the ad. to be quickly picked out from surrounding matter by the searcher. Of course, it goes without saying, that such illustrative effects are not so valuable as those depicting an article itself, or that article in use; yet they have peculiar functions of their own.

One of the appropriate occasions for their use is in connection with copy setting forth special merchandizing efforts or seasonable openings. When so used, care must be taken to see that they harmonize with the spirit of the occasion and with the copy used. This is important, and is a point which is often overlooked by retailers.

Some Concrete Examples

In the illustrated ads. shown herewith, can be seen examples of the manner in which illustration, occasion and copy harmon-

Are You Shod for Spring, Madam?

- ¶ Your shoes are every whit as important as your hat.
- ¶ We can sell you footgear that will add distinction to your spring apparel.
- ¶ Our spring opening is now on. You are invited to attend.

John Burrows

8 Carlisle St.

No. 1

ize. In No. 1 is seen a very catchy illustration for a spring opening ad. Note the trellis work, the flowers and the lady in new spring finery, and note again how the copy turns it all to advantage by compiling footgear with headgear. As it is merely an introductory announcement, no prices or descriptions are given. This ad. is an example of complete harmony in the three important essentials above mentioned.

In ad. No. 2 the illustration is very appropriate for an ad. used in the latter part of April or the early part of May, when nature is just beginning to awaken from winter's slumber. It is also merely introductory in form, though a range of prices is mentioned. Note the touch of daintiness about the whole

ad. that is especially appealing to a woman.

In ad. No. 3 the harmony of the copy with the illustration is very noticeable. Without this headline the cut would be a very ordinary eye-catcher, even though well-executed, but combined with the heading and enforced by the ensuing copy, the whole ad. takes on a forceful tone, and is a good selling argument. Another heading might be, "Has He Bought You Your Spring Footgear Yet?"

Enough has been said to show the value of seasonable and catchy illustrations in drawing customers and brightening up selling talks. Such illustrations the SHOE AND LEATHER JOURNAL'S art department is ready to supply at a nominal rate. Further information will be freely given on request, and all orders will receive very prompt attention.

Reader Must Take Action

In speaking of "Copy That Pulls," a leading authority says: "It is a psychological fact that the mind is in a neutral state when it first takes notice of an advertisement. Unless there is some interest-compelling feature, such as a well-planned appeal to some human sentiment (a sort of hook, as it were), the reader's attention slips off and gets away. It is this fact that leads many superficially versed in advertising to think the public mind will not "stay lit" in one spot. It is not the fault of the public mind, but of the subject advertised or the way it is presented. Even if, by a good head-

No. 2.

ing, the interest is aroused, that interest or curiosity must be satisfied by information, or it is aroused in vain. Securing interest avails nothing unless the reader is led on to form some

positive opinion, or take some definite action. It naturally follows that if no action is proposed, and no argument or persuasion is given leading to such action, the advertisement may be said to have failed.

The success of an advertisement must be tested by this rule: Does it conduct the reader's mind through a series of thoughts which arouse confidence in, and desire for, the article advertised? If such advertisement accomplishes this, it is only a matter of persistence until the advertiser secures the order.

It is pathetic to see a strong-minded advertiser sometimes tear to pieces good copy his advertising man has prepared, in order to embody some idea of his own. Such copy generally fails to "pull," and the advertising man gets the blame. Physicians tell their patients that if they will not take the medicine as prescribed, no cure can be promised. No manufacturer or merchant can expect 100 per cent. results when he takes 75 per cent. of the efficiency out of the advertising by upsetting the copy. If the advertising man does not know his business, get another one; if he does know his business, let him prove it.

Efficiency in copy writing is the result of special training in the school of theory, experience and practical work. It is a distinct profession in itself, and no man who is making a success of a factory, or a commercial enterprise, has time to master an entirely new art and science, requiring him to change the attitude of his mind toward his own business. This is a "transmogrification" of identity, neither possible nor desirable. It is like "unscrambling an egg."

Anyhow, leave the advertising to the advertising man, just as you would leave the buzz-saw to the sawyer; don't monkey with it.

The non-advertiser who sits around "waiting for something to turn up" usually finds it's the toes of his business when it goes to the graveyard of dead failures.

If you think, "My business is different and doesn't need to be advertised," you think only what many others have thought whose first big day's business followed the advertising done by the sheriff.

Since Our New Spring Styles Came In, He's On the Jump!

We can safely say that never before have our spring styles in footwear "caught on" with the public as has been the case this year.

We have a splendid line of tan and gun metals in men's and women's shoes, both buttons and bluchers.

Patent pumps for women are all the rage. We have just your size in stock. Try us. Prices from \$2.50 to \$6.

Much Depends on the "Attack"

Much advice is continually being given to shoe salespeople regarding their calling. They are admonished that if they would be successful they must wear good clothes, look pleasant, know their stock and the goods they are selling, have tact, fine manners, patience, knowledge of human nature, in fact, possess attributes of a sort to bring them success in any calling.

One thing that seems to have escaped most writers on this pregnant subject is showing goods. It is well enough to have clean finger nails and polished shoes. Those are a matter of course. So are good humor and a smiling face. Back of such essential things there is much in the way shoes are shown. The persuasive effect of goods shown right is greater than patience, greater than tact, greater even than a knowledge of the boots.

In the science of selling this might be given the technical name "attack." It is how a salesman attacks the prospective buyer that counts. Very often the salesman feels almost certain on accosting a customer that he will make a sale, or he feels instinctively that he will not. There is something in the "attack" that settles it. As an instance of a right method of attack there is the producing of a certain shoe by a salesman immediately it is asked for.

A wrong method is in asking too many questions. Of course,

some callers like to be queried, but the average one does not. A good salesman will allow a customer a chance to volunteer as much information as possible. He should draw him out without making it evident that he is trying to find out anything.

An incorrect method of "attack" is the asking of price. This is bad for several reasons. A man doesn't always know just what he is willing to pay. Let the salesman put himself in the customer's place. Do you always know when you go to buy a pair of shoes that you will pay \$5.00 and no more? Are you sure that you would not pay a little less or even more if you saw something that satisfied you? The customer should do the talking about price. The salesman should talk quality and the merits of his goods.

Salesmanship comprehends not only the handling of a customer, but paving the way to sales, and after the way is paved, keeping it in good condition for more traffic. Elbert Hubbard, in his lecture on the "Spirit of the Times" says: "The law is not the law." This sounds paradoxical, but it's true.

Equally true and equally paradoxical is it that a sale does not end with a sale. Ask any old hand at the business. A sale properly made has ensured another sale—and another. And as salesmanship comprehends more than the mere act of making a sale, so does "attack" comprehend more than merely greeting a customer and learning his footwear wants.

How Ambitious Shoemen Would Start

(Continued from page 43)

shoe store? By buying only what my cash will pay for, and getting the discount, also buying from manufacturers who keep stock in standard lines to assort from, so that I would not need to stock heavy in any line, and renew from time to time, as demand requires, and cash comes in. Careful buying means success. If I was to start in the spring I would buy only spring and summer goods to start with and heavy fall and winter lines later with my summer receipts. To equip my store with the necessary fixtures, such as silent salesmen, showcase, counter, chairs, footstools, floor mats, window fixtures, desk, and wrapping paper, I would limit the amount to the sum of \$150.

I would expend the sum of \$100 on shoe dressings, and findings, such as laces, insoles, slipper soles, and small articles suitable to the trade.

For stock in rubber goods I would buy only first quality in light goods for men, women and children, about:

Five cases for men	\$100.00
Five cases for women	75.00
For boys, misses and children	75.00
	\$250.00

This would give an assortment to start with, and more can be ordered later.

In buying men's lines I would expend \$500 in fine lines of patent kid and calf in Goodyear welt, and a few McKay sewed lines, with three or four dozen of men's slippers in kid.

In men's heavy goods (nailed only), made in kip, grain and split, laced, \$300.

In boys' lines in box calf and kip, S. screw, \$200.

In women's lines I would buy most all lines, in blucher, bal-moral, oxford and slippers, in the best qualities of McKay sewed, as they are made to-day, with as much style and finish as the Goodyear lines, and will sell in most places, but one must have a few Goodyear, also:—

For women's lines	\$750.00
For misses' and children's	250.00

Now I have come to the end of my cash spent for goods, and if the amount bought did not fill my shelves, I would fill the remaining space with empty cartons and remove them as my stock increases.

If I should want to buy more than my capital would permit, I would borrow the money from a friend and pay interest, as I would save in the discount more than the interest.

As to advertising my business, I would make a yearly contract with the best local paper for a stated sum, paid monthly, not to exceed the sum of \$50 per annum, and the right to change my advertisement as often as required.

Convert Your Goods Into Cash

By Arthur L. Wilson, 73 King Street East, Toronto.

My first thought in investing \$2,500 in a shoe business would be dating. Usually not enough attention is given to that. I would see that my goods came in when the season is on (not two months before, and have them fall due just before or when you are selling them). That gives you a chance to convert your goods into cash before payment is demanded. Then my discounts—it is through taking your discounts that your profits increase. I would certainly want all, should it be possible. I would buy from as few makers as possible, for different reasons—to confine my business, as by doing so, it would be much easier, should I desire to get any accommodation, to have few different cartons on my shelves, and then the chances of odd pairs accumulating is practically nil. I would watch my lines so as not to allow them to lay over another season. I would much prefer to sacrifice and get my money out of them than to

stock them, and then not be able to buy cleaner goods or more advanced styles on account of shoes lying there. Again, when your stock is clean and small you are always in a position to buy should an opportunity come.

I would conduct my business on a one-price, no-approval, no-cut, all-cash idea, and give value every time. Should there be a wholesaler in your city—if not, select the best and the one closest, so as to lower the freight charges—you can get one or fifty pairs when wanted, and can arrange your payments with that firm so as to take your discounts and yet have an opportunity to get rid of your goods before you pay for them. There are very few houses who would not help in some way.

I would pick on one line of both ladies' and men's as a leader, and would leave freaks alone. Let the man with more capital carry them. Where you would sell one pair, you would have two pairs to carry over or sacrifice. Do not be discouraged if some sales are missed. A store two blocks long would have to say, "Sorry, but we are just out of that line," so varied are the requirements of the shoe trade, especially with ladies' footwear.

\$2,500, after paying for your fixtures and fittings, ought to get you about \$6,500 in stock, \$500 ought to pay for fittings, etc., and arrange for accommodation to the extent of \$3,00, which is obtainable. I would divide my capital equally between men's and ladies', including boys', youths', little gents', misses' and children's. I would trust to my wholesaler for most of my goods, and would make my arrangements with him as to payments, etc. I would in a sense tie up to that wholesaler (at the same time keeping a safe distance), believing that by close attention to business and with the stock such as he has to draw on, I would shortly be in a position to buy from whom I liked.

As for advertising, I believe in the use of printer's ink, and would contract for a small space, say the width of one column two inches deep, in the same place in paper each time, using it every second night, changing the advertisement each insertion I would use it to keep my name before the public, and to announce any special feature. I would pay a great deal of attention to my window, believing it to be my best advertisement. In findings, I would look for a large margin, and would use \$50 at the start. Findings mean laces, insoles, polishes, arch supports, etc.

With that small capital I would have to be content with the middle and working class of trade, and so would give more attention to such goods. On my rubber account in season I would expect a turnover of about \$800, and so could not estimate what amount would be sufficient to put in.

I do not believe with such a limited capital I could decide what I would invest in each line, for I think a person would have to feel his way, purchase what he needs when he needs it, and in quantities best suited to his requirements. I would want the most central site I could get on my allowance of \$100 per month, and believe with a \$6,000 stock and close attention to business that I could have a turnover of around \$18,000.

I believe, or better still, know, any young man with a favorable reputation, a knowledge of shoes, situated in a place where he is known, can command from a bank a further amount over his \$2,000, of \$1,000, without anything standing against his store, but the usual rate of interest. Of course, as his business went on, should it not warrant such a confidence, then this amount would be immediately withdrawn.

JUST ONE OF MANY RECEIVED

Allow us to compliment you on the bright and interesting paper that you are turning out. It is progressive, and filled with many helpful hints. We certainly think issuing twice a month is a great improvement.

Sincerely yours,

D. McCRAW & SON.

Button Boots Have Big Call In All Large Centres

The Popularity of Tans Was Never More Pronounced Than This Season—Orders for Fall Goods Are Coming Very Well, but Remainder of April Will See a Decidedly Brisker Business—Some New Offerings

The period for selling fall and winter shoes is advancing, and practically one end of Canada to the other is being covered by representatives of the leading manufacturing firms and wholesale houses. The season is opening up fairly well, but has been a little backward on account of the late spring. However, now Easter holidays are over, it is expected that bookings will be more numerous and prompt than they have been.

The outlook on the whole is encouraging, and manufacturers who have been interviewed state that indications point to a very busy summer. However, the fall runs of the factories

An Autumn offering by W. B. Hamilton Shoe Co.

have not yet begun in earnest. Some have finished taking stock and others are overhauling their plant preparatory to resuming activity on a very large scale. That the shoe business generally is in good condition from the manufacturers' side is evidenced from the fact that a large number are installing new machines, while others are extending their premises, and preparing to make new lines. Canadians are beginning to show more and more appreciation of the splendid home products in the footwear line, and with a little more mutual effort and appreciation, as well as co-operation of interest, the Dominion will soon play an important part on the shoe map of the world.

In connection with fall styles, there is not much to be added to what has been presented in these columns during the past six weeks. Tans will likely be a strong favorite for cold weather wear, and very few freaks or trappy shoes have so far been sold. The over-gaiter boot has met with a rather cold reception, and the "Rocker" has not been very kindly received. Sane, conservative, sensible types are being looked, and it is expected that the tendency toward lower heels and wider tread will meet with increasing favor. Buttons for both men and women are increasingly popular.

Spring Lines for Men

The Tetrault Shoe Mfg. Co., of Montreal, are displaying for fall several nifty lines in velours, gunmetal and tans. Buttons are a strong feature of the exhibit, and among them is seen the new overgaiter shoe for men. These are made on the high toe last, with grey cloth, melton and other fabrics, and come in a variety of leathers. Most of the button boots have seven

buttons. Two of the busiest lasts are the "Flirt" and the "Rattler." Some fine Goodyear lines for boys are presented. One shoe attracting considerable attention is an all patent, with fancy yellow stitching, with brown hooks and eyelets. This has a slip sole with attractive welted edge in red and black. The principal showings are in high toes, but broad and medium effects are also seen. In tans there is a representative and smart display in tan Russia, storm calf and Madero calf. The latter can be easily cleaned and kept as fresh and nice as when taken out of the store. A glazed storm calf button with viscolized sole and another of the same style, lined with genuine English calf, double sole, are proving very good sellers. In women's, several specimens of the overgaiter family are seen with the stage toe and tops of Roman silk and other fabrics. There are also showings in white nubuck and an excellent collection of buttons and bluchers. The range for fall is one of the strongest and most compact turned out by the company.

Buttons Are to the Front

The Adams Shoe Co., Toronto, are making for fall many tans and patents for misses, children and little gents. They report that buttons are in strong demand. A very attractive line

One of the strong Fall lines of the Ahrens factory

in practically all leathers, except gun metal, is being shown, and many of them have patent collars, low heels, and are in nature shapes. The demand for tans is active. A number of white nubuck button shoes have recently been turned out for the summer trade. The company report that business is particularly brisk at the present time.

Chas. A. Ahrens & Co., of Berlin, report having put in a new boys' last in their everyday line. It is a neatly fitting shoe, and one that will wear comfortably and give satisfaction. A new children's last gives further interest to their range for fall, which comprises all their usual solid leather staples.

The J. W. Hewetson Co., Toronto, are making a fine range in box calf and gun metal for little gents and youths on nature shaped lasts. In children's a number of patents are being shown in blucher and button. Buttons are strong in nearly all lines.

and in some styles fully 75 per cent. are button. The output of the factory is about 2,500 pairs per week. A fine range of shoes for growing girls in tan calf and velours, which line was undertaken some time ago, is meeting with ready acceptance from the trade.

The Solid Leather Shoe Co., of Preston, are progressing. They have put in four new lasts for fall. They are getting out several new lines and showing this year for the first time women's medium high toe shoes in tan, gunmetal and vicí kid. A line that they expect to go well are in sizes from 2½ to 5, and are presented in box calf, velours, gun metal calf and vicí kid. The firm are also making a boys' school boot of kangaroo grain and box calf, in medium-priced goods, all solid leather, McKay sewn. The samples are very attractive this season.

The London Shoe Company, at London, Ontario, have issued a very handsome and artistic catalogue, which will prove a very useful textbook to the shoe trade. The issue is replete with shoe illustrations, leading styles and timely information. The contents are compact and convenient and are printed on heavy coated paper in several colors. At the front appears a splendid

picture of the company's warehouse and also a group portrait of the head of the concern, Mr. Philip Pocock, and his staff of salesmen and associates.

The Dominion Shoe and Slipper Co., of Berlin, which concern recently started in the manufacturing line, report business as brisk. One order recently received was for 1,800 pairs. The company are featuring a green printed slipper with a high heel, which they expect will prove a good seller. Many other catchy productions are being presented.

The Galt Shoe Co., of Galt, has been making great progress since beginning operations. They are specializing in misses' and children's shoes. They are featuring high toes. They are showing some nice 13-button, in from 2 to 5, and some classy creations in sizes 8 to 10.

The McKellar Shoe Co., of Berlin, is going strong on a line of high cuts in oil tan, grained and American elk. The company have five new lasts in a range of solid leather staples in McKay, peg and standard screw. This is unusual, and makes their samples look right up to the moment. In toes, the new lasts are high, medium and round.

One of the handsomest Easter windows seen in Toronto in a long time was that which adorned the Regal Shoe Store. The light, airy effect was particularly noticeable. The pillars and cross beams at the side and rear were covered with white felt. At the side were several Japanese wall vases with block designs in graduated squares of gold satin. The Japanese floor boxes were made of the same material, and from all the vases and boxes in both the men's and women's windows were sprays of

mauve and white sweet peas. In the higher portions was a panel effect, the background being of white, with tubular strips of green. The show cards and tickets were very dainty, being in the brush design of an Easter egg. In the men's side were displayed a fine range of tan, gun metal and patent shoes for spring on all the latest lasts, while in the women's there was a pleasing picture of both low and high cuts, including a number of nubuck shoes. The window was trimmed by W. E. Smith.

Securing a Stronger Grasp on the Family Trade

How the Average Shoeman May Handle Traveling Requisites to Decided Advantage — Tourist Traffic Constantly on the Increase—The Growing Popularity of Fitted Bags and Steamer Trunks

The retail shoeman who does not put in a stock of suit cases and trunks is losing an opportunity of adding to his profits and increasing his business. He need not lock up a great deal of cash in the initial outlay, but a few representative lines should be carried.

The passenger returns of railway, steamboats, and all transportation companies show that as the various seasons go by, more and more persons are traveling. This means, of course, the purchase of additional requisites and the summer holiday and short vacation trips are now such institutions that they have become a feature in the life of nearly every toiler. In fact, the person who does not is a scarcity to-day.

The shoeman, if he only realizes it, has many advantages over the ordinary harness man or general store keeper, to capture the traveling goods trade. So many people are leaving for the West these days that he should be able to equip them with suit cases and trunks of all kinds. If he does not attend to this he is neglecting a very promising avenue of trade. He can lay in a very good line of suit cases which come in oilcloth and keratol, from 75c to \$4 each. The oilcloths come mostly in brown of various shades, while the keratol in natural and pebble grains, and the embossed sea lion, seal, goatskin, grain cowhide, and other imitation leather are frequently disposed of. One feature perhaps not much appreciated is that sometimes two or three of these cases may be sold to various members of the family. The profit on them is good, and sales made all the year round.

Talking with a leading manufacturer of traveling equipments the other day, the *SHOE AND LEATHER JOURNAL* was informed that nowadays there was no call for the telescope, the valise or the Gladstone bag. In the higher grade of goods, the club or Oxford bag is displacing suit cases. It had one advantage in traveling that articles could be secured from it without exposing all the contents to view, and generally the various things which one takes on a trip are pretty much in the same position in which they were placed originally, whereas, in the suit case, the effects are apt to become a case of "confusion worse confounded."

Very Appropriate for Gifts

Suit cases with appropriate fittings, and club bags neatly equipped with all traveling conveniences are paying lines for the dealer to handle during these months of the year, as they make excellent wedding presents, and are frequently given as prizes at regattas and athletic tournaments.

The live retailer will see that he stocks in connection with his stock of suit cases a few fibre and Japanese matting cases, which are particularly light and airy for summer use, and are carried by the very best class of people. The better grades in woven cane are as durable as any solid leather cases, and are sold to the trade at about \$4. The live retailer should be in a position to satisfy nearly everyone desirous of securing a fitted club bag or suit case by keeping a few separate fittings which are adjustable to any one. Of course, these fittings come in a variety of styles and prices, and depend upon the number of articles in each set. There are glass vessels with nickel and sterling silver mountings. There are brushes of imitation and

real ebony, articles in ivory and imitation ivory, etc., so that any person or purse may be satisfied.

The steamer trunk or short-trip trunk, as it sometimes is called, is daily coming into more popular favor. It is never more than 13 inches deep, and about 38 to 40 inches in length. It can be easily shoved under a berth, and enables a traveler taking a two or three weeks' tour to have everything desired within easy range. The wardrobe trunk, which has been featured in these columns several times, is, of course, not possessed by many people as yet, but the demand is setting in, and it would be well for the shoeman to have at least one or two of these trunks to show what is absolutely up-to-date in the matter of equipment and to demonstrate that he carries a representative stock. One or two of these will be sufficient, as the demand is as yet limited.

Durability of Modern Trunks

The old solid leather trunk is disappearing, and is rarely seen to-day. More modern productions with vulcanized fibre binding and canvas covering will outwear several times the leather trunk of bygone days.

Another thing that might be mentioned is that the double handles which have been seen on club bags for some time are disappearing, and the single handle will once more prevail. As already pointed out, in the superior class of goods, the club bag or Oxford bag is replacing the suit case, and the fitted outfits are being looked upon more and more as a necessity rather than a luxury. The fittings are easily detachable should one not require the articles. It has been demonstrated that the matter of club bags those that readily sell from \$8 up are in better demand and give the purchaser more satisfaction than the cheaper lines. The retailer should have no difficulty in impressing upon his customers that it pays to buy a good article, that the purchase of sojourning paraphernalia is not a matter of everyday occurrence, and tourists are often judged by the character of their luggage. Of course, this must be done tactfully. The profit on the better grade of goods is larger, and generally this class of trade yields the retailer more permanently satisfactory results.

Makes the Line Pay Well

"I believe that the shoeman should be able to secure all this trade," said a Stratford dealer the other day, "usually he can display a few representative lines somewhere in his store and the remainder of the stock should be within easy reach. Why should he let this class of trade go to outsiders? The shoe store is generally clean, bright and attractive. The merchant gets his customer sitting down, and thus has an advantage over other persons who carry these goods. In a comfortable position, seated in one of my easy chairs here, a woman or man can take plenty of time in viewing these goods, and feel in no way hurried or driven to take something that he or she does not want. I have handled traveling goods for eleven years now, and have found them one of the strongest assets and most active branches of my business. I know indirectly it has brought me family trade that I would not otherwise have secured. As leather goods are being given more and more for wedding and other presents I feel that the opportunities that lie before the average shoe merchant to capture a connection which legitimately belongs to him are more promising than they have ever been since I started out on my own hook. I make strong window displays during the vacation season, and call attention in my advertisements to the various articles that help to make traveling so comfortable and delightful to-day."

A Few Practical Pointers For the Retail Shoe Man

Stunts That Have Been Found Profitable—They Can Be Modified to Suit the Circumstances of Your Own Locality—Plans That Make For Greater Efficiency and Augmented Sales in the Boot Business

Changing Electric Sign Pulls

Montreal.—A local shoeman's ad. is included in the many different advertising slogans that appear, turn about, on a huge changing electric sign on the roof of a St. Catherine Street store. This sign instantly attracts the attention, and frequently people remain standing for five minutes or more to watch one slogan after another, advertising various firms, flash out its message. The merchant in question believes this ad. one of the best investments he has ever made, judging both by direct returns and the sure indirect results. On a smaller scale, such an idea might easily be tried out in any town.

Keeping Tab Daily

Vancouver.—"I used to have a great deal of difficulty in keeping tab on my stock in hand with any degree of accuracy," said a retail shoest here recently. "Records were imperfectly kept, and I was continually finding shortage on lines urgently needed. To remedy this, I installed a system whereby full particulars of goods sold had to be entered upon cash slip ere the cashier would accept same. The next day, after the cashier had entered all particulars from cash slips one certain clerk appointed for this purpose, entered daily details of all sales in the proper place in the stock book. Now I know just where I stand each week, as this work is always up-to-date, and I can buy intelligently at a moment's notice." What's the matter with more retailers adopting this idea?

No Cartons Lying Around Here

Toronto.—A Yonge Street store had adopted a very effective plan to ensure cartons remaining in the proper places instead of being scattered in endless confusion over ledges and floor, as is so often the case on busy days in many stores. Special roomy cartons were made, all of uniform color, with what might be called a hinged lid—the front part of the lid lifting up, thus allowing shoes to be taken out and the carton slipped back into place. Consequently there is never any confusion, and on the busiest days, the proprietor or his assistants can at once place their hands on any boot wanted. A uniformly and constantly clean store is worth the extra initial cost, the customers are handled more quickly.

Cashier Saves Time

Winnipeg.—One shoeman here found that his clerks constantly wasted time by going to and from the cash register in the rear part of the store to make change,

frequently causing waiting customers to become impatient. To avoid this, he installed a cashier in an overhead office at the rear, and a small carrier system by which all parcels and the cash slip and money could be forwarded to her desk. She tied up the parcel, made the change and returned it, during which time the clerk concerned was able to attend to another customer. On busy days a boy ties the parcels and saves the cashier's time. This system is a great success, and has more than repaid the first cost of installation.

Simplified Buying

Brantford.—"Buying right is over half the battle," says a local shoe retailer. "But you can't buy right unless you know to a dot exactly what you need, both in sizes and styles. And sometimes you need this information in a hurry. In consequence of a plan I put into force some time since, I can now do this. I keep four stock books: two for women's styles and two for men's; these are gone through, and posted from the sales slips daily; hence when I go on a buying trip I can slip these four books into my pocket—they are of medium size—and do my buying right from them without wasting time making out memorandums. It's a big improvement on the old guesswork way."

No Cut Price Sales For Him

Quebec.—"I am surrounded here by cut-price rubber signs," said an Ancient City shoe man. "But not for me. I intend to stick firmly by my regular prices of \$1.10 for men's A1 rubbers and 75 cents for women's good rubber footgear. I get my share of the trade, too. I explain that while I charge higher prices, I sell only the best quality at those prices. Of course I keep cheaper grades—at cheaper prices; a fact I am careful to explain. Misrepresentation never made a permanent customer. Once bitten, twice shy. And I don't hold any January shoe sale for the same reason. Better sell one pair of shoes at a profit than ten at a loss. I have my eye on net results." Here's the right kind of talk.

He Fosters The Sporting Idea

Calgary.—A local shoe dealer makes a dead set on the pockets of the young folks of sporting proclivities in this town by reasonable window displays and illustrated advertising matter. One of his windows usually contains a display of some seasonable sporting article. Recently it was snowshoes, hockey sticks, pucks, skates and shoes. And he has salesmen who know

how to sell these things, too. Consequently he has "corralled" a large share of this class of trade in his neighborhood, as well as much transient business. And it proves a feeder for his regular departments as well.

He Makes Money on Trunks

London.—One shoe man here handles trunks and leather goods rather extensively. He does this by reserving a reasonable space for them, where they will be seen, and pushing them at all seasons. He frequently sells a traveling bag to a man along with a pair of shoes, by dint of asking a few tactful questions, and adroit salesmanship. And in his advertising and window trims he gives these articles fair play. Just now in the slack season he is busy trying to clean out old stock by offering reduced prices, something he will not do in his shoe department, but trunks take up much room in dull seasons.

A Remodeled Store Front

Hamilton.—Recently a well-known merchant who had only a narrow store front age made up his mind to turn it to advantage. He ripped the old front completely out of the store, and instead of the old-fashioned window with the store entrance at the side, he had constructed a narrow deep middle entrance with a triangular-shaped window space on each side the bases of the triangles being next the door. This gave him over twice the display space, and everyone could get very close to the goods on display to look them over—a vast improvement. It did not disarrange his interior plans very much—and the renovated front has made his display look better, and brought him much increased business.

Feet Doctored as Well

Toronto.—The Owl Shoe Store here has a unique method of winning and holding custom. A skilled chiropodist, located on the second floor, is constantly on hand to treat any person suffering from major or minor foot ailments or discomforts. In spare time this specialist assists salesmen and thus frequently is his own business getter. As an example of how this works out, recently a lady customer, learning that such a specialist was on the premises, sent her son, who had long suffered from foot trouble, to the store for treatment. He was given relief, and soon cured. Needless to say, he and his family are solid boosters for the firm that has done so much for him.

Some Things That Are Heard In the Shoe Trade

What Is Going On Among the Retailers, Travelers, Wholesalers and Other Interests—Personal Paragraphs of Interest—Business In All Lines Is Most Promising—The News In Short Shape

L. Foster has opened a new boot and shoe store in Medicine Hat, Alta.

Z. Moize, shoe merchant, Montreal, has made an assignment.

C. H. Le Saunier has started a boot and shoe business at Sylvan Lake.

E. B. Weiss, shoe retailer, of Napanee, was calling on the Toronto trade this week.

The stock of J. Tebbutt, shoe retailer, Montreal, was recently damaged by fire.

Harry Wannamaker, of Wannamaker & Son, Brighton, Ont., was in Toronto calling on the trade last week.

George Chambers, head salesman in the Regal Shoe Store, Toronto, has returned from a trip to Boston.

Akl. Holmes, of Galt, has embarked on the shoe repair business, having opened a shop in the Buchanan Block.

Grant Fraser, late of Antigonish, N.S., where he conducted a shoe store, has gone to Saskatoon, where he will locate.

M. Walsh has opened a boot and shoe establishment in Gananoque. His premises have been neatly fitted up.

W. H. Miner, of Miner Rubber Company, Granby, Que., has returned from a business trip to Winnipeg.

Thomas Wise, late of Cumberland, Eng., has bought the shoe repairing business of C. Bellwood, of Oakville, Ont.

P. L. Losier has opened a new boot and shoe store in the Tucker Block, Weyburn, Sask.

A. Bender, late of C. E. Raven's shoe store, St. Thomas, has gone to the West to reside.

John Stevenson has removed his shoe business across the street from his former stand in Cayuga, Ont.

E. Rizzio, shoe dealer, of Ottawa, was in Toronto this week, calling upon the trade.

W. J. Dunscliff has entered the boot and shoe business at Wauhaushene, Ont. He was formerly engaged in that line.

John H. McClinton, who recently embarked in the shoe business in Goderich, has added an efficient repair department.

E. E. Hutchison, of J. Eveleigh & Co., Montreal, is spending a few weeks in Bermuda for the benefit of his health.

T. H. Rieder, vice-president of the Canadian Consolidated Rubber Co., Montreal, was in Toronto this week.

There has been a change in J. H. Larochelle, Piche & Co., wholesale boots and shoes, Quebec. E. Piche is retiring.

The Canada Leather Goods Co., the Imperial Shoe Store, and Paul Roy, leather dealer, of Montreal, are among the firms recently registered.

The commercial travelers of Quebec at their annual dinner last week were addressed by Sir Wilfrid Laurier and Hon. L. P. Pelletier, postmaster-general.

Jacob Koenig, a former Walkerton shoe merchant, who has been living in Hanover for some time, will leave shortly for the West.

Fred J. Mitchell of Fort William has made extensive interior improvements to his establishment, and has recently installed

an excellent system of clothing wardrobes with long lines of exclusive shelving for his shoe department.

N. V. D. Labonte of Coaticook, Que., who is the only exclusive shoe dealer in that town, reports that business with him is very good.

M. B. Davidson of Kemptville has disposed of his shoe business to A. Jardine, who was in the general store business for a number of years in Chrysler, Ont.

Joseph Livingston, of Victoria Harbor, Ont., has removed his boot and shoe shop to a new stand, opposite the Queen's Hotel in that village.

J. S. Henderson of Parrsboro, N.S., has bought out the boot and shoe business of his brother, T. E. Henderson, and has assumed possession.

W. J. Greer's shoe store, Wingham, which was damaged by smoke at a recent fire has been repaired and painted, and now presents a fine appearance.

The Roberts and Vane Lane Shoe Company, of Paris, have engaged an expert shoe repairer, and are featuring this department in their newspaper advertising.

Miss Edith M. Axford, who has been for some years in Sutherland's shoe store, St. Thomas, has resigned to enter a Toledo hospital as a nurse-in-training.

Beal Bros., Limited, 52 Wellington St. East, Toronto, have recently added to the equipment of their harness factory, and increased their staff.

Wm. Howarth, of F. J. Weston & Sons, Toronto, has bought the shoe business of A. E. Cudmore, 952 Gerrard St. East, Toronto. He has added a line of traveling goods.

Two young men noticing that H. Sugarman's store, Kingston, was vacant Tuesday afternoon, entered and put a pair of boots under their coats. Mrs. Sugarman noticed the boys, and chased them out to the street, where she recovered the footwear.

A. McDermid, who succeeded Logee & Co., Ingersoll, has made very extensive improvements to the interior of his store. A new ceiling and new shelving have been installed. Several mirrors placed in position and other renovations make the premises exceptionally attractive.

Lieut.-Col. John Byron Robinson died recently in Gananoque. In company with his brother-in-law, the late John F. Kelly, he purchased the boot and shoe business of J. M. Thompson, which has since been carried on very successfully under the name of Robinson & Kelly. Col. Robinson leaves a wife and one son.

Goff Bros., new boot and shoe store on Victoria Row, Charlottetown, P.E.I., was greatly admired on the recent opening. It was brilliantly lighted, and with its double galleries, up-to-date appointments and glittering lights, is a store that would attract attention in any city.

It is reported that the Regal Shoe Co., says the Weekly Bulletin, is to put before the public a new offer on its \$4.50 grade of shoes, which this firm will guarantee to wear satisfactorily for six months from date of purchase, and if they prove unsatisfactory in that time, will give a cash re-

bate dependent upon the amount of time the shoes have been worn.

L. R. Howard, of the Nugget Co., who has been on a trip to Great Britain for some weeks, has returned to Toronto. The company now have 1,700 galvanized sign boards distributed throughout Canada from coast to coast, and have only about fifty of these left. They have also a number of attractive show cards, which they are sending to the trade.

A fine spring stock of boots and shoes was totally destroyed a few days ago when fire broke out in the establishment of James Perry, 213 McGill St., Montreal. The fire, which started on the lower floor, made rapid headway, the flames shooting up through a light shaft from the first to third floors without touching the second floor.

The Royal Shoe Company, Limited, of Toronto, has been granted a charter. The capital stock is \$150,000. The company is empowered to carry on the business of boot and shoe makers, deal in and manufacture footwear of all kinds as well as to acquire by purchase or otherwise, the retail boot and shoe business of C. F. Tugman, conducted under the names of the Toronto Shoe Company and the Royal Shoe Store.

J. E. Willis, of Seaforth, has decided to institute a cash system in connection with his shoe business. Mr. Willis makes the announcement in a prominent place in the local papers, and says that he hopes to sell goods at a discount of ten per cent. on the usual credit price that he has been asking. He believes that the advantages of the cash system are apparent to all, and has issued a neat circular to his many customers, setting forth the benefits of the change.

Recently fire broke out in Coun. A. W. Moffatt's brick block in the store occupied by the Union Boot and Shoe Store, Amherst, N.S. The building and stock was badly damaged before the flames were extinguished. Owing to the location of the fire, which was caused by an overheated furnace pipe, large quantities of water had to be used, and the loss to goods is principally by water and smoke. C. H. Watt, proprietor of the Union Boot and Shoe Store, has \$5,000 insurance on the stock.

T. W. Hart, of the Nugget Polish Co., Toronto, has returned from an extended business trip through the Canadian West, going as far as the coast. He is delighted with the results of his visit, and in one city obtained an order for over \$3,000 in polishes. This possibly constitutes a record for a single order. Mr. Hart will return to the West again in July, and will have charge of the exhibits which will be made by the Nugget Co. at the Calgary and Winnipeg fairs.

R. B. Van Dine, shoe retailer of Fredericton, N.B., is one of the progressive merchants in the Maritime Provinces. He believes in holding a spring opening, and sent out artistically printed invitations. This year, his premises on Queen St. in the capital city of New Brunswick, were visited by an interested and delighted throng when he held his Easter showing on Tuesday and Wednesday, April 2nd and 3rd, from 3 to

6 o'clock each afternoon. The opening was a splendid success. It is now looked forward to as a characteristic feature of the establishment conducted by Mr. Van Dine, who had all the latest offerings on view and his store appropriately decorated for the occasion.

Canada's Active Felt Centre

Referring to an article recently appearing in the SHOE AND LEATHER JOURNAL called "Canadian Shoes for Canadians," which was reproduced by the Galt Reformer, that paper says: "The reason that American felt shoes are not sold in this country is due to the fact that in Waterloo, Canada, we have mastered the art of manufacture and are producing felt shoes that are possibly the best seen anywhere. There does not exist an American firm to-day that places on the market the equal of our product. Waterloo, Canada, enterprise, thanks to the German element of our population, has made it possible to make this boast. As for other classes of shoes, wholesalers and retailers from coast to coast, mark these Canadian lines up to the highest standard—in some, degree of quality is not excelled anywhere.

Well Liked by the Trade

J. A. H. Morin, who has been before the public in Quebec for a number of years, is one of the best liked men in the shoe trade in the ancient capital. He was first in the employ of the Campbell Shoe Co., from April, 1905,

to March, 1909, and since then he has been the energetic representative of James Robinson, of Montreal. He carries on his premises on St. Joseph Street a large and comprehensive stock. Mr. Morin is a great lover of dogs, and can tell all the fine points of every breed. He has one of the finest spaniels in the province for his constant companion. Mr. Morin is a great devotee of the chase, and frequently goes on hunting expeditions. He is a good shot and a genial, kindly, all around good fellow. In fraternal circles he is especially active, and he numbers scores of friends in his business and social relations. He is always willing to extend a helping hand to the man who is down.

New Prices of Shoe Packs

"Men and boys who wear shoe packs and larrigans will have to pay more for them next fall than they have been paying this winter," said a well-known Eastern jobber. The advance is about 10 per cent., and it had to come owing to the great increase in the cost of hides. "Our salesmen, however, have not had any the less business because of the advance," said he, "in fact, our bookings up to the present time are up to our best record in previous years. The people must have the goods, and an advance of even 25 per cent. would not deter their purchasings of such an article as shoe packs."

A Big Call for Tans

The demand for tans is growing, and in some cities it almost amounts to a craze. Tan buttons with Cuban heel and short vamp are having a great call, while among men there is a fair demand for tan button and bluchers. Manufacturers in some Canadian cities report that the re-

quisitions for tans were never more numerous than at present. It seems that if a demand once gets properly under way there is no stemming the tide, and every retailer and jobber wants orders filled in an unreasonably short time. The fall and winter samples of Canadian makers include a larger representation in tans of various colors than they have for years past. One manufacturer said that they were becoming more and more of a staple so far as leathers were concerned, and were worn by many people the year round.

Varied Career in Shoe Line

In twenty years of shoe selling G. H. Ansley, better known as Bert, has had a varied and interesting career. He was born in Chicago, but he had resided in Canada for the past quarter of a century. He started selling for the

old Seguin-Lachine Co., of St. Hyacinthe, Que., traveling in the Maritime Provinces. After they wound up their business he went with George A. Slater, Montreal, then with the J. D. King Co., Toronto, as a special salesman for the Nursery shoe, made by them, which line he originated. For seven years he was with the Slater Shoe Co., of Montreal, covering the Maritime Provinces and later Ontario.

Mr. Ansley has been sales manager for the Nursery Shoe Co., of St. Thomas, for the past two years, which industry has been making great strides since its inception. He has the faculty of making friends with everyone by his obliging and genial disposition. While selling shoes has always claimed his first consideration and attention, he is an ardent apostle of bowling, and manages to get around to the various tournaments in Western Ontario when not on the road. He was at one time a clever hockey player. Mr. Ansley resides at 54 Gladstone Avenue, St. Thomas.

One of the Rubber Hustlers

A record of twenty years on the road and still at it is the history in brief of Ed. M. Zavitz, of Ottawa. His first position was with F. J. Weston & Sons, of Toronto, whom he represented for a dozen years and made a name as a reliable and wideawake salesman. In 1904 he was sent to Ottawa by the Berlin Rubber Manufacturing Co. and took charge of their branch in the Capital. In 1907 he was given supervision of the branch of the Merchants' Rubber Co. of Berlin, and continued in that post until a year ago, when he was chosen as manager of the warehouse of the Consolidated Rubber Co. in the Capital. Mr. Zavitz has built up a large business, and is very well liked by all with whom he comes in contact. He is genial and gentlemanly, and numbers many friends among retailers in all parts of Ontario, while every fellow traveler has a good word to say for "Ed." as he is popularly known.

The Bulk Sales Act

W. D. McPherson's Bulk Sales Act was passed upon by the Legal Committee of

the Legislature in a few minutes recently. Last session the West Toronto member had a similar bill, but left it over so that the business men of the province might be heard from. The McPherson bill provides that every person purchasing any stock in bulk shall receive from the vendor a statement in writing containing the name and address of every creditor of the vendor for any amount exceeding \$50, and stating the amount of the indebtedness of the vendor to such creditor. If the purchaser fails to obtain such a statement before completing the sale, it shall be void against the creditors of the vendor.

Upon obtaining such a statement the purchaser shall, by a certain written waiver from the creditors of the vendor, at once pay the whole of the purchase money into the hands of a trustee for distribution among such creditors, to be distributed according to the Assignments and Preferences Act. No trustee can be appointed without the consent of creditors who represent at least fifty-one per cent. of the amount of claims against the estate of the vendor. When the bill came up in the House it was deferred for another year.

Big Orders Make Him Smile

Graham is his name, but he is not the former Minister of Railways and Canals, who was recently elected in South Renfrew. This man's signature and address are Harvey E. Graham, 42 Dalton Road, Toronto, Ont.

He began his career as a shoe salesman in 1899, when he took charge of A. D. I. Graham's shoe department in Sydney, C. He held that position for four years, and then started on the road for the Robt Taylor Co., Limited, of Halifax. For nearly five years he traversed Nova Scotia as part of New Brunswick, meeting with success and establishing a wide connection. He then joined the Hart Boot and Shoe Co. of Fredericton, N.B., transferring his activities from the provinces down by the sea to western and northern Ontario. His ground is from Toronto to Sault Ste. Marie, Cochrane and Windsor. Mr. Graham is of a quiet disposition, and says his only real hobby is telling merchants his good Hart Shoes are. There is one thing that always makes him happy—big orders, and lots of them. When a boy was a brilliant hockey player, and took foremost part in other lines of sport.

Injured by Catalogue Houses

The thirteenth annual convention of the Retail Merchants' Association of Canada for the Province of Ontario closed recently. A resolution was adopted requesting the executive committee to ascertain from the retail merchants of the province what extent the retail trade was injured by catalogue houses. The following resolution was also passed:

"That as the association has complained and transient traders act that applicable to all parts of the province, as they have secured copies of similar goods from all parts of the world, that a measure be introduced at the next session of the Ontario Legislature, also a resolution have the criminal code amended so as to make it a criminal offence to falsely advertise any article; also requesting the minister board to urge upon the Government the necessity of having the r

trade represented on the Tariff Commission, a resolution advocating an educational campaign to show the public that it would pay them better to deal with merchants in their home town; also one instructing the executive to watch very closely the proposed Employers' Liability Act. It pointed out also that a great many legislative measures have been introduced and a great many opposed during the year. The treasurer's report showed a surplus with all expenses paid, and a payment of over \$2,500 on past liabilities created by opposing injurious legislation.

A hearty vote of thanks was tendered to the secretary, Mr. E. M. Trowern, and the treasurer, Mr. M. Moyer.

The following officers were elected: President, A. Weseloh, Berlin; first vice-president, E. C. Mathews, Toronto; second vice-president, N. C. Cameron, Goderich; treasurer, M. Moyer, Toronto (acclamation); secretary, E. M. Trowern (acclamation); representative on the Canadian National Exhibition Association, John McClellan, Bowmanville; auditor, A. E. Herrington, Toronto.

Suit for \$2,000,000 Entered

A two-million dollar suit and attachment was filed recently in Boston against the United Shoe Machinery Company by the Duplessis Independent Shoe Machinery Company, Limited, of Canada, for an alleged violation of the Sherman Anti-trust Law. The Duplessis Company were organized fifteen years ago by English capitalists, and had a factory in Beverly, Mass. The suit alleges that it was driven out of the country by the United Shoe Machinery Company. The suit was filed in the United States District Court, where two other similar suits are pending against the United Shoe Machinery Company, the three aggregating \$5,000,000.

Some Styles in the Old Land

A correspondent writing from London, England, says: In the matter of footwear there is to be a return to simplicity, and *le ligne*, of which so much is said in regard to dresses, is to be the thing about shoes. No more very fanciful bows and buckles are to be worn by the most fashionable. Instead, plain laces, small buttons and few are to be smart. The black patent shoe or boot with a light suede top will continue in vogue in spite of its long run, and there will be black and white shoes, more conspicuous than pretty, one imagines. Cuban and military heels will be liked.

Diamond Heels in Montreal

A recent despatch from Montreal says: Mrs. C. H. Anthony of Muncie, Ind., set Washington society agog the other day with her astonishing creations in gowns and her wonderful originality in studding her slipper heels with diamonds. In one of Birks' windows recently a pair of slippers were shown with heels studded with half-carat diamonds, giving a good idea of his extravagant invention. These jeweled creations have not as yet been demanded by the Montreal Smart Set; when they are, however, it is well to note that the Birks' firm has taken the trouble to prepare for any order which they may receive.

To Kill the Tipping Evil

The death blow to the "tipping evil," which the Commercial Travelers' National League has been directing its energies to abolish, may be struck at last if the latest plan formulated by that body is carried into effect. At a recent meeting of the officers of the organization W. E. Ad-

ams, of Philadelphia, vice-president, offered a resolution calling for the formation of a stock company which will operate a chain of "tipless hotels in more than one hundred leading cities of the country. To accomplish this he suggests that each traveling man invest \$10, and all houses employing commercial travelers \$100 each, thereby providing a capital stock in excess of \$10,000,000, which would be sufficient to operate a number of hotels to which traveling men could resort and escape the "tipping" nuisance.

Another Veteran of the Road

Twenty years on the road, and still at it. That is why J. L. Tretheway made a success of the business of traveling. He believes in continuity of effort, and throughout Western Ontario, there are very few retailers who do not know him personally and even intimately. He was born and educated at Port Arthur. His first venture in the shoe line was in the retail business at Owen Sound, where, along with his brother, he was engaged in the trade for some three years. He later joined the traveling staff of the J. D. King Co., Toronto, and was with that firm for ten

years, covering Western Ontario. His brother, R. J. Tretheway (now of Tretheway, Karn & Co., wholesale boots and shoes, London), was also a traveler for the same company for many years. A few years ago "J. L." went with the Brandon Shoe Co., of Brantford, becoming identified with the firm at their inception in Aylmer. His field is from Toronto to Windsor. Mr. Tretheway resides in Toronto, his home being at 44 Warren Road. W. G. Tretheway, discoverer of the famous Tretheway and Coniagas silver mines at Cobalt, and now proprietor of the Tretheway Model Farm at Weston, is a cousin. J. L. Tretheway generally spends a couple of months in the summer at his cosy and comfortable summer home on beautiful Lake Temagami, for he is fond of the open air, and has some private interests in leading Cobalt properties. In the winter, when not on the road for the Brandon Shoe Company, he may be seen curling or enjoying a game of ninepins, and at both he is quite an expert. He likes the shoe selling game, and has made a success of it during the score of years that he has been calling upon the trade.

The Easter Trade was Heavy

Reports from all sections of the country indicate that Easter business in the shoe line was well up to the mark. In fact,

many merchants report that while some spring lines were a little slow in selling, still the large volume of business done in rubbers, owing to the damp weather, rolled up a trade that was considerably ahead of last year. From everywhere come reports of strong demands for button boots, particularly tans, carrying a short vamp, high toe, and Cuban heel. Several retailers have been searching far and wide for suitable lines in order to satisfy the craze for this particular type of shoe. Some dealers do not relish selling buttons, as they claim that having to shift buttons takes up a lot of time, and that they could have done one-third more business had they been disposing of lace boots. The button Oxford for women seems to be a coming favorite, and there are indications that whites will be selling strong within the next few weeks, but in the meantime the run is on tans, and nothing seems to abate the cry. Lu lu's, gun metals and tans are going well in all districts, and there is apparently about an equal measure of favor between the two leathers. Button boots are being called for more and more by the male persuasion, and it is likely that, as the warm weather comes along, the measure of appreciation for button shoes will grow. There are comparatively few patents selling except for dress or social occasions. On the whole, the Easter trade was particularly active, and seems to have been satisfactory to most dealers. There is one universal verdict—the rubber business was never better than during the past few weeks, the weather being particularly favorable to the demand. Jobbers report a good sorting business done during Easter and state that nearly all spring footwear has now been shipped out. Orders for fall shoes are coming in very well, and in the meantime everybody is looking forward to an active, healthy spring trade.

A Handsome Western Store

The New Westminster Columbian says: There was a good attendance at the formal opening of Johnston's Big Shoe Store as a means of celebrating the completion of the large annex at the rear of the building. The spacious store presented a fine appearance all lit up by means of the newly installed electric fixtures. A piano at one end of the building provided music, and the event took pretty much the form of a promenade. Large numbers of citizens passing up and down Columbia Street, attracted by the music and the crowd, dropped into line and walked through to see and admire. The store is one of the largest, as well as one of the most complete in the West. It measures 132 by 32, and is admirably lighted, by means of windows at the front and rear sides. At the back of the store is a balcony, cash and parcel gallery, and opening off from it the manager's private offices. The old gas fixtures have been taken out and replaced by ornate brass electroliers, and when lighted the store has an especially pleasing appearance. A new air line cash and parcel system has been introduced, and is easy of access from any portion of the store. On one side of the store itself a neat little telephone and letter writing room has been fitted up for the convenience of patrons. The store has been newly floored, and the double row of seats which occupy the centre of the store have laid in front of them heavy carpet. A rear entrance provides access to Clarkson Street. The architects for the improvements were Messrs. Mercer & Gardner, and the work was done by Mr. J. H. Vicars, of Vancouver. In addition to the improvements to the store accommoda-

tion, two comfortable stores have been built on Clarkson Street above the shoe store, which it is expected will very shortly be occupied. In order to keep pace with the growing business the staff has been increased, and ten clerks are now employed. In addition to these an expert window dresser has been engaged, and will shortly arrive here from Toronto.

Rubber Prices Will Go Higher

It is evident that there will be an advance in the price of rubber footwear within a few days. Various manufacturing companies are urging retailers to place their orders early in order to give them a chance to make the goods and to assure delivery in the early fall. All the companies report an improvement in the matter of earling placing, but there are a number of dealers throughout the country who have not yet given their bookings. One manufacturer stated that this had been the most wonderful spring for the rubber footwear trade that he had seen in 20 years. Practically all the output of the factories had been taken to satisfy sorting orders and very little reserve stock was being piled up. In fact in many of the lines various establishments are short. The demand is still keen for rubber footwear of all kinds except cloth goods and lumbermen's shoes. In all light wear and rubber boots, the number of requisitions has been phenomenal. The price of crude rubber is high. Cottons have taken an advance and wages generally are on the up-grade. In view of these circumstances, several representatives, who were interviewed, agreed that an increase of 7 per cent. would surely be made within a very few days and the retailer, who is wise, will be forearmed, and place his business now. This is not only good policy and foresight on his part, but it may result in him saving many dollars besides. Early ordering is a necessity also from the fact that no stocks have been accumulating and manufacturers guarantee delivery of all goods if placed during the present month. Some orders if not received during the next two weeks, may not be filled as promptly as certain persons, who are holding back, may think.

The World's Dearest Shoemaker

The creation of a school of artistic shoemaking is the dream of one of the most original tradesmen in Europe, who occupies a workshop on the top floor of a house in the Place Vendome, Paris. This artist in footwear, who is a Sicilian named Paolo Yatorny, proudly styles himself the dearest bootmaker in the world, and the title is justified by the following six rules handed to every visitor to his atelier:

- 1—A last is made for every client.
- 2—Experimental boots and shoes are provided until complete satisfaction is given, and are at the cost of the house.
- 3—Prices vary from \$20 a pair.
- 4—The order consists of (a) ten pairs of boots and shoes, (b) ten pairs of trees worth sixty pairs of silk stockings or socks, (c) a special traveling shoe trunk.
- 5—A deposit of \$600 to be made.
- 6—Terms: cash down.

The deposit of \$600 is the preliminary to all business with Yatorny, and he will only serve clients who have leisure to devote to the all-important business of being fitted. He makes the last from a block of mahogany with his own hands, does all the cutting out and modeling of the shoe, and only has the assistance of a couple of workmen for sewing on the soles. He often spends weeks over the last seeking to re-

produce with the fidelity of an artist the exact lines of a client's foot. One pair of shoes after another is furnished to the client, and destroyed until an exact fit is obtained. This original bootmaker has on his books several royalties and some of the smartest women in England and America. He never advertises. He took a shop in Bond Street during the coronation week to show London what Paris could produce in the way of shoes.

He Grew Up in the Trade

Yes, he grew up in the shoe business and is a Kingstonian by birth. His father started a custom shoe manufacturing concern over sixty years ago, and two brothers continue the historic shoe house. James T. Sutherland, who recently started on his third year with the Cook-Fitzgerald Co., of London, covers all the large towns and cities between Toronto and Quebec. He is one of the most widely known travelers on the road to-day, and has built up a strong connection with the Astoria and Liberty brands. Leaving the Limestone City at the age of twenty-one, he went

South, and was manager of the shoe department of Altmayer and Co., Savannah, Georgia, for nearly three years. He next sold shoes for a leading American house in Michigan, Illinois, Indiana and Wisconsin for four years, when he engaged with another company, and for eight years traversed the territory between Baltimore and Florida. He thoroughly understands boots from tip to pull strap, and, when he is not on the road "Jim" is devoting his attention to hockey and other branches of clean, amateur sport. He has been a member of the Ontario Hockey Association executive for some time and has managed the famous Kingston Frontenacs, which team has either won the championship or been in the hockey finals every winter for the last fifteen years. During the warm weather he spends several weeks at his comfortable summer home on Amherst Island, near Kingston, and is never tired of black bass and other fishing, at which he is as expert as in boosting hockey or selling shoes.

Some Advice on Ladies' Shoes

A leading woman writer in one of Canada's most widely read daily papers has something of interest to say on style in

women's footgear. She observes: One hears it said of a baby that he "feels his feet," as though they were something new he had discovered, and when spring comes, and rubbers and overshoes are discarded, grown-ups often have a somewhat similar sense of sudden realization, but I think it is their boots that they realize. With the realization comes a renewed interest in the windows of the shoe stores, which certainly display some very dainty wares.

But as all sorts of dresses do not look well on all sorts of figures, neither do all sorts of shoes on all sorts of feet. A short-vamped shoe, especially if high-heeled, emphasizes the stubbiness of a short foot; a deeper vamp and a lower heel on a shoe a size longer and a width narrower will have a better appearance. The woman with a long, narrow foot can wear short vamps without getting a wide effect. But you can tell more by studying your feet in the mirror, and considering it in proportion to your whole figure, than by any rules I may lay down. If it fails to carry out the general lines and proportions of your figure it may be dressed to rectify the chief faults.

The fitness of the shoe for the occasion on which it is worn is another important point, and comfort is one of the first requirements of appropriateness. I am sure that no woman walks as comfortably in high Cuban heels as she does in low broad ones, with the addition of a rubber heel. Undoubtedly a good walking boot with extension soles and low heels makes the average foot look two sizes larger than does a high-heeled shoe, but it is worth it in comfort and fitness, and the high heels may be used for other occasions.

Many people fail to realize the importance of dress accessories, and the greatest importance of all lies in their good repair. A cheap little dress worn with irreproachable gloves and shoes will look better than the most expensive one worn with soiled and frayed accessories. A missing button or a knotted lace should be a humiliation, and the expression "down-at-the-heels," has been well-used to describe a state of mental and material carelessness. Nothing seems more of a barometer of one's all-round fitness than the condition of one's footgear. Heels might be supposed to be the least noticeable part of one's outfit, but it is astonishing what comments they evoke. One man wrote a whole article on them in a recent magazine, and illustrated it, and another was heard to reply hesitatingly to a complimentary remark on a girl's appearance: "Ye-es, but her heels were run down."

The popularity of short skirts has increased the importance of footgear. The extensive wearing of pumps and oxford ties has had an inclination to enlarge the ankles, and now that high, white buckskin boots have achieved such favor they will perhaps have an opportunity to regain their slenderness.

Canadian Day at Boston Fair

One of the big features at the National Shoe and Leather Fair to be held in Boston from July 10th to 17th next, will be the Canadian Day. This will be observed on Friday, July 12th, at the suggestion and through the influence of the SHOE AND LEATHER JOURNAL. The publishers impressed the importance of the matter upon the management in view of the representative number of visitors from the Dominion, who attended the fair last year. Canadians will thus be honored by having a day set apart for their entertainment and instruction. It will be one of the cards of the great gathering. It is expected that a larger delegation

than ever from Canada will visit Boston during the Shoe and Leather Exhibition in July next. Many meetings and conventions will be held by trade organizations. The National Shoe Retailers' Association will celebrate a "get together" week, making their headquarters at the Mechanics' Building, where the management have given them space. National shoe travelers will also hold a reunion during the progress of the fair. There will be a special day for superintendents and foremen, and the fair directors will provide all these gentlemen who make application, with pass tickets, good for free admission during the entire week. A great publicity campaign is being conducted and visitors are expected, not only in large numbers from Canada, but from all over the continent, and from many European countries. The management report that already more exhibition space has been sold than at the opening of the fair last July. All branches of shoe and leather industry will be well represented.

Rubber Tanned Leather Industry

The Canadian Rubber Tanned Leather Syndicate, Limited, who are located in Port Hope, expect to start the manufacture of their rubber tanned leather in a week or two. H. Graham-Green, who is the managing director, states that owing to the recent coal strike in England one of the principal chemicals used had been delayed in shipment, and it could not be obtained on this continent.

The process, for which the company hold the Canadian patent rights to manufacture, is entirely new on this continent, leather, which has previously had all the cells emptied of grease and fats, etc., by a patent process, with a pure rubber so and consists of treating chrome-tanned leather, which by a series of tanks and drums is forced right through the cells of the leather, thereby rendering it not only waterproof, but very much more durable, it is claimed, than any other leather which has been placed on the market.

"Whilst its use has not been confined to any one particular purpose, it is specially valuable for sole leathers, machinery belting, hydraulic cup leathers, and last, and most important of all, automobile tires. For machinery belting it has been proved by everyone who has tried it that rubber-tanned leather has far greater attraction than any other belting, and is not affected by any varying degrees of temperature, hot, cold or damp. For sole leathers, the fact that it is waterproof and extremely durable, and also practically noiseless makes it extremely valuable," say the company.

New Inventions

The following information is specially compiled for the CANADIAN SHOE AND LEATHER JOURNAL, by Messrs. Hughes & Young, patent agents, of 55-56 Chancery Lane, London, W.C.

24150—G. Evans, 2 Walton Street, Toronto, Canada. Boots, heels. In detachable heels of the type having a peripheral lip or flange adapted to be slidden into engagement with a peripheral turned-over flange on a metal plate fixed to the boot, etc., the lip of the heel is stiffened by a metal plate embedded in the heel, and having projections extending into the lip. The heel is preferably of rubber, and has a lip adapted to be engaged with a flanged plate, the lip being strengthened at intervals by projections on the metal plate. The plate may be suitable cut away to lighten it and to prevent the flexibility of the heel from being unduly impaired. For example, it may be T-shaped.

24214—Messrs. Gimson & Co., engine

works, Vulcan Road, and S. Keats, 96 Mere Road, both in Leicester. Boots, pounding, etc. In pounding-up or like machine of the type in which a series of yielding members adapted to be held outward by centrifugal force are mounted on a rotary head, helical springs arranged longitudinally between discs form the yielding members. The springs, which are preferably of flattened material, close wound, are supported in recesses in the disc, or on projections. A core is provided to prevent the springs from being bent too far inwards. The springs may be wound in the same direction or in opposite directions.

On an Interesting Mission

J. S. Ashworth, who is in charge of the Canadian headquarters of Sir H. W. Trickett, the noted English slipper manufacturer, left last week for the Old Country on an interesting mission. He will be absent about three months and when he returns to the Dominion, expects to have very congenial company. Mr. Ashworth has been connected with Sir H. W. Trickett, Limited, for over seven years and has been coming to Canada about six years. Early in June he

will be wedded in the Presbyterian Church at Larne, Ireland, to Miss Maud N. Jackson, who is a resident of Larne, which town is located near Belfast. Mr. Ashworth and bride will spend some time at Waterfoot, near Manchester, England, before returning to Canada. They will take up their residence in Toronto. Mr. Ashworth is well-known to the wholesale shoe men and manufacturers from one end of the Dominion to the other and his numerous friends will wish him a very pleasant voyage and safe return.

News Budget from Quebec

Many Manufacturers and Retailers Pay Visit to American Cities—Easter Business Was Fair

O. Goulet was in Montreal for a few days last week on business.

J. B. Blouin, of Levis, has installed a new No. 5 Goodyear lasting machine.

L. Duchaine has added several new lines of felt goods in men's, boys', youths', women's and misses'.

E. P. Mullarkey, superintendent of the Wm. A. Marsh Co., Limited, is spending a few days in Boston.

A. Roy, former shoe manufacturer of this city, was seized with a paralytic stroke a few days ago, and his condition is very serious.

Lachance & Tanguay have put in a new Reece buttonhole machine and other ma-

chines in their fitting room. The factory is still busy and working hard to finish its winter's run. All the new spring samples have been completed.

E. Fournier, of the Plessisville Shoe and Leather Co., Plessisville, Que.; G. J. Settle, of the Hartt Boot and Shoe Co., Fredericton; L. H. Dupre, of the Independent Box Toe Co., Montreal; P. J. Hogan, of the United Shoe Machinery Co., Montreal; A. Robert, of the United Leather Co., Boston; Mr. Jackson, of Jackson & Savage, Montreal; M. P. Mounsey, of Sultana, Limited, Montreal, and others were in Quebec during the past few days.

The John Ritchie Co. aggregation have won the hockey championship of the Manufacturers' League in Quebec for the season of 1911-12, and have thereby captured the Scott cup. This premium was donated by J. A. Scott, leather merchant of Quebec, who will banquet the champions at an early date. The successful team was composed of: Goal, F. Hatch; point, S. Boudrault; cover point, M. Cleary; cover, J. Stewart Ritchie; centre, James Davis; left wing, A. Racine; right wing, A. Lapointe. The teams in the Manufacturers' League were: William A. Marsh Co.; John Ritchie Co.; James Muir Co.; Rock Shoe Co.; and Louis Gauthier Co.

The Easter trade among the retailers of Quebec City was very satisfactory, but not as great as in other years, owing to the weather being too cold, and there being too much snow and ice for the disposal of spring goods. The number of rubbers disposed of was very large. There were several nice window displays made by enterprising dealers. A number took advantage of the Easter holidays to spend a short vacation in New York, Atlantic City and Boston. The factories are generally pretty busy.

Among the visitors in Quebec during the past few days were: Messrs. M. J. Burns of Coats, Burns and Wanless, London, Ont.; G. A. Whitley of Fred Whitley & Co., Montreal; Sauve of Sauve & Perras, Montreal; H. C. Parker of the Dominion Supply Company, Montreal; Lemieux of the Fraserville Boot and Shoe Co., Fraserville, Que.; A. McKillop of Calgary, Alta.; Dalton of L. H. Packard & Co., Montreal; Taylor of the Goldbert Last Co., Montreal.

He Believes in Organization

Louis F. Falardeau, who was recently elected provincial president of the Retail Merchants' Association of Canada at the annual gathering in Montreal, has long been a public-spirited citizen of Quebec. He was the

first president of the Shoe Retailers' Association of that city, and has been in the shoe business for 30 years. He has built up a wide connection and to-day enjoys one of the largest footwear trades in the ancient capital. Mr. Falardeau has a strong belief in the benefits of "getting together," and is of the opinion that associations of men, engaged in kindred lines, can accomplish much by united and aggressive effort. He has given largely of his time and attention to mercantile associations, and his good work was recognized at the annual meeting held in Montreal city the last week in February, when he was elevated to the presidency. Mr. Falardeau is popular with all classes and has done much to uphold the interests of the boot and shoe retail interest.

Happenings of Interest Among Canadian Factories

New Footwear Factory to be Established in Prince Rupert—Removal of Windsor Concern to Stratford—Montreal Shoe Section Discusses Invasion of American Shoes—Floods Do Damage to Industries in Galt and Guelph

The A. A. Durkee Co., Limited, of Truro, is so busy that it is running night and day.

W. F. Martin, sales manager Kingsbury Footwear Company, Montreal, is expected back from the West this week.

The Solid Leather Shoe Co., of Preston, Ont., have recently installed a Rex pulling-over outfit.

The T. Sisman Shoe Co., Aurora, is to put in three Ideal Model C clicking machines.

The N. Langmuir Mfg. Co., of Toronto, has put in a four-foot gearless dieing-out U.S.M. machine.

Bert Gibbard, representing the Pingree Shoe Co., of Detroit, Mich., was in Toronto last week on business.

M. L. Savage, representing the Tetrault Shoe Mfg. Co., Montreal, left last week on an extended trip to the coast.

D. McDermott, of McDermott Shoe Co., Montreal, spent a day or two recently in New York.

W. P. Hodges, of George A. Slater, Limited, Montreal, is leaving shortly for the Maritime Provinces.

W. M. Adams, of the Adams Shoe Co., Toronto, has returned from a successful business trip to Winnipeg.

The contract for the erection of the new factory of the Collis Leather Co., of Aurora, Ont., has been let to George T. Browning, who has begun excavation.

Wayland Shoe, Limited, Montreal, are showing their first welts and samples for fall shoes. Three new lasts have been put in, and they are very nice indeed.

Sterling Bros., Limited, of London, have recently installed a Rex pulling-over machine and auxiliaries, as well as other additional equipment.

J. W. Hewetson, shoe manufacturer, Toronto, has returned from a visit to New York, Philadelphia and other points, where he was picking up several style pointers.

Star Shoe Co., Limited, Montreal, are about to occupy the ground floor in the building where their factory is located. This extra space, 120x45 feet, will relieve much of the congestion which now exists.

The Independent Box Toe Co., Montreal, are now making heels of all kinds for men's and women's shoes. The new pany have been turning out some very attractive specimens.

Smardon Shoe Company, Montreal, are now in possession of a handsome sample room, where a full range of samples are being shown for the first time. It is a big improvement on their former sample room, being much larger.

Two new lasts are being shown in the Star Shoe, Montreal, fall samples. One is a misses' medium high toe, and the other is a boys'. The boys' McKays are being shown for the first time by the firm.

The Commercial Trunk Co., Limited, the share capital of which is \$25,000, has been granted a charter. The head office will be in London, and the organization is empowered to manufacture and deal in trunks,

boxes, bags, suitcases and leather goods. The incorporators are C. E. Speiran, W. J. Bigelow, L. E. Thompson, S. Brown, W. J. Oliver.

There was a rumor circulated recently that several shoe factories in Quebec were contemplating a removal to Montreal. This report is staunchly denied by the manufacturers in the ancient capital. They state that they have no intention whatever of quitting Quebec.

Charles Knees, proprietor of the American Oak Leather Tannery, of Canifon, Ont., has sold his business to John Kennedy, of Kingston, who will take possession about the middle of May. The tannery makes chrome sole, chrome belting, chrome lace and also raw hide lace leather.

Valentine & Martin, of Waterloo, Ont., are building an addition to their factory for Goodyear work. The new extension faces Queen Street. It will be of brick, three storeys high, and in dimensions 132 by 66 feet. The addition will be equipped with all the newest machinery. Mr. Val-

New Rubber Company

J. I. Chouinard, Montreal, has purchased the plant and business of the Corona Rubber Company, and has organized a new concern which will be known as The Columbus Rubber Company, of Montreal, Limited. The company has an authorized capital of \$400,000, and will manufacture a complete line of rubber footwear, putting in new American lasts and patterns for all lines. An addition of two storeys will be made to the factory in the early summer giving the firm a possible output of 5,000 to 6,000 pairs a day. J. I. Chouinard is president and general manager of the company, while Joseph Gravel is assistant man-

J. I. Chouinard.

ager and general sales agent. E. Gauthier is secretary-treasurer. The directors are J. I. Chouinard, Alex. Desmarteau, accountant; U. Vanier, manufacturer; A. Geoffrin, M.P.P., lawyer; J. B. Morin, manufacturer.

R. E. Coughlin, who was connected with the Canadian Rubber Company for nine years, will be superintendent of the factory.

Mr. Chouinard is the proprietor and president of the Regina Shoe Company, and J. I. Chouinard (jobbing house), Montreal.

The new company will market two grades of rubbers, "Columbus" first quality, and "Minto" second quality, through the jobbers.

entire is a great believer in keeping Good-year and staples separate. It is only two years ago that a large addition was erected by the firm.

The Berlin Trunk & Bag Co., at the head of which is A. L. Breithaupt, have begun work on their new factory in Berlin, which will be 160 feet long, 60 feet wide, and three storeys high. Mr. Breithaupt has recently returned from a business trip to New York City.

John Scully, late of Galt, has been appointed foreman of the bottoming department of the Adams Shoe Co., Toronto. The factory have recently added a Consolidated hand lasting, a pulling-over machine, a Reece buttonhole outfit and a Reece button sewer.

The Regina Shoe Company, Montreal, will shortly begin erection of a further addition to the plant. It will be 25x100 feet, and four storeys high. The new section will house the Goodyear department, inaugurated last fall, which is developing rapidly.

It is understood that the tannery of Mr. Zinkan, of Port Elgin, Ont., will shortly change hands, and come into possession of parties from the United States, who are expert chrome tanners. Mr. Zinkan has recently returned from the Canadian West, and negotiations are now in progress.

The Logan Tanneries, Limited, of Picton, N.S., have assumed possession of the assets and good-will of the Logan Tanning Co. \$125,000 capital was asked by the Logan Tanneries, Limited, and it is understood that the securities have all been taken up.

George Gregg met with a very painful accident at the Beardmore Sole Leather tannery in Acton. He was working at the leather rollers when his right hand was caught and pulled in. The arm was drawn in to the shoulder, and the member pulled completely from the socket. The shoulder was also broken, and Mr. Gregg was injured internally. He was taken to the hospital, but expired a few hours later.

Another new industry in the line of manufacturing of boots and larrigans of all kinds, has been started in St. John, N.B., by Messrs. Steen Bros. They have begun with a dozen hands and expect in the near future to employ twenty-five or thirty. They are using the best chrome leathers, making the line of strictly waterproof goods. They also manufacture a high grade of ladies and gents' fancy fringed moccasins.

The hide market still continues stiff in the matter of prices, and the hide merchant are complaining of the cost of supplies. This they are scarcely able to account for. The hides coming in at present are rather poor quality. The fact that there is no very pronounced demand from tanneries should weaken the market, yet quotation remain very steady in Toronto. There is said to be a scarcity of live stock throughout the country.

There have been several disastrous floods in western Ontario during the past few days, and among the sufferers have been several shoe manufacturers. The River Speed at Guelph went on the rampage, and flooded a considerable portion of the city. The water entered the factory of the Royen Ogg Shoe Co., doing about \$4,000 damage. At Galt, the River Grand overflowed its banks and inundated a considerable portion of the town. Among the industries

(Continued on page 70)

NUGGET

ACTUAL SIZE OF

NUGGET

Because it was impossible to better the quality of "Nugget" Polish it was desired to give the public the benefit of economical manufacture. The size of the tin has been increased. It's just twice the size of the old tin.

The sales-making possibilities of the new large tin, especially when it is remembered that the quality of polish is the same as of old, are unlimited. "Nugget" is just twice as good a proposition for you, Mr. Merchant as it was.

POLISH

NEW LARGE TIN

POLISH

THE NUGGET POLISH CO., LIMITED

TORONTO - ONTARIO

Fit your customers to Dr. Scholl's Appliances. Increase your profits on every sale leaving your store—You can do it.

Scholl's "Foot-Eazer"

A positive easer for the feet, limbs, body and nerves. Self-adjusting, springy, and is the appliance that can be worn by any one with comfort.

Bridges the weight from heel to toe. For tired and aching feet, or for anyone constantly on their feet. Prevents flat-foot. All sizes, for Men, Women and Children. Price \$2.00 per pair

Dr. Scholl's "Bunion-Right"

A most practical invention for the correction of Bunion trouble. Is soft, pliable and is placed between the great and second toe to give just sufficient outside pressure to bring the toe to its natural and true position.

Sizes Large and Small. Price 50 cents each, \$1.00 per pair.

Dr. Scholl's Bunion Reducer

Gives immediate relief. Fits closely and snugly to the bunion or enlarged joint, shuts out all air and moisture, thereby arrests further growth of the bunion by its reducing action on the tissues.

Thoroughly antiseptic and sanitary, as it can be cleansed by washing. Made of pure para gum rubber. All sizes, Rights and Lefts. Prices 50 cents each, \$1.00 per pair.

Dr. Scholl's Anti-Bunion Spring

This practical apparatus acts as a lever to draw the affected toe to its normal position. Especially necessary to those who are troubled with bunions caused by the deformity of the joint or misplacement, when of long standing.

Sizes, Small, Medium and Large. Right and Left. Price \$1.50 each, \$3.00 per pair.

There's a Scholl appliance or remedy for all foot ills—Don't accept substitutes—Specify Scholls.

The Scholl Manufacturing Co., Limited
472 King Street West Toronto

Surer Profits

Your customer can't help but feel impressed with the fact that 20th Century Welts give value for every cent of their price. You won't have to "knock off" anything to make a sale.

Retailing, Men's at \$4.00 and \$5.00, and Boys' at \$3.50 and \$4.00, they give a real good profit that you are sure of on every pair.

Two new lasts for Fall, 1912.

THE
C. E. McKEEN CO.
QUEBEC

that suffered by reason of the freshet were the Galt Shoe Co., who estimate their loss at \$3,000, and Getty & Scott, Limited, a portion of whose premises was submerged. The loss to this firm will be about \$7,000. The waters have now gone down, and normal conditions again prevail. The past few days have been very trying ones with the manufacturers.

The Halifax Herald of recent date says: With William McClure as president and manager and the following gentlemen comprising the board of directors, the success of the Logan Tanneries, Limited, should be assured: E. M. MacDonald, M.P.; R. M. MacGregor, M.P.P.; Edward Fullerton and Albert F. Logan. This business has a dividend record of 12 years and the investors of the province will be interested in the advertisement of Louis N. Fuller, who is offering for the company \$125,000 7 per cent. cumulative preferred stock with a 60 per cent. bonus of common stock.

Union No. 228 of the Boot and Shoe Workers, Hamilton, have elected the following officers: President, J. Gimblett; vice-president, G. Askew, Jr.; recording secretary, Wm. Anstey; financial secretary, H. Harrison; treasurer, Fred Braid; conductor, A. Gardner; sergeant-at-arms, J. Moore; Auditors, J. Gimblett, A. Charlesworth, A. Willis; trustees, C. Hull, A. Willis, W. Anstey; executive board, J. Gimblett, G. Askew, Jr., A. Milne, W. Anstey and J. Lanning; delegates to Trade and Labor Council, H. Pegg, A. Milne, H. Harrison, P. Moore; delegates to Label League.

A despatch from Port Arthur says: "We are going to establish a \$150,000 shoe manufacturing plant in Prince Rupert, 350 miles north of Vancouver, in British Columbia," said P. K. Smith, who is a representative of the National Shoe Machinery Company of Chicago, and is spending a day or two in Duluth before leaving on his long journey to complete the final arrangements and instal the machinery for the new factory. That Prince Rupert is a city of some pretensions is evident by the size of the shoe

factory to be installed by the American firm, their first venture in Canada. The machinery, which in this country is operated on a royalty basis, will be sold outright, and the plant completed will give employment to about two hundred people and turn out about 3,500 pairs of shoes per week. N. B. Wilson is the man representing the Canadian capitalists who are financing the concern.

A rubber heel which can be trimmed without its appearance being spoiled is being put on the market by L. H. Packard & Co., Montreal. It is a reasonably

priced heel, and comes in all sizes, and because it is possible to trim it without making any material difference in its appearance it is popular, especially with the repairing trade.

A meeting of the shoe section of the Canadian Manufacturers' Association was held in Montreal on April 11th. Mr. Joseph Daoust, the president, presided, and there was a good attendance. Several topics of interest were discussed, among them being the large number of American shoes that are coming into Canada at the present time. The invasion of so much footwear—some of it of a doubtful quality and make—from across the border, was deplored, and special reference was made to the practice of certain departmental stores bringing in these shoes and selling

them at a decided profit, under glaring announcements of high-grade American shoes and thus misleading the public. No definite action was taken, but the matter may be discussed again at an early date. The question of terms was also considered. It appears there are very many differences in the concessions which are extended to the trade by manufacturers, and as one member said, "Each appears to be so well satisfied with his own terms that he does not particularly interest himself in the terms that others offer." It is probable that a more uniform basis may eventually be agreed upon. At present some are giving four months, some sixty days, some thirty days net, and some two per cent. ten days, while the discount in many instances also varies.

The by-law which was submitted to the ratepayers of Perth, Ont., to grant \$25,000 to the Winn Shoe Co., for fifteen years, without interest, was voted upon on April 13th, and was defeated. 354 persons cast their ballots for the by-law and 141 against, but the majority required, under the municipal act governing loans, was not sufficient, being 86 votes short of the necessary number.

Stratford has secured a new industry in the Dunford Elk Shoe Company, which will be removed from Windsor, where it has been successfully conducted for the past five years by R. C. Dunford, who will be manager of the new company in the Classic City. The concern makes the Elk tan brand of shoes, worn by prospectors, miners, western farmers and ranchers, as well as other lines for men and women. They have purchased the building occupied by the Stratford Clothing Co. The provisional directors of the firm are: Duncan Ferguson, G. C. McPherson, Robert McEwan, J. A. Davidson and R. C. Dunford. F. J. Lashbrook is the general selling agent for the Dunford line throughout the Canadian West. He is also representative for Getty & Scott in the same territory.

Helping your shoes to wear longer

A Guay solid leather counter never caused a shoe to lose its usefulness, but it has helped in many cases to give the shoe a longer life.

Guay counters will help your shoes to wear longer and give better satisfaction because they are built to stand the strain.

And they only cost $3\frac{1}{2}$ to 4c. per pair.

For Attention of Subscribers in Arrears—

Some time past a representative of an American Collecting Agency was requested to look after some of our accounts in the more remote places.

In some manner they secured a total list of our subscribers, and tried to force collection.

This concern calls itself the **Publishers' Adjusting Association** and is absolutely not authorized to collect for us from anyone. We have repeatedly asked them for a statement of their collections, and this has never been forthcoming. They have on no occasion remitted to us any moneys they have collected.

Subscribers, note this, and pay either our credited representatives or remit direct.

Is Your Rubber Order Placed?

If you have not yet given your order to one of our selling representatives, you have only two more weeks of the placing season in which to attend to this important matter. Delays are dangerous. The prices of raw rubber, linings, and other material are increasing.

Rubber footwear will certainly not go lower in price, and by giving your order during the next few days you are **guaranteed** deliveries in good time for the fall trade. This is surely a consideration not to be ignored.

Our goods were never so thoroughly up-to-the-minute in quality, fit and finish as this season. They are appealing strongly to the trade, and from all sides come not only generous orders, but words of commendation of the snappy, high-class character of the Miner and Shefford brands.

Remember, "Miner means merit." The progressive merchant is the one who takes time by the forelock and places his order promptly.

This is the Brand that makes sales for you

It's value that makes sales for you, and "YAMASKA" Brand Boots and Shoes have all the value that could possibly be incorporated in shoes of their price. They are made to meet the requirements of that large class of people who desire long wear and comfort at a reasonable price. That they fulfil the desire of these people is evidenced by the way they come back for more "YAMASKAS." When you see the Fall samples you will agree that "YAMASKA" Brand means sales.

How the Completeness Of the "Classic" Line Benefits the Retailer

The present completeness of the "Classic" line is the result of appreciation of the original line.

That is to say; "Classic" shoes for Misses and Children so appealed to dealers and their customers by reason of uniform high quality that a woman's shoe of the same quality was asked for.

The introduction of the "Classic" woman's shoe under these circumstances gave it at once a prestige that would ordinarily have taken years to gain.

The value of this prestige to the dealer is inestimable. The very fact that you can say to a prospective customer when showing a "Classic" woman's shoe, "Here is a shoe made by the same firm that make the shoes your children wear," makes the sale almost a certainty.

And the matter of placing and buying is considerably simplified as you can now deal with one firm where you formerly dealt with at least two. This means a great saving of time and trouble to you.

Salesmen with the complete "Classic" line are now calling on the trade, and if they have not already reached you, they soon will. Wait for them. It'll be profitable.

Jas. Linton & Co.
MONTREAL TORONTO

THE "Cleo" trade mark on a shoe is something more than a mark of identification.

In fact, it is a mark of esteem.

To the woman in search of a medium priced shoe of full value, it conveys more than the mere information that the shoe was made by the Cleo Shoe Company. It seems to say to her: "Here is a shoe that, besides giving you style, will treat your feet right. The Cleo Shoe Company is proud of this shoe, proud to place their mark upon it, proud to recommend it to you."

"Cleos" retail at \$3.50 and \$4.00 per pair, and with every pair goes style, fit, satisfaction.

Have you seen the new Fall samples?

Cleo Shoe Company, London

FOR PROFIT NOW

Summer Sorting

Whatever you want at any time to make your stock of Summer Sellers complete—remember I have it.

High cuts, low cuts, bluchers, bals., laced, buttons—in all shapes, sizes, styles and prices—for men, women, youths, misses, little gents, girls, boys and children.

And remember this, too, whatever the price, you get full value.

Look over the quick movers in your stock and if you find you need even a small order send it at once. I promise you prompt service.

All profit isn't made in the selling of goods. There is much of it, made or lost, in the buying. Profit is a matter of buying right and selling right.

And buying and selling right doesn't mean buying as cheaply as possible and selling as dear as possible. You must consider quality.

For no matter how much margin you have on a sale, if the shoes sold are not satisfactory you have not made a profitable sale.

You see, your business grows in the same degree that you give satisfaction. The more satisfaction, the more business. The less satisfaction, the less business.

JAMES ROBINSON, 182-186

AND IN THE FALL

Fall Placing

The first step, then, in profitable shoe trading, is to buy for quality. But don't pay too big a price for it. Remember you want to make a profit.

I can give you quality, for that's what guides my buying.

I can give your fair prices, too, because I buy in large quantities.

The footwear I sell has a reputation for satisfactory service that is helping to increase my business. It can help to increase yours, too.

Now whether it's for summer sorting or for Fall placing, it's satisfaction you need, and remember "Satisfaction is Jim Robinson's middle name."

I have a stock of Fall Footwear that I am proud of. It's a big stock and very comprehensive with a range of prices that is bound to suit everyone.

Style and quality were the main considerations in the buying of this stock, it wasn't low price that influenced me.

But I got a good price just the same, because I took such big lots, and I am going to give you a good price whether you buy in big lots or in small.

No shoddy or poorly made goods in this stock, it comprises the best makes of every grade of footwear. Wait till you see the samples.

cGILL ST., MONTREAL, QUE.

Every claim made for Rideau Shoes

RIDEAU Quality is not a thing of words but of deeds. It is the culmination of years of work and study, of close attention to details and honest endeavor to make better shoes.

Rideau Shoes are not good because we say they are, but because we take pains to make them so. And every time a claim is made for Rideau Shoes

you will find there is in them a quality characteristically "Rideau" to back up the claim.

Now when we say that Rideau Shoes for Fall 1912

are stylish, up-to-date and pleasing, we have the shoes to back up that statement. Even the illustrations of these shoes

will show you that Rideau makers have had "their feet to the ground" and have correctly caught the note of coming fashions. But we claim more than the color style for Rideaus — we claim service. And when we claim service we are not thinking of what we should like Rideau Shoes to give their wearers but of what they have given the past. Not that we're traveling on a reputation, but that we're living up to it.

RIDEAU SHOE COMPANY

is backed up by Rideau Quality

And Rideau service is a long factor for sales. It means more to your customer than mere length of life. It means besides comfort, fit and protection to the feet.

So when you hear a "Rideau" man make a claim for a Rideau Shoe, just examine the shoe, it'll back him up.

This backing up of claims made works to your advantage as well as to ours, for you can make the same claims, and

they'll be backed up in the same convincing manner.

When the "Rideau" salesman calls on you, if he has not already done so, he will show you samples of a wide range in men's and women's shoes.

Every one of these samples represents a style that has been evolved with a view to pleasing the popular fancy and thereby making sales for you. Examine these samples carefully, note their many points of

superiority, take particular notice of the evidences of careful, honest workmanship. We feel sure that if you do you will order Rideau Shoes.

And when your order is in don't worry as to what the shoes will be like. Just remember that it is the pride of every "Rideau" shoe-maker that every shoe is made strictly up to the sample.

You'll not be sorry if you order "Rideaus."

LIMITED MONTREAL, QUEBEC

IN the mining country, in the mountains, on the big rivers and railroads, on the farms, in the foundries, everywhere, in fact, that shoes are put to severest tests Ruthstein's Steel Shoes have proven their superiority over leather shoes.

Rocks, mud, water, ice, snow, heat and cold have proven no barrier to the man equipped with these wear resisters. They have kept his feet dry. They have preserved his health. They have given him foot comfort. They have stood the strain. They have saved him money.

Men who have worn Ruthstein's Steel Shoes will always wear them. They are the best work shoes so far invented and they will be improved whenever possible. Leather shoes cannot compete with them because they cannot possibly give the same amount of wear.

Ruthstein's Steel Shoes are made of one piece of seamless steel from toe to heel into which are set adjustable steel rivets. These rivets, besides giving a firm foothold, lengthen the life of the shoe as they can be replaced when worn. The uppers are made of select leather.

N. M. RUTHSTEIN
The Steel Shoe Man

The Better Work Shoe

That Ruthstein's Steel Shoes are better suited to the needs of workmen than ordinary leather shoes is demonstrated by the eager manner in which they are bought up by these men.

The fact that there are over 500,000 now in actual use is proof positive that men who require much of their footwear are well satisfied that they get it from Ruthstein's Steel Shoes.

The confidence of the makers in the future of Ruthstein's Steel Shoes is shown by the extensive advertising which they are carrying on in Canada. They feel certain that as soon as the workmen of the country become acquainted with these shoes and their excellent qualities, they will want Ruthstein's and no others.

This advertising is certain to benefit the makers of these shoes. But it is also going to benefit the dealers who sell them. This, then, is your opportunity to get in on a growing market. Here is your chance to gather profits from sales that are practically made for you. A glance at the following table will show you that the profits are surely there:

No.		Cost	Sell
		you.	you.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment :

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work :

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Murray Shoes are Built to stand the Final Test

THE most that you can ask of a shoe is that it will make sales and keep custom.

A shoe to make sales, must give "eye service"—must be good to look at. To keep custom, it must give "foot service"—it must wear well and be comfortable.

It isn't so very hard to get the first kind, but they generally fall down when put to the final test on the feet of your customers. This is the test a shoe must successfully pass to earn a right to a place in your stock.

Into whatever stock they have gone Murray Shoes have quickly proven their right to a position of prominence. It has taken a deal of study and acquiring of "inside" information and knowledge of shoe making to bring them to their present state of perfection, but the result justifies the trouble. The style is there, the material is there, the workmanship is there—they'll pass all the tests—the final as easily as the first.

You'll be pleased with the new Fall styles. They've the proper amount of "go" in them, and they'll back it up with service.

THE BEST FROM

McLAREN

WHEN you buy from McLaren & Dallas samples that will soon be shown to you will appreciate the significance of this more fully when you see the shoes themselves. In selecting these lines for fall 1912, we have kept in mind the conditions that confront requirements. We feel we have been unusually successful in this and know that i

The Imperial Shoe

Here is a line of men's and women's shoes of the highest grade of material and workmanship. It is an extensive line and comprises many new and catchy styles correctly made over comfortable lasts. This line will satisfy the demands of your best trade.

The Beaver Shoe

A high-grade shoe made only in Goodyear welts in men's and women's buttons and bluchers. The styles and shapes are correct, the workmanship and materials are excellent and the price is a sure attraction. With the "Imperial" and "Beaver" you can supply almost any class of trade.

These are our leading brands and having proven them to be entirely satisfactory the lines we handle, are always right up to sample. You can depend on every pair.

McLAREN & DALLAS, 30

FIFTY FACTORIES

DALLAS

at one sitting from the best lines of fifty of the best factories in the Dominion. You have endeavored to choose a stock complete enough, and varied enough to meet all your samples careful examination you will find what is best suited for your trade.

The Little Canadian Shoe

Correctly fashioned to fit with comfort the growing feet of Misses and Children.

There is no forcing of little feet to fit the Little Canadian Shoe. "Little Canadian" lasts are built along anatomical lines and correct rather than deform growing feet—a mighty good selling feature.

"Little Canadians," as their name implies, are strong and sturdy and will stand the hard usage usually given by children to their footwear. Good leather, good workmanship, good service.

Maple Leaf Brand Solid Leather Shoes

An all-leather line for all of the family. Made for rough weather and rough usage. Every pair guaranteed to give good service, and lasting wear. Absolutely all solid leather throughout from heel to toe.

recommend them to you as profitable lines. You will find that they, in common with all

FRONT ST. W., TORONTO

Davis Calf Leathers are mighty good Leathers because they're made in a mighty particular way

There is nothing accidental about the goodness of Davis Calf Leathers. That goodness is the result of painstaking effort in every stage of the production of these leathers.

You see, the Davis idea is not to make the cheapest leathers in Canada, but to make the best. We don't meet competition by cutting the price, but by raising the quality—by giving, in fact, all the quality the price will stand.

To do this entails constant and careful supervision of our own plant and workmen, and the studying of other plants and their methods. Whenever a new device is invented to do a certain work better, we install that device, whenever a new method is evolved, we adopt it. We make it worth the while of our men to use their brains as well as their hands, and thus produce better leathers.

And, so by constantly aiming at something better we have brought Davis Calf Leathers to be regarded by careful shoemakers as absolutely essential to their success.

If you will send for samples you will see that Davis Leathers are out of the ordinary.

Davis Leather Co., Ltd.
Newmarket - Ontario

A sign which is a power—a real power. It brightens dull periods, and makes recognized hustling days still busier ones. Its effect is lasting, it is not a mere vibration.

Nothing Succeeds like Success

Following our announcement of a record season, we are in the fortunate position to state that never in the firm's history has the opening of a new run been attended with such an influx of orders. This time the expected has happened, for when our travelers set out with their range of Fall samples they were convinced that they carried the material which would enable them to smash their previous best, and each one is easily doing so. A postal card will bring them your way.

Ready for Big Business. No Delays

The factory equipment was never more up-to-date or capable of grappling with customers' demands than it is to day, but in the interests of all concerned we would ask the co-operation of merchants in the early placing of their orders. It ensures the most minute attention being given to the smallest details which go to make up perfect workmanship—always the pride of the Slater Shoe Company.

Ready to Ship Orders

The marked success accorded to these orders has encouraged us to specialise another range for the go-ahead merchant who is willing to give the Slater Shoe a trial. Each order is composed of 144 pairs of **Self Selling Lines** in **popular lasts** and **Supreme Styles**, and are as follows:

SHOE

QUALITY talks
louder than price

The fact that you can buy Monarch, Brandon and Dr. Brandon's Cushion Sole Shoes direct from the makers, thereby saving the jobber's profit, is certainly a good reason for handling them.

But there's a greater and more important reason—quality. Quality—not only in leather and workmanship, but also in style and fit—quality that makes your customer pleased with his shoes and with your store—quality that gives stability to your business.

You'll see plenty of this quality in the Fall 1912 samples. Examine them carefully.

By One Operation of the NATIONAL CASH REGISTER

The receipt is
printed

This receipt goes to customer. Being printed, it cannot be altered. A duplicate printed record is locked inside the register.

The amount is
added

These adding wheels must show the same record as the customer's receipt. They act as the merchant's receipt for a correct unchangeable record.

Record made on
sales strip

The sales strip must show the same record as the customer's receipt and the adding wheels. It shows the proprietor a complete record of the day's sales.

And shown to everyone
in the store

These figures at the top of the register show everybody in the store the amount recorded. The amount shown must be the same as that on the receipt, adding wheels and sales strip.

This PUBLICITY Prevents Mistakes, Removes Suspicion, Ensures Accuracy

The N.C.R. "Get a Receipt" plan provides a printed receipt for each customer, showing the amount and kind of transaction, and also forces a corresponding record on the merchant's cash register.

It furnishes a receipt for the merchant in the form of correct, unchangeable figures on the adding wheels.

It gives a receipt to each clerk for the correct registering of every sale, in the form of printed figures on the sales strip.

The merchant and his clerks are forced to give the customer a correctly printed receipt, because neither would wish to show printed evidence of a mistake. When a correctly printed receipt is given to each customer and the merchant gets a corresponding record on his cash register, the accurate handling of cash sales, charge sales, money received on account, and money paid out is assured.

The N.C.R. "Get a Receipt" plan is the only method by which the merchant can know that the records which remain in his store are the same as those which go to his customers.

By using the "Get a Receipt" plan the merchant protects himself against mistakes, carelessness, and losses in handling money; against forgetting to charge goods sold on credit; against disputes and misunderstandings which result in lost customers; against paying out money without a record, and against mistakes in handling customers' accounts.

He satisfies his customers, by guarding them against misunderstandings with himself and his clerks. He also guards his customers against shortage in change and against overcharge.

The only reason you "cannot afford a National Cash Register" is because you have not got one. Let us show you how you can pay for a National with the money it saves you. Write now for free booklets to

\$1.00 per Year $\frac{-In-}{Advance}$

General Advance In Shoe Prices Foreshadowed

Retailers Are Now Paying More For Nearly All Lines—They Must Recoup Themselves—Some Are Adopting Odd Prices and Others Make Fifty Cent Advances—They Do Not Favor Deterioration in Quality

The cost of leather footgear of all kinds shows a strong tendency to advance, and many retailers in sympathy with the situation are raising their prices. They feel that they cannot afford to buy at from five to fifteen cents more per pair and sell at the old figures, in view of the growing cost of doing business and what they have to pay for help, rent, light, heat, advertising, insurance, and general store expenses. The tanner is paying more for his hides, the manufacturer more for his leather, particularly for his calfskins, wages are increasing, and no sane man, wholesaler or retailer, believes in doing business nowadays at a loss. The public, therefore, must come to the rescue and make up the difference if they want the same quality of goods and style, fit, wear and finish.

A good article at a fair, reasonable price is what sensible people are demanding. They do not want shoes skinned at vital points in order to keep cost down. There is no money for anybody in cheap, shoddy, ill-finished footwear, and far less satisfaction. Some retailers, like a few manufacturers, pretend to sell at the old figure and keep the quality up to standard, but it is contended that such a situation cannot last long. It is better that matters be faced squarely and frankly in the price of foot covering.

A Table That Means Something

An interesting comparative table has been compiled by the Shoeman, of Boston, which says that the grand average per cent. on all items entering into the manufacture of shoes for the past four years is ten per cent. The average increase in these four years is given as follows, the largest percentage of increase being on the greatest item: Black calfskin, 19 p.c.; Russia calfskin, 20 p.c.; sole leather, 14 p.c.; kid leather, 7 p.c.; sheepskin, 5 p.c.; counters, 11 p.c.; box toes, 13 p.c.; heels, 11 p.c.; toplifts, 14 p.c.; welting, 9 p.c.; insoles, 11 p.c.; outsoles, 13 p.c.; lasts, 11 p.c.; patterns, 8 p.c.; linings, 9 p.c.; cotton thread, 7 p.c.; silk thread, 7 p.c.; other trimmings, 10 p.c.; laces and buttons, 7 p.c.; cements, shellacs, stains, etc., 14 p.c.; shanks, 4 p.c.; cases and cartons, 11 p.c.; office supplies, etc., 5 p.c.; labor, 12 p.c.

Retailers Must Get More

In Toronto, Montreal, Winnipeg, and other cities a few retailers have made an all-around increase of 50 cents per pair, while in other cities the advance has been from 15 cents to 25 cents. Some dealers are considering the feasibility of adopting odd prices, such as \$2.65, \$3.15, \$3.40, \$3.85, \$4.30, \$4.70, \$5.15, \$5.35, etc.

In the last four years the tanners have seen a constant ad-

vance in the price of hides of all kinds. Chicago packer native steers are from four to five cents higher than four years ago, British American dry hides from eight to nine cents, South American packer steers from four to five cents, Chicago packer branded cows from six to seven cents, Ohio buffs from six to seven cents, and Chicago city calfskins from seven to eight cents. Then there are less cattle being raised. In the United States and Canada there has been a decrease of ten per cent. in the last decade in the number of range and farm cattle. Leather is entering into many more uses—for furniture trimmings, automobiles, fancy articles, and harness. This abnormal demand, with fewer cattle, naturally has one result, and that is the public will have to pay more to get shod.

Bold Assertion But True

One of the leading tanners of the continent makes the unequivocal assertion that it is not possible to-day to turn out a shoe of equal quality and style at the same price now as it was a year ago. It is also rumored that kid shoes will shortly go up in price.

A leading maker in Canada, discussing the affairs, remarked: The public has been demanding frequent changes of lasts and far-fetched trimmings, which all mean money. Better leather is also asked for. If people must have the best they will have to pay for it. There is no sense in letting the quality deteriorate for the sake of a few cents additional. Now, with the higher prices in calfskins and sole leather, we have got to come out even somewhere. I would say that in the production of men's fine and medium shoes in Canada about sixty per cent. are calfskin; in women's, about forty or forty-five per cent; and in children's, some forty per cent. Tan calf is in exceptional demand, and the demand is extending all the year around. Nearly one-half the calfskins used to-day by us are tan calf. A cent or two advance makes a wonderful difference when factory expenses and operation are figured on such a close basis as to-day.

What Some Retailers Say

A number of retailers in large and small centres have given their views on the present situation and its outlook.

W. J. Trott, Leamington, Ont., says he has not bought a great deal of fall shoes yet. He finds in the higher grade of women's lines, there is some raise in price, the average being 5 to 10 cents per pair. He has raised two or three lines of shoes from 15 to 25 cents a pair. He does not think the quality should be sacrificed in order to make a boot at a certain figure, and adds: "I find that most people are willing to pay more for high grade shoes, but of course you have to show them the difference.

I have never tried selling at odd prices, although I believe it is a good idea. I think that I will make an attempt before long to institute prices like \$2.70, \$3.15, \$3.65, \$4.35, etc. Heretofore I have sold at the even dollar or 50c. quotation. We frequently cut off 10, 15 or 25 cents to make an even price, and it means a loss of a lot of profit in a year, and your customer does not thank you for the reduction. When a shoe goes up from 5c. to 15c., I do not think that a retailer is justified in raising the price 50c. a pair, but I certainly do believe that he should get 25c. more for a line that has advanced 15c."

London Man Pays More

Roland Hill, of London, Ont., reports that he is paying more for nearly all grades of shoes except the lower lines made of vici and dongola kid. "We have," he writes, "paid as much as 25c. more per pair, but the advance is usually 10c. or 15c. We have found that the quality of shoes has deteriorated in some cases where there has been no increase in quotations. We have been gradually raising prices for several years, but expect to do more of it on fall lines. We do not find that customers object to pay a higher figure when they are getting good value. In some cases we are selling better lines than before, even when prices are advanced. We sell shoes under \$3.00 at odd figures, but all over that are disposed of at \$3.00, \$3.50, \$4.00, \$4.50, etc. I believe that odd prices are practicable in the shoe business and could be adopted if old-fashioned ideas of selling at even figures could once be broken away from. In the dry goods and clothing lines odd figures prevail, and I do not see why shoe men could not start the practice. Profits of late have been cut into by a series of small advances, until now a retailer is selling on too close a margin for safety, and where he has to pay 15c. more per pair, I think he is justified in advancing the retail price by 50c., as he is only coming to his own. All our expenses are increasing, and we have to carry a greater number of lines in proportion to the business done, and it is impossible to keep along on the margin which formerly paid us so well."

Odd Prices in Lower Grades

J. C. Hefkey & Son, of Drayton, Ont., state that they are anticipating a general advance but are still buying staples at the old figure. Where there has been an increase it has been from 15c. to 25c. per pair. "As to whether there has been any deterioration in quality we cannot say, but we keep the manufacturers strictly up to the sample we buy from, and if the deliveries are not right up to the mark we send the goods back. We have not raised prices on many lines, as yet, as we bought in most cases at the old figure. In some instances, where the price went up, say, from 15c. to 20c. per pair, we simply jumped the selling figure 25c. extra. Every merchant has a certain amount of growlers, and, of course, these people naturally object to paying a higher price for the better grade of shoes, but the more intelligent class do not. In a good shoe, we do not advise selling at odd prices, but in the lower priced lines we think that such a method is all right. We find no trouble at all in disposing of shoes that retail under \$3.00 by using odd figures, but when we advance the price on a \$4.50 boot, we add nothing less than 25c., to make it sell at \$4.75, as we think that you can get an extra quarter just as easy on the high grade product as you can 15c. As long as the people get a high class article and a nice article, they are not going to kick on a 25c. advance, therefore there is no need of taking 15c. when you can realize a quarter. Where a shoe goes up in price from 5c. to 15c. per pair, we do not think it reasonable for the merchant, if he is already getting a fair profit on his goods, to advance the price 50c. per pair."

Customer Wants "Odds" Removed

J. S. Edgar & Son, of Windsor, find that there has been no advance except in the better grade goods, and there the average increase is 10c. per pair. The quality, where shoes are sold at the same price, like in cheap staples, they have found to deteriorate. "No, we have not raised prices as yet," the firm say,

"and we do not think that retailing shoes at odd prices is advisable. We find goods that sell at \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, etc., are more satisfactory to us and to the public. When odd figures are used the customer generally wants the odds taken off. When a shoe goes up as much as 15c. per pair, we think a merchant is justified in advancing the retail price by 50c., as profits in the past have been on too small a percentage, considering the extra cost in connection with store keeping. Wholesale prices have advanced so much during the past few years, the expenses of living and doing business have about doubled, and yet the advances made by the retailer in footwear have generally been far less in proportion. We believe many merchants are trying to figure too closely to cost in marking prices. The wage earners and others are receiving more remuneration for their time and labor, and why should not the storekeeper also get more? But does he? So far as we are concerned, we do not."

All Welts Have Advanced

"Some staples are a trifle less, but, as a general thing, they hold about the same. On higher grade goods, particularly on welts, there has been an advance from 5c. to 15c. per pair," writes J. E. Johnston, of Kingston, Ont. "We have not found that the quality has deteriorated, and, while we have raised some lines 25c. per pair, still we are selling most of them at the old prices. As a general thing people do not object to paying a higher figure when they are getting a good shoe. I have tried for some months the odd prices, and we find, with most of the trade done with farmers on a boot that sells at \$3.15, they want the 15c. knocked off. I think that odd prices are a good idea. If I add on 15c. extra I sometimes make a sale by knocking it off, so get the \$3.00 in any event. We have no objections to odd prices. If a shoe goes up 15c. I do not think the retailer should advance the price by 50c. a pair, as a quarter would be giving him a good percentage on the 15c. raise. I am a practical shoemaker, making boots to order, and also selling factory made goods. I find if you are handling a good lot of genuine calf or kid, and raise it 50c., the people who sell shoes and do not know a kidney cut from a close neck, will take the latter, which may look the same to the eye. Not knowing the difference, certain persons sell the shoe for more than we can get for the very best cuts of leather. That is what is the matter with the shoe business to-day—people disposing of shoes and clerks talking them up, making patrons believe that the goods cannot be beat for \$5.00 anywhere, when shoes, in which inferior stock is used (yet look good) will not give \$5.00 in wear. The price of them should be \$4.50."

Toronto Man on Situation

Fred. A. Blatchford, of H. & C. Blatchford, Toronto, in a recent interview, stated that their firm had raised prices of higher grades of shoes by 50c. per pair. The recent census taken by the Ontario Government shows that there are fewer beef cattle on the farms of Ontario than there were a year ago. The production of hides was not keeping pace with the increase of population, either in the United States or in Canada, and it was impossible for tanners to secure sufficient skins for their business. The cost of raw skins had advanced about 25 per cent. during the past year or two, and, therefore, it was natural that retailers would have to pay more for their shoes. There was not much demand for dongola kid shoes, and the great mass of people wanted calfskin. There had been but one natural result, namely, the public having to pay more, particularly in the higher priced lines. Many shoes that were selling at \$4.00 are now \$4.50; \$5.00 shoes are either going at \$5.50 or \$6.00, and where the price had jumped \$1.00 manufacturers would improve the quality and use only the very finest stock throughout.

Keep Up Retail Profits

D. W. Downey, of Brockville, reports that there is an increase from 5c. to 25c. per pair on nearly all the shoes that he

(Continued on page 58)

Window Dressed Entirely With One Price Shoes

Hamilton Retailer Tells of His Experiment—Tried the Scheme to See How Trim of This Character Would Take—Results Were Quick and Exceeded All Expectations

An example of enterprise and effectiveness in the art of window decoration, which had financially satisfactory results, was presented in Hamilton a few weeks ago by the Wilson shoe store. Success was obtained with a specially dressed window giving prominence to one price shoes only. Mr. Arthur L. Wilson, who has charge of the men's department in the store, conceived the idea and says he put in the window merely as an experiment to ascertain how a trim of this character would take. So instant was the response and so much trade was brought to the store through this unusual

for a pair of shoes and felt that his purse would not allow him to give any more, strained a point in order to obtain a \$3.50 pair, while the fellow who had made a practice of paying \$4., \$5. and \$5.50 for his footgear felt that he was effecting a real saving by securing such excellent value at \$3.50.

In the large sign at the back of the window, it was pointed out every pair was guaranteed to have sold originally at \$4.00 or over. Another point emphasized in the printed announcements surrounding the display was there was not a damaged shoe among

Specially trimmed window that caught the men's trade.

attraction, that the trim was allowed to remain three weeks.

All heavy winter weight shoes that were left, were included in the display, along with regular \$4. and \$4.50 lines and some others at a higher figure, all to retail at \$3.50. In fact, a general sale was instituted of men's shoes at this figure.

As will be noticed by the accompanying illustration, four bronze rods were run from corner to corner of the window, being fastened by wires. From the rods the shoes depended by means of snap hooks, and on each shoe was a neat ticket bearing the price, "\$3.50." The flooring of the window was formed by means of wall paper of a light pattern, with silver stripes, and the mirrors at the back lent effectiveness to the scene. In the window there were exhibited about 75 men's lines of the latest build and on the catchy lasts.

Many persons came in and bought two or three pairs for their use. The man, who was in the habit of paying \$2.75 and \$3.00

them—that all were perfect, and dwelt upon the fact that \$3.50 was a popular price.

Speaking of results of a specially dressed window of shoes selling at one price, Mr. Wilson said he thought that having a separate ticket on each shoe was more impressive and convincing than if there was only one large priced card in the centre of the exhibit. One very interesting feature in connection with the window trim at the Wilson store (which was established in 1863), is that, for the floor or bottom of windows, effective use is made of wall paper. This is purchased in remnants from some stationery store and its employment enables a new bottom to be put in every time that the window is dressed. The wall paper is generally made to harmonize with the decorative scheme and is a timely and economical means of adding variety to interior adornment. Mr. Wilson finds it effective to tone up his windows on holiday occasions.

Some Timely Observations and Comment

ADVANCED PRICE OF SHOES

Business in shoes has been good for the past month, as far as the retail end is concerned. The cool weather prior to Easter no doubt had some effect in retarding spring business, although most dealers assert it was better than last year up to that point. Since Easter there has been an increasing demand, and if it only keeps up the season will be a record one. Wholesalers report a good beginning for fall trade, although dealers in many cases shy at the advanced prices asked. The best buyers, however, seem to realize that the increase is necessary, and are covering themselves. In most cases advances have been asked by dealers on regular lines, and in some cities and towns this action has been the result of mutual conference amongst firms in the trade. Everybody seems pleased with the outlook.

MUCH ACTIVITY IN BUSINESS

Reports from all quarters indicate activity in practically all lines. In spite of the high prices ruling in most lines of food-stuffs, there seems to be no falling off in the demand, which goes to show that the people are abundantly able to pay for what they want. Indications from across the line, where, until recently, times have not been as brisk as here, seem to warrant the belief that even with a presidential contest imminent, trade is growing by leaps and bounds. A fair indication is the fact that the steel trust is working almost to its capacity practically. Spring trade is reported from rural districts as fully up to the average, while in the cities there has been a notable increase in business. It looks as though the season would be a most satisfactory one.

INCREASED COST OF HIDES

Tanners are holding off and are only buying what they actually need to complete orders and meet their regular trade. They claim that the prices of all hides are an average of fully three cents above the actual worth of the raw stock, and claim they have to put their wits to the utmost use to get anywhere near whole in the manufacture of their product. A great deal of the hides offering are still undesirable and at the prices quoted make profit unthinkable. The slight advances in the market quotations of leather do not begin, tanners say, to represent the increased cost of hides and manufacturing. Some producers appear to be getting their prices, while on some sides there are reports of shading. Business in leather is good, both here and abroad, as it is the beginning of the shoe manufacturing season.

LESSONS FROM RECENT DISASTER

The terrible loss of life and property in the foundering of the *Titanic* may seem a strange dispensation of Providence, but man has had to learn his lessons both individually and collectively at great cost in order to profit by them. Had all the passengers on the *Titanic* escaped, the hitting of an iceberg by that vessel would have been a matter of interest to Lloyds principally, and the incident would have been forgotten after a few days, as with the *Republic*. The searchlight has, however, been turned on the whole question of ocean navigation, and already some most desirable results have been reached. If increased efficiency in the way of lifeboat accommodation, searchlights, and emergency drills alone were secured the end would doubtless be the saving of many lives. But we are also likely to see a

rigid supervision of routes, time, watches and intercommunication amongst ocean-going vessels.

THE MULTIPLICITY OF STYLES

Retailers complain that the number of styles shown for fall would seem to indicate that either some manufacturers are not getting the business they think they should, or they are inordinately greedy. Usually the fall season is regarded as one that does not call for much effort in the way of new designs or changes in styles. It would seem, however, as though one season were becoming as bad as another for innovations, and those who sell shoes are wondering where it will all lead to. Stocks have to be twice as large as they were a few years ago to keep pace with the requirements of the trade, and it is a severe tax upon the selling staff as well as upon the finances of any ordinary concern. But good times have the faculty of precipitating many peculiar situations.

EARLY CLOSING MOVEMENT GROWS

All the merchants selling shoes in Hamilton, with the exception of three, have signed a petition for early closing. The request was presented to the city council recently and the necessary by-law that shoe stores close on Tuesday, Wednesday and Thursday nights will likely be passed. Shoe selling conditions in the Ambitious City have not been ideal by any means for a long time. Possibly half a dozen dealers closed the shops at six o'clock at night, but the remainder kept open until all hours. The result was that both clerks and proprietors had a long siege and naturally envied the position of merchants in other towns whose stores closed every evening (except Saturday), at six o'clock. However, the Hamilton retail shoe establishments will soon be shut three nights in the week. This is considered a very progressive step in the interests of the trade.

ABOLISH THE LEDGE IN YOUR STORE

"I have noticed that a shoe store, which has a ledge running along about three feet from the floor, never looks as well as where the shelving is straight up without any projection. It is very much on the same principle as a flat top desk compared with a roll top," declared a Stratford shoe man the other day. "The flat top desk, by its very presence, and by the nature of its layout, compels that everything should be characterized by system, order and arrangement—whereas, on a roll top desk papers are thrown here and there, or left promiscuously and the top closed, when the occupant is in a hurry or in an indifferent mood. The same remarks will apply very largely to a ledge in a shoe shop. Cartons of all kinds are allowed to rest upon it, boots are scattered here and there—it is an abiding place for strings and papers and a general litter, that will accumulate in spite of the best organized effort. Now, when there is no ledge, a clerk will not take a carton from the shelf. He will simply remove the shoe, place the cover on the bottom of the box and, if that shoe does not give satisfaction, it will be returned to its place at once; whereas, if the carton is taken down, the shoe will likely be left alongside of it and may remain there for hours. There is no more necessity of the old-fashioned ledge in a modern shoe store than there is need of a long counter. In the repair shop, where there is an abundance of chairs there is apt to be litter and dirt and callers are inclined to remain, sit around and have a chat, whereas, if there is no resting place, the repairer will do much more work and not be interfered with. It is the same with the ledge. The very fact that it is there, tempts otherwise neat and orderly persons to lay parcels of all kinds on it."

Encountering Human Nature in Retail Shoe Trade

The Fads and Fallacies of Some Customers—How a Shoeman is Supposed to Keep Everything for Everybody—
The Salesman Gets a Close Line on Family Affairs—Some Sidelights

"Oh! he is such a kind, agreeable and obliging man, and she such a thoughtful, sympathetic lady."

Expressions like these are often heard and heedlessly made. Most anyone in business life to-day is approachable and considerate enough if you are not trying to sell them anything or seeking to secure money from their pockets. It has been truthfully remarked that to know a man or woman thoroughly you must do business with them. It is then that the true characteristics and real inner self are revealed.

There are many people in this world who think more of a

dollar than they do of their principles, who hold cash in greater regard than they do character, and would rather get a bargain than do a kindly deed or a generous act. Such dispositions, weaknesses and shortcomings all help to make up the force of personalities that are doing business to-day.

There is possibly no field in which all the varied elements of humanity are seen to greater advantage than in the retail shoe store. It is a strange phase of human nature that many people who are never very particular or picky regarding dress in general are first-class cranks when it comes to pur-

A HAPPY GATHERING ON THE RAILROAD BANK

The foregoing picture shows a pleasant and prosperous appearing group of rubber exponents on the railroad bank near the Kimmel felt factory, in Berlin. One might naturally suppose they had assembled in a hayfield, judging by the character of the surroundings. Their visit to the county town of Waterloo was to inspect the busy felt factories in that thriving centre. The occasion was an outing for the representatives of the Canadian Consolidated Rubber Co. at the time of the annual conference.

In the front row (from left to right) are: T. H. Rieder, of Montreal, vice-president of the company; Harry D. McKellar, of Canada Felts, Limited, Berlin; A. J. Kimmel, Berlin; Oscar Rumpel, of the Berlin Felt Boot Co.; E. M. Zavitz, Ottawa manager; Hugo Wellein, of the head office staff, Montreal.

Second row: R. J. Younge, general sales manager; R. M.

Butler, traveler for Northern Ontario; W. G. Martin, city traveler, Toronto; W. A. Allan, district manager, Vancouver; W. S. Louson (now general sales manager for Ames-Holden-McCready), and J. A. Connor, London manager.

Third row: A. G. Hymmen, traveler, Montreal; R. E. Jamieson, Toronto, district manager for Ontario; C. F. Veitch, manager of the footwear department, Toronto; V. LeChambre, Quebec manager; F. E. Partridge, superintendent of the Canadian Rubber Co., Montreal; A. N. Douglas, Winnipeg manager.

Rear row: A. Angus, assistant sales manager for Ames-Holden-McCready; A. W. Young, secretary of the Kimmel Felt Co., Berlin; J. M. S. Carroll, Montreal district manager; Charles Holden, Winnipeg, Western sales manager, and M. McGowan, manager of the shoe department, Winnipeg.

chasing headgear or footgear. The hatter or haberdasher will tell you of many amusing experiences that he has had with men of different degrees of temperament and eccentric ideas in the matter of style. The shoe merchant possibly has as many "queer" customers as any man in trade.

Several Points of View

In making a sale several points have to be taken into consideration. He has to keep three chief thoughts before the average customer—a proper fit, the right style, and suitable price. Often a shoe suits, but the patron does not want to pay the price, or possibly has not the money to do so, and sometimes while the price is satisfactory, the shoe is not, either in the matter of size or width, and is not of the right kind of leather, or toe.

To dwell upon the human nature element in a day's transactions is a revelation. A leading retailer, who has been seventeen years in the boot business, and has, within that period, encountered all classes of people, from the purchasers of high-priced footwear to the buyers of brogans and buskins, was in a reminiscent mood the other day when the *SHOE AND LEATHER JOURNAL* man dropped in to have a chat with him. Here are some of his observations, and the average shoe seller will be able to recall many parallel instances.

The Vivacious Stenographer

There is a chic and chatty young stenographer or saleslady, who enters with a friend, or possibly two. She wants a pair of high cut button boots, single sole, size 2½, in B. width. Several are shown her, some in tan, dongola, and gunmetal. Then she selects one pair as particularly pleasing and suitable in every respect. She then asks her friends how they like that pair, and, of course, one friend likes something else; the other prefers a 16-button shoe instead of a 14-button. Thus the discussion begins and continues possibly for a long time. The purchaser is anxious to please herself and tactfully yield to her friends as well. They in turn think that she has no taste or judgment if she don't, and a long time often elapses before a sale is closed. If the lady in question had entered alone, she could have been much more easily satisfied and would have completed the purchase in one-half the time. The trouble is that many women customers seem afraid to trust their own opinion or to come to any decision by themselves. They must bring in a friend, relative, husband, or someone else, and are swayed this way and that. It is rarely that two people in this world agree on any style, shape, model or last. This makes the shoe salesman's lot a difficult one at times.

Who IS Boss of the Family?

Another peculiarity is brought out frequently in the matter of children's footwear. "I can tell," observed the retailer, "within five minutes who is 'the boss,' providing the father, mother and child enter the store at once. Sometimes the father is very emphatic in his utterances, and demonstrates that he has the say, at other times he keeps in the background and lets the mother do the talking, and very often the child seizes upon a certain style of shoe and insists on having it. The mother says, 'No, no.' The child persists and pleads, and in the end wins. This demonstrates that the child is 'boss.' Now, what the average mother should do is to buy something that she believes will wear and at a price which she can afford to pay, and not yield to the whims or passing complaints of youngsters, whose fancy is as fleeting as an April shower. I always sympathize with people when a three, four, or five-year-old child is 'the boss,' and I pity that juvenile, who is granted such indulgence, in the years that are to come.

"I know that many a dealer takes special pains to cater and win the favor of the women in the family. It is the mother who does three-fourths of the buying, and if she is satisfied, then it is safely computed that no special means need be taken to look after the men or boys.

"Personally, I would rather satisfy an eccentric, cantank-

erous, and even peppery customer than I would one who comes in ready to buy, is willing to accept almost anything proffered, pays the price, and walks away. Such a patron is liable to go some place else the next time, and still another place when he or she again requires shoes. The fussy and precise client, one who requires minute attention and painstaking methods to satisfy, is apt to be a firm friend of the establishment and to talk on how well Mr. Robinson or Mr. Jenkins has met his or her specific footwear needs.

Minimizing Size of the Foot

A rather humorous experience came under my notice a few months ago. A woman who takes a number 6½ E., but wanted those who waited upon her to believe that she had a very delicate and dainty foot, came into the store one afternoon. The chief clerk in the ladies' department, forgetting himself for the moment, asked her, after she was seated and said that she wanted a pair of pumps, 'What size, please?' Looking at him very frigidly, she observed, 'Young man, I came here to be fitted. The question of size has nothing to do with my feet.'

"It is a strange fact, as well as commentary upon human nature, that certain persons, both men and women, think it an honor, a charm, or a personal attribute to have small pedal extremities. There is nothing to be particularly proud of in abnormally miniature 'pedestals,' and the sooner persons become disabused of this conception, the better for them. Many callers, particularly women, will not allow you to remove their shoes and permit you to fit on a new pair until they have first made you show several styles. Then the woman will ask you if you have size three on such and such a last, and even men will enquire if you have seven in a patent colt blucher. When you come to try on the sizes asked for, it will invariably be found that they are too small, that they require two sizes larger, and the would-be lady purchaser will exclaim: 'Well, well, that seems strange, too. Why, the last pair that I bought were only 3's.' Such tales are merely fiction, romance, or a pleasing figment of the imagination. Some people do not want to tell the truth at the outset. They prefer to exaggerate, in many cases, and to minimize in others. It is one of the oddities of human nature that, in the matter of one's feet, the tendency is certainly not to err on the side of ponderosity.

A Candid Confession Is Made

"Sometimes a man enters and will tell you frankly that he is a bit of a crank. Other times a woman enters and candidly confesses that she is awfully hard to suit, and has an extremely difficult foot to fit. We have generally found that people who admit this are easily satisfied and only imagine that they are fussy or idiosyncratic. It is something the same as with a man or woman who tells you how bad she or he is. You can generally discount their stories and conclude that a voluntary confession of depravity is not nearly as black as the narrator paints or pictures.

"I could deal with a great many other types of humanity, from the fellow who has recently secured a job in a tannery or leather factory, comes in here and tries to 'tie us up in knots' with a bewildering display of knowledge, forgetting that a little learning is a dangerous thing, to the fresh, young chap, who has just secured a job in a shoe factory, and, after he has been running a machine for two or three weeks, imagines he knows all about the make and construction of boots. Then there is the veteran, who was a shoe repairer in his youth, and the lady whose brother or father was a footwear merchant.

The Gamut of Foibles

"So the gamut of human experiences is as varied and as comprehensive as the stock on my shelves, and you perhaps know the number of styles that a modern retailer has. Why, you would be surprised if I told you that in the average shoe store of to-day there are between seven and twelve thousand pairs, either on the floor itself or in the reserve stock room. The number of lines is simply appalling. Why, in men's, I have

200 different styles, ranging in price from \$1.00 to \$6.00; in boys', 50 styles, ranging in price from \$1.00 to \$3.50; in little gents', 25 styles, selling at from \$1.00 to \$2.25. In women's I have 250 lines, running from \$1.50 to \$5.00, and in misses' about 45 lines, going as high as \$2.50 and \$3.00. It will thus be seen that it requires some knowledge to have a thorough grasp of one's stock, but it also requires discipline and complete mastery not to lose one's temper or to retort in a satirical way to the many questions, foolish and flippant, that are fired at us every day we live.

"It would require pages to tell you of the various dodges that certain customers resort to in a vain endeavor to obtain credit, for I may say that we always do a cash business. Then there are persons who always want shoes sent on approbation or asking for styles that they know we do not carry, but which they may have seen in a larger city. They want to indirectly inform you they have been out of town. Besides this small army of disgruntled ones, there is the person who can always obtain better satisfaction at Tompkin's, down the street, or from Gardner, in the north end. They say that we are making too large a profit, that we do not keep up-to-date.

Many Tender Advice

"They tell us how to run our business, what will sell, what hours we should keep open, what class of trade we should cater to, and all that sort of guff, which we must bear with tolerance, composure and dignity. It is pretty hard at times, after a trying day, to have someone come in and calmly tell you how you should manage your affairs and direct your business. The greatest study of the present day is 'human nature,' and if one can keep himself well in hand and be tactful, diplomatic, thoughtful, but yet firm, there is no reason why he should not make as big a success of mercantile business in the shoe line as in any other avenue of trade; and look at the rich and ripe harvest of 'experiences' that he is reaping every day in proud, peevish, popular, plump, pretty or pompous patrons, whom he has to please."

Does It Pay To Talk Too Much?

"You occasionally hear travelers boasting about how much business they placed during such and such a season. One man will tell you, with a good deal of pride and self-appreciation, that his sales amounted to \$75,000 last spring and \$60,000 last fall. Another road man will perhaps add five or ten thousand to these figures, and so the process of exaggeration goes on," remarked an Ottawa traveler the other day to the SHOE AND LEATHER JOURNAL.

"Now," he went on, "I do not believe that anything is gained in bravado or hot air talk. I never tell one retailer how much a competitor in his city has bought from me, or how large an order I was given by Brown or Jones in another town. I endeavor to mind my own affairs, and sell shoes for the firm I represent. I do not think that the average dealer wants the amount of the order which he has placed peddled around by word of mouth to rivals, and on this point I have always kept silent. Not that I have any objection to a man letting off a little steam if he wants to, but I find minding my own business the strongest part of salesmanship valor.

"I have known fellow travelers to tell me about how large an order Jenkins placed with them for children's goods, for women's goods, or for men's oxfords. I had no idea that Jenkins, who was not a customer of mine, was such an extensive buyer, and had always neglected calling on him. However, the next time I visited the town I made it a point to see Jenkins, and secured part of that big booking which my traveling friend had been shooting off about. If he had kept his mouth shut, I do not suppose that I would have thought of this man as a likely customer, but I received a valuable pointer, and naturally acted upon it. The result will be that when my vaunting road friend goes around for Jenkins' order next time, he will discover

to his dismay that he has already placed a generous share of it with me. I do not think it pays to tell others the extent and nature of the business you are doing. It may be all right with some, but with me I am afraid it would not prove a very profitable venture, in fact, a boomerang."

Celebrates His Diamond Wedding

Mr. John Hellyar, the veteran shoe merchant, of Bowmanville, and Mrs. Hellyar, celebrated their diamond wedding anniversary on April 22. The occasion was marked at "Gladstone Villa" by a happy gathering of children and grandchildren. Sixty years of peaceful and prosperous wedded life is an unusual event in the present day and age, and therefore such an occasion was worthy of significant recognition. Mr. Hellyar was married to Miss Catherine Brenton at the Bible Christian parsonage, Cobourg, Ont., on April 22, 1852, by Rev. John Edwards. Both bride and groom were natives of St. Eyal, Cornwall, Eng. When John was only five years old his father died, so that he

was early left to make his own way in the world. As a youth he was apprenticed to Catherine's father and with him learned the shoemaking trade. Being children together naturally they became closely acquainted. The intimacy ripened into affection, which later led to their union. On April 11th, 1850, the Brenton family sailed for Canada, and John accompanied them to the new land. They made their first Canadian home in Cobourg, where, after living two years, the young couple were married. After two years' further residence in Cobourg, they moved to Tyrone, and for twenty-nine successive years they continued to reside there. In 1883 they moved to Bowmanville. In 1902 Mr. and Mrs. Hellyar celebrated their golden wedding. Many friends will wish them many more years of health and happiness.

On the Road

SOME EXCEPTIONS TO THE GOLDEN RULE

"Yes, 'gratitude is often a lively sense of favors to come,'" remarked a Quebec shoe traveler, seated in the smoking car on his way to Toronto the other evening. "The man whom you befriend the most is he who will often turn you down cold. Now, our firm last year wanted a man to represent us in Eastern Ontario. I practically had the appointment—that is, I knew the one whom I recommended to the boss would get the job. I had an acquaintance who was in the retail business in an Ontario city. He told me that the house which he had represented on the road for a number of years was likely to part with his services. You see, he had been in the retail line and selling shoes in Western Ontario as well. He came to me, when I had my fall samples displayed, and placed an order for about a thousand dollars. He said that he could use two thousand dollars' worth of my goods in his shop, and he hoped that I would use my influence to secure him the post in the eastern territory.

"Now, I had partially given my promise to another man, who was retiring from the retail trade and was desirous of going on the road. He had good experience behind the counter, but, not having traveled any, I thought that, all things being considered, a fellow with some insight in the selling game outside would prove a more efficient representative. I had really no preference in the matter, but said to myself: Now, the first mentioned chap can use a couple of thousand dollars' worth of my goods annually, which means a hundred dollars' commission to me, and perhaps I should favor him. I went down to the factory some weeks after and spoke to the boss regarding this retailer-traveler, and he inquired all about him. The applicant—Cleaver—had one or two faults, but was a fair salesman.

Wanted to Square Things

"Perhaps I recommended Cleaver a little too highly. Any-way, he was taken on, and I wrote a letter telling him that I had secured the post for him. He never acknowledged my communication, but at this I was not greatly surprised, and supposed that everything would be all right. His order of one thousand dollars worth of goods was ready. I was about to order them to go ahead as I was departing, when, to my surprise, I received a cancellation or words not to ship the goods. I was dumbfounded, could not explain the matter at all to the firm, and told them to wait until I went West. On the street, a few days later, I met Cleaver, and he invited me to come in and have a drink. I refused and inquired of him what was the matter that he had cancelled his order? He said that he would take the goods in a few days. I was to leave them at the factory, and accordingly I instructed the house to that effect. Cleaver informed me that he could not take the new position, as his old firm had reconsidered things and would continue him on the territory which he had covered so long. I did not mind this so much as I still had the other man in view and knew that he would gladly accept the now vacant situation. Days passed and Cleaver religiously kept out of my way. I expected to hear from him all the time about shipping the stuff for his retail store,

but not a word came. I met him accidentally. He wanted to smooth things over with a cigar and a friendly chat, informed me that he very much regretted he could not accept the shoes which he had ordered, that he knew his treatment of me was not right in view of all I had done for him and the manner I had looked after his interests.

"Well, on that order I dropped about fifty dollars, but I took an oath to myself that I would get even for such a raw deal even if it took years. One day he was in a boot shining parlor when I entered. I spoke to him and asked: 'How much money have you, Cleaver?' He said: 'About thirty-five dollars.' 'Give me twenty-five?' I requested, and he handed over the notes. A day or two later I dropped him a pretty plain epistle informing him, in no unmistakable terms, what I thought of his conduct, and explaining this was my means of squaring matters for the dirty trick he had played upon me. I told him if he thought he could get the money back to go ahead and we would see who was the better man.

A Campaign of Slander

"Then what do you suppose he did? He went around to a number of travelers telling them that I had virtually stolen twenty-five 'bucks' from him. I would have known nothing about it only a friend was good enough to give me the tip. I found that Cleaver was circulating all sorts of rumors and some of the mud that he slung might stick. Finally I relented and mailed him a check for the twenty-five. I know that my method of retribution may not be admired when I borrowed that twenty-five, but I had lost my commission on the goods, had secured for him a job and used him the whitest that I knew. I might say again that, previous to my dealings with him I had only known him slightly, and where I made the mistake was in recommending him to the boss and listening to his plausible yarns. The next time that I endorse any man for a job I *will know him through and through*. You do not often get thanks for kindness done to one who beseeches you to come forward and put in a good word when he thinks that he can use you to advantage. Giving the other fellow a boost is all right when you know the fellow, but be careful whom you boost. That act of mine in booming Cleaver got the boss sore on me; the factory had to turn over his cancelled order at a loss, as they had kept the shoes on the floor for several weeks ready to ship, and I dropped many dollars."

FINDS IT BRIGHT AND BREEZY

Enclosed you will find one dollar for renewal of my subscription to the Shoe and Leather Journal. I am always anxious to receive this paper. The news and discussions in it are up-to-date, bright and breezy.

Faithfully yours,

G. W. WILSON.

Markham, Ont., April 18th, 1912.

Some Bright Exponents of the Shoe Business

A Few Words Regarding the Identity and Career of Those Who Were Successful in Recent "Going Into Business" Competitions—A Feature That Proved of Lively Interest and Was Generously Appreciated

The recent salesmanship competitions on "Going into the shoe business with a cash capital of \$1,000" or "\$2,500," have been closed. The names of the winners in each contest were announced in the editions of April 1st and 15th respectively. Their contributions were eminently practical, helpful and timely, and no feature that the SHOE AND LEATHER JOURNAL has introduced for many months aroused such widespread concern.

A. E. EDGAR,
Windsor, Ont.

In the competition on "Going into the shoe business on \$1,000 capital," the first prize was captured by Mr. A. E. Edgar. Mr. Edgar is the son of Joseph S. Edgar, of Windsor, Ont., who has been in the shoe and clothing business in the Frontier City for thirty years or more. Mr. Edgar, Jr., has always made a close study of trade problems, and has devoted considerable attention to writing on a number of interesting mercantile topics. He is the author of that excellent work, "How to Advertise a Retail Store," and "Simple Stock-keeping System," which appeared in the SHOE AND LEATHER JOURNAL some months ago. He was for a number of years ad. critic for a leading publication in the United States. In his home town he is a member of the public school board, the library board, and other representative bodies. He is a public-spirited citizen, and a master of anything that he turns his hand to.

F. A. Robinson,
Saskatoon, Sask.

F. A. Robinson, who won second prize in the contest, is one of the brightest and brainiest shoe men in Western Canada. He is a shrewd buyer and a close student of shapes and styles. For several years he had full charge of the shoe department in the large departmental store of Currie Bros., Saskatoon, who, some months ago, disposed of their business to F. R. MacMillan & Co. Recently several improvements have been made to the premises, and Mr. Robinson is still the man at the helm. If there is one thing more than another in which he is successful, it is in training help. He believes that more attention should be devoted to this branch of the shoe line, and says that there are to-day many second and third-class clerks; but first class, reliable, efficient salesmen are scarce. Mr. Robinson has been a reader of the SHOE AND LEATHER JOURNAL for nearly a quarter of a century. He occasionally visits Toronto, where he has a number of friends in the trade.

JESSIE CUMMING,
Fergus, Ont.

The winner of the third prize was Miss Jessie Cumming. She is a clever young lady, who is employed in the shoe store of H. L. Harrison, Fergus, Ontario. Miss Cumming does not betray her name. She is certainly one of the "coming" ones in the shoe arena. In the salesmanship competitions, which were conducted some time ago in this paper, she was successful in carrying off a prize, and, when the going into business competition was presented, she likewise entered, and proved herself worthy of a place, in the face of considerable opposition. Mr. Harrison speaks of her worth and work in his store in most appreciative terms. She is an excellent stock-keeper.

In the \$2,500 competition, the winner was A. L. Wright, of Peterboro. He was for a number of years with Morris & Co., of Glace Bay, C.B., and some time ago removed to Peterboro, where he resides at 595 George Street. Wright has given considerable attention to every phase of the shoe trade, and in the competition of shoe selling experiences was successful in carrying off first prize in August last, and in another competition, two months later, he won second prize. He not only has some practical ideas, but has the executive ability to carry them out. A young man with a bright future ahead of him, he is a diligent student of everything pertaining to the shoe trade and style problem.

A. L. WRIGHT,
Peterborough, Ont.

D. J. M. McGeary, who was successful in taking the second award, is the manager of the Royal Shoe Store, in the progressive city of Saskatoon. For a number of years he was employed in Winnipeg establishments, previous to going to Saskatoon. Mr. McGeary is a firm believer in attractive interiors, artistic fronts, the uniform carton system, and other impressive accessories. The Royal Shoe Store has for a long time given coupons free to each purchaser of a pair of shoes, entitling the holder to five free shines. Such shines are a part of the policy of the store. He is a close student of styles, and has the ability to read human nature in a marked degree. He is an adept on fitting.

D. J. M. McGEARY,
Saskatoon, Sask.

John Maw, of Ormstown, Que., is one of the veteran retailers of that province. He has made a success of the shoe business, and enjoys the esteem of the citizens, both in a business capacity and as an upright resident. He has been a reader of the SHOE AND LEATHER JOURNAL ever since the first copy was issued, over 25 years ago, and he declares that each issue is brighter and better than the preceding one. Mr. Maw is a gentleman of quiet disposition, good judgment, and up-to-date ideas in stock and store methods. He has built up his trade on quality and service. He thinks there are too many and too frequent changes of styles to-day for the retailer's good.

JOHN MAW,
Ormstown, Que.

Arthur L. Wilson, of Hamilton, is a son of Robert Wilson, who is the oldest retailer in that city, and does business at 73 King Street East. Mr. Wilson, Sr., started in the shoe business in 1863, and next year will celebrate his golden jubilee. This is a record of which few retailers can boast. Arthur L. Wilson is both alert and aggressive in the shoe line and a window trimmer of ability and good taste. He has practically grown up with the trade and believes that the footwear business is one of the most interesting and enlivening that can engage the attention of any young man, providing he loves the smell of leather, is a follower of styles, and likes to come in close contact with people.

ARTHUR L. WILSON,
Hamilton, Ont.

Some Stray Shots from "Solomon"

He who loses his temper in an argument prejudices his case. The man who is sure of his ground has no cause to give way to violent feelings. There are some people who are everlastingly going about with a chip on their shoulders and seem more concerned about their dignity or reputation than the rightness of their cause or their character. In spite of their being constantly under arms to repel invaders, they are shot full of holes every day. "He that hath no rule over his own spirit is like a city that is broken down and without walls." He invites attack, where calmness of spirit would otherwise inspire confidence. Even when a man's cause is a righteous one he injures it by "going up in the air." Besides this, the fellow who has learned to "keep under his body" has won the greatest fight of life, and is only then prepared for other conquests. Get a grip on yourself. If you can't, get Someone stronger than yourself inside.

There are some people who are in the "rag and bone" business in life, and make the gathering of "scrap" their sole aim. They go about gathering and retailing the scandal and shame of a community with the avidity that characterizes the dealer in junk who haunts our back lanes. When you mention a name it suggests to them some mental or moral shortcoming, which they with hypocritical reluctance commence to recount. These business and social ghouls will desecrate the most hallowed associations of a community, in order to prove their theory that "all flesh is grass." The man who delights in the thought that every man is crooked and every woman is weak is a bad man to have dealings with. He would corrupt angels if he got the chance. How much better is the one who is constantly on the hunt for good, and who always seems to find plenty of it. "As cold water is to a thirsty soul, so is good news from a far country." The man with "good news" is like a breath of spring after a March blizzard.

Instead of jumping on your enemy or hitting him on the head with a club try the other way. There is philosophy as well as religion in the advice of the wise man: "If thine enemy be hungry give him bread to eat; and if he be thirsty give him water to drink." Whatever wisdom there may be in the saying that "more flies are caught with honey than vinegar," there is no getting around the fact that the keenest kind of revenge is returning good for evil. Most men can stand a brickbat or will face a gun, but few care to have a bun given them in return for a stone, or a boost for a blow. People are learning that the bludgeon never pays. It is stated that Queen Elizabeth pardoned a woman who made an attempt upon her life, and afterwards made her a lady-in-waiting. This queenly magnanimity not only disarmed the enemy herself, but no doubt made for the safety of the queen, as far as others were concerned.

A man who cannot be depended upon is worse than no help at all, for a man when "up against it" and alone will make an effort to fight his way through with some chance of success. But a chain is only as strong as its weakest link, and when the strain comes it does not matter how much good iron may be in it and how well the other links have been forged, the one weak spot will prove fatal. "Confidence in an unfaithful man in time of trouble is like a broken tooth and a foot out of joint." Did you ever try to chew with a broken tooth? It is worse than having to "gum it." Have you ever tried to put your weight on a weak ankle or a dislocated leg? You could navigate better without any leg at all. These people you can't depend on would

be better out of your way. They are a heartscald as well as a hindrance.

The other night there was every appearance of a nice spring rain. The wind was in the right quarter, the clouds were lowering, and we had every reason to expect a down-pour, but it came not. There are some people who lead one to think they are going to be a help and blessing to the community or that they will accomplish wonders in their particular sphere, who do not "pan out." "Whoso boasteth himself of a false gift is like clouds and wind without rain." Be content to take your place quietly, where Providence has placed you. Take yourself as seriously as you like, but don't force the idea upon other people that you are a marvel, or they will expect more than you can produce in a show-down. Put in your best lies and leave to others to decide whether you are the only man in the town who knows his business. They are in a better position to judge than you.

Don't tell abroad your troubles, especially those you have with your neighbor. You will find it hard to patch up a difference when it has become common talk, even when both parties have agreed to come to an understanding. When you have trouble that is worth while and needs mending go to the man who is most concerned and talk it over with him. Half the troubles in life will disappear when they are faced. It is the running about and cackling about differences that make them so hard to settle. "Debate thy cause with thy neighbor himself and discover not a secret to another." A celebrated divine was bitterly attacked by an opponent in a pamphlet. He wrote a scathing reply, and before sending it to the printer read it to a friend, whom he asked to suggest a suitable title. The friend replied, "'Go to the Devil,' by the author of 'Come to Jesus.'" The divine had written a very popular tract under the latter caption. The "scathing reply" never reached the public.

The man who is quick to pick a quarrel is his own worst enemy. He will find plenty of trouble waiting for him and his very attitude will prevent him meeting it with advantage. The man who is looking for trouble is always the least prepared to handle it. To be forewarned is to be forearmed, but to be always meeting trouble half-way is to demoralize one's ability to dispose of it. "Go not forth hastily to strive lest thou know not what to do in the end thereof, when thy neighbor hath put thee to shame." As Shakespeare says, "Beware of quarrels, but let him beware that quarrels with thee." Be the last to resort to war and only consent when all efforts to secure honorable peace fail. Most of the private and public quarrels of life are precipitated by hot-headed, foolish people, who do not stop to think until they are badly hit in the fray.

You "gave as good as you got," but were you as good a man after as you were before? It is a temptation with most of us to "get even," but the process, often as not, leaves us very "uneven" when we get through. If you let this spirit get hold of you it will bring you to the level of a common thug. It is the law of the jungle—an eye for an eye, a tooth for a tooth, cursing for cursing—and if you want to get down to the level of the wild beast there is the path. One of the best tonics for true manhood is the practice of the advice of the "Greater than Solomon"—"Bless them that curse you, do good to them that despitefully use you." But even the Wise Man says, "Say not I will do so to him as he hath done to me: I will render to the man according to his work."

Big Net Profits Made in Pushing Sale of Findings

When They Are Properly Boomed—What to Buy and How Much to Spend—Hints on Displays and General Management—Findings Offer a Broad Field for Effort Not Yet Exploited to Anything Like Its Possibilities

There is money in findings, *but*—don't trip over that "but"—you've *got* to push them to get it. The shoeman who, when he is asked for shoe laces, dressings, or some other of the many different wares combined under the word "findings," has to go to the cellar stairway or some obscure place in the stock room to get the article requested, need not wonder if his findings sales are rather thin in spots. The man who, by such actions, practically apologizes for keeping findings at all, should quit the findings business right away, and acknowledge that he is a back number along that particular line.

Much Net Profit in Findings

Profit? Yes, plenty of it. As a comparison, the *average net profit* on shoes is approximately 15 per cent.—*net profit*, mark you—while on findings the net profit runs anywhere from 25 to 100 per cent., and even more. And it is "easy money." A big turnover can be made on findings in a little while with very little trouble or loss of time.

That is only the direct profit. Look at the indirect returns. Findings are great feeders for the regular shoe departments. Many a person, under the influence of skilful salesmanship, will stay to buy shoes, whereas he only came in to purchase laces or shoe polishes.

How to Succeed

First and foremost, organize a separate department for all findings. Place them in that department; see that all purchases are charged and all sales credited thereto. Next, see that the position of this department is as advantageous as possible. The closer it is to the door the more likely are the findings sales to mount up. As findings take up very little floor or shelf space, it should not be hard to secure this position.

Buy a *good* showcase. A great deal of the success of this department will depend on the appearance of this showcase, therefore don't "save at the spigot and waste at the bung." A cheap, shoddy-looking case robs the whole department of that bright, up-to-date appearance that is the hallmark of every well run shoe store. For about \$40 you can buy a handsomely-finished showcase of quarter-cut, mission or fumed oak, with plate glass top and shelves, plated, adjustable shelf brackets and mirrored doors. Just here it is well to add that, if you have electricity the case should also be wired, and nickel reflectors placed under the upper front glass, so turned that the light will be thrown *into* the case and not into the observer's face or around the room. A good average-sized case measures 6 x 3 x 3 feet, and will hold quite a tasty display.

Such a showcase will attract a great deal of attention, provided care is given to arrangement and harmony of display. It looks especially inviting at night, and many a dollar's sales can be traced directly to the desire to buy some article in the display that strikes the eye.

What to Buy

Many people seem to think that the term "findings" includes only laces and polishes, brushes and kindred items. But these are only a small portion of the stock of a well-laid-out department. Look at this list: Shoe trees, rubber heels, insoles, heel cushions, arch and ankle supports, shoe lifts, buttonhooks, ice-creepers, heel plates, canvas cleaners, bunion protectors, corn removers, etc. When you broaden the field a little, and add to

these such articles as buckles, shoe ornaments and bows of all kinds, it is readily seen that the scope of the findings department is a large one. Moreover, hosiery can really be included in the findings department in the average medium-sized store. It can be displayed to advantage with findings in showcase and windows, and when carried with findings stock, it saves accounting. In large city stores, however, it will probably be found more convenient to carry these items in separate departments, and this is usually done.

The proportion of your capital to be spent on these different classes of findings depends largely upon circumstances, and must be decided by the shoeman according to his best judgment, based upon the way in which such things have sold in the past. Of course, laces, polishes, rubber heels, buttonhooks, and like articles always sell readily, and hence a sufficient stock should be kept on hand. As to the ordinarily less readily sold articles, it is a matter of judgment. "Go light until you gauge the pulse of the actual demand, and find out what is the prospective demand," is a safe motto.

How Much to Spend

As to how much it is necessary to spend at the start, or, to put it in another way, how little one must spend to secure favorable results from the venture, opinions differ. However, from \$100 to \$150 will buy a fairly representative stock, and as repeat orders are quickly filled in these days, and turnover frequent, not much more than that amount need be set aside for the foundation of a good-sized findings department. This is exclusive of the cost of the findings case and any other fittings. And, of course, the usual terms can be secured when placing a findings order, so it is not necessarily a C.O.D. proposition. If one takes advantage of all discounts, it helps greatly to make the department a success.

Display Methods

Too often the mistake is made of using the showcase as a sort of storehouse for findings. This is a grave mistake, and goes to defeat the very purpose for which the case was bought, viz., attracting the eye of buyers in the store. There must be a neat display to do this, and that does not mean a mass of materials huddled together helter-skelter, any old way, but a few articles, tastefully arranged.

In window displays the same mistake is often made—that is, when the shoeman is interested enough to devote a whole window to a findings display. Too often, findings are given an obscure corner totally overshadowed by the rest of the display. This is suicidal to success. Why, the writer has seen some very striking findings displays made from such things as variously colored shoelaces. In one case, from a common centre in the rear, laces were stretched to every corner of the window front, and to the sides as well. In another case buttonhooks were used as the basis of a very attractive display effort.

Concentrate in Displays

In every case, keep the display elements from clashing. Show polishing and mud brushes with blackings, but don't put rhinestone buckles, if carried in stock, in the same window—at least, not near the blackings. They are too incongruous, and hence clash. Better displays can be secured by aiming for one effect. There are plenty of chances to feature other classes of findings. Try to boom brushes and polishes one time, and arch supports, insoles, and like articles later on. This plan brings big results.

Advertise. At least, give your findings department a proportionate share of advertising space used—that is, proportion-

ate, not to price of the articles, but to the net profit to be made. Here, again, reason must dictate the exact proportion.

In a subsequent issue, the *SHOE AND LEATHER JOURNAL* will take up the interesting question of whether findings in larger stores should be sold by every clerk or whether one salesman,

and one only, should be responsible for the department. There is considerable difference of opinion along these lines, and the two methods will be discussed fully. Also the question of whether findings should be sold by salesmen on a percentage basis or not. Watch for this helpful discussion.

How and How Not To Advertise Shoe Stocks

A Few Mild Criticisms on Styles of Retail Shoe Advertising Too Common—How These Mistakes Can Be Rectified—Stick to Facts and Make Reasonable Claims If You Desire Direct Returns and Good Results

First, there is the man who is extravagant in his claims. He prefaces his remarks by stating that he is offering "the bargains of a lifetime," or some other modest assertion. He probably finishes up by saying that he is offering \$5 for \$1.99. As a general rule, however, he doesn't offer a money-back guarantee—something the public seem to lose sight of until two or three weeks' wear discloses the fact that probably the counters are rotten, and the soles and stitching are pulling apart. Then the buyer begins to howl.

Selling Under False Pretences

While one has little sympathy with bargain hunters in such cases, that does not absolve the shoeman from blame. The buyer gets what he pays for—a cheap shoe; but the shoeman really sells under false pretences—in fact, if not in law. It is gradually becoming recognized among skilled advertising men that the truth is the only thing that pays, and the day is rapidly coming when big black type and illustrations of the scarehead nature will kill the trade of the firm using such methods. The people are becoming harder to fool all the time, and the firm with a rock-bottom reputation for truthfulness is winning out—and getting the "skin-'em-alive" firm's trade.

Wasting Costly Space

Then there is the advertiser who is truthful, but who expresses himself, and tells about his goods in bad typographical form. Moreover, he frequently utterly wastes valuable space

JOHN JONES & CO.
10 ESSEX STREET

We can satisfy all your shoe wants all the time. We can fit any kind of foot. We want you to give us a call because we know if you come once, you'll come again.

JOHN JONES & CO.

in a "home made" effort to do something out of the ordinary. Note the example above. This is modeled after the style of hundreds of similar efforts throughout the newspapers every week.

For a well-meant effort, this is a shining example of *how not to do it*. And, generally, such ads. use considerable space on extreme commonplaces. No man would give such an ad. a

second thought; certainly if he wanted a pair of shoes he would go straight past John Jones' store to that of his competitor, who used a small single-column ad. something after this style:—

Men's Tan Oxfords

New Spring Styles
\$3.50 to \$5.00

We have just received a snappy assortment of Tan Oxfords in several of the latest receding toe lasts. All widths.

The workmanship is excellent; medium sole, flange heel. Just the thing for the man wanting comfort plus style.

John Graham, Shoeman

Is it any wonder that the man who wants an Oxford for spring wear goes by the door of the "hot-air" artist and buys from the shoeman who talks to him frankly, as an intelligent human being, and not after the Barnum's circus style? This change to informative copy is coming, but it can't come quickly enough for the shoe trade in general, and the delinquent shoemen in particular.

Get Down to Facts

Every shoeman must tell the buyer *why* he should deal with him and *what* he has for sale. He should impart this information in as few well-chosen words as possible. If he gives a genuine bargain, he should give genuine reasons, else the public will think it a new edition of the nutshell game. And he should back up such advertising by every means in his power. "Stand by promises if it breaks you." The public will soon learn that such a spirit possesses a firm, and they will show their appreciation in a very practical way.

Perhaps the reader may consider the sample ad. given herewith as far-fetched. It is not. Such a shoe ad. appeared in a big city daily in 10-inch double-column space last week. And this is only one sample among many. A foolish man and his money are more quickly parted by advertising than in any other way.

Rubber Footwear Took Advance of 8 Per Cent.

New Price Lists Went Into Effect on April 22—Companies All Report a Large Placing Business—Reasons Why Figures Have Been Raised—Some Retailers Now Sorry That They Held Back

The rubber placing order period is over, and all companies report an excellent business. Through the influence of literature, backed up by strong selling talks, the number of bookings in March and April are ahead of last season. Dealers find that there is a decided advantage in giving orders so as to afford factories a chance to forward deliveries in ample time. As intimated in the last issue of the *SHOE AND LEATHER JOURNAL*, the prices which went into effect early in March were not destined to remain at that figure long, owing to the advancing quotations in raw rubber, cottons, textiles, and cost of producing the finer goods. On April 22 another increase went into effect, which, taken on the average of production, means that those who held back will now have to pay about 7.7 per cent more.

It will be remembered that the first price lists showed a raise on the average of nearly five per cent., and the second augmentation of prices has brought the figures up to about twelve and a half per cent. higher than they were last season, when the companies declare they were doing business at practically below cost. They contend, for the reasons already mentioned, the elevation in list prices is warranted, and that Canadian prices are now about on a parity with those in effect across the line.

Changing Styles Add To Expense

Then the constant clamor for new lasts to fit the ever-changing shape of shoes adds materially to expenses. The retail trade, it is contended, is being fairly well dealt with, in view of increased quotations for materials and larger outlay for labor. The sorting business was particularly lively all the spring, and some lines were exceptionally low.

The Canadian Consolidated Rubber Company, the Gutta Percha and Rubber Manufacturing Company, the Kaufman Rubber Company, the Independent Rubber Company, and the North British Company all adopted the new schedule on April 22nd. The Miner Rubber Company put the new list into effect one week later. On some lines the advance has been fifteen and even twenty per cent., and on other lines only three and four per cent. The average has been taken on production and the relative demand for certain lines of goods.

Business on Firm Ground

A leading manufacturer stated this week that the rubber business was now on a permanent basis, and the outlook for the companies was better than it had been for some years. The game of doing business at cost or less was not a paying one, and as leather shoes have gone up in many lines, it could not be expected that rubber footwear would remain at the same figure. Cottons were thirty to fifty per cent. higher than three or four months ago, and raw rubber was hovering around \$1.20, and there was no telling how high it would go. Operating and selling expenses were going up all the time. No advantage had been taken of retailers, as practically all had ample opportunity to come in on the first list of prices. The trade had been pretty well covered before the second advance prevailed.

Several orders that were held back until after April 22nd were refused on the old basis, and, consequently, there were some heart burnings. This year there appears to have been little or no cutting of prices below those on the lists, and, while there have been certain rumors afloat, they have not been taken very seriously. The factories will now be in a good position to manufacture on their largest scale, and have goods ready for shipment when desired.

It is learned that the first consignments will go out in July, and August will be a heavy month. The companies will thus be enabled to take care of all sorting business, which they were not in a position to do last season, owing to an abnormal de-

mand and the fact that so many retailers held back for some reason or other, and in the end were caught short. They would wire in orders and insist on immediate deliveries, which, of course, they could not get. In many instances they lost considerable money through lack of foresight, stock, and sudden demands, for which they were unprepared.

In connection with the recent advance in rubber shoes, the most marked increases are in the lighter goods, which, previous to this year, were sold at no profit in the case of many lines. Western prices have also been newly issued, and, like the originals, have been raised about 3 p.c. higher on the average than Eastern prices. The advance on heavy goods is not so much as on the lighter lines.

The Consolidated Rubber Co. report that Dominion, Anchor and Challenge brands are advanced from 5 to 6 p.c. on the general average. In the Challenge brands, only boys', men's and youths' overshoes have been raised. The company report that the 12 p.c. per annum discount for prepayment has proved an excellent incentive to early placing, and that dozens of retailers, who formerly did not have goods shipped until September, October and November, are getting them this year for shipment by June 1st, so as to get the benefit of the 1 per cent., which would be coming to them as a result. July, August and September shipments will also be heavy.

Wore These Shoes Eight Years

A shoe that will wear eight years, stand being re-soled seven times and yet not be worn out, is something that the present generation seldom witnesses. An instance recently coming to light, furnishes evidence that the day of miracles is not over. Thomas Gillean, a prominent jeweler, doing business at 402 Richmond Street, London, Ont., walked into the shoe store of the late John Pocock away back in 1904 in that city and asked for a pair of comfortable and durable shoes. He was shown the Doctor's Special manufactured by J. & T. Bell, of Montreal, which he purchased for \$6.00. As already mentioned, he has secured eight years'

constant use out of them. There is only one small break in the vamp of the right shoe, showing a wonderful wear. Mr. Gillean had the shoes re-soled six times. The welt had then become so worn by frequent stitching that, when he took the footwear to a repair shop for the seventh attention, it was necessary to nail the tap soles. The upper stock is of the finest number one box calf. The size of the shoe is eight. In the Doctor's Special there is a sheet of rubber next to the insole, which keeps the feet of the wearer dry at all seasons.

Record Orders Coming In From Retail Shoe Trade

The New Models in Fall Footwear are Taking Admirably—The Demand for Tans Keeps Up—Extreme High Cuts are Popular with Smart Female Dressers—There is no Requisition for Extreme Effects

From one end of the Dominion to the other come gratifying reports of the large orders received for fall and winter shoes in all lines. Business appears to be opening up remarkably well, and retailers are buying freely in anticipation of a brisk fall trade. Travelers report that button shoes are having a large call, and that tans will be worn a great deal for fall. A number of bals are being presented and are also receiving some measure of appreciation.

In the matter of toes, the high toe seems to be the favorite in all the smaller centres, and dealers are doubtful about taking up the receding or drop toe except in the larger cities. However, there is a pronounced tendency on the part of good buyers to accept a number of shoes on the English last, with wide heels and broad shank. Men's button boots are growing in favor and gun metal appears to be holding its own, along with tan calf. While a number of patents are selling, still the demand is not nearly so active as two or three years ago, but knowing ones declare that before another season elapses, there will be a sharp reversal in the matter of leathers, and that the shiny goods will again come into their own.

Of course, some complaints have been heard in the matter of higher prices in women's, men's and children's shoes. There is, however, not very much kicking now as retailers are accepting the inevitable. Practically all manufacturers have raised their prices, and when there is a general movement in this direction, the result is viewed with more equanimity than it otherwise would be.

Freak shoes have by no means found favor and those which evidence clean workmanship, smooth shoemaking, quiet conservative effects, neat trims and artistic lines are in much more general requisition than anything that savors of the outlandish or the eccentric. Many high goods have been ordered, particularly in melton, whipcord, and other cloths, with legs from 9 to 14 inches in height. These walking shoes are rather high in price, retailing from \$8 to \$12, but they will be worn by the best dressers in Montreal, Toronto, Winnipeg and other cities for outing purposes. Their popularity this fall may become quite phenomenal.

Among pumps and colonials there are some novelties being shown. One is a matt calf colonial with the tongue and vamp in one piece, giving a buckle effect. Another neat offering is a moire silk pump with a silk pom pon. A patent colonial with beaded vamp and tongue is attracting attention. These have Cuban-Spanish wooden heels. In bals there is shown a gun metal walking shoe for women with a typical New York toe receding slightly, with 15-8 heel. Heavy, tan calf storm boots with viscolized soles all with one and two buckle straps are seen among many samples. The high toe is still the most popular for ladies running to a modified round toe. Nubuck offerings, high and low, along with metal button with fabric tops are liberally represented in many lines.

Reports coming in from the West indicate that the shoe business was never better than at the present time and travelers are sending in record orders to their houses, which augurs well for a busy season in the factories, and an active fall run.

New Shapes for the Young

The Weston Shoe Co., of Campbellford, Ontario, have a fine new range of fall and winter lines in infants', children's, misses', women's, and little gents'. They are presenting a splendid showing of infants' on a nature last, which is taking well with the trade. It is wide and comfortable for little feet and is seen principally in buttons and bluchers in patent calf and kid leathers. On the new Saska last a number of jockey shoes for misses are being shown with patent collar and tassel. The toe is a medium high one and wide at the ball of the foot. Gunmetal, box calf, and storm calf buttons are seen in this range. The showing for fall also embraces a large number of buttons of quiet pattern and attractive build. Patents are running rather strong and the firm are of the opinion

that there will soon be a growing demand for shiny leathers. Tans are also well represented. Shoes from five to two in little gents' and youths' are presented on mannish lasts. A number of slip and full double soles are seen for winter wear. The display is a good one and evidences smooth, artistic shoemaking, up-to-date patterns and sensible ideals.

Many Buttons for Men

The Hartt Boot and Shoe Co., of Fredericton, N.B., report that fully thirty to forty per cent. of the orders taken for men's shoes during the past few weeks are for button boots. There is a strong, steady demand for tans, and the toes shown are the high, the modified, and the receding toe. A nice shoe is a nine button gun metal on the Dinkey last with parallel buttonholes. There are a number of bals displayed on the same last. Two very attractive new lasts with the firm are the Patsy and the Duke. The latter has a drop toe, long, low, flat heel, wide shank, and natural tread. The former has a higher heel and carries a modified round, high toe for young men. Most of the button boots possess from seven to nine buttons and in all the drop toe showings, edges are very closely trimmed. A gun metal button with grey whip cord top and leather front seam is a choice offering. It is on a New York receding toe. Other specialties are in heavy waterproof calf, tan and black, leather lined, with viscolized soles. High cuts for miners, prospectors and engineers in tan and black storm calf etc., all with bellows tongue and waterproof soles, and legs from nine to fifteen inches in height, are strongly represented.

A Comprehensive Range

The spring and fall samples of J. & T. Bell, of Montreal, embrace progressive and advanced styles in shoe making. The firm has added two new men's lasts during the present season, the Strand, which has a receding toe, low flat heel and wide tread. It comes in bals, bluchers and buttons, in tan, gunmetal and patent leathers. The Durbar has a modified high toe, carrying a 10-8 heel and slip sole. A number of the offerings have blind eyelets and possess the new octagon hooks which are a novelty. There are no freaky creations, but the showing in tans and buttons is strong. A dark storm calf with viscolized sole and new perforations forms a strong feature of the line. Dr. Reed's cushion soles in dongola and calf are widely represented. A number of men's button shoes have serge tops. A seamless bal of black storm calf with crimped front and double viscolized sole is an interesting offering. A curling boot in velours calf, or kid, with dolge felt insole, felt lined, with Hercules slip sole, felt outsole and rubber heel, is a winner. A college boy's button shoe cut just above the ankle with four to six buttons, is a novelty. In women's lines the Toy, Rosary and Bungalow lasts are popular. One interesting range is the aviation boot, with melton upper, high cut, either button or blucher, rubber sole and heel, gun metal facing and fleece lined. This is a particularly popular boot for fall motoring or winter wear and a pair was recently acquired by the Princess Patricia, through a leading Ottawa shoeman. The shoe was made on a special last. It carries a fairly high toe and Cuban heel and has a fourteen inch leg. The Ottawa retailer received \$20. for a pair, which is possibly the record price for a woman's shoe in Canada. Skating boots in winter willow calf, black and tan, as worn by the Ottawa skating club are also shown. Among other artistic creations are the Princess Patricia slipper with beaded vamp and tongue and Cuban-Spanish heel. These come in satin, suede, patent and kid. Another smart showing is a gunmetal button on the Toy last with Scotch tweed top. A decidedly new last is the Puritan. It is a nice medium opera last and comes in blucher, balmoral and button with cushion insole. Dr. Reed's shoes for women are again seen in a represen-

tative range and possess smart, new top bands, stamped with catchy design, similar to that which is seen on the sole and on the face of the cartons.

Some High Cuts For Women

The Regina Shoe Co., of Montreal, are showing a representative line in high cuts for women with fourteen inch leg, which are commanding attention. The firm are making both welts and McKays, and report that tan and gun metal buttons and bluchers are their best sellers. There is also a fair demand for patents. Button shoes and pumps in nubuck and corded white canvas are displayed. In misses' and children's the showing is a good one, and the high toe is largely in evidence. Some buttons with moire silk, whip cord, and satin tops are observed. Some splendid heavy lines are shown for fall and the selection is one of the most representative ever turned out by the firm.

Get Down to Details

Know all about your own shoe business. A thorough knowledge of it is absolutely necessary if you are to cope with your competitors who have that knowledge. In this day of great industries complete intimacy with the smallest details could not be secured in the old way of knowing simply through doing. There are too many details. The business man of to-day must have facilities by which knowledge of them will come to him automatically. Well-directed effort means more than mere industry and hard work. It means that the worker must know how and when to apply his labor so as to attain the best and most satisfactory results. The success of any business depends largely upon its organization. Its organization rests entirely upon the systematic carrying out of its fixed rules.

Two Handsome Easter Windows

Two handsome and very original windows were those represented in the Blachford Shoe Store, Yonge Street, Toronto. In the women's window the bottom was of buff satin, while against the wall was a mantle covered with white and surmounted by maiden-hair ferns and air plant. Over the mantle were roses and green leaves. At either end was a white pillar, on which rested green baskets filled with Easter lilies. In the centre was a mauve colored pedestal and on this were a pair of gold slippers and a basket vase filled with flowers. The footwear embraced the latest in colonials, oxfords, patents, buttons, both high and low, with stockings to match the various lines. There was a varied assortment of rosettes, buckles and white trimmings revealed.

In the men's window, the design was of a cathedral character, the background being of panel oak and the upper part of grey stone effect. On each side were stained glass Gothic windows, lighted at night by electric light. The frames were covered with cardboard and the colored glass effect was obtained by the use of transparent paint. There were two Gothic church seats shown. On the highest seat was displayed a line of natural shaped shoes for all the members of the family, including father, mother and children. Beneath was a neatly written card—"Mr. B. Comfortable and family." On the lower pew was a line of patent leather footwear, appropriate for every member of the household. This clannish gathering was designated as—"Mr. B. Dressy and family." At the back of the pews on a pedestal, was an Easter lily in a brass jardiniere. There was also a mural festoon of Easter lilies. The flooring was of white sateen. The showing of footwear represented men's black and tan, both oxfords and high cuts in button, blucher, and balmoral styles. Mr. J. J. Holtze trimmed the women's window, while the dressing of the men's was attended to by Mr. J. C. Trimble.

General Advance In Shoe Prices

(Continued from page 40)

has purchased for fall. He has found that the quality in the medium class has deteriorated somewhat where there has been no advance in price. He purposes raising the figure on several goods at once, to cover increased cost and store expenses, which he thinks should be computed at 10 p.c. He has not raised prices as yet. Mr. Downey reports that he has not tried odd prices, and that his regular store prices are even, such as \$2, \$2.25, \$2.50, \$3, \$3.50, \$4, etc., except when he puts goods on sale tables, when he asks \$1.48, \$1.88, etc. He does not see why odd prices are not practicable, but he thinks it quite as easy in most cases to sell for \$2.75 as \$2.70, \$3.25 as \$3.15, \$3.75 as \$3.65. A merchant needs this to meet the advance in cost for help, rent, advertising, etc. Mr. Downey concludes: "Shoe men generally are selling rubbers and shoes on too small a margin. They should have at least 30 p.c. on selling, or 40 p.c. to 45 p.c. on the cost prices. It is the fear of our neighbors under-selling us that keeps prices so low. Your paper is doing good work; keep at it to get at least 40 p.c. profit on cost price, and urge merchants not to sacrifice rubber prices below other merchandise in percentage of profit."

Do They Want Looks Only?

Milton Cumming, of Preston, says he has not found that he has to pay more for shoes yet, but he expects he will have to before his fall purchases are concluded. He does not think the quality in some lines is quite as good as a year ago. If prices go up wholesale he will certainly raise retail prices. Mr. Cumming has never tried selling at odd prices. He says he would not like this plan, as, if you mark a shoe at \$3.15, he believes the people would ask you to throw off the 15c., and a merchant could not stick for 15c. If he did throw off 15c., buyers would soon expect him to throw off more. If a shoe goes up as high as 15c. more wholesale, he thinks a dealer is justified in advancing the retail figure 50c. per pair. The general public want classy shoes at the lowest price. "By this I mean if you build two pair of shoes on the same last and tell them one pair is dearer, but would last twice as long as the other pair, the majority of people, so far as my experience goes, will take the cheaper pair nine times out of ten."

Create an Arguing Point

W. J. Honeyford, Collingwood, reports that velours calf, tan calf, and heavy grain have advanced, and that the average increase in price per pair is from 5 to 20c. He has advanced the selling figure of certain shoes 50c., but in other lines they remain the same. People have no objection to paying the higher rates. Mr. Honeyford says that he has tried selling shoes at odd prices, but he does not think that the scheme is practicable, for the simple reason that odd prices create an arguing point and a possible bait for the customer, who will ask that ten or fifteen cents be taken off. Where the price is \$3.35, the buyer will want it reduced to \$3.25. "I consider," he continues, "that where a shoe goes up as much as 15c. in price, a retailer is justified in advancing his quotation by 50c. Many a merchant is selling at as close a price as he can afford to, and in several cases shoes are marked at selling prices below what they should be. The price of many lines of shoes will have to advance 50c. per pair and even higher. Much better that they should do this than that the wearing qualities should be taken out of the product."

Other Dealers' Experiences

J. T. Allen, of Mount Forest, says that he finds that the price of all grades of shoes is higher than a year ago, and he is paying from 15 to 25c. more per pair. In some instances he has found, where there has been no advance, that the quality has deteriorated. Customers do not object to paying a higher figure. He has tried odd prices, but finds that the further you

keep away from them the better, as, for instance, \$3.65 would be wanted in most cases for \$3.50, \$3.15 for \$3, etc."

E. C. Scarrow, of Owen Sound, reports that he is paying from fifteen cents to twenty-five cents more per pair for shoes than he did a year ago. He has found where there has been no advance the quality of boots is not so good. He has raised the quotations on many lines, in some instances twenty-five cents per pair. He does not find that patrons object to the raise where the quality and style are kept up. He says that he has tried selling goods at odd prices and that he finds the method has worked very well.

A Roast for Some Manufacturers

H. L. Harrison, of Fergus, thinks that selling at odd prices is quite practicable, and he has tried it. Where a shoe goes up from 5c. to 15c. he does not believe the selling price should be raised all at once to 50c. in order to dispose of it at even figures. If raised, the same amount as he has to pay the manufacturer should be quite sufficient. Mr. Harrison reports that he is paying from 10c. to 20c. more per pair for nearly all lines than a year ago and concludes: "The main observation we have to make at present is that manufacturers are more to blame for the dilatory way in which they get their orders out than for the extra charge of a few cents a pair. Some lines of my spring ordered goods are not here yet, nor have we even received the invoices. This is the 25th day of April, and it is certainly time that some manufacturers wakened up. We do not find that people object in many instances to paying the higher price for shoes, if the quality is in the article."

Too Many Fake Sales

Charles W. Cowper, Dundas, Ont., says he has found that on the best grades of shoes prices have gone up from 10c. to 15c. per pair. He intends raising prices if the advances continue. "I do not think," he adds, "that one could successfully adopt the practice of selling at odd figures in a small town, for you have so many friends, and they naturally say: 'Oh, make it even money and I will take the shoes.' It would be very difficult to refuse them. I think an advance of 50c. would be too much to jump prices at the present time, but consider that 25c. would be sufficient. In conclusion, I may say that there are too many fake sales conducted by city merchants. These transactions are not genuine and mislead the public."

Walter G. Willis, of Seaforth, Ont., says he has not seen any fall samples yet and has not raised his prices. His objections to retailing shoes at odd figures are that customers would think a \$2.70 shoe was really a \$2.50 one, a \$3.15 shoe a \$3.00 one, and so on. "If a merchant has to pay 15c. more per pair for shoes I think he is justified, on a high grade product, in raising his retail price 50c. In a cheaper shoe, a quarter would be sufficient."

Pins Faith on Odd Prices

J. W. Deegan, of North Bay, finds that from 2c. to 5c. more on the cheaper lines, and from 10c. to 13c. more on the better lines are what he has to pay for the goods on this year's purchases. Where prices have not been advanced, he believes the quality has deteriorated. He has protected himself by raising his retail prices from 10c. to 25c. per pair, and does not find that customers raise any shout against higher quotations. He says they are always willing to pay a little more if the goods are better. "I have for years," he writes, "found odd prices a success. I regard them as practical, and do not consider that the ordinary objections raised hold good. The price of goods, the cost of living, and help, etc., have so far advanced that the old margin of profit does not pay, and, if a shoe goes up 15c., I think the retail price might well be raised by 50c., if the goods will stand it."

Several other views on the matter of advancing retail prices so that the shoe dealer may be protected will be published in the next issue.

Decided Advances in Shoe Store Conveniences

Prominent Toronto Retailer Leads the Way in Show Windows, Display Trays, Shelving, Children's Department, Office Equipment, Stock Handling and Findings Branch—Methods That Are Practical, Expeditious and Progressive

In the embodiment of new ideas, handy devices, convenient methods of stock keeping and practical arrangement of goods, both for display purposes and quick sales, Mr. Alex. Chisholm, shoe retailer, 1685-87 Dundas Street, Toronto, has an establishment that is worth traveling many miles to see. The layout and adjustment of his new shoe house is original and unique to a degree. He spent many months studying plans and specifications, carefully weighed and estimated them all, and, now that his work is completed, he has the satisfaction of reviewing it with commendable pride.

Last month he moved into his palatial business home, and

poses. Mr. Chisholm instructed his architect on all the fine points brought out in the structure.

Unique Features in Show Windows

On the left of the men's window marble stairs lead down to a basement barber shop, which is liberally patronized. In descending the men pass alongside seventeen feet of plate glass, the full depth of the men's window, where all the latest styles of masculine footwear are admirably presented. There is plate glass on all sides of both windows, which are oblong in shape with an angle about twelve feet from the front. The

The splendid show windows of Mr. Chisholm's shoe store in West Toronto.

the structure, erected at a cost of \$20,000, is a credit to West Toronto, and the mercantile quarters in that progressive portion of the city. A little over a year ago he acquired the site and early last summer began building operations. The edifice is an imposing, two-storey brick one that arrests the attention of every passer-by.

Mr. Chisholm began business in December, 1898, a few doors west of his present stand, after being some eight years in the former wholesale house of Harvey, VanNorman & Co., Toronto. He has met with a large measure of well-deserved success. His show windows are marvels in ingenuity and conception. He planned the building from a revenue basis as well as for effective retailing, the upstairs portion being leased for office pur-

entrance is long and receding, affording a full view of the footwear on display. The glass itself is held by statuary bronze copper, which forms the base and the supporting pillars. Luxfer prisms are set in the doorway and on the outside is the name "Chisholm" in tile letters. The flooring of the generous-sized windows is of bird's eye maple paneled with mahogany. The windows project five feet inside the door and entrance to them is gained by hinged panes. One can walk in the windows to trim them as easily as one can enter the store. They are lighted artificially by 100 watt lamps with X-ray reflectors. Surmounting the plate front is prismatic glass set in small squares of copper. Each window is about three and a half feet wide at the front, extends twelve feet to the door and five feet inside the

store, making them veritable show cases. The idea of an endless number of mirrors has been discarded. There is only one mirror, which is on the women's side. It stands five feet high and is fitted with keyhole strips, supporting nickle brackets, on which rests a glass shelf. This may be raised or lowered to any desired height. On this shelf various novelties and dainty shoes are shown. The inviting and striking exterior was put in

A glimpse of the reception entrance and findings department

by the Kawneer Manufacturing Co., of Niles, Mich., specialists in commercial fronts.

There are small airholes at the base of the windows and at the top, which allow freedom of ventilation and obviate frosted or murky glass by a perfect system of circulation. There is no wood employed at all in the exterior of the store except the door.

An Impressive Interior

The interior is equally attractive and delightful. The floor is of oak as well as all the fittings and furnishings. The store is 100 feet deep and 20 feet wide, with ceilings about 14 feet high. Once inside there is what might be well termed a reception front, for a distance of eighteen feet. Here are two semi-partitions of oak, about four feet high, with a square pedestal at either end. In front are silent salesmen show cases, each six feet long and fitted with Laurentian marble base, a few inches above the floor, so that persons can stand close and not injure the base. In one of these show cases are displayed findings of all kinds, and in the other a complete range of silk, cashmere and mercerized hosiery. At the back are glass wall show cases for the various lines carried. This department is in charge of an experienced young lady, who devotes her entire attention to its arrangement and display. Mr. Chisholm has long believed that there is a good profit and trade-drawing possibilities in properly handling, showing and specializing findings, and he has made them a feature of his business. This department is practically separated from the shoe stock, and, if the store is crowded there is ample room at the forepart for friends to chat, for a mother to leave her baby carriage, or to take in the impressive interior

of the establishment. It is as pleasing and picturesque as any grand entrance hall in a richly furnished private dwelling, and makes the visitor feel that he or she is right at home.

The store is heated throughout by means of steam, and lighted artificially by several Tungsten electric lamps, of 50 watts each, enclosed in frosted globes. At night the shop presents a brilliant appearance. Ventilated by openings at the floor and registers along the walls near the ceiling, there is assured fresh pure air at all times in the store.

Single Shelves and Uniform Labels

The shelving is of the single carton style, there being seven cartons on each shelf in the women's section, which is on the right, and six on the men's. The shelving is eight feet high, but the topmost carton can easily be reached when standing on the floor. There is no ledge which the proprietor considers totally unnecessary, as it serves as a resting place for shoes, paper and litter of all kinds. No cartons are removed when displaying goods, thus order, neatness and method are at all times noticeable. Uniform labels of a quiet scroll design are used, which bear the words "Chisholm's Footwear." The effect is decidedly artistic and harmonious. For the accommodation of patrons there are solid oak chairs, leather-seated, placed in lots of five each. There is plenty of space between the chairs on the men's side and on the women's, and also between the rows and the walls. In front are long strips of Brussels' stair carpet, which allows persons, who may be trying on shoes, to take a short walk in order to ascertain if the footwear is comfortable. This is a new idea, as a shoe may feel all right when a customer stands in it, but whether it possesses easy fitting qualities when walking is sometimes another tale. The visitor may pace up and down on the stretch of carpet without soiling the soles of the shoes, and thus be perfectly satisfied that his or her pedal requirements are suitably met before departing.

Fascinating Place for the Young

At the rear is the children's department. This is separated from the main body of the store by means of tall glass show cases against each wall and a neat oak arch of Colonial design. The show cases, which are Mr. Chisholm's own idea, are three feet wide by two feet deep and are fitted with movable glass shelves, in which are displayed infants', children's, misses' and youths' footwear to excellent advantage. The mural shelving runs back to within three feet of the rear wall. At the back of the premises is a large glass show case, nine feet long by six

The barber shop that brings men's shoe trade to the store

feet high, which contains the daintiest of juvenile footwear and hosiery, and is radiantly illuminated at night.

Elevated about seven feet and reached by a stairway is a gallery, which affords the proprietor office quarters. Here are also located the desk of the cashier and wrapping table. In front of this balcony is an ornate oak railing about one foot high. From his desk Mr. Chisholm can view all operations in the store and keep an eye over every department. He can also transact business in private. There are four air-line basket carriers and two cash carriers to the desk of the young lady who

attends to the duties of cashier and parcel wrapping. In front of her, by means of filing hooks, on which are placed the duplicate sales slips, a record is kept of the various classes of shoes sold. No wrapping or making of change is done on the floor of the store, and much time is saved thereby, as salesmen can wait upon many more customers in the event of a rush. Mr. Chisholm considers that the basket carrier, parcelling and cashier system, which he has instituted, is far superior in a shop of his dimensions to any other plan that could be devised. The cashier keeps all parcels that are to be called for, repair work, etc.

The windows at the back of the store are of prism glass and strongly barred. The reserve stockroom is downstairs. This part of the building is also well lighted and easily reached. All the goods are taken in at the back, and, by opening a trap door, cases are slid down an inclined plane to the floor, which makes handling convenient and expeditious.

Mr. Chisholm himself is in charge of the men's goods; his brother, Morley S. Chisholm, the women's and the reserve stock room, while P. Williams has supervision of the children's branch

Detachable Trays for Special Sales

Among the interior conveniences for special displays are wooden trays, which have projected sides and can be fitted along the wall fixtures by the removal of one carton in each section. These oak trays can be attached to all the shelving in a few minutes, and at Christmas and other holiday periods, lines may be shown in the open to marked advantage. Probably no other shoe store in America has such ready and practical methods of displaying goods for special occasions. The trays are about two and a half feet long and two feet wide and about three inches deep. Another feature is that, at the back of the railings which demarcate the reception front and the store proper, are two folding tables, which can be used by travelers for exhibiting samples, for holding parcels when needed, and in an emergency

for wrapping purposes. They work on the same principle as a folding secretaire. There is also a latticed stool just inside the railing, upon which travelers place their grips, instead of depositing them on the floor or the chairs.

Identifying All Lines by Numbers

Another unique thing is that all goods in the cartons are kept track of and designated by numbers. The French system of marking is used to indicate sizes and widths, another bunch of numerals for the selling price, and still another for stock purposes. Each shoe, as it comes in, is given a stock number. The first left hand figure stands for men's, women's, children's, etc., the next represents the kind of leather, and the last two figures up to fifty denote high cuts, and all over fifty low cuts.

In first left hand figure, 1 is for men, 2 for women, 3 for boys or youths, 4 for girls or misses, and 5 for infants. The second figure, as stated, stands for the kind of leather, 1 being patent; 2, dongola; 3, gunmetal; 4, box calf; 5, tan; 6, suede; and 7, canvas. The next two figures up to 50 represent high cuts, and over 50 low cuts. In the first fifty denoting high cuts the even numbers are lace and the odd ones button. In the numerals over 50, representing low cuts, the even numbers indicate oxfords and the odd numbers pumps or Colonials.

Thus 1342 would be a man's gunmetal lace boot; 2139 would be a woman's patent button boot; 4568 would be a girl's or misses' tan oxford, and 5233 would be an infant's dongola button, etc. The plan is easily followed and is both simple and practical for the ready recognition of all lines in the store.

Mr. Chisholm intends to further develop this handy numeral system and will make the figures do duty for obsolete lines, and also cover different makes—that is, whether they are Goodyear welts, McKay sewn, fair stitch, turns, etc. The possibilities of the numbering method are great. It is really a kind of "business shorthand."

A view of the impressive interior showing the children's department at the rear.

Recent Activities in the Shoe and Leather World

What Is Going On in Different Centres of Interest—Personal Notes and News That Will Be Found Instructive and Timely—Interesting Items of the Trade in Short, Readable Shape

The stock of Joseph Beaudoin, shoe dealer, of Montreal, has been disposed of.

G. J. Plante, shoe retailer, of Montreal, has made an assignment.

The shoe stock of Z. Morse, Montreal, has been sold.

E. T. Jacobi, Toronto, has returned from spending a few days at Atlantic City.

W. G. Robinson has succeeded R. L. Rix, dealer in boots and shoes, Edmonton.

J. Bone has opened a shoe repairing shop in Lumsden, Sask.

F. C. Heineman, shoe dealer, of Winnipeg, passed away recently.

Dr. W. M. Scholl, of the Scholl Mfg. Co., Chicago, is in Toronto this week.

Frank Richard, dealer in hardware and shoes, Montreal, has made an assignment.

The Victor Shoe Repairing Co. has been registered in Montreal.

Isadore Brand, shoe dealer, Winnipeg, is discontinuing business.

L. Paradis, shoemaker, of Letellier, Man., has gone out of business.

John Stevenson, shoe dealer, has moved into a new stand in Cayuga, Ont.

J. C. North, shoe retailer, of Pictou, Ont., was calling upon the trade in Toronto last week.

Russell & Morrison, Newcastle, N.B., are adding a boot and shoe department to their present men's wear store.

Harry Thompson, sales manager of the Slater Shoe Company, was in St. John and Halifax during the latter part of April.

A new retail store will be opened shortly at 50 Yonge Street, Toronto, which will be known as the Invictus Shoe Store.

D. Lorne McGibbon, of Montreal, has returned from spending a few days at Hot Springs, Va.

James Donavon and William S. Gremley have opened a boot and shoe repair shop in Newcastle, N. B.

The Avenue Shoe Co., of Winnipeg, of which George C. Locke is the leading spirit, has been incorporated.

The shoe stock of P. A. Drolet & Co., Thetford Mines, Que., was sold by auction on April 24.

McLeod Bros., shoe dealers, of Glace Bay, C.B., recently assigned to I. Greenwell.

Ricc Bros., shoe retailers, of Brandon, recently made an assignment to E. H. Newton.

Henderson Bros., dealers in clothing, shoes, etc., Fort William, were burned out recently.

Miss Stoughton, who has been in R. W. Eady's shoe store, Renfrew, has gone to Indian Head, Sask., to reside.

Robert Thompson intends going into the boot and shoe business in Wallaceburg, Ont.

F. W. Ingram will shortly open up a new boot and shoe store at 788 Gerrard Street East, Toronto, where he will carry a representative stock.

W. G. Damer, Western representative of F. J. Weston and Sons, Toronto, left a few days ago for the West. He will jour-

ney as far as Victoria, B.C., with fall and winter samples.

Jas. Fairbairn, who was a pioneer saddle and harness maker, of Portage la Prairie, Man., died recently, aged 67 years. He was born in Brockville, Ont.

C. T. Farrell, shoe dealer, of Grimsby, has formed a partnership with W. W. Kidd, in that town, and will conduct a real estate and insurance business.

The Toronto Shoe Co., of which J. J. Connor was manager, has given up business in Niagara Falls, Ont. The company recently suffered a heavy loss by fire.

H. B. Hammond, formerly of the H. B. Hammond Shoe Co., of Victoria, B.C., has gone on a trip to England. On his return he will again go into business.

J. H. Gillespie, shoe dealer, of Springhill, N.S., is opening a fine new footwear establishment in Amherst, N.B. Mr. Gillespie has been in the shoe business for years.

The St. Leger Shoe Co., 542 Queen Street West, Toronto, are remodelling their headquarters store and installing a handsome new front, which greatly improves the appearance of the premises.

W. F. Cassidy, shoe merchant, Chatham, N.B., has just been elected Mayor of Chatham for 1912-13. This is the culmination of four years' useful service in the council there.

McCrudden & Thompson, Slater Shoe Store, Montreal, are moving from St. James Street to 113 Notre Dame Street West. The new store will be completely renovated. A new front is being put in.

Frank Halbert, who recently purchased the boot and shoe store of H. S. Fenton, of Shelburne, Ont., is doing some attractive advertising as the only "exclusive boot and shoe store in the town."

Renworth & Jefferson are opening a retail shoe store in Prince Rupert. Mr. Renworth has traveled for the Ames-Holden Co. for many years, and Mr. Jefferson is connected with the Wallace Fisheries. Both are well known in Prince Rupert.

Among the retailers of Toronto, who may be seen taking an airing now and again in their motor cars are A. Wellwood, 1250 Bloor Street West, W. Powell, 1682 Dundas Street, and J. J. Davis, 454 Queen Street West.

J. W. Weir, who has been manager of the Roberts & Van Lane shoe store, Brantford, Ont., has gone to Paris to take charge of the same firm's branch store there. Before coming to Brantford he held most important positions in Owen Sound and Guelph.

The Carey Shoe Co., which conducts stores in Toronto, Chatham and Barrie, has secured the lease of new premises in the latter town and during the past few days have been engaged in removal. The new premises are attractive and in every way an improvement for business purposes.

A. Weseloh, of Berlin, recently bought the stock of Alexander and Co., at Listowel, which was partially destroyed by fire, and is carrying a full line of shoes in stock. He will continue his dry goods and clothing business in Berlin. He reports trade

at both the Berlin and Listowel stores as exceptionally good.

W. Elliott, of Hamilton, has bought the shoe business of A. E. Cudmore, at 320 Danforth Avenue, and took possession this week. Mr. Cudmore will devote his attention to real estate and building operations. He is erecting two attractive stores at the corner of Gerrard Street East and Ashdale Avenue, Toronto.

Messrs. Clifford, Porter and Maguire were among the victims of the Titanic disaster. All were widely known in manufacturing circles in Canada. George Clifford was president of the Belcher Last Co. in Lynn, and Mr. Porter, head of Porter & Co., also last makers there. Mr. Maguire was connected with the Dunbar Pattern Co., Brockton.

Several interior improvements have been made to the warehouse of D. D. Hawthorne & Co., Toronto. The office quarters have been greatly enlarged, taking in the former sample room. A new sample room, large and well lighted, has been opened on the ground floor, where the various lines are displayed to decided advantage. It is nicely furnished and decorated.

Brandon, Man., will have a big summer fair, and one of the chief features will be "Travelers' Day," when a gala industrial parade will be held. Among those who have consented to provide floats for the occasion are the Brandon Tannery, A. Carrothers Co. (hides), the Zink Shoe Co., Dowling & Creelman (wholesale shoes), the Adams Shoe Co., and Nash & Lott (retail shoes).

Mr. Corbett, of the firm of Roome, Corbett & Co., shoe retailers, who were burned out in London some months ago, has been spending a few weeks abroad. He had intended returning on the ill-fated Titanic with a friend, who was unable at the last moment to accompany him. This delay caused Mr. Corbett to change his plans and sail by another boat. He is now decidedly thankful for the fortunate circumstance which caused him to hurriedly change his arrangements.

Frank Power, representing the Rideau Shoe Co., Montreal; J. P. Buchanan, of the Smardon Shoe Co., Montreal; J. G. Settle, of the Hartt Boot and Shoe Co., Fredericton; C. E. Fice, of J. and T. Bell, Montreal; N. J. Bourdeau, of Jackson & Savage and the Regina Shoe Co., Montreal, and Mr. Moore, of Kirvan & Doig, Montreal, were among the travelers in Toronto during the past few days, with fall and winter samples.

Walter G. Willis, shoe dealer, of Seaford, has just completed extensive improvements in his show windows, which add greatly to the attractiveness of the store. The old woodwork has been removed, and replaced with a floor of inlaid oak squares finished in natural color. The top is Southern pine with natural finish, and the inner portion of Southern pine, with weathered oak finish. The upper part of the inside contains a number of small panes, and the lower part solid paneling.

The Abernethy Shoe Store, Kingston, Ont., still seems to have an attraction for burglars, as recently the building was entered and about eight pairs of boots

taken. When Mr. Abernethy opened the store one morning recently he found the back doors wide open. Just what time the robbery took place it is hard to say. The affair was reported to the police. This is the fourth time the store has been burglarized, the last being about a year ago, when Bertram Abernethy caught one of the burglars, who was dealt with in the police court.

At the annual meeting of the Toronto Branch of the Retail Merchants' Association, held a few days ago, a satisfactory report on the year's finances was presented and the following officers elected: President, J. C. Vancamp; first vice-president, W. G. Sheppard; second vice-president, W. G. Britnell; treasurer, S. C. Higgins; secretary, J. Impey; auditor, O. M. Moore; representative on the executive board, T. Bartram.

David J. Winder, a north side cobbler, in Chicago, found diamonds valued at \$5,000 in the toe of a shoe he was about to repair a few days ago. While looking for a ticket to identify the owner of the shoe, a maid rushed in, showing much excitement, and enquired for the shoes. They belonged to a wealthy woman in Sheridan Road. A one dollar bill was waved aside, with the comment, "I'll be satisfied with being honest."

Among the shoe travelers now touring the West and who were recently in Winnipeg, are: W. C. Myers, representing Rideau Shoe Co., Montreal; Wm. MacLean, George A. Slater, Limited, Montreal; James Ross, the John MacPherson Co., Hamilton; Fred P. Beemer, H. E. Guptill, Haverhill, Man.; E. J. Lashbrook, Getty & Scott, Galt; L. Goldbrook, J. & T. Bell, Montreal; W. H. Jardine, the W. B. Hamilton Shoe Co., Toronto; P. M. Goff, the "O.B." Shoe Co., Drummondville, Que.; Percy Fry, Smardon Shoe Co., Montreal; J. G. McDiarmid, the Cook-Fitzgerald Co., London; M. L. Savage, Tetrault Shoe Manufacturing Co., Montreal, and many others. They all report business as exceptionally good.

The Royal Shoe Co., which was organized in Toronto, is opening a second store at 772 Yonge Street, near Bloor. It will be in charge of J. L. Chisholm, a popular and thoroughly experienced shoeman. John T. Elmes, a member of the newly-organized company, of which C. F. Tugman is president, has been made manager of the head store at 88 Yonge Street. C. L. Owens is the general sales manager of the company. The new shop on upper Yonge Street is attractively fitted up and the furnishings are of golden oak. The chairs are of the Austrian design and have special arms. The uniform carton system is used throughout and the color is pale blue. Pale blue rugs cover the floor. The front is imposing, having double windows and long receding entrance to the premises. The windows are deep and well adapted for display purposes. The new boot shop is about 85 feet deep.

Protecting the Wholesaler

The Canadian Credit Men's Association, Limited, has been successful in another case in punishing fraud, viz., in the case of Olaf Wallin, of Menisino, Man. This man approached the wholesalers and obtained goods to a large amount on a statement that he submitted showing a considerable surplus in a business conducted by his brother, of which he was manager. After these goods had been supplied, the debtor (the brother), James Wallin, made an assignment for the benefit of his creditors. The debtor was examined under the As-

signments Act and admitted that the statement he had prepared and submitted was false. The matter was submitted to the Canadian Credit Men's Association, Limited, and at their instigation Olaf Wallin, who made the statement, was arrested. He elected to be tried by jury, who brought in a verdict of guilty, and Wallin was last week sentenced to three months' imprisonment, the judge remarking that it was necessary that the wholesalers and the general public should be protected against fraud.

Unclaimed Baggage Sale

The annual auction sale of unclaimed baggage in the possession of the Grand Trunk Railway, was held in Toronto last week. The allotment consisted of suit cases, grips, traveling bags, trunks and other articles. There was a large crowd in attendance at the sale, and the bidding was lively. Of course, one could see the exterior of the things, but regarding the contents it was a mere guess. Some bidders obtained decided bargains, while others

SNAKE SKIN

A popular cloth for topping patent leather shoes

secured old clothes, magazines or papers as "prizes." Suit cases were all the rage at the sale. Some of them were full and others were empty, but they were all sold at very satisfactory prices.

A Pointer for Some Firms

Trade journals are valuable aids to the retailer, says George L. Louis, in a recent article in *System*, and adds: "An intimacy with retailers cannot help but impress one with the fact that their respective trade journals have a marked influence on their buying and selling, and the little details that intervene from window draping to store arrangement and display of goods. For pure educative window matters of the do and don'ts of storekeeping, the trade papers have served a better purpose for the retailer than any other one element. Upon being asked whether or not they took trade journals, and what they thought of them, many of the retailers pointed to carefully kept volumes, to which they referred from time to time. One retailer had an indexed system of keeping clippings from journals, under the subject of Sales,

Window Dressing and other subjects. He also (and here is a noteworthy fact for skeptical advertisers) kept the advertising of manufacturers of the lines he carried, so that he could immediately get in touch with any of them should occasion require."

Managers Met, Conferred and Ate

A. L. Johnson, Western manager, Winnipeg; Chas. Bonnick, Toronto manager; W. M. Angus, St. John; E. A. Dagg, Calgary; F. M. Morgan, Edmonton, and A. B. Erskine, Vancouver, were guests of their company, Ames-Holden-McCready, Limited, in Montreal, April 8 to 13, when a sales convention was held, under the chairmanship of W. S. Louson, general sales manager. A very busy week was put in by everyone. On Friday, April 12, the party went to St. Hyacinth, to look over No. 3 factory, and a feature of the visit was the a la Sherry luncheon, served by Superintendent F. J. Boyden. "F. J." is always up to the mark, but he more than outdid himself in this luncheon, which was served on the premises. The boys are talking about it yet. Alex. Angus was along from the Montreal office, too. Messrs. Dagg and Morgan had not been East for a long time, and were welcomed as long lost brethren.

Care of the Feet

Careful attention to the feet means far more to our physical well-being than the large majority of people realize, says a woman writer. The mere fact of washing the feet daily and frequently changing the stockings may not seem to have much to do with the complexion, but some of the largest and most active pores of the body are on the feet, and when they are clogged what is to be expected but a muddy and pimply face?

The style of boot or shoe worn is often the cause of much spinal trouble and many headaches. A shoe that fits properly is snug at the heel—a great saving in darning—comfortable across the ball of the foot and has an instep that supports without being high enough to take one's weight off the ball of the foot.

Too short a shoe forces the heel and ankle out of place, besides cramping the toes. The height of the heel depends on the instep, but it should never be so small and high that the wearer does not step squarely on it. A great many "run-over" heels are due to this and the fact that the shoe is too short. Shoes last much longer and look better when two pairs are worn alternately and changed for slippers in the house. Getting shoes wet and letting them dry "any old way" is the ruination of the best footwear. They should be carefully wiped and filled with crushed tissue paper—or, better still, hot oats—and placed in the air to dry, then rubbed with a little sweet oil. Little toe rubbers that fold into waterproof cases are worth more than their weight in gold to the woman who suffers from chilblains or frequent colds.

New Method of Embossing

We just hear of an epoch-making improvement which has been made by German engineers, and which is destined to revolutionize the whole of the embossing trade. It appears that sheep, goat, and small calf skins, instead of being embossed in strips, as hitherto, are now worked over the whole surface without the skins being shifted or even touched by hand. Joins or seams of any kind are, therefore, completely avoided, and the result of the new method is a surprising one indeed. If manufacturers of leather goods and of

ortfolios will consider that such difficult grains as straight lines, squares or Russian grain may now be produced uniformly over the entire surface of the skin to the very claws, every square inch being used to its fullest advantage, they will not fail to recognize the tremendous advantage and progress this new method means for their respective trades. All natural grains, such as seal, goat, shagreen, etc., appear in all their beauty absolutely like natural skins. Although a similar method to the one described has been tried with an American-built machine, manufacturers will, however, find an advantage in so far as the new embossing machine can be obtained at a considerably low figure; further, the name of the makers, i.e., Moenus Machine Company, of Frankfort on M. is sufficient a guarantee for manufacturers to investigate the merits of this new method of embossing and graining skins. The machine has been put on the market under the name of "Clareta."

A Popular Sales Manager

One of the rising young business men of Montreal is Joseph Gravel, who has been appointed assistant manager and general sales agent of the Columbus Rubber Co. Mr. Gravel has a host of friends, who are pleased to

hear of his advancement. The company will erect two additional storeys to their present factory, which will give them an output of nearly 6,000 pairs daily. The new organization is a strong one, and will doubtless achieve a generous measure of success. Needless to say, the selling force will be capably directed by Mr. Gravel.

Abandonment of Frank, Alberta

In view of the action taken by the Government, calling for the abandonment of the village of Frank, Alberta, and the hardship that will be entailed upon all classes in that community, the chairman of the village council, W. J. McGowan, headed a deputation to wait upon the Premier of the Province of Alberta, with the object of obtaining some relief from the Government by way of compensation. Owing to the absence of Premier Sifton in Winnipeg, this deputation got no further than Calgary, but was instrumental at that point in interesting the Board of Trade, who passed a resolution calculated to add weight to the application for help from the Government. The Canadian Credit Men's Association, Limited, have likewise retained the services of Emery, Newell & Ford, of Edmonton, to represent them when the deputation arrives in Edmonton, and the officers of the association in Calgary are likewise lending their assistance on the matter, but have intimated the same was entirely in the hands of the Provincial Alberta Legislature. A meeting of the Winnipeg Board of Trade will be held in the near future, when the matter will be taken up by that body also.

The Problem of White Shoes

Speaking of the lure in the white shoe for women and asking whether Canadian ladies will succumb to the "cult," a writer in a Toronto paper offers some interesting observations. He has evidently been over in Detroit where as early as the middle of February, women were seen in large numbers wearing nubuck button boots.

The rage has continued and in all leading urban centres across the border, the white wave spreads. In Canada, while the usual number of "puritan products" will be seen, manufacturers do not anticipate that the mania will be as acutely developed as some enthusiasts would lead the public to suppose. "For the last few weeks," says the writer who poses as something of an authority, "the white boots and shoes have been in their heyday of popularity. The cool weather still prevailing brought several new and anomalous modes. Many ladies, when they put on their pure white boots, felt constrained to don white dresses also, and, as a result, summer costumes appeared even on frosty nights. Others, who could not endure the cold even for the sake of appearing as goddesses of the hopeful spring, wore the white boots, it is true, but retained their long winter coats of blue, and tan, and green. Another anomaly—and yet one which produced a striking and not unpleasant effect.

It seems to be an infallible dictum that whatever else is worn with the white footwear, white silk stockings must be one detail. To this there are no exceptions—either in warmth or in cold.

Another peculiar feature of the custom is that there are definite hours when, by common consent, the white boot is not worn. Practically none are to be seen until one o'clock in the afternoon. Black and tan are the prevailing colors until then. Gradually the whites begin to peek out, but even the afternoon is not their chief time. It is not until the evening that they really begin to flower forth in all their glory. From seven until midnight, the Grand Circus and Woodward Avenue, and the rest of the down-town sections look subtly gay with almost an European gaiety. The Parisian touch consists in the premature white shoe.

Who can be found to disparage the eagerness of Detroit's fair colony? Mere man looks on with approval, for he likes the spring, and if he can't see symptoms of it in budding leaves, he welcomes it in maiden's whims. A rather gallant credential, isn't it? Little girls and babies have been smitten with the desire and have joined in wearing the new costume, and, as they say in "The Arcadians," bow at the altar of fashion. Ten-year-olds walk jauntily along in the proud self-consciousness of the fashionable Miss, and, as for the infants, a census revealed that ten out of twelve just learning to walk wore white "booties."

An Aggressive Westerner

He is called "Tiny," owing to his miniature proportions. Others style him as the "boy," since he stands only 6 ft. 3, and weighs a trifle over 250 pounds, but to give him his full and proper title, he is Lancelot Farewell. He is a son of John James Farewell, the veteran shoe traveler of Toronto, who has been over forty-one years on the road. Mr. Farewell, Jr., first began his shoe career with a retailer on Queen Street West, Toronto. Another salesman at that time in the store was J. G. McDiarmid, who is now the Western Canada representative of the Cook-Fitzgerald Co., of London. After clerking a while, "Tiny" returned to school, and later joined the Clapp Shoe Co., on Yonge Street. He then went to Nelson, B.C., where he was employed for

two years in a large footwear establishment. Returning to Toronto, he took a position with the J. D. King Co., for whom his father traveled for many years. But "Tiny" believed that the West was the proper field for him, and he grasped the first opportunity that presented itself. Joining hands with Mr. McArthur (now of the W. A. Marsh Western, Limited) they ably upheld the Hartt Boot and Shoe Co., of Fredericton, in the central West, introducing this line to many who had never seen it before. Last season he took over the agency himself, and his aggressiveness with the goods of this company has created a favorable name for him as a signally successful shoe salesman. Mr. Farewell can curl, fowl or watch a baseball game with anyone. He is also interested in real estate, and has recently become possessor of a flock of land near Winnipeg, which he is dividing into city lots. If he can dispose of these as rapidly and methodically as he does shoes, he should make a nice haul.

An Enterprising Easterner

J. E. Dupre founded the Dominion Die Co., in Montreal in the spring of 1904, and in the fall of the same year started a box toe business. In 1908 the Montreal Box Toe Co., of St. Rose, was bought, being amalgamated with the business Mr. Dupre had inaugurated. The new firm was operated separately from the Dominion Die Company, under the name Montreal Box Toe Company, and has been making everything in box toes and heels from that time. The Dominion Die Co. has been making cut dies, leather, rubber, paper, cloth, etc. A. Baillargeon has been Mr. Dupre's partner in the box toe company since the purchase of the St. Rose enterprise. Just recently the two companies removed to a splendid new factory on Aird Avenue, Maisonneuve. The building is a four-storey one 115 x 45 feet, of mill construction, well lighted, and modern in every respect. One floor is devoted to the die business and one floor to box toe and heel interests, while the other two flats have been rented.

News Budget from Quebec

Retail Business is Rather Quiet— New Commission Firm—What the Factories are Doing

The Wm. A. Marsh Co., report business as very brisk, and are looking forward to a busy fall and winter run.

Eli Jobin Limited, and J. H. Larochelle & Picher Co., are taking stock before starting on their fall runs.

Achille Boucher, formerly shoe manufacturer of Quebec, passed away on the 25th inst. He was in the 67th year of his age.

Among recent visitors to this city were A. R. Clarke, of Toronto; A. Davis, of Davis Leather Co., Newmarket; E. J. Caron, of the British American Oil Co., Montreal.

The Provincial Elections which take place on May 15th, have rather unsettled retail business, particularly in the country and the weather has not been warm enough yet for any marked activity in spring shoe

selling. It is believed that the opening of navigation will have a good effect on trade.

Stewart Ritchie, Superintendent of the John Ritchie Co., Limited, was in Boston recently on a business trip, looking over new styles for next year. The Ritchie firm is working hard to finish its spring run.

Robert Smith, formerly with the Louis Gauthier Co., has been engaged as foreman for the John Ritchie Co. He has had 30 years' experience as a foreman and is well equipped to improve the finish on any shoes.

La Chance & Tanguay are making improvements in the fitting room department of their factory. They are removing all the old machines and putting in entirely new ones which will greatly increase the capacity.

A new firm has been formed, known as

Dupere & Garant. They will do business as commission merchants and dealers in shoe findings at No. 610 Rue St. Valier. They will undertake to represent various manufacturers whose interests are not looked after in and around Quebec, and will be glad to have visitors pay them a call. Mr. Dupere for the past two years has been selling agent for the Bonner Leather Co., Cotton Threads, Limited, and Dominion Supply Co., all of Montreal, H. B. Johnston Co., Toronto, E. A. Jones Co., Brockton, Mass., and the O. K. Shank Co., of Boston. Mr. Garant is a son of Mr. V. Garant, formerly of Goulet & Garant, and was for ten years buyer for this firm. For the last two years he has been foreman in the Louis Gauthier Co.'s factory. Many friends wish the new commission house every success.

pany \$25,000 for fifteen years was defeated by being 86 votes short of the required number for it. The vote stood 354 for and 141 against. Had the recent private bill been given the Lieutenant-Governor's signature, the by-law would have carried.

A despatch from Amherst, N.S., says: In the month of March the shipments of footwear from the Amherst Boot and Shoe Company amounted to \$100,124. If the present good business continues they say they will have a trade \$100,000 in excess of last year's shipments.

The Dunford Elk Shoe Co., of Stratford, has been incorporated with a capital of \$40,000, divided into 400 shares of \$100 each. The incorporators are: W. C. Dunford, Windsor; D. McC. Ferguson, Robert McEwen, Geo. G. McPherson, and John A. Davidson, Stratford.

Ames-Holden-McCreedy, Limited, of Montreal have awarded a contract for the erection of a five story building in St. John, N. B. It will be built at the corner of Duke and Canterbury streets and will contain the offices and warehouses for the Maritime branch. Work was started a few days ago.

A rumor that was afloat to the effect that Utz & Dunn Co., of Rochester, contemplated opening a shoe factory in Vancouver for the making of ladies', children's, and misses' shoes, is denied by the company, who say that they are at a loss to understand how such a report started. There is no foundation for it whatever.

Tetrault Shoe Mfg. Co., Montreal, are unfortunate in having been visited by fire again on April 21, when a considerable stock of uppers, vamps and box toes, damaged in the recent fire, and stored in the garret, took fire, spontaneous combustion causing the trouble. The fire was confined to the place of its origin, but water and smoke did considerable damage on lower floors. The factory was kept from working only for a day or two.

The McDermott Shoe Co., Montreal, are going to make turns, sizes 1 to 7 in width. They make some of the nicest stuff in their turn slippers, particularly a corn shade in satin that is very attractive. The staple shades, such as lavender, black, white, pink and blue are shown, while their fine range shows corded silk lines that are very attractive. The same company are showing some new patent shoes with snake skin topping, the latest idea in cloth tops.

Ed. R. Lewis, who was for many years connected with H. B. Johnston, in the leather business in Toronto, has assumed the agency for Pope & Co., cabbettas, Boston, as well as the Helburn Leather Co., another Boston house manufacturing sheep skins and fancy leathers. These firms are securing a practical man, with a good connection, in having Mr. Lewis to represent them, and all Mr. Lewis' friends wish him every success in his new undertaking.

A recent despatch says: Business at the St. Croix, N.B., shoe factory is practically at a standstill, and just what will become of the industry is not certain. During the time the factory was in operation it was worked at only a small proportion of its capacity. This made operations too expensive, owing to the size of the plant, which was sufficient for an output several times greater than the largest output during the conduct of affairs by the present management. The loss of this industry, should the factory close, would be felt considerably in this community.

Ignace Plamondon, late superintendent of the mechanical department of the Canadian Rubber Co., died at the residence of

News of Interest from Shoe Factories

Various Firms are Adding New Equipment—Some Changes in Positions—New Factory Begins in Stratford—Certain Plants are Working Overtime—Leather Continues to Advance—Higher Prices Necessary

Clarence F. Smith is back in Montreal again, after a sojourn in Atlantic City.

Ames-Holden-McCreedy report they are running in fine shape, turning out 9,000 to 10,000 pairs a day.

The Rowen-Ogg Co., of Guelph, have recently installed a full line of treeing machines.

A. O. Beardmore, of the Beardmore Co., Toronto, who has been spending several weeks abroad, returned home last week.

The capital stock of the A. P. Cimon Shoe Co., Limited, Montreal, has recently been increased to \$150,000.

L. H. Crowell has been appointed manager of Robert Taylor & Co.'s shoe factory, in Halifax.

A permit has been issued in Montreal for the erection of a new factory on Sherbrooke Ave. for the A. P. Cimon Shoe Mfg. Co. The cost will be about \$25,000.

E. E. Donovan, superintendent of the Cook-Fitzgerald Co., London, has returned from a business trip to Boston and other centres.

John Powell has rejoined the staff of the John McPherson Co., of Hamilton, Ont., and has been made foreman of the finishing room.

The by-law granting a free site and tax exemption to the Canada Saddlery, Harness & Wire Steel Goods Company was voted on in Walkerton, and carried by 419.

Sultana Manufacturing Co., Montreal, are now making shoe polishes in their new four storey, 62 x 107 ft. factory on Amherst St.

F. L. Patten, of Toronto, formerly representing the Argam Tannin Co., of New York, has joined the staff of the United Shoe Machinery Co., of Toronto.

W. J. Heaven, of the Anglo-Canadian Leather Co., Toronto, has returned from an extended trip through the Maritime Provinces.

Oscar Vogt, of the Great West Felt Co., Elmira, Ont., was in Toronto last week. The factory has been running night and day for several weeks in order to keep up with orders.

The price of leather is stiffening all the time. Sole leather has of late gone up a cent to two cents per pound. Upper stock has, in many instances, advanced from one to two cents per foot. Wax bits are also

up two and three cents. Prices were never firmer than they are at present.

A new factory for the W. H. McElwain Co. is to be built this summer at Claremont, N.H. It will be of brick, mill construction, 200 x 42, and five stories high, and will make 200 dozen welts per day.

The Western Shoe Co., of Berlin, have recently installed pulling-over and lasting machines and a full line of Goodyear outfit. The company report business as very active.

R. J. Younge, general sales manager for the Consolidated Rubber Company, has just returned from a rather extended tour of inspection of Western and Pacific Coast branches.

The Humberstone Shoe Co., of Humberstone, Ont., have acquired another building, which is being removed and attached to their factory. This will afford them much needed accommodation.

E. Weaver, late foreman of the bottoming department for the Solid Leather Shoe Co., of Preston, has gone West to take a position with the J. Leckie Co., in Vancouver.

The Shoe Machinery Investigating Board have been holding sittings in Quebec. The evidence of several manufacturers was heard. The commission will sit in Montreal again next week.

James A. Main, an employe of the Maple Leaf Rubber Co., Port Dalhousie, and his son, aged 18 years, ventured out in a flat-bottom boat on a fishing expedition and were drowned a few days ago.

The Asbestos and Rubber Goods Company, Limited, has been incorporated with a capital of \$40,000 and head office in Toronto. The company will manufacture and deal in all kinds of asbestos packings and rubber goods.

The Dunford Elk Shoe Co., which recently removed from Windsor to Stratford, now have their plant in operation. Considerable new equipment has been installed, and the operations of the concern will be greatly extended.

As many rumors have been afloat to the effect that the McNeely Co., of Philadelphia, were retiring from business, the company deny the statement that they propose doing so, and declare all reports to that effect were unwarranted.

A by-law to loan the Perth Shoe Com-

his daughter, Mrs. F. Lemire, 1177 Delorimier Avenue, Montreal, last week. Mr. Plamondon had been in poor health for the past five years or more, but his sudden demise was unexpected. He leaves behind a widow, three daughters and one son, Mr. K. Joseph Plamondon, who is a salesman for the Consolidated Rubber Co. Mr. Plamondon had been connected with the Canadian Rubber Co. for fifty years, having come originally from Samonville, New Hampshire, to Montreal.

Work has started on the new factory of the Berlin Trunk and Bag Co., Limited, of Berlin. The building will be three storeys high with basement, and in dimensions 140 x 65 feet, with power plant additions. It is expected that the structure will be completed by September 1st, when the manufacture of trunks will be commenced. The company are at present making traveling bags, suitcases and telescopes in temporary premises. I. Holman, who has been with the L. McBride Co., of Berlin, for seventeen years, will be the factory superintendent. The officers of the company, which is capitalized at \$100,000, are: President, A. L. Breithaupt; vice-president, Dr. A. F. Baumann; secretary, H. D. Huber.

The Quebec Chronicle, of a recent date, says: Quite a flurry of excitement has been created in Quebec by a story published in a Montreal paper to the effect that no less than nine shoe factories from Ontario and twenty-two from Quebec would transfer to the metropolis, Maisonneuve and adjacent parts. While nothing is known in regard to the intentions of the Ontario manufacturers, it can be positively stated that so far as the Quebec end of the story is concerned, it is purely and simply a canard. The removal of twenty-two shoe factories from Quebec would mean the en-

tire wiping out of the whole industry in this city, and this is so extravagant on the face of it that the whole thing looks like a dream. While there have been strong inducements held out to individual manufacturers to transfer their works to Montreal, these have not, so far as known, been accepted, but such a sweeping change as that presaged by the Montreal paper is beyond reason. "While we have our own troubles in Quebec," said a shoe manufacturer recently, "we are not so sure that we would be any better off in Montreal or vicinity, and that there is any concerted idea to remove en bloc from Quebec is simply ridiculous. We have too much money invested here, and it would be almost impossible for such a general exodus."

A novelty, which has been placed on the market by the Hurlbut Co., of Preston, is a white enamel leather, chrome tan, which will not crack, and can be easily cleaned

with soap and water. No dressings are required to eliminate stains and dirt. This leather is being used in children's sandals, strap slippers, bals and button welts, with cushion insole, in sizes from 4 to 7½, and is proving popular with the trade.

A city baseball league has been formed in Galt for the season of 1912. The Classic Baseball Team, which carried off first honors in the Manufacturers League last year, has again organized, and will be a prominent feature in the new city league. The following officers have been elected:

Honorary President—E. J. Getty.

Honorary Vice-President—F. S. Scott.

President—C. Fogelberg.

Secretary-Treasurer—F. Delafield.

Manager—W. Barlow.

Executive Committee—W. Lund, W. Cudney, F. Thompson and J. Coleman.

J. M. Humphrey & Co., shoe manufacturers, of St. John, N.B., have been extending their premises. They have bought the building in which they are located and expect in time to occupy all the space. About 250 pairs a day are now being turned out. The company hope soon to double the number of their employes as well as their production. Their building is a three storey one, 50 ft. by 90 ft., and the factory was started less than three years ago. It has now become an important industry in St. John.

Tanners are in despair over the high cost of hides and skins, and yet the condition of the American and European markets gives no indication that raw stock will be cheaper in the near future, says Hide and Leather. In fact it is predicted that values may be still higher, although opinions on this question are not united. The trouble is that the supplies of hides and skins the world over are always factors of uncertainty. Then, again, consumption of leather is liable to expand more actively than generally expected, thus preventing leather supplies from accumulating and stimulating tanners to repeatedly replenish their stocks of raw material.

Fit your customers to Dr. Scholl's Appliances. Increase your profits on every sale leaving your store—You can do it.

Scholl's "Foot-Eazer"

A positive easer for the feet, limbs, body and nerves. Self-adjusting, springy, and is the appliance that can be worn by any one with comfort.

Bridges the weight from heel to toe. For tired and aching feet, or for anyone constantly on their feet. Prevents flat-foot.

All sizes, for Men, Women and Children. Price \$2.00 per pair.

Dr. Scholl's "Bunion-Right"

A most practical invention for the correction of Bunion trouble. Is soft, pliable and is placed between the great and second toe to give just sufficient outside pressure to bring the toe to its natural and true position.

Sizes Large and Small. Price 50 cents each, \$1.00 per pair.

Dr. Scholl's Bunion Reducer

Gives immediate relief. Fits closely and snugly to the bunion or enlarged joint, shuts out all air and moisture, thereby arrests further growth of the bunion by its reducing action on the tissues. Thoroughly antiseptic and sanitary, as it can be cleansed by washing. Made of pure para gum rubber. All sizes, Rights and Lefts. Prices 50 cents each, \$1.00 per pair.

Dr. Scholl's Anti-Bunion Spring

This practical apparatus acts as a lever to draw the affected toe to its normal position. Especially necessary to those who are troubled with bunions caused by the deformity of the joint or misplacement, when of long standing. Sizes, Small, Medium and Large. Right and Left. Price \$1.50 each, \$3.00 per pair.

There's a Scholl appliance or remedy for all foot ills—Don't accept substitutes—Specify Scholls.

Your Winter Shoes Will be as Waterproof as the Leather That Goes Into Them

Can the Leather You use for Your Winter Shoes Stand This Test ?

If you make your winter shoes from "Endural" Calf its certain they will be perfectly waterproof, for the simple reason that "Endural" is a perfectly waterproof leather.

No dampness can penetrate it. That has been proven by us to our entire satisfaction and by shoe wearers to their satisfaction and comfort. A leather so tanned that it can actually hold water is certain to be able to exclude it. Take any "Endural" Calfskin. You'll find that it will hold water—and it won't crack.

Get a few skins and try them. You'll be pleased.

The Man Who Wears Murray Shoes Knows What Good Shoes Are

No matter how much money you make on a pair of shoes, unless you have made your customer feel that he has secured the best shoe value possible, you haven't made a profitable sale.

When a man is fitted with a pair of Murray shoes he is satisfied that he has secured the best in style and appearance. After he has worn those shoes a while he feels that he couldn't have gotten as good satisfaction anywhere else than at your store.

This is the class of shoes you should be selling. Are you ?

The Value of the "Cleo" Trade Mark

If there was no trade mark on the "Cleo" shoe it would be just as good a shoe. The mark does not help the shoe to give satisfaction.

But—it does help a woman to know what shoe to buy to get full satisfaction. For every woman who has worn "Cleo" shoes is satisfied when she sees the "Cleo" mark that she is getting shoes to suit her.

The "Cleo" mark will help your business, because "Cleo" shoes will bring women back to your store.

"Cleo's are popular-priced — \$3.50 and \$4.00

Keep Feet Warm and Dry

Without the Aid of Rubbers

When a man who wears Doctor's Antiseptic Shoes strikes wet and muddy roads or pavements, he doesn't cuss the merchant who sold him the shoes. He just walks happily on, unconscious, as far as his feet are concerned, that the walking is bad.

Doctor's Shoes are built to keep the feet comfortable in bad weather. They've three soles that effectually bar cold and damp, and their uppers are thoroughly waterproofed. Snow, slush, rain or mud has no effect on these shoes.

Men appreciate the comfort they get from shoes like the Doctor's and the appreciation shows on the right side of your ledger.

Try out Doctor's Shoes. They're good for business.

SPECIAL CANADIAN DAY

Boston, Mass., Friday July 12th

====With Headquarters at the====

Sixth National Shoe and Leather Market Fair

Mechanics Building, July 10 to 17

Shoe manufacturers and tanners, shoe wholesalers and retailers and manufacturers of shoe and leather machinery, findings and supplies are cordially invited to visit Boston during the week of July 10-17, and join in the big International Shoe and Leather Week, to be held at that time.

Members of the Shoe and Leather trade from all parts of the United States, Canada and abroad will be present in large numbers, and the biggest gathering of this industry ever held is already assured.

The big Shoe and Leather Fair in Mechanics Building will be headquarters for the week. Here will be shown shoes, leather, shoe and leather supplies of all kinds, lasts, patterns, machinery in motion, including all the latest things in modern American Shoemaking and leather production.

Among Special Features of the week are:

Special Canadian Day, Friday, July 12th.

Shoe Factory Superintendents and Foremen's Day, Saturday, July 13th.

Big gathering of members of the National Shoe Retailers Association, who will have space at the Fair.

Gathering of members of the Southern Shoe Retailers Convention who will have space at the Fair.

Convention of Delegates of the National Shoe Retailers Association.

Gathering of members of the National Tanners Association who will have space at the Fair.

Exhibit by Pratt Institute of New York, demonstrating educational course in the tanning trade.

Boston Harbor Excursion and outings at nearby ocean beaches and seaside resorts.

These Pass Buttons are for Shoe Factory Superintendents and Foremen only.

The Shoe and Leather Fair is an exceptional opportunity to see, under one roof in a brief space of time, all the latest and best things in the production of shoes and leather. Its educational value cannot be over estimated. Arrange to meet your friends from Canada and the United States at the Fair.

Exhibition Space

If you have any article, machinery or merchandise to sell to the shoe trade of the world, take exhibition space in the Fair and show your samples. Good space can be had from \$90.00 up, fully equipped with signs and all furniture. All you need to furnish is your exhibit. We do all the rest. Write us for floor plan and full details. The Fair is the place to meet the trade, sell goods and open new accounts.

Our new illustrated booklet mailed on application.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

FULL INFORMATION FURNISHED PROMPTLY ON REQUEST.

There's Real Money in Steel Shoes

N. M. RUTHSTEIN
The Steel Shoe Man

The shoes you make the most profit on are the ones which cost you the least trouble and expense to sell. That's one point on which Ruthstein's Steel Shoes will appeal to you. But it's only one. The actual money profit that you make on each pair you sell should certainly weigh strongly with you also.

The big advertising campaign that is being carried on to show Canadian workmen why they should wear Ruthstein's Steel Shoes is going to make the selling of them an inexpensive matter to you. The difference between the price which you pay for them and the price you sell them for is a mighty fine profit for you. The great advantages which Steel Shoes possess over leather shoes are bound to have an effect on the sale

of work shoes. The workmen of Canada are now being educated to see these advantages, and it is only

a matter of time until almost all workmen will want Steel Shoes. You have the opportunity of "getting in on the ground floor" of this growing market.

Whenever prospectors, miners, lumbermen, trappers, foundrymen, laborers, etc., buy their footwear, Ruthstein's Steel Shoes can be sold—and sold profitably. They make an appeal to these men, who need shoes of extraordinary strength and wearing qualities, that leather shoes cannot make. Their possibilities for wear are so apparent that they at once make a hit.

If any of your business is done with men engaged in work that is particularly hard on shoes, you cannot afford to be without Steel Shoes. They will give so much more satisfaction to their wearers, so much more comfort and so much more wear that workmen cannot fail to be favorably impressed with the store that sells them.

The actual profits to be made on each pair of Steel Shoes is worth the handling of them. Look here and see.

Mr. Shoe Manufacturer

Industrial peace and uninterrupted production are promoted by shoe manufacturers operating under a Union Stamp Arbitration Contract.

The Union Stamp is a selling factor, the influence of which is equivalent to the work of one or more road salesmen, according to the amount of territory covered by the manufacturer. Wages are fixed upon a competitive basis; the volume of output is largely increased in every Union Stamp factory, thereby reducing manufacturing fixed charges and giving employees more weeks' work in the year.

The Union Stamp is the emblem of peace, which means more business even in dull times.

Manufacturers desiring further information should correspond with the undersigned.

The Returned Goods Problem—Who Is To Blame?

Sidelights Pro and Con on This Perennial Difficulty—Where Both Retailers and Manufacturers Are To Blame—The Compromise Spirit is a Way Out—Some New Views Presented

Just at this time of the year, when all of the spring orders have been shipped to the retailers, the usual problem of "returned goods" crops up again. The causes contributory to this state of affairs lie with both the manufacturer and the retailer, and one is usually about as much to blame as the other. In all business transactions there should be a certain spirit of "give and take," and it is where this spirit is not recognized that most of the trouble arises. Here are a few examples.

The other day a manufacturer who had been receiving large yearly orders from a certain retailer, got a rush order from the latter amounting to several hundred dollars. He advised the retailer that he could only take the order conditionally, and that under the circumstances he would be unable to turn out the goods before April 15th. The retailer wrote back accepting the order on these conditions. The goods were shipped three or four days after the specified date and reached the retailer about April 22nd. The latter immediately rushed some of the shoes into stock and sold quite a bit of the delayed shipment before the end of the month.

A Sample of Sharp Practice

A few days ago the manufacturer received word from the retailer that he was returning about 50% of these goods as they had arrived too late to be of service. This, in spite of the fact that he accepted delivery before April 15th, and then they were only a few days late. In this case, however, the retailer took good care to shove the best and most saleable portion of the shipment of the stock, while he returned only the shoes that he considered there would be any difficulty in selling—goods that, by the way, he had rather enthusiastically ordered against the advice of the traveler, who wished him to stock another line that he considered more saleable. Naturally, the manufacturer wrote back advising him that he would not accept return of the goods, stating that the retailer must either return the whole of the shipment or none at all. Can you blame him? The retailer did; and is now very sore on that manufacturer, who saw through his game and acted in the only way possible to protect himself.

Where the Manufacturer Errs

Here is the other side of the story, proving that the manufacturer is frequently as much to blame as the retailer. There

are some manufacturers who, in spite of shortage of skilled labor, and other difficulties as well, will frequently accept orders for delivery when they are "loaded up to the guards" with work, and when they they know that it is an utter impossibility to turn out the orders in the time specified. A little computation will easily show this to be the case, but they evidently trust that in some almost super-human manner they will be able to handle the work in the months that intervene before date of delivery. This is the case of a great deal of actual loss among retailers.

And it is a double loss, inasmuch as the retailer when he does not receive the goods in time for the season's trade is out just that much business and net profit.

If he accepts delivery under such conditions, he very frequently has considerable of the stock left on his hands. This is especially the case if the delivery is made six weeks or two months late, as happened with a Montreal retailer last fall, who received goods from a manufacturer on the first of October instead of the first of August, as ordered.

In this case can any fair-minded manufacturer blame the retailer if he returns a considerable part of the shipment? The footwear of the heavier and waterproof varieties would still be quite seasonable, but some of the lighter styles of fall footgear would be to a considerable extent unsaleable on such a late date. In spite of this, the manufacturer was very much "cut up" because the retailer, to use the manufacturer's own expression, "had the nerve" to return part of the shipment when the goods were up to specification in other ways. The manufacturer here, had really himself to blame for his partial loss; besides which he lost the trade of a good customer. It is pretty hard to excuse a two-month tardiness in delivery.

Cases For Compromise

Oftentimes also, the manufacturer does not fill the order according to specifications. When a man gets a military heel, and the order calls for only a heel of medium height; or when the shoe is made up with an extreme high toe when a medium toe is ordered, a good case for compromise is offered. In such cases the goods are by no means valueless to the retailer, and the latter should not take the stand that he cannot sell the shoes. It may be strictly legal to do so, but it hardly shows the "give and take" spirit for the retailer to ship the goods back without advising the manufac-

turer in time for him to make some effort at a compromise. It naturally makes a manufacturer sore in such cases, when the first word he receives of such returned shipments is when the express, or railway company notifies him that part of the shipment sent to a certain town is back in their hands awaiting instructions. It is neither courteous nor decent to act hastily in this way without the slightest notification, when a little correspondence could easily fix up the difficulty.

Wholesale Condemnation Not Right

Another case often noticed is when the retailer returns, let us say, a twelve pair lot of a certain line of pumps because one pair is poorly finished. The fact that one pair is not up to the mark is no reason for condemning the other eleven pairs. Such cases are a very common cause of irritation, and a lot of acrimonious correspondence on both sides. A polite letter from the retailer advising of the discrepancy will, in practically every case, elicit a favorable response from the manufacturer.

An Unusual Case

Not long ago, the writer ran across a case where the manufacturer's shipper sent the goods by the wrong railway line. In consequence, the retailer refused to look at the goods at all, because he stated that he never had any dealings with the company over whose line the shipment was routed, ever since some row he had had with this road. From this standpoint this may have been all right, but it was rather rough on the manufacturer, who, although it was his own error, not only lost the sale of the goods, but had to pay the freight both ways. He, in this case, did not take any action in the matter, other than refusing to have further business dealings with the retailer.

Handle Mistakes Dispassionately

These are only a few of the instances in which returned goods are a source of irritation to both manufacturer and retailer, and much of the difficulty can undoubtedly be avoided if both sides show a tendency to compromise occasionally and not insist upon the "full pound of flesh." This is a matter worth considering seriously at this time of the year by both sides to these numerous disputes.

Applying System in the Shoe Store

Study your business closely. The shoe retailer, who makes a real success, must be a close and diligent student. No trust-to-luck, happy-go-as-you-please style will answer to-day. Exact system must be employed in every phase of buying and selling. Every department must be supervised and scrutinized.

With too many dealers window displays used to mean simply filling the space with an array of seasonable goods. Now it isn't even sufficient that the shoes shown be seasonable and the trim pretty. It is recognized that a window attains only a small percentage of possible efficiency unless it goes farther than that. After attracting attention, it must so present the footwear that it will make an appeal just about as definite and persuasive as that of personal salesmanship. Harmony is important, and also the arrangement of shoes to give them the same appearance they would have when worn. These are just two of many points which have been established by close study.

There is nothing to which the shoeman of to-day needs to give closer study than his buying problems. Some stores, splendidly equipped from a selling standpoint, fall down when it comes to buying. Are you constantly striving for the maximum sales with the minimum stocks?

A certain arrangement of stock in a certain department was good enough some years ago; to-day it will not answer. Now goods must be so placed and classified in the store that a salesman can lay before the customer in a moment any style that may be called for. There are few retailers who do not realize that this is one of their most important problems.

Why Some Windows Never Draw

Retailers Crowd Them With Too High Priced Shoes—Featuring Footgear That Sells At a Moderate Figure Would Prove More Interesting To the General Mass of Purchasers.

How productive do you make your windows? Are you drawing custom, telling people just what you have in store, and impressing them with the knowledge that you can fill their wants? Or are you losing some business and creating a false impression in the public mind?

A shoe manufacturer who has had retail experience, recently returned from a trip to St. Louis and other middle western United States cities, and had some interesting views to express. They are worth thinking over.

"I was struck with the style of window dressing generally adopted," he remarked. "It is quite different to the eastern methods, and to the ideas practiced by most Canadians. In Canada, particularly in the cities and larger towns, if you walk along the main streets looking at shoe windows you will find that nine out of ten contain high-priced shoes. Few of them display medium priced lines, except those stores handling only cheap goods, or job lots. But I am talking of the average retailer who is a man supplying the bulk of the people.

"In St. Louis, particularly, I noticed that the majority of retailers featured shoes at prices interesting to everyone. Perhaps a window might contain three or four pairs at \$6, but the average price would be \$2.50 to \$3.50.

Show Average Price Shoes

"Do you not think that the idea of showing average-price shoes in the window is much better? Take the ordinary passerby, can he or she afford to pay \$6 for a pair of shoes? No, and while they may stop to look at a window featuring high price lines they will not buy as quickly as they would were shoes at a lower figure shown. It is not the 'man on the street' who pays for the \$6 shoes. The man or woman who can afford to pay this figure walks right into a high class shoe store and asks for such a shoe. They will buy such a pair whether it is displayed in the window or kept on a back shelf. The purchasers of high priced shoes are not as much influenced by window displays as are the great mass of the people who pay from \$2 to \$4 for shoes.

"Now, I do not say that the retailer should eliminate expensive lines from his windows. Let the costly shoes be made to act as a frame, but have the picture comprised of shoes within the reach of the ordinary person.

"You and I both know of a store in this town that always shows shoes from \$1.50 to \$3.50 in their windows. And we also know what a tremendous number of sales their windows pull. Would their returns be as great were shoes showed from \$4.50 to \$8 in the windows? You cannot get away from the fact that the average person seeing only expensive shoes in the window will conclude that they cannot get a shoe to fit their purpose in a store charging such high prices. I think it much better to get the people into the store by showing reasonably priced boots in the window (with a background of higher priced lines) and then selling them a \$6 pair, than to risk turning them from the store altogether by creating the impression that only the highest priced shoes are sold.

"A ludicrous feature is that, frequently, a retailer has but 15 pairs of, say, \$6 shoes in his stock, and every shoe in the window!"

New Home of the Shoe Journal

The offices of the SHOE AND LEATHER JOURNAL, which for the past four years have been located at 59-61 John St., Toronto, have been removed to 1229-1231 Queen St. W., at the corner of Gwynne Avenue, where a large, four storey building has been fitted up with every modern convenience, both from a mechanical and business standpoint. The removal was rendered necessary owing to the Canadian Pacific Railway purchasing the property of the Acton Publishing Co. for the expansion of their yards and terminals.

Some Stepping Stones to Success for the Shoeman

How a Montreal Retailer Has Built Up a Fine Business—Advertises His Own Service—Believes In Approbation, Rightly Handled—No Special Sales Necessary—Orderly Stock and Courtesy Very Important

"I have always held that if a man had a goal in front of him, to aim at, he would finally arrive at his destination if he stuck to it persistently enough. I first started in the shoe business in the States twenty-five years ago, although I have been a Montrealer for over twenty years, and I made up my mind that, sooner or later, I would start out for myself. I stuck to it till I saw my chance, then bought out the store. I was at that time managing for another party, when the latter retired from business. That was over five years ago, and to-day I have here an A1 family trade, besides being in a good position to get my share of the transient business."

So spoke Thos. Dussault, the popular St. Catherine Street East shoeman, of Montreal, on a recent occasion. Mr. Dussault certainly has gone a long way toward realizing his ambitions, and has to-day a steady, ever-growing clientele of the best class of customers, largely French-Canadian, of course, as this is Mr. Dussault's own nationality.

Ability Plus Persistence

The example of this shoeman of the younger generation can quite profitably be kept in mind by every salesman behind the shoe counter in whatever part of Canada he may be placed, because it is capable of emulation by every ambitious, earnest worker with the same goal in front of him. Contrary to the old exploded saw about opportunity knocking only once, facts prove that the cause of the average failure is not lack of opportunity, but lack of ability or aggressiveness in seizing the opportunity when it comes; or, what is worse, lack of purpose in preparing for it.

Questioned as to some of his business beliefs—or policy, as

you prefer—Mr. Dussault averred that one of his pronounced beliefs was one in which many of his fellow shoemen could not see eye to eye with him, viz.: that every shoe in his store should have his own name stamped thereon, and not the name of the manufacturer. He stated that, of course, he knew many shoemen, and the SHOE AND LEATHER JOURNAL as well, might not agree with him upon this point, but he had only adopted this policy after many years of experience and observation.

Branded Lines Not Thought Essential

"In the first place," claimed Mr. Dussault, "I am naturally in business to make a profit. Now how can I best accomplish this? Contrary to what is often claimed, I figure that I can do this better by pushing my own name and store, rather than by tailing on to the band wagon, and profiting by the publicity efforts of any one or more manufacturers. Of course, this policy implies a close personal relation between shoemen and customer, one in which the customer has learned to trust to the judgment and honesty of his or her dealer. If a stranger comes into the store and asks for a certain branded shoe, I do not try to substitute, but to convince him that I have a shoe that will answer his purpose fully as well, and I assure him that I will stand behind that shoe, if necessary, to the limit. Suppose that man comes back to me and registers a complaint, does he blame the manufacturer for any defect? Not at all. He blames me—and rightly. I am the go-between, and I would have to take the blame anyway, whether I sold a pair of branded shoes or not, so why should I not get the benefit as well?"

Advertise Your Own Service

"It is my service, my footwear, my store, that I am always working to impress on my customers. I tell them that it does not matter at all where the shoe is made, or who makes it; it is

The artistic window trim of the Dussault shoe store, Montreal

a shoe of the quality I represent it. Of course, in following out this policy, I am most careful to see that every shoe received from the manufacturer is up to the standard called for in the order—which is as good quality as is in any branded line the manufacturer may carry—and I see to it that my customers do not suffer in any way. I can then order where I like, and am under no obligations to any one. If one line of shoes for any reason is not up to its usual standard, I drop it for the time and buy where the quality suits me. I find that I get just as good service from the manufacturer as if I am an ardent booster of his line. It is as broad as it is long, because he gets just as much business from me, if I am dealing with him, as if I were handling only his branded lines, and the name 'Dussault' is impressed on the customer's mind, which is exactly what I want.

Created Demand Increases Profits

Of course, as has been intimated before, there are many who do not see eye to eye with Mr. Dussault in this matter, preferring to take every advantage of a created demand that they possibly can. Such shoemen claim that this policy is along the line of least

Mr. Dussault's special label

resistance, and that they do not care who gets the credit, so long as they get the net profit, and keep the trade and goodwill of their customers. At any rate, this policy works out well with this enterprising shoeman, and that is all that he requires.

Approbation, Properly Handled, Good

Another of Mr. Dussault's beliefs is that approbation, properly handled, is a good thing, and a sure trade-winner. Note that "properly-handled" however. There is the little joker in the pack. The sort of approbation that will send out several pairs of shoes to a customer unattended, for that customer to try to fit himself, is not Mr. Dussault's kind of approbation. With every pair of shoes that goes out from his store, a clerk goes with it, to see that the customer is properly fitted. And the shoes come back with the salesman, unless a sale is made at the time. By this method, the customer is accommodated, and new business is frequently secured from some who otherwise would be unable to avail themselves of the service of this store.

Mr. Dussault is also a thorough believer in the policy so often advocated in the SHOE AND LEATHER JOURNAL, of buying in large lots from as few manufacturers as possible. He states that in this way it is not nearly so hard to keep stock straight, and the trouble and correspondence in connection with sorting orders is reduced to a minimum. "Moreover, in doing business this way," said Mr. Dussault, "the manufacturers concerned naturally are much more willing to extend to the retailer any little courtesies possible, than they would be if he were doing only a little business with each one. This is but natural."

Courtesy All-Important

Another stone in this shoeman's business arch, is that of courteous attention to everyone entering his door, no matter what his station in life. The little child gets just the same careful attention that his mother would receive if she were present in person, and this policy makes for an ever-increasing family trade, and it gains the good will of the mother, the all-powerful member of the family when it comes to influence. The salesmen are also very courteous and obliging, counting no trouble too great to

satisfy the customer, and gain his permanent favor. Moreover, they know their business, which is very important.

No Disordered Shelves Here

The store is of medium size and compact in arrangement, with men's shoes on one side and women's on the other. One of the things that strikes the eye at once upon entering is the total lack of the usual disorder seen upon the average shoe store's shelving. Not a box is allowed to remain out of place, or awry, hence the effect is very striking. The label used by Mr. Dussault on all his cartons also heightens this effect. A cut of this label is shown here, and its neat design is very apparent. Any empty boxes are turned upside down, and are removed every few days by the staff and refilled.

Two shoe display cases stand just inside the door, one on each side. In one, is shown, a few of the latest styles in men's shoes; in the other, the latest women's creations. These have proved a splendid investment, and help to improve the interior appearance.

No Special Sales

No particular system of stock-keeping is followed, but—note that "but"—every care is taken by the proprietor and staff to see that the stock is gone over two or three times per week, and kept in perfect shape. Any "stickers" are at once given some kind of an identification mark, and a dead set made on them until they are disposed of. A stock room in the rear suffices to carry the extra stock of footwear kept on hand against emergencies. Special sales are absolutely tabooed in this store. Mr. Dussault states that such sales would lower the whole tone of the store, and he does not care to be classed with the sample shoe store, and others of that ilk. "Any goods that will not go after a season or so, are quietly sent off to an auction room to bring what they will. The loss is not nearly so great as would be the loss of prestige from running special sales on every little provocation." Such a policy would pay more than one shoeman, were he to adopt it.

Window Displays Cheap Advertising

As the store front shown here will indicate, Mr. Dussault believes in careful window dressing, and his windows are changed every week or so. Seasonable trims are strictly adhered to, and much business is directly traceable to the windows. "It is the cheapest form of advertising, and is in the hands of one of my salesmen, who takes special interest in his work," said Mr. Dussault. During holiday seasons, or on special occasions, suitable extra effort is made at decoration. Mr. Dussault is also a believer in printer's ink as a valuable form of publicity, but windows are best and cheapest.

Fewer Cattle—Dearer Leather

The following live stock figures for the province of Ontario are, according to the reports on the first of July on each of the years names as reported by the Ontario Department of Agriculture. It will be noticed by the figures of 1911, as compared with those of 1905—six years ago—there has been a marked decrease in the number of milch cows, cattle, sheep and lambs raised by the farmers, and, therefore, the scarcity of hides can easily be accounted for, as well as the advancing price for leather. In the United States the increase has been very small compared with the immense growth in population. When all grades of cattle are taken into consideration, there has been a decided falling off in the number raised. The Ontario figures are—

	1898	1900	1905	1910	1911
Horses	611,241	617,309	672,781	724,384	737,910
Milch Cows	965,021	976,124	1,106,984	1,052,796	1,045,610
Other Cattle	1,250,922	1,453,206	1,782,519	1,514,332	1,547,595
Sheep and Lambs	1,677,014	1,797,213	1,324,153	1,065,101	1,040,245

The following table shows the number of various classes of live stock in the United States in the years named:

Year	Horses	Milch Cows	Other Cattle	Sheep	Hogs
1867	5,401,000	8,349,000	11,731,000	39,385,000	24,694,000
1887	12,497,000	14,522,000	33,512,000	44,759,000	44,613,000
1897	14,365,000	15,042,000	30,508,000	30,819,000	40,600,000
1907	19,747,000	20,968,000	51,566,000	53,240,000	54,794,000
1910	21,000,000	21,801,000	47,279,000	57,216,000	47,782,000

Give Manufacturer Complete Details With Order

When Sizes or Other Details Do Not Go With Order, Everyone Suffers—Some Features of This Abuse Discussed—How It Affects the Manufacturer in Different Ways

In a recent issue of the *SHOE AND LEATHER JOURNAL* a retail shoe man gave utterance to some rather frank remarks about the lateness of many of the shoe manufacturers in their spring deliveries. Parenthetically it may be stated that several causes have contributed to bring this about. One of the causes is the shortage of skilled labor in a great many factories. Another is the quite frequent failure of the leather men to keep the shoe factories with whom they have contracts supplied according to contracts. This, of course, is due to the fact that the tanners themselves have been up against the problem of securing the proper amount and quality of certain classes of hides, of which there has been a very great shortage.

This, however, is not the point we wish to discuss here, but rather, another factor in this late delivery problem. Be it thoroughly understood that in this matter the *SHOE AND LEATHER JOURNAL* is not taking up the cudgels against the retailer in favor of the manufacturer, but is endeavoring to state faithfully both sides of this apparently annual difficulty which is more acute than ever this spring season. For this reason some of the above observations are made in fairness to the manufacturer.

Faulty Method of Ordering

The other factor we wish to discuss, is the very faulty method of ordering shoes that pertains among many shoe retailers to-day. This in itself is responsible for considerable of the late delivery in some factories. It is also responsible for a lot of dissatisfaction

among retailers and manufacturers alike. Here is the way it works out. When the traveler comes around to secure the retailer's spring or fall placing order, the latter gives him an order amounting to, perhaps, several hundred dollars. He stipulates, however, that he will send the sizes in later on, as he does not exactly know the quantity of each of the various styles and lasts that the trade will require the next spring. He fears that he cannot gauge the demand properly several months ahead of time, consequently he prefers leaving the matter of filling in the sizes, and quantities of each size until a later date.

How the Delay Works Out

If the matter ended there no manufacturer would object in the slightest degree, but, unfortunately, it does not end there, in a great many cases. Let us say that the order is placed in October for spring delivery. For the next three months the retailer, apparently forgets all about the order. Along in January the manufacturer, who has been mighty busy thus far on specific orders he has on hand, considers that the retailer has had about long enough to make up his mind and writes the letter to that effect. He either gets no reply, or else he is told that the shoe man is not yet quite ready to give the required information.

Of course, the manufacturer, who has plenty to do, lets the matter rest there for a little while longer, then probably writes again. This time he gets a night letter giving complete details of sizes, quantities and styles for spring delivery with "the sting

A PLEASING HORSE SHOW WINDOW

Turning a recent popular event to advantage. The Fogarty Co., Limited, Montreal, presented a striking horse show window that was a result getter.

in the tail" of the message to the effect that these goods are required for April 1st delivery. It is then about the middle of February. Of course, it runs in the retailer's mind that because the skeleton of his order went in during the month of October that there should be no difficulty in having the order finished by April 1st. Of course he totally overlooks the fact that until the manufacturer received specific details about this order, he was unable to start on same.

Such Placing Methods Unfair to Manufacturer

Allowing the latter only six weeks after complete details were furnished to finish up an order for several hundred dollars, means that the manufacturer has to thrust aside someone else's order that was in plenty of time to finish the belated one. Now, a moment's consideration will show the retailer that it is not fair to the manufacturer to expect this hurried filling of his order, especially in a very busy season. It is still more unfair to the manufacturer if the retailer, because he does not receive shipment of his order within two or three days of the stipulated time, when shipment finally does arrive, returns same because it is late. This is not a hypothetical instance; it is an actual fact, and it happened only a few weeks ago with one of Canada's largest manufacturers. The representatives of the SHOE AND LEATHER JOURNAL run across cases like this every little while.

It is quite true that there is the other side to the story, and this other side will be sifted impartially as occasion warrants. There is no doubt, however, that cases like this constitute a real abuse in the trade at present; and for this abuse the retailer is almost altogether to blame.

Lack of Nerve the Cause

Going farther into the matter, repeated questioning of many and diverse retailers along these lines would suggest that the main reason for such a system of ordering consists principally in the retailer's lack of confidence in his own ability to diagnose the probable trade demand in his locality, even when he has the experience of the past and the knowledge of the surrounding trade to guide him.

The weakness of many a shoe retailer to-day lies in just this fact, that he is not a good buyer. He either under buys, or buys too much, or else he does not buy the right proportions of the different styles for his trade. If a man is doubtful as to what is going to sell for the next season in certain new styles, it will be better for him to order lightly at the start, trusting to sorting orders later on to help him out of the difficulty, in case the demand for the style in question is larger than he expects. This does not apply to staple lines as the retailer usually knows where he is at, along such lines. He need not trust to the travelers' judgment in these matters, but should rely rather upon his own judgment, which may be formulated to a certain extent on what the traveler tells him.

This Practice Should Be Abolished

It is to be hoped that during the present fall season retail shoe men throughout the country, who have been given to this practice at all, will either send in complete instructions with the order, or else send them in within a fortnight after the order is received by the manufacturer. There are times, of course, when the traveler calls unexpectedly, that the shoe man wants a certain amount of time to make up his order. In such cases a slight delay does not inconvenience either party. In future, however, many manufacturers who have had this difficulty to contend with in the past, in order to protect themselves, will notify the retailer that such orders will be filled in rotation, but will only be begun when complete details for the order are received. That means that the retailer who telegraphs details of his order at the last minute, as some have been in the habit of doing, will "get left" when it comes to delivery, and he will have only himself to blame.

ANOTHER WORD OF PRAISE

I may add that your paper has greatly improved, and should, in my opinion, be in the hands of every shoe dealer.

Yours truly,

Toronto, April 18, 1912.

H. B. McCARTHY.

Keep Your Store Looking Neat

"Once every week our stock is carefully gone over, all the laces in the shoes tidily arranged and fresh tissue paper placed in the cartons so that the appearance of the goods is fresh and neat. Each shoe does not look as if it had been handled or tried on several times, and a favorable impression is created thereby." declared a Guelph retailer recently.

PRINCESS PATRICIA OF CONNAUGHT

Who has firm faith in the style and the superiority of Canadian-made shoes.

Some Fallacies in the Figuring of Shoe Profits

Dealers Too Often Base Percentage of Profit and Cost of Doing Business on the Volume of Trade, Then Apply These Percentages to Cost Price When Making New Prices—A Grievous Error

By E. ST. ELMO LEWIS

A business efficiency expert recently caused to be inserted in several national mediums, a little problem he had found that always agitated the minds of retail dealers wherever it was propounded. The problem was stated as follows:

Wholesale price of an article is.....	\$1.00
Cost of doing business.....	22%
Retailer's profit.....	10%
What is the retail selling price?	

Remember, you are basing your percentages on selling price.

This problem has led to more agitation among retailers, their trade papers, etc., than anything excepting the parcels post or the question of substitution, that has appeared in the trade press for several months.

Some correspondents in their desire to contribute to the humorous rather than to the serious columns of the publications, have expended a prodigious amount of clumsy wit in making fun of the man who would compute profits with percentages figured on his selling price. They seem to think the "good old arithmetic" is the sole arbiter of the question.

They entirely eliminate the equation of human nature.

I believe that the writer has as much respect for the "good old arithmetic" as he has for the good old anything else, but he believes also that the world moves; that you can't stand pat on

the methods of statement indulged in by the old arithmetics, any more than you can stand pat on anything else in the world.

Science vs. Practice

Scientifically, two and two always make four. Practically, two horses and two cows are neither four horses nor four cows, but four animals.

So you must always be careful in the statement of your facts, because one statement does not always equal another.

From an article printed nearly a year ago, I get an illustration of the principle involved in the statement of the foregoing problem of figuring profits on the price.

"You will find in every arithmetic such examples which are scientifically true, but which do not allow for the false thinking of a great many very practical men. A man buys a horse for \$50.00, and sells him for \$75.00. What percentage of profit does he make? Answer, 50%.

"The arithmetic figures the percentage of profit on the \$50.00 and not on the sale.

"The consequence is that our good teachers have led us to think of the percentage of profit from a standpoint that makes men think they are making much larger profits on the business they are handling than they really are. This makes them prodigal of expense, and very often leads to a failure, which with a more thorough knowledge of expense from a practical, everyday standpoint could have been avoided.

"Suppose a man has in contemplation a horse for sale on the basis of the above transaction. A horse broker approaches him and offers to conduct negotiations. He asks a commission of 33 1-3%. Now, the owner of the horse, believing he can get \$75.00 for him, and having a profit of 50% in sight, agrees, and the broker having completed the transaction, renders the bill as follows:

"Sold one horse at.....	\$75.00
Commission 33 1-3%.....	25.00
	<hr/>

"Due seller..... 50.00

"In other words, the seller's books show a profit of 50%, entirely eaten by a commission of 33 1-3%. This problem is thoroughly descriptive of the difficulties of a great many of our smaller merchants."

Take An Assumed Case

Let us, for the sake of argument, and for the purpose of clarifying the situation that has been somewhat fogged by men who think from entirely opposite poles, beclouding the issue with the dust of ridicule instead of trying to clarify it by sound reasoning, suppose a man starts in a small shoe business, and in order to keep the problem in harmony with the one stated in the first paragraphs of this article, I shall assume a large expenditure for expenses, etc.

The amount of percentage, of course, has absolutely nothing to do with the principles involved in the computation.

Suppose our dealer buys his stock of goods and, as is usual in such cases, he priced them at what the wholesalers' salesman tells he ought to get for them.

At the end of the month he finds that he has done a business of a thousand dollars.

He has kept a close track of all the sales and finds the goods he has sold, at invoice cost, cost him \$680.00.

He finds that his total selling expenses, etc., are \$220.00, and thus he has \$100.00 as a profit.

He does a little figuring.

He assumes that his cost of doing business is 22% of the total amount of business that he has done, that being the easiest way

The Princess and Her Shoe

The accompanying cut represents a shoe worn by the Princess Patricia of Connaught. It is known as an aviation boot. It is made of melton cloth, with fleece lined, has fourteen inch leg, is partly laced down the front. The shoe carries a fairly high toe, Cuban heel, and is equipped with rubber sole and heel. It was made on a special last for Her Royal Highness and was sold to her by a prominent Ottawa retailer, who received \$20 for the pair, which is possibly a record price for a lady's shoe in Canada. The footwear is used for motor-ing or walking in cold weather. J. & T. Bell, Limited, of Montreal, who are the oldest shoe manufacturing house in Canada, were the makers. The firm are also producing an artistic creation called the Princess Patricia slipper, with beaded vamp and tongue and Cuban-Spanish heel, which is turned out in kid, patent, suede and satin.

to figure it. He has made a profit of 10% of the total amount of business. This is quite the natural way for the average man to figure it. Let us suppose, therefore, that he proceeds to replenish his stock with exactly the same kind of merchandise that he had before, and he thus buys another \$680.00 worth of goods. (We assume this simply for the sake of illustration). He gets the goods in and he says:—"I'll mark these to make 32% over cost, because I want to make 10% profit, and 22% will cover the cost of doing business, etc."

What does he get? He finds at the end of the month that he has sold the same amount of merchandise, but he has received only \$897.60 for it. In other words, he hasn't made his \$100.00 profit, but has actually paid out \$2.40 more than he received.

Had the retailer's knowledge of percentage been more thorough he would have realized that while the \$320 was 32% of his sales of \$1,000, it would be necessary to add 47% to the cost of the merchandise to get selling prices to total the desired \$1,000.

Where the Difference Comes In

Briefly, could it be argued with success that because \$320 was 32% of \$1,000, it therefore was 32% of \$680? But it is just there that our retailer fell down!

He has been guilty of two fallacies in his methods. In the first place, he has based the percentage of profit and cost of doing business on his volume of business, but applied these percentages to his cost price when it came to making new prices; and in the second place, he is not trying to make any money on the amount of capital paid out for rent, clerk hire, advertising, etc. It is just as real capital that pays the clerk to hand out the merchandise, as it is the capital which it takes to pay the wholesaler for the merchandise, and a man should make money on both, because both are part of the service which his capital procures for the purchasing public.

How should he have protected himself in the matter?

Let us figure it out a moment.

Our dealer has found that his cost of doing business is 22%. He wants a profit of 10%.

We assume that 100% is what he gets for the article. Therefore, we deduct the 32% from the 100% to find out what per cent. of the total price, the cost price is, because the cost price will be that portion of the 100% which is left after deducting the percentages required to pay the cost of doing business and the profit. We find, therefore, 68% of any selling price, where the cost of doing business is 22% and the profit desired 10%, represents what any article costs. Suppose the article cost \$1.00. We divide 68 into \$1.00 after adding two ciphers, and get \$1.47 plus as a result. Let's prove it. If a man sells the article for \$1.47 and is allowing 22% for cost of doing business, he gets 32 cents plus, for expenses. If he has figured on 10% of his business as profit, he finds that he gets 14 7-10 cents or 15 cents profit. Deduct your 32 cents cost of doing business from your \$1.47, and you have \$1.15. Deduct 15 cents profit, and you have the \$1.00 left.

The Better Way to Figure

So we have proven that it works.

And we propose to prove that this is the better way to handle the figuring of profit for a good many reasons.

Suppose a man wants to do it in the "good old arithmetic way."

What does he have to do?

He has found out that 22% of the total amount of business that he has done represents the cost of doing business.

He figures that if he makes 10% on the amount of business he is doing, that he would be making a fair return on the amount of his capital invested.

He understands that he is getting his percentages on the amount of his business, but he wants to figure his profits on his cost price.

All right.

We find by referring to the "percentages of profit tables," which I will be very glad to send to anybody interested, that, in order to make 32% of the selling price to cover your cost of doing business and to make a profit, you will have to add 47% to your

cost price. (You see our \$1.47 comes in on an article that cost \$1.00). In short, it doesn't make any difference whether you figure on cost or selling price as a basis, provided you understand that 10% profit of your gross business will not produce the profit when you use it as a profit to add to any given cost price.

A very simple illustration will suffice. Suppose your selling price on an article is \$1.00. You know it costs you altogether 90 cents to get it into the hands of the customer. You say, that's 10% profit. But suppose another bill of goods comes in and you say to the clerk, "Mark it up 10%." You mark it up 10% and it gives you 99 cents, doesn't it? It doesn't give you \$1.00, does it?

But if you kept in front of you the fact that 10% of your selling price meant 11.11% of your cost price, then when that bill of goods came in, you would mark it up 11.11% of the cost price, and the price would be 99 99-100 cents, which you would make \$1.00.

After all, therefore, it comes down to the question of the policy of figuring profits on selling or cost price. We know, what I believe all our readers will admit, that we can get very sadly tangled up sometimes. I know from a pretty wide investigation that many a retailer is to-day figuring in the dark with a result which is unfortunate, because he does not keep the percentages of profit from his cost prices.

We know that it makes a very great deal of difference how you look at a thing. It is important that the average man should consider every part of his business carefully.

Day of Scientific Management

This is the day when we are trying to consider things from a practical standpoint. The advantages of figuring your percentage of profit on the selling price and not on the cost, are obvious, if we will consider them openmindedly and dispassionately, and leave the good, old arithmetic—for it is a "good old one"—and while being profoundly reverent of the ancient problems yet know how they work in our everyday lives.

Thus, because a problem is stated in one way, doesn't mean that it can't be stated in another and the last be a better way of stating it. The following reasons for handling profits on a basis of selling price, are paraphrased from Thomas A. Fernley's book "The Right Way to Figure Profits."

1. The remuneration of salesmen, for instance, is figured on a percentage of the selling price, and is not figured on the cost price. Therefore, the selling price plan works in harmony with that.

2. The percentage of expense of doing business is based on the selling price.

If you talk and think of your percentage of profit on cost and your percentage of expense on selling price, nine cases out of ten, you will lose money before you get yourself untangled.

Some Pertinent "Beauses"

3. Because the mercantile and other taxes are invariably based on the percentage of gross sales. Therefore, it is important if you are figuring in your mercantile and other taxes in your expenses, to figure them in the same way in which you are figuring your anticipated profits and making your selling prices.

4. Because the sales totals are always given in books of records, cost totals are seldom, if ever, shown.

5. Because a profit must be provided for two items of capital. On the capital invested in merchandise and on the capital necessary for operating expenses and other expenses not properly chargeable to merchandise account. This is only possible by figuring a profit on the selling price.

6. Because it indicates correctly the amount of gross net profit when the amount of sales is stated. If you are figuring your percentage of profits through the selling price, a statement of gross sales for the day, or month, or year, would be a pretty accurate indication of what you should expect in the way of profit. The percentage of profit on sales is indicative of result of a year's business—percentage of profit on cost is not.

7. Because allowances in percentage to customers for cash discounts and otherwise, are always from the selling price. There-

A Catchy Shoe Window for the Fair June Bride

A Practical and Comparatively Inexpensive Display—Horse Show Trim to Capture the Trade in Larger Centres
—Some Timely Suggestions for Progressive Retailers—Details of Materials Used

By A. A. DAoust

The SHOE AND LEATHER JOURNAL has inaugurated this window trimming department for your special benefit. Descriptive sketches and suggestions are offered each month, which, if you will avail yourself of, will undoubtedly considerably increase your daily sales. These ideas are not untried plans, but are furnished the SHOE AND LEATHER JOURNAL by one of the most successful men in his chosen profession. They need not be carried out too elaborately, but can be adapted or changed as desired, according to circumstances.

You can make a big increase in your cash sales by following out these suggestions as carefully as possible. That is what this department is for, and it is the earnest desire that you use these suggestions from month to month, and report results.

The latter part of May is the period in which every live shoe man should turn his thoughts toward the month of June, as the month in which very many weddings take place in every locality. The question in his mind should be, "How can I turn this condition of affairs to my particular advantage?" Herewith is a detailed sketch showing clearly how an elaborate setting can be carried out at a medium cost, and which will more than repay for such cost

the trouble and thought required to reproduce this display in the window.

Just here attention should be called to the propensity, all too common among shoe men, to refuse to try any display which appears the least bit involved or difficult. The main reason for this evidently is, that the shoe man looks at the display as a whole, instead of dissecting it feature by feature, and taking one feature in hand

An inviting June bride window.

at a time. In this way by following a well defined plan, either in his own mind or on paper, the merchant can readily build up a striking and attractive display.

Don't Crowd the Display

Again, however, the writer would call attention to the fact that it is not necessary to try to show a sample of every new style

in the store. In spite of the general tendency in this direction, we must express emphatic disapproval of such methods of window dressing. The consensus of opinion among all the most successful window dressers, is to the effect that a crowded display not only causes the onlooker to have a poor opinion of the store, but it also prevents him from picking out the particular style he is after, as he is confused with the multiplicity of shoes in the window.

Morcover, there is the other side of the question to consider. When a window is jammed full of shoes it means a great deal of sorting and taking down stock from the shelves, which work has to be duplicated when the window is taken out. And, it makes the store look too much like the sample shoe store, which is the very last thing any retail shoe man should wish to be compared with.

THE JUNE BRIDE TRIM

Details of the June Bride window sketch herewith shown, are as follows: The five bells in the sketch may be made on wire, taking care that the proper shape is given to the wire. It would be better to have the work executed by a florist if at all possible. These people have facilities for this sort of constructive work, and can cover such a frame with flowers far more artistically than can any shoe man, no matter how expert.

However, if there is no florist in your town the easiest and cheapest way to cover these bells would be to use fine white tissue paper next to the wire, and then use small white roses with foliage. These can usually be had from florists padded with moss, so the trimmer will be able to make a better job fastening foliage upon them. If necessary, artificial flowers and decorations can be used, and if the window is to be left in for any length of time, this will prove to be the best investment. However, if the window trim is only to be allowed to remain for two or three days, as is usually the case in stores in the larger towns and cities, it would be more natural and seasonable to use real flowers, if at all possible.

It will be noted that the bell at the top is fully twice the size of the other four bells fastened to the cross piece in the window. The actual size of these bells must, of course, be determined by the judgment of the shoe man, who will know best what space he has to work in. An electric wire should be run through into the centre of each of these bells, using a bulb frosted white at the end to give it the effect of a real bell. It should hang down far enough in the bell to make it appear like a regular clapper, also to be readily seen.

Further Details

To make a pedestal in the centre, construct a square base of one-half inch lumber and cover this with white felt. On top of this fasten a round post, which should also be covered with white felt. These posts can be secured from any dry goods store, that sells oilcloth or carpets by the roll. To make the flower holder on the top, buy a large chopping bowl, gild it, and after filling it with moss, use foliage and white roses, or other light colored flowers to complete the decorations, taking good care to make these hang from the bowl. Of course, here again, if necessary, good artificial flowers may be used.

Wide white ribbons should be used with the bell at the top, and fastened after the style in the illustration, and white cushion cords with the small bells at the side. These are easily secured at the dry goods stores.

If the window has not a cross piece, as in the sketch, cut one out and cover it with white felt, hanging the bells at each side, as in the sketch. This cross piece should run from side to side about the centre of the window and not quite half way up from the floor. Note, also, that the frames of the window should be covered with as much foliage and flowers as possible to carry out the idea.

Don't Forget Purpose of Display

As the purpose of the display is to sell footwear of all kinds to June brides, any footwear used in the display should be suitable

HAS THEM ALL BEATEN

I find a great many say and I often hear that your Journal has all similar publications beaten, not only in Canada, but that it can teach publishers on the other side of the line many things in the production of a good shoe paper.

R. B. McPHERSON.

Vancouver, B.C., May, 1912.

for the trousseau. Remember that the bells should be made as white as possible, and as a counterfoil for this, white silk for the flooring would look extremely handsome.

As stated previously, this whole display can be carried out with white artificial flowers, and these will give beautiful and rich effect. Put only a few shoes in each window, and remember that the money expended on such a display will not only bring immediate results in increased sales, but it will also give the store a prestige that it has not previously enjoyed, if little attention has been given to window displays heretofore. This whole display can be carried just as elaborately, or inexpensively as the trimmer desires, and full information can be secured from the writer as to where all necessary artificial foliage can be purchased, provided a stamped self-addressed envelope is included in the letter of inquiry.

HORSE SHOW WINDOW

This sketch can be carried out at a very small cost, and by using the different colors that each city has for its Horse Show, a handsome background for the display of shoes can be secured. The large horse shoe in the bottom centre of the window is made of wood, covered with suitably colored felt, and costs practically nothing, as it can be cut from shoe case lumber with a small circular saw. A more elaborate horse shoe can be made of wire all covered with puff silk, and using different colors for the nail holes. Care must be taken to use silk harmonious in coloring with the regular horse shoe colors. If the shoe man has not a good idea of color harmony, he had better call his wife into counsel to help him out, as any clashing of colors would spoil the whole scheme—at least for fastidious women onlookers.

This Trim Easily Made

Any florist can make the above wire shape at small cost; or, such a shape can be secured from people making wire shades, and the work of that kind. The small shades at each side can be made of cardboard with a covering of tissue paper or silk, the fringe being made of either of these materials as desired. The horse shoes at the top can be procured from the local blacksmith and gilded, which gives a rich effect. Of course, these shoes can be borrowed only, and can be returned after the display is taken out. The whips, stirrups, etc., can be borrowed from the local saddle or harness maker. In such cases a small card so placed as to be seen readily, yet not to obtrude itself upon the display as a whole, should be placed in the window, giving credit to the firm from whom these materials are secured. This is only common courtesy, and it enables the shoe man to borrow his articles more readily, because, when seen in such an attractive display they prove a splendid ad. for the lender.

If the window has not a cross piece in the center, as in the sketch, one can easily be made and nailed across the window after the fashion of the one in the June Bride window.

Use Plenty of Foliage

Plenty of seasonable foliage should be used to cover the frames of the window all round, also the cross pieces. A large card shaped just the size of the inside of the horse shoe should be made, worded according to the fancy of the shoe man. This card should be neatly executed, as a poorly written card would spoil the whole effect. The wording shown in the sketch is merely offered as a suggestion. Such a card will round out the whole display very nicely indeed.

Cover the whole window flooring with ground cork, which can be bought at about five cents a pound in the average locality. It should be procurable at the druggist's, or, possibly, at the grocer's. If this cannot be secured, the writer will be only too pleased to forward information regarding same. It should, however, be easily procurable.

The whips should be fastened to the upper rear part of the window, in the manner shown; these can also be procured at the saddler's. More whips in different positions, will add to the attractiveness of the display, also a few gilded horse shoes on the bottom. Like the previous sketch, this idea can be carried out as elaborately or as cheaply as the shoe man requires.

Some Stray Shots from "Solomon"

There is no hatred like that of a man for the fellow he has injured by his crooked tongue. If you want to know why some men are so bitter against their neighbors, just find out what they have done to the latter. Nine times out of ten they have done some dirty trick and they hate the injured instead of hating themselves for their meanness. It is the law of the jungle to hate the victim. This is the distinction between a real man and the wild beast. "A lying tongue hateth those that are afflicted by it." The slanderer tries to justify his venomous tongue by proving that the man he has wronged is at least as bad as he is. "Love your enemies" is the motto of the good. "Hate your victims" is the creed of the harpy. Get your knife in and turn it around, is the aim of the moral assassin.

It is better for a man to listen to honest criticism than to be humbugged by false friends. The man who says "Yes, yes," to everything you say, give a wide berth to. He is either too much of a jelly fish, or he has some purpose in his flattery. "A flattering mouth worketh ruin." Many a man has been led on to business as well as moral perdition by the honeyed words of some liar who laughs behind the back of his victim as he utters them. We don't like plain talking when it puts us up against our weakness, but it would be better for us many a time if we had those who would not hesitate to point the finger of condemnation at us and say, "Thou art the man." No real man is ever injured by honest criticism, and the best are often led astray by the wiles of the flatterer.

The man who "didn't mean to do it" is a brother to the fellow who says "I was only fooling." Many a thing said in jest has been more cruel in effect than that uttered in earnest. There are few people who take refuge behind "humor" as an excuse for a nastiness that is tenfold more despicable and injurious than if it was clothed in its regular garb. "Half in jest and whole in earnest" is the most deadly kind of stiletto to use in a man hunt. "As a mad man who casteth firebrands, arrows and death, so is the man that deceiveth his neighbor and saith, am I not in sport." When you want to "do" your neighbor take a gun or club and face him. Don't sneak up on him with the Judas kiss.

Get out of conceit with yourself. That doesn't mean to lose confidence in yourself, but get it into your head that it is possible for you still to pick up a few ideas. There are two classes of business fools--the one which listens to every blatherskite who butts in with advice, and the other which despises anything that comes from anywhere else but his own small brain. "Secst thou a man wise in his own conceit, there is more hope of a fool than of him." A fool stands a chance when he listens to the wise, where the ass who cares for nothing but his own ideas and whims can't have horse sense licked into him with a stick. An open mind, not a vacant mind is a result of successful achievement.

If you want to do any "skinning," try it on the rich and not on the poor. "He that oppressteth the poor reproacheth his Maker." There is a Providence that exacts recompense for the wrongs of the poor. Don't forget that. The money you have made out of those second mortgages that you have had big interest on, and finally foreclosed may look good to you, but it will be found on you when you get to the other end of the road. The only thing a man can take with

him into the next world is the record of what he steals or squeezes out of his fellows. It has to go through with him to be put in evidence. But seldom does money got by oppression stay with the man who gets it. There is something about meanness of this kind that hangs it in the long run. "He that oppressteth the poor to increase his riches shall surely come to want." Some may seem to dodge this fiat of Providence, but you only need to look around to find it proven.

There are a lot of people who, if all their needs were fully provided for, would want somebody to put their food into their mouths for them. It is said that "Job's turkey" was so poor that it had only three feathers in its tail, and had to lean against the fence to gobble. There are some men who are so lean morally that if they were given abundance they would complain of the trouble of cutting and masticating their food. "The slothful hideth his hand in his bosom; it grieveth him to bring it again to his mouth." There are men so lazy that if they were given an automobile and chauffeur they would kick because they had to climb into the tonneau. The lazy devil is a hard master. His cry, like that of the horse leech is "Give, give."

Don't be a party to keeping up strife. Do your share in the work of peacemaking in the world by keeping your tongue still as far as quarrels are concerned. "Where no wood is, there the fire goeth out." If people would only stop carrying about stories a great many of the troubles of life would disappear. What people say concerns us so much, unfortunately, that we are affected by every rumor that gossips start. If we cared less for our reputation and more for our character, we would not be quite as much interested in what people say of us, but, alas, we keep our ear cocked for gossip, and this invites trouble. Busybodies are responsible for many a shipwreck in life, and in the great revelation of all things we will find that many a life has gone down in a despair that was brought by the heaping of fuel on the fire of rumor.

What's bred in the bone comes out in the flesh, and what's thought in the heart is seen on the lips. You can no more get clean speech from a dirty soul than you can fresh water out of a frog pond, or pure air from sewers. The reason some people's words are as fresh and sparkling as childhood is because they are themselves child-pure in their hearts. "He that loveth pureness of heart for the grace of his lips the king shall be his friend." There is nothing that shows the man so much as speech. "Thy speech bewrayeth thee." You can no more hide your character when you get your tongue going than you can disguise the contents of a bottle of aqua fortis or attar of roses when you take the cork out. Are you aqua fortis or attar of roses? Is your place in kingly company or with bar-room loafers?

Get rid of anybody around you who is always criticizing and fault-finding, especially one who sniffs at everything that is "good." The old conundrum, "What makes more noise than a pig under a gate?" has another answer. One squealer in a shop or family will set more nerves on edge and do more downright harm than all the pigs you could put under any gate. He will get everybody into the habit of grunting or knocking if you don't get rid of him. "Behold how great a matter a little fire kindleth," yea, how much heartburning and mischief one bad tongue in a community can cause is hard to compute. "Cast out the scorner and contention shall go out; yea, strife and reproach shall cease."

Apportion a Set of Numbers to Each Section

A Practical and Simple System of Keeping Shoe Stock—What To Do in Case of Repeats—Entering Goods in the Books and Checking Off Each Pair Sold—A Few Good Rules

By A. L. WRIGHT

I will try to describe some of the clearest and most practical systems of stock keeping that I have come in touch with. I had, some time ago, the privilege of spending several months in connection with what is probably the largest retail shoe business in Montreal, and was able to observe the working out of the system which I shall describe.

To begin with, any "system" to be at all thorough, may appear at first sight, to the smaller dealer, to be somewhat intricate, but it will be found worth while to familiarize oneself with details. We will suppose all lines are received in "uniform" cartons bearing the firm's (not the maker's) label. Our plan is now to divide the stock into sections and apportion a set of numbers to each section, as follows:

Infants' lines.....	100 to 298
Childs' lines.....	300 to 598
Misses' lines.....	600 to 898

Youths' lines.....	900 to 1198
Boys' lines.....	1200 to 1498
Women's lines.....	1500 to 2000
Men's lines.....	2000 and up.

Line numbers to be clear and easily followed might read: 600, 602 604, etc., the hundred and fifty numbers thus provided will probably be found ample in any of the lines, except the "men's" where there is no succeeding line to limit its extension!

In the event of line 488 having been repeated on and coming in, finds 7 pairs of the original lot still on hand, the new lot takes the even number 488, the left over lot being marked X after stock number, and reading 488X. Our section numbers must again be sub-divided according to the different leathers, and fabrics, for instance, men's patents, 2000 to 2200. tan calf to 2300; gun metals and calf to 2600; vici kid 2800; grains, to 2900; splits to 3000. All the other lines, women's, boys', youths', etc., to be sub-divided.

AN ORIGINAL HORSE SHOW WINDOW DISPLAY

The accompanying cut gives some idea—although it must be confessed that it is not an adequate one—of the windows which were part of the display by C. E. McKeen Shoe Store Co., during the fifth annual horse show in Vancouver. The competition was a vigorous one, being entered into by a large number of stores, while many of the exhibits were elaborate and even extravagant. C. E. McKeen's shoe store windows captured first prize in the contest, they being considered the finest and most original. In the women's window, a daintily dressed and attractive doll of large size is standing in the background driving a four-in-hand, the ribbon reins being attached to miniature ponies, placed on pedestals. In the men's window, several beautiful ferns and potted plants lend an attractive background to the display. It will be noticed

that the walls are hung with seasonable pictures, and that the show cards are particularly apropos, the horse shoe at the top encircling the head of a steed, which is being held by a fair equestrienne. At the back of each window was the expressive motto: "Enjoy life with the ponies," and on either side were pennants referring prominently to the great event, which was held from April 22-27, and was a big social success. The windows were artistically trimmed by R. B. McPherson, who is an expert in the line of picturesque presentations of footgear. The manager of the store is W. W. Ingledew. The highest grades of shoes are carried, and a very satisfactory trade done with those who desire smart and stylish coverings for the foot and are willing to pay a fair figure. The motto of the company is "From tannery to foot."

The use of numbers will be found very convenient for the different lines in stock in your store.

We now come to the "stock arrangement" wherein the foregoing is so essential. The only proper shelving is the single carton system from 9 to 12 shelves high from baseboard up, the divisions between holding eight men's or 10 ladies' cartons. One side of the store we will name down to a certain section, our men's department; then follows our boys', our youths', etc. Similarly, the other side: women's, misses', children's. Beginning at the front of the store in the men's department we now find if our stock has been numbered as above, line "2000," our best patent button to sell at \$6.00 (always running button boots before lace), beginning with smallest size, 4 D, is placed on lower shelf at left and follows to right and then continuing in shelving from left to right until all of the 2000 D's are placed, then begins 2000 E size 4, and follows along until exhausted, no matter where in the shelving. Line 2002 the smallest size and width immediately follows, and so with line 2004, working from our best to our cheapest patent button, which

is followed by our best patent lace working down the price grade and up in numbers.

Numbers Will Run Consecutively

If the above schedule is carefully followed it will be evident that our numbers will run consecutively higher as we progress down the store, the better lines being to the front, and where our patent lace ends, our tan button begins, and so on. It goes without saying that all stock is entered in the stock book on being received, as 60 pairs, line 2284, or whatever the number may be, and each pair sold is checked off from the sales slips, which show the number of line disposed of, always revealing how the stock of any certain

This system of placing stock is like turning the pages of a book, and just as simple, if you keep in mind the schedule. Patents tans, gun metals, vici kids, grains, splits, buttons, always preceding lace, running your \$5.50 tan button, then your \$5.00, then \$4.50, right down to the cheapest tan button before beginning tan lace, \$5.50, \$5.00, etc.

Disputes Between Leather Buyer and Seller

There Is No Legal Machinery for Their Adjustment—Tanner Believes That Question is of Vital Importance and That a Referee or Inspector of Measuring Machines is Necessary—A Case in Point

The Canadian tanner has his grievances like other men. He can make a sale of so many sides of leather and charge the customer, who may be a shoe manufacturer, so much per foot. Now, in case a dispute between the customer and himself arises, who is to settle the difference? There is no medium, no officer or no tribunal which can adjust the trouble.

"Such a matter as this has caused me to do considerable thinking of late," remarked a Toronto leather merchant this week. "Now in the case of hides and skins, there is an inspector to whom the matter can be referred. He is appointed by the government and stands between the seller and the buyer at all times. The buyer can purchase the hides flat or subject to inspection, which ever he pleases. When bought subject to inspection they are classed as No. 1, No. 2, No. 3. There is no room for a jangle. The inspector is the arbiter in such affairs. The buyer hands over five cents per hide for inspection, and whether it pays him to take inspected stock or to buy it flat, is a matter for his own discretion. Now, after a hide is tanned, the tanner sells the leather. It may be at 25, 28 or 30 cents a foot. The vendor contracts to take so many skins, and the vendor, of course, puts these through an automatic measuring machine, and charges so many feet. I will give you an example of what I mean, which will more clearly illustrate the point at issue. A man who has long been a patron of our firm; in fact, was a personal friend, came into the office not long ago and said he believed that he was being cheated on certain stock; that he was not getting the number of square feet for which he was paying. He told me that he thought of putting in a measuring machine. We discussed the matter, and while he had every confidence in our firm, he said that he had reason to believe others were doing him. Well, instead of putting in up-to-date, thoroughly modern machines, he went and secured one from some place—I don't know where, and installed it. Next time he bought sides from us, we put them through our machine and found that they measured so many feet. My friend came back a few days later and told us that our machine must be wrong, as he found that he was billed for many more feet of leather than his machine recorded.

I'll Not Go Back On It

"How do you know that your machine is correct?" I inquired.

"Well," he answered, "it is true to square and if it is accurate on a paper square of 8 feet, it must be correct when it comes to the matter of hides.

"We discussed matters for some time and naturally the con-

versation grew very warm. I offered to take the hides back and have them measured on a machine of the very latest type which had been installed by another leather house. I invited him to be present at the measuring, but he would agree to no such condition. He declared he had no reason to go back on his machine, which he believed was as good as any, and no mere hearsay would convince him to the contrary. Well, I went and got the sides that we had sold him and, for my own satisfaction took them over to this very latest machine. I found that the measurement on the whole lot tallied exactly with our own machine which, while not a modern one, we assumed to be correct. I told my friend that his machine evidently must be wrong, as the most modern one invented had verified the correctness of our own estimate. He still, however, maintained that his own was just as good as any, and though I called it a "second-hand, cheap john one," he refused to abide by the record of any other. He stayed away for some time, but finally came back and is dealing with us again.

A Court of Appeal Necessary

"To make a long story short, there should be some system whereby machines would be inspected the same as scales, bushel or peck measures, etc. It would obviate much misunderstanding and unpleasantness. There is no one, as I have pointed out, to refer matters to when a buyer and seller do not agree on the exact number of feet sold. Each man may have a machine and believe in it as he does his own watch, but that does not guarantee that the outfit is correct. Now, there should, I contend, be an inspector, or some other competent official or board, to settle just such matters as I have spoken of.

"I think this is a question that the tanners' section of the board of trade might very profitably take up and bring pressure to bear upon the government to arrange for a regular inspection of machines, or appoint some official who would be a referee in matters arising where both parties are convinced they are dealing in good faith, but cannot agree upon figures. There is no more important proposition, to my mind, in connection with the tanning trade, than the one that I have briefly outlined. I know whereof I am speaking, as several instances of disputes have come under my notice and there has never been a safe or satisfactory method of settlement."

Just because the dust has been wiped off from the show case once to-day is no reason why it should go until to-morrow before being dusted again if it needs it before.

Increased Shoe Cost From the Factory Standpoint

Serious Jump in Leather Prices, Particularly Calf Skins—Other Items That Have Hit the Producer Hard—Labor Demands Additional Wages and Have Helped—A Review of Conditions

Retailers considered the manufacturers were bluffing when they stated early in the year, through the medium of representatives of the *SHOE AND LEATHER JOURNAL*, that prices would have to go up on practically all lines of shoes. Many of these retailers said that they had heard the same story before, and that nothing had come of it. But they reckoned without knowledge of several very important factors in the situation—factors which the manufacturers had full cognizance of, to their sorrow, in many cases.

The first of these factors—and the most important—was the series of jumps taken by leather prices, in which most varieties of leather were included. Calfskins have proved most prolific in surprises, especially tan skins. When a manufacturer pays 31 cents for tan or gun metal calf, as more than one did last week, it is little wonder that he begins to look in some direction for relief. The significance of this is the more evident when it is realized that the volume of shoes now being manufactured, into whose composition calfskins enter largely, is increasing each season. It is also a fact that it is next thing to impossible to get some of the best grades of calfskins—so much so that more than one manufacturer has been in the market for the choicest grades of box kip, as an alternative choice. In fact, tanners handling the finest quality of box kip have been busy taking down orders, partly because of this situation, and because a fine kip is better than an indifferent calfskin.

Some Other Features

Now calfskins are only one feature. Practically every leather has gone up, either in sympathy, or because of a genuine shortage, as in the case of calfskins. Sole leather is more than usually expensive just now, and an increased price in this commodity hits every manufacturer alike, no matter whether he manufactures welts, turns, Mackays, standard peg, or what not? He must use large quantities of sole leather, and his pocket book gets a severe jolt when the price jumps a few cents.

Moreover, every sort of accessory has gone up as well, during the last few months. Threads, cotton linings, fabrics for toppings,

and others too numerous to mention have felt the upward swing due to increased cost of production; and the manufacturer has been the man to get hit by the price increase every time.

Hit Him Very Hard

Then labor demands, such as increased wages, shorter hours, better working conditions, etc., have caused the manufacturer much added expense, although in this particular he is but sharing the burden of brother manufacturers in every line. It is in the price of raw materials that the shoe manufacturer, through no fault of his own, has been hit unusually hard.

There was only one way to recoup himself, and that was by charging the retail trade and the jobber as well, an increased price for shoes of practically all grades, and this has been done? In the case of the better grades of footwear, the increase has run from 10 to 15 cents per pair, or about 5 per cent. on an average. Cheaper grades do not feel the increase so much. It is only a small matter for the retailer to recoup himself by asking his customers to pay slightly more for their shoes. It is the only way out, and should not be difficult to manage if sufficient tact and determination are put behind the retailer's effort to increase prices. Sooner or later the increase had to come.

When Will It End?

We have had a hint or two lately of the volcano that smoulders beneath the surface of business conditions on this continent as well as Europe. The recent railway troubles in England, and latterly the coal strike there and that in the United States have added their warning to those already sounded by the recent revelations in connection with the bridge workers organization of America as to the gathering storm involving capital and labor. Civil war will not be a circumstance to the situation that promises sooner or later to be precipitated by a deadlock between those who provide money for industrial enterprises and those who furnish the labor.

The imposing front of Sippel, & Hagen's Shoe House, Berlin, Ont., showing an attractive window trim.

Retailers Should Face the Situation as It Exists

Public Generally Has Little Definite Knowledge on Shoe Values and Will Not Object to Increased Price—Majority of Dealers Who Have Paid More, Are Asking More—Are Odd Prices Feasible?—Some Opposing Views

The advanced price of footwear is now so universal a topic of conversation, and occupies so large a place in the relations of the buyer and seller as well as manufacturer and tanner, it has become firmly fixed in the public mind that a raise of a considerable amount is both justified and justifiable, under existing circumstances.

The SHOE AND LEATHER JOURNAL in this issue presents further interviews with representative retailers on the situation. They all appear of one mind, i. e., the public will have to pay more to get shod, and the quality of the shoe should not be allowed to deteriorate, owing to added cost of raw material and manufacturing. A prominent retailer remarked the other day that it would not be long before any shoe worthy of the name, particularly in fine wear, could not be retailed at less than \$5.

The public might as well make up its mind that it has to pay more than in the past, and the manufacturer who says that he can produce the same kind of a shoe to-day that he did a year ago without asking more for it—well, he will bear watching, and so will his goods. Every indication points, in connection with spring and summer samples, that prices will go even higher. Quotations for calf skins are increasing constantly, and one prominent tanner stated this week that, so far as he could judge conditions, the expense to manufacturers will be fully 8 cents per square foot higher than a year ago, when the same grades of skins are taken into consideration. Not only in upper stock but in bottom stock counters, box toes, linings, and practically everything else which enters into the consumption of a shoe are showing decided tendencies to increased cost and, therefore, conditions might as well be recognized as they are.

There is no sense in the retailer trying to please a thankless public by doing business at a less profit simply because he is afraid somebody is going to institute a kick or buy boots from another man up the street. The other retailer has to live and, while he may hold out for a while doing business at a minimized profit, the high cost of living, rents, help, insurance, etc., will get him in time. The man who has the courage to advance prices at once in the same ratio that he has to pay for the goods is the one who will come out right in the end. There is no rhyme or reason engaging in business and investing a large amount of capital in it unless there is an adequate return for the outlay of time, risk, labor, uncertainty and struggle.

Dear Public Must Pay

Fred Jackson, of Clinton, Ont., says that whatever advances are made in shoes, the dear public must pay. He has found an increase in nearly all lines from 5c. to 10c. up to 25c., and has raised the price on a number of shoes from 25c. to 50c. Customers realize more than they did some years ago that it does not pay to buy very cheap shoes. Mr. Jackson has not tried selling at odd prices and does not think the plan practicable, as it induces the habit of bantering. On a \$3.15 shoe, patrons want 15c. off; the same way with shoes selling at \$4.85 and \$5.85, when the merchant will be asked to throw off the 10c. Mr. Jackson adds: "I believe, though, that persistently maintaining odd prices would, in the end, wear out this habit. The most trouble occurs with shoes priced at \$1.10, \$2.10, \$2.15, \$3.15, etc. If shoes advance as much as 15c., I do not think the retailer should raise his price by 50c.—25c. would answer."

Calls Odd Prices A Fad

W. L. Tuttle, of Halifax, N.S., finds that there has been approximately a 5 and 10 cent raise on all lines of shoes. He has not noticed any deterioration where there has been no advance in price. He has raised prices on various lines from 5 to 10 cents and 25 cents per pair, and does not find that his clients object to paying the higher figure. He has never tried selling at odd prices.

He concludes: "I do not think it is necessary to charge odd prices. I think it is a sort of fad. Every maker or retailer can arrange to have all put into, say a \$5.00 boot that he can afford to for the money. The retailer should get the same profit, whether the prices are odd or even. I fail to see the advantage that the consumer receives by odd prices."

The Public Getting Reconciled

Hugh MacKay, of Trenton, N.S., says some shoes have advanced 15 cents per pair, and he has raised the selling figure from 10 to 25 cents on many lines. The public do not object to paying it as they are getting reconciled to the higher figure. He has sold goods at odd figures and says it works all right in his town, and he has no objection to it whatever. "In my experience," he adds, "I found that some manufacturers advanced the prices and reduced the quality to a certain extent, no doubt, to meet competition from other manufacturers, and at the same time they endeavored to lead the retailer to believe that theirs were the best priced goods of the kind on the market."

Takes a Common Sense View

J. T. Heath, Orillia, Ont., goes extensively into the question of increase. He says all products from cowhides have advanced about 8 to 10%. Dongola kids, etc., from 3 to 5%, and that all round the advance will average about 6 to 7%. As to what the average increase is per pair, it depends upon the class of goods. For instance, a good reliable house in men's fine shoes sold us lines last season for \$3.00. This season, they are asking \$3.25 and \$3.35. We have found that where shoes have not gone up in price, there has been, in most cases, a deterioration in quality. We have certainly raised retail prices, enough to cover the advance. A shoe, on which the former cost was \$3.00, we sell for \$4.00. At the advance figure of \$3.25, we now get \$4.50. Another illustration is that where a shoe on which the former cost was \$1.55, and which we disposed of for \$2.00, now costs us \$1.65, and we have to dispose of it at \$2.25. Customers do not object to paying the advance in high-class goods, but in the cheaper lines, they offer some protest. We have tried selling at odd figures, but not generally. We believe the plan is practicable. Of course, the object of odd figures is to impress the public or buyers that you are retailing at very finely cut prices and small profit. This goes with a certain class of people, but with the majority, we can just as well get \$4.00 for a shoe as \$3.85, or \$2.00, as well as \$1.90. When a boot advances from 5 to 15c. more per pair, I do not think the retailer is justified. . . in tacking on an extra 50 cents—but if we pay \$1.15 and sell for \$1.50, and the advance is 5 cents, making the cost \$1.20, we will sell for \$1.60. If there was a jump of 15 cents, we would probably charge 25 cents more than we formerly did."

Get Busy and Raise Prices

W. J. Symington, of Dundalk, Ont., says he has not raised prices on any lines as yet, but on an average he has to pay 10% more per pair for shoes. Where the figure has not gone up, he thinks the quality has gone down. Mr. Symington finds that customers do not object to paying a higher figure for the better grades. He is not an advocate of the odd price practice. He however, thinks it is advisable in some cases in order to dispose of odd lines. When a shoe goes up in price he does not believe that the retail figure should be jumped more than the wholesale, but that it should be advanced according to the amount of the original cost.

Staunch Advocate of Odd Prices

J. D. Climie, 30-32 King St. West, Hamilton, says, "Four or five of my fall orders are already placed. On some few lines

Retailers Should Face Situation

(Continued from page 46)

I have paid an advance of 5 cents per pair. I placed all my orders very early this year. I find that the samples are all right, even when there has been no advance in prices, as manufacturers know that I will return any shoes not up to the sample. I am still selling all lines at the same figure. I understand, however, that some pairs have been advanced since I have placed my orders. I certainly think that shoes bought at the old figure will have to be carefully examined when they arrive in the fall. Regarding odd prices. I would say that I have tried them successfully, and they are perfectly practicable. Some three years ago I had to change my prices in order to meet the manufacturers' advance. I find no trouble in instituting odd prices. If the manufacturer raises his figure, say 10 cents, and I wish to continue handling the line—I advance the price 10 to 15 cents. I do not consider that, where a merchant has to pay 15 cents more per pair, he is justified in charging a customer 50 cents more. I am selling shoes to-day at \$2.15, \$2.40, \$3.35, \$3.65, \$5.25, \$7.25, etc. I am a strong advocate and believer in odd prices."

Charge Higher for Fancy Lines

J. O. A. Vadnais, Richmond, Que., says: "I do not find any increase in the price of shoes except an advance of about 3%. My prices have been the same for over a year now. So far as the public is concerned around this vicinity, there are very few who know the quality of a pair of boots, so they do not object to the price that is charged. I have tried selling at odd figures and find that I had frequently to come down to regular prices or else lose a sale. Odd prices are all right in cities, but not in a small town like this where everybody knows you and will try to beat you down. I consider that a merchant should have a profit percentage on all fancy lines higher than a staple and stick to only one price."

Raised Prices on Some Lines

L. F. Falardeau, of St. Roch, Quebec, says that he finds that he has to pay more for shoes of all grades than he did a year ago. The increase is from 2½ to 10%. Where the price has not gone up, he considers the quality has deteriorated. He has raised prices on certain lines, but not on special goods. Customers do not object to paying the higher figure, when prices have been honestly raised. He has never tried the matter of retailing at odd prices. He contends that odd figures can never be made to work fairly in the shoe business, and does not believe the plan is practicable. Mr. Falardeau adds:—"In the boot and shoe retail business it depends upon the class of customers and the style in which the goods are made, whether you should advance prices say by 50 cents retail when there has been an increase of only 15 cents wholesale."

Too Many Style Changes

Fred R. Foley, of Bowmanville, says it seems a pity that there should be such a constant change of style and variety in shoes. He believes that he is paying more for shoes, but the lasts are altered so frequently, one cannot tell how they compare with last year. Continuing, Mr. Foley says: "I have no idea what the average increase is. I am not looking out for values. I take what seems to suit and regulate the retail prices according to cost. I think our wholesalers are a pretty reliable class, and I just make the best selections I can. I have not raised prices as yet, but I often feel that I am selling too close to make a good profit. With regard to whether the customers object to pay a higher figure for better grade of shoes, I would say that the ordinary customer has not a very definite idea of values. This has been my experience in the main. This can be very easily ascertained if one only tried it for a bit of a joke. The public is so accustomed to the cry of advanced prices that it just smiles good-naturedly and pays up and we poor merchants eat as much butter and eggs as when prices were low. I have tried odd prices on shoes in a few cases, but have never given the plan a general application. If a shoe is raised 15 cents per pair, I do not think the retailer is justified in advancing the figure

by 50 cents. 25 cents should be sufficient. I have some conscience for the poor family man as he has hard enough going as it is to make ends meet. Now I must go out and work in my garden, which takes up every available spare minute I have. There is also a big lawn to look after, and raking and cutting grass is not a light task."

Keep the Quality to the Front

C. E. McKeen, 912 Broughton St., Vancouver, says that there has been an increase in price on all grades of shoes, and the average is ten cents per pair. This firm do not believe any effort has been made, where there has not been an increase in price, to take the value out of the shoe, and think that most manufacturers have taken advantage of the slight advance in material to put greater value in the shoe and make it better than in the past. The firm have raised prices in some lines, making a \$5.00 shoe out of a former \$4.50 by raising up the quality. The firm have cut out the lower priced goods and are selling better boots than ever before. They do not find customers object to paying the higher figures.

Asked as to whether they sell on odd prices or not, Mr. McKeen says: "No, we do not even know what quarters are here, let alone odd prices. Our men's goods are \$4.00, \$5.00, \$5.50, \$6.00 and \$7.00. Of course I am speaking now of our selling prices in our own retail stores. As to whether odd prices are practicable, I would say no. I believe that salesmen should for mutual advantage, but particularly for a customer's benefit, make every effort to sell good goods, having regard always for the service required of the shoe, and leading the purchaser up to the higher prices that he or she can afford to pay. On men's or women's line even twenty-five cents is too short a step. I don't believe that when shoe advances 10 or 15 cents that the retailer is justified in raising the price by fifty cents. I believe in adding twenty to twenty-five cents more to a ten cent advance by the use of a better counter, a gauge or two heavier sole, or an improvement where the shoe is weakest, running the advances up to say thirty-five cents to him (the dealer) and charging the customer fifty cents over old prices, that the shoe will be so much improved over the old one, that part of the advance due to increased cost of material will be entirely offset or overcome, and that the consumer will suffer no loss what-

The Store of an Eastern Retailer

A. L. Wile, of Bridgewater, N.S., has been in the boot and shoe business for eighteen years. He has an attractive store, 16 feet wide and 60 feet long. The height of the ceiling is 12½ feet, and the front window is 9 feet 10 inches, with side plate glass of 3½ feet. Mr. Wile's stock room is upstairs. The chairs

for patrons are kept well to the rear of the shop. The lower storey is finished in quarter cut oak and equipped with sliding ladders. Mr. Wile, in answer to a recent inquiry regarding whether he had made money in the retail business, significantly replied: "I can assure you anyway that I enjoy good health."

ever but simply get at least fifty cents more service out of the boot. I know this is only adding twenty-five cents to actual balance of the new shoe—the other twenty-five cents being represented by profit and augmented cost of material. I submit that twenty-five cents added judiciously to the expense of producing a men's shoe retailing from \$4.00 to \$5.50, or a women's from \$3.00 to \$4.50, is worth 50 cents to the consumer—yes and more too."

Doubtful of Odd Prices

W. J. Greer, Wingham, Ont., says, "At present I think there is an average increase of 5%. In some cases where the prices have not been advanced, the quality has suffered, but in nearly all lines an advance has been made. We have not raised prices yet, but, of course, we will do so on new goods. The public generally are buying better shoes to-day than ever before. We have never sold at odd prices except on bargain tables, and I do not think this plan practicable. My experience has been that with such prices as \$3.15 even on a bargain table a customer wants the goods at even money.

Pays to Sell Good Lines

Albert Hicks, 1605 14th St. W., Calgary, says, "I find there has been an average advance of 10% in shoes. We have raised prices only on medium priced goods. Our \$5.00 shoes are selling at the same figures, although we pay 40 cents more per pair. I have never tried retailing shoes at odd prices, and the only fraction of a dollar that we have charged has been 25, 50 and 75 cents. The plan might be workable in the Eastern provinces, but not in Calgary, as the average person here never kicks at even prices except on children's shoes.

"As to whether a merchant is justified in raising the retail price 50 cents in case there is an advance in the wholesale figure of 10 or 15 cents, I might say that in some cases he might be warranted in doing this, but not on cheap boots, as if there was an advance of 50 cents on the pair it would not prove very satisfactory to the storkeeper in case they proved defective. I have put in a line of cheaper boots of late to realize my profit of last year, but by doing so, I do not think it has improved matters any, for the sale of the higher priced stock has fallen off."

Too Much Doctored Leathers

A. McDermand, of Ingersoll, says: "I find the tendency is to higher prices, especially in the calf and heavier leather, but very little change in prices on dongolas in women's and children's lines. In most cases the increase is from 5 to 10 cents per pair on the better grades of shoes. Poor workmanship and doctored leathers are the source of great annoyance. I believe that all retailers should have greater percentage of profit than formerly to offset the increased cost of living. Customers will not object to reasonably high prices, if you can show them better quality. All the people are demanding better goods to-day and they naturally expect to pay a bigger figure. The time of cheap, trashy shoes has passed in Canada. I have tried odd prices, especially on the better grades, and find the system works well on a rising market. When an advance of 50 takes place, I think the retailer should not increase his figure more than 25c.

Concluding, Mr. McDermand says: "I have certainly found that there are a great many shoes going through the factory which are being slighted in workmanship. In all my shoe experience I have never been obliged to return so many shoes for unskilled workmanship and doctored leathers as I have during the past year. This may be attributed to the fact that the factories are taking in more orders than they can properly fill, or are pushing them through in too great haste. If the raise in prices will give us better quality I, for one, will welcome the advance and any agitation in the line of better footwear will be appreciated by both the retailer and the buyer."

Who Pays for It All?

In our large centres real estate has been changing hands with a celerity that leaves the sleight of hand operator in the shade.

One day a piece of central property is sold for half a million dollars and within a week it is turned over for three quarters of a million to a person or syndicate which hopes to realize a million. It is not uncommon to find business sites double and treble their values inside of a few months. Many of these properties are rented by retailers who must pay a proportionate rental thereon. The question is who "pays the piper" in the immense accretion of values that is pocketed in these sales, and where is the retailer to make or continue to make a living when rentals have jumped from two to four thousand dollars a year.

Tackle the Place That You Know

Speaking of the possibilities of success in the retail shoe business a Chatham, Ont., dealer said recently:

"I believe that a young man, if he desires to enter the shoe business can do better by embarking in the line in the town in which he is known and has gained his experience. He has the advantage of knowing the people. If he has made money for others, all things considered, he should be able to do so for himself. I find very few ladies who, if you serve them politely and attentively, do not appreciate the fact. When you have taken infinite pains to please them, you have won a true friend. There are very few bargain hunters among the number. While it may require a little more time to satisfy them than it does a man, it is the women who control the family trade, and their influence is greater in the matter of purchases. There is no reason why a shoe store cannot advantageously carry trunks and all kinds of traveling requisites. I have dressed a window there which is full of suggestions. The price of each article is ticketed. In the holiday season and at certain other periods, particularly in the spring and midsummer when so many people are leaving for the west, the chances of making big sales are especially good. We can fit a man or woman out with everything they may require in the way of leather goods, and thus sales are materially increased.

Some Fallacies in Figuring Shoe Profits

(Continued from page 41)

fore you can figure more accurately in taking your cash discounts into consideration if all percentages are based in the same way.

8. Because no profit is made until the sale is actually effected.

9. Because by harmonizing your entire plan of figuring your percentages relative to profits in business, etc., with the entire plan on which your merchandising is harmoniously developing, you will not consider your selling price, percentage of profit and expense, etc., entirely different from anything else.

Fail Through Poor Accounting

In closing I would like to call attention to a little thing that was written by one of the great merchants, a man who, by the way, has probably been brought in contact with as many different retailers as any other man in business—Mr. W. D. Simmons, of the great Simmons Hardware Co., of St. Louis. Mr. Simmons recently wrote an article for the Hardware Reporter.

In this article he called attention to the one great difficulty with the retail business, that retailers' accounting did not account, that in some of the fundamental methods of figuring they were incorrect; that in too many cases their books of account did not show their expenses or their gross profits for comparative purposes; and if the testimony of the great firms of public accountants was concentrated in one expression, it would be to the effect that more business goes wrong by poor accounting methods than poor salesmanship or buying methods. For this reason, this little problem is an important one and should not be entangled with personalities or the cheap blackguardism of those who would rather be witty than right.

I have endeavored to untangle this subject in a way that appeals to the experts, to whom I have submitted the problem, for the good of the cause of right thinking and efficient accounting in retailing.

Take a Firmer Stand in Selling Rubber Shoes

Salesmanager Has Something to Say on Question of Returned Goods—Some Peculiar People Actually Expect a Rubber Shoe to Last as Long as a Leather One—Fallacy of Certain Claims—More Vertebrae Needed

"The returned goods problem is getting to be insufferable in rubber shoes as well as in leather ones," declared a general sales manager the other day. "The worst offenders appear to live in the eastern provinces. We have more trouble with rubbers returned from New Brunswick and Nova Scotia than we have in any other section of Canada. Now, the difficulty is that the retailers do not adopt a firm enough stand on this matter. What they want is a little more back-bone and not such a ready acquiescence to gratify the whim of every customer who believes he or she has a grievance, if the rubber does not last as long as a box or tan calf boot.

"Many retailers are too careless in the matter of fitting. They are too anxious to make a sale, because a patron thinks that a rubber looks nice, or desires one of a certain shape, not at all calculated to fit the shoe they are wearing.

"You know, there has been a radical departure in shoe styles during the past year or two, and, of course, the producers of rubber footwear have had to keep pace with the times. High heels and high toes have called for rapid changes in lasts and in their panic to work off old stock or obsolete lines, some retailers have tried to sell low heel rubbers for high heel boots and to fit narrow toe rubbers on full toe shoes. The result has been that the rubbers

have crept forward and cut out at the heel. Then, too, certain retailers neglect their sorting and endeavor to fit a patron too generously or too niggardly. The evidence is that the rubbers cut and break at the toe, side or heel. Few goods have such tensile strength as rubber, which yet tears very easily after a rent is made. Grease and oil of all kinds are very injurious to them.

Anything to Oblige, You Know

"But there, I am getting away from my subject. I was in an eastern store not many weeks ago, when a man entered and going up to one of the clerks, said, 'Here is a pair of rubbers that I bought from you some time ago, and they have not given satisfaction.' The salesman, without any further question, took the rubbers and threw them in a corner and said: 'Well, perhaps we can give you a new pair.' Now, of course, these goods would be returned to the producer, and he would be expected to make good, whereas, if the retailer had had a little more decision he would not allow himself to be imposed upon so easily. I was in another store not long ago when a lady entered and stated that she wanted a new pair of rubbers, as her old ones had given out at the heel. This retailer had a little more backbone than the other one, and inquired how long she had worn them. She replied: 'Why, only three

A Handsome Spring Window of a Montreal Shoe House.

months.' Then, turning to her, he said politely, but in a tone of no uncertain meaning, 'Surely you have obtained your money's worth in the durability of these goods. You cannot expect them to last forever.' The woman finally confessed that, perhaps, she had been looking for too much value in the goods, and took another pair, for which she paid. Now, if this dealer had not exercised a little firmness, he would, no doubt, have been imposed upon for a new pair and the shoes would have gone back to the factory or warehouse to be replaced.

Trying to Work Dealer for New Pair

"I could go on naming you dozens of instances where people try to work shoe men for a new pair or two. If one is successful then, of course, others will follow. It is time that a stronger stand was taken on this matter by certain weak-kneed merchants. You ask me how long a first quality plain-over for men or croquet for women should wear. I cannot tell you. In the first place, much depends upon the fitting qualities of the rubber. In the second place, some people give rubber shoes much harder usage than others, and in the third place, it depends upon the amount of walking that is done, whether that walking is done on hard pavements or on snow covered surfaces and with what substances the footwear comes in contact. Roughly speaking, I should say that two pairs of rubbers should wear the ordinary individual for the season, say from November until April. But the great trouble lies right here. A man will come in and pay 75c. to \$1.00 for a pair, or a woman will hand over from 60 to 80c. These same people will pay from \$5 to \$6 for a leather shoe, and a great many of them are so unreasonable as to expect the rubber shoe to last equally as long as the leather product for which they have paid five or six times as much. This statement may seem a little absurd, but I assure you that it is perfectly true. The leather shoe has a firm hard surface and sole, is tough and strongly reinforced at vital points. Now the rubber being of a softer and more resilient nature, is placed on the outside of a leather boot, with its hard, stiff lines, and perhaps run over or run down heels. What is the result? The outer shoe is expected by some cranks or misers to last equally as long as the inner shoe, which it is protecting and shielding at every point in the hardest season of the year.

The Cantankerous Crowd

"Now, it is only necessary to stop and think a moment. Surely the fallacy of expecting a rubber shoe to last anything like as long as a leather shoe will be easily seen. It is most imperative in fitting rubbers that there should be ample room for the toe and heel or else the rubber shoe will not wear. Of course, there will always be cranks so long as business continues or water runs, but the category of the contumacious can easily be kept down if certain parties are not encouraged in their whims or complaints. Common sense and a fair consideration of the question of returned goods in all its phases will do much to solve this perplexing problem and relieve manufacturers of what has really become a "thorn in the flesh." There are several faults on the side of manufacturers, for no institution is perfect, but I am not dealing with these shortcomings just now. I have given you a frank expression of my views of the ease, and hope in the matter of returned goods that retailers may see things from a new and broader standpoint."

He Has Had His Eyes Opened

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir,—I feel that I owe the SHOE AND LEATHER JOURNAL my thanks for the benefit I have obtained from discussions, in recent issues, on the cost of selling goods, and the actual percentage of sales that represent the cost of selling.

After fifteen years' experience in the retail shoe business, and reading these articles, I am just getting my eyes opened to the fact that I have been wrong all this time in calculating the cost of selling goods. I made the common mistake that so many are and have been making, of figuring in this way. Say, for instance, that I did a business of \$20,000, and my expenses were \$3,000,

therefore I have been saying that my expense of selling was 15%. My old fogey figuring, you can see, was that if it cost \$3,000 to sell \$20,000, it would cost 300,000 cents to sell 20,000 dollars or 15 cents to sell one dollar's worth of goods. Now, since I begin to see daylight and figure that I sold \$20,000 and it cost me \$3,000 to sell that amount, therefore I must figure that if I really want to know what it cost to sell goods without any profit I would need to put it in this way. If the cost of selling is \$3,000, I must deduct that sum from the \$20,000, leaving \$17,000; therefore the goods cost \$17,000, which I am to sell for \$20,000; and if it cost \$3,000 to sell what cost me \$17,000, it would cost 17 11-17, or roughly speaking 17 2-3 cents to sell \$1.

But I want some profit, say \$2,000 annually. Therefore my cost of selling and my profit would be \$5,000, which, deducted from the sales, would leave \$15,000, which represents the cost of the goods.

Thus, \$15,000 must make..... \$5,000
 \$1 must make..... 33 1-3 cts

Hence, I must mark all my goods, or at least average them up, so that there is 33 1-3% added to the cost price, which is the same as 25% of the sales.

Now, perhaps, I am still wrong, but am open to criticism, and more than that, I feel that I should be kicked around a block at least once for each year I have been doing things wrong in this way, so if any of the readers of the SHOE AND LEATHER JOURNAL want the job send them along—but I prefer one who has committed the same crime—and of the same opinion as myself—then we could really enjoy ourselves.

Yours truly,

J. T. HEATH.

Orillia, Ont., May 2nd, 1912.

Weekly Holiday for London Retailers

Dealers will Close Every Wednesday Afternoon During the Summer—Officers Elected At Annual Meeting—Approbation May Be Eliminated—Other Motions.

The annual meeting of the London Retail Shoe Dealers' Association was held on May 7th inst. in the Duffield Block, London. The special business of the meeting consisted of the election of officers for the ensuing year and resulted in Ward Casselman being elected to the presidency, Rowland Hill to the vice-presidency, N. K. Wanless, second vice-presidency and W. J. Ashplant, secretary-treasurer.

Applications for membership were received and accepted from the Johnston-Murray Co., and Mr. Wallace Corbett of the Majestic Shoe Store.

Half-Holiday Weekly

It was agreed upon by the Association that the stores close at one p.m. sharp Wednesday during the months of June, July and August. It was also agreed that the minimum price at which all tennis and outing shoes be sold, be drafted by a special committee composed of Messrs. Morrison, Casselman and Ashplant.

No Free Attachments

A notice of motion was put in by Mr. Casselman that no more hockey skates be attached to shoes free of charge, and also a notice of motion by W. Morrison that the members of the association draft some lines of procedure to regulate the refunding of money for goods being returned.

Good Balance on Hand

The financial report for the year ending May 7th, showing a cash balance on hand, was read and accepted.

The foregoing covers all the amount of the actual business that was transacted but, under the head of good and welfare in an informal way, the matter of sending goods on approbation also received considerable discussion, and in all probability official action will be taken at an early meeting.

Shoe Producers Must Have an Eye to the Future

Plenty of Business To-day May Not Always Mean Activity—Well Directed Publicity Helps Buttress Many a Concern When a Stringent Period Arrives—It Is Then Too Late to Grasp for Support

"The shoe firm that do not advertise, that do not keep their name to the forefront, will in the end be overtaken by an aggressive rival, and if not very careful, will lose the prestige they have gained by years of history and association.

"Now I am not in the advertising business, and I have never done anything but make or sell shoes all my life," remarked a manufacturer, who to-day is out of the making game and selling for another house who advertise spasmodically, but not in a regular, concentrated, systematic manner.

"It is like this," he went on, "I know that if an advertising solicitor walks into a factory a proprietor will often tell him with a great deal of unction and pride, 'There is no use in my advertising, I am doing all the business that I can possibly do at the present, and even cannot keep up with orders.'

"Of course, that is a very nice state of affairs, a delightful condition of things, but how does this man know that he is going to have such a satisfactory business one year from now, or even six months hence? He will then possibly rush into print and expect immediate results. There is nothing of the magical or hypnotic in advertising. It simply keeps the quality of a firm's goods, the prestige of their name and the business in which a house may specialize before the public. But, alas, new rivals are springing up on every side. Concerns which were thought to be asleep or merely infants, wake up and gather strength, and the older institution seems to be affected with a sort of creeping paralysis. You can find evidences of this on every side. Little fellows that the big producer perhaps snapped his fingers at in disgust, have, by selling efficiency, worthy creations and broad-gauged publicity come right to the front, while the older institution, that disclaimed any need of or benefit from advertising find themselves faced by a competitor, aggressive, alert and resourceful.

Make Your Position Stronger

"Now if one's position is strong, I believe that every effort should be made to make it still stronger. There is nothing more fatal than to lull one's self into a sense of false security.

"I will give you an example of what I mean, and perhaps the illustration will shed some light on this subject. A certain shoe manufacturing firm making women's fine McKays, had practically a monopoly of the Eastern business. They claimed that their lines were so widely recognized and so eagerly sought after that it would be folly for them to spend any money in publicity or to attempt to impart a brighter sheen to their shining name. There was another institution in the same city making a similar range who began advertising in a small way, and were turning out a couple of hundred pairs of women's McKays the first year. The next year this product was increased, as well as their advertising appropriation. Retailers liked their goods, as they were well made, of fine fit, and the price was right. The older factory even thought it unnecessary to put in new lasts for a couple of years; the old ones had such a name and reputation that shoemen would not demand anything else. They thought a big saving would be effected, and decided to cut out all publicity expenditure. The result was that they got through one season without any material loss of trade, but the fact that they had added no new patterns or up-to-date shapes, as their younger and more enterprising competitors had done soon told against them. They also grew a little careless in the finish and trim of their goods. The result was that the new concern are now doing a larger business than the older one, who are hustling for every order they get, and making strenuous efforts to recapture some of the bookings they have lost through lack of new equipment and do-

ing no advertising, simply thinking that their name and fame would carry them along the high road of success.

The new rival are already doing more business than the once big house. The announcements of the former can be found in any of the trade papers. They have imparted to their creations a smartness, dignity and individuality, and live up to it in every particular. I tell you a man may be doing a huge business to-day, but he should look at the future. It is not alone the direct and immediate benefits that accrue from forceful advertising, but the help it gives in fixing a name firmly in the public mind, and when trade is dull or other contingencies crop up, the companies that have been on the alert and preparing for a squall by using every means to popularize and establish their product, are the ones that come through the strain and stress with flying colors and an undiminished demand for their goods."

Some General Comment

Reports for May so far indicate very general activity in all classes of merchandise. Of course in some staple lines of produce prices are almost prohibitive, but, nevertheless, the market is cleaned up, and more could be sold if supplies were available. In groceries and provisions there is a good steady demand and the recent advance in flour has not materially affected sales. In hardware, both for agricultural and building purposes, there has been unusual activity, and dealers claim the month is the best so far as they have yet experienced. The great boom in building, which is not confined to the cities, is creating such a demand for supplies as well as labor as can hardly be met by available supplies.

Reports from the west indicate a very successful spring season. Seeding is practically over, and the results promise everything that could be desired. In Ontario the fall wheat has unfortunately been killed in many places by the succession of warm days and frosty nights, and there will not be more than half a crop. Seeding operations in other grains, including spring wheat, have been very successful, and unless a drouth occurs, or other unforeseen circumstances transpire, spring crops will almost atone for the failure of the fall wheat. Reports from other wheat growing centres are so encouraging that the market is somewhat easier as a result. Buyers are also awaiting easier freight conditions incident to the opening of navigation.

Within the past two or three weeks there have been indications of the fact that we are approaching a period of greater conservatism as well as that of closer financial watchfulness. The rate on call and business loans as well as that on property investments, has advanced perceptibly. Some appear to think that this is a forerunner of at least a pause in business expansion and real estate development. It would seem reasonable to think that the vast amount of money put into property and business development within the past two or three years must reach a limit sooner or later, and those who follow financial matters closely aver that we are approaching the period of curtailment that always follows prosperity and expansion.

With the advent of the warm weather shoe men have had a spurt of trade that has kept them smiling. The demand for shoes of all kinds has been very active for the past month, and from what we can learn May will make a new record. The call has been largely for black and particularly patents and tans are waking up, and especially in ladies' goods are frequently asked for. Most retailers say they are well satisfied with the results of spring business, and those who are getting increased prices on their goods claim the break has hardly caused a ripple in their trade.

Some Things Seen and Heard in the Shoe Arena

Various Items of Interest Picked Up from a Variety of Sources—The Gossip of the Trade—Personal Notes and What Is Being Done During the Early Spring Months

T. Viola has opened a shoe repair shop in Trail, B.C.

The shoe stock of the estate of Louis Plante, Montreal, has been sold.

Mr. Hill has removed his shoe repairing shop from Port Dalhousie to Merriton.

Peter Zaff, of Aymer, Ont., will have a new shoe shop erected for his business.

The Fit Well Shoe Co., dealers in wholesale shoes, Montreal, have recently registered.

W. F. Cochrane, shoe retailer, 148 York Street, Toronto, will shortly retire from business.

Charles McGowan has opened a fine, well-lighted and attractive store in Elora, Ontario.

J. D. McArthur, shoe dealer of Guelph, Ont., was in Toronto last week calling upon the trade.

Hugh Hotson, of Tavistock, Ont., has moved his shoe stock into new premises in that village.

Mr. Fowler, late of Wainright, has opened a shoe repair establishment in Watrous, Sask.

J. A. Bedard, of J. A. Bedard & Son, shoe merchants, Lachute, Que., passed away a few days ago.

R. Ralston of Midland has moved his shoe business into a new building on Toronto St. of that town.

Fred Knibbs is now covering North-western Ontario from the Toronto warehouse of Ames, Holden, McCready.

J. E. Pare, of Dufresne and Locke, shoe manufacturers, Maissoneuve, was in Toronto last week calling upon the trade.

B. W. S. Martin, salesman for the John Ritchie Co., Quebec, was in Toronto last week for several days on business.

C. W. Watt, proprietor of the Union Shoe Store, Amherst, N.S., who was burned out some weeks ago, is continuing business in his renovated store.

E. B. Graham, of Hamilton, an experienced shoeman, has bought the boot and shoe business of Thos. Wilson in Milton.

Danford Roche & Co., Newmarket, have bought the stock of the McDonald shoe store, 419 Parliament St., Toronto, and have removed the goods to Newmarket.

J. A. Wathen, who has celebrated his first year in business, in Harcourt, N.B., has a fine and admirably equipped store and stock.

J. W. Baldwin has begun business in the boot and shoe line at Sault Ste. Marie. He has secured a fine, well-lighted and nicely planned store.

S. C. Cronk & Co., wholesale shoes, have removed from the Pacific Building, Scott Street, to 126 Wellington St. W., Toronto, where they will carry their stock in future.

J. Heffering, Toronto, representative of the Tetrault Shoe Manufacturing Co. has been spending a few days in Montreal on business.

The Abernethy Shoe Store, Kingston, has bought out the stock of women's shoes, which was formerly carried by the Wal-

dron dry goods house, in Kingston, and have been offering special values.

T. H. Rieder, of Canadian Consolidated Rubber Co., Limited, Montreal, spent some time recently in Berlin on business.

Mr. Walker has opened a bright and inviting new shoe store at 790 Lansdowne Avenue, Toronto, in a rapidly growing section of the city.

T. J. Mullins, late of Truro, N.S., formerly of Toronto, has joined the staff of the Kaufman Rubber Co. in their Toronto branch, as assistant manager.

Clayton Hurlbut, of the Hurlbut Co., Preston, and E. T. Jacobi, Toronto, have returned from a business trip to Rochester, N.Y.

Reg. Smardon, representing Smardon Shoe Co., Montreal, in Western Ontario, spent a recent week-end in Montreal, and left again for St. Thomas.

M. D. Welsh, formerly with Robinson and Kelly, Gananoque, Ontario, has opened a well equipped boot and shoe store in that town, and is doing well.

C. N. Oke & Son, of St. Catharines, who expected that they would have to move from their present stand, have secured another lease of the premises.

Frank Power, of the traveling staff of the Rideau Shoe Co., Montreal, who has been suffering from a severe attack of rheumatism in his right arm and hand, is greatly improved.

Robt. Rogers of the traveling staff of Philip Jacobi, Toronto, has returned from an extended business trip to the West, going as far as Regina and Moosomin.

W. G. Berscht, who has been ill for two months with typhoid fever, at his home, in Guelph, has resumed his work on the road covering the Niagara and Lake Erie district for McLaren and Dallas, Toronto.

The engagement of Miss Florence Lulu Mundy, daughter of ex-Mayor Mark Mundy of Galt, one of the most popular shoe retailers in Western Ontario, to Edward V. Smith of London, Ont., is announced. The wedding will take place early next month.

The partnership of Vance & Somers, shoe retailers, Tillsonburg, has been dissolved. The business will be carried on under the name of S. G. Vance. The retiring partner, M. S. Somers, will locate in Edmonton, Alta.

Smith & Chapple of Chapleau, Ont., who have been in business for a number of years, are erecting a very fine building which they will soon occupy. The structure is a credit to the business houses of the enterprising northern town.

V. J. and R. J. Graveline have started an up-to-date repair shop at 1022 St. Catherine St. East, Montreal, having installed the Goodyear welt system. They call the new enterprise the Victor Shoe Repairing Co.

L. Higgins of L. Higgins & Co., Moncton, N.B., is at present on a trip to California, and will be away several weeks. Mr. Higgins is enjoying a well earned rest. In the meantime Mr. Hooker, his accountant, is in full charge.

William G. Parsons, Toronto, leaves

in a few days on a two months business trip to England. He will be accompanied by Mrs. Parsons. Mr. Parsons is the President of the Wholesale Leather and Findings Association, which was formed in Toronto a few months ago.

J. H. Gillespie, of Springhill, N.S., has opened a new shoe store in Amherst. His father was the first shoe merchant in Springhill, and at the time of his death had been longer in trade than any other business man in the town. Andrew Munroe is the manager of the new store.

H. Ashplant and Sons, shoe retailers, of London, intend erecting a large building adjacent to their store, which will be fitted up for commercial purposes. It is understood that the new structure will have fine sample rooms, which will prove an accommodation to the many travelers visiting the Forest City.

Joseph Mantell, who resides with his daughter, Mrs. Edwards, 69 Herbert Ave., is probably the oldest resident in Toronto, and Canada's oldest Freemason, having joined the craft in 1840 in Tillsonburg, where, until a few years ago, he was engaged in shoemaking. Mr. Mantell is 103 years old, is still hale and hearty, and can read without glasses.

The United Shoe Dealers, which recently opened up a store at North Bay, are doing a fine business in that thriving town. The manager is William McDowell. The United Shoe Dealers now own and operate six stores in Ontario—at Lindsay, Owen Sound, Parry Sound, Sudbury, Port Arthur and North Bay. A handsome front has just been built in Lindsay with attractive double windows and long, receding single door entrance. M. H. Sisson is manager. The stores of the United Shoe Dealers will all have fine electric street signs.

A new establishment known as the Invictus Boot Shop has been opened at 50 Yonge Street, Toronto. Herbert J. Eady is the proprietor and the premises are neatly fitted up. The fixtures are of birch and in dimensions the shop is 70x30 feet. Only men's high-grade shoes will be handled. Mr. Eady has had a thorough retail experience in some of the largest footwear houses in London, England, and since coming to Canada has been employed with Walter Burnill, 75 Queen Street East, Toronto.

Mr. W. A. Moyer, of the Moyer Shoe Store, Winnipeg, says that he has what he considers one of the very few things that will dye satin shoes properly. Mr. Moyer is advertising the preparation in the newspapers of Winnipeg, and says that any satin slipper may be dyed to the exact color and shade so as to perfectly match any dress and gown. One bottle will dye two pairs of pumps. The preparation was invented by Mr. Moyer himself, and he says the retail price to other shoe men is 25c. per bottle.

A most interesting display of shoemaking has been a feature of Goodwin's, Limited, windows, in Montreal. Several machines used in making Goodyear welts were loaned and set up by the United Shoe Machinery Co., and the spectacle of these being operated in full public view attracted large crowds of the curious, most of

whom have only the haziest ideas of how shoes are really put together. The display thus serves both an educative and an advertising purpose. Upstairs in the shoe department proper the shoe in every stage of manufacture is shown fastened to a display board. This display has also attracted much attention.

Tracing the many differences between male and female organisms, Sir James Crichton-Browne, vice-president of the Royal Institute, at a child study conference, at London University, London, England, recently pointed out that women had a flatter planter-arch than men and that this accounted for their partiality to high heels in shoes.

The new shoe department of Jas. Ogilvie and Sons, Limited, of Montreal, was opened a few days ago. It is located in the basement and is accessible by four elevators and six stairways. It occupies a space 150 feet by 90 feet. The air in the room is changed every seven minutes. A suction device drawing off the stale air and at the same time a supply of fresh ozone is forced into the room by a pipe system. The floor is nicely carpeted, and there are comfortable chairs for persons waiting. The latest devices for accurately measuring the feet and for fitting are employed. The apartment is brilliantly illuminated. Long show cases display fancy styles in all high class grades and variety of footwear. Mr. Lindsay is the manager. The department is both spacious and inviting.

Montreal and Toronto jobbers report a brisk sorting trade, notwithstanding that the warm weather has been very slow in making its appearance. Orders for fall and winter are coming in nicely, and the trade outlook in the footwear line is encouraging. There is a decided demand for

tan button shoes for both men and women, Colonials in nearly all leathers, and one jobber reports that white goods will be in strong requisition notwithstanding that some have been making predictions to the contrary. The general opinion is that medium high toes will remain a favorite in all lines, at least, for a couple of seasons more.

The recent annual meeting of the Kajang Rubber Estates at Edinburgh was consumed chiefly by a discussion of the probabilities of continued prosperity for the plantation rubber industry of the Far East. In the last eight years \$450,000,000 of British money has been invested in that industry. It was estimated that some 1,070,000 acres were under development, indicating a final output of from 150,000 to 170,000 tons of rubber a year. The world's present consumption is said to be only about 85,000 tons. Englishmen in the trade are divided as to whether the recent heavy increases in demand will continue at fast enough pace to absorb the coming increase in supply. They said that in spite of the prevailing high prices Brazil had not been able to increase her output, the whole of the increase in the demand having been met by plantation rubber interests. The consensus appears to be that the consumption of rubber will increase fast enough in the next decade to make all of the plantations profitable when they get to bearing heavily.

When making application for a position it is passing strange what some aspirants will offer in the line of recommendation. A young man, who recently landed in Toronto from the Old Country, sought a connection as warehouseman a few days ago. In his letter he stated: "I might add, sir, that I have waited upon the following:

The late King Edward, King George, the Kings of Italy, Belgium, Spain, Portugal, Norway, Sweden, Heirs Apparent, Crown Princes, the Duke of Connaught, Queen Alexandra, Queen Mary, the Queens of Norway, Sweden, Princess Victoria, the Duchess of Connaught, and many other royal personages." It is scarcely necessary to add that the wholesale house did not appoint him. The applicant at last accounts, instead of waiting on crowned heads, was waiting for a job. Another young man, in presenting a letter in answering a certain firm's advertisement for a traveler, rang in the name of the house as follows: "I may say, sir, that I am a Scotchman, a Presbyterian, and my father's mother's name was the same as the one under which your progressive and widely-known concern is doing business.

An Attractive Ontario Store

One of the brightest and roomiest shoe stores in Western Ontario is that of Charles E. Clement, who opened out a little over a year ago in the lively capital of Kent County. The establishment is in every way a credit to Chatham and is 125 feet deep and 24 feet wide, with ceilings about 12 feet high. There is an abundance of natural light in every nook and corner, while, artificially, the place is illuminated with Tungsten lamps hung in attractive electroliers. The shelving runs up about eight feet and all goods are easily reached from the floor. The shelving starts about ten or twelve feet from the front and good use has been made of the space at the entrance of the store by a varied assortment of trunks, traveling bags, and suitcases. Set diagonally on either side is a silent salesman show case, which is used for the display of findings, and the choice evening shoes. Resting on each case are potted

One way to make your shoes profit winners as demonstrated by the Ogilvy Co., Montreal at the recent horse show.

plants and flowers, which add materially to the beauty of the interior. The flooring of the windows is of cherry and oak and the walls of cherry, while mirrors three feet high surround the sides. The plate glass is joined by means of copper supports, and the effect is light and airy. The store floor is of hardwood and the entrance tiled, while the premises are heated by steam. The settees are of oak and the fitting stools correspond. Uniform cartons and universal labels prevail throughout. At every third section are mirrors and over the plate glass windows at the front are luxfer prisms.

Canadian Products for Canadians

The made-in-Canada train, which has been organized under the Canadian Home Market Association, for the purpose of presenting to the people of the West the products of Canadian industries, left Toronto last week on a tour that will take in ninety-eight stops in Manitoba, Alberta and Saskatchewan, varying from two to thirty-six hours. The train consists of ten cars, and it is expected that it will arouse a lively interest among the newer residents of the prairie provinces. The made-in-Canada caravansary is a striking example of what Canadian workshops can produce. The exhibits include everything from shoes to automobiles, and a specially interesting feature is a car fitted up as a modern house, consisting of parlor, living-room, bedroom, dining-room, and kitchen. There will be interesting lectures at each point, when the people of the West will be given first-hand information regarding what factories mean to a community, how they add to the population, benefit mercantile life, and increase enormously the home market. These lectures, illustrated by limelight views, will form an interesting and instructive feature of the trip. The lecturer will be T. H. Race, of Mitchell, Ont., who has represented Canada at world's fairs in different countries. Among the exhibitors in the made-in-Canada train are the John McPherson Co., shoe manufacturers, of Hamilton; the Gutta Percha & Rubber Manufacturing Co. Limited, Toronto; and the Dunlop Tire & Rubber Goods Co., Toronto. It is regrettable that more shoe manufacturers have not availed themselves of the opportunity to present to the people of the West some adequate conception of how shoes are manufactured, thus affording the people of that great inland empire ideas on what stylish, well-made, snappy and durable footwear is turned out on this side of the line.

More Evidence Before the Board

At the recent sitting of the United Shoe Machinery Company Investigation Board, in Quebec, four shoe manufacturers were heard, and the investigation in that city concluded. J. B. Drolet, Frank McKeen, James Muir, and Luc Routhier all expressed themselves in favor of the U. S. M. Co., and deprecated any change in existing conditions. Mr. Muir said he would not entertain the idea of buying a machine outright. Before the advent of the United Shoe Machinery, when machines were bought outright, there was continual botlier, as the type of machine was constantly changing. Shoe manufacturers were therefore forced to buy new machines all the time. They were unable to renew faulty parts on the old machines, which had become obsolete. This condition of affairs had been remedied by the American company.

At the resumption of the inquiry in

Montreal, George Poloquin, of Maissonneuve; Nap. Tetrault, Montreal; John T. Tebutt, Three Rivers, and J. A. Cote, of St. Hyacinthe, shoe manufacturers, all spoke approvingly of the company's system. Addresses of counsel will be given on May 21st, before the commission.

At the investigation in Montreal, President W. F. Winslow, of the United Shoe Machinery Co., Boston, which controls the business in the United States and Canada, gave evidence regarding the practice and operations of the company in the Dominion. Mr. Winslow gave a complete history of the formation of the United Shoe Machinery Company, together with the methods by which it did business, which were generally that by improving machinery and methods they would improve the product, and therefore increase consumption, with benefit to the consumer, the manufacturer, and the company. As to the leasing or "tying" system, Mr. Winslow was very explicit that this was the best system that could be evolved, arguing that it united the interests of the manufacturers of shoes to those of the makers of the machinery, for the upkeep of the very best type of machine. The leasing system insured a continuity of work, and allowed the company making the machines to see that they were kept up to a high standard of efficiency.

"Every Canadian manufacturer," said Mr. Winslow, "can get the best machines there are, and if a better one is invented, out comes the old and the new one goes in, while many of the shoe manufacturers by themselves would not have sufficient capital to make such a change."

The "tying clause," he contended, was necessary in order to insure that the shoe manufacturers who took their machinery

Veteran Shoeman Passes Away

The death occurred a few days ago of A. J. Stephens, the veteran shoe retailer, of Ottawa. The business, which he established, was founded in 1868. He was, therefore, engaged in the shoe trade for forty-four years. Mr. Stephens was a highly respected and progressive citizen of the capital, and the shoe house of A. J.

Stephens & Son is one of the most attractive and best equipped in the province. F. A. Stephens, the son, joined his father in 1887, and will continue the business. Many friends will regret to learn the passing away of Mr. A. J. Stephens, who was a credit to the shoe interests of Canada, and a man highly thought of by all classes of people.

would use it in such a manner as to make it pay, so as to get the best results from the machines. Mr. Winslow said that 100 out of 138 shoe manufacturers in Canada had taken the company's machinery, because they could get more for their money than elsewhere. Without the "tying clause" the company would have to charge more rental for its machines.

Goes Into the Insurance Line

F. B. B. Patten, who resides at Cedarvale, (Oshawa), is a well known traveler, and was for some years with the McCready Shoe Co., of Montreal, covering Toronto and North-Western Ontario to Owen Sound, Kincardine, Goderich, and other towns. After the amalgamation, about a year ago, he devoted his attention to pretty much the same area, exclusive of Toronto. Previous to getting into the shoe line, Mr. Patten was for six years a traveling representative for the F. F. Dalley Co., of Hamilton, and established a wide connection. He is well liked by a large circle of friends. He is at present district inspector for the Dominion Life Assurance Co., at Oshawa.

The News from Old Quebec

Shoe Manufacturers Appoint New Business Agent—Mr. Pion Opens a New Office—Wedding of a Shoeman

Luc Routhier is touring the West in connection with his business.

J. A. Duchaine, of Duchaine & Perkins, was in Montreal this week.

E. W. Vance, of Galt, Ont., is on the road with complete lines of Quaker shoes.

Alf. Dupere, of Dupere & Garant, was out of town three or four days in connection with their business.

George Parker, of the Dominion Supply Co., Montreal, spent a few days in Quebec this week.

J. A. Langlois, of the L. Gauthier Co., was placed in nomination in St. Sauverin Division. He ran as a Labor candidate in the recent elections.

George Fex has arrived at the Louis Gauthier Co. factory, to take over the interest of Mrs. Louis Gauthier, sister of Mr. Fex.

Henry Muir, of James Muir Co. was in Boston, Lynn and Haverhill on business. This firm is constantly receiving a large number of orders. James Muir was in Boston during the past week.

James Gauthier, son of the late Louis Gauthier, was married on April 29 to Blanche Huard. They are on an extended wedding trip to Montreal, Ottawa, Toronto and Niagara Falls.

J. B. Blouin, Limited, of Levis; the Rock Shoe Co., Wm. A. Marsh Co., Duchaine & Perkins, the John Ritchie Co., Tourigny & Marois, are all busy endeavoring to finish up their spring and summer run.

A. Pion, who was identified with A. Pion & Co., for sixteen years in the tanning business, has opened an office at 344 Prince Edward Street. He will handle hides and skins, and in the near future he intends branching into leathers. Mr. Pion is well known among shoe manufacturers.

His numerous friends wish him success in his new enterprise.

J. S. Langlois, formerly of J. S. Langlois & Co., has been appointed business agent and secretary of the Boot and Shoe Manufacturers' Association of Quebec. Mr. Langlois was born in Quebec in 1851, and was married in 1872 to Miss Aurelie Beaumont. For six years he was in the employment of Olivier Rochette, leather merchant, and for the past fifteen years he has conducted a retail shoe store in St.

Joseph Street. Mr. Langlois was a well known shoe manufacturer for 20 years.

Among the recent visitors in Quebec on business were H. A. Galpin, representing A. J. Foster & Co., Boston; L. S. Odell, Toronto, representing Fisk, Limited, Montreal; W. C. Pitfield, representing Eastern Securities Co., Limited, Montreal; W. H. O'Flaherty, representing E. F. Walter & Co., and Jules Payan, representing Duclou & Payan, St. Hyacinthe, Que.

years, has taken a similar position with Ames-Holden-McCreedy, Montreal.

L. F. Mulready, superintendent of No. 1 factory of the latter company, resigned a few days ago.

During the past few days a number of shoe factories have been busy taking stock preparatory to commencing their fall and winter runs. Nearly all manufacturers report that orders have been coming better than last year at this season and all are looking forward to a period of activity.

J. M. Humphrey & Co., of St. John, who began the shoe manufacturing business in a small way, about three years ago, are branching out and making some finer grades. They have recently enlarged their premises. At present they employ some 50 hands, but will increase the number to 100.

The Activities in the Factory Centres

Many Firms Have Been Taking Stock—Perth By-law to be Voted Upon Again—Veteran Superintendent Accepts a New Job—More Additions to Various Plants—Will the Tariff on Shoes Be Reduced?

Mr. Ogg, of the Rowen-Ogg Co., Guelph, Ont., spent a few days recently in Rochester.

Thomas Williams, of Williams, Hoyt & Co., shoe manufacturers, of Rochester, N.Y., spent a few days in Toronto recently.

The Solid Leather Shoe Co., of Preston, Ont., has had recently installed a Rex pulling over and other machines.

The Stentiford Shoe Repair Shop, of Brantford, has added a Goodyear rapid stitcher to its equipment.

The Normal College students of Truro, N.S., recently paid a visit to the shoe factory of the A. A. Durkee Co.

R. L. Savage, of Jackson and Savage, Montreal, spent a few days in Boston last week.

J. A. Adams, of Rideau Shoe Co., and D. McDermott, of McDermott Shoe Co., Montreal, spent a few days recently in Boston.

Simon G. Grosch, of the Grosch Felt Shoe Company, Milverton, Ontario, has bought an automobile and is enjoying some lively spins through the country.

John Dougherty, late of the Rowen-Ogg Co., Guelph, has been appointed foreman in the Solid Leather Shoe Co., of Preston, Ont.

S. H. Parker, sales manager of the William A. Marsh Co., Limited, Quebec, was in Toronto, Hamilton and other cities last week calling upon the trade.

The Elmira Felt Co., of Elmira, Ont., have recently installed an Ensign lacing machine, a Naumkeg buffing and an edge setting machine.

The Brandon Shoe Co., of Brantford, Ont., have been so busy with orders that the factory has been running at nights for some time in order to turn out the goods.

Charles Ash and Sons have opened a new shoe factory in Harbor Grace, Nfld. Machinery is being placed in position and the industry has bright prospects.

Messrs. C. Merner and Ratz, of the New Hamburg Felt Boot Co., New Hamburg, Ont., have been on a trip to Indiana, Illinois, Ohio, and other states.

The Berlin Felt Boot Co., of Berlin, have recently added several snappy lasts, which are much admired and for which large orders have been received.

J. A. Walker, of the Walker-Parker Co., Toronto, returned last week from spending a few days in Boston and other shoe centres getting a number of pointers for spring and fall styles.

C. F. Hayes, superintendent of the Aylmer Boot and Shoe Co., Aylmer, Ont., has returned from a business trip to Bos-

ton and other centres in the New England states.

M. McGowan, manager of the footwear division of the Consolidated Rubber Co., Winnipeg, was in Toronto last week on a business trip.

Richard Weston, of the Weston Shoe Company, Campbellford, Ont., was in Toronto for several days last week with some new samples, which he was displaying to the trade.

Alex. Braid, foreman of the Goodyear department of the John McPherson Co., Hamilton, was in Toronto last week on business. Warren Elliott, late of the same company, has bought a retail shoe business at 340 Danforth Avenue, Toronto.

The United States rubber year ended March 31st, and the total income was \$7,227,167, increase of \$629,478. Their surplus amounted to \$5,376,307, an increase of \$1,076,482. Their previous surplus was \$3,349,423, with an increase of \$549,826.

W. V. Matthews, superintendent for J. and T. Bell, Limited, for a number of

The firm of Walker-Parker & Co., Toronto, recently celebrated their 13th anniversary in business.

Mr. Walker, previous to forming a partnership with Mr. J. T. Parker, was, for a number

of years, clerk in a retail shoe store in Owen Sound, and for nine years a traveler for the J. D. King Co., of Toronto. He states when his firm began manufacturing shoes, they were the third concern in America to place women's footwear on the market, under a registered or branded name, and with the price of each shoe stamped on the sole. There were two houses in the United States making women's shoes, who followed this process. Certain parties declared that it was merely a fleeting fad, and a passing fancy, which would sooner or later die. The fad seems to have developed into a lively conviction,

The Lang Tanning Co., Limited, of Berlin, Ont., have, during the past few months, erected extensive additions to their property, and their tannery is now one of the best equipped and up-to-date of any on the continent. The present capacity is over 1,000 sides a day. The buildings are admirably laid out, and the firm lay claim to the proud distinction of being "the largest exclusive harness leather tanners under

the British flag." During the past year there were erected by the company a three-storey brick building, 264 feet by 40 feet wide, and a four-storey concrete structure, 80 feet by 64 feet. These two buildings are used for dressing and finishing leather. A concrete tan yard, 274 feet by 64 feet and another 235 feet by 102 feet, as well as a concrete addition to the beam house, 136 feet by 35 feet were also built.

as now practically all manufacturers of high-grade shoes have their own brands, while a number stamp the price on the sole. Being the first in Canada to inaugurate this move, Mr. Walker believes it has been one of the contributing causes to the success of the "Empress" shoe, combined, of course, with excellent craftsmanship and splendid material in its construction. The firm were also one of the first, if not the first, in Canada, to engage exclusively in the production of women's shoes. They have never attempted to make anything else, and strongly believe in specialization.

The Harbor Grace, Nfld., Boot and Shoe Mfg. Co., W. J. Janes, manager have just installed a line of counter-making machinery. This is a new industry, and one that counts much for the well-being and life of any shoe. Heretofore, the counter in vogue with most manufacturers was made of leatherboard, but this company can now boast of a good solid shoe throughout.

J. P. Donald, who for the past twelve years has been secretary of the R. M. Beal Leather Co., of Lindsay, has resigned and will leave in the near future for Pic-

ties it has been torn down. The building was for many years the shoe factory under the management of Mr. Ross. A large number of felt shoes were manufactured, but at that time there was not much demand for this class of goods. The factory was closed about fifteen years and the machin-

that the loss will be close on to \$30,000. as, in addition to the machinery, there was a supply of leather robes, etc., valued at several thousand dollars. Mr. Adam, the proprietor, was making preparations for operating a shoe factory in connection with the tannery, and the machinery had been on order for some time. The fire has, of course, put an end to the undertaking. It is probable that the tannery will be re-built, and the citizens of Camrose will assist in the re-erection of the same.

The by-law to loan \$25,000 to Winn Shoe Company, Perth, will be again submitted to the electors of that town. This by-law was voted on last month and was defeated, but according to the new bonus by-law assented to in the House there were sufficient votes polled in its favor to declare it carried. But according to the old law it fell by the wayside by 86 votes. The conditions of voting under the old law required three fifths of the eligible voters on the list, provided less than one-fifth had voted against the measure. The new law requires three-fifths of the council

WARD A. CASSELMAN

Who has just been re-elected President of the London, Ont., Retail Shoe Dealers Association.

ery moved. Since then the structure has been going to ruin, and during the past winter the roof fell in.

E. H. Lightford, superintendent of the shoe factory in Perth, Ont., was in Toronto last week on business. The by-law to loan the company \$25,000 for fifteen years will again be submitted to the rate-payers of the town on May 23, and it is predicted that the measure will carry. The name will be changed to the Perth Shoe Company, and it is the intention of the management to largely drop the making of children's footwear and convert the product of the factory into women's shoes.

The tannery at Camrose, Alberta, which was owned by Francois Adam, and built

Who has recently opened an office in Quebec city and will handle hides and skins.

ton, N. S., where he becomes head of a large leather concern. Since residing in Lindsay, Mr. Donald has taken a prominent part in the political, civic and religious life of the town.

The Crown Shoe & Leather Co., Montreal, expect to begin operations about June 1. The company has secured a factory on Moreau Street, and will make oil tanned shoes, or larrigans. Later they may go in for heavy lumbermen's and miner's shoes. J. R. Claude is president of the company, and C. H. Deguise, secretary-treasurer. Mr. Claude will continue his hide and skin business.

The Collis Leather Co., who are erecting a large factory in Aurora, which town has voted a bonus of \$10,000 and freedom from taxation, is offering \$100,000 of a capital stock at par. The factory will be in charge of Walter Collis, a practical tanner, who understands every part of the business. The directors have themselves subscribed more than one-third of the stock.

An old landmark has disappeared in Walkerton. Having been sold to local par-

ROWLAND HILL

some four years ago, was destroyed by fire recently. The establishment had lately been re-modelled and was being operated very successfully. It is estimated

favorable to its submission, and two-thirds of the total vote polled for the by-law.

During the last fortnight a petition has been circulating among Montreal manufacturers with reference to the appointment of a representative whose duty it would be to secure competent workmen in American shoe centres in times of labor stringency in Canada. The object, of course, would not be to bring in workmen under contract, but, as this would contravene the provisions of the Alien Labor Law, they would be encouraged to "trek" up to Canada, where labor conditions are usually better. It is understood that some move may be made by the backers of the scheme in question to take up the matter of alleviation of the frequently occurring labor shortage question among shoe manufacturers with the Department of Commerce and Labor.

FOR SALE AT A SACRIFICE.—One Singer sewing machine, double power table and all attachments. Room for six machines. Nearly new. Apply H. Peel, Owen Sound, Ont.

The shoe manufacturers and tanners of Canada were recently somewhat alarmed over a despatch from Ottawa, which appeared in a number of Canadian papers, to the effect that the Government was contemplating sweeping tariff changes, and that the reductions would be made by an order-in-council, at an early date. It was intimated that the present protection in leather boots and shoes and rubber goods would be immediately lowered. It is now denied that any tariff alterations are likely before the next session of Parliament. If the Government desires it can reduce the tariff on almost any article and have Parliament confirm its action next session. There is a special provision in the Act enabling the Government to grant a drawback on articles brought in by manufac-

turers for their business, and another authorizing tariff reductions or the suspension of the collection of duties to meet unusual conditions, such as a coal famine. But although it has the authority, the Government has no intention of revising the tariff. Finance Minister White is giving a good deal of time to the study of tariff questions, but on the whole the present tariff appears to be working well. It is understood that no industry is being adversely affected by it.

Some "Home Market" Truths

"When we buy goods at home we get both the goods and the money."

Two hundred and fifty (1912) factories, branches of companies established in the United States, are operating to-day in Can-

ada, representing an aggregate investment of over \$250,000,000 (1912).

The factories and workshops of Canada employ 435,000 artisans and workpeople who receive and distribute annually \$250,000,000 in wages. Do you want to keep this money working for you at home, or will you send it abroad to work for the other fellow?

"No goods purchased abroad are cheap that take the place of our own labor and our own raw material."

An industry employing a thousand mechanics who receive the average wage and average salary, means to any community the addition of at least 5,000 people to its population, and an additional expenditure of \$2,500,000 a year in that community.

**A FEW
INSIDE FACTS
ABOUT
EYELETS**

BETWEEN two shoe eyelets that present the same appearance in the shoes, there may be a world of difference in the wear. One can resist wear only to the extent of its none too reliable coating of enamel; underneath is the inevitable brass of the brassy eyelet. The other kind (if it is a Fast Color eyelet) is constructed as shown above, and by the way, there is only one kind of eyelet that is Fast Color. They are all made this way, with celluloid tops of solid color and nickel non-corroding barrels. It is impossible for them to wear brassy. They preserve their bright, new appearance throughout the wear of the shoe.

You will readily realize the importance of establishing the identity of these two classes of eyelets and there is a sure way.—Fast Color eyelets have a small diamond trade mark slightly raised on the surface of each eyelet. No others do. Just fix this fact in your mind, and you will be able to avoid mistakes. No diamond trade mark—no Fast Color.

OFFICE AND FACTORY: Lagachetiere and St. Monique Sts. - MONTREAL, QUE.

THE FACILITIES AT THE BACK OF THE BRAND

One of the thriving manufacturing enterprises of which Granby has reason to be proud of is that of the Miner Rubber Co., Limited.

The various buildings occupied are equipped with the most modern machinery and facilities for the manufacture of High-Grade Rubber Footwear of all styles.

This business was established here three years ago by the late S. H. C. Miner, who was a leading factor in the Rubber Footwear business for a number of years.

Since operations were commenced the growth of the business has been phenomenal under the direction and supervision of Mr. W. H. Miner, Vice-President and General Manager.

The products of the Company are shipped to all parts of Canada from coast to coast.

A large number of expert workman are employed.

The plant has a capacity of over 10,000 pairs daily. Branch houses and selling agencies are located in all principle cities throughout Canada.

ACTON PUBLISHING CO. LIMITED
TORONTO MONTREAL

This Letter Is Directed To Whom It May Concern—

We are experiencing a remarkable revival in the demand for WEILDA CALF which predominates on the gray as well as the black and brown shades.

Coming as it does almost entirely from the manufacturers of fine shoes, we take this new demand for WEILDA CALF to indicate that this leather has not lost its popularity, but has simply been overshadowed by the call for various fancy fabrics.

The fad for these having now become exhausted, WEILDA CALF is coming into its own again.

Though thus reasonably accounted for, the present popularity of WEILDA CALF seems the more remarkable to us in view of the tremendous orders received on our TAN GUN METAL CALF--the demand for which exceeds the supply.

This condition bids fair to continue on account of the splendid wearing qualities and value which are always to be found in TAN GUN METAL CALF.

As stated before, this is merely trade information, and we believe it will be appreciated by those who read and make use of what they read, as it may be best adapted to their individual business.

Yours very truly,

A. C. LAWRENCE LEATHER COMPANY

JAMES ROBINSON
BOOTS - SHOES - RUBBERS

182-186 McGill Street

Montreal, June 1, 1912

Mr. Shoe Merchant:

How are you fixed right now for summer selling?

Is that good stock you put in still complete enough to stand the demands of June sales?

Indications point to there being a good month's business ahead, and without considering the inroads that the sales of July and August will make on your stock, it is surely advisable to put that stock in good shape right away. Your stock of outing shoes especially will need to be in pretty good order.

Look over your stock to-day and even if it is only a few pairs you're short, send in for them. I can fix you up, no matter how large or how small your wants are, and I can do it promptly, too. Just let me know what you need. I am only too anxious to show how well I can serve you.

I hope you will have a very successful summer's business.

Yours for bigger profits,

James Robinson

Helping you to Sell More Shoes

Advertisements like these are appearing in the leading papers in Canada.

Our Poster and Booklet advertising also helps our retailers to sell more shoes.

Mr. Workingman

you cannot afford to be indifferent about the make of boot you buy. Your boots get hard, constant treatment six days a week. A poorly made boot is too expensive.

In the

AMES HOLDEN

ARTISAN

the uppers are hand cut from honest tough leather. The soles are double locked stitched or pegged. These treated with Viscol Oil absolutely keep the damp out and your feet dry and warm. As a matter of economy ask your dealer for ARTISAN.

Any dealer selling our shoes can secure gratis electros like these for his own use by writing to us.

When you set out to buy a pair of shoes in which to look your best, you should come home with

AMES HOLDEN SHOES

They are always abreast of the latest and newest ideas in shape and style. They are scientifically made along lines that ensure perfect fit and comfort. They retain their shape and handsome lines because they are fitted over lasts by expert workmen. They are all leather without any kind of substitute. They are lock-stitched with silk and cannot rip.

They merit your choice from three standpoints—appearance, wear and comfort. Your dealer will be glad to show you these shoes.

The Calf Skin that IS Waterproof

We call "Endural" a waterproof calf not because we would like it to be waterproof or because we have tried to make it so, but because we know it is waterproof, and because we have the assurance of many shoemakers that it is the best water excluder of which they know.

It has proven profitable to us to have discovered a means of making "Endural" perfectly waterproof without spoiling its grain or texture, and it has proven profitable to many makers of good winter shoes to discover the good qualities of "Endural." Now, it's going to be just as profitable to you to make sure of these good qualities and it's not going to cost you much, either. Just order a few skins and try them.

You'll be mightily pleased when you find that "Endural" answers every purpose of imported viscolized leathers and actually costs you some 4c. less on every foot you cut

Isn't "Endural" worth a trial?

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

FULL INFORMATION FURNISHED PROMPTLY ON REQUEST.

How We Have Grown—and Still Growing

We want every Dealer, Jobber and Manufacturer to help us make our Black Cat as large as possible for 1912. We will be pleased to furnish, without charge, any electroplates to use for catalogue work or any other advertising.

CAT'S PAW CUSHION RUBBER HEELS

Cat's Paw Rubber Heels have all the advantages of ordinary rubbers, and—besides—the Patented Friction Plug—in the back part of the heel—just where the wear comes—keeps you from slipping on wet sidewalks, and also makes the heels wear much longer than the old-fashioned kind.

Insist upon Cat's Paw Heels—Your Customers are Asking for Them

WALPOLE RUBBER COMPANY, LIMITED

Eastern Townships Bank Building, Montreal

“Cleo” Distinctiveness

“Cleo” styles are popular styles but they do not follow blindly the lead of any other line. In fact they do not recognize the leadership of any other line. They don't need to. They've a distinctive style about them that while not obtrusively novel is very catchy. They appeal forcefully to women of taste and refinement who desire to dress well. “Cleo” distinctiveness can be made a strong factor for sales, for most women know that where the “Cleo” sign is displayed there good shoes are sold. They retail at \$3.50 and \$4.00—a popular price for women's shoes.

CLEO SHOE COMPANY
LONDON, CANADA

ONLY Men's Shoes are made in the Murray Shoe Factory—Men's Shoes of correct style and good wearing qualities. This sticking to one line of Shoes is one of the great reasons of "Murray" superiority. For it stands to reason that where many lines are made extra particular attention, such as is necessary to produce shoes of Murray calibre, cannot be given to any one line. There is nothing in the Murray factory to distract the extra particular attention from the Murray Shoe for Men. To use a popular expression, "It's the whole works." Now, if you're going to compete successfully for the business

of the men of your locality it will have to be with a line that has been carefully and thoroughly evolved to meet the requirements of these men. You'll find that the Murray Shoe fills the bill in a manner that leaves nothing to be desired, for the Murray Shoe is the result of the work and worry of the entire Murray factory. Brains and brawn have combined to make it one of the finest lines to be had. Try "Murrays." They'll do your business good.

**THE MURRAY SHOE
CO., LIMITED**

London, Ontario

I want to help you sell the best work shoe made in Canada

Many shoe dealers in Canada are to-day reaping splendid profits from the sale of Ruthstein's Steel Shoes. They are being helped to these profits by the extensive advertising these good work shoes are receiving at the hands of their makers.

You should share in these profits. Ruthstein's Steel Shoes will sell in your locality as well as in any other. Workmen in your town will read the Steel Shoe advertisement and will be convinced that Steel Shoes are what they need. These men will go out actually hunting for the Steel Shoe dealer. They'll come to his store and demand Ruthstein's Steel Shoes and will be satisfied with no other.

But when you're handling Ruthstein's Steel Shoes you needn't let anyone hunt for you. I will supply you with cuts that you may use in your local papers. You can then tell the people what Ruthstein's Steel Shoes

are, and where they may get them.

And the advertising that I have undertaken for Steel Shoes is not going to be spasmodic. It's going to be kept right up until every time a man thinks of work shoes he'll think of Ruthstein's Steel Shoes.

This advertising is going to make it far easier for you to sell Steel Shoes than to sell any other kind. It's going to bring men right to your store with their minds made up to buy. And if you give them a good fitting pair of Ruthstein's Steel Shoes they'll be certain to come to your store again.

You need have no fear that these shoes won't live up to the advertising. There are over 500,000 pairs giving fullest satisfaction to-day. Miners, prospectors, lumbermen, contractors, laborers, in fact all classes of men who require

heavy service from their footwear, have proven that Ruthstein's Steel Shoes are the best work shoes made.

Because it's being made so easy for you to sell Steel Shoes isn't used as a reason to cut your profits, as can be readily seen from the following table:

No.		You Pay	You Get
03	Men's 6 in. black	\$2.65	\$3.50
04	Men's 6 in. tan	2.65	3.50
07	Men's 6 in. black	3.75	5.00
08	Men's 9 in. tan	3.75	5.00
09	Men's 12 in. black	4.50	6.00
010	Men's 12 in. tan	4.50	6.00
011	Men's 16 in. black	5.00	7.00
0103	Boys' 6 in. black	1.90	2.50
0107	Boys' 9 in. black	2.65	3.50
0108	Boys' 9 in. tan	2.65	3.50

Now, you're going to profit most by being the first merchant in your locality to handle these "best work shoes." Send in an order to-day and commence getting this good profit right away. Or, if you are not convinced, let us send you some interesting booklets that contain complete information regarding Steel Shoes. Don't delay. Write now.

Every Rideau Shoe
Gives "Down-to-
the-Last-Cent"
Value

RIDEAU

RIDEAU

EVERY Rideau Shoe gives full measure value because every hide that comes into the Rideau factory must be a "full value" hide, every Rideau shoemaker must be a "full value" workman to hold his job and every Rideau last must be a "full value" practical shape.

And the Rideau Shoes are inspected and must receive the unqualified approval of experienced shoemen before they go to you.

So, when you get "Rideaus" in your store you can be sure you have shoes that are right in every particular, shoes that are going to give entire satisfaction to your customers and an enviable reputation to your store.

You and your customer receive from Rideau shoes "down-to-the-last-cent" value because we make sure that value is there before we allow the shoes to go to you.

Try "Rideaus" and see.

RIDEAU SHOE CO., Limited
MONTREAL, QUEBEC

WHY DIAMOND FAST COLOR

Nothing so cheapens a shoe as a brassy eyelet. In most instances it is more conspicuous than a break in the leather and even more difficult to remedy. But there is a sure way to protect your patrons from any annoyance in this connection. Diamond Fast Color Eyelets cannot wear brassy, they always look new and help to preserve the appearance of shoes throughout the longest wear. There is also a positive way to tell whether the shoes you purchase are fitted with them. Just look for the little  diamond trade mark raised on the surface of each. It is inconspicuous but very important. Your customers realize it. It is your guarantee that the eyelets are genuine Fast Color, for only the genuine Fast Color have the  trade mark.

UNITED FAST COLOR EYELET COMPANY

UNITED SHOE MACHINERY CO. OF CANADA

Lagauchetiere and St. Monique Streets - - MONTREAL, QUE.

Continuous Concord between Retailer and Customer is what a Slater Agency means. The goods give an unbroken run of Satisfaction.

Little Talk and Quick Sales are appreciated by the Merchant and his assistants on a busy day.

If the Sign of the Slate is not to be seen in your town, send a card for particulars of our Exclusive Agency, the money maker for hundreds who went one better. Our advertising campaign will bring people to your store whose custom you will appreciate—it will be a decided case of first impression with the Slater Shoe.

THE SLATER SHOE CO., LIMITED - MONTREAL

“Make it in Maisonneuve”

Maisonneuve, the “Pittsburg of Canada”

The profits in shoe manufacturing are such that every means must be taken to reduce the cost of manufacturing. A poor location with inadequate shipping facilities, high power rates, and labor troubles, all conspire to cause the manufacturer to work for a “living” only.

In the TOWN of MAISONNEUVE, we give you all that is desirable for a factory location, fine shipping conditions—C.P.R., G.T.R. and C.-N. R., with Terminal Electric Railway, four railroads in all—a freight line linking them all together, besides this, the finest harbor and water shipping port in Canada.

Another reason why you should build your shoe factory in MAISONNEUVE—here a total absence of labor troubles, here workmen are contented, own their own homes, and are prosperous, and there is the finest labor market in the world to draw from here, male and female, skilled and unskilled.

We give bona fide industries important concessions in Maisonneuve, ten years' exemption from taxes, etc. Many big industries are now located in Maisonneuve. **The United Shoe Machinery Co., The Vickers Maxim Co., The Montreal Steel Co., The Slater Shoe Co., The Kingsbury Footwear Co.,** and many others.

We can make it worth your while to locate in Maisonneuve. Get in touch with us at once and we will give you more information.

ALL YOUR NEEDS FOR FALL, 1912

For fall of 1912 we have gathered together one of the most complete and comprehensive stocks of footwear in the Dominion. It comprises every grade of boots, shoes and rubbers that you will require, no matter what your class of trade may be.

We faithfully recommend these brands, which we know to be absolutely satisfactory:—

THE "IMPERIAL" SHOES

THE "BEAVER" SHOE

THE "LITTLE CANADIAN" SHOE

THE "MAPLE LEAF" SOLID LEATHER SHOE

"KANT KRACK" RUBBERS

"DAINTY MODE" RUBBERS

"ROYAL" RUBBERS

"BULL DCG" RUBBERS

You will have no fault to find with the salesmaking qualities of these goods. They are all A1 value in material, workmanship, style and fit, and are bound to please your customers in price as well as in comfort.

The samples of these lines, from which you order, are precisely the same in every particular as the goods you will receive. You know just what you are getting before you see the goods.

We are sure you would be interested in seeing our different brands of leather and rubber goods, both for summer assorting and fall shipment. If our traveler has not yet called we would be glad to send him.

Satisfaction in Every Pair

In the Williams' factory, satisfaction isn't left to chance. By tried methods it is embodied in every shoe that is turned out. There is never a time in the process of manufacture that the satisfaction of the wearer of Williams' Shoes is not kept in mind.

By these methods and by constant supervision, shoes are produced that, in the matter of fit, appearance and wearability, are entirely satisfactory to their wearers. Of this we are assured by the steady increase of sales to those who have tried Williams' shoes and found them right in every particular.

Satisfactory shoes like Williams' are mighty good for business. Try them in your store.

You're Mistaken —That Was A Two-Dollar Bill I Gave You!

When these angry words from a customer ring in your ears, how do you feel? What do you do?

You search your cash drawer for the bill he gave you. An argument follows. There is an angry discussion. But no matter how much you apologize, or what you do to show your regret, you have offended—maybe lost—a customer.

A National Cash Register Positively Prevents All Errors in making Change

It protects both you and the customer against such disputes. Provides you with a system that makes it a pleasure for your customers to deal with you. Insures absolute accuracy in every transaction. Cares for your money in a way that no other system does.

You can cut out forever the worrying hours you spend at your store after closing time, looking for the elusive "cash balance." With a National Cash Register, there is always a cash balance—you can tell at a glance the exact amount in your cash drawer. The machine balances your cash for you as each sale is made.

The day you install a National Cash Register you'll notice an increase in your cash receipts. Some retailers tell us that it brings them as much as four dollars a day more. Here is the

reason: In every store not protected by a National Cash Register, there are money losses that you can't see. A dime here, and a quarter there—mistakes that can easily occur in the rush of waiting on customers.

A National Cash Register Will Keep Your Books, Check Your Stock, Stop All Disputes, Mistakes, Losses, Protect Your Money, Etc.

as thoroughly as if it were a safe-deposit vault, and enable you to do without a cashier and serve customers quicker.

More than 1,000,000 merchants the world over use National Cash Registers. They tell us they would not—could not—do without them. For they protect the thing they are in business for—money.

You Can Pay for a National Cash Register Out of the Money It Saves You—In Less Than a Year.

Write for Booklet and Full Information to

Will the Shoes You Buy Sell at a Good Profit?

If You Have Any Doubt About It Don't Purchase—The Ranges to Select for the Coming Season—Stop When You Get What You Require—Some Expedients Used by Successful Buyers

By A. E. EDGAR

The secret of good buying is to obtain the best materials and styles at figures that will allow a fair net profit. Goods should be bought with but one end in view—to sell at a profit. They may be purchased under price, and yet prove a bad investment, because they will not sell.

A merchant who starts off to buy his next season's stuff should know as accurately as possible the condition of his present stock. He should not only know from memory, but by having actual figures before him. This is when a perpetual inventory is almost a necessity.

He should also have a pretty fair idea of the tastes of his community. These are changing all the time, and one must keep constantly in touch with the trade. For this reason the man who serves on the floor part of the time has an advantage over the one who does not.

Various Considerations

There are a great many other considerations to be taken into account when buying. Briefly they are:—

- 1—Deliveries.
- 2—Small freight charges.
- 3—A maximum number of styles with a minimum stock.
- 4—To keep from overstocking.
- 5—To prevent duplication of lines.
- 6—To guard against accumulating sizes.
- 7—To secure styles suitable for the store's trade.
- 8—To buy at the right price.
- 9—To purchase at the right time.
- 10—To procure from the right houses.

These are important points to be remembered, weighed, and thoughtfully considered. There are other motives also that enter into the choosing of one line in preference to another.

Perhaps the first thing to consider is when to buy. The

writer is of the opinion that the right time is when the traveling salesmen are on their regular trips. The majority of firms have a stated time for starting their salesmen. Their samples are as complete then as they are likely to be at any time during the season.
