THE NEW HOME OF THE MONARCH, BRANDON AND DR. BRANDON SHOES.

# Watch Us!

Prosperity has increased our factory to its present size. Living up to our slogan, "Where quality counts we win," by keeping our goods up to standard, has forced us to enlarge our building. Our new plant will have a capacity of 1,000 pairs per day of men's fine Goodyear Welt Shoes.

Our new Fall line, which we will show you very early this year, contains the finest range of shoes that has been shown in Canada. Every shoe is a quality shoe, and the added profit you will obtain through handling our line will give you the same prosperity that we have had.

Buying direct from a maker who specializes makes it much easier to

size up, besides enabling your balance sheet to show a bigger gain on the right side by eliminating counter bargain sales, the weak spot in retailing.

We thank the retail salesmen for the energy displayed in showing and pushing our line, and trust that they will be right with us in trying to make 1913 the banner year for Monarch, Brandon and Dr. Brandon Cushion Shoes.

We wish you all a prosperous year.

Very truly,

**Brandon Shoe Co., Limited**  
**Brantford, Ont.**

THE OLD HOME OF THE MONARCH, BRANDON AND DR. BRANDON SHOES.

# Genuine Palmer Shoe Packs

We control the sale of the finest line of  
Shoe Packs in Canada.

Our travelers will cover every town in Canada immediately after January first with a complete range of Genuine Palmer Shoe Packs. Our prices are right, and you will save money by holding your order for Fall Delivery. :: ::

**Canadian Consolidated Rubber Co., Limited**

(Watch for our January issue of Foot-Prints. It will contain complete illustrated catalogue of this line.)

---

# Make it the "best-yet" year.

Mr. Manufacturer, you'll want to make your 1913 sales "the best yet."

And you'll want to make them "the best yet" in such a way that every succeeding year will be "the best yet." To do it you'll have to build on quality. Not ordinary good quality, but the quality that is unique, that is far and away above the next best.

When you talk of quality in shoes you get right down to leathers. And quality calf leather is the first essential to quality shoes.

A Russia Tan Calf, (and remember you're going to sell more tans than anything else this year) that you can depend upon—every skin

of which is absolutely even in color and texture—a tan that requires you to do no matching in your packing room—a tan that you can wash with soap and water—a tan that will not fade—this is a real quality calf.

Such a calf is "Bestyet."

It has all these good qualities—and more—for it has behind it Davis service which is always prompt and efficient.

We would like to help you have a better year, and we're going to be prepared to do it. This month we commence operations in our new addition which enables us to more than double our former capacity.

May we help you to a "Bestyet" year?

**DAVIS LEATHER CO., Limited**  
NEWMARKET, ONTARIO

Some Pointers on "Elmiras" and why you should sell "Elmiras" to your customers and why your customers will want them.

**T**HERE are many good reasons why the best retailers sell only "Elmira" Felt Shoes and Slippers. "Elmiras" have been the "Top Notch" in Felt Footwear for over 12 years. They have stood the test where others failed. The success of "Elmiras" was established by attention to details. Every piece of material, every seam in Elmira quality is made with an expert's knowledge of what is required in Good Felt Footwear, always the same, one price to everybody, and that price based on actual cost of good material and expert workmanship - - Not on a basis of a percentage less than some Leader, because "Elmiras" have always been the leaders to which competitors have looked for both standard of quality and price, usually coming out below in both.

In 1913 the Elmira line of Felt Shoes and Slippers will be the most complete ever shown. ¶ In quality the same as always. ¶ In range, larger and with many desirable new lines. ¶ Elmira 1913 illustrated catalogue is the handsomest and most complete ever issued and will be mailed on request to any dealer not having already received it. ¶ Elmira samples will be in the hands of 80% of the Canadian Shoe Jobbers early in January. ¶ When placing your felt order, ask to see the above Trade Mark on the samples and when receiving shipments look for it on cartons and shoes.

---

## MR. RETAILER:—

¶ There is nothing better than we offer you in the way of snappy, up-to-the-minute welts for men.

¶ We make them right, but should they go wrong we make them good.

¶ It is this policy that has won the patronage of thousands of your guild.

¶ Write, wire or phone us. Always at your service.

**L**ET'S see, I've been buying shoes, felts and rubbers for - - - well, it's so long I'm ashamed to tell you. I've seen firms grow, and firms go. I've seen new brands born and old ones die, I've seen changes innumerable in shoedom - - and I've been buying all the time.

I know where to buy now - - and when.

I wouldn't be up to much if I didn't, would I?

Well there you are! I'm offering you the use of my hard-earned experience to help you to the happiest year you ever knew, and the most profitable.

What do you say to linking up for 1913?

# Interesting Style with More Interesting Prices

When it's a woman's shoe you want with style, distinctiveness and wearability—a high class welt at a popular price—make sure of your own and your customer's satisfaction by specifying "The Perth."

"Perth" Shoes are made for women who can distinguish "class" from mediocrity, and style from freakishness.

You'll be placing the very best kind of insurance on your women's trade when you stock "Perth."

Do not the prices interest you?

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

**MODEL N**

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

FULL INFORMATION FURNISHED PROMPTLY ON REQUEST.

## Here's a Shoe That'll Sell Anywhere

The "Doctors" Cock o' the North Shoe is built for country roads as well as for city pavements. It's a shoe that will sell as well in the country as in the city, and mighty well in either place.

For the city man who does much walking, and wishes to do it comfortably, this is the ideal shoe. It is plain, yet dressy; strong, yet not heavy; comfortable, yet not clumsy.

In the country it will appeal as a serviceable, fine-looking, comfortable shoe.

So, whether your store is in the city, town, village or crossroads you'll be able to sell The "Doctors" Cock o' the North Shoe with profit to yourself and pleasure to your customer.

It's waterproof, it's perspiration-proof, it's germ-proof.

# COMPARISONS

THAT TELL A

## WONDERFUL STORY

OF

## SUCCESS

¶ From the beginning the growth in the sale of "Nugget" Polishes has been steady and rapid.

¶ And with the beginning of Nineteen-Thirteen it is with a feeling of pride we publish these comparisons.

¶ Our success is mostly due to three things in particular:

Keeping everlastingly at it by Advertising.

Co-operating in every possible way with the Trade and

Producing goods that give the greatest satisfaction to the consumers and pay the retailer a handsome profit.

¶ For Nineteen-Thirteen we hope to show a much greater increase, but to do so we need your assistance.

¶ Are you with us?

## There's as much service as there — is style —

If you've seen Linton samples we don't have to tell you of Linton styles. For whether you've handled them or not you must have been struck with the attractiveness of Lintons.

But, if you haven't handled them you can't know what it is to be absolutely satisfied with the shoes you get, how you get them and when you get them. You can't know that Linton

service means more than shipping service—that it starts away back when the hide comes into the factory and follows every operation and transaction until the shoe goes out of your store. Linton service is something with which it's profitable to be acquainted. It means more sales, and easier ones.

Are you acquainted with Linton service?

## You're as Honest as the Shoes You Sell

It does seem rather hard to saddle any merchant with the responsibility for the faults of some of the shoes being sold nowadays. But what can you do about it?

If you sell a pair of shoes for \$3.50 or \$4.00 and they're not worth \$3.00 to your customer, who gets the blame for it? Does the manufacturer? Not much!

You get it, and get it good. So, you see, it's up to you to be honest with yourself first. Stock honest shoes. "SURPASS" Shoes have been known as honest shoes for half a century or more. Wouldn't it be a good idea to protect yourself and your business by connecting up with this fifty years of honesty?

## Every Woman Wants Style

You know it is "looks" that sell nine out of every ten pair of women's shoes. Even the matter of fit is an almost secondary consideration. When the shoe has the required "snap" and appearance it is readily sold.

McDermott Shoes go strong on style for good sales reasons, and sales grow as a result. With "McDermott's" to show your best women customers, you are "well fixed" as far as women's trade is concerned.

**THE McDERMOTT  
SHOE COMPANY**  
Women's Shoe Specialists  
MONTREAL - QUE.

## Was Your Store System Efficient in Handling The Heavy Holiday Trade?

If it wasn't, now is the time to improve it. You know now where it is weak, where it failed to handle the crowds and give adequate service.

Here is a suggestion:

Take your watch and time individual transactions. Note how long it takes for a cash sale to be completed: how long for a charge sale to be completed.

Consider the time your customers waste while waiting for change to come, when anything but an up-to-date system is used.

Remember, also, that while these customers are waiting for their transactions to be completed, they are keeping others from buying.

Consider the loss you sustain because customers in your store aren't waited upon promptly.

Then remember that with National Cash Registers, change is made on the spot, giving maximum protection with the sales slip records and the money.

### A National Cash Register tells you:

The amount and kind of every sale, and who made it.

That the customer got the right amount of change and that your share of the sale was protected.

That you have a record of every transaction in the store and can get your daily balance quickly and accurately.

That your clerks will be better salesmen, more careful and more accurate, because they get credit for good work and know that the blame for mistakes is fixed beyond dispute.

Naturally as the "National" cuts out so much lost motion your business is handled more efficiently.

You place yourself under no obligation by writing for free booklet, explaining the use of the National Cash Register in your business.

Write for this booklet NOW to

## Is the Annual January Shoe Sale Necessary?

The Majority of Retailers Appear to Think That It Is—Getting Rid of Dead Stock is Principal Object—Make the Sale a Genuine Success if You Undertake it—Reduction on a Few Lines Adds no Glory to Retailer

*Do January sales pay? Some shoe retailers think they do while others say "no." Many hold a January sale just because it seems to be a generally observed custom, or procedure, and several defer it until February, as they are too busy taking an inventory of their stock right after the busy holiday season. There is one piece of advice that may be given, and that is, if you put on a reduction sale see that it is a genuine one, carry it out in good faith, and make it a hummer. A half-hearted, go-as-you-please, trust-to-take-in-the-public kind, is no credit to the retailer himself or his business, and often acts in the nature of a boomerang.*

"I have found that I get enough advertising from a January sale to warrant my holding one every year. For this reason alone I am in favor of them although I do not believe in different kinds of special sales held throughout the year by some dealers. I think they lend an air of 'cheapness' to a store and the public looks upon them as more suitable to an auction room than a shoe store," declared a Fredericton, N.B., retailer.

"Yes," writes a Halifax dealer, "I give a 20% discount on every shoe in my store during these sales. Some merchants think this is a mistake as they figure people will not touch old stock or slow lines if this is done, but will favor more popular goods. I have held sales in previous years giving a discount only on old stock, and did not attract half as many people into my store, they preferring to go to the shoe store up the street where they could get a 20% discount on any boot in stock. I therefore, lost a great deal of business in this way. Latterly, I have had a bargain table in the centre of store and have thus disposed of a large amount of old stock to people—steady customers very often—when they came to make one purchase only. What surprised me a lot was the number of better class patrons who took advantage of these sales. I have parties whom I never see during the year, who always turn up the first couple of weeks in January and take as many as six or eight pairs of shoes.

"I keep as little old stock as possible, and what is left over after a January sale, I dispose of as best I can, even if I have to sell it to an auctioneer, because it is getting less valuable all the time. I very often hate to do it, but find it pays in the end. I know several dealers who hold on to old stock, hating to let it go too cheaply, but they always

seem to get a smaller price than myself, simply because goods one season old are more easily disposed of than goods three seasons old. Moreover, I can be utilizing the money and space obtained by disposing of old stock right after a sale, to great advantage. I am very careful in buying and am not troubled to any great extent with old stock, and am generally able to get rid of most of it in January."

### A Necessary Procedure

Being approached on the subject as to whether January sales paid, a St. Catherine Street retailer in Montreal said, a lot depended on the class of trade to which a store catered. "I have tried them, but found they did not pay, at least, not in my present stand. I go in for a high class trade, having my steady customers. I had practically nothing in the way of leftovers last year, due a lot, I suppose, to the fact that my business increased 40% over the previous year. I don't think any merchant who uses good judgment should have much in the way of old stock, and, although I do not believe in special sales, I think the January sale is necessary for the average shoeman to dispose of stickers, shelf warmers, and leftovers. I keep a very close eye on all lines, and when I see that any particular one is going rather slow, I push it hard and also give the clerks instructions to push it. Another thing that has helped me keep my leftovers down, is the great attention I pay to my windows, and nothing helps on a slow line as much as giving it a prominent place in a well dressed window."

### Pays if it is Run Right

A Winnipeg firm writes: "Certainly, we think a January sale, like anything else, pays if it is run right. We hold one every year, and although we can't say it pays, it enables us to clean out all our old stock. We find the best plan is to give a 20% discount on all lines in stock and we always start off old lines this way and give still better discounts if we see they are not going very strong. We figure that getting rid of old stock during one of these sales at anything up to 50%, we are not losing, as we might as well give a customer 40% or 50% off, rather than job it later at a discount of 70%. If a man feels he is getting a real bargain, he is sure to come back again, even if not till another sale. We think it is a good plan to give the discount on all lines as it draws customers into a store, and in walking around, they will very often see something they have been after in the way of footwear on the bargain table, and will make two or three purchases. A good bargain window is necessary to make a January sale a success, as anybody can have a bargain sale,

and the buyer will pick out the store that looks best to him. By the time we are through with one of these sales, we have pretty well disposed of old stock. We keep it down as much as possible by sorting sensibly as often as we can and not in too large quantities. It is very hard, however, as in-stock houses are very scarce in Canada, and it is impossible to get anything in less than six weeks or two months often, where three weeks sufficed some years ago when manufacturers were not so busy. A good canvas sign to put over the front of the store, and posters help a great deal."

#### Means a Lot in Ready Money

"I think January sales are worth while," observes a London dealer of many years experience, "as they help to clear out old stock and make room for the next season's styles. A shoe man can always use ready money, and a sale is necessary to keep up the average for January. Another reason I hold a sale during this month is on account of the keen competition. Practically eighty per cent. or more of the shoe retailers hold a January sale, and I feel that I am forced to hold one myself. Nine persons out of ten will buy at a place where they find it possible to secure a discount such as is given during January sales. A shoeman, no matter how careful he is, cannot be expected to gauge right down to the pair how many shoes he is going to sell in a coming season. There seems to be a certain class of man who can guess right down to within a few pairs of what sales are going to be, but the average shoe dealer has more or less trouble. There are certain styles for which there seems to be a big demand, and one has to use pretty good judgment

to stock just enough, as buying too little is as much a losing game as over-buying. I generally come out pretty good in this way, as I buy moderately to start off and increase my order to the manufacturer when I see there is going to be a demand for any special kind of a boot. We never have any trouble with our rubber department, as we are able to sort all the time."

#### Not Catering to Bargain Hunters

"No sir, no special sales for me," is what a Calgary man declares is his view. "I would not hold one under any conditions. I have a certain high class trade, regular paying customers. I think it would prove a drawback to the prestige and excellent reputation of my store. If I have too many stickers I ship them off to an auction room as I am not desirous of converting good well-to-do patrons into bargain hunters. No sir, it does not matter what other dealers do, I am not a copyist, a follower, or a mere imitator, no special January reduction sales for me—or any other month for that matter—and I guess I clean up as much net cash at the end of the season as any of my competitors who shout and proclaim 'sale,' 'bargain,' 'special reductions,' and all that sort of thing. The class of trade that is always looking for 'bargains,' 'sacrifices,' 'clearances,' etc., I do not want. They are here to-day, there to-morrow, and some place else the next day, you are never sure of them. I want and have a trade and connection that I can count on—one that will pay a fair price for a good article. They consider quality and style first and price afterwards."

Here is what the proprietor of the Alberta Hotel, Edmonton, describes as a "classy group" of shoe travelers, and adds that they would add "tone and distinction" to the guest list of any house. The men were on their spring trip and all look pleased as the result of heavy order sheets. From left to right are:—W. G. Damer (F. J. Weston & Sons, Toronto); John A. Smith (D. D. Hawthorne & Co., Toronto); F. M. Downs (A. P. Cimon Shoe Mfg. Co., Montreal); G. J. Scott (A. P. Cimon Shoe Mfg. Co., Montreal); W. G. Hardie (Sterling Bros. Limited, London); W. J. Robinson (W. A. Marsh Co. Western Limited, Winnipeg) standing in front of Mr. Hardie; J. C. Morrow (London Shoe Co., London); T. Rookes (proprietor of Alberta Hotel); A. C. Paddock (Amherst Boot & Shoe Co., Amherst, N.S.)

# Do You Know What It Costs You to Do Business?

Many Shoe Retailers Do Not Figure the Interest On Their Investments and Overlook Several Important Items That Should Be Included in Expenses—Don't Hold a Sack at End of the Year With Nothing in It

By A. M. BURROUGHS

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.

Until recently retail grocers in a certain Western city were paying \$1.40 for a 50-pound sack of flour, which they were selling for \$1.55. This allowed them a gross profit of only fifteen cents per sack.

The Retail Grocers' Association in this Western city took up this problem in a special convention. Most of the grocers agreed that this fifteen cents did not allow a profit, though a few were of the opinion that they were making a little on it.

"—searching out expenses so he can know his profits—"

The result of the discussion was an investigation into the cost of doing business in that city. When the different grocers began producing their books

to show their expenses, a very wide range of costs was shown.

Some of them had cost systems and declared it cost them 22% to 25% to do business. A few, while admitting that their systems were not very complete, estimated their costs at 10% to 12%.

The final result of the investigation was an agreement (those who knew didn't "agree") upon the average of 15% as the proper and correct cost of doing business.

## The Average Is Incorrect

But this average was plainly incorrect because the low figures ranging around eleven and twelve and thirteen per cent. were from the stores of grocers who did not figure to make anything over a reasonable salary for themselves; who did not figure to make anything on the investment in the store buildings they happened to own; who did not figure for interest on their investments, and who overlooked a score or more important items that should be included in the expenses.

The high percentages, ranging around twenty to twenty-five per cent., were from the stores of retailers who had applied a searching cost system to their business. These merchants were charging up to their business every item that could be considered as expense and it made their expenses seem high.

The investigators took these high percentages, which were about correct, and the low percentages, which were eight or ten to fifteen per cent too low, and combined the whole list to arrive at the average of fifteen per cent. Now a good many retailers who think they are fixing prices right, are puzzling over their failure to find the profit they expected last year.

## It Amounts To Just the Same

The cost of doing business is, of course, just the same whether a merchant includes all of the items or only a few of them in his expense account.

The only difference is that he deludes himself into thinking that the cost of doing business is only 15% when in reality it probably is 20% to 25%.

If he fools himself in this way, and figures for a 10%

profit, the chances are that the expenses and the extra cost of doing business, which he hasn't figured into his percentages, will eat up that profit, and leave him holding the sack at the end of the year.

A Cleveland shoeman thought he was clearing \$100 a month, \$1,200 a year, over and above his expenses.

But the \$100 a month included his own salary, the interest on his investment, the salary of his wife who spent most of her time in the store, and a number of other items.

If the retailer had allowed himself interest on his investment, that alone would have produced \$50 a month without risk or worry.

Another \$25 a month of his "profits" rightly came out as expenses incurred in running the store. He had charged several expense items as "investment."

Instead of making \$100 a month clear, he was not only failing to make anything, but he and his wife were both working for almost nothing.

If they had both worked in some other store they might have earned \$100; so instead of making \$100 they were losing \$100 a month.

## Unprofitable Business Is Unsalable

Another shoe dealer in Pittsburg was interested in politics. Last year he succeeded in landing a city job, paying him \$2,500 a year.

When he got this job he decided to sell his store. He placed the store in the hands of a broker, and had an accountant go over the books

"—the family helps—for nothing—"

to place a value on the stock and to see what the business was worth.

The accountant's report showed that no charge had been made for salaries.

The footwear merchant, his wife, and two sons ran the store. When proper

allowance was made for salaries, the store was found to be paying a fraction over one-half of one per cent a year on the investment.

Instead of a fairly profitable business, one salable at a premium for good will, it was found to be a business so nearly unprofitable as to be unsalable.

Fixtures and stock were finally sold at a loss. Nothing was received for good will, because there was no good will—only a chance to work for nothing and take the ordinary business risks besides.

## Some Averages in Salaries, etc.

In scientifically managed stores it has been found that the salaries of the clerks average around nine per cent. of the gross sales by those clerks.

The salaries of managers, bookkeepers and other employees, who do not sell, run the average cost for salaries up to about thirteen to thirteen and a half per cent of the gross sales.

Rent is likely to average around four per cent., delivery

around one and a half to two per cent., light and heat from one to two per cent., and so on down the list of expenses.

No merchant, as he so frequently does, should assume these percentages to be his costs. He should get his own costs from his business, considering these percentages only as standards by which to judge whether he is higher or lower than the average.

The merchant who would know his cost of doing business

should classify his expenses into such accounts as will give him the information he needs.

He should install a cost system that will search out all of the expenses and enable him to know, not merely a few of the things which he pays for, but all of the things which enter into his cost of doing business.

#### A List of Various Expenses

Here is a list of the expenses used by one wide-awake merchant:

*Rent*—if the building is leased; depreciation or upkeep if it is owned.

*Salary*—of all employees, and the manager.

*Delivery Expense*—including repairs to wagons, harness, shoeing of horses, grease, feed, barn, rent, etc.

*Light*—including light in barns, etc.

*Heat*—including coal, fireman, etc.  
*Ice*—for drinking fountains, refrigerators, soda fountains, etc.

*Advertising*—in newspapers, circulars, etc.

*Printing*—stationery, blank books, bill heads, etc.

*Gifts*—presents, donations, etc.

*Telephone* and telegraph tolls.

*Insurance*—stock, fixture, burglar, etc.

*Taxes*—on fixtures, stock, etc.

*Interest*—paid out.

*Paper Bags*—wrapping paper, twine, etc.

*Breakage* and spoilage of goods.

*Repairs*—on fixtures, etc.

*Depreciation* on merchandise.

*Shrinkage* of merchandise.

*Depreciation* on fixtures, furniture, etc.

*Bad Accounts.*

*Goods stolen from stock.*

*Depreciation* from cost price by change of style and by the purchase of unsalable stock which makes it necessary to reduce prices.

Some merchants add freight and cartage to this list but it should not be charged as an expense. It is a part of the original cost of the goods and should be charged to goods and not to expense.

## How You Can Get the Trade You Want Most

Some Pertinent Pointers Which the Shoe Retailer Should Conjure Over—Success Depends on What People Think of You and Your Business Methods—What Kind of Service Do You Furnish?

The way you run your shoe business is your best or your worst advertisement. If you are not getting as many customers as you should get, then you are not doing the proper things to attract trade.

A business properly run advertises itself and attracts trade. If careless methods are used you cannot expect the best results. To run your business properly does not require expert advice, but thought and attention.

Your success depends on what other people think of you and your business methods. In figuring out how you can attract more trade, put your self in the position of the public and look at yourself and your business as they look at you.

A clean sidewalk, especially on stormy days is sure to attract the attention of the passer-by, which will naturally draw his attention to the windows.

Always make it a point to keep your sidewalk clean.

#### Lights

Keep your store well lighted inside as well as out. A well lighted store is always attractive to people passing. When your customers come into your establishment they appreciate your showing your shoes to advantage.

Remember that unusual things attract trade and advertise your business. You must not be absurd, but you can do unusual things without doing ridiculous things.

People like to see employees with clean collars and like to see goods handled by clean hands. Have plenty of soap and water always on hand so that your employees can have facilities for keeping clean.

#### Your Windows

Keep your windows clean inside and out. Change your displays often. Many times customers coming into

your store to buy some particular shoe will have their attention called to some other shoe in your window, and buy a pair more than they originally intended to purchase. Use neat, attractive signs in your windows, calling attention to prices and particular bargains or specialties in footwear.

#### Cleanliness

Clean floors and show cases attract trade. The surest way to promote cleanliness is to have good light. Light and dirt do not go together. The cheapest things in this world are light, air and water. Very few people appreciate their importance.

Proper ventilation is very important. People are often unconscious of good ventilation, but bad ventilation is undesirable and very unhealthy.

#### The Best Advertising

The best advertising in the world is "mouth to mouth" advertising. Treat your customers so well that they will tell their friends about you and your business and advise them to deal with you. This is the cheapest and best advertising in the world.

You have often heard it said, "A satisfied customer is the best advertisement." This is absolutely true. You know that satisfied patrons talk favorably about your business and dissatisfied customers either do not talk at all or talk unfavorably.

If your business is so situated or so large that you should do newspaper, billboard, street car or window advertising, you will find that neat, clean looking printed matter is the best investment. Remember that your competitor can buy the same space in the same newspaper that you can. Whether your advertisement will be more attractive and bring you more business than his, depends entirely on what you say in the space you buy and how you say it.

# Making a Big Success of Ladies' Shoe Department

The Inviting Fixtures and Pleasing Displays of Bright Ottawa Store—Featuring Special Lines—How Window Trims Should Strengthen Newspaper Advertising—Capable Help Pays

The ladies' shoe department in the A. E. Rea & Co. departmental store, Ottawa, Ont., is an attractive one. It is most beautifully situated on the third floor, which is carpeted throughout and given up entirely to ladies' wear, viz. shoes, millinery, mantles, costumes, furs, corsets and white-wear.

The shoe shelving is of mahogany and also fixtures, which are seen in the foreground. These fixtures are most useful and great savers of floor space. They hold 140 pairs of shoes each, and the tops make ideal department display. Shoes are kept in linen covered stock cartons, colored to match the fixtures. Each carton is fitted with brass ticket holder and handle. Shelving and fixtures are made to carry only one row of cartons. J. K. Rose has been buying for and managing this department for three years and has had good success with honest, Canadian made shoes at \$3.50 and \$4.00, which the firm feature strongly under their own name (Aerea Quality), and with some well known American lines at \$5.00, \$6.00 and \$7.00. The firm are at present showing an exclusive line of New York evening slippers from \$4.00 to \$9.00, including some very pretty styles in rhinestone trimmed and in gold and silver cloth.

## Only Experienced Help Employed

Mr. Rose is ably assisted in this department by M. R. Shore, an Ottawa boy who knows shoes and understands fitting them, as well as handling his help. Messrs. Rose and Shore have a staff, thoroughly experienced, consisting of five ladies and a stock man. All have had several years' insight.

"We do not believe in inexperienced help. We pay good salaries, are pleasant and firm but not cross with our staff and find very little trouble in keeping capable help around."

remarked the manager, who is an enthusiast in the matter of correct fitting and foot comfort.

The A. T. Rea & Co. shoe windows are dressed by a man from the men's footwear department in the basement, which is also under Mr. Rose's charge, and he finds this man's window trimming is much more effective than when done by the store window trimmers.

## Qualifications of Window Trimmers

Mr. Rose contends that it takes a man who understands shoes to trim a shoe window. He is a firm believer in newspaper advertising and the shoe department is never left out of the company's ad. for want of matter. The manager is very particular to have his ads. up in lots of time. They are generally in unless some other departments are doing some special advertising and there is not room for all of the sections.

"We find that advertising lines in conjunction with window trims is undoubtedly the best publicity for our department. People apparently like to see the goods advertised from the outside before coming in. We think this backs up the idea that a person likes to stand before a shoe window, study the different styles and practically decide on what he or she wants before entering. Several find it very bewildering to come into a shoe department and have the many questions asked regarding style, leather wanted and so many shoes shown them before seeing the kind they desire. We take great care in the dressing of our show windows to see that they are not too crowded and that each shoe stands out prominently and distinctly, unless it is a cheap sale window, when we crowd the window full," concluded Mr. Rose, who believes in clearing out very promptly all lines that are inclined to stick, or move slowly.

THE LADIES' SHOE DEPARTMENT OF AN OTTAWA STORE.

# Doing \$12,000 Business a Year in the Shoe Line

How Large a Stock Should One Carry—Much Depends Upon the Locality, Class of Trade, Convenience to Wholesalers, etc.—Competition Arouses Much Interest Among Readers

## THE AWARDS MADE

First Prize - W. J. S. Leblanc, Quebec, P.Q.  
 Second Prize - G. A. Fraser, Edmonton, Alta.  
 Third Prize - F. A. Robinson, Saskatoon, Sask.

## DO NOT CARRY TOO VARIED A LINE

By W. S. Leblanc, Quebec

How large a shoe stock should you carry to do a \$12,000 business a year? While the writer will attempt to answer this question, he recognizes the difficulty in making his reply general enough to cover even a majority of cases. Here are some of the circumstances that govern turnover:

### 1. Distance from or nearness to the base of supplies.

A merchant in a small town or village near enough to any of the jobbing centres, such as Toronto, London, Hamilton, Winnipeg, Montreal, Quebec, etc., can do as much business on half of the stock as the merchant who is distant from these centres and must calculate every want weeks, if not months, ahead.

### 2. Class of competition.

By class of competition we mean this. Some localities have more shoe stores than should be there, or, in other words, the shoe business is "overdone." It will be necessary for the shoe merchant who finds himself under these circumstances to carry a much larger stock to do the same amount of business as his fellow merchant in a town or village where he has practically no opposition whatever.

### 3. Class of goods carried.

If a merchant tries to do trade along a very high class line and can only do \$12,000 annual business he is working along wrong lines, yet in some small shoe stores there will be found a full range of shoes from \$6.00 down to the coarsest plow boot. There is usually a larger stock and very often, more often than not, the stock is double the size it should be. But the worst feature of the stock is that while there is variety there is very often no consecutive run of sizes and consequently with a large stock to draw from it is hard to fit and suit a customer.

A store doing but \$12,000 business should not try to carry too varied a line. It is far better to stick very closely to certain lines. As an instance let us take men's fine shoes. If a five dollar shoe is the highest grade carried, there should be stocked only one make in this grade. There should be but one or two toes represented, except of course when style changes are taking place. There should be enough sizes to cover a large range of fittings. These shoes should be purchased from a manufacturer or wholesaler who can supply sizes upon short notice.

Some manufacturers can turn out sizes in three or four weeks, some do not seem able to do so in months. The small dealer has no business to have business relations with a manufacturer who cannot take care of his business. A merchant doing a small turn-over depends largely upon prompt shipments. He must do some sizing, and he wants his sizes at the very time he asks for them, not two or three months afterwards. A very close watch must be kept on sizes. In fact it will pay the merchant to keep an accurate account of the number of pairs sold each season, the sizes sold, etc. From such reports he is able to gauge his purchases more accurately.

When buying his stock he should have a chart of the sizes in stock. If he finds he has surpluses in any sizes he

must not buy those sizes under any circumstances. "But," some shoe merchant will say, "if we do not buy all sizes of a new line, the line is broken when it comes in the store." It is granted. So is the line broken as soon as any size is sold out after it arrives. Do we do anything desperate when that event takes place? Do we put the line aside as of less value then? We do not consider it of one cent less value; we take it as a matter of course. So don't be misled either by yourself or others by the "broken lines" bugaboo. The last pair of a line on the shelves is as good as the first pair was—if you can sell it at the same price. If you put a pair of fresher shoes in front of them you will sell from the front row. Keep the stocks down by selling out clean. Half the reductions made on shoes by the average shoe dealer is pure cowardice. He should learn how to sell goods and he would not have so many broken lines.

As before stated the merchant should know how many pairs of this grade of shoes he is likely to sell during a season. But he should not sit right down and order them all at once unless he needs them all at once. If he divides up his orders, having a quantity for delivery on different dates, he is able to finance his business better, to take more discounts.

The next few words are important. If the merchant carries a \$5.00 shoe he does not need to carry a line to sell at \$4.50. That price and grade should be cut out and the next price should be \$4.00. This price may prove a more popular one than the \$5.00 grade. It usually does, yet half the dealers will order equal quantities, order them regularly, and order the intermediate grade to sell at \$4.50 also. Such merchants generally carry from seven to ten thousand dollars worth of shoes on their shelves to sell \$12,000 worth a year.

Each grade of shoes should be taken up separately and its merits and sales considered separately. When the merchant begins to keep his records so that he can tell which grade he sells best and what size he sells most of, and lots of other little things like that, he will be getting down to business and he will be able to make money—because the oftener a stock can be turned the more profit can be made. All large departmental stores figure their net profits practically come from their discounts. The oftener a stock is turned the oftener the amount of discount adds to profit.

4. A stock may be turned over more frequently if constantly watched. In almost every shoe store there will be found numbers of duplicate lines. They are purchased from different houses, but are practically alike. One line properly sized is of far more value than two that are short of some sizes; so that these duplicating lines should be weeded out. Some of them may have been carried for years. That does not matter. Cut out the line you think you can spare the easiest. Keep the line that is easiest to get and discard the other.

Careless and quick buying will never produce an increased turnover. Don't try to be an off-hand buyer, a "good" buyer, as the traveling salesman will term you. You are not in business to have traveling salesmen going about the country telling how you are such a good buyer, you bought so many of such a line in so many minutes, etc. The traveler who does not know enough to allow the merchant to use his own judgment in buying needs a gentle reminder to keep in his own place. A dealer should never allow himself to be driven, coaxed or in any way influenced by the traveler, or allow his friendly feelings towards a house to sway his judgment when the samples are before him. Buy the lines required and in just the quantities required. If it is only one pair or one dozen, buy no more. This is one of the strongest points that I would urge upon the small retailer. He should never try to plunge or stake all on chance, or mere conjecture regarding the future.

The writer has examined the records of a number of establishments in his day and he has laid out the following

table showing how a merchant can turn over his stock twice on a \$12,000 business.

Month	Sales Selling Price	Sales Cost Price	Purchases	Stock on 1st of month
January	\$ 800	\$ 560	\$ 400	\$4,000
February	700	490	300	3,840
March	900	630	1,200	3,650
April	1,000	700	1,200	4,220
May	1,000	700	500	4,720
June	1,200	840	400	4,520
July	900	630	400	4,080
August	800	560	1,000	3,850
September	1,000	700	1,000	4,290
October	1,000	700	1,000	4,590
November	1,200	840	500	4,890
December	1,500	1,050	500	4,550
January	.....	.....	.....	4,000
	\$12,000	\$8,400	\$8,400	

At first sight this table may seem a little arbitrary. It is made to conform strictly to the proposition: Given a stock of \$4,000 how would the business be divided by months to produce \$12,000 annual business? In some localities the sales might be in different proportions—never would they be an even \$1,000 per month. February, the shortest month of the year in a normal business, in a normal season, would naturally produce smaller sales than any other month. It is so recorded. December is naturally the heaviest business month, it is so shown.

We have assumed that the average gross profit would be thirty per cent. in figuring out the cost price of our goods.

In the column "purchases" are intended to represent goods received during those months, some of which might have been purchased four months before. According to our table the bulk of the goods bought on placing orders are received in March and April for spring and in August, September and October for fall and winter lines. The receipts in the other months are to be considered as practically all sorting sizes to fill in broken lines made during the previous month's sales.

In the column showing stock on hand on the first day of the month it will be noticed that in practically every month the amount of stock on hand corresponds with the amount of business done during that month, the stock being heaviest during big business months.

### STOCK METHODS FOR SMALL TOWN

By G. A. Fraser, Edmonton, Alta.

"Give the public a better service and the public will make a beaten path to your door." It matters little who made this statement first, the point worthy of consideration here is that the principle of service underlies success in every field of endeavor. Business is now a recognized science, worthy of the highest intelligence and governed by laws of success and laws of failure that work out as unerringly as the laws of nature. The problem therefore resolves itself into this, "What is the smallest amount of stock upon which a service can be given that will bring the annual sales up to \$12,000?"

Before proceeding to figures let us note that in a store of this size, the proprietor should, with the assistance of a youth upon whom only a very small percentage of the selling need devolve, serve the customers himself, which is a salient point in favor of good service and intelligent handling of stock. On the other hand the smallness of the business in question necessarily prevents a high degree of service as the family shoe store must carry many lines and its power to serve depends to some extent upon the variety shown in each.

Assuming that our town has a daily train service and that staples for sorting can usually be procured by freight within ten days from the mailing of the order I should consider an average of \$1,000 a month quite possible from a stock of \$6,000 in April or September, when all placing orders were in, and scaling down to \$4,500 at January inventory, the latter figure to be reached without resorting to

a discount sale. Experience has shown that small town sales have long since lost their pulling power, besides in the shoe business, where mail order competition is not very keenly felt, they are unnecessary. Odd sizes and slow moving lines can always be sold at a profit if they receive the proper attention.

An intelligent division of this stock cannot be arrived at without considering the occupations of the people to be supplied. For instance, staples required for farming trade vary greatly with the seasons, while the needs of miners and other industrial workers can be supplied throughout the year from practically the same stock. Again, a \$4 pair of fine shoes will last a farmer a year, while it is characteristic of miners to pay the highest prices for freak styles, and this extravagance is not confined to the head of the household.

In a farming town I have handled heavy staples on a cash basis at a profit of from 20 to 25 per cent. and made the line the most profitable feature of the business, frequent sorting enabling me to keep the department complete without carrying a large stock; in fact it seldom represented an investment at all, as the stock on the shelves would rarely exceed the amount of undue bills. Where depreciation must be charged against stock such as women's slippers, extreme styles and holiday novelty goods, I should consider an advance of 50 to 60 per cent. necessary—on the whole an average of 33 1-3 on invoice exclusive of cash discounts. On this basis \$1,000 a month sales should pay a fair dividend on the capital necessary to finance the stock as estimated above.

The most satisfactory method I know of keeping records of stock is to size all lines every month or oftener, each manufacturer's goods to be on separate sheets, which are dated and filed for reference. I have also got excellent results from a system of identifying stock by marking all cartons twice a year, using the eraser end of a lead pencil and an ink pad of a different color at each marking. In this way old stock stands out more prominently and the effort to sell it should be measured by the number of marks.

In a small town family shoe store I do not consider it practicable to confine buying to either manufacturers or jobbers as the variety of goods required is too great. Welts, the better grade of McKays, standard screw and pegged, should be bought direct from manufacturers while the lower grades of leather goods—which it is better to avoid as much as possible—can be procured in small quantities from jobbers only.

The writer of this, although living now in the West, has under consideration an Eastern town where conditions are normal and trade steady. In the West business is too speculative to figure on anything with any degree of certainty as so much depends upon the crops, a projected railroad or the magnetic power of the real estate boosters.

### AVERAGING UP THE STOCKS CARRIED

By F. A. Robinson, Saskatoon, Sask.

How large a stock should a shoeman carry in order to do \$12,000 business a year?

While not thinking of this subject exactly, nor yet of any definite amount, I have been looking here and there and comparing stocks with turnovers for some years back. I found some people fairly well pleased with themselves who were carrying far too much stock. No. 1 had a stock of a little over \$10,000 and was doing \$22,000 turn over. This man was within easy trading distance of Toronto or Montreal and when questioned admitted the stock was too large. I asked why he did not sort by express. He said express came too high, and when I asked the rate he did not know. I found out afterward the express rate was less than freight and cases to that point. I believe this man could cut his stock down to \$5,000 and not have his business suffer any.

No. 2 had a stock of \$30,000 to \$35,000 and was doing less than \$55,000 business, as I learned on good authority, and from the business that seemed to be doing any time I was in I would say less than \$55,000. This man had less excuse than No. 1, for he is in one of our large cities and can have good shoes delivered every day free. Allowing this

(Continued on page 34)

# Do You Give Your Clerks a Chance in Buying Shoes?

They Are the Ones Who Have to Sell the Goods but Too Frequently Never Have a Voice in Their Selection—What Constitutes Good Buying—Three Distinct Viewpoints on the Subject

"I cannot make an engagement with you this afternoon to look at your samples but I can come to-morrow morning at ten o'clock. I always like to have two or three of my clerks go with me to help in making the selections but the boys are busy to-day unpacking and marking up some goods which have just arrived," declared a Charlottetown retailer to a traveler for a Montreal shoe firm the other day.

"I'll wait for you and to-morrow at ten o'clock will suit me fine if that time is convenient to you," added the salesman. "I always like clerks to look over my line. They are the ones who have to make the sales and I think they should have a reasonable voice and say in the purchasing."

## Chief Factor is Right Buying

In the success of any shoe business one of the chief factors is right buying—knowing what to buy, in what quantities, sizes and widths, when to buy and understanding the needs of your trade. The judgment of no one man is perfect or infallible and the fellow who knows it all cannot

learn or be told anything—well, he is no longer fit for any earthly sphere. How many merchants selling footwear to-day give their clerks an opportunity to make selections and tender advice in the buying problem? Ask any traveler, who has been on the road for years, and he will tell you comparatively few, but the number is growing, especially among the most progressive shoeists.

In the larger stores the clerks are the ones who have to fit the patrons and make the sales. It is not the usual custom for the proprietor or the buyer to devote a great deal of time to this work. His duties are generally of a more executive and supervisory character.

Getting down to the serious business of buying there are probably not three men who will agree in all details regarding how it should be done. Each fellow has his own method and ideas. Some have too much confidence in their own judgment and experience, some are finical and critical, and others are dictatorial and dogmatic. In the purchasing end diversities of character are shown.

Here are three distinct views which the SHOE AND

## A FELT BOOT FACTORY TEAM THAT CAN PLAY BALL

The boys of the Great West Felt Co., of Elmira, Ont., are great exponents of baseball and in the factory league during the past season they succeeded in carrying off the championship honors. There were four teams in the struggle and the result was in doubt until the final game. The pitcher for the Great West nine in that memorable battle had no less than sixteen strike-outs to his credit.

O. H. Vogt is the president and T. F. Shirley is secretary.

The boys in the picture are: Top row—F. Linder; E. Otto, 3rd base; E. Thompson, 2nd base; E. Ruchty, 1st base (manager); A. Morris, H. Stroh, right field; H. Mogk, short-stop; P. Heidrich. Second row—O. Weichel, pitcher; C. Mogk, mascot; L. Ruppel, catcher (captain). Bottom row—N. Ruppel, left field; O. Mattusch, centre field.

LEATHER JOURNAL has obtained from representative retailers.

One St. John man, when asked his opinion on the subject of what constituted successful buying, remarked, "No, I do not allow a clerk or head of a department to do the buying and I will tell you why. The majority of young men would overstock and that is a thing that has to be rigidly guarded against. It has caused more losses and created more business shipwrecks than one can number. A man who does not do the financing of a business or has not a pay roll, rent, fuel, taxes, drafts and other levies to meet, knows absolutely nothing about the exigencies and struggle of business to-day. He is inclined to think that the boss is making all kinds of money and that dollars are grown on trees or picked up on the street. The fellow, who has to do the financing is the one who should do the buying. Make the man who orders the goods responsible for meeting the bills when they mature and he is not apt to be carried away by sentiment, whims, over-confidence or desire to be a dickens of a big fellow in the eye of the traveler, many of whom will naturally urge upon him the advisability of plunging heavily in such and such a thing; that tan buttons or patent oxfords or suede pumps are going to be big sellers and are quite the rage.

### Buy What Suits Your Trade

"Now what will suit one man's trade will not meet the requirements of another fellow. Local conditions and environment largely determine the kind of footwear that a shoeman can sell. He must understand these and no better qualified person can be found than the boss. I am that chap and have the burden of having to pay for all the shoes that come into this store. I know that when I give an order I will sooner or later have to settle the account with the manufacturer. I want nothing that will not turn over quickly. Dead stock means a moribund business. A traveler who will not enthuse over his samples and push his sales to the limit is a rather poor proposition for his house, but the retailer should not be carried away by illusive stories and romantic pictures.

"It is all right to be firm friends with the travelers, but some of my men on the floor here would buy goods from every genial, good-natured fellow that drops in. I have between thirty and forty travelers calling on me every spring and fall season, but I do not buy from more than eight or ten firms, although I look at the samples of nearly every representative that comes around, because I believe in making friends with the men on the road. I can often secure good pointers from them even if I do not become a customer. The average clerk, if he did the buying in this fast moving age, would carry too much sail and not enough ballast. The man who possesses these qualities in just the right proportions is the one who makes the greatest headway in business to-day."

### It Pays to Know Details

Here are the views of a Regina shoe dealer: "Buying—yes, I do it all. I take some advice, however, from the heads of departments. I make close study of all branches of my trade—men, women's, youths, misses and children. Of course, all merchants have not the same facilities for obtaining exact data that I have. I have a cashier in the store who takes in all sales slips, the money and does the parcelling. I use the basket carrier system and thereby my clerks lose no time in wrapping goods or making change. When we are busy, they are ready for the next customer just as soon as a transaction is completed and thereby valuable time is saved. You know that time means money in the matter of clerk hire, especially when there is a rush. This whole thing might be summed up in the one word, efficiency, or service.

"Well, on each sales slip, one of which we retain, the other going out with the goods of the customer, there is the kind of shoe, leather, price, size, etc., mentioned. The cashier has several wire files in front of her on which she sticks all these slips. There is a file for men's tan bluchers, men's dongola bals., gun metal oxfords, etc. Every night these slips are removed from the hooks and the cashier then, or the next morning, enters up in a book kept specially for

the purpose and properly subdivided, the number of three, four, five or six dollar shoes disposed of, tabulating the price, style and the various kinds of leather. Each week or month this is totalled up by the young lady and I transfer the figures to a vest pocket note-book. When I go to a sample room to buy for the coming season, I have there before me the exact number of pairs that my trade has bought in say, women's patent pumps at \$3, \$4 and \$5, the number of gun metal button, the number of tan bluchers, the number of dongola bals, the number of kid slippers, the number of cushion soles, flexible welts, glazed kid, box calf, etc., and the prices at which they went. I know whether the four, five or six dollar boots in such and such a line were the best sellers with my patrons. I do not care about what the other fellow buys. If a traveler tells me that men's tan button oxfords are going to be the big thing during the coming season, I look at my handy reference book and say, "Well! they may be, but last season we disposed of only thirty-five pairs and had difficult work to do that. No! I think that I will stick to the blucher oxfords in gunmetal or velours calf. I know that they will meet the wants of my customers better. I do not speculate too much on the future. I prefer to judge it by the past. Know your trade, its needs and what your big profit lines are. While it may take some time, effort and money to ascertain all this data, it eliminates all speculation and guess work. It is the greatest help I have yet discovered in right buying and as a preventative of over-stocking or loading up with stuff that you cannot turn over quickly."

### How He Developed His Clerks

Another retailer, a Brantford man, pins faith in an entirely different system. Said he: "I am never afraid to try out a few new lines, shapes and even novelties, but you bet I get a much higher profit on these than I do on the bread and butter range. I let at least two of my clerks do the buying along with me. They are the ones who have to sell the shoes. The first time that I took the boys down to a sample room they wanted this, that and the other thing. We did not agree, but I compromised after some discussion, and each season they have grown more experienced in the game. I now entrust purchases solely to their judgment. I have allowed them reasonable latitude and I will tell you why. If they take to a certain model they will have conviction and enthusiasm behind it and are going to push that particular shoe. They become imbued with the spirit that this is what should sell. When a young man or young woman comes in and asks their advice as to what is new or is the very latest in seasonable footwear, they will show what they have banked on and will talk it up for all they are worth. You know the older that I grow the more I become a student of the psychology of salesmanship. Conviction and zeal carry the day and the clerks who have bought that particular line know that if it becomes a sticker, they are responsible for it and they will therefore push it. All I do now is to keep a fatherly eye over the stock. I consider my boys are now better buyers than I am myself, although I have been in the shoe business for many years and they have been with me only eight and nine years respectively. I have given them a chance and they have made good.

### Where Responsibility Gravitates

"If a salesman is not prepared to accept certain responsibilities and come to a definite decision on questions of policy and procedure, he is not worth his salt. A clear, cool head and calm, even judgment, never making the same mistake twice, go a long way toward carrying a youth on the highroad to success in the shoe or any other trade.

"The fellow who, in my mind, is the poorest buyer is the one who wants the most changes made. He would like different kinds of foxing on a certain shoe, a tip with larger perforations, a heel two-eighths of an inch lower, a different combination of leathers, a little higher cut leg, and so on. He would have a traveler's samples altered in every way, shape and manner. This I call crazy patchwork buying. I think the man who gets out the samples at the factory, the powers that prevail and who are

(Continued on page 42)

# A Few Sidelights on Matter of Overdue Accounts

Which Go to Show that the Manufacturer Is Not Always at Fault When Goods Arrive Behind Time—Present Transportation Facilities Rival Those of the Stone Age—Other Troubles That Crop Up

While discussing this subject let it be said right here that the retailer who has sent in a "blanket" order is not considered in this discussion one way or another. By "blanket" order is meant any order in which the sizes are not sent in with the rest of the information attached to the order. In such cases the intention is to send these in a little later on when definitely decided upon. The way it usually works out is that they are sent in at the last moment, sometimes after the manufacturer has telegraphed for them. There may be cases when this is necessary, but they are so few that they may almost be considered a negligible quantity. Therefore we say at the start that the "blanket" order man is eliminated from this discussion, as he brings most of his troubles regarding late delivery on himself.

But what about the retailer who gets his order in at the first of the buying season and stipulates that he is to get his shoes at the beginning of the retail selling season? Certainly he has some right to "howl" when a month has gone by and no sign of his shipment is to hand. What more natural than to sit down and write the manufacturer in question a hot letter, threatening cancellation and relieving his mind.

However, whatever the cause of the delay in the goods leaving the factory, the retailer can hardly blame the manufacturer when the cases leave the factory on time, and then are "hung up" at some indefinite point between the sending and receiving points. Instances of such happenings are as common as blackberries in August. Recently it took a car of rubbers three weeks to come from Granby to Montreal, a distance of 57 miles. A carload of leather shipped from an Ontario point to Montreal was still on the road somewhere a month after, lost as completely as if the earth had swallowed it up, judging by the information that could be secured from the railway in question.

And where the railways are not to blame, their cartage connections at terminal or junction points are. In Toronto a shipment of felts lay at the warehouse for a whole month before being delivered. The cartage people were appealed to in vain to get the stuff up to the firm needing it so badly.

The latter would willingly have gone to the expense of having it specially hauled by outside parties if they had only known where to look for the shipment. But one might as well look for a needle in a haystack as to search for individual shipments among such a heterogeneous mass of merchandise as is always to be found at such points. The policy of the railway companies seems to be to send out such stuff in the order in which it is dug up, not the order in which it came in. Sometimes the manufacturer will notify the cartage people to come for a shipment of shoes, and the latter will take two weeks to get the shipment away.

Now there are two ways to overcome this shipping difficulty; one is for the railway and cartage companies to "wake up" and get their terminal handling facilities up to date. This is essential, because no matter how small a town the retailer may live in, and no matter how easy it may be for him to get shipments away from his station, nearly every shoe manufacturer or jobber is situated in a large terminal centre where the congestion is acute, and if he is not, goods must pass through such a centre to get to the retailer. Therefore the problem concerns the latter as intimately, or even more so, as if it were right at his door. But the railways are not beginning to catch up with the problem, even though they may be trying hard to do so, which puts the problem of getting shipments to the consignee on time squarely up to

There are signs that the latter realizes his responsibility in an ever increasing way. At this date (December 10th) several manufacturers that the writer has recently asked about this shipment question have stated that they will be ready to ship some lines of goods that were ordered early within the next few days. One man stated that he now had two or three shipments of spring goods ready to ship and that more would follow in a few days. Another has already

despatched a shipment of spring goods to the far West, and still more are in his shipping room waiting for the dilatory cartage companies to get them away to the stations.

As far as possible shipments intended for points the farthest away from the manufacturer are being rushed through so as to allow plenty of time for them to reach the distant retailer. Many manufacturers in their datings allow at least a month for the shipment to reach the distant retailer. Thus if goods are shipped January 1st the invoice sent will be dated February 1st, and the usual terms and discounts allowed dating from that time. Some allow even more time than this.

But it must be remembered that with the phenomenal growth of the shoe trade in Canada, there will be many complaints of slow delivery, no matter how much care is exercised by all parties concerned. It will be better in case of any delay for the retailer to write the manufacturer and ascertain whether he or the railway is at fault in the case of overdue shipments, and he will then give every attention possible to tracing such shipments for the retailer. If the manufacturer is at fault then he can be "got after."

## Doing \$12,000 Business a Year in the Shoe Line

(Continued from page 31)

man to be doing high class trade, I think his stock could be cut down to \$15,000 and his sales not suffer.

No. 3 (and don't be weary, for this is the last one I shall quote) has a \$22,000 stock and a turnover of less than \$40,000. There is more excuse in this case, for he is far from any large trading centre and express rates are high, but even on such stock as can be sorted up daily I find him loaded and groaning under it. He is trying to offset this evil by getting some long prices where relative value is not given. Of course he is watching the rat at the wrong hole. I feel certain that this man can cut his stock down to \$10,000 and his turn over will not suffer.

Men who have made a science of business systems tell us that 95 per cent. of the trade carry too much stock. At first sight I thought they had overstepped the mark, but may be not, for in so far as I have looked at the subject 100 per cent. are overstocked.

Now to get at what stock should be carried. I am trying to arrive at a conclusion from the three cases cited. I have many others, but these are representative in that No. 1 is quite a distance from a large trading centre, No. 2 right in a large trading centre, and No. 3 a long distance from a large trading centre.

	Stock	Turnover	Stock should be
No. 1 .....	\$10,000	\$ 22,000	\$ 5,000
No. 2 .....	35,000	55,000	15,000
No. 3 .....	22,000	40,000	10,000
	<u>\$67,000</u>	<u>\$117,000</u>	<u>\$30,000</u>

A turnover of \$12,000 should be made by carrying a stock of \$3,076.92, but let me not be too radical in my changes and allow the stock to be \$3,500. Also let us notice in the figures shown above that as matters stood the three stocks aggregated \$67,000 while the sales, \$117,000, is less than two turn overs. This is not as it should be. Notice in the column marked "Stock should be," these stocks are cut down to \$30,000, which allows almost four turnovers. This is not enough but should be easily within reach. The sooner the shoe trade as a whole deals with this question of overstocking the sooner will one of the worst drains on the retailers' profits be stopped.

The foregoing is useful only in so far as my observations have been correct, but of one thing I am sure, I am not so far under the mark as a hundred per cent. of the trade are over the mark.

# Various Schemes to Get New Shoes from Dealers

Retailer for Policy's Sake Often Yields when He Should Be Firm—How One Factory Lost a Good Account—Some Ruses that are Resorted to by Thoughtless or Stubborn Purchasers—Faults on All Sides

The question of returned shoes is a bugbear. Like bad pay customers the "returns" are ever present, giving retailer, wholesaler and manufacturer endless trouble and causing misunderstandings galore.

No one branch of the trade can throw a stone at the other, for they all live in glass houses. The only reasonable adjustment is more co-operation and conciliation all around. The retailer is afraid, in many instances, to take a bold stand when he knows that he is being imposed on because the party bringing the shoes back has an uncle, a sister or grandfather who is a good customer of the house and has been for many years. He does not want to offend the kicker and turn him or her into a knocker, and, in many instances, for policy's sake, will pocket the loss and allow the complainant, whether the complaint is a just one or not, a liberal rebate or replace the shoes with a new pair.

But right here is where the rub comes in. The retailer is not willing to bear that loss alone. He will try to get it out of the manufacturer: he will pass it along. He is ready to be generous before he is just, at the expense of the producer; that is if the producer will stand for that sort of thing.

## A Squabble Over Sixty-five Cents

The shortcomings are not all found at the door of the wearer or the retailer. Some manufacturers are too shortsighted and pernickety. Not long ago a Sherbrooke retailer sold a woman a pair of child's branded turn shoes, which cost sixty-five cents—factory price. The woman, who bought them for her little girl, came in a few days later and showed the shoe to the dealer. The round impression made by the heated die or stamp on the thin soles had fallen out. When the shoes were branded the die had been too hot and the leather scorched. There was the circular hole the exact size of the stamp. Of course, the retailer gave the woman a new pair. He sent the shoes back to the factory to be given another pair or else have a credit check sent him. The manufacturer wrote a two-page letter in reply, claiming the defect was not theirs and all that sort of thing, and positively declining to make good the loss. The retailer at once cancelled his account.

Speaking of the incident he said: "If that is the attitude of this firm well and good. I am glad to learn it. I want nothing more to do with such a narrow-minded, cross-grained concern. It is not for the sixty-five cents that I care so much, but it is the mean, close principle of the thing." The account of this man, which amounted to about five thousand dollars annually with the company, was lost, when there was no need for it.

## The Gall of Some People

A fellow walked into a shoe store in Chatham, N.B., not long ago with a pair of shoepacks which were too small. He had bought size seven whereas he should have got eight or nine. He had worn the larrigans two or three days and they were soiled considerably. He told the proprietor that they did not fit him properly. Now, this man was a good customer and the proprietor was willing to make a change and let it go at that.

"No," remarked the youth, "I will not take another pair of anything that you have in the store. I want my money back."

"Well, I have gone as far as I can with you in all reason," declared the retailer, "but I am not such an easy mark as you apparently take me to be. I cannot sell these shoepacks again at anything like full value and you would not buy a soiled pair yourself at full value, yet you want me to stand the entire loss. I am not so green as all that.

I have offered you an exchange in goods, which is really more than I should do."

"Money back or nothing," retorted the young fellow stubbornly.

"Well, you can take the larrigans with you," was the decisive reply of the dealer. "I am willing to stand the loss of my profit on the pair but not for the loss of the

## Should Have Repairs Done Outside

"In 1884 I started to work for the T. Eaton Co., of Toronto, as a boy. There were three of us and we did up the parcels for the whole store. Quite a change from what that great departmental establishment is to-day." The speaker, one of the many Ontario men who have gone West and is meeting with success in the shoe business, was M. H. Clapp. Two years ago he left for Vancouver and a few months later opened a store at 564 Broadway west, in the Pacific Coast city. His motto is, "Shoes for the whole family." He reports that he is doing well and making far more money than he ever did in the East. His career has been a rather interesting one. Mr. Clapp spent five years in the wholesale establishment of Greene, McLaren and Co. (which was composed of R. H. Greene, now sales manager of the Gutta Percha and Rubber Manufacturing Co., and J. A. McLaren). After leaving the jobbing house, Mr. Clapp went into business for himself in Toronto. About fifteen years ago he started the stand at 977 Bloor street west and sold it out six years ago. He was one of the first members of the Shoe Retailers' Association in Toronto and says that it was a live organization and accomplished a great deal of

good. The trade was able to come to an understanding in reference to many abuses that existed. He hopes that some day the shoemen of Vancouver may form a similar organization, for it is badly needed. Mr. Clapp's store, which is situated in a progressive district, is 40 feet deep and 21 feet wide. He says that Vancouver is a good shoe city and that they are getting lots of wet weather, which will last until the end of February but it creates lively business. Mr. Clapp was born in Belleville, Ontario, where he spent his early days.

Speaking of the question of repairs he said that he had never had a repair man in connection with any of his stores; he always sent jobs out and did not encourage customers to leave repairs, but instead tried to have them take their work direct to the shoemaker. "I think the ordinary retailer has enough troubles of his own without doing repairs," he concluded.

whole thing. If I give you another pair I will get a profit on that pair and the return will have to go at cost or less—maybe not at all. That will make only one profit on two pairs; but if I gave you your money back I would be out everything and have no profit at all. Surely the matter is clear to you now. I am taking big chances with any second-hand pair." But the obdurate customer could not see it that way.

Here was a case in which the proprietor went farther than most retailers would. He had resolution and firmness and took the proper stand.

#### A Rival Dealer's Revengeful Spirit

A woman entered the store of a Montreal dealer doing business on Notre Dame Street and, calling a clerk, showed him a pair of dongola button shoes, which she had bought a few days before for five dollars. She said: "I want you to take a look at these shoes. They are split." One of them was torn on the vamp and the other had broken out at the back.

"What have you been doing to these shoes?" inquired the clerk.

"Wearing them, of course," rejoined the woman rather impudently. "What else do you suppose I would be doing with them? I want a new pair."

"Oh, no," replied the salesman, who understood his business, "you have bought too narrow a width and have had these boots stretched by some outsider."

"I do not own a stretcher," she declared vehemently.

"Well, I don't suppose that you do. They are owned only by shoe dealers and repair men as a general thing."

"Well, I have never had them stretched, and I want a new pair," persisted the caller.

"Oh, you cannot fool me" observed the clerk. "I know that these shoes have been stretched unmercifully. They would not give out in that fashion if they had not been. There is nothing doing here in the way of an exchange, I may tell you."

"All right then," responded the fair one, and her tongue fairly snapped, "it is the last time that I will ever darken your door again. I will get my shoes at M—'s after this. He always stretches them and does not charge me a cent for it either."

She had blurted out the truth, for the salesman knew that she had gone to another shoe house to have the stretchers put in. Evidently seeing that she had bought elsewhere—for this woman had been a good customer until recently—they had, with malice aforethought and a vengeful spirit, evidently burst one boot at the forepart, for it does not require a great deal of pressure on a light button shoe to split the vamp where the button fly ends. Then they had told her that the shoeman where she got this particular pair should hand her out a new one. The game did not work, however.

#### A GOOD MOTTO for 1913

*I believe in the stuff I am handing out, in the firm I am working for, and in my ability to get results. I believe that honest stuff can be passed out to honest men by honest methods. I believe in working, not weeping; in boosting, not knocking; and in the pleasure of my job. I believe that a man gets what he goes after: that one deed done to-day is worth two deeds to-morrow; and that no man is down and out until he has lost faith in himself. I believe in to-day and the work I am doing; in to-morrow and the work I hope to do; and in the sure reward which the future holds. I believe in courtesy, in kindness, in generosity, in good cheer, in friendship, and in honest competition. I believe there is something doing, somewhere, for every man ready to do it. I am ready Right Now.*

## Career of an Ambitious Shoeman

A. P. Cimon, who is president of the Shoe Manufacturing Co. in Montreal, bearing his name, is an example of how a young man fired with a purpose and animated by zeal can accomplish pretty nearly anything that he sets out to do. Mr. Cimon was a country boy, born in Charlevoix county, Quebec. He followed the cultivator and the plow for a number of years and then made up his mind he would learn a trade. He decided that shoemaking was a good, useful occupation, and going to the New England States, he gained a thorough knowledge of the different processes in the leading shoe centres. Returning to Canada, he took a good position with a factory in Quebec. After a number of years, he made up his mind to enter business in his own behalf, and

commenced in the Ancient Capital to make hand turned and hand welted shoes. Later he went to Montreal and, after filling a number of responsible posts, entered into partnership with two others, forming the Eagle Shoe Co. It was about four years ago, he organized the A. P. Cimon Shoe Manufacturing Co., and is president and general manager. Mr. Cimon, who is in his fifty-third year, is progressive and thorough in all his methods, an indefatigable worker and a man whose work and worth are appreciated not only by his associates, but by all who have the pleasure of doing business with his company.

The new factory of the Cimon Co., at the corner of DeNormandville and De Fleurimont streets, Montreal, is 135 feet long and 45 wide and consists of three storeys and a basement. The structure, which is of brick and concrete, is entirely fireproof and everything is arranged with a view to economy of time and space and continuity of operation. The ventilation and lighting facilities are excellent.

# When the Boss Acted as a Shoe Messenger Boy

John Vaughan, of St. John, N.B., Chats on Old Associations and Customs—Has Been 51 Years in Retail Footwear Business—Sixty Styles Were Sufficient Then—Ten Times as Many Required To-day

After having been in business for fifty-one years, a dealer can look back upon the past and see many changes in contrast to the present way of doing business, and if he is as pleasant and jovial a conversationalist as John Vaughan, proprietor of the well known shoe house of Francis & Vaughan, King street, St. John, N.B., it is both interesting and educative to listen to him tell of olden times when he first started in the trade.

Mr. Vaughan is possessed of a fine memory, has a pleasing personality, and his obliging disposition in explaining matters so that they will be entirely lucid to his listener, is not soon forgotten. These are all factors which have won him success in his long career in the shoe business in St. John, and they are regarded as potent characteristics when it comes to dealing with a critical public. He is still in the best of health and it is the earnest hope of a large circle of friends that he will live to enjoy many more years of successful business life.

## A Name That Means Something

The name of Vaughan has been connected for nearly a century with the shoe trade in St. John. Long before the days when present dealers in the front ranks of the city's merchants were learning the business, the name of Vaughan was foremost in the list in boot and shoe circles. Mr. Vaughan's father was engaged in the shoe trade and his early days were spent in part in his father's store, for even while he was at school he was interested in the business. It seemed as though he really inherited the knowledge of the shoe trade which he readily grasped, for his first days in a shoe store date back to the time when lads wore kilts.

His first position—if such it really could be called, for "job" would probably be the more appropriate term—was as boy with the late M. Francis, a dealer who for years conducted a successful footwear business and who was respected in the trade and by the public in general. From him Mr. Vaughan received his early, practical training which stood him in good stead in later life. Although it was as a boy he was engaged young Vaughan's duties were not much like those of the lad engaged about a shoe store at the present day. He was not kept busy answering telephone calls or running with parcels to this or that end of the city. Such a thing as delivering a pair of shoes was unheard of in those days. The idea was preposterous! And it was not for some years later that the delivering of parcels came more into vogue.

"Even at that," said Mr. Vaughan the other day in a mood of reminiscence, "there were no delivery teams, and if a parcel had to be taken, we would generally see that it went at the dinner or supper hour. Mr. Francis was not above taking it, let me tell you, even though he was the proprietor of the store. We generally worked the delivery scheme so that if the parcel to be taken had to go in my direction, I took it, and if the purchaser resided in his neighborhood Mr. Francis undertook the delivery himself."

## Customers Had to Return Goods

Those were the days when no cartons graced the shelves of the shoe man. All goods were sold in bulk. The finer qualities of boots were kept in drawers, while others were exhibited more freely. When a buyer entered the store he or she was shown the various lines, as now, and the powers of persuasion were as essential to the clerk as they are at the present day. But if the customer took a couple or three pairs home to decide as to which he or she would keep, it was up to the buyer to return what were not kept, for the practice of sending after a parcel taken on approbation was an unheard of proceeding, and only those well known enjoyed the privilege of approval.

"We probably carried about fifty or at the most sixty different lines in those days, whereas now there are between 500 and 600 different varieties on our shelves," added

Mr. Vaughan, "so that the matter of making a selection was not such an arduous task as it seems to be to the buyers of the present age, who are apparently more particular than they then were, or else they take longer to decide on what they want.

"There were about seven stores in St. John in those days—now there are easily fifty shops wherein boots and shoes are sold. Competition was not nearly so keen, as is only natural, and it seems surprising that so many shoe stores can keep doing a fairly satisfactory business when it is considered that the increase in population has not been nearly so remarkable as has been the increase in the number of business houses. The smaller shoe stores, many of them

INTERIOR OF THE FRANCIS & VAUGHAN STORE, ST. JOHN, N.B.

kept by foreigners, cut into the trade now, and they were an unknown factor years ago. They try to buy cheaply and sell the same way and they get their own class of customers. The only way to manage to beat them out is to keep reliable lines at fairly reasonable prices and to endeavor to give as good satisfaction as is possible. But there seems to be room for all, and so long as we manage to march forward and make a comfortable profit, we feel well satisfied."

## Old Time Quality was Good

Speaking again about the differences in the lines handled in pioneer times and now, the veteran shoe dealer said that the quality of many lines in the olden days was just as good, if not better, than some now in vogue, but of course there is a vast improvement in most kinds of shoes. The introduction of the Goodyear welt practically revolutionized the shoe trade and created a distinct betterment in most regards. Tanners have improved upon their work and the result of their preparations and experience has brought such lines as willow, velour, patent, etc., to a most finished product. "Not that we used not to have patent," said the speaker, "we used to carry a fairly heavy stock of it, but there was not the same demand for it as now. French kid was a most popular fixture in the early shoe trade but it has been practically a dead issue for nearly twenty years or more, because the introduction of dongola has eliminated it from the shelves. It was a fine stock in its way, and a good seller, but the sale fell off when dongola came in. Prunella shoes were a popular portion of our stock in fine goods, too, and the sale used to be particularly good in the women's boot department. English goods were kept largely in stock but gradually local and Canadian manufacturers began to place their lines upon the market and a ready demand was created for them. Prices in general were higher than they now are, particularly in the lower grades. A shoe that now might be purchased for \$1.50 or \$2.00 would be better quality than these formerly offered at a slightly advanced price, but there would not be a great deal of difference as regards the higher

priced lines, except for the fact that now they have better finishing touches applied, and the work of building is more up-to-date and better perfected."

#### Started in at Sixteen Years

Starting with the late Mr. Francis fifty-one years ago, when he was sixteen years of age, Mr. Vaughan has seen many changes in the shoe trade since then—has seen the business increase to much larger proportions with himself and in the case of other merchants, and has seen many faces come and go with the trade of whom few are still in business. He and H. L. Francis, who is now with J. V. Russell in his store in Brussels street, are practically the two oldest shoe men in the city, but since he has been in the game dozens have come and gone, the places of the older men being taken by younger blood, advancing either through successful retirement of the passing generation, through failure, death, or some other of the many causes which are responsible in the closing of one man in a business, and its being taken over and operated successfully by another.

Mr. Vaughan not only attended to the work of the retail and wholesale selling of boots and shoes but the manufacturing of them was also something with which he became intimately acquainted. In 1862 Mr. Francis engaged in the manufacture of different lines himself, meeting with encouragement and employing a large crew of workmen, and Mr. Vaughan continued this policy when he became proprietor. The shoemaking industry flourished with many other dealers both in St. John and in other parts of Canada at that time, for wider markets were opening to the trade and there was a large field for the finished products. Later on Mr. Vaughan went into partnership with H. L. Francis, spoken of in a foregoing paragraph, and they continued in business for some years, the firm being dissolved in 1893, but the business has been continued under the old reliable name of Francis & Vaughan, even though the latter name is really the only one which enters directly into its existence.

Before the "big fire" in '77 when whole sections of the commercial and residential district were swept from the map, the business stand where Mr. Vaughan attended to the trade was in Prince William street, but afterwards a removal was made to King Square. Then the site was changed to King street, where for thirty-six years there has been a continuation of the business. The house has stood for thoroughly reliable trade principles, and the march of progress has witnessed the firm of Francis & Vaughan striding along still keeping well to the fore, still flourishing, keeping alive to the more modern methods being introduced, and adhering firmly to the policy of half a century ago, "to make a customer and keep him so."

#### The Store is Up-to-date

The house of Francis & Vaughan in King street occupies two stories of a fine brick building. In the lower floor is the portion wherein the business of the firm is done, the main store being there located. The double shelf system is in use and found to work satisfactorily; lady clerks assist in the selling force, and the up-to-date fixture arrangements of the interior are in keeping with the progressive policy which has characterized the long established house. Upstairs are long rows of fixtures containing hundreds of pairs of boots and shoes, the store-room wherein are kept the lines of reserve stock and it is a commendable feature of this department to note that the bins are arranged with care and neatness and there is no unnecessary scattering of boxes or cartons about the floor, but everything is so located as to be at once available if needed in the floor below.

John Vaughan is known to scores of travelers from the different shoe manufacturing concerns in Canada, and is also personally acquainted through his long years of commercial life, with many of the business heads, and their experience has always been that in all his dealings he is square and above board. He does not seek to take a mean advantage of anyone and his relations with one man are as open and fair as with another. His friends are well aware of this and that is one of the reasons why he has so many, for in St. John and other parts of New Brunswick they are numerous indeed.

## He Would Tax Big Stores

"I would like to see a bill passed by the government making departmental stores who are largely responsible for the practice of cutting the price on rubber footwear, findings, and other lines pay a business tax in whatever community they do business. I have to pay municipal and other levies here for doing business, yet some of these departmental stores take more money out of Port Rowan than I take in, and they do not contribute one cent to the municipal treasury. This is a matter which I think could very well be taken up and considered at the next gathering of the retail shoemen."

The speaker was H. Barringer, who conducts a successful shoe business in the lakeside town of Port Rowan, Ontario, and has worked at the trade for over a quarter of a century. He got his first acquaintance with the art of St. Crispin in the Village of St. Williams, Ont., and after two years here went to Marine City, Mich., where he was employed for some time in a large custom shop. In those days everything was done by hand, and only one machine was used which was for the purpose of fitting light uppers. A lot of long French boots as made for the captains and officers of vessels on the great lakes, and also a lot of eighteen inch leg with pegged and sewed edges for the lumbermen of Northern Michigan. Broad brass top lifts were used on the heel, and the ladies did not think they had the proper kind of footwear in that period unless their boots also had brass top lifts. Returning to St. Williams about 1880, there was a lot of seine fishing in Long Point Bay. There were no long rubber boots then, and Mr. Barringer used to help in the shop in making all the fishermen's boots. He worked on the bench from seven in the morning until nine and ten o'clock every night. Now, in his own shop he stands up at his work and can do five times or six times as much in a day with his repair machinery, which is driven by an engine.

"Yes," he added, "the early eighties were the days of the long calf boot with a small two and half inch heel. It seemed as if everybody wore them. I may tell you that I have not made a pair in ten years."

After spending six years in St. Williams, Mr. Barringer removed to Port Rowan, where he worked on the bench for about fourteen years, and then put in a stock of shoes and harness. For several years there was no harness maker in that burg. The people kept bringing in their harness to be repaired. He kept buying harness tools, leather and saddlery until he had a full fledged harness shop, carrying a considerable stock. He thinks that it is a good thing for a shoe man in a small town to carry a line of saddlery. He has a Champion stitcher that will sew everything in the harness line as well as stitch half soles on welt shoes. He has also several other machines for shoe repair work. Mr. Barringer also carries a stock of several thousand dollars in shoes, and finds that his repair work pays well, especially when solid leather shoes are brought in for attention. He has noticed a tendency of late to use other materials than leather for the counters, box toes, insoles, etc., even on some branded shoes which retail as high as \$4.50 per pair.

"It is a fright the paper and canvas that enter into the make of some shoes which are mostly sold by general stores, whose proprietors do not know leather or how to analyze the vital parts of footwear. In a short time the counters, particularly in women's, are all gone. I think that no man should handle shoes without experience. The best one to buy shoes from is a practical shoe maker or retailer of recognized reputation. What would a shoe maker look like selling various lines of dress goods, and recommending them as first quality, when he does not know wool from cotton. It is, in my opinion, about equally as preposterous for the dry goods man to sell shoes. If good practical men handled shoes, the composition counters, shoddy heels, etc., would soon disappear. for the simple reason that dealers would not buy them from the manufacturers" he concluded.

## Helpful Hints for Advertisers

### Copy and Display Both Good

Taylor, the Petrolia shoe man, knows what a good ad. looks like, undoubtedly. He uses good electros, and displays both them and his copy very well. The copy is bright and to the point. Moreover it gives definite information on the question of \$4 shoes, which is what it ought to do. Many retail ads. "fall down" sadly because they do not inform.

The critic, however, would make the suggestion that the copy would look better unbroken and in the same size and style type. The information really belongs together, and that part of it within the panel would be more logically placed after that in the smaller type. This would give the ad. a more connected appearance. The border is well set up and suits the ad. well.

### Too Much Told in the Ad.

The two ads. of the Temple Shoe Store, Brantford, do not lack for matter. One might hazard the suggestion that there is just a little too much of it for the average reader.

Ad. No. 1.—Cuts are good. Matter is also good, but lengthy. Descriptions really describe but might be shorter and snappier. This would leave more white space, which would give a better display. But the points mentioned are well brought out.

### Some Unnecessary Things

Ad. No. 2.—This ad. is better displayed than No. 1. The copy is also barred by a little too much verbosity. It has the selling points, all right, but buries them under too many words. Cuts are good. There is no necessity for having the firm name at both top and bottom of these ads. The space saved by eliminating the top line could profitably

be used to give more room to the headline or the copy. The "if" in the headline of ad. No. 2 does not need to be displayed. It means nothing. The Temple Shoe Store deserves credit because it does advertise extensively and well. More retailers should do likewise.

### Our Men's \$4 Shoes

Yes, four dollars will buy a splendid pair of Men's Shoes if they are bought here. The rise in shoe leather will not prevent our offering our customers excellent \$4.00 Shoes—the best that's made.

Test Our Good Shoes

Leathers—Dull Calf, Patent Colt, Velour Calf, Button Bal or Bluchers, every size and width. Styles just the same as seen in the shoe costing a dollar or two more

Come and see the best shoe value and shoe style crowded in a pair of Men's Shoes and then sold for four dollars.

## The Value of the Small Price Card

It Is Necessary That Price Tickets Should Be Made Easily and Quickly—Use of the Air Brush—A Comprehensive Treatment of Various Styles—Neat Effects Produced by Beveling—What the Different Figures Show

By R. T. D. EDWARDS, The Robert Simpson Co., Toronto

(Copyright by the Acton Publishing Company, Limited)

The small price card is one of the most valuable salesmen that a store can have, and on account of its importance the writer is giving over the entire lesson this month to various styles of these and the method of constructing them. A glance at the accompanying illustration will show the results of our endeavors to prepare a set of price cards, which would contain a large number of valuable suggestions for the card writer. The air brush has been used on quite a number of the tickets illustrated, but many can be executed by the use of the Soennecken pen alone. It is necessary that price cards be made quickly and easily; consequently, an effective style that can be produced in the smallest amount of time is, for general purposes, much the best.

Some of the ideas worked out in various cards have been used before, but most of them are original and may possibly require individual explanation. The method of making air brush cards is similar throughout. On account of this fact, the explanation of one will cover several. For instance, card No. 1 is made from a stencil cut from oiled Manilla paper. The method of preparing the stencil was gone into thoroughly in a previous lesson and need not be dealt with again. Of the larger cards illustrated, Nos. 1, 3, 8, 12, 15, 17 and 19 have been made with the use of the flat stencil.

Card No. 5 illustrates a turnover corner effect. This is secured after the first stencil is taken off by simply placing the corner of the stencil in the required position and applying the air brush.

Two stencils are required in card No. 7, one for the entire outline and the other to complete the small shield effect in the corner.

### A Set of Stencils

Cards Nos. 9 and 10 are similar in appearance, but they are made by different methods. No. 9 is constructed by the shadow scrip method, which was described in a recent lesson. The figures in No. 10 are made from stencil cut from Manilla paper in the usual way. Cards may be made in this way very rapidly after a set of stencils has been made.

A stencil in a three scroll effect is illustrated in card No. 11. This is a very effective style of card, and after the stencil has been made it can be executed very rapidly.

Card No. 13 shows a stencil with a shield pattern cut out in the centre of a card making a suitable panel for inserting prices.

The stencil used in card No. 14 is made by pasting long strips of Manilla paper together.

The stencil used in cards Nos. 15 and 16 were made from the same piece of paper, one part being the cut out piece.

Mat boards make very effective price tickets and are very serviceable on account of the fact that they do not get soiled as quickly as white does. Cards Nos. 4 and 6 illustrate wood grained board used in price cards.

Card No. 21 is made of mat board on a cut out centre with beveled edge. A light piece of mat board is used in

the opening. The advantage of this style of card is that the insert can be changed very quickly when a different wording is desired.

### The Air Brush or Pen

The balance of the cards illustrated contain a large variety of ideas that can be worked out with the air brush or pen. Their style is such that does not require further explanation. In making small tickets, such as No. 39, which are intended to be used in hat bands, it is best to use a thin Bristol board, which is not liable to stretch the band.

Some very nice effects can be made by beveling show cards, which work is done quite easily, providing you have the proper tools. Figure 1 illustrates three styles of beveling tools which will be found suitable. These can be secured at almost any hardware store. For beveling work it is advisable to wrap the tool with heavy soft cord, as illustrated in Figure 1, and this makes a good handle, which can be firmly gripped and at the same time not be hard to hold.

Figure 2 shows a home-made apparatus for holding the card in position while the beveling is being done. It is constructed of a strip of steel about 2 inches wide and 2 feet long fastened to a board by means of a screw nail.

## Big Future for Staple Shoe:

L. J. Breithaupt, of Berlin, Ontario, very recently returned from a business trip to Montreal and Quebec. He is of the opinion that the staple shoe trade will in the near future centre in the Western part of Ontario and that Berlin and Waterloo will receive no small share of it. Speaking of conditions generally Mr. Breithaupt, said: "I predict that in the next five years there will be, on an average, one new shoe industry a year launched in Berlin and Waterloo. This centre is more and more becoming the nucleus of the shoe industry." Speaking further of trade conditions, Mr. Breithaupt said: "That there is a shortage the world over of all lines of hides is an established fact. The great packing interests of America alone have been largely blamed for the advances, and they can readily be trusted to do their share in getting prices up; but unless tanners are willing or obliged to pay the advances, the latter could not be obtained. Hides are duty free in United States and in Canada, but whether imported from England, South Africa, or any part of the inhabited globe, the same situation faces the tanner, namely, prices higher than ever. In our case, we are now paying higher prices than ever in the history of our business since its being established in 1857, and we fear the 'end is not yet.' Leather is higher than it was, but must go higher still. Last spring the large sole leather corporation in the United States predicted an advance of 7 cents per pound in sole leather before the end of the year. This statement seemed too ridiculous to be entitled to any thought or credence, but everything is now shaping very strongly in that direction. However, time will tell. Tanners will do well to keep 'near shore' in selling their leather as they have everything to gain, and nothing to lose by standing to their prices, which, by the way, are still considerably less than the stock can be replaced at to-day."

## Are Competent Salesmen Encouraged?

**Western Shoeman Thinks That Employers Often Lack Penetration and Appreciation—Admits There Are Exceptions, But Regrets the Lack of Proper Training in Canada.**

To the Editor of the SHOE AND LEATHER JOURNAL: SIR:—What about the encouragement of shoe clerks by employers? I know that in many footwear establishments industry, faithfulness, initiative and energy, are readily recognized but is there not want of foresight on the part of some employers. The old adage has it that you cannot put old heads on young shoulders. This is a truism never to be lost sight of. Further, if we all were front rank men I fear the wage list would be a very uniform affair. I remember some years ago taking one of my men to task in England and demonstrating to him how to create business, and his answer was, "Yes, sir, if I could do that I would not be behind this counter."

Someone has said, "The poor ye have always with you." Just so. Likewise have we the round man in the square hole, the incapable in places throwing their chances away, lazy people keeping poor while they might be well off, and others losing opportunities in a fashion that shows a lack of intelligence bordering on insanity. These conditions will exist while the world goes round. But often as much lack of penetration is displayed by the employer as ever was practised by the employed; and frequently the manager or buyer, not being the proprietor, finds it expedient to keep talent of the rank and file below his own, and I cannot help thinking my own experience has borne this out.

### Failed to Get a Chance

I know what I am capable of and pretty well every man of my qualifications at all knows this of himself also, I submit that a good man, or as we say in Canada, "A man with the goods," has a something about him that would soon be apparent and convincing to an employer looking for the best for his money. But I fear this latter class too often rely upon their own status with the public to own that any clerk could influence their business in any way. As a case in point: I came to Canada six years ago, and being a thoroughly experienced shoe salesman applied to the wholesale and retail houses in Winnipeg for employment, but failed to get engaged; so I wrote a letter to a firm in Vancouver, not in the boot business, stating that I was an immigrant recently landed, and that I believed from the positions I had filled in the Old Country, I could say without egotism that I had considerable capacity for business. I offered my services to them in any capacity. A letter came by return mail asking for an interview. I kept the appointment, and in less than one minute, was engaged. I stayed with that firm five years and did well for them, and to their honor be it said also, they did well for me, for I never had to ask them for anything. They anticipated me on every occasion. Yet, comfortable as I was, like the Jews of old, I "could not forget the leeks and onions," so each season for two years, I renewed my efforts to get into the shoe trade, but with no success whatever, for I never had the refusal of a good appointment. At length I abandoned the idea and looked forward to the time when I should be independent of employers, which time eventually arrived, and if nothing unforeseen occurs, is likely to continue.

### Have Accepted the Inevitable

I have a young lady clerk in my employ to-day who seems to me to display the most lamentable want of intelligence in wrapping a parcel. She rolls the paper round the shoes, or the cartons, if sent out, leaving the end unfastened, and often before a customer leaves the store, the bundle is all to pieces; and no amount of showing, demonstrating, tuition or coaching on this point brings any change. Yet this girl is one of the most assiduous and industrious clerks

one can wish for; but on this one point, correction seems impossible, so I have accepted the inevitable and make it do. This same sort of crankiness, I suppose, is prevalent with others in other forms. Hence we shall never get all that we want, and if we did, why, there would be no room for the smart to excel in. Certain it is that in the Dominion top notch shoe salesmen are not so plentiful and where nearly all employers have to adapt the best they can to their requirements, we shall suffer from the want of early training such as the apprentice gets in the Old Country.

Two young men of my acquaintance, with no knowledge whatever of footwear, opened a store in an Alberta town. One had been a tea man for some years and the other had always been in the agency business, yet these gentlemen, after a few years partnership, are in good businesses of their own, one in Manitoba and the other in Saskatchewan. Think now, sir, what their chances would have been in competitive England, or which wholesale house would have been disposed to give them credit? The experienced shoeman knows full well that they would not have had a look in, and had they started would have been vanquished before they could turn round.

Sincerely yours,

A. C. W.

Victoria, B. C., December 9th, 1912.

## Do You Give Your Clerks a Chance in Shoe Buying?

(Continued from page 33)

responsible for the models, lasts and patterns are the best judges. That is their business. They make a study and specialty of this work and know more in five minutes about what type of a shoe to make on a certain last than I would all day. They recognize that a particular kind of last can best carry a certain height of heel, whether it is suitable for a blucher, a bal or a button, whether it should have plain quarters or foxed, whether it should possess sixteen, eighteen or twenty buttons, whether it should have a wing tip or a plain one in order to bring out its lines more gracefully. I leave the make-up to the discrimination, experience and insight of the men who supervise the samples and visit all the leading shoe centres. That is their part of the business and mine is to buy the shoes exactly as they are or to leave them alone. Of course, when I refer to alterations I do not mean to say that the ornaments on pumps or a certain kind of button or buckle should not be changed, or minor affairs of that character. I mean alterations that change completely the make-up and build of a shoe. Take it from me that the factory knows best what kind of grouping of leathers, edges, perforations, heels and cuts that certain lasts should carry, and not Tom Robinson or Bill Smith, who perhaps never have been in a cutting room and do not know a heel seat rounding machine from a treeing machine or a pulling over machine. My advice is take the shoe as it is or leave it alone. Don't ask that a certain particular pattern be made up on another last. You are apt to be disappointed in your calculations and will find in nine instances out of ten that the creation does not look so well as you thought it would. Leave this part of the business to the styles committees and the men in the factories.

### Things One Will Soon Find Out

"Do not overbuy; confine your selections to a few houses and do not take all kinds of shoes from one or two manufacturers. I find that certain firms can give me better values than any other in women's McKays, another has a strong specialty in pumps, another in oxfords, at a certain popular price, another possesses exceptional facilities in tan buttons, and still another in men's welts at a medium figure, and so on. Each firm excels in some particular good selling, well made and reasonably priced line. You will soon find these out and, when you get a good thing, don't switch without cause. But there, I have talked too long."

# Further Advance in Price of Leather Foreshadowed

Annual Meeting of Ontario Tanners Held—Causes of the Abnormal Figure for Hides—Change in the Tariff May Be Applied for—How Imports Are Rapidly Increasing—New Officers Elected

*“The situation that the tanners have to face at the present time is that the advance in the price of leather is not commensurate with the advance in the price of hides, and that as there has been a considerable advance in the hide market since September, action should be taken for a further increase in the price of leather in compliance with the resolution passed by this section at a meeting held on October 1st. The increased demand for light leathers has also had the effect of cleaning up all the accumulation of skins which have been on the market for some years, and prices of raw skins have advanced equally and in many cases more than hides. Should our present government undertake to revise the tariff in the near future, we think steps should be taken by the tanners to place these matters before them and request that an increase be made in the present duty on some lines of leather and leather manufactures.”*  
—From the report of Chairman F. G. Clarke.

Owing to the fact that hides and skins are likely to remain at a decidedly high level, in price, that stocks are very low, that the advance in leather is not commensurate with the figure for hides, that tan bark has materially gone up in cost, that relative outlay for labor is greater in Canada than elsewhere, and the supply of available cattle is decreasing while the population is rapidly increasing, were some of the points emphasized in the address of the retiring chairman, F. G. Clarke, at the annual meeting of the Tanners Section of the Toronto Board of Trade held on December 20th, as reasons for a further advance in the price of leather.

The gathering was largely attended and several interesting reports were adopted, action on which is likely to be taken in the near future.

John Sinclair, of the Barrie Tanning Co., Barrie, who has been vice-chairman, was elected chairman of the Section for the coming year. F. G. Clarke, the retiring presiding officer, was warmly thanked for his able services during his tenure of office. Dr. S. Morley Wickett, of Toronto, is the newly elected vice-chairman.

### The Chairman's Address

In his address, Chairman Clarke said:—The most notable and outstanding feature of the past year's business has been the unprecedented and constantly increasing prices which tanners have been called upon to pay for hides and skins of all kinds.

At the beginning of the year the market for hides was somewhat quiet but firm, at a level of prices which was thought by some to be dangerously high, but during this year we have seen, month by month, these prices increase till at the first of this month they had reached on the average a position more than 25% higher than was ever known in the history of the trade.

The price of South American B. A. Dry Hides which sold in January for 22½ cents had advanced at the first of this month to 32 cents, an increase in this class of 40%. Chicago steer hides, in the same time, moved up from 15¾ cents to 20 cents, an increase of over 25%. And similarly English ox hides which sold under sixpence in January, brought 7 3-8 pence at the sales this month, with supplies

very limited. Canadian hides in the same time advanced from 12 cents to 16 cents, and in all the markets there is no accumulation.

### The Cause of Abnormal Prices

If we seek a cause for these abnormal prices we will find it in the change in the relative number of cattle grown in the last few years compared to the increased population, and more varied use of leather. We are all familiar with the high cost of beef and other meats, and as hides and skins are a by-product of the meat industry, so long as there is a scarcity in this supply, high prices will likely prevail in the hide market. It is worthy of note that the United States has practically ceased to be a meat exporting country, that is, whereas formerly when the population was less, vast herds of cattle were raised on the Western prairies, at the present time all available cattle are required as food for the increased population.

### No Relief on the Horizon

Taking everything into consideration, it would appear as though we were likely to see hides and skins remain for a length of time at least the same level as at the present. The situation that the tanners have to face at the present time is that the advance in the price of leather is not commensurate with the advance in the price of hides, and that as there has been a considerable advance in the hide market since September, action should be taken for a further increase in the price of leather in compliance with the resolution passed by this section at a meeting held on October First. The increased demand for light leathers has also had the effect of cleaning up all the accumulation of skins which have been on the market for some years, and prices of raw skins have advanced equally and in many cases more than hides.

### How Imports are Increasing

I regret to have to report that the imports into Canada of leather and articles, manufactured from leather, are rapidly increasing as appears from the figures published by the De-

partment of trade and commerce. In the year 1903 there were imported of leather and manufactures of leather a total of \$1,910,000. This amount was increased to \$4,239,000 in the seven years that followed up to 31st March, 1910, an average increase each year of about 12% on the previous year's imports. Then for the year ending March 31st, 1911, the imports were \$5,326,000, or an increase of 26%, and for the same period ending March 31st, 1912, \$6,391,000, or an increase over the large imports of the previous year of 20%; while the total of three and a half millions for the five months

ending August 31st, 1912, indicate a still more rapid increase.

#### What Tanners Have to Face

This large relative increase has been contemporaneous with the lowering of the tariff, and was no doubt largely caused by this reduction of the duty. Trade conditions have changed materially in Canada in the past few years, bark has so increased in cost that at present a very large proportion of our tanning material is imported at higher freight rates than any competing country is paying, and the relative cost of labor is also greater in Canada than elsewhere. Should our present Government undertake to revise the tariff in the near future, we think steps should be taken by the tanners to place those matters before them, and request that an increase be made in the present duty on some lines of leather and leather manufactures.

#### Canadian Business Conditions

It is gratifying to report that this is Canada's growing time, and her prosperity is more marked than ever. Immigration continues to increase and the many opportunities, for all classes of workers attract a better class of men than in the past. Helped by the large influx of English capital, railroad construction and general building, and mining operations are very active throughout the whole country.

In closing I wish to express the hope that this general prosperity may be shared throughout the leather trade, and that the coming year may be a prosperous one to all the members of the section.

#### The Officers Elected

The following officers were elected for the ensuing year.

Chairman, John Sinclair, Barrie; Vice-chairman, S. Morley Wickett, Toronto; Secy-Treas, F. G. Morley, Toronto; Executive Committee, J. C. Breithaupt, Berlin, S. R. Wickett, Toronto, W. D. Beardmore, Toronto, J. J. Lambe, Omemee, C. G. Marlatt, Oakville, G. P. Beal, Toronto, G. C. H. Lang, Berlin, George McQuay, Owen Sound, A. O. Beardmore, Toronto, Charles King, Whitby, A. R. Clarke, Toronto, Hon. E. J. Davis, Newmarket, F. G. Clarke, Toronto.

Legislation Committee: Charles King, Whitby, S. R. Wickett, Toronto, A. R. Clarke, Toronto, W. D. Beardmore, Toronto, R. M. Beal, Lindsay, H. B. Johnston, Toronto, G. P. Beal, Toronto, A. O. Beardmore, Toronto, Hon. E. J. Davis, Newmarket, C. E. Clarke, Toronto.

Transportation Committee: L. J. Breithaupt, Berlin.

C. G. Marlatt, Oakville, S. R. Wickett, Toronto, S. Morley Wickett, Toronto, A. R. Clarke, Toronto, John Sinclair, Barrie, G. C. H. Lang, Berlin, W. D. Beardmore, Toronto, H. B. Johnston, Toronto, J. J. Lambe, Omemee, A. O. Beardmore, Toronto, R. M. Beal, Lindsay, Charles King, Whitby, Hon. E. J. Davis, Newmarket.

Representative to the council, A. O. Beardmore, Toronto.

#### Figures That Tell a Tale

The following table of figures which show the rapid increase in the imports of leather and leather manufactures into Canada during the past three years is worthy of preserving as a reference. The figures were obtained by Chairman Clarke from official sources and are reliable.

#### IMPORTS OF LEATHER AND MANUFACTURES FOR THE YEARS ENDING

	Mar. 31, 1910	Mar. 31, 1911	Mar. 31, 1912	5 months ending Aug. 31, 1912

THE NEW FACTORY OF THE PALMER-McLELLAN SHOEPACK CO., AT FREDERICTON, N.B.

# How to Put in a "Cold Weather Sale" Window

Simple and Effective Way in Which it May Be Carried Out—A Design That Will Command Attention—Do Not Crowd the Window With Shoes All and Sundry—The Making of Price Tickets

By A. A. DAoust

Every merchant is aware of the great importance of a January sale window, and this simple outline will undoubtedly help. There is nothing very artistic about the whole scheme, but it is simple and if carried out neatly, should bring splendid results.

To make the scale in the centre, use boards from shoe cases, cutting them as in the sketch or any other design suitable to the trimmer. Cut a piece of suitable size in proportion with the rest for the cross piece. Make sure that you bore the hole exactly in the centre of this so that it will balance.

Buy two small square or round tin pans for each side of the scale, bore holes in each corner, and hang with small chains of even length. If impossible to get chains, use white cord, or anything else will do. Place shoes on one side and a few coins and bills in the other, but as the shoes are much heavier in weight than the money, you will have to use something heavy under the latter.

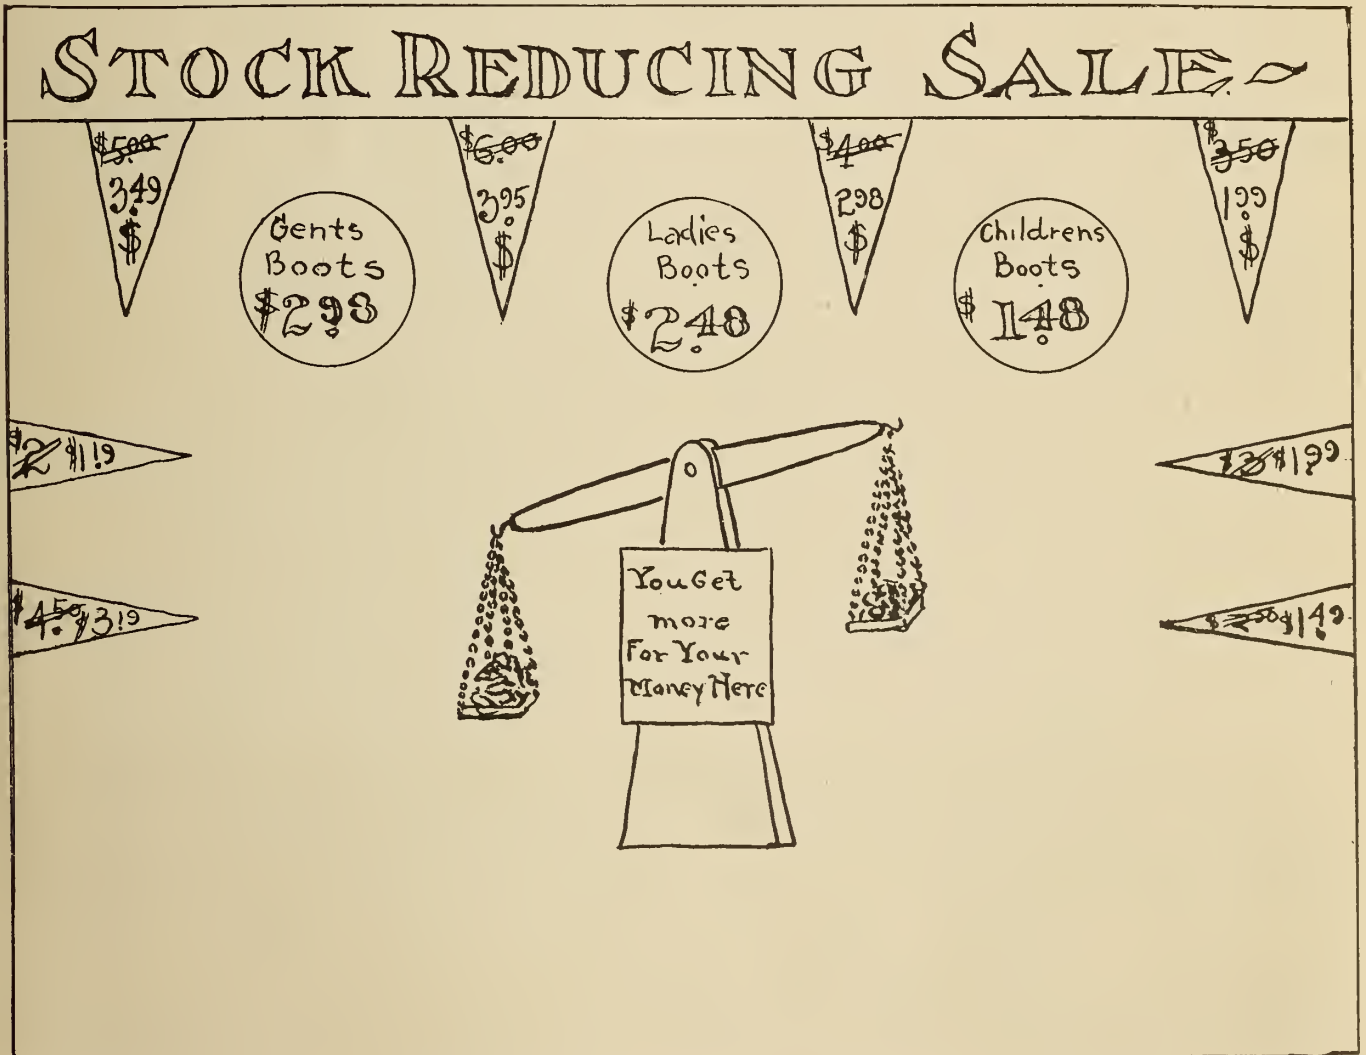

A card should be placed at the front of scale as in the sketch. Make the cards like the one in the sketch or any style which will suit your window. The cards should be neat and plain so that they can be read easily. Have a long strip at the top of the window on which have the name you

are calling your sale. Banners and circles to look attractive should be cut out of nice cardboard. If this is too expensive use heavy paper.

Have price tickets made in either the round or pennant shape, as shown at the top of the window sketch. If

the round style is used a ticket pin will be needed. Display plenty of shoes, in the window without overcrowding it. Shoes displayed neatly on stands as in an ordinary window will bring equally as good results as making huge piles of shoes. This particular old-fashioned idea of crowding is quickly going out with all progressive dealers.

CATCHING THE EYE OF THE PUBLIC WITH A GOOD DISPLAY

# SHOE FACTORY NEWS.

The name of Gale Bros., shoe manufacturers, Quebec, has been changed to Gale Bros. Limited.

A. R. Clarke, of Toronto, left this week to spend several days in Atlantic City, Philadelphia, and New York.

J. Scully, late of the Adams Shoe Co., Toronto, is now in charge of the plant of the Elkman Shoe Co. at Brampton, Ont.

r. G. Foster has been appointed superintendent of the factory of Williams & Son at Milton and has entered upon his new duties.

The Hurlbut Co. and the Solid Leather Shoe Co., of Preston, are both so rushed with orders that they are working nights.

Jas. Pickles, superintendent of the S. O. & C. Eyelet Mill, Ansonia, Conn., visited the leading shoe factories in Ontario during the past week.

Alf. Baines, late of the Aylmer Boot and Shoe Co., Aylmer, Ont., has taken a position as foreman of the lasting department in the Cook-Fitzgerald factory, London.

The employees of the fitting room of Getty & Scott, Limited, of Galt, presented Miss Grobe, the forewoman, with a handsome pendant pearl sunburst as a holiday gift and mark of appreciation.

Mr. Thompson, manager of Campbell-Bosworth Shoe Machinery Co., of Boston, Mass., accompanied by Henry Moore, the Rochester representative of the company, called upon the shoe manufacturers in Toronto and other cities recently.

The Great West Felt Co., of Elmira, Ont., are installing several new felting machines so as to be prepared to handle the increased demand for their footwear. The company are also installing another boiler and carrying out other improvements.

The Brandon Shoe Co., of Brantford, since the addition of another storey and the erection of a new extension to the factory, are re-arranging the various departments and as soon as everything is in good working shape, which will be in a few days, the output of the company will be doubled.

The C. N. W. Shoe Co., Ltd., with a share capital of \$40,000 has been formed, with head office in London. The incorporators of the new concern are E. W. Cumming, Geo. H. Nichol, W. E. Wilson, J. J. McMahon, all of the city of London, and Chas. Cumming of Galt. The factory has begun work.

Dominion Rubber Co., with a share capital of \$1,000,000, and head office in Toronto, has been formed to make, purchase and sell India rubber goods and all goods of which rubber is a component part. The incorporators of the new company are R. F. Segsworth, John J. Main, E. M. Carleton, T. J. R. Cook and H. M. Moull.

R. Dack & Son, boot and shoe dealers and manufacturers, 71 King Street West, Toronto, have taken out a permit to build a three-storey factory at 337 King Street West, at a cost of \$30,000, which will greatly increase their capacity. They expect to occupy their new premises on April 1st. A retail branch will be continued on King Street West just opposite their present stand.

A. R. Clarke & Co., Limited, Toronto, while being large tanners of patent leathers, also do a large business in gloves, shirts and sheepskin coats. Their eighteen travelers are starting out January 1st with a stronger line than ever. The knowledge this firm possess of tanning has enabled them to turn out the remarkable line of goods that they

now show. The representatives all travel direct from Toronto and will cover the territory from Halifax to Victoria.

The Canadian Consolidated Rubber Co. and the Canadian Consolidated Felt Co. have each declared a quarterly dividend of one and three-quarter per cent. on the preferred shares of the capital stock of the company. The Consolidated Rubber Co. has also declared a dividend of one per cent. on the common shares of the company.

The Dominion Shoe and Slipper Co., of Berlin, which has entered upon the second year of its career, has had a very successful twelve months. The company manufactures a line of felt slippers and its products in warm footwear are marked by the highest quality, style and workmanship. The firm goes directly to the trade, and has worked up a fine expanding connection.

The Reliance Shoe Co., 122 Adelaide Street West, Toronto, which began business about a year ago and are specializing in boys' boots, have made such great progress that they have been forced to move into larger quarters which they have secured at 350 Sorauen Avenue. The company are now installed in their new factory which is in the same building with Winnett & Wellinger, manufacturers of fancy leather goods.

H. H. Hastings, general manager of the Independent Tire Company, Limited, says that their new factory at Guelph, Ont., has been accepted and taken over by the officials of the company from the contractors, and is very satisfactory. He also states that five carloads of machinery coming from the Farrel Foundry and Machine Company, of Ansonia, Conn., now being installed, will complete the entire machinery equipment. Mr. Hastings thinks that the factory will be in shape to turn out tires this month.

A despatch from Washington, D.C., says: Solicitor-General Bullitt filed in the Supreme Court the Government's brief asking for the reversal of the decision of the Massachusetts Federal Court dismissing four of the five counts in the indictments returned under the Sherman anti-trust law against the United Shoe Machinery Company. This brief, the contents of which were made public, marks the opening of the legal fight over the criminal prosecution of the alleged trust. The case will be argued January 6th. The Supreme Court will then take the issue under advisement.

Frederick A. Lovell, superintendent of the Cook-Fitzgerald Co., Limited, London, who has been in Massachusetts shoe centres for two weeks, had a very painful attack of rheumatism of the inflammatory type. Mr. Lovell's many friends will be glad to hear that he has returned to London, fully recovered and filled with advanced ideas on the shoe game that will keep "Astoria" and "Liberty" shoes in the front ranks. No better posted or more popular shoeman than Mr. Lovell visits Boston and the contiguous territory.

The regular quarterly dividend of 1¾ per cent. has been declared upon the preferred capital stock of Ames, Holden, McCready Ltd., Montreal. The company have had a most successful and busy season, and orders for spring are away in advance of any previous period in the history of the firm. Six months business from May to October last showed an increase of sales of over three-quarters of a million in excess of the corresponding period of last year. All the factories of the company will be kept rushing for some weeks to come.

A St. Thomas despatch says: The members of the city council had another conference with President A. W. Dono-

van of E. T. Wright & Co., when the plans prepared by Architect John T. Findlay were gone over and approved. Mr. Donovan impressed upon the aldermen the necessity of providing additional land for extensions and hopes to have the initial factory completed by April 1. If the building is not completed then it cannot be occupied before October, because the company can only move between seasons. President Donovan spoke most enthusiastically of the prospects and voiced many valuable suggestions. He returned to Boston last week. t

The ratepayers of Newmarket will vote on a by-law at the municipal election to guarantee the bonds of a new shoe factory company up to \$25,000 and to assess the property of the company at \$10,000 for a period of 10 years. The promoters of the new industry, on the other hand, agree to purchase a site, erect a building, and install machinery at a total cost of not less than \$40,000. They agree to have this completed and in full running order with 75 hands by the first of September next, and to continue to employ on an average not less than 75 hands for at least 240 working days in each year for a period of 20 years. The company agree to give the town a first mortgage on their building, machinery, etc., for the full amount of the bonds guaranteed and to pay the bonds as they fall due.

The annual meeting of the A. A. Durkee Co., Limited, was held in Truro last week. Satisfactory reports were presented. It was shown that the factory was giving employment to about sixty hands and was running at full capacity with a generous number of orders ahead. There are 272 shareholders of the company residing in Truro and 35 in Yarmouth. Mr. Durkee in his report said the number of hands had doubled in a year, and showed the increase in pay roll and output for periods in 1911 and 1912 as well as the volume of orders ahead at the present time as compared with a year ago. He referred to the loyal support given the company's output by local shoe dealers. The factory was of the most convenient and modern character and splendidly equipped. George W. Stuart was re-elected president, A. A. Durkee, vice-president and general manager and F. A. Doane, secretary-treasurer.

The Hamburg Felt Boot Co., of which E. Merner, is president and W. H. Umbach is secretary-treasurer, are negotiating with the village of Tavistock, Ont., under the name of the Tavistock Felt Boot Co., to erect a factory for making felt boots and shoes. The ratepayers will vote upon a by-law at the municipal election to grant the company a bonus of \$10,000 to supply free water and to exempt the industry from taxes, except school taxes and local improvements. The company agree to erect one building 120 x 45 feet, three storeys high, another building 60 x 45, two storeys high, and a third structure 70 x 40, one storey high. They will also install machinery worth from \$15,000 to \$20,000, commence work on the structure by May next, and have the plant in operation by January, 1914, and employ not less than fifty hands for ten months in each year for a period of ten years. The factory of the company at New Hamburg will be continued, the industry at Tavistock being an additional enterprise owing to the rapid development of the felt boot business.

Fourteen years ago the Kingsbury Footwear Company produced their first shoes on Montcalm Street, Montreal. To-day the concern have in Maisonneuve one of the most up-to-date shoe factories employing nine hundred men, and by the end of 1913, they expect to have the number doubled. The company have just finished the erection of a five-storey high building on La Salle St., which will be ready for use this month. This extension is 150 feet long by 50 feet wide. It is of reinforced concrete, absolutely fireproof and splendidly lighted. The arrangement of the factory is new and decidedly practical, and all the latest machinery is being installed. All the machines will be run by electricity. Another feature is the complete dust system installed, which clears all the dust from the air the operators breathe, as well as pumping the atmosphere. Seven years ago there was less than 5,000 square feet of working space, to-day there is 112,000 square feet, in addition to which the

company have a building containing 12,000 square feet which is used for storage purposes.

#### Gutta Percha Company Re-organizes

There has been a reorganization of The Gutta Percha and Rubber Manufacturing Company, of Toronto, Limited, whose factories are located in Toronto (Parkdale). The reorganization took effect on January 1st, 1913. The company has carried on an extensive business throughout Canada and by export to various parts of the world for over a quarter of a century, having been incorporated as a purely Canadian industry under the Ontario Joint Stock Companies' Act, in 1887. As the business grew, it became necessary to open branches in many places. At some points these were operated under the name of "The Gutta Percha and Rubber Mfg. Co., of Toronto, Ltd.," but in the Prairie Provinces the business has been conducted at Winnipeg and Calgary through a subsidiary company, The Winnipeg Rubber Company, Ltd., and in British Columbia through another subsidiary company, the Vancouver Rubber Company, Ltd. The directors and shareholders of the company have now decided that its interests and convenience as well as those of its customers will be better served by a reorganization which will enable it to operate in all branches under one name and at the same time adequately care for and develop its very large and constantly increasing business. To this end, application has been made for a Dominion charter under the name "Gutta Percha and Rubber, Limited." This has been granted with an authorized capital of \$6,000,000. The new company is controlled by the same interests and is under the same management as the old. It has acquired all of the trade marks, patents, properties and good will of the old company and, as heretofore, is an entirely independent concern, without connection or affiliation with any other company in or out of Canada.

#### New Industry for Fredericton Starts

The new factory of the Palmer-McLellan Shoepack Co., Ltd., of Fredericton, N.B., started manufacturing last month and is making the Palmer brand of oil-tanned footwear. It is planned to turn out one hundred pairs a day and to have one hundred employees. The construction of the factory was started on June 1st last and the building was completed in November. Since then the most modern machinery has been installed and to-day the entire plant is in full operation. The building dimensions are 200 by 50 feet and the factory is of brick construction, consisting of two storeys with a basement of stone with concrete floors. There is also a spacious power plant in connection in which is situated the company's own electrical plant in which electricity for the lighting system is generated. Part of the plant is operated by electric power. The building is divided into two sections, the tannery and the factory. The tanning floor is of concrete between the vats, which are of fine quality stock brick with cement face and are twenty-six in number. Modern machinery is installed in the tannery so that the finest quality of oil-tanned waterproof leather is turned out for manufacture in the factory division of the plant. Much of the sewing in a larrigan factory is of necessity hand work of the company have been fortunate in securing most competent and long experienced sewers. They also have the latest machinery installed by the Singer Sewing Machine Company and the United Shoe Machinery Company for that portion of the work which can be done by machines. Throughout the building are power elevators which run from the basement to the top floor and provide the most convenient arrangement for handling stock.

John Palmer, the managing director, is an expert tanner, having learned the trade in his youth and is practically the pioneer in the oil-tanned footwear business in Canada. The work of the Palmer-McLellan Shoepack Company's tannery is carried on under his personal supervision, while W. A. B. McLellan is superintendent of the factory. Associated with them are the following heads of the different departments:—Larrigan making, John Donovan; manufacturing department, John Gibbs; draw-string department, Joseph Burke; tannery, William Spiers; leather finishing department, Arthur Reading; cutting department, Fred Harris and Frank Bailey.

# AMONG THE SHOE MEN.

L. Jacobson, shoe retailer of Montreal, has assigned to V. Lamarre.

Emile Carrier, shoe dealer, Hull, Quebec, has assigned to J. E. Couture.

The Ideal Shoe Stock Co., Quebec, manufacturers of soles, have recently registered.

White & Bridges have opened a shoe and rubber repairing business at St. Stephen, N.B.

A. Rumford, of Forest, has sold his shoe business to P. Cearnes and has removed to Thedford.

J. Adams, of the Regina Shoe Co., Montreal, spent a few days in Toronto last week on business.

N. Tetrault, of the Tetrault Shoe Manufacturing Co., Montreal, was in Toronto last week on business.

The Edward Stark Shoe Co., Limited, Vancouver, has been taken over by the United Boot Shops, Limited.

J. D. Reaman & Son, dealers in boots and shoes and groceries, Rockwood, Ont., have sold out to W. H. Wells.

F. A. Guinivan, manager of the Walk-Over Shoe Store, Montreal, was in Boston and other shoe centres recently.

Mr. Carcallen, 1267 Bloor St. West, Toronto, has been appointed a deputy-postmaster and has opened an office in his shoe store.

A block of trackage property has been bought at Edmonton by a big eastern firm contemplating establishing a harness factory.

Parrott Bros., of Chatham, Ontario, have sold out their business to Turrill & Dill, shoe retailers of that city and will locate in the West.

C. J. Fitzgerald, of the Cook-Fitzgerald Co., was in Toronto last week on his way back to London from a business trip to Boston.

P. M. Goff, of Toronto, general sales manager of the O. B. Shoe Co., Drummondville, Que., was in Winnipeg recently on a business trip.

The stock of Simpson & Vair, shoe retailers, New Michel, B.C., has been sold to the Crows Nest Trading Co. at sixty cents on the dollar.

John A. Macfarlane, salesmanager of the Macfarlane Shoe Co., Montreal spent a few days with relatives in St. Thomas, Ontario, last week.

Among the callers on the Toronto trade during last week were C. E. Coles, Brantford; H. C. Clarke, Dundas; A. Summerfeldt, Unionville, and many others.

The premises of Geo. A. Rudd, harness manufacturer, 787 King Street West, Toronto were damaged by fire to the extent of \$25,000. The company will suffer no interruption in business.

J. T. Stenson & Sons, shoe dealers, Peterboro, who have long conducted one of the most successful retail businesses in Central Ontario, have decided to embark in the wholesale line as well.

Norman Leach will, early next month, open a boot and shoe store in the Marsh Block, Smith's Falls, Ontario. He has been employed for a number of years with one of the leading industries in that town.

The Mount Royal Footwear Co., is the name of one of Montreal's latest shoe factories. Their factory is located at 1315 Ontario Street East, and Mr. Voyer is manager. They are specializing in children's shoes.

A. G. McKenney, of Vancouver, W. G. Fowler, Calgary,

H. D. Mewhirter, of Winnipeg, and W. H. Galt, of Montreal, were in Toronto recently attending a conference of the branch managers of the Gutta Percha and Rubber, Limited.

Leather Goods and Sports, Ltd., have taken over the harness and leather business of J. H. Matthews & Co., of Saskatoon, the heads of the new company being Arthur G. Smith and Walter D. Gunning.

At the annual meeting of the Commercial Travelers' Mutual Benefit Society, held in Toronto recently, S. R. Wickett, of the firm of Wickett & Craig, tanners, and A. J. Tipping, traveller for D. D. Hawthorne & Co., wholesale shoes, Toronto, were among those re-elected as directors of the society which is in a flourishing condition.

At the annual meeting of the Dominion Commercial Travelers' Association, held in the Windsor Hotel, Montreal, an eloquent address in reply to the toast "Canada" was given by Sir Wilfrid Laurier.

W. F. McNeill, of Toronto, Canadian manager of the Nugget Polish Co., accompanied by his wife and family, left a few days ago on a visit to England. They will return at the end of the winter.

H. and C. Blachford, shoe retailers, 114 Yonge Street, Toronto, who are one of the oldest shoe firms in Canada, being in business nearly fifty years have been incorporated under the name of H. and C. Blachford, Limited, with a capital of \$100,000.

The United Shoe Machinery Co., has disposed of a large number of skate grinding machines to shoe repairers throughout the country, many of whom have bought the machines outright and are doing a rushing business with skating and hockey enthusiasts.

Charles J. Silver, of the traveling staff of the W. B. Hamilton Shoe Co., Toronto, has been re-elected a director of the Commercial Travelers Association. This is his second term, and he received a much larger vote than last year, which is the strongest testimony to the faithful character of his work in the interest of the association.

The M. Langmuir Manufacturing Co., of Toronto, makers of traveling goods, have increased their capital stock from \$200,000 to \$400,000. It is understood they will build an addition to their factory at the corner of King and Niagara Streets, and will greatly add to the capacity of the plant in order to meet the demand of their rapidly growing business.

Walter E. Yates, the popular warehouse manager for McLaren and Dallas, Toronto, was married on December 24th at Janetville, Ontario, to Miss Grace Hobbs, late of Toronto, at the home of the bride's parents, Mr. and Mrs. J. Hobbs. The ceremony was a very quiet one. Mr. and Mrs. Yates have taken up their residence at 678 Gladstone Avenue, Toronto.

A new Slater Boot Shop has been opened in Montreal at 413 St. Catherine street east. The store advertises a perfect fit in shoes by means of a new patented foot-fitting chart and says: "This new fitting system protects you against getting shoes that are too large or too small, too loose or too tight. It ensures you greater ease, more comfort, wear and style than you ever got in shoes before."

Advices received by certain Toronto wholesalers from Montreal and Quebec, state that men's heavy shoes which sold at \$1.95 per pair, and of late have been going at \$2.15, will be raised as high as \$2.40 per pair by the makers during

the present month. Finer lines may advance when fall samples are ready, but it is not expected that the jump will be so heavy as in splits and grains.

"The trade for the three days before Christmas was the heaviest that I ever knew," remarked a Western Ontario shoe dealer. "The class of goods purchased for holiday presents was better than in any previous year, consisting of fine shoes, a high grade of leather, velvet and felt slippers—in fact, more durable and stylish footwear all around. This is a pleasing indication of the times."

The rapid expansion of business in the west is probably reflected in no line more accurately than in the boot and shoe industry. When asked recently regarding business conditions as they applied to that line of trade E. A. Dagg, manager of the Ames, Holden, McCready Co., Calgary, Alta., was in most optimistic mood. He said that the Calgary business of the firm had extended to such a point that a new warehouse was essential. In fact, the company are even now casting about for a suitable site. The new warehouse will be built during the coming year.

The shoe dealers of East Hamilton recently had a rather unusual experience owing to the shut off of electric power throughout the city. Scores of men were prevented from going to work and having a whole day ahead of them they thought it would be a good idea to go for a skate. There was an unexpected rush for skates and boots from early morning till late in the afternoon. The footwear merchants were kept busy supplying the demand. One dealer says that he sold more hockey shoes that day than he usually did during a whole month. He was soon cleaned out of the standard sizes and unable to meet the rush.

At the annual meeting of the Superintendents' and Foremen's Association, held recently in Montreal, there was a large and enthusiastic attendance. The following officers were elected for the ensuing term: President, E. F. Leonard; 1st Vice-Pres., D. Hannigan; 2nd Vice-Pres., E. Le-pine; Sec'y-treas., A. O. Giroux; Corr.-Secs., D. Leighton and G. Fortin. The good work of the past year was reviewed and several interesting addresses were delivered. A committee was appointed to take charge of the annual ball which will be held in Stanley Hall, Montreal, on February 8th.

How to prevent a fire waste of \$25,000,000 a year in Canada! That is the problem that the Canadian Manufacturers' Association, the Boards of Trade, the Credit Men's Association, and other allied bodies, have set themselves to solve with an earnestness and an enthusiasm that bespeaks success. A contributing cause, if not the principal incentive, to something effective being done along this line, was the address given before nearly five hundred members of these organizations recently in Toronto by Mr. Franklin H. Wentworth, secretary of the National Fire Prevention Association of the United States. A. R. Clarke, chairman of the Toronto branch of the Canadian Manufacturers' Association presided at the gathering.

It is understood that two new shoe factories will locate in Maisonneuve. Already 15,000 feet of ground situated at the corner of Ernest and Aird streets has been purchased at a price of \$9,000, and building operations are in progress. The first factory is expected to be erected and ready for occupation by the end of May, 1913, and it will employ about 150 to 200 hands. The other factory will be proceeded with early next spring, and when completed should employ 100 people. Both factories belong to one manufacturer, who is a well known Quebec gentleman, and if everything turns out as anticipated, it is on the boards that further developments might be expected from this source. The new works will be adjacent to the C. P. R. line and the Montreal Terminal runs right past the site, so that the proprietor will have exceptional shipping facilities. The size of the factory which is now being built will be 40 feet by 200 feet, and three storeys high, and the other factory will be 25 feet by 45 feet. Both structures will be equipped with all the latest and most up-to-date plant. There will be elevators and every modern convenience for the production of the best possible goods. The buildings are to be of steel and brick,

### Shoeman Makes Money out of Skates

Among the Ontario shoe men who have made a distinct success in handling skates, is W. J. Thurston, of Guclph. He has carried skates for six years and finds that the average price paid for a pair is from \$2 to \$2.50. Skates obtained at his store are attached free, but when bought elsewhere, Mr. Thurston charges fifteen cents for the work. "I think," declares Mr. Thurston, "that the skate business belongs to the shoe trade, as when we fit the shoe, we can fit the skate to the shoe and save a lot of guess work. I have never heard hardware men raise any objection, and one of them told me the other day that he was not going to bother with skates. We find handling skates helps the sale of hockey boots, as most people want to buy the outfit. We do not handle hockey sticks or pucks now. We only carried them one year, and did not think them a success. We find that there is a better profit on skates than on hockey shoes. The average price paid for hockey boots in this city is from \$2.50 to \$3.00. The popular price for a pair of boots and skates is \$5.00, as this is what a great many young people like to pay for the outfit."

### A Progressive Western Shoe House

The Adams Shoe Co., 802 Rosser avenue, Brandon, Man., is doing some attractive advertising and in a local paper recently there appeared a good illustration of the imposing front of the establishment. The company has been located in Brandon for eighteen years and five years ago moved into their present premises at the corner of Rosser avenue and Eighth street. The store is 125 feet deep and twenty-five wide. Many leading Canadian and American lines are handled. Grips, suit cases, trunks and other leather goods manufactured by the Adams Co. are stocked in large variety and a big business has been built up in that section. Special attention is paid to findings of all kinds and a shoe repair department is a paying proposition. The managing director of the store is David F. Creighton, who has been

### "IN THE GOOD OLD SUMMER TIME"

On the left is J. K. Rose, manager of the shoe department of A. E. Rea & Co's. departmental store, Ottawa, next is Harry Lloyd, of Orillia who has been in business in that town for over 20 years. The little toddler is Master James Paisley, of New York City, nephew of Mr. Lloyd.

in the retail footwear business for twenty-seven years, the last ten of which have been spent in his present position. He is a former Toronto man who has scored success in the West and whose aggressiveness and energy has resulted in building up the trade of the company in the Wheat City to its present large proportions. Under him is an efficient staff of half a dozen salesmen.

#### Edmonton Shoe Happenings

James Ramsay, Ltd., have recently put in a shoe stock. They are making a speciality of certain lines and are working up a nice trade.

E. M. Foster, of Calgary, who lately opened out a new shoe store, has been very successful, and is capturing his share of the trade.

The American Shoe Store, conducted by Mr. Rix, is doing a splendid business. Mr. Rix, who is well liked by the trade, has recently recovered from a severe illness.

Mr. Warren, manager of the shoe department of Johnstone, Walker & Co., has been with that house for some years and is getting on exceptionally well in his position.

The Imperial Shoe Store, located at the corner of Jasper avenue and Second street, is doing a very nice business. It is owned by Thorne & Webb and is ably managed by Mr. Webb.

A change made recently in the shoe trade in Edmonton is the withdrawal of Mr. McLeod from the firm of McLeod & McSweyn of the Eclipse Shoe Store. Mr. McSweyn is continuing the business and Mr. McLeod has returned to the employ of Ames, Holden, McCready, for whom he traveled for five years previously.

#### The "Pure Shoe" Bill

Representative Oldfield of Arkansas has introduced a bill at Washington requiring shoe manufacturers to stamp their boots and shoes showing whether substitutes for leather have been used in their manufacture.

The first section provides that "it shall be unlawful for any person to use in manufacturing for sale any boot or shoe, a counter, heel, insole, outsole, side sole, or slipsole, made in whole or in part of leather-board, straw-board, leatheroid, fibreboard, pats, hiteite, or chrome-pats, or any other substitute for leather whatsoever, without legibly and in the English language stamping with a metal die, and in plain view, upon the outside of all soles of boots and shoes where any kind of such boot or shoe was made and what substitute for leather has been used in its manufacture."

The bill places in the hands of the Secretary of Agriculture the duty of investigating and examining specimens of boots and shoes, to determine whether manufacturers and wholesalers who do an interstate business are complying with the act, and if the Secretary of Agriculture finds that they are placing substitutes in boots and shoes without placing the proper stamp on them, then it is his duty to notify the Attorney General and the various district attorneys, so that the violator of the act can be proceeded against.

Mr. Oldfield says that the bill is in line with the legislation contained in the Pure Food and Drugs Act. He also states that the people of the United States are spending something more than \$600,000,000 annually for boots and shoes and in a great many instances are buying paper, rags and other substitutes for leather at leather prices. He thinks that it is only fair that people know when they buy a pair of shoes, whether or not it is a pure leather shoe. Mr. Oldfield said that he is preparing a bill making it unlawful for manufacturers of all kinds of merchandise, who do an interstate business, to falsify or make misleading statements for the advertisements of their product.

#### Shoe Firms Use of Electric Devices

The results to be attained from a more extensive use of electricity in store advertising are being more and more recognized by the firm of Waterbury & Rising, in King Street, St. John, N.B., who have attracted more than usual attention to their place of business by the establishment of an ornamental and useful set of curb lamps in front of their premises, and by the displaying of an ingenious device in one of their

windows which drew the eyes of hundreds of holiday shoppers to the showing made therein. The first named, the street lamps, have been placed in position at the edge of the broad sidewalk in front of the store, and the firm is the first shoe house in the city to make use of them. There are five of them, large round frosted lamps, the globes being attached to an iron post having four arms extending at a height of about ten feet above the road, and being surmounted by a fifth lamp on top of the pole, giving the whole a nicely bunched appearance. They shed considerable light and the name of W. & R. is to be seen in large letters at quite a distance, together with the suggestion which naturally accompanies the name, "boots, and shoes," these being printed on the different globes.

The other contrivance referred to was the conception of Wm. C. Rising and was evidence of much originality and thought in its preparation. Of the thousands who passed up or down King street, one of the main thoroughfares of the city, during the holiday rush, few failed to stop outside the window and puzzle over the device shown therein, and then after many conjectures, gave it up as a bad job, the knowledge of how it was worked. It was only an innocent looking little tungsten bulb projecting from an infant's moccasin, but there were no wires or other connections to be seen whereby it might be known as to how the globe was lighted. Yet there it was—throwing a circle of light over the display of holiday features shown in the window.

#### He is a Hustler After Business

H. W. Parsons, who some time ago became identified with the Toronto staff of The Nugget Polish Co., is one of the oldest employees of the company. He became identified with the Nugget people when they first started in London, England, seventeen years ago. He was transferred to the New York office where he held responsible posts. He took charge of several exhibits made by the house and was a

familiar figure with the trade at the annual Shoe and Leather Market Fair in Boston. Since coming to Toronto, Mr. Parsons has covered the Eastern ground for the company. He leaves early in January on a business trip through Quebec and the Maritime Provinces. Mr. Parsons is well liked for his obliging disposition, genial manner and energetic nature. He is a born salesman. If you don't believe it, ask those on whom he calls, for he certainly knows how to boom the merits of "Nugget."

### An Electrically Made Leather

Mr. W. F. Reid, past president of the International Association of Leather Trade Chemists, speaking recently at the biennial conference at the Leathersellers' Hall, London, said that possibly the time might come when the industrial chemist might be called upon to manufacture not only new tanning materials, but even leather itself. Certainly the time would come when the area available for the production of the raw material of leather would be so limited in proportion to the needs of the human race that some one would have to step in and produce a substitute, and possibly even the electric furnace might in time produce material which would be quite as efficient as tanning extracts for producing leather of a kind.

### The Price of Shoes in Old Country

A correspondent in London, England, writes: Boot and shoe retailers, of whom there are about 70,000 in this country, are face to face with the most serious crisis which has ever threatened their trade. Year by year the price of leather has been advancing steadily, but never has the increase been so rapid as during the last twelve months. Within that period the leather which goes into a pair of men's boots of medium grade has gone up from sixpence to ninepence in cost. "The consequence is," said the secretary of the Shoe and Leather Fair, "that the quality of the footwear is constantly deteriorating. Shopkeepers are afraid to put up their prices, so that their only alternative is to sell the public an article which is defective somewhere. Manufacturers have exhausted their resources, and unless a new range of values is established very soon boots and shoes will continue steadily to deteriorate in wearing quality. The increased cost of leather is explained by the disproportion between the quantity of the world's cattle and its human population. In twelve years the cattle census of the United States, on which we draw largely for our supplies, has decreased seven per cent., while the population has increased twenty-five per cent."

### Heavy Liabilities of Jobbing Firm

The firm of P. E. Frank & Co., wholesale shoe dealers, 20 Front street east, Toronto, who have been carrying on business for about two years' recently assigned. The company formerly conducted the Boston Shoe Store on Yonge street, Toronto. The majority of all the goods handled by this wholesale firm were American lines. Judgment was recently given J. H. Winchell & Co., of Haverhill, Mass., against the firm for \$30,464.17. The liabilities of P. E. Frank & Co. are said by the assignee to be \$250,000 and the assets about \$50,000. In the meantime the affairs of the company are in the hands of the courts. The affidavit of L. W. Whitman, treasurer of the Winchell Company, says that he is not aware of any other undisclosed assets of the firm except their Philadelphia business and their interest in the Boston Shoe Company, Montreal, and claims that H. E. Frank informed him that both of the last mentioned businesses had been a drag on the local end of the concern, as they had been drawing heavily. "From my investigation into the affairs of the firm," Mr. Whitcomb says, "I have learned that money has been withdrawn frequently from the business and deposited in the Bank of Montreal, Home Bank of Canada and Bank of Ottawa in the names of different members of the Frank family; his wife, brother, mother and mother-in-law. Although I am unable to state positively, the amount which has been withdrawn from the business and deposited, I think it is in the neighborhood of \$15,000. Recently American goods received by them were shipped to the amount of \$27,000 to their Philadelphia office, as, I believe, with fraudulent intent against their creditors."

An assignment which has attracted considerable interest in local business circles is that of the Boston Shoe Company, Montreal, with a retail store at the corner of St. Catherine and Mansfield streets, against which a winding-up order has been issued on demand of Dame Harriet E. Schwartz.

Though no formal list of creditors has as yet been pre-

pared, it was stated by the legal representative of the firm that the liabilities would probably total in the neighborhood of \$150,000. The amount figuring in the demand of assignment is \$7,000, this being made up of two separate loans made to the concern by the petitioner, one being for \$3,000, whilst the second is for \$4,000.

Alexander Desmarteau, who has been appointed provisional liquidator, will continue the business for the benefit of the creditors, authorization for this having been obtained from the court. A meeting of creditors will be held January 10. L. E. Frank is the manager of the Boston Shoe Store, in Montreal.

### Beal Bros. Lose Their Tannery

The tannery of Beal Bros., at Uxbridge, was completely destroyed by fire on December 17th. The loss will reach about \$75,000, and being only partially covered by insurance is a serious blow to the firm. The buildings were worth about \$30,000, being of frame and sheet steel construction. The value of the stock was in the neighborhood of \$40,000. The blaze was discovered by the night watchman early in the morning, and although

MAYOR NORMAN R. BEAL, OF UXBRIDGE, ONT.

the fire department responded promptly the water pressure was so low that the flames gained great headway. The daily capacity of the tannery was 125 sides of harness, lace and moccasin leather, and the firm's operations in the harness factory in Toronto, will be up to the mark, new arrangements being effected. Norman R. Beal, who is mayor of the town is manager and part owner of the plant. When the watchman discovered the fire he was gone upstairs from

THE BEAL TANNERY WHICH WAS WIPED OUT

the boiler room in the main building, having heard a crackling about him. When he reached the first floor he was driven back by the smoke. The tannery has been in operation for thirty-two years and employed about forty hands. It has not been definitely decided where the tannery will be erected, although Uxbridge is very anxious to retain the industry and has offered some concessions which are being considered by Beal Bros., whose head office is in Toronto.

#### News Notes from Old Quebec

It is rumored that a large shoe factory in Quebec will remove to Maisonneuve at the end of April.

The friends of E. Samson, manager of the Rock Shoe Co., are congratulating him on the advent of a son and heir.

The retail trade during the holidays was very satisfactory. Dealers report that the volume of business was considerably ahead of last year.

Sole leather for shoemakers, which sold recently at 28 cents, a pound, has jumped to 32 cents, and several repairers are talking of raising prices in order to meet the increased cost of the supplies.

J. A. Scott, who has been spending some weeks in Europe has returned home in good health. He had a most enjoyable outing, and recently entertained a number of his friends at a smoking party.

It is reported that W. Cantin, patent leather manufacturer has just taken a contract for five thousand sides of patent leather for a Montreal firm. This is the largest order for patent placed here in a long time.

The C. E. McKeen Co., distributed to their friends and customers during the holiday season a large number of nice clothes brushes. Under the able direction of Mr. Frank McKeen, the company have had a very successful year.

A number of manufacturers to show their appreciation of the faithful work done by their superintendents and foremen during the past year, presented them with gifts in the shape of bonuses, boxes of cigars and other evidences of good will.

The plans for the factory of Tourigny and Marois are complete and they expect to start building operations early in the spring. Rene Lemay is the architect. The new factory will be one of the largest and best appointed in the province.

The recent heavy winds and rains have caused considerable damage to property in this city. Several factories which are run by electric power have been obliged to close down for two or three days, while other concerns not dependent on electricity had to close their shops early on account of having no light.

Recently the Technical School Commission paid a visit to several factories to inspect the newest and latest machines, preparatory to opening a course for instruction in the art of shoemaking in general. This course should prove encouraging and helpful to the workers, to learn how to operate and to become more thoroughly acquainted with the work.

#### Big Holiday Trade was Secured

Reports from various sections of the country indicate that shoe dealers, with few exceptions, did a larger and more profitable holiday trade than last Yuletide season. In some cities an increase of twenty-five to thirty five per cent. is

recorded. The attractive window trims of many retailers were very striking and brought excellent results. House shoes and evening footwear were popular lines, and the children's departments were crowded for several days before Christmas. A tremendous trade was done in hockey boots and those shoe men handling skates report very satisfactory results. The sale of felts and rubbers was also very encouraging. A number of retailers are at present taking stock preparatory to conducting the usual mid-winter sale, when many slow selling lines are cleared out and space made for spring goods as these will have to be in hand unusually early this season owing to Easter falling on March 23rd.

#### Paid Two Plunks—Worth More

A Toronto jobber recently received a rather unique and expressive letter from a resident in a small Ontario centre who is evidently a disciple of Josh Billings, and a student of the phonetic system of spelling. Here is the letter—Deer sir—I got a pare of boots with yure naim on last spring, called everyday boots, and they are the best I ever sean for ware and looks. I sent the boss to — git a pare for hissself and the yap there sold him anuther kind. I will want anuther pare for miself, and I've ben losin sleep woryin wether I'll be abel to git anuther pare. I think the boots ware to well to soot dealers if you ast me. Ware can I git them in the city. Nun of the stores I've ast seems to know the boots. You otta make them noan. They are shure winners, paid two plunks for the shoes and wouldn't be without them for fore.

#### The Policy That Builds Up

Speaking of success in the shoe line, a leading retailer in St. John, recently said: "Our policy from the beginning has been and is one price to all, and the greatest value for the cash. This, together with the practice of adjusting complaints fairly, and persistent advertising, has given us business that is to-day, second to none as a net profit proposition. A comparison with conditions twelve or fifteen years ago and now, would be very interesting from a financial standpoint, and the volume of trade done. We have to fight for all increase in business that we get, but we like the warfare and it is a case of the "survival of the fittest."

# When the Snow and Slush Comes

The first snows of winter, followed as they invariably are by thaws, give cause for a big rubber rush. There's profit in this inclement weather, but only for the merchant who is well prepared with good brands.

A complete stock of "Miners" and "Sheffords" is the best possible preparation for

**M**INER  
EANS  
ERIT

this season. Their salability cannot be questioned, and the good service they give is a strong and lasting recommendation of the merchant who sells them.

If you are not ready with a good stock of "Miner" and "Shefford" Brands, send in your order to-day. And when you send it in, rest assured it will come to you as ordered.

"Miner" service awaits your instructions.

## When You Sell Union Made Goods You Make a Direct Appeal to One of the Largest Classes of Buyers in Your Community

Throughout the country Union Labor represents a large proportion of the population and the retailer who wants to get the greatest possible profit out of his business must secure this class of trade.

The present membership is enormous and constantly growing, thus is the purchasing power continually increasing and giving retailers greater opportunities every day.

With a thorough knowledge of what the Union Stamp means to them, members insist upon its appearance on all shoes which they purchase and impress upon the members of their family the importance of buying nothing that does not bear the Union Stamp.

The best shoes produced to-day are made by Union Labor and the manufacturer who employs these skilled workmen is supplying his customers with an honest product at the fairest prices and giving the most efficient service.

The Union Stamp is the protection that is demanded by many people right in YOUR town. Are you catering to these protective buyers? If not, you cannot afford to delay longer in offering that which they insist upon having. With shoes bearing the Union Stamp you need make no excuses, it is proof sufficient that the goods are honestly made and will render the maximum of service.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp.

ESTABLISHED 1877

NEW FACTORY, 1912

The new home of Genuine Palmer "MOOSE HEAD BRAND" Oil Tanned Shoepacks, Larrigans and Moccasins.

*The goods with a world-wide reputation.*

This new factory with its modern machinery, capable of turning out two thousand pairs of Packs per day, is the direct result of the high quality of leather and workmanship that has always been put into "Moose Head Brand" goods. Lumbermen, Farmers, Hunters, Miners, when they want Shoepacks or Larrigans think of "Moose Head Brand." Past experience and the experience of their friends has taught them the reliability and sure excellence of these goods. Selling Oil Tanned footwear of any kind is much simplified when you can point to the "Moose Head Brand" Trade Mark.

Our new factory is ready now to handle your orders.

Our goods are handled by the leading Shoe Jobbers from Coast to Coast, who are now out with new samples for 1913.

If you want satisfied customers, be sure you get "Moose Head Brand."

Manufactured by John Palmer Company, Limited, Fredericton, N. B., Canada's largest manufacturers of Oil Tanned Footwear.

We wish to take this opportunity of wishing all our friends and customers a very prosperous 1913, also to thank them for all past favors and to solicit a continuance of their esteemed patronage.

 PERSPIRO

"FITZU"

"ORTHOPEDIC"

THE four lasts of the "DOCTORS" Shoe illustrated here will give any shoe merchant a most complete line of sensible footwear for men. Each last is built along strictly anatomical lines, and is designed to fit snugly and comfortably. a particular standard shape of foot. With these four lasts in your stock you will be able to fit quickly practically every man who comes into your store.

The special features of the "DOCTORS" Shoe—waterproofed soles and uppers, and thermal asbestos middle sole—will appeal to your customers and its perfect fit will surely please them.

## Make your tan shoes 100% saleable

Did you ever pick out a fine looking tan calf leather, with a deep rich color, expecting it to make up into particularly handsome shoes, only to find in the packing room that their beauty had been spoiled by some inerasable marks? And did you then say harsh things of the careless workman who was the cause of the marks, forgetting that the marks could not be eradicated, because that fine looking calf you were so proud of had only "skin-deep beauty"?

Don't blame your workmen because the shoes do not show 100% of the sales-making beauty of the leather. Just try this as a solution of your troubles:

Take an ordinary skin of our Bestyet Tan Russia Calf, and let it pass through your factory in the ordinary way. Then if the shoes are marked, just take a sponge, a little Castile soap and water and wash off the marks. Then match those shoes up with another skin of "Bestyet" that hasn't been cut, and prove that "Bestyet" Calf will put 100% of its sales value into your tan shoes.

Think this over: Beautiful, even finish and rich color—the biggest selling factors of tan shoes—are always 100% efficient in "Bestyet" Calf. Then send in your order.

## This is a good season for Rubbers

Old Winter seems rather loath to set in in earnest. Wintry days with snow are being quickly followed by days of sunshine or rain. It's great weather for rubbers.

Is your stock of rubber footwear feeling the effects of this "sloppy weather"? Or have you the wrong brands on your shelves?

Great sales of Independent Brands are being recorded from week to week—sure evidence of a good rubber season, and the popularity of Kant Krack, Dainty Mode, Royal and Bull Dog Brands.

See to it that your stock of these high quality goods is not getting too low. If you've never stocked them introduce a few now and watch results. You'll be back for more soon.

SALES BRANCHES:

ST. JOHN, Halifax, Sydney, Yarmouth, Pictou, Moncton, Charlottetown, MONTREAL, Quebec, Granby, Ottawa, Kingston, TORONTO, Belleville, Hamilton, Brantford, London, Port Dalhousie, Berlin, WINNIPEG, Regina, Saskatoon, Calgary, Edmonton, VANCOUVER, Victoria.

SOME pointers on "Elmiras" and why you should sell "Elmiras" to your customers and why your customers will want them

THERE are many good reasons why the Best Retailers sell only "Elmira" Felt Shoes and Slippers. "Elmiras" have been the "Top Notch" in Felt footwear for over twelve years. They have stood the test where others failed. The success of "Elmiras" was established by attention to details. Every piece of material, every seam in "Elmira" quality is made with an expert's knowledge of what is required in Good Felt Footwear, always the same, one price to everybody and that price based on actual cost of good material and expert workmanship. Not on a basis of a percentage less than some Leader, because "Elmiras" have always been the leaders to which competitors have looked for both standard of quality and price, usually coming out below in both.

☞ In 1913 the "Elmira" Line of Felt Shoes and Slippers will be the most complete ever shown.

☞ In quality the same as always.

☞ In range, larger and with many desirable new lines.

☞ "Elmira" 1913 illustrated catalogue is the handsomest and most complete ever issued and will be mailed on request to any dealer not having already received it.

☞ "Elmira" samples will be in the hands of 80 per cent. of the Canadian Shoe Jobbers early in January.

☞ When placing your Felt order, ask to see the above Trade Mark on the samples and when receiving shipments look for it on cartons and shoes.

W. L. DOUGLAS  
"The World's Greatest Shoemaker"

## Do You Want the Exclusive Agency for W. L. Douglas Shoes in Your Town?

W. L. DOUGLAS SHOES need no introduction. For over a quarter of a century they have been the most extensively advertised, easiest selling shoes in the world, and to-day they are the standard of quality everywhere. They are sold by over 11,000 shoe dealers, as well as through a chain of 78 Exclusive W. L. Douglas Retail Stores, situated in 45 of the principal cities of the United States.

If interested, write us and we will give you full particulars relative to the Exclusive Agency for W. L. Douglas shoes and also make arrangements to have a Salesman call at your store with our complete line of samples for the coming Fall and Winter Trade.

**W. L. DOUGLAS SHOE CO., 201 SPARK ST., BROCKTON, MASS.**

FACTORIES OF W. L. DOUGLAS SHOE CO., BROCKTON, MASS. U.S.A. CAPACITY, 17,600 PAIRS A DAY.

## They Tread the Soil of Every Nation!

Walk-Overs are the chosen footwear of the world demanded by name of dealers in eighty-four countries.

In every civilized land under the sun you will find Walk-Over stores or agencies

Every day more than seventeen thousand shoe buyers walk into these stores and say "Fit me to a pair of Walk-Overs."

This world-wide reputation doesn't just happen! —It takes a mighty good thing to command the world's commendation.

This enormous business is built on merit—how else?

Because Walk-Overs are proven to give more quality, more comfort, more style—the utmost in shoe value.

Exclusive Walk-Over stores or agencies are to be established in all cities and towns of Canada.

If there is not already a Walk-Over representative in your town we'd welcome the opportunity to explain the proposition to you.

## GEO. E. KEITH COMPANY

Manufacturers of Walk-Overs for Men and Women  
CAMPELLO (Brockton) - MASSACHUSETTS

## Let's co-operate for big business

**I**F you could look over the stocks of all the best footwear manufacturers in Canada, choosing something here, rejecting something there, and taking just the best from each, you'd have a mighty fine stock to place before your customers. And if you could handle many times the amount of stock you do now you'd get a far better price than you can get from the manufacturer now.

You can't choose from the stocks of every manufacturer, and you can't buy more than you can sell, but you can join with other dealers in telling your wants to me so that I can buy with advantage to all of us.

And it's not only what I

can do this year that'll count. There's what I did last year, and the year before, and many years before that. The experience gained through extensive buying will stand us in good stead in 1913. You and I will be able to buy more profitably because of it. We'll know where to go for best value and service.

So let's get together for a great big year in 1913. Come on, get acquainted.

Just at present you'll be interested in knowing that I've a good, complete stock of Independent Rubber Co's good brands—Kant Krack, Dainty Mode, Royal, and Bull Dog. Look over your rubber stock and see that it is properly assorted.

**JAMES ROBINSON, MONTREAL**  
182-186 MCGILL STREET

No. 2004

## 1912 was a Big Year for Tetrault Shoes

But 1913 will not stop  
at Last Year's Figure

On many TETRAULT lines not one of the thousands of pairs of lasts in each style has been idle for months---and the rush still continues.

There are definite reasons for the popularity of Tetrault shoes---snappy styles plus good workmanship, at prices that allow a good profit to the retailer.

You should stock Tetrault shoes in 1913. They are money-makers.

## The last "Rideau" is always the best

The "Rideaus" we will make to-morrow will be better than those we made to-day because there'll be one more day's experience behind them. And every succeeding day's output has been better than that of the preceding day for the same reason.

This consistent striving after better results is what is putting "Rideaus" "in right" with the public. When one of your customers buys his or her second pair of "Rideaus" and finds them better than the first your popularity and that of "Rideaus" is greatly enhanced. Your opportunities for profit increase with every pair of "Rideaus" you sell.

## Popular Styles in Popular - Priced Women's Welts

¶ The PERTH SHOE will interest your women customers because it gives them the style and dressiness they demand at a very popular price.

¶ And PERTH style is not a surface affair that appeals only to the superficial observer. It will stand the scrutiny of the most exacting because it is built right into the shoe. There is a "snap" and a "class" to PERTH SHOES that stays until the shoes wear out

¶ And the popular price of "PERTHS" puts them at once within the reach of the many—it suits the purses of the majority of your customers.

¶ "PERTHS" are low enough in price, and high enough in quality to suit most women.

## PERTH SHOE CO. LIMITED

## A protective mark on shoes

If we couldn't build Surpass Shoes so well that merchants would want to handle them continually we would not put this distinguishing mark on them.

And if this mark didn't stand for something to the wearer of shoes, the merchant wouldn't be interested, would he?

The "Surpass" mark is a surety of honest value. That's why it's used.

For your own protection, and for that of your customer, look for the "Surpass" mark on all staples you stock.

THE LOUIS GAUTHIER  
COMPANY, LIMITED  
QUEBEC CITY

**Maisonneuve** the "Pittsburg of Canada"

offers inducements for the shoe manufacturer to locate here—exemption from taxes, etc.

You doubtless know the following shoe manufacturers that are already located in MAISONNEUVE:—

The Kingsbury Footwear Co., Limited; The Geo. A. Slater Co., Limited (Invictus Shoe); Dufresne & Locke; Rideau Shoe Co.; Paliquin & Gagnon; Kirvan-Doig, Limited; McDermott Shoe Co.; Dupont Freres; and three more big factories, already building and coming.

Here are figures showing the value of the industrial production of the chief cities of the Dominion, compiled by Mr. A. Blue, Statistician of the government, and given before the Manufacturers' Convention at Ottawa, Sept. 25, 1912.

**VALUE OF INDUSTRIAL PRODUCTION**

	Year 1910	
First, Montreal	\$166,000,000 00	
Second, Toronto	154,000,000 00	
Third, Hamilton	55,000,000 00	
Fourth, Winnipeg and St. Boniface	39,000,000 00	
FIFTH, MAISONNEUVE	21,000,000 00

## Why a Retailer Should Report to Credit Agencies

Solid Commercial Reasons Underlie the Giving of True Financial Reports to Accredited Commercial Agencies by Retailers—Instances Showing How This Works Out to the Retailer's Great Advantage

*Why is not the retailer more willing to make a detailed report of his financial standing to the various agencies established for that purpose?*

*Why does he seem to think that it is nobody's business but his own what he is worth and that it is rank impertinence on the part of any outsider, especially a "cold-blooded" commercial agency to make an attempt to set his financial standing before the public and before the people in his trade?*

"These are certainly burning questions," said a shoe manufacturer the other day, "and I know of no one who could take this up with better success or with a better right than the SHOE AND LEATHER JOURNAL, as far as the trade served by it goes." When the retailer refuses point blank to give any information to a duly accredited commercial agency, here is what happens. The representative of the agency either has to send in a blank report or else, in making an estimate on his own hook, he frequently makes it on such a conservative basis that it does not by any means do justice to the assets, financial or otherwise, of the retailer.

In so doing he does not mean to be unfair, but the very nature of his business demands that he be on the safe side, consequently, to make assurance doubly sure, the retailer is rated at a much lower figure than he really deserves. There have been many instances in which men worth \$25,000 and upwards, estimated on a conservative basis, have been rated at \$10,000 or \$12,000, and even less. The agency simply cannot afford to make a mistake on the optimistic side, because of the obligation it assumes towards its subscribers, and naturally it prefers to make some sort of a report based on personal inspection, personal inquiries from other parties, or both, rather than to let the matter go altogether unattended to.

### Results of Refusal to Give Figures

"Here is an example of the way in which systematic refusal to answer questions which, considering the purpose they serve are perfectly legitimate, works out. Some time since one of our Canadian shoe men was in an American city on business and he dropped into a commercial agency where he was acquainted to pay a friendly call. While there a subscriber to the agency's service dropped in for information about a jobber in the same city whom the Canadian shoeman knew quite well. To the latter's surprise, when said subscriber asked for a report as to that manufacturer's financial standing the agency informed him that it could give him no information, simply because the manager of the firm in question and systematically refused to answer or had

ignored all the statement forms which the agency had sent him periodically. Of course the subscriber considered it inadvisable to do business with the recalcitrant jobber, because he knew really nothing definite about him and was just leaving when the Canadian suggested that they call the man up and bring him down to have a little chat.

"He came. When he found what was up he was very wrathful and declared that his financial standing was beyond all question. The agency man replied that year after year he had been sent these statements to fill in so as to show an accurate statement of his resources and liabilities and the agency had never got a reply, consequently the file pertaining to his firm was an absolute blank, as far as information was concerned. 'Now,' he said, 'I'll show you the difference. Here is a file pertaining to Mr. Jones (pointing to the Canadian)—let us say this is his name—and for seven years back. Although a Canadian, and in no way obliged to report to any commercial agency, especially an American one, he has year by year sent in a full and true statement of his financial standing. We can tell in a minute just where Mr. Jones' firm stands, but you, although an American firm doing business in the same city as the agency, have never condescended to let us have the slightest information about your financial standing. Can you wonder that other firms who might be desirous of doing business with you take the same ground as Mr. Blank here and prefer to swing their big deals to a firm they know more about?"

"The manufacturer in question saw a sudden light and returned a form completely filled in the next day."

### The Purpose of Agency Reports

Now, just why should the average retailer consider the agency that makes inquiries as to its financial status in the light of a "Paul Pry"? No agency asks questions pertaining to a firm's financial standing for the sake of being inquisitive, but because they owe it to the merchant himself and also to their subscribers to get information as accurately as possible. Now, if a merchant has only \$500 capital there is no disgrace in making this fact known. The information does not become public property in the sense that everyone on the street knows about it, but is simply compiled in a volume with thousands and thousands of other like statements, and it is accurate and just to all sides. This volume is only consulted by tradesmen who need the information. In fact the only disgrace a merchant need feel is that his capital does not increase after years of labor, because this shows something wrong with himself or his methods of doing business. It is nothing to be ashamed of, however, to have small capital when one is working up or just starting. The pity is in staying there.

Let us suppose, however, that he does give this information, and his rating is duly and justly incorporated in a

volume for the purpose, which volume reaches all the subscribers of the agency in due course. A traveler brings his firm in an order from the tradesman in question, and the credit man who, perhaps, has never done business with him before, at once looks up the agency's report. Perhaps the sales manager has been dubious about filling an order that he may have considered out of place or beyond the probable needs of a tradesman in a town of the size he is situated in. He takes it up with the credit man and they find out that the order is perfectly justified by the merchant's financial standing and his credit rating, and it goes through.

Now, if the merchant had not given a true statement of his resources he would either have been greatly underrated or not rated at all, which would have meant that the sales manager would probably have felt compelled to either cut down the order somewhat or to refuse it altogether. At any rate he would not likely have accepted it before he had made inquiries of the banker in the merchant's home town or from other likely sources, which inquiry would have proved more embarrassing to the merchant by far than would the fulfillment of a straight request for a true statement of his financial standing. When an order has to be refused or cut down because the financial standing of the merchant is in doubt, it is not only distasteful to the manufacturer or wholesaler, but the traveler who took the order is incensed, the merchant himself is wrathful because his standing is doubted, and perhaps because of the length of time and the trouble it takes to straighten things out by correspondence.

#### Where the Retailer's True Interest Lies

Enough has been said to show the purpose of these inquiries and to show that it is to the interest of every merchant, whether shoe dealer or not, to answer them fully. He cannot get more goods if he refuses to answer at all, because his standing will certainly come out when closer inquiries are made—as they will be, undoubtedly, every time. Therefore, it is time that the scales fell from the eyes of the average retailer when regarding this question, so that he will be ready and willing to file with a recognized agency full details as to how he stands financially and what his resources and liabilities are. Correspondence will be greatly lessened and hard feelings now so prevalent in cases arising from this neglect would be almost entirely obviated. It is to be hoped that every Canadian shoeman will give these facts here presented his earnest consideration and end by giving the proper commercial agencies his hearty co-operation, treating them not as interlopers but rather as workers together with him in enabling the wheels of commerce to run more smoothly.

### Want Business Tax Reduced

Claiming that the business assessment now fixed under the assessment act is too high, a deputation representing the Retail Merchants' Association of Ontario waited upon the Ontario Government recently to ask that there be a reduction. Sir James Whitney received the deputation along with Hon. W. J. Hanna, Hon. A. J. Matheson, Hon. R. A. Pyne and Hon. Jas. S. Duff.

A long memorial was read by Mr. J. C. Van Camp, who led the deputation and pointed out that the rate of 35 per cent. in villages, 30 per cent. in towns and 25 per cent. in cities was altogether too high, and the assessment should be reduced to the general basis of 10 per cent. for the whole Province.

Mr. Van Camp argued that the retailers represented the largest commercial class and his premises were usually located on the most highly-assessed property. As a class, he paid the largest share of the general taxes, and in addition to that, there was the business tax, the local improvement rates, and the various licenses levied by the municipality.

The memorial, which was along the lines submitted by the association at the recent sessions of the Assessment Committee, admitted that the endeavor to make all wealth the basis of taxation was sound. The association had no selfish interest to serve, but stood between wealth and poverty, and what affected them affected their customers.

## The Shoe Industry Down East

### Fredericton Has Now Three Factories—Good Opening for Big Tanneries and a Last Making Industry

The past year witnessed appreciable advancement in the development of the shoe industry in New Brunswick, the province demonstrating its desirability as a successful manufacturing district.

Manufacturers, wholesalers, and retailers, are unanimous in the opinion that 1912 was the best the shoe business has ever experienced in that province. Good prices prevailed throughout the year, and there was an increasing demand for all grades of footwear. The Humphrey Shoe Co. of St. John, enlarged their plant during the year, while other shoe manufacturers increased their output. At Fredericton, New Brunswick's capital city, and a thriving manufacturing centre, two large larrigan factories and tanneries were erected during the year. The John Palmer Co., Limited, in order to meet the demands of their increasing business, were forced to build an up-to-date new factory, which is one of the finest of its kind in the Dominion. The Palmer-McLellan Shoepack Co., Limited, were organized during the year, and have lately commenced operations at their new factory near the C. P. R. station.

The largest boot and shoe factory in New Brunswick is that operated by the Hartt Boot and Shoe Co., Limited, also located at Fredericton. This company during 1912 experienced the best year in its history. Since Mr. John D. Palmer, formerly of St. John, took the presidency and management of this concern two years ago, the volume of business has more than doubled. The factory has a capacity of 1,200 pairs a day, and it is expected that the output will be greatly increased during the present year.

Fredericton affords exceptional opportunities for the establishment of shoe factories, last factories, tanneries, etc. The city is now served by five railways, the largest of any centre in the Maritime Provinces. About \$15,000,000 is being expended in railway construction. The cheapest of fuel is available at Fredericton and labor can be procured at reasonable figures. Notably if a tannery was established at Fredericton, the raw material could be assembled to excellent advantage due to the city's nearness to the port of St. John (66 miles). Those prominent in shoe manufacturing see a very bright opening for a successful tannery, and it would not be surprising if concerted action in this direction was taken in the near future.

Fredericton is the centre of almost inexhaustible areas of hard and soft wood, which can be assembled either by rail or water at a very low cost. Rock maple, which is essential in the manufacture of lasts, is available in large quantities, and there should be a good opening in Fredericton for a last factory, as most of the lasts are now imported by the manufacturers from the United States.

The City Council of Fredericton has been authorized to grant a free site, free water and exemption from taxation for a definite period of years to sterling, bona fide industries, and the Publicity Commissioner would welcome enquiry from those interested in the establishment of shoe, last or tanning companies.

The most prominent figure in the shoe industry in New Brunswick is Mr. John D. Palmer, the president of the Hartt Boot and Shoe Co., Limited. He possesses striking business characteristics, is pleasant at all times and enjoys the assistance and co-operation of every employer of the big factory. The head of the Hartt Boot and Shoe Co., Limited, is not a member of that class who achieving good results, is content to sit back and take it easy, but he is one of those who continually push things for all their might. He has made good in the shoe business of Canada. Down in Fredericton, Mr. Palmer is recognized as one of the best boosters of the city's advantages.

## Christmas Windows That Sold Shoes

Enterprising Retailers Excel in Variety and Effectiveness of Their Display—How Prize Winning Trims Were Judged.

In the Christmas window trimming contest conducted by the SHOE AND LEATHER JOURNAL, much interest was aroused. Entries were received from a large number of centres and the judges experienced no little difficulty in arriving at a decision. The displays in all cases were artistic and elaborate. They were judged, however, on their merits as business creating mediums, their power of arousing attention and interest and making a silent but direct appeal to buy.

The real vital object of all window decoration should be to sell goods. If the presentation of footwear styles fails in this it can be of no great benefit to the retailer. A number of "freak windows" were received, a few were badly photographed, and some others were so congested with shoes of all kinds that no definite impression of values or shapes could possibly be carried away by the spectator. The great majority, however, were splendid efforts and represented much effort, thought and study.

In the city competition the first prize has been awarded to the Fogarty Co., of Montreal, and the second prize to C. D. Mitchner, the Royal Shoe Store, Saskatoon. Other city window displays are worthy of special mention. The

illustrations will appear in later issues of the paper as well as the results of the contest among retailers, who are located in towns and villages.

### A Window That Grippped Business

The prize-winning trim represents a Christmas window dressed by Fogarty & Co., retail shoemen, Montreal. It is one of the classiest bits of window dressing for a shoe store that the competition editor of the SHOE AND LEATHER JOURNAL has had pass through his hands for some time.

The background was a large canvas painting representing the sectional view of a house surrounded by a true-to-nature outdoor scene. Part of the wall is shown cut away so as to give a look at the interior of the house, where a genuine Christmas scene is displayed—fireplace, gifts and all the rest of it. This painting was very lifelike and made a splendid background for a most attractive trim.

Above, and in front of this painting, there was suspended from the ceiling of the window a skate about two and a half feet long, made of galvanized iron. This skate was covered with cotton wool, giving quite a wintry effect, and being in strict keeping with the rest of the display. The floor was also covered with this wool, which added to the crisp out-of-door tone resulting from the drawing and the skate.

Hockey, skating, skiing boots and moccasins were shown in the window and these proved the kernel of the display for which all the rest was intended to be but a sign board. The window paid, and paid splendidly, especially as it is

FIRST PRIZE CHRISTMAS WINDOW—BY THE FOGARTY CO., LIMITED, MONTREAL

situated on such a busy corner where the striking display gripped passers by. The four show cards also added greatly to the effectiveness of the exhibit, as did the holly, mistletoe and other decorations of a Christmas nature.

#### A Simple and Effective Arrangement

In the Yuletide window of the Royal Shoe Store, of Saskatoon, simplicity and effectiveness were the keynotes, while the whole display was tastefully arranged. D. J. M. McGeary is responsible for the execution and trim. As business getters the goods and catchy display cards showed up well. The background of white enamel lattice work (home made) was an important feature and also a rich velour curtain (golden silk).

The wreath and doves formed a pleasing centre for the back and the end of the picture. A liberal amount of genuine holly decorated the lattice work and also the bottom of the window. The floor was covered with white flannelette and then again with snow material, imparting to it a glistening effect in contrast to the goods which were carefully chosen and artistically arranged. Three vases of artificial carnations were placed on the floor. Holiday goods, selected shoes, and some hosiery constituted the display. The stands and pedestals were arranged to attract attention to the styles on view and to balance up window.

I don't know anything that a young business man ought to keep more entirely to himself than his dislikes, unless it is his likes. It's generally expensive to have either, but it's bankruptcy to tell about them.

## Jolly Reunion of a Loyal Staff

The annual dinner of the travelers, office and factory staff of the W. B. Hamilton Shoe Co., Toronto, which was preceded by the annual meeting of the company, was held at the National Club, Toronto, on January 3rd, and proved to be a most enjoyable event. The decorations of cut flowers and potted plants were very pretty.

After the feast of good things came the speech-making. W. A. Hamilton, President of the Company, was toast-master and part of "the penalty" that every guest paid was to make a few remarks, but all were equal to the occasion. Everything passed off in fine style, the informal function being unanimously voted the most successful ever held in the history of the company, which is one of the oldest in the Dominion. John Huxley, better known as "the Professor," sang the British Lion, and was given a rousing reception. The following were present, W. A. Hamilton, Chester B. Hamilton, G. A. Seccombe, W. T. Purvis, W. A. Griffiths (Barrie,) L. S. McKindsey (Hamilton), directors of the company; George Killer, manager of the Western Shoe Co., Berlin, J. E. Firth, Peterboro, Geo. B. Campton, Brockville, Richard Roach, St. John, N.B., J. A. Viau, Montreal, C. J. Silver, John Huxley, W. H. Jardine, George Nicholson, J. O'Sullivan, E. McConachy, R. B. Hornbrook, A. Hatt, W. J. Colson and I. Whitton. At the annual meeting most encouraging reports were presented, the volume of business during 1912 exceeding that of the previous year by \$125,000, while the orders for spring delivery show the gratifying advance of twenty-five per cent over those of twelve months ago.

SECOND PRIZE CHRISTMAS WINDOW—BY C. D. MITCHNER, ROYAL SHOE STORE, SASKATOON, SASK.

# Clerks Take Their Cue from the Boss on Conduct

"Opportunity" Offers Some Pertinent Observations on Decorum and Selling Methods of a Staff—Thinks They Average as High in Qualifications as Employers—There are Two Sides to Every Question, Including "Returns."

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir:—Allow me as a clerk of several years' experience, to make a few remarks regarding an article which appeared in your December 15th edition, on the "Dignity of the Sales Force." You speak of the references made by a certain Montreal traveler, wherein he finds fault with a shoe clerk, talking in too loud a tone of voice to a customer, so that everyone in the store was able to overhear this salesman's remarks. How does that traveler know but what the clerk's customer was hard of hearing? Now, regarding the observation in regard to certain salesmen in one of the finest shoe stores in Vancouver, waiting upon women buyers, and using slang expressions, I might say that I agree with the traveler in this respect, and also think that no young man should say "I this" and "I that." It is far better for an employee when talking of the style, fit or wear of shoes, to use the term "we." The proprietor of this establishment, however, could overcome this objection by going about his premises once in a while and observing what was going on.

The remarks with respect to salesmen, who do not happen to use correct English, are too severe. Many of the best clerks, the most effective and alert members of a staff, never saw the inside of a grammar, and I may add that, in my opinion, if an employer would always use good English, his salesmen would follow his example. I write purely and simply as a clerk, but I want to emphasize the fact of the influence which the head of the house generally has upon its members. Do not blame the salesmen for too many frailties. The average employer has equally as many, if not more. Most men follow the example set by their chief.

## Smoking During Business Hours

I notice that a reference is made to the fact that clerks in another store are in the habit of smoking at the back of the shop in dull moments. I would like to ask where the boss is? Surely he could check this practice if he desired. But he very probably is an offender himself. I certainly would like to hear from a few more travelers, such as the one who spoke out so candidly. I give him credit for the courage he showed in stating what he heard and saw in the stores. I would like to see more articles in your paper on how the proprietor should treat his help. I think there is a wide field for discussion and instruction on this subject. Views may differ very widely, but there are generally faults on both sides, for you know, one of the modern newspaper philosophers, who passed away recently, stated that "there were always two sides to every story, and the truth besides."

I am not offering any captious criticism, but I take exception to a few things which appeared on page 47, under the heading "Manufacturers Discuss Returned Goods Problem." A full page is taken up with the attitude of the manufacturers and their discussions on returned goods. One of them says that "if we find a retailer constantly returning goods, we drop him from our list."

I do not think this man is saying exactly what is correct, for most manufacturers that I have seen are only too anxious to sell a retailer again; that is, if they have "put one over on him" as a great many of them say.

In my humble opinion, if the manufacturers would stick to a strictly one price idea and pay more attention to workmanship and finish, than to discount and terms propositions, they would not have so many "returns." I am doing, some straightforward, plain speaking, but the fact is, I often sell stuff called "shoes," and would be ashamed to meet the customer afterwards on the street. The heels are not even,

the tips are different and the insoles are often away over the in-seam. These are only a few of the many shortcomings. When you speak to a traveling salesman about it, he will say: "Oh, you are getting too particular." But at the same time, these men are very agreeable when showing you their new samples and will add, with considerable assurance: "Oh, we have a new superintendent now, and all will come out fine. We are certain you will have no more cause for complaint." But the difficulties very frequently continue.

You are certainly correct when you say that if the manufacturer will keep a keen eye on all goods sent out, it will surely lessen the amount of "returns." Thanking you for your space for these rather disjointed observations, I remain  
Yours, etc.,

Brandon, Man. Jan. 8th, 1913. "OPPORTUNITY."

## From Parcel Boy to Manager

For over sixteen years W. H. Plummer has been in the shoe business. He started at the foot of the ladder, running errands for Mitchell's shoe store in St. John, N.B. He had an ambition to get behind the counter, for they had counters in nearly all footwear establishments in those days. This dream was realized after two years of hustling parcels, cleaning floors and washing lamps. Early in 1902 Mr. Plummer secured a position with Waterbury and Rising, where he remained for five years, when he went to Sussex, N.B., to take full charge of the shoe department in the

Sussex Mercantile Co., Limited, which post he still holds. He gained most of his selling experience with Waterbury and Rising, and found their King Street store a splendid school in which to learn patience, tact, courtesy—in a word, salesmanship. Since going to Sussex, he has acquired a wider knowledge of values and now pays as much attention to the buying as the selling end. Mr. Plummer is thorough, practical and earnest in all his work and is a clever window trimmer. He possesses many original ideas regarding stock keeping, sales, etc., which he has carried out in his department and has built up a wide and constantly increasing trade.

# How Do You Figure Out Your Stock Turn-overs?

Many Retailers Think They Turn Their Stock Investments Oftener Than They Really Do—Some Dealers Could Turn Their Stock Much Oftener Than They Do—This Article Tells How

By A. M. BURROUGHS

"Business is a tank of profits. Capital is a myriad of sponges. The sponges should be constantly put into the tank, one at a time, then taken and squeezed dry."

A shoe dealer bought ten pairs of shoes at \$2 a pair and sold them at \$3 a pair, costing him \$20 and selling for \$30. He turned his capital once, at 33 1-3 per cent. gross profit on the selling price.

"—turning capital often means many profits—"

An implement dealer bought a wheelbarrow at \$2 and sold it for \$3. Then he bought and sold another and another until he had sold ten, costing him \$20 and selling for \$30.

He turned his capital ten times at 33 1-3 per cent. on the selling price at each turn.

One merchant makes 33 1-3 per cent. on his investment. The other makes 333 1-3 per cent. gross. The difference is

that one man invests \$20 once. The other man invests \$2 ten times. Both do a gross business of \$30.

If both had \$20 at the start, the implement dealer could have invested his other \$18 in a dozen other items. By the time the shoe dealer had sold his whole ten pairs of shoes the implement dealer would have sold ten each of the other twelve items.

## When Capital Is Turning Once

Capital is turned once when it is invested in stock and all the stock is sold.

In practice this becomes very complicated, because a part of the capital invested is released almost immediately and put back into additional stock.

"—turned stock once—"

This has the apparent effect on the books, of increasing the investment. The purchase records show stock purchases very much in excess of the capital invested. Sales records show, however, that this stock has been sold.

A dry goods man doing \$100,000 business per year on a \$10,000 investment, probably puts \$60,000 to \$70,000 into stock—that is, re-invests his \$10,000 capital from six to seven times.

Knowing the amount of money originally invested, the average amount of stock on hand and the total amount of the purchase, the retailer can arrive at the number of times he has turned his capital without reference to the amount of the gross business. Whether he has turned it at a profit each time is another matter.

We have purchased \$30,000 worth of goods. Our stock averaged \$5,000. Our original investment was \$5,000.

## Re-invested Capital Six Times

We have re-invested our money six times. We still have the same amount of stock we had in the beginning. So we have invested our capital six times.

The hardware man who has \$10,000 worth of stock when he takes his inventory needs to know the amount of the purchases and the average stock on hand to arrive at the number of his turnovers.

When he tries to figure the number of turnovers on the gross business, he must allow for the profit on each turn of his capital before he can know the number of turnovers. He is working without a starting point.

If he knew the amount of the purchases and the aver-

age amount of stock on hand, it would be an easy matter to see that he has re-invested the amount represented by his stock a certain number of times.

Suppose you had a gross business of \$10, had stock on hand worth \$1, and knew that you averaged \$1 worth of stock during any given period, how many times would you have turned the stock investment of \$1?

Most retailers would jump to the conclusion that you had turned it ten times.

Now, let's see. Suppose you made 50 per cent. gross profit (based on selling price) at each turnover. Fifty per cent. of \$10 is \$5, so your total stock investment represented in the \$10 gross business was only \$5.

You turn your capital once when you sell all the goods you have bought, regardless of the price at which the goods are sold.

A chapter from "A Better Day's Profits," copyrighted by Burroughs Adding Machine Co.

## Are Women Careless in Foot Attire?

Miss Billie Burke, the talented actress, who for some time has been writing articles for the press, recently took a fling at her sex for the kind of shoes that some women wear. She says that "many a fluffy girl wears the shoes of a tramp," and "that a neatly shod foot is absolutely necessary in these days of tight skirts."

I wonder why so many girls think the thing of least importance is their shoes when they start to get themselves into a swagger costume? declares the charming comedienne.

Your shoes should be one of the first things that you put on when dressing. They should always be donned before you don your corset and before your hair is combed. Their importance in "good grooming" is quite as great as that of any other part of your attire, yet I have seen the prettiest girls, who seemed perfectly clothed until their feet were spied, and who then made one feel they were peacocks indeed.

In no way are the different standards by which men and women are judged more noticeable than the standards by which their feet are shod. The standards of their morals are not farther apart than the standards of their footwear.

If a man is going to apply for a job the first things he thinks about are a shoe shine and a shave. If he only has a quarter it will go for these two things. A girl, perhaps after the same position will be sure that her hair is coiffed in the very latest style and that there is plenty of powder on her nose—but she will forget that her shoes need blacking!

Last summer during the rehearsals of "The Mind the Paint Girl" I used to see many actors and actresses on the street that were presumably looking for positions in the companies then forming. I could not help but notice the difference in the condition of their shoes. You might be sure that the man was living on his last dollar if his shoes were not shined. He had almost reached the stage of the "down and outer." You might, however, see shoes of the same condition on a girl who was all dainty, fluffy ruffles that bespoke a well-filled pocketbook.

Some women seem to think that shoes with buttons off and heels run down do not mean anything if the hat is on straight.

Many girls will buy a beautiful collar or jabot when they need walking boots badly, and they will go on wearing shoes that are so run over at the side that their ankles are strained and the arches of their feet endangered every instant. Make a New Year's resolution that you will not abuse your feet, or other people's eyes, by wearing untidy shoes next year.

# Starting in Business on the Other Fellow's Capital

Can a Bright, Progressive Youth Succeed on Assurance or Bluff?—Scores of Successful Retailers Began on Literally Nothing—How a Good Appearance, Shrewdness and Persuasive Talk Won the Day

The SHOE AND LEATHER JOURNAL now and then receives inquiries from young men who have had a certain amount of experience in the retail shoe line asking how much capital is required to start in the footwear business. This is a difficult question to answer and depends on circumstances, what sort of a connection the ambitious youth has, where he proposes to launch out, what class of trade he would like to cater to, how much opposition there already is, the character of the community, and what his general experience, trade insight, selling ability and purchasing acquaintance are.

To attempt to answer the question offhand, would be preposterous. One might as well lay down a hard inflexible rule regarding how much a man should eat, how much walking he should do for exercise, at what hour he should retire and how large a family he should raise. A good deal in reference to such matters depends on the general health of the individual, his temperament, his reserve force, his mental make-up and his upbringing in life.

## A Traveler Tells What He Knows

A few weeks ago there were published in these columns several contributions on the subject of going into business with one thousand cash capital, and also on the assumption that one had two thousand five hundred dollars in bank bills. The views of the persons writing from the two standpoints differed widely. Two or three even said that they would not endeavor to embark upon the troubled sea of retail life with a thousand dollars, and others were doubtful if the larger sum was sufficient, in view of the heavy stocks, rapidly changing styles, and prompt payment requested by many wholesalers of the present day. Much depended on

the town, the class of residents, the lines carried, proximity of wholesalers and many other things.

A refreshing communication reached this office a few days ago from a writer who signed himself as "Traveler with eighteen years' experience on the road." He assured the JOURNAL that he wrote in all seriousness, and as he presents some new viewpoints, the following excerpts are taken from his rather lengthy communication.

"I believe that it requires little or no capital to enter the shoe business to-day, if given one or two accepted conditions—that is, a fair amount of experience and natural shrewdness and a favorable location, with rent at a reasonable figure. Of course, it would be absolute folly for a mere tyro in the game to get away with the bluff, but a bright, intelligent chap can do it.

## Began With No Silver Spoon

I know what I am talking about, and in my career have learned the history of several men, and some of them started on practically nothing. I have in mind one leading retailer on a fairly good street in a neighboring city who got off to a start with thirty-five dollars; another who has specialized in a certain line new to the trade had only \$250. capital. Another—and of course, I am not at liberty to mention names—secured the backing of his mother-in-law, and, if I told you where he is located, you would open your eyes. He does an exclusive trade to-day, and gets the very highest prices simply on the name of his store. In a Western Ontario town, a man, upon whom I call every season, and who has cleaned up thousands of dollars, began with less than six hundred in a village. He succeeded there, sold out

AN EFFECTIVE AND SMART HOLIDAY SHOE WINDOW, BY ALLAN SIMPSON, PARLIAMENT ST., TORONTO, WHICH CREATED HIGHLY SATISFACTORY BUSINESS RESULTS

to advantage, and then started afresh in a county town.

"Yes, I can furnish a score of instances where most successful retailers to-day began on practically nothing but nerve and supreme confidence. They held themselves well in hand the first few years, confined their buying largely to two or three houses and won out. What has been done can be done over again. Many others have tried the experiment and have fallen by the wayside. I am not advocating such a course as starting on nothing, but it can be accomplished to-day just as well as ever.

#### Is Credit So Hard to Get?

"I have pointed out that a man must have knowledge of the trade and a good front—that is half the battle. They say that credit is hard to obtain. Well, it may be, but in some respects, and with some people, it is the cheapest and easiest thing in the world to secure. You ask if wholesalers would not inquire into the backing, antecedents and other like information regarding a man before they extend him credit. Perhaps they will, but here is a case I know of and the man has "made good." It all happened two or three years ago and the fellow is in business in a certain Canadian city to-day. There may be a quantum of deception in what he did, but when a chap is desperate, he will do most anything if he has only a few dollars in his pocket. This persistent fellow looked around one of the new sections of the city which was growing rapidly. There was not a shoe shop within six or seven blocks, and he discovered a store that he thought would suit for an opening. The rent was forty dollars a month. He told the landlord that he would take it. He bought a few chairs, for which he paid cash. He got a carpenter to put him in some very fair fixtures of the kind, and contracted with an electrical firm to put up the electroliers. The latter work was done and the bill not sent in for some time. Then he went among the wholesalers and told the following fabrication, for he had just come from the West. He said that he had been in the shoe business several years ago, naming a certain town in Alberta, where the man with whom he claimed to have gained his experience was dead, so that the wholesalers could secure no definite information from that quarter. He had spent four years with this dealer, so he affirmed. His talk showed that he was familiar with shoes and he was well versed in the terms of the trade, so his word was accepted. He then told how he had drifted into the real estate business in a growing city on his private hook and had come east to invest his money.

#### Got a Stock on Plausible Tale

"I will pay cash," he said, for all that I get, and I want six hundred dollars' worth of men's, women's and children's goods. Now when a fellow offers to pay cash that does not mean spondulux on the spot, but ten days after the delivery of the footwear. Without revealing that he had practically no money at all, and had only a load of effrontery and confidence, he secured the goods after trying two or three wholesalers. He talked quietly and impressively, and his tone carried conviction as he spoke of paying cash right off the reel—a proposal not presented any too frequently.

"Well, the goods were sent up after a man from the warehouse has gone around to look at the store and found that the opening was a pretty promising one.

"I will call the fellow Jos. Hinter—that cognomen will answer. He secured large sheet posters and several hundred circulars—all on credit, mind you—and these were distributed. His windows were nicely dressed, and he started business on a Friday, so as to get the benefit of two Big Saturdays before that fateful ten days in which he had to pay cash, came off. The first day he took in \$40, and the next Saturday, his receipts amounted to \$135. Monday next added only \$25, Tuesday, \$31, Wednesday (when the hands in the surrounding factories were paid), \$75. Thursday his revenue dropped back to \$17, Friday it swelled to \$39, and

by sending out announcements of special values on Saturday to celebrate his first week in the trade. He had a veritable harvest. He ran \$162. This made exactly \$524. He had started in a favorable month—June, and his small stock was well assorted. He had made a very favorable appearance by having all the shelves filled with cartons, even if half of them were empty. He deducted \$74 for living expenses, clerk hire and other incidentals.

#### Making Himself Solid With Jobber

"The following Monday morning Hinter went to the warehouse. He had promised to pay the entire \$600 (which he had obtained in goods), all in cash, getting the usual discount of two per cent. He handed over to the accountant just \$450, requesting a little time for the balance, and telling a good story that trade had been a little slower than he expected, and that no man could rightly calculate the exact amount. Then a remittance which he was expecting, had not come to hand. His word was accepted especially as he had called around a day or two sooner than necessary. He secured some more goods, but he knew what he was about and did not load up heavily. The next week he took in three hundred dollars and he had gauged pretty accurately what his territory would yield him. He kept his stock neat and trim, was obliging and the people liked him. His service was cheerful and prompt.

He continued to send personal leaflets around to the residents in that locality pointing out that he could sell just as cheap and handled just as reliable goods as any of the down town establishments, and that they could save both time and car fare by purchasing from him.

"Hinter had begun at the psychological moment; he had sized up the situation well and he did not lose his head. He had to do some kite-flying at first, but he handed all the money over to the house promptly, and in time got so that he could wade out a little farther from shore and buy from other firms. There is no use going into further details. He has succeeded beyond his fondest expectation, and he started virtually without a dollar. To-day he has his stock of \$5,000 all paid for. He has put in better fixtures, enlarged his store, and increased his staff. He also got married a few months ago.

"There are not half a dozen men to-day, who know that he got his start purely on assurance and a bold front. Hinter possessed the rare gift of not having success turn his head, of keeping his mouth shut and his brain active and being on the job all the time. And yet some will tell you to-day that it requires an awful amount of capital to launch successfully in the retail shoe business. Hinter took a chance after he had tried his hand at several things in the West. You naturally ask where he got his experience. Well, some day I will tell you, but not now, but remember, every clerk who unpacks a case or takes down a carton is not a Hinter—far from it."

#### USEFUL ADVICE TO SALESMEN

*Enclosed you will find one dollar to pay for my subscription to the SHOE AND LEATHER JOURNAL for another year.*

*Allow me to say that I find the JOURNAL very instructive. I am sure it would be to any young man's advantage to keep in touch with its pages, for it gives much useful advice to the shoe trade.*

*Yours respectfully,*

*W. H. Mack, Jr.*

# High Level of the Hide Market During Past Year

Conditions Clearly Reviewed and the Prediction Made That Prevailing High Figures are Likely to Continue—Everything Points to Active Business During Coming Year—Why Shoe Prices Have Been Advanced

"The Chicago packer market has shown a gradual advance in price ever since the beginning of the year 1912, both in natives and branded hides," says W. D. Beardmore of Beardmore & Co., Toronto, who ably reviews the situation during the past twelve months, in the annual Financial Survey edition of the Toronto Globe, issued recently. He adds:

In the autumn, while the hides themselves do not actually depreciate in quality, yet the hair, being so long, absorbs and holds a great deal of moisture, and, the cattle being stall-fed, more or less dung adheres to the hides, and, although

W. D. BEARDMORE

allowance is supposed to be given for this, yet it does not nearly cover the extra weight caused thereby, and, owing to the condition of the hides, our experience shows that November and December hides are not worth within 10 per cent. of July and September hides, on which the hair is very short. Notwithstanding this, as you will see by the quotations following, the advance has continued until this month, and, although the demand has now slackened, and the market exhibits a good deal of weakness, yet the conditions which have caused the extreme high prices this year still exist, and, barring any financial stringency or panic, there does not seem to be much prospect of lower prices. With December hides ruling at about the top-price of the whole year, when they are actually not worth within 10 to 15 per cent. of the summer hides, it is not to be wondered at that tanners hesitate to buy, as they are doing at present, and prefer even to stop working rather than pay such exorbitant prices for hides in such poor condition. While, therefore, we naturally look for lower prices, as the quality of the hides declines in January, February and March, we do not think it is likely that the prices at which these hides may sell will be, considering quality and condition, relatively lower than prices at which hides ruled last July and August, and leather made from these spring hides at prices which hides will probably bring will cost quite as much as that made from July and September hides.

## Some Comparative Prices

The Chicago market opened in January of this year at 15¾ cents for heavies, and during February about the same prices prevailed. In March the price declined slightly,

but that was in the very worst season of the year, and it was remarkable that hides should have brought such prices as they did. In April, in spite of hides still being poor and grubby, the price advanced, first of all, to 15¾c., and afterwards sales were made as high as 16½c. In May hides sold at 17c., in June at 17½c., in July at 18c., in August at 19¼c., in September at 19½c., in October and November at 20c. As already stated, December hides have declined, and to-day would not bring more than 19c.

## Away Down South

The South American market opened this year with Buenos Aires ruling at about 22½c., and in November Buenos Aires sold, C. & F. Boston and New York, as high as 32c., which is the record for many years. Dry hides are now getting in the poorest season, and, the demand having slackened, Buenos Aires are now offered at 29c. It must be remembered, however, that when Buenos Aires were selling at 32c. to 32½c. they were relatively dearer than other kinds of South American dry hides. They were selling at about the same price as Cordobas, although the latter usually sell at from 1c. to 2c. per pound more than the price of Buenos Aires, and, with the very high prices now ruling, are easily worth 2c. per lb. more.

The season for Cordoba hides is now about over. These sold as high as 33c., but none are offering to-day, the fact being that the market has been pretty well sold out.

## The Price of Leather

In the United States, and in Great Britain also, leather, although prices have advanced very considerably, has not sold at a parity with the price of hides on the same date. While the trade in Canada, and also in Great Britain, has been very good, and indeed phenomenal in Canada, yet in the United States the same active conditions have not existed, although during the last few months the demand has very greatly improved, and advances have taken place, which were long overdue. On the whole, tanners' books must have shown very handsome profits during 1912, or at least, for the last six months, but, notwithstanding this, prices realized have in many cases not sufficed to provide out of the profits sufficient to pay for the advanced cost of hides to replace those which were sold. This applies especially to the United States, as conditions in Canada have been a good deal better.

Shoe manufacturing has been phenomenally active the whole year, and at the close finds every factory running up to its fullest capacity. Prices of shoes generally have been advanced to meet the additional cost of leather, and manufacturers report that they have had no difficulty in getting increased prices.

Everything points to a very good business in 1913.

## ANOTHER WORD OF APPRECIATION

Please find enclosed Express Order for one dollar for your excellent paper—*THE SHOE AND LEATHER JOURNAL*—which I read with a great deal of profit and interest. It is getting more helpful and instructive all the while.

Yours respectfully,

Fred. A. Falconer.

# The Best Way to Keep Shoe Accounts Collected

Nearly Every Retailer Has Many Good But Slow Pay Customers—How to Regularly Get What is Coming to You and Still Retain Their Patronage—A Simple System of Recording All Credit Transactions

If every one paid cash for shoes, and no one asked for credit, the retailing of footwear would be an ideal occupation. Many dealers find that it is utterly impossible to transact an absolutely cash business. They can not do so for many reasons. Probably the town in which they are established is a factory centre, and pay envelopes find their way into the hands of the army of employees every two weeks. It may be that credit has become a local institution so firmly entrenched that it is impossible to make a radical departure, or that farmers, professional men, and life long residents are in the habit of settling their accounts at stated periods, and to alter the system requires more courage and backbone than the struggling retailer can summon.

Of course, the alert, discriminating shoeman learns in time whom to trust and whom to refuse credit. He generally has to pay for his experience, however, and may be doing business in a city or town for months and, in some instances, for years before he becomes thoroughly acquainted with the dead beats and fakirs. In every community there are many people who are known as "good but slow pay" customers, and incidentally it may be remarked that there are a number

of business men in this class. Collecting the footwear bills from families who are slow to settle up yet fairly well-to-do and still retain their patronage is a difficult task. One cannot go at such parties with an axe and a hammer.

The secret of the success of such collections is to get what is coming to you and still keep the friendship and good will of those inclined to "transgress," or who do not keep their promises, to put it mildly. Good buying is featured as one of the most essential qualities in the upbuilding of a profitable shoe business. Getting rid of dead stock and keeping your goods on the move is another, and still a third is not carrying too much foot toggerly for the business done. One factor frequently overlooked is the successful collection of accounts. Not every shoe dealer can be a successful collector. Human nature must be studied and good judgment exercised. Collection is a task by itself, a work of great importance if your credit business is large. Money and experience steer the ship of commerce and to keep shoe accounts well collected and still retain your customer's patronage, is of great value. But it can be done.

"The great percentage of failures rests in not knowing

Here is a rather unique holiday trim of Wallace Bros., 171 Barrington street, Halifax, N.S. The character of the display in both windows was a "snow window," the materials used being cotton wool and snow sparkle for the flooring and borders, while the trimmings were of holly. The goods shown in the ladies' window consisted of a general selection of fine footwear, while in the men's a hockey scheme

was carried out, skates, hockey sticks and pucks being exhibited. The window was decorated by W. G. Power. Wallace Bros. have recently fitted up their front with handsome electric signs and Geo. D. Wallace has taken in as his partner Herbert D. Wallace. The firm has been changed to Wallace Bros. They report that the holiday trade was very satisfactory from every standpoint.

how to do business and in failing to collect for what you have sold," remarks T. F. McDowell, of Vancouver, B. C. "We might ask ourselves, "Why people who can pay, don't pay?" Do we find this class behind in their insurance policies or their obligations in transactions in which their personal worth is in danger? Very seldom.

What a revolution in trade we would have if our accounts were settled when due. Some people assume obligations with the idea that if they get short of cash at any time the retailer can wait, but he (the customer) finds money to pay his insurance. Our several associations, and those affiliated in one, The B. C. Retail Merchants' Association, can do a great work to establish prompt settlement of accounts. It is the duty of every member of a retail organization to report those customers who are unscrupulous in their payments.

**Make Settlements Short**

Suppose you are in business and you approach your customer whose account is past due. He replies by saying, "Why do you bother me about a cheque? When I lived in Winnipeg my shoeman waited three months for his money." Or he might say, "Before I opened my account with you I dealt at your neighbor's store and he never asked me for money; now, if you don't want my account under these conditions I will deal elsewhere."

Now, this is the point I want to bring out: Let us stop this now and forever. None of us want to lose a good customer if he is well-to-do, but we want to feel that our competitor will act as we have, and not allow such dilatory settlements.

Mr. Smith may speak to you in regard to opening an account before he settles with his former dealer, but if he finds a rule prevailing among tradespeople insisting on prompt settlement, he will in all probability remain with you, and pay up.

**Arranging the Details**

Let us now deal with Mr. Jones. He approaches you for credit; he finds it more convenient to order shoes by telephone, asking that they be sent up on approbation, pay by cheque, or his income may demand a certain time of settlement. Do you transact this business over the 'phone with a man you do not know personally, or only by reputation. Never. He is asking a favor; he must come to your place of business. Now is your time to arrange details. Personality must play a great factor at this meeting. You must show a certain degree of independence; impress the idea on your likely customer that you are in business to cater to his requirements and to please. In making these arrangements, state your terms, then give him the privilege of stating his time of settlement. If your date is the 10th of the month following statement and he pays all his household bills on the 15th, by all means grant him his request; by thus consenting you gain your first point, but make a record of it.

**A System that is Simple**

The system for this purpose is very simple. A little cabinet file with several cards divided in sections A, B, C, etc., and on one of these cards you write thus:

Name.....  
 Residence.....  
 Owner of Residence.....  
 Residence or Office 'Phone.....  
 Previous Dealer.....  
 Date of Settlement as Arranged.....  
 .....

Also leave room on these cards to record any court transactions which you may obtain from Bradstreet's or Dun's weekly reports (for the best of us sometimes get into trouble).

I believe it wise to enclose in your first statement to a customer a memo of this description:

Dear Sir—

To avoid any misunderstanding in connection with the payment of this account, we respectfully state the terms of settlement as arranged to be August 15.

Faithfully yours,

Name.....

**Wife Will Keep Him Posted**

As a rule, the statement when received from the mail is opened by Mrs. Jones. At a glance she sees the arrangements (probably Mr. Jones has not told his wife of these terms), thus she is likely to keep busy Mr. Jones posted about August 15, or date agreed upon. If the account is not paid on August 15, send him an account rendered, and enclose one of these little notices which I have just mentioned. This transaction should be recorded in your collection journal, and a date set for renewed action in case of default. On that date your next action is to get in touch with him over the 'phone, speaking to him courteously and asking him for a cheque. He may say, "I will send you a cheque on August 25th." "Thank you, sir," should be your reply. Record this date in your collection journal. August 25th passes and you have not received his cheque. Before you close business on this date attend to Mr. Jones in some way. I would suggest a letter like this:

Dear Sir—

We respectfully draw your attention to your July account for \$29.45, which you failed to settle to-day, according to arrangements made August 20.

Yours truly,

Name.....

Next morning he opens his mail and is confronted with this letter. "By jove, I forgot that matter yesterday, I must send him a cheque at once," he says.

**Use of a Collection Journal**

A collection journal is a book with consecutive days and dates and on each day and date have plenty of room to record different transactions such as:

Call on Mr. Jones for July account by request.

Mr. Smith promises a cheque by mail to-day.

Mr. White's note on account due to-day.

Sent Mr. Black a statement on August 15; he promises to pay to-day.

Sent Mr. Kelly a statement August 15, unable to get in touch with him; write him again to-day, etc.

When you have sent your accounts out, take from the ledger a list of names of every account owing, and their amounts. You know by so doing how much each person owes you. Accounts should be in alphabetical form, and when payments are received make it a daily duty to mark "paid" opposite their amounts, or if paid on account mark "paid on account \$20.00." On the 15th look over this list and make what I would term a collection list. On this list you have before you the balance of your unpaid accounts. Watch them carefully.

If you are compelled to resort to methods of collecting, you must have facts in such shape with which to confront him if he says: "I did not make arrangements to pay you on the 25th of August," you have your collecting journal to show him. The business man sometimes forgets, seldom making a record of a promise, but you have, and thus you always have the best of him.

Don't waste time calling if you can get him on the 'phone; if you call on him his office may be filled with people waiting to see him on business, but 'phone him and he will stop talking to his caller and you thus have him at once. Try to always leave your man feeling the best towards you, but thoroughly impress him with the importance of your business

# Doing \$12,000 Business Annually in Shoe Trade

## WOULD STOCK NO COSTLY SHOES

By T. A. Forder, Vancouver, B. C.

To do a shoe business of twelve thousand dollars a year, you ask in your competition how large a stock a dealer should carry. I would say that his shelves should at no time contain more than four thousand dollars worth of goods. At certain seasons especially spring and fall, the stock might run a thousand dollars more, but on the average, it should not be more than what I have mentioned. The progressive shoeman should be able to turn over his stock three times every twelve months. If not, I do not see with the high rent that he has to pay to-day, taxes, light, heat and other incidentals, how he is going to make any money. I have been a shoe clerk for nine years and have never gone into business for myself, but I am giving you my views based on observation, deduction and insight gleaned working for others.

Some retailers in a small town or village may say that I am only theorizing or speculating, and if I think I can do a twelve thousand dollar business annually on this limited stock, that I had better try it for myself and find out. Well, there may be something in this utterance for you know that it takes a lady, who has never married, to give her wedded sisters sound advice on the proper management of a home and husband, and it requires a woman, who has not raised a family to impart instruction to the neighbors on the right way to bring up children. On the same principle I have equally as good a privilege to tender advice on how often a small shoe man should turn over his stock. I may be in business some day for myself, for I have saved a fair proportion of my salary, and being only twenty-five, I can afford to wait, for you know, that all things are said to come to him who is a patient waiter.

I would not attempt to cater to any special trade except a general one, and I would not carry any shoes for men or women that retail over five dollars. They would eat up too much of my limited capital. It is the regular bread and butter lines, the ranges which move quickly and steadily on which the dealer makes his money. To attempt to stock too many lines is sheer lack of foresight. If you had a stock of thirty thousand dollars you would not have the exact size and style in some lines to satisfy certain customers, who would have to go elsewhere. The first year in business should give one a pretty accurate idea of what his trade will stand, what they demand the most, and what the people in his locality are prepared to pay. There is no use going outside this orbit.

Regarding average profit, no dealer at the present day should dispose of a shoe that is a good seller at less than fifty per cent. on cost price, which is equal to thirty-three and one-third on the selling price. If a woman's gun metal welt costs me three dollars, I should get at least four and half for it, if not five dollars. There are always a few shoes that are a drag, and at the end of each season have to be reduced to clear. On the whole, therefore, on each case lot a retailer may consider himself lucky if he averages twenty-five per cent. on the invoice price. Remember, that all expenses for your establishment come out of the selling price and not the cost. Twelve thousand dollars means the money that you take in during the year, or in other words, your income in the aggregate, and out of this sum has to come your rent, wages, taxes, light, help, heat, delivery, and other expenses. In other words your cost of doing business and your net profit. Therefore, the margin of profit should always be

reckoned on the selling price. I would not hold any general special sales, for personally, I think they undermine trade in the end. You only get the bargain chasers, who will look elsewhere when some other shoeman has cut rate prices. Impress upon each patron that you are giving full value for the money, and handle only such shoes as you can guarantee. Stand behind that guarantee and make the manufacturer or the jobber do the same. If he does not, the sooner you sever his account the better. I would keep certain bargain tables on which I would periodically place odds and ends. When I saw that other lines were moving slowly I would bring them up to the front, put a special star on the labels and push these goods, after "sizing up" my customer. There are always people in every centre, especially where the head of the family has to count each dollar that he expends in order to make it go to the utmost. They do not care so much for style and cut, the height of a heel or the swing effect of a last, as they do for a boot that will give them wear and service.

As to how I would divide my stock, of course, local circumstances would have to largely govern that. I would perhaps, invest about \$1,500 in men's and boy's, \$1,000 in women's and misses', \$300 in children's, \$600 in rubbers, and the remainder in heavy staples, findings, evening slippers, pumps, etc.

If I could afford to carry only a four thousand dollar stock, I would buy for the first year or two, at any rate, almost entirely from wholesalers in the city where I could assort easily and quickly. He will carry the reserves for you, and you can do much more business thereby than with the manufacturer where you frequently have to wait for long periods on certain shoes, and if you give a repeat order, the goods often arrive too late for ready sale. However, I would buy my first line in welts in both men's and women's from manufacturers, as well as some of my McKays, but generally speaking, on the cheaper or medium ranges, you can do equally as well from a jobber. He will help you to bear the burden, and has a pretty fair conception of what will sell otherwise he would not stock you. His judgment for the small shoeman should prove a good guide. I would spend thirty or forty dollars twice a year sending out a neat leaflet to my probable customers, whose names I should seek to obtain for a mailing list. I consider this invaluable if accurate. To receive some attention by means of booklets or a special note when you have something extra to offer tickles the vanity and delights the thoughts of more people than you can imagine. They like you to think that their trade is worth having and cultivating.

Do you know that a regular paying customer, one who has a family, is worth from ten to fifty dollars a year to your store. See then that such a customer is treated courteously, given a proper fit, and is well looked after in every way. Go out of your path to oblige one who stands by you for it necessarily follows that if you do only twelve thousand dollars a year in shoes, your stock and store will not be among the leading establishments of the place unless you are located in a village or very small town, but it is all the world to you. I would procure a well bound blank book properly classified for making all entries of goods received, number, sizes, etc. Opposite I would have another column showing what goods have been sold. I would make the entries to this every night from the day's sales slips. This should not be a very complicated operation in a business of \$12000 volume.

Whether I would spend any money in newspaper adver-

tising I cannot say. It would all depend upon local conditions, rates, etc. If I did not make my \$12,000 turnover increase in receipts by at least \$1,000 every year, and keep my expense of doing business to less than 20 per cent. I would consider that I was merely marking time. I would sell out and give some else a chance.

### BUY IN QUANTITIES—NOT VARIETIES

By Miss Jessie Cumming, Fergus, Ont.

I am writing with the idea that the retailer is situated in a town of say 2,000 inhabitants, surrounded by a good farming community, and within easy access of a city in order to get goods quickly.

Now, regarding doing a \$12,000 turnover annually, the most effective way of turning a stock over frequently is based on careful buying, and a sale when the merchant finds he has some odds and ends and obsoletes.

The wise retailer asks himself what company makes the shoes that seem to suit his particular trade, that bring him the largest profit, and a return of the customer. He will buy from manufacturers in fine welt goods for both men and women, and the best staples he can get for boys, misses and children, and in such quantities as he knows he can pay for.

It is better for him to buy in larger quantities than varieties, for two reasons. First, that in buying larger quantities he gets a better assortment of sizes, and is less liable to have tag ends for which he will have to take a reduced price. Second, a manufacturer will often give an extra discount of from 5 to 7% to one buying in case lots, which is an extra inducement to a man carrying only from \$4,000 to \$5,000 stock.

He will also buy from one or two good jobbing houses preferably those who distribute an extensive catalogue showing cuts, prices, etc., as in these days of telephone and fast express, with a descriptive catalogue in his hand, he can have goods landed at his door inside of 24 hours. This method is almost an absolute necessity to a successful retail business man, on account of most manufacturers not carrying a floor stock to supply the needs of the small retailer for immediate orders. Therefore, the best plan is to buy from both manufacturers and jobbers to get the best service.

He will carry in stock about \$2,700 in fine and medium lines which will include Oxfords and slippers for men, women, boys, misses, about \$500 for child's and infants' lines. The balance of \$800 will include rubbers, heavy staples and shoe findings.

To figure his profit he will take 1-3 of the selling price, or at least 50% on the invoice price. His cost of doing business will figure about 15% of the \$12,000 gross business, which would give a net profit, after deducting cost of doing business of \$2,200. An average 5% discount on \$8,000 worth of goods would be \$400 in addition to the \$2200.

Two sales a year are sufficient giving a reduction of 20 to 25% off the ordinary selling price, which would bring goods down to about cost, and expense of doing business.

The stock should be turned over at least from two to three times a year. The best method of keeping tab on stock and daily returns is the cash register, showing sales made which must correspond with amount of sales recorded in daily cash book. As each customer is suited, his or her name (if possible) is written in sales book with the description of shoe, giving sample number, size, etc. These sizes can be replaced in stock every morning. The name of the customer is mentioned as it is a splendid way of keeping tab on the amount of service a shoe has given, and if any thing goes wrong, and an allowance has to be made, the retailer can turn to his book and find how long a time the shoe has been in actual use, thus making it easy to effect an adjustment, and satisfy the customer as well.

### KNOW STRONG AND WEAK POINTS OF STOCK

By A. L. Wright, Peterboro, Ont.

In endeavoring to outline clearly, definitely and briefly the vital principles of the amount of stock to be carried to do \$12,000 business annually, a question (better dealt with now than later) suggests itself! For how many years would I be satisfied to do this turnover? One year only! If my careful, well-planned methods, hard work and advanced system did not result, the second year, in an increase of from \$1,500 to \$2,000, then I should feel my prospects for success in the shoe business to be poor indeed. To do the foregoing amount of business, I believe a cash capital of \$3,000 to be ample financing, possibly less. My stock would never exceed \$4,500 at heaviest, and should be calculated to run as low, at or near midwinter stock taking season, as \$2,500.

A stock of this size, bought say in September, should be proportioned as follows,—Men's lines, \$1,200; women's lines, \$600; boys' and youths', \$200; misses' lines, \$100; children's and infants' lines, \$100; rubbers and overshoes, all lines, to amount of \$900; findings to amount to \$80, would bring the total actual stock up to \$3,180. My system of buying, as will be seen, would of necessity bring the stock up to the \$4,000 mark very readily during the busiest months, while it would also lower it amazingly during the quiet ones. Of the \$1,200, apportioned to men's lines, I should invest \$400 in a leading line of high grade shoes to retail at \$4.50 and \$5.00, with a well known manufacturer. Still, I would stake my faith and most of my capital with one first class jobbing house, only going outside for a rare line that they could not supply. \$300 would be apportioned to men's working lines, ordered from specialty manufacturers in that grade of shoes. The \$500 balance of the men's proportion would be placed with my jobber for staple lines from \$2, \$2.50, \$3, \$3.50 and \$4.

In my campaign for the ladies' trade I would follow a somewhat similar plan as in the men's, buying a well-known leading line from the manufacturer to amount to \$250.00, to retail at \$3.50, \$4.00, and \$4.50. The balance of \$350.00 would procure from my jobber a nice range of medium class lines selling at \$1.50, \$2.00, \$2.50 and \$3.00, and including three lines of Oxfords and a range of slippers.

My boys' and youths', misses', children's and infants' lines could all be bought from my jobber, whose order would now total about \$1,200, which would naturally receive careful attention and best discounts. In doing a general trade, to best advantage, a fixed margin of profit could not be placed on any and every line, as some novelty lines would bear a sixty per cent. margin, while twenty-five per cent. would only be possible on certain staple working lines, still an average forty per cent. would be my endeavor.

Two all-important rules have strongly impressed me since reading them years ago. The first, the Story of the Stock, "one-fifth of which was doing the actual business," while the other four-fifths were lying idle. The second, Pick the Winners, meaning the live sellers, passing up the dead ones. While no man is infallible, going through season after season of buying, without drawing an occasional dead one, the use of a stock book showing the exact state of every line (when buying) and a thorough knowledge of what the public is at present buying as well as what they WILL BUY for the coming season, will go a long way toward insuring a clean live stock.

Any line which was found (four weeks after going into stock) to be not moving freely, would be first "red-starred," for another four weeks, after that the bargain table and a substantial cut and a big card would take proper care of it. My belief is that a six weeks' clean up sale, midwinter and summer, would be a necessary tonic for any stock and much better than prolonging the bargain table idea throughout the year. While certain parts of the stock will be turned over

(Continued on page 45)

# A Help to Fix Your Selling Price

How You Can Prove Your Figure Adequate to the Net Per Cent Profit That You Desire to Get

As a short cut in the arithmetic of profit figuring the chart prepared by the Publicity Committee of the Stationers' Association is worthy of study and of saving. When figuring selling prices, knowing the per cent. of expense in doing business and the cost of the goods, you can prove your price as being adequate to the net per cent. of profit you desire to get.

There is but one businesslike method of figuring per cent. of profit, and that is upon the selling price of the article, says the Boot and Shoe Recorder. This is so, for the only object the shoe dealer has in mind, in buying anything from the manufacturer or jobber, is to sell it to the consumer. If he never sells it, he never makes a profit out of it, and while it is in his store it accumulates a certain cost, in addition to what was paid for it, by reason of rent, salaries, etc., and these most important items must be charged up to the consumer before the shoe can earn any profit to the dealer who handles it.

The three elements that make up the actual price the customer pays should always be based on the sum received from the customer and not the price of the article as it is purchased from the manufacturer, delivered in the store. Your invoice cost is a percentage of your selling price; your cost of doing business is a percentage of your selling price and, therefore, your profit should likewise be a percent-

## For Example

Rule.—Divide the cost (invoice price with freight added) by the figure in the column of "net per cent profit desired" on the line with per cent it "costs to do business."

If a shoe cost \$2.60  
Freight .04  
\$2.64

You desire to make a net profit of 6%  
It costs you to do business 28%

Take the figure in column 6 on line with 28, which is .66. That represents what per cent of your selling price is the cost of the shoe.

Divide \$2.64 by  $\frac{66}{100}$  or  
.66) 2.64 ( 4.00—the selling price.  
2.64

The percentage of cost of doing business and the profit are figured on the **SELLING PRICE.**

now have, so as to make certain that you are not fooling yourself in reference to the profits.

## The Materials for Box Toes

An increasing use of felt for box toes is one of the items of the steadily enlarging use of fabrics in shoes. There is some difference of opinion among shoe manufacturers, however, as to which makes the best box toe, sole leather or felt.

Those who incline to sole leather hold to the time-honored axiom that "there is nothing like leather." They believe the use of any substitute for leather in any part of the shoe must depreciate the quality and value of the shoe. Therefore they use a high grade leather box toe and an expensive cut shellac, at a cost that takes away quality from some other and perhaps more essential part of the shoe.

Those who incline toward felt box toes take the ground that all that is wanted in a box toe is that it shall make a shapely toe and give absolute satisfaction to the wearer. They regard the expenditure of any money beyond that necessary to accomplish this as money wasted which could be used to better advantage in the quality of the upper or sole.

The advocates of the felt box not only claim it to be the equal of leather for the purpose, but go farther and contend it to be superior in one respect at least. They point out that if a shoe with a leather box has been worn some time, and is then laid aside for a time, the edges of the box will curl downward so as to hurt the foot of the wearer, while at the same time the whole toe of the shoe will be covered with fine wrinkles. They claim that the felt box when properly filled with waterproof box toe gum will not do this, but will remain perfectly smooth and shapely. The reason for this is said to be that the leather will absorb

COST TO DO BUSINESS	NET PER CENT PROFIT DESIRED

age of your selling price. There have been numerous cases of disaster due solely to the practice of figuring the percentage of profit on anything but the selling price. Your invoice cost is not a quantity, or a sum to be added to, nor is your cost of doing business. Both are percentages of your selling price, as is your profit.

The rule and method shown in the graphic figures are short cuts to the system of arithmetic in profit figuring. Make the computations on the selling price of the shoes you

shellac or gum to the same extent that the felt will absorb the gum, which leaves the leather subject to moisture from the foot while if the gum used with the felt box is waterproof gum, the felt box will not be so affected.

The man who thinks that HIS business is an exception to the general rules for business building has not tried to apply those rules to his own store.

## Travelers Are Now With Felts

The rapidly changing seasons bring different activities of footwear trade to the front. Each branch has its own appointed time and place. January sees most shoe retailers conducting a vigorous mid-winter sale after the holiday rush, and on the road it is the time for taking orders for felt footwear of all kinds. The new price lists issued show that figures are about five per cent higher. The business of manufacturing felt foot toggery of all kinds is growing rapidly and during the past year several extensions were made to factories while one or two new ones will be built during the coming year. Waterloo and Perth counties are the great centres for the felt boot industry. The progress in specializing on certain lasts, styles, shapes and combinations, has been so marked that felt boots and slippers are appealing more and more to good dressers in all parts of Canada. There are over seven thousand felt shoes and slippers of various kinds turned out daily in Canadian factories which are now running to capacity, and will be kept busy all year on the orders that are coming in. Deliveries will start in May or June next, and keep up until fall. They will continue for sorting until a later date.

All staple lines are in black, but colored felts are growing in popularity. Red, green, brown, grey, claret, blue and other shades may now be seen in slippers and house shoes, and some really fetching creations are exhibited. Felts are being worn more and more in Canada. Formerly their sale was confined principally to the prairie provinces, the lumber and mining camps and in the districts far north. They were looked upon as part of the dress of those in the colder sections.

To-day this aspect of affairs has changed, and shrewd business men and stylishly dressed women are not backward in wearing this class of footwear during cold spells. Comfort is preferable to all else when one is a sufferer from frigid feet. Well made felt footwear affords constant comfort, is not clumsy or awkward looking, will wear well, and, if soft weather comes, all that has to be done is to place rubbers over the boot the same as with leather foot covering, and the owner is perfectly safe from moist pedal extremities.

## Live Shoe Firm Holds Banquet

The annual dinner and reunion of the Rannard Shoe Co., of Winnipeg, was held at the Royal Alexandra Hotel recently, and was a pronounced success. This function has become one which is invariably looked forward to with much expectancy, and this year's banquet was the best that has been held. C. F. Rannard, the head of the Company, presided, and the tables were attractively decorated with roses and cut flowers. Congratulatory telegrams were received from several leading shoe manufacturers, extending greetings and regretting their inability to be present. Among this number were: The Hartt Boot & Shoe Co., Fredericton; George A. Slater, Limited, Montreal; The Sardon Shoe Co., Montreal; J. & T. Bell Limited, Montreal; Kingsbury Footwear Co., Montreal; Tetrault Shoe Mfg. Co., Montreal; MacFarlane Shoe Co., Montreal; Kaufman Rubber Co., Berlin; Cook-Fitzgerald Co., Limited, London; Murray Shoe Co., Limited, London; Getty & Scott Limited, Galt; Philip Jacobi, Toronto, and others as well as from several leading American firms. A few extracts may be taken from the greetings as expressive of the kindly feeling which exists between the Rannard Shoe Co., and various manufacturers.

"We hope," wired the Hartt Boot and Shoe Co., "that your business for the coming year will be still larger than that of 1912, as a result of your good business methods, knowledge of footwear, and efficient and capable selling organization."

George A. Slater Limited, said in part, "Evidently your firm is composed of three partners working together in

absolute harmony. These three partners are Capital, Labor and Society, or the public, and it speaks very highly for the spirit of co-operation which must exist amongst your staff. The results obtained must be very gratifying to them as well as yourself. We have no firm on our books with whom our business relations are of a more pleasant nature than with those of your company."

Mr. Rannard stated that the company did a \$200,000 business during the past year. He congratulated the members of the staff of both the Main Street and Portage Ave. stores on their efficient co-operation in bringing the business to such a successful status. He also commented favorably upon the keen, but friendly rivalry between the two establishments for supremacy, and said that the end of the year saw them break about even.

Mr. Rannard was presented on behalf of the staff with a handsome walrus club bag with the initials engraved in gold.

During the evening jolly songs were contributed by the following members of the staff: James Waddington, John Webster, Albert Young, Charles Newton, and a quartette from the Portage Avenue store, with Reginald Newton, pianist.

The Rannard Shoe company was started nine years ago, on Main Street, Winnipeg, where the present store now stands, by C. F. Rannard, who came to Winnipeg from Lincolnshire, back in the eighties. The date of the banquet was the anniversary of the opening day.

## A Shoeman Who Has Public Spirit

A live business man of the great and growing West is E. A. Dagg, of Calgary. He not only takes a deep interest in shoes, but in the welfare and development of the city in which he has resided for the last seven years. He is the President of the Calgary Board of Trade, and Third Vice-President of the Associated Boards of Trade of Manitoba, Saskatchewan and Alberta. Previous to taking up his permanent abode in the West, Mr. Dagg represented the

firm of Ames-Holden, Limited, of Montreal, for eight years, on the road covering Manitoba and Saskatchewan. He opened the branch for them in Calgary as manager until it was taken over by the new firm of Ames-Holden, McCready, Limited, at which time he was continued in the position which he fills with efficiency and marked ability. So rapidly has the business grown under the direction of himself and an able staff, that it is expected during the present year a new and thoroughly well appointed warehouse of much greater capacity than the present one will be erected.

## The Perplexities of Style!

### Can One Tell What is Really Fashionable in Leathers and Lasts Which Change So Spasmodically?

"I'm ashamed of these shabby shoes, so please don't look at them," said the girl who had arrived late, as she glanced down at her footgear and then tried to tuck them out of sight under her short street skirt. "I had to wear them to-day because of my excessive zeal for style."

"Really, I don't see anything stylish about those shoes," declared a candid girl among the listeners.

"You misunderstand me, dear," explained the girl who had arrived late. "Let me explain, if the subject interests you. I've been intending for weeks to run in somewhere when I had ten minutes to spare and buy a pair of low-heeled tan suede shoes. I had a sort of feeling, without really thinking about the matter that low-heeled suede button shoes were the thing to wear on one's feet. It seemed to me, you see, that the style was entirely sensible and desirable.

"I thought it was such a simple thing to have your mind all made up beforehand, and not to have to look at dozens of styles before making a selection that I kept putting it off until yesterday afternoon. Then I dropped into a store that I was passing and told the clerk what I wanted:

"The clerk looked at me in astonishment. 'Low heeled suede!' he repeated, in a tone of horror, as if I'd suggested that he commit a murder. 'Madam, you cannot get them in any first-class store! They are not worn at all! Now, let me show you something in a beautiful chocolate dongola—but, of course, with heel in cuban style, nice and high and chic, with receding toe.'

"Then away he rushed. When he brought the shoe it was a perfect stilt, and I couldn't bear the sight of it. He said it was all they had, because it was positively all that was worn. "So I left.

"I stepped into the next store, and asked for low-heeled colored suede button shoes. The clerk there smiled at me as he would at a child who has no mind of its own. Going back in the store he soon brought me a pair of fearful looking tan button shoes with French heels.

"These," he said, impressively, 'are the only thing this winter. They are stunning when worn in combination with any of the new winter styles.'

"I didn't care to explain that I didn't happen to possess any of the new winter styles as yet, having to wear out my last winter's suit first. Yet I stopped long enough to ascertain that the store had really nothing with low heels. Then I left.

"Next, I found a lovely looking store, where I was sure they'd have what I wanted. I pleaded with a salesman there to bring me nothing but low-heeled suede. He listened with a kindly air and then proceeded to explain that suede was out of date—nothing but dull leather was approved in the best society, to which that store catered. He did me the honor to think that I belonged to the best society, but he recommended that I desist from my efforts to establish a precedent in shoes and submit to the nice, mannish, dull leathers he had. I tried one on, and it made my foot look so much like my father's that I rebelled and immediately departed.

"In the next store the clerk brought me the very thing I wanted. I was just on the point of taking it when I happened to overhear a conversation near me. A girl was trying on patent leather shoes, and she asked the clerk if patent leathers were much worn. He smiled reassuringly and gave his word of honor that absolutely nothing else was good form this winter. Everything else was dreadfully out of style!

"So while my clerk was back having the buttons fastened on my shoes, I slipped my foot into my old shoe and fled. For I felt that I couldn't pay all that money for old style things—and I couldn't make up my mind at once whether I ought to have tan, patent leather or dull!

"Finally I decided that the patent leather clerk had been absolutely sure of his ground, for he was so emphatic. But by that time I had been in all the stores in that part of the big city.

"At last I found a store where you pay high prices for

the cheapest shoes—for I was bound that I'd be stylish after taking so much trouble.

"I asked the clerk to show me the latest styles in patent leather shoes. He looked puzzled. Then he called a junior and gave him some instructions. After that I waited. It must have been half an hour before the junior returned and I overheard him telling the clerk that he'd had to climb up to the very top shelf.

"The clerk looked somewhat dubious as he showed me the shoes. 'We like to satisfy our customers,' he said, 'but these are the last patent leathers we've received.' And he had to smile at the old-fashioned shape with the saucy, frontier-like toe. 'You know absolutely nothing is asked for nowadays,' he explained, 'except suede or fabric tops with low heels.'

"Then I jumped up wildly and fled. To-morrow I'm going to get my mother to go back and buy the pair that I left having the buttons sewed on. She will invent some story—I'm ashamed to go!"

## Keeping a Record of All Your Sales

Do you keep a record of every sale? Impossible, you say, too much fuss, waste of time, effort and money. Could not be bothered, too tedious and too much detail.

There is a dealer in a town of five thousand people in Western Ontario who has tried it for a year now and finds that it pays him handsomely. Here is the blank form that

He has had printed hundreds of neat cards each about four inches wide by six long and keeps a fountain pen in his vest pocket. When he is unpacking new goods preparatory to placing them in the reserve stock or on the shelves of his store, these slips are conveniently at hand. When he is marking the label on the cartons he also enters on each card the style of the boot and the sample number, the size and the width as well as the cost price and the selling figure. All this information is on the carton label anyway and he transfers it to the card at the same time. This card rests inside the carton until the contents are sold. Then it is removed and the proprietor or his clerks fills in the name of

NAME _____	
ADDRESS _____	DATE _____
STYLE _____	
SIZE _____	WIDTH _____
CUT _____	SELL _____
REMARKS _____	
SALESMAN _____	

the buyer and address as well as the date and any remarks about what the customer may be wanting in the future. The initials of the clerk are also inscribed in the lower right hand corner. At the office, where it is taken, a small index box is kept, and the cards are arranged alphabetically. A complete list of all the customers of the shop is at hand.

If a clerk does not know the name and address of a purchaser, inquiry is made in a polite way and seldom if ever is such information not willingly given. If questions are asked the salesman tells the caller that they keep a mailing list to whom they send out a nice style booklet at various seasons of the year and that they would like to forward one to him or her. In only five instances have names been refused by patrons. These cards are gone over at various times and suitable literature sent to each party or a courteously worded note calling attention to some new goods of a similar kind that have just come in, or that a fine fitting last in the width and size of the last one bought, but carrying a neater, toe, etc., is to hand. These letters generally meet with a gratifying response.

## New Manager Enters Upon His Duties

H. D. Mewhirter, of Winnipeg, has just been appointed manager of the central division of Gutta Percha and Rubber, Limited. He is one of the most progressive business men in the Prairie Capital, and has an extended and thorough experience in general mechanical goods, rubber footwear and druggists' sundries. Mr. Mewhirter was born in Illinois in 1874, and lived on a farm until he was twenty years of age. He secured a high school education, and in 1894 graduated in pharmacy and chemistry at Des Moines, Iowa.

Leaving there he took a position as traveling salesman with the Ryan Drug Co., of St. Paul, Minn., with which firm he was associated three years. His next post was with the Plant Rubber Co., of Minneapolis, and in 1902 he joined the staff of W. S. Nott Co., of the same city. He became identified with the Winnipeg Rubber Co., now Gutta Percha and Rubber, Limited, in 1906, assuming the position of sales manager, the duties of which he has discharged faithfully and efficiently. This month he was appointed manager, succeeding the late Mr. Andrews. Mr. Mewhirter is a gentleman of genial nature, broad sympathies and energetic disposition, and his many friends in the trade are congratulating him on his well deserved promotion.

## And Still Prices are Soaring

The footwear trade is being livened up by dealers during January by special sales. Since the fall of snow a splendid business has been done in rubber shoes and felt goods. Sorting orders are fully up to the mark for this season of the year, and payments are reported good. Travelers are now out taking orders for felt goods for next season. The total volume of business done by jobbers during 1912 was very satisfactory and many report a decided increase. Prices for tennis shoes have advanced recently from two to five cents per pair, and new quotations for felt footwear show increases from five to ten cents per pair. On the whole the advance is about five per cent. over the figures for last year. Shoe factories are now actively engaged on their spring runs and some shipments of spring goods are already reported. The getting up of samples for fall is under way and the models will be ready about the first of March next. There is every likelihood that prices will ascend as the stiff values of hides and leather keep up with no relief in sight. The general belief among manufacturers is that the high figure for shoes, like the high cost of living, has come to stay. Calf skins are very firm, dongola has stiffened somewhat in figure, sole leather is expected to take another jump and dearer wetting is one of the latest things to elevate cost of production.

What the advance will be on the better grades of shoes for fall it is impossible to predict at present, but probably ten per cent. on some lines.

## Doing \$12,000 Business Annually in Shoe Trade

(Continued from page 41)

as many as ten or twelve times during the year, other portions would do well to be turned just once, still, my endeavor would be an average turn over of three times and as much more as I could possibly do. After my opening stock, my only placing orders would be with the manufacturer for the lines above mentioned, all staple lines and sorting orders from my jobber would be bought lightly and often repeated on, by telephone, wire, or letter, goods expressed in order to supply any shortages in stock, and particularly to insure a complete range for Saturday business.

A monthly trip to the city to keep strictly conversant with the supply houses and their stocks would be an advantage and part of my programme.

The aim should be to carry a light, active, live stock, well varied, but not heavily bought in any line, preferring to repeat and repeat again on sizes going strongest, buying the centre sizes heavily, and the end sizes very light. For a business of this size, it is my opinion that "Buying from the manufacturers only," would not be possible or of real advantage, while, on the other hand, to buy and handle only the lines procurable from a jobbing house would hardly place us in a position to meet keen competition. The "leaders" from the manufacturer, the staples, the quick turn over stuff from the jobber, strikes me as the best solution of the buying problem.

What strikes me as the best "guarantee" of success is the careful, watchful, keeping-in-touch with our stock, having a thorough knowledge of its "standing," its **strong points** and its **weak ones**, being always on the look-out for better systems and more efficient means to handle stock quickly, accurately and at a safe margin.

## THE LINES THAT SHOULD BE STOCKED

By J. H. Flaherty, Amherst, N. S.

To conduct a shoe business in a small town or village, one would require about \$6,000 worth of stock in order to do \$12,000 worth of business a year. The lines to carry would be men's heavy grain and split leathers with a half sole, and a lighter line of box kip to sell at \$3; also a few pairs each, assorted sizes, to sell at \$4.00; for youths and boys, a heavy grain and box kip; for women a \$3.50 shoe for fine wear, and a dongola to sell at \$2.10, a kip at \$1.50; misses' box calf, \$2 and dongola at \$1.50; infants' and child's dongola at 75c to \$1.50.

The average net profit of the business should be 20%—two special sales a year, one in February and one in August. The goods would be turned over twice.

To keep tab of the stock on hand and sold, etc., I would have a stock book marked with sizes and numbers and every line bought would go in the stock column and what was sold would be entered up in the sold column on the sheets every night. In a small business like this, all the numbers and sizes could be put in the counter check book when making up the sales and copied at night into the stock sheets.

It would be necessary to buy from jobbers as they could give a better rating and sometimes have lines carried over that could be turned in to an advantage for the small retailer.

The mail order houses get their business by asking the farmers to buy from them. Are you asking the farmers for their trade as often as the mail order houses are?

## Wholesalers Sell Too Much Retail

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir,—If you would kindly grant me space in your valuable Journal, I would like to ask the retail shoe men if they ever consider the injustice that is handed out to them by some wholesalers.

Now, sir, I have taken this matter up with the different jobbers and they all have the same story to hand out; that they know it is not a square deal to the retail merchant and they do not want to do it, but they ask, "What can we do?" One jobber in reply (while I was in that house and did not ask any questions) merely looked at the clerk, then at the customer, and then turned with a smile to hear that same old story, "That is a cousin of a customer of ours in Aurora." "Of course they have an order," so he said. I will tell him now, while I did not at the time, and he will know how well I believed him, when he reads this article, "*I am from Missouri.*"

Another excuse that they have is that other wholesale houses give their employees orders. If such orders exist they should not, for any boss who is employing a man and will not pay him sufficient salary to permit him to buy his wear from the retailers, and be of some benefit to the community, should not be counted as one of the population, and should not be entitled to be an employer of labor.

Some time ago I noticed in your Journal one jobber who positively stated that he did not do but very little of that kind of business, and that the shoe men of Toronto were too ready to jump at conclusions. Well, I have been in every wholesale house in Toronto, and I have seen customers in them all fitting on shoes, and I got the same old story from every one. It has now come to the time, if the shoe men have any backbone, to put a stop to this evil. I say "buy your goods out of town." You will have this one advantage—your customer will not be able to tell you the cost price of your goods.

Just the other day, a customer came in to my store and asked the price of a certain shoe. The caller then turned to me, after fitting on the shoe, and finding out the size said that he guessed he would wait, as he was going down town and could get them at the wholesale.

Now, it was necessary for me to telephone that house, give his name and kind of shoe and declare myself in order to stop the sale. Why should this exist? Mr. Jobber, answer.

Shoemen, get busy. All we want is fair play.  
(Sgd.) FAIR PLAY.

Toronto, Jan. 13th, 1913.

## How Shoe Repairer Advertises

Robert Paynter, 269 Princess street, Kingston, Ont., who recently installed a complete Goodyear repair outfit, has issued some unique advertising cards. One of them which has reached the SHOE AND LEATHER JOURNAL reads: "Bob Paynter is my shoemaker. Remember—When your ankle turns your shoes need to be mended. When you slip be careful you don't fall; so be quick and go to the Shoe Doctor."

## Will Make More Turns

A leading American firm writes to retailers as follows: We have been devoting considerable time of late, and have been making an earnest study on the subject of turn shoes for women. It is our desire to offer to our customers in the sample line for fall, 1913, a line of turns which will appeal to any retailer and exactly fit in with his wants. The demand for turn shoes has been increasing rapidly, and will be a great factor in your business next year. There is a certain proportion of your trade which will always insist on the easy, flexible turn, and it is a subject which we feel is worthy of your attention as well as ours. We would like to know how we can serve you best in this matter, and are going to you frankly with it. We are enclosing an addressed postal card, on which we would appreciate the favor if you would suggest

to us what styles of turn shoes for women would be best suited to your trade. We would like information as to lasts, material, etc.

## Honored Departing Member

Many friends in the shoe trade will greatly regret the news that one of the most popular young men of St. John, N. B., engaged in this business, namely George A. Gamblin, who for the last nine years has been a valued employee in the office of J. M. Humphrey & Co. in King Street, has severed his connection with that firm. Although his severance of connections with shoe interests will be regretted it is pleasing to note that he is gaining promotion. He will enter the office of Jones & Schofield, wholesale grocers, to take charge. There was a happy gathering in Bond's restaurant last night to mark the esteem in which he is held when his fellow employees assembled and tendered him a banquet at which he was the recipient of tokens of goodwill and esteem. R. T. Hayes, manager of the concern, presided, and spoke of the valuable services Mr. Gamblin had rendered and of the regret amongst the employees at his severance of ties. On behalf of the firm he presented to Mr. Gamblin a handsome gold locket. The staff presented to him a pair of gold cuff links and a valuable writing desk. There was a lengthy programme of songs, instrumental numbers, readings, etc., and a general good time was enjoyed by all, closing with three cheers for Mr. Gamblin.

## Some Reminders of the New Year

The Independent Box Toe Co., of Montreal, have forwarded to the trade an artistic calendar for 1913 entitled "Vanity Fair."

Tourigny & Marois, shoe manufacturers, of Quebec, have sent out to the trade a very handsome calendar on which a remarkably fine life size figure of King George appears in his coronation robes.

Clarke & Clarke, leather manufacturers, of Toronto, who have been established since 1852, have sent out to the trade a very convenient diary for 1913 bound in flexible leather. This is the ninth edition of "Lest we forget" and it is highly prized by all.

J. Eveleigh & Co., of Montreal, have issued a very neat calendar in brown. A prepossessing young lady attired in a smart, white tailor-made suit with brown trimmings is seen waiting at the railway platform with a trunk, suit case and traveling bag as her companions.

The Hurlburt Co., of Preston, Ont., have issued a very fine water color art calendar, showing a comely mother and her proud baby boy seated at a table on which rests a telephone. The happy mamma is placing the receiver to the ear of the infant, who is lost in childish wonder and delight at the conversation of the father at the other end. The calendar is the brightest ever sent out by the firm.

One of the handsomest and most artistic reminders of the Yuletide season was a hanger with deep gilt background showing a proud peacock with beautifully colored feathers, which was sent out by Farnsworth, Hoyt & Co., of Boston, to the trade. The hanger conveyed Christmas greetings and the expressive words: "Fine feathers make fine birds; our fine fabrics make fine shoes."

A booklet containing a rare selection of almost 1,000 different kinds of grains has just been published by the Moenus Machine Company in Frankfurt-on-Main, Germany. The artistic reproductions of the grains, and the beautiful get-up of the album show at a glance that the Moenus Company has the greatest experience in the construction of embossing and ironing machines and that in these matters they undoubtedly excel. The practical arrangement of the grains in groups is very convenient. The useful information given on graining plates contains a rich stock of long years' experience and is most important to every leather manufacturer using embossing machines.

# SHOE FACTORY NEWS.

The Canada Leather Board Co., of Montreal, recently registered.

N. Macfarlane, of the Macfarlane Shoe Co., Montreal, was in Toronto last week on business.

G. E. Henckell, in the hide business in Buenos Ayres, was a caller on the Montreal, Quebec and Toronto trade recently.

C. E. Hurlbut, of the Hurlbut Shoe Co., Preston, has returned from a visit to Boston and other centres in the United States.

The style of the Winn Co., of Perth, of which H. H. Lightford is manager, has been changed to the Perth Shoe Co., Limited.

L. S. Germain, Montreal, has had two new machines, an edge cutter and edge trimmer, installed in his factory by the United Shoe Machinery Co.

W. V. Matthews, general superintendent of the Ames-Holden, McCready Co., Montreal, is back from an extended trip to United States shoe centres.

A. R. Clarke & Co., tanners, have secured a permit for an extension to their buildings on Eastern Avenue, Toronto, which will cost three thousand dollars.

Geo. P. Balfre, Canadian manager of the Chicago Tanning Co. is at present on a trip through Western Ontario, and will be back in Montreal around the end of month.

The engagement is announced of Frank C. Archibald, of the firm of Archibald Bros., shoe manufacturers, St. Johns, Nfld., to Miss Isa Whitman, daughter of J. A. Whitman, of that city.

Good progress is being made on the new factory of the W. E. Woelfe Shoe Co., Berlin, and it is expected that the building will be ready next month for the installation of the machinery.

George Pratt has been appointed foreman of the lasting department of the Minister-Myles Shoe Co., Toronto. He was formerly employed with the Hamilton-Brown Shoe Co., of St. Louis.

The addition to the Kingsbury factory in Montreal is nearing completion, and the company anticipates being able to use it early in February. The new building will be used exclusively for turns.

Beal Bros. have not decided where they will erect their new tannery which was burned at Uxbridge some time ago. Several offers from different towns have been received and are yet under consideration.

Harold T. Heath has accepted the position as foreman of the stitching department of the Brandon Shoe Co. of Brantford, Canada. He was formerly employed by the Ashby-Crawford Co. of Marlboro, Mass.

D. J. McDermott, of McDermott Shoe Co., Montreal, recently returned from a ten day holiday trip to Boston and New York. He reported splendid Christmas weather and very brisk business there during the holidays.

H. R. Rice, of the Rice-Hurlbut Shoe Co., Courtland, N.Y., spent a few days recently in Toronto, Montreal, Berlin and other points. While in Montreal he was the guest of George Cain, general sales manager of the Miner Rubber Co.

Wilfrid Gardiner, a young man employed at the Williams' shoe factory, Brampton, recently met with an accident which might have terminated much more seriously. He was operating a buffing machine and slipped, falling against it. He was whirled around the shaft, every stitch of cloth-

ing being torn off his body, but with the exception of some painful abrasions on his side and stomach, he escaped unhurt.

Underhill's, Limited, intend erecting a fifty foot extension and a two storey addition to their new staple factory in Barrie, Ont. The work will be undertaken at an early date, and when completed, the building will be three storeys high.

Mrs. I. M. Condon, late of Woodbury Shoe Co., Beverly, Mass., has taken a position as forelady in the stitching department of the Perth Shoe Co., of Perth, Ont. Mr. Perry, late of Montreal, has been appointed foreman of the lasting room in the same factory.

The Palmer-McLellan Shoepack Co., whose new factory has just been completed in Fredericton, is at present turning out six hundred pairs a day, and report a very large number of orders ahead. The full capacity of the factory is twenty-five hundred pairs a day, and it is expected that this output will be reached before the company has been very long in operation.

Following on the increased activity in Canadian Consolidated Felt in the unlisted department, it is stated that application will be made at an early date to have both the preferred and the common stock of Canadian Consolidated Felt listed on the Montreal Stock Exchange.

The shoe factory building of James Muir Co., Ltd., Quebec, was some time ago sold to Ludger Duchaine, but the Muir people retain the machinery. The company have to vacate by March 1st but Mr. Muir says, while several propositions are under consideration, they have not yet settled definitely the matter.

Charles E. Slater, who has been associated with the Slater Shoe Co., Montreal, for thirty-five years and for many years has been its president and general manager, has severed his connections with that company. He disposed of his financial interests in the Slater company some months ago. Mr. Slater is now enjoying a brief holiday. It is understood he has several plans in view, and may make his future headquarters in Boston.

The Canadian Consolidated Rubber Co. have been appointed sole Canadian selling agents for the Palmer-McLellan Co. of Fredericton, N.B. By this arrangement the latter company has placed at its disposal the very efficient distribution system of the Consolidated Rubber Company with their agents and depots in all the main centres from coast to coast. This will enable delivery of the products made by the Palmer-McLellan firm to be made on very short notice, and should prove very beneficial for both the firms concerned, and the trade as a whole.

The death occurred recently in Montreal of Richard Smardon, who was in his eighty-second year. While not in the best of health for some time past, the end came as a great surprise to his many friends and relatives. Born in Devonshire in the year 1831, the late Mr. Smardon came to Canada when but eleven years of age, and since that time has lived in Montreal almost exclusively. He went into the boot and shoe business, establishing one of the first stores in Montreal. In this work he met with great success, until he finally became one of Montreal's leading shoe manufacturers. Some years ago he established another factory at Three Rivers, P.Q., the plant being a very large one. Mr. Smardon had not in recent years taken a very active part in business affairs. The death of Mrs. Smardon, two years ago, came as a great blow to him, and was one from which he never recovered. The deceased was an uncle of Walter Smardon, of the Smardon Shoe Co., Montreal.

# AMONG THE SHOE MEN.

The assets of L. Jacobson, shoe retailer, Montreal, have been sold.

P. Cairns, of Forest, Ont, bought the stock of shoes and rubbers of A. Rumford.

Alfred Price, of Camrose, Alta., was in Toronto calling upon the trade last week.

L. Scheuer, Montreal, importer of slippers, has left on an extended selling trip west.

J. H. DeWolfe, shoe retailer, of Gananoque, Ont., is retiring from the shoe business.

Bert Packard, sales manager of L. H. Packard & Co., Montreal, was in Boston recently.

Walter Oughton, late of Fergus, Ont., has embarked in the retail shoe business in Southampton, Ont.

Harry Thompson, of the Thompson Shoe Co., Montreal, was in Toronto last week calling upon the trade.

J. G. Settle, of Montreal, representing the Hartt Boot and Shoe Co., was in Toronto last week on business.

The Fit-u-Shoe Company has opened a neat retail footwear establishment at 1167 Bloor street west, Toronto

W. F. Martin, sales manager of the Kingsbury Footwear Co., of Montreal, was in Toronto last week on business.

R. R. Macaulay, secretary-treasurer of the Miner Rubber Co., Montreal, was in Toronto on business last week.

John A. Vallary, shoe traveler, Toronto, left last week for Boston, where he will spend several days on business.

F. A. Guinivan and Herbert Beatty, of the United Co-operative Stores, of Montreal, were in Toronto last week on business.

George Cain, of Montreal, general sales manager of the Miner Ruber Co., spent a few days in Toronto last week.

M. McGrath, Durham, Ont., has bought the stock of Thos. McGrath of that town and will continue the business in the old stand.

Parrott Bros., who recently disposed of their shoe business in Chatham, Ontario, intend locating in the west and will open up new shoe stores in Regina and Saskatoon.

Burglars entered the store of A. E. Brimstin & Co., 431 Queen St. West, Toronto, last week and stole several pairs of hockey skates, some boots and a sum of money.

J. Dunbar, who was formerly with the Slater Shoe Co., Montreal, is now traveling for A. Corbeil. He will cover the Western provinces.

The establishment of the Harris Mfg. Co., sheep skin shoe manufacturers, has closed down at Deloraine, Man. Mr. Harris may remove the plant east.

In Washington, D.C., it is reported that there is a vogue of the heelless slipper for matrons, which, it is said, is very popular.

Douglas Balfour, manager of the Regal Shoe Store, Winnipeg, was in Toronto and other Ontario cities last week on a visit.

Elmer Bailey, late of Portsmouth, Ohio, has been appointed foreman of the fitting room of the Relindo Shoe Company, Toronto.

Robert Rogers, of the traveling staff of P. Jacobi, Toronto, left last week on an extended trip West. He will go as far as Vancouver.

C. S. Hyman & Co., tanners, London, Ont., have sent out a decidedly attractive calendar entitled "Dawn in the Highlands," from an original painting by W. Watson. It is

beautifully colored and represents the cattle and sheep grazing on the heathery hills.

Mrs. A. E. Arthurs, who for several years has conducted a shoe store in East Toronto, has disposed of her business to the Arcade, of Hamilton.

There is reported to be an excellent opening for an exclusive shoe store in Leaside Junction, Ont., owing to the rapid railway development in that centre.

C. D. Mitchner, of the Royal Shoe Store, Saskatoon, has been appointed a member of the executive committee of the Retail Merchants' Association of that city.

William Garside, late of the firm of Garside & White, Toronto, left this week, accompanied by his wife, for Los Angeles, California, where he will spend the winter.

George D. Wallace, 171 Barrington St., Halifax, has admitted his brother Herbert D. Wallace as partner in his shoe business. The firm is now known as Wallace Bros.

E. P. Howe, of Edmonton, who is opening up a new shoe store and men's furnishing establishment in that city, was in Toronto last week calling upon the trade and placing orders for stock.

Wm. Harris, formerly manager of the shoe department of the Hudson's Bay Co., Portage La Prairie, Man., has gone to Brandon, where he has taken a position with a wholesale house.

William McDermott has opened a harness and leather shop in Fergus. He has had a number of years' experience in the larger cities of Canada and the United States, and is meeting with success.

A new ten storey building will be erected on the south side of St. Catherine St., Montreal, between Stanley and Drummond Sts., on the site now occupied by the Regal Shoe Co. and adjoining stores.

Mr. Case, of the Sample Shoe Store, Edmonton, was in Toronto last week on his way to New York and Boston. He speaks in high terms of the rapid growth of Edmonton and has done remarkably well in that city.

Martin Tate, of Brampton, Ont., age sixty-five years, and a resident of that town for twenty years, where he was engaged in the harness and leather business, died recently. He is survived by a wife and two daughters.

The shoe store of F. Kibler, of Berlin, was entered recently and robbed of a few dollars. An entrance was gained through a rear door and the cash register forced open, but fortunately contained no large sum.

G. H. McCrady, late of Brockville, Ont., has joined the traveling staff of McLaren & Dallas, Toronto, and will cover a part of the eastern ground. He succeeds E. J. Kew, who will look after the sample room in the warehouse.

John F. Shea, 23 King St. E., Hamilton, who has been in the shoe business in that city for many years, has decided to retire. His lease expires in a few weeks and, as he will not renew it, he is now holding a big clearing sale.

A new store is being opened in Moose Jaw by Allen, Cummings & Co., which will have a well equipped shoe department. It is understood that L. Fingland, son of John Fingland, of Brampton, will be the manager of this branch and will enter upon his duties next month.

J. L. Tretheway, 44 Warren Road, Toronto, who is a widely known shoe traveler representing the Brandon Shoe Co., of Brantford, in Western Ontario, has gone with his wife on an extended sailing tour to the Bermudas, Mexico and Panama. He will not return for several weeks.

P. R. Logan, late of the traveling staff of Garside &

White, Toronto, has gone to Vancouver to reside, where he has taken a position in a large departmental store. H. L. Geene, of Ottawa, Eastern Ontario representative of the firm, spent several days in Toronto last week on business.

M. L. Savage, who has been spending the past few weeks in California, was in Toronto this week on his way to Montreal. Mr. Savage, who has for many years covered the Western provinces for the Tetrault Shoe Mfg. Co., is one of the best known and most successful travelers in Canada.

H. B. McGee, sales manager of the Minister Myles Shoe Co., Toronto, who underwent an operation for appendicitis in the Toronto General Hospital, is rapidly recovering. Mr. McGee's scores of friends in the trade will be pleased to learn that he will be able to be around again in a few days.

In the fire which took place in the adjoining stable, the Vermilyea Shoe House, of Belleville, was saved from threatened destruction through the strenuous work on the part of the firemen. The stock was considerably damaged by smoke, but business was in no way interrupted.

A. Chisholm, chairman, and Warren T. Fegan, treasurer, of the Toronto Shoe Retailers' Association, leave next week on an extended trip to the Pacific coast. They will journey south as far as San Francisco and return through the Western and Middle States. Messrs. Chisholm and Fegan will be absent several weeks.

Mr. McGee, who for several years has represented the Hartt Boot and Shoe Co., in the Maritime provinces, was in Toronto and London last week on business. He will handle the lines of the Murray Shoe Co., of London, in the Maritime provinces during the coming season along with those of the Macfarlane Shoe Co., of Montreal.

The United Shoe Dealers will hold a convention of their sales managers in Toronto on February 10th. The organization at the head of which is J. W. Foy, of Toronto, and H. D. Wing, of Parry Sound, have well equipped shoe stores in Lindsay, Parry Sound, Owen Sound, Sudbury, North Bay and Port Arthur.

Harvey E. Graham, of Toronto, who for the past five years has capably represented the Hartt Boot and Shoe Co., of Fredericton, N.B., in Northern and Western Ontario, has joined the selling staff of Jackson & Savage, of Montreal. He will travel Western Canada from Winnipeg to the Coast in the interest of the Boy Scout shoe.

Ernest A. Bonnick, son of Charles Bonnick, of Toronto, was married on December 31st at Calgary to Miss Lilian Isabel Edmunds, of Winnipeg. Mr. Bonnick and bride will reside in Red Deer, Alberta. For several years he was engaged in the shoe business, being connected with the warehouse staff of Ames, Holden, McCready in Toronto.

Peter Valiquette, now of the Slater Shoe Store, 117 Yonge street, Toronto, will shortly go to Montreal, where he will take an important position in the United Co-operative Stores. It is rumored that the latter intend in time to open up new establishments in London, Brantford and Hamilton, but nothing definite has been decided upon for the present.

Frank Mercer, formerly of the selling staff of the Relindo Shoe Co., and at one time manager of the Dolly Vardon Shoe Store, Yonge Street, Toronto, who now resides in New York city, was in Toronto last week on a visit. He travels for Hanan & Son, of Brooklyn, covering the Southern States in the interests of this firm. His many old friends were pleased to see him after two years' absence.

W. G. Berscht, of Guelph, a member of the traveling staff of McLaren & Dallas, met with an accident recently when driving. His conveyance upset, throwing him out, and a trunk fell on his right arm, badly straining the ligaments. He was laid up for several days, but is able to be around again. Mr. Berscht has been rather unfortunate of late, as only last summer he was ill for several weeks with typhoid.

Griffith Clarke, of A. R. Clarke & Son, tanners, Toronto, escaped serious personal injury in a peculiar accident which occurred recently at the corner of Isabella and Jarvis streets. His automobile was struck by a grocery wagon during a blinding blizzard and Mr. Clarke, who was seated in the tonneau, barely missed the horse's head and shaft of the

colliding vehicle. His car was badly smashed as a result of the impact.

The latest advice received from England is that leather laces have gone up by ten per cent. The manufacturers state that this is owing to the high price for skins and the increased cost of production. The advance applies to porpoise, one tag and other laces. It will be remembered that mohair laces recently advanced ten per cent., and leather laces have apparently gone up in sympathy.

J. T. Lawson, of Regina, is spending a few weeks visiting at his old home in Orangeville, Ont., and in Toronto. He has been in the shoe business in the West for two years and previous to that was engaged in the same line in Orangeville. Mr. Lawson has met with great success in the capital city of Saskatchewan and has associated with him his two sons. He reports trade as active and speaks in optimistic terms of the future.

The many friends of W. H. Budreo, one of the Western Ontario representatives of Blachford, Davies & Co., who resides at 47 Springhurst avenue, Toronto, will sympathize with him in the loss of his infant son, nine months old. The child was sleeping and by some manner turned over and was smothered to death in the bed clothing. It had been left only a short while, and when its mother went upstairs to see how it was, she found the little one lifeless.

H. S. Bond, late of Ottawa, has been appointed manager of the Slater Boot Shop at 163 Yonge street, which was opened this week. The new establishment is attractively fitted up with the single shelving carton system, all the fixtures and high-backed settees being of oak. Mr. Bond has had several years' experience in the shoe business in Belleville, Ottawa and Montreal, and expects that the new store will soon be one of the busiest that has been launched by the company. The new front possesses a receding entrance, deep plate glass windows with Laurentian marble base and is decidedly artistic.

R. G. Boyle, who for the past few years has ably looked after the eastern ground for Blachford, Davies and Co., Toronto, covering the territory from Kingston east, including the Ottawa Valley, will henceforth represent the firm from Orillia north to Fort William. He is well liked by the trade and is a most successful salesman. His successor in the East is E. B. Weiss, of Napanee, who has been identified with the trade for several years, having for a long time been with the Blachford Shoe Store, Yonge street, Toronto. The staff of Blachford, Davies and Co. held an enjoyable dinner on Monday night last.

William West, who was for many years engaged in the retail shoe business on Yonge Street, Toronto, on the site now occupied by the T. Eaton Co., and a resident of Toronto for more than half a century, died January 12th at his home in Broadway Avenue, Eglinton. Mr. West was in his seventy-fifth year. He succumbed to the effects of a cold contracted a few days ago. About sixteen or seventeen years ago he retired from the shoe business. He is survived by two sons and two daughters. Mr. West was a successful merchant, possessed a bright, optimistic disposition and had many warm friends. He amassed considerable property and was an active and useful citizen.

#### SHOEMEN HONORED BY ELECTORS

F. S. SCOTT  
Re-elected Mayor  
of Galt

H. ASHPLEANT  
Re-elected Alderman  
in London

A. W. AULT  
Re-elected Alderman  
in Ottawa

### Shoemen Win Many Municipal Honors

Men identified with the shoe and leather trade generally make a success of any thing they attempt. Many possess sufficient public spirit to devote a portion of their time to the welfare of the cities or towns in which they reside. At the recent municipal elections in Ontario, their candidature of these gentlemen was successful.

F. Stewart Scott, of the firm of Getty & Scott, shoe manufacturers, was re-elected mayor of Galt by acclamation. He has filled the civic chair of that busy town for a year with zeal and efficiency, and inaugurated during his regime many progressive measures.

R. M. Beal, president and treasurer of the R. M. Beal Leather Co., Lindsay, has been elected mayor of that town. Mr. Beal has been one of the most progressive business men in Lindsay, and his many friends congratulate him on his elevation to the civic chair.

A. Knechtel, shoe retailer, of Stratford, and one of the live ones in that city, has been returned as a member of the aldermanic board. He made an excellent showing at the polls. Mr. Knechtel has been a valued member of the city council for some years.

In London, Ald. H. Ashplant, of the firm of H. Ashplant & Sons, shoe retailers, was re-elected for the coming year, and materially increased the vote that he received a year ago. He has been a member of a number of the most important committees in the Forest City.

In Berlin, several men identified with the shoe and leather trade were highly honored in the municipal elections. Among those elected to the council were George Rumpel, president of the Berlin Felt Boot Co., A. L. Breithaupt, President of the Berlin Trunk and Bag Co., H. A. Hagen (who is identified with the shirt manufacturing business, but is also a partner of the retail shoe firm of Sippel & Hagen), N. B. Detweiler, president of the G. V. Oberholtzer Co., John Hassenhauer, of John Hassenhauer & Son, shoe retailers, and A. Weseloh, who has long been identified with the footwear trade. For membership on the light commission A. R. Lang, vice president of the Lang Tanning Company was returned.

Among those recently re-elected to the city council was A. W. Ault, head of the wholesale firm of A. W. Ault & Co., Ottawa. He was first chosen as an alderman for the Capital ward in 1912 and has made a capable representative.

### Important Changes in the Trade

More important changes have occurred in the shoe manufacturing field during the past year than in any previous year. There have been nearly 125 new firms, 100 important alterations in location, many changes of buyers and superintendents and also several consolidations. All of these are contained in the new 1913 American Shoemaking Directory. This handy little book which just fits the vest pocket, contains a complete list of all shoe factories in Canada and the United States, together with information of value to those following this trade. The book is sent postpaid for \$2 by the Rogers & Atwood Publishing Co., 683 Atlantic Avenue, Boston, Mass.

### Western Travelers Elect Officers

At the thirtieth annual meeting of the Northwest Commercial Travelers' Association in Winnipeg, the following officers were elected for the ensuing year: President, William Stitt; vice-president, A. McAllister; treasurer, L. C. McIntyre; secretary, Fred. J. C. Cox; members of the executive committee, J. M. Scott, E. H. Lee, G. R. Bolton, J. H. J. Murphy, A. E. Wayte, W. J. Litster, Charles Holden, J. E. Holland, John Brockest, C. M. Scott, L. Nash, J. P. Minhinnick; vice-president for Alberta, J. D. McDonald; vice-president for Saskatchewan, W. C. Bell; vice-president for British Columbia, A. R. McFarlane; members of the executive, Alberta, O. S. Chapin; Saskatchewan, S. C. Burton; British Columbia, R. W. Clark.

## Just a Few Bouquets

### Good Wishes and Good Luck

*Kindly accept my congratulations on the twenty-sixth anniversary of the Shoe and Leather Journal. You certainly are getting out an admirable paper in every respect. Wishing you all the compliments of the season, I remain,*

*Sincerely yours,*

*Jas. T. Sutherland.*

*With the Cook-Fitzgerald Co.*

*the Frontenac Hockey Club,*

*Kingston, Dec 18th, 1912.*

### Shoe Repairer Finds It All O.K.

*I have been busy moving down to the centre of the town. I notice that you had an excellent article on the necessity of shoe repairers getting more money for their work, and in this I thoroughly agree with you. The SHOE AND LEATHER JOURNAL is the best value for one dollar that I obtain in any publication.*

*Yours truly,*

*JOSEPH MOREY.*

*Portage la Prairie, Man.*

*Nov. 25th, 1912.*

### Full Of Good Things

*You run out a good paper. There are lots of ideas that we can use to decided advantage. Find one dollar for another year's subscription.*

*Yours truly*

*Russell Bros.*

*Fort William, Ont.*

*Jan. 3rd, 1913.*

### A Dollar Well Invested

*Enclosed find P. O. Order for two dollars to pay my subscription to THE SHOE AND LEATHER JOURNAL for 1912 and 13. I am well satisfied with the abundance of information given in its pages, and find one dollar a year is money well spent. Wishing you all success.*

*Yours truly,*

*J. T. Brown.*

*1061 Granville St., Vancouver.*

*Dec. 27th, 1912.*

### What Live Repair Firm Say

*We are sending one dollar for another year's subscription to THE SHOE AND LEATHER JOURNAL. We are only repairers, but we find a lot of useful information in your paper and would advise every repairer to subscribe for it, more especially those who are thinking of handling new goods in the future.*

*Yours very truly,*

*Hunt and Harry.*

*Souris, Man.*

*Dec. 30th, 1912.*

### A Welcome Guest

*We wish you success with your up-to-date trade paper. We read and enjoy every issue.*

*Calgary, Alta.*

*Ed. M. Foster.*

*Dec. 18th, 1912.*

**Breezy Notes From Winnipeg**

Mr. Battice, of the Yale Shoe Store, spent Christmas at his home in Duluth.

W. H. Miner, of the Miner Rubber Co., Granby, was in Winnipeg recently on business.

W. A. Marsh, of the W. A. Marsh Co., Limited, Quebec, spent a few days in Winnipeg recently.

W. J. Berryhill, of the Yale Shoe Store, spent the holiday at his home in Keewatin.

C. T. Bloodsworth, late of the Avenue Shoe Store, left recently for his home in New York City.

T. Ryan, salesman for the Ryan-Devlin Shoe Co., spent the holidays at his home in Toronto.

C. Newton, has resigned from the Rannard Shoe Co., Main Street, and taken a position with J. Robinson.

Mr. Hamilton, late manager of the shoe department of Robinson's department store, has resigned his position.

The holiday business was very good with all the shoe dealers and satisfactory reports are recorded by all the leading stores.

R. K. Jenkins, lately manager of the Avenue Shoe Store, has resigned his position and taken a place on the road with the W. A. Marsh Co., Western, Limited.

Mr. Higgins, late with Ames, Holden, McCready, Limited, has left for the West, where he is starting business in a new town. He was in Winnipeg recently purchasing goods.

Some of the holiday windows of the shoe men were marvels of beauty, good taste and attractiveness. Among those that may be specially mentioned are: The Moyer Shoe Co., Limited, The Ryan-Devlin Shoe Co., Main street store of the Rannard Shoe Co., and the Nickle Boot Shop. The shoe men certainly surpassed all previous records.

**Shoeman Who Is Climbing Up**

L. J. Mulhall is one of the most popular shoemen in the West. "Mull," as he is familiarly known, is a Nova Scotian by birth. After an apprenticeship of four years in the east, he journeyed west some seven years ago and has been with the Ryans in Winnipeg ever since. He began with Mr. George Ryan and by energy, perseverance and application has steadily worked his way up until he is now Mr. Devlin's right hand man, and he is a good one too. He is to-day manager of the Ryan-Devlin Shoe Co., taking the place of S. W. Caldwell, who recently joined the staff of Eaton's, as assistant manager. Mr. Mulhall has many warm friends in the trade, who respect him for his bright, cheery disposition and for his honest, sterling worth. He is a true, wholesome fellow, who possesses the faculty of winning and retaining friends. Mr. Mulhall is quite a tennis player, and also takes a keen interest in all lines of live sport. His one weakness, however, is baseball, in which game he shines some himself.

**Ratepayers Encourage Shoe Industry**

During the recent municipal elections in Ontario, several by-laws to grant concession or assistance to shoe and leather companies were voted upon and were carried in a majority of instances. In London, Ontario, a measure was submitted to the people to loan the C. N. W. Shoe Co., \$20,000, which was to be repaid in annual instalments. The by-law received a majority, but not sufficient to carry it. However, it is understood that this will not interfere with the operations of the company, who are now at work making shoes and have a large number of orders ahead.

In Tavistock, a by-law was voted upon to grant a

bonus of \$10,000 to the Tavistock Felt Boot Co., to supply free water and exempt the industry from taxation for a period of years. The by-law was carried by a large majority, and the Hamburg Felt Boot Co., which is at the back of the new industry, will now go ahead with the erection of several buildings. The factory at New Hamburg will be continued, the one at Tavistock being a new enterprise to meet the increased volume of business. The company agrees to erect one building 120 by 45 feet, three stories high, another building 60 by 45 feet two stories high, and a third structure 70 by 40 feet, one storey high. The Tavistock Felt Boot Co. will instal machinery worth \$20,000, and will begin building operations in May next. It is expected the industry will employ about seventy-five hands, and will be in operation by January of next year.

In Newmarket a by-law to guarantee the bonds of a new shoe factory company was carried by a very large majority. The measure called for the guarantee of the bonds to the company up to \$25,000 and to fix the assessment of the property at \$10,000 for a period of ten years. The company will purchase a site, erect suitable buildings, employ 75 hands, and instal machinery at a total outlay of not less than \$40,000. It is expected that operations will be commenced in September next, and that seventy-five hands will be employed. The company also agree to give the town a first mortgage on the building, machinery, etc., for the full amount of the bonds.

At the recent municipal elections at Huntsville, a bylaw to fix the assessment of the Anglo-Canadian Leather Co. on its tannery in that town at \$50,000 for the next ten years was passed by a large majority.

**The Happenings In Quebec**

Mr. and Mrs. O. Goulet have returned from spending a few days in Montreal.

V. Coulombe, shoe dealer, of Quebec, has gone on a visit to relatives in Ireland.

Dr. M. Brunet, of the Rock Shoe Co., was confined to his room recently owing to illness.

E. P. Mullarkey, Superintendent of William A. Marsh Co., was in Montreal during the holidays.

E. Tremblay, shoe manufacturer paid a visit to his mother recently at St. Felicien, Lake St. John.

O. Goulet, shoe manufacturer, is installing five electric motors in his factory to run each department separately.

James Pleau, foreman of the Louis Gauthier Co.'s sole leather room has resigned. M. Legace has taken charge of the fitting department.

F. J. Minges, representing the Narrow Fabric Co., of Reading, Pa., who manufacture the only laces on the market which are guaranteed for six months, is on his annual trip through Canada.

A. C. Kitchener, of the Canadian branch of the Palatine Heel, Preston, Eng., was in Quebec last week on a visit and called on Dupere & Garant, Quebec representatives. He expects to leave for England next month and will be away several weeks. Mr. Kitchener is well satisfied with the sales made in Canada.

Among the visitors in Quebec during the past few days were L. W. Bishop of the Narragansette Narrow Fabric Co., Pawtucket, R.I., R. A. Pettigrew, of The Bonner Leather Co., Montreal, John McPherson, Hamilton, Ont., M. Bastien, representing J. G. Watson, Montreal, and H. C. Parker, of The Dominion Supply Co., of Montreal.

The retail business at the present time is better than that of the corresponding period last year. Retailers have sold more shoes and the stocks are rather low. The demand for felt goods has not been so good owing to the soft weather. Many of the shoe factories took stock during the holiday season, and since then have started in working at full capacity. They expect a decidedly active run for the next few months and orders are coming in nicely at the present time.

### Has Sold to Three Generations

Mr. F. W. Hills, whose photo is shown here, is one of the best known "old timers" in the shoe line especially in Ontario and Quebec, where he spent his entire time up to date. He covers Eastern Ontario, the Ottawa Valley, and Huntingdon, Que. district for Jackson & Savage, the Montreal jobbers. Mr. Hills was born in Lachute, P. Q., where he spent his earlier years, and on leaving school started in the tanning business under his father, who conducts a tannery in Lachute. After learning the trade from start to finish, he started traveling in his father's interests, making his first trip in 1868, when traveling conditions in Canada were poor and accommodation bad. He continued on the road for his father many years, leaving it later to join the staff of Jas. Robinson, Montreal, for whom he traveled eighteen years and later for Jackson & Savage, with whom he is at present.

Needless to say, during the forty odd years Mr. Hills has been on the pike, he has had many opportunities to view innumerable changes in shoe conditions, which have been many, as well as in general state of the country. Practically all his territory was covered then by driving, as railways were unknown in this part of the country at that time. "I wonder," said Mr. Hills, "if the younger generation of travelers would be willing to put up with what we had to then in the way of accommodation, etc."

His customers look on him as a personal friend rather than from a business standpoint, and he is as well known in Ottawa Valley towns as most natives—better than some, and has a reputation of being the best of good fellows. Mr. Hills says in one town he has sold to three generations, grandfather, father and son.

### He is Forging to the Front

An Ottawa boy, who has succeeded in his home town, is M. R. Shore. A few years ago he broke into the shoe game and now occupies the position of assistant manager of the footwear department of the A. E. Rea and Co. departmental store. He has a host of friends in the capital and is an all round good fellow as well as a competent shoeman, one bringing energy, industry and application to bear in the discharge of his duties. Mr. Shore is one also of the best known black-faced comedians in Ottawa, and can sing a bunch of humorous songs. He takes part in many social entertainments and is always sure of numerous encores. He takes a deep interest in athletics and all forms of outdoor exercise.

### Municipal Honors for Mr. Weseloh

One of the successful candidates for aldermanic honors during the recent election in Berlin, Ontario, was A. Weseloh. It was the first time that he ever aspired for recognition at the hands of the ratepayers, and he was a winner without doing any canvassing, except having his name printed on the ballot. Many business men and personal friends wanted him to stand, and, now that he is elected, he intends to do all in his power for the advancement and upbuild of Berlin, where he has made his home for the last seventeen years. He has seen the place grow from 7,500 people to a city of 17,000 inhabitants. He has long been a progressive merchant and was for many years in the shoe business, selling out in February last to F. Kibler, First Vice-President of the Ontario Shoe Retailers' Association. Mr.

Weseloh is president of the Ontario Board of the Retail Merchants' Association of Canada, and First Vice-President of the Dominion Board. He has always taken an active part in its affairs. He is now conducting a general dry goods ladies' ready-to-wear and men's furnishing business. He is making many changes in the interior of his store, and enlarging it at the rear by an archway. He also devotes considerable space to house furnishings and curtains.

### This Man Headed the List

The one who headed the polls of all the old aldermen seeking re-election in Berlin was H. A. Hagen, of the shoe firm of Sippel & Hagen. This makes his fourth year in the city council. He served last year and about fourteen years ago was a "town father" for a couple of terms. He is identified with several interests in Berlin, and is a successful and wide-awake business man. He has always evinced the liveliest interest in sport, and is at present one of the directors of the Canadian League Baseball Club. He is also an enthusiastic lawn bowler, and takes part in many a game. Mr. Hagen possesses public spirit and is never tired doing everything in his power to further the interests and prosperity of "the youngest city in Ontario."

### An Increase in Price All Around

The Kingsbury Footwear Co. announce an increase in price on all their lines, this increase taking effect the first of the present year. This step has been made necessary by the continually advancing price of leather, and other raw materials, labor and everything contributing toward the cost of making up shoes. It is to be noted that every line in the Kingsbury Company's great range has been included in this increase, which is sufficient evidence of the fact that these advances are inevitable. The retailer in future must govern himself accordingly and sell his goods at a price which will allow him a fair profit, because undoubtedly the advance put in force by the Kingsbury Footwear Company, will be accompanied by advances upon the part of other manufacturers.

### Outlook of What Will Sell

Manufacturers and jobbers are anticipating a good demand for white shoes, both in canvas and in leather. Rubber-soled Oxfords promise to be the best selling novelty. In materials, gun metal is easily the favorite, with tan second. A larger use of patent leather than last season is anticipated. There is also an increased demand for kid leather, but how strong this will become is uncertain. Both manufacturers and retailers seem favorable to pushing the sale of kid mostly because of the belief that it would have a tendency to reduce the price of calf skins.

### It is Now Ald. Wickett

In the municipal elections in Toronto, one of the new men who came to the front and headed the polls in Ward Two, was S. Morley Wickett, who made a phenomenal run. Ald. Wickett is vice-president of the Tanners' Section of the Board of Trade, and managing director of Wickett and Craig, Limited, leather manufacturers. His father, S. R. Wickett was for several years a member of the Toronto civic council. All the newspapers heartily endorsed the candidature of S. Morley Wickett, who was born at Brooklin, Ontario, 1872, attended the public schools, Toronto Grammar School, Toronto University (B.A., 1894) and later took post graduate work at Vienna, Berlin, Paris and Cambridge.

**WANTED**—Shoe salesman to handle my steel shoes as a side line. Sell at sight, especially in farm community. No competition, best advertised line. Write for particulars to Steel Shoe Co., Toronto, Can.

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

## UNITED SHOE MACHINERY COMPANY OF CANADA

LAGAUCHETIERE AND ST. MONIQUE STREETS

MONTREAL, QUE.

122 Adelaide Street West, TORONTO

492 St. Valier Street, QUEBEC

He was Fellow in Political Science at Toronto University, for some time, then entering on a business career. He is a member of the Canadian Manufacturers' Association executive and has written several books on trade questions. He is an independent in politics, and a member of the National Club, R. C. Y. C. and Lambton Club.

**A Useful Reference Book**

The annual year book issued by the Jacobsen Publishing Co., of Chicago, for the year, 1913, has been published. This work containing a directory of the tanners, shoe manufacturers, packers and other branches of the trade, is very complete and reliable. It is a veritable mine of information and contains reliable statistics relative to production, trade organization, corporations, etc. A portion of the book is devoted to the shoe trade in Canada, wherein much interesting information is presented. The Hide and Leathers'

Year Book and Directory for 1913 contains 516 pages and it will be found a very useful volume for any one connected in any way with the trade.

**May Be Brought Back to Canada**

Henry Frank, who is alleged to have left Toronto when the firm of P. E. Frank & Co., wholesale boot and shoe dealers, Toronto, failed with liabilities of \$240,000 and assets of \$30,000 or more, has been arrested in New York city and may shortly be brought back to Toronto. Gideon Grant, the solicitor for the creditors, said that the offence with which Frank is charged at present—conspiracy to defraud—is not an extraditable one, and that as Frank declined to waive his rights another charge that is extraditable may be laid. At a meeting of the creditors, Messrs. Gideon Grant, Joseph Montgomery, D'Arcy Grierson and George W. Holmes were appointed inspectors, and Mr. Daniel Grant, the assignee, was instructed to wind up the estate.

# Some Pointers on "Elmiras"

and why you should sell "Elmiras" to your customers  
and why your customers will want them

The Mark

on Them

**T**HERE are many good reasons why the Best Retailers sell only "Elmira" Felt Shoes and Slippers. "Elmiras" have been the "Top notch" in Felt Footwear for over 12 years. They have stood the test where others failed. The success of Elmiras was established by attention to Details. Every piece of material, every seam in Elmira quality is made with an expert's knowledge of what is required in Good Felt Footwear, always the same, one price to everybody, and that price based on actual cost of good material and expert workmanship. Not on a basis of a percentage less than some Leader, because "Elmiras" have always been the leaders to which competitors have looked for both standard of quality and price.

In 1913 the Elmira line of Felt Shoes and Slippers will be the most complete ever shown.

In quality the same as always.

In range, larger and with many desirable new lines.

Elmira 1913 illustrated catalogue is the handsomest and most complete ever issued and will be mailed on request to any dealer not having already received it.

Elmira samples will be in the hands of 80% of the Canadian Shoe Jobbers early in January.

When placing your Felt order, ask to see the above Trade Mark on the samples and when receiving shipments look for it on cartons and shoes.

# A New Shade of "Bestyet" Calf

"Bestyet"  
Brown—  
Twin Brother  
To "Bestyet"  
Tan

Write for particulars of these two lines

A good heavy waterproof calf in colors.

You'll need some of these skins for your heavier fall shoes.

Moderate priced veals.

These are thoroughly waterproofed and reliable

**DAVIS  
LEATHER  
COMPANY  
LIMITED**

**NEWMARKET  
ONTARIO**

¶ *"Bestyet" Tan Calf has a rival for popular favor. Its name is "Bestyet" Brown. It's a Russia Calf in the newest and most popular shade of brown.*

¶ *You could hardly imagine anything richer than the color of "Bestyet" Brown, or anything better calculated to catch the popular fancy. It is just the shade you've been looking for.*

¶ *Like "Bestyet" Tan, "Bestyet" Brown is absolutely even in shade from skirt to skirt, and from head to tail of each skin, and like "Bestyet" Tan it is washable, and will not fade.*

¶ *This is to be a big "tan season." Make sure of your share of tan sales by putting "Bestyet" Tan and "Bestyet" Brown into your samples. Remember, these leathers equal anything you could import, and they save you the duty.*

¶ *You could have as prompt delivery as you wish on these leathers.*

## “Perth” Shoes keep their shapes

“PERTH” style is not merely an added feature to promote first sales. It is an integral part of the shoe itself—it’s built right in.

¶ “Perth” shoes appeal to women of taste because of their trig and natty shapes, and because they retain their shape so long. The “style” of a “Perth” shoe is as strong and as lasting as the shoe itself.

¶ Wouldn’t it be good for your business to feature in your women’s department a shoe that holds its shape like the “Perth.”

## Walk-Over Shoes in Stock

Hiker—Stock Dept. No. 2114

THE advantages to the customer of the Walk-Over Stock Dept. are obvious.

You can carry a smaller stock; turn that stock oftener; always have sizes, widths and styles for your trade; seldom be overstocked or have dead lines to close out at a sacrifice—and all with less money tied up and less insurance to pay for.

The Walk-Over stock line is most complete and comprehensive, comprising 82 numbers of men's shoes and 74 women's shoes.

We have two distributing points, Campello, Massachusetts, and St. Louis, Missouri. The same shoes are carried in both places and the same prices prevail.

Our new stock catalogue, beautifully illustrated, will be sent on application to any dealer who is located in a town where there is now no Walk-Over representative.

# McLAREN & DALLAS

WHOLESALE DISTRIBUTERS OF

Heap on more wood, the wind is chill  
But let it whistle as it will  
We'll wear our warm "ELMIRAS" still.

It is not alone the excellent quality, the substantial construction, the neatness of appearance, nor the comfort-giving features that make "Elmiras" the right brand for every shoe merchant to handle.

It is the fact that the remarkable combination of all these things embodied in every pair of "Elmira" Felts helps to create business that is worth while, because all "Elmiras" are ready sellers and ready sellers mean good profits.

This is the "reason why" you should buy "Elmiras" and the "reason why" you should buy through us is that in doing so you not only receive the best goods, but also adequate service, including quick delivery when you are needing the goods most.

## And Now a Word About SPRING LINES

As a matter of course you have decided to make the coming spring your bumper season. Then you will need some of those mighty fine styles which have lately been added to our range of spring goods. Be sure our traveler shows these to you when he calls on his spring sorting trip.

Take a good look through all our brands, including "The Imperial Shoe," "Beau Brummel," "Beaver Brand," Maple Leaf" brand, Heavy Shoes, and "The Little Canadian." You will likely find a number of styles and sizes you will want for sorting purposes.

Your order for these you may be sure will be properly taken care of at this end.

## So kind to tender feet

For old feet---for feet with corns, and feet with bunions---for tender feet of any description, there's the Professor Shoe.

Its uppers are of softest kid that yields quickly to the slightest movement, and does not chafe the foot. Its medicated, cushioned inner sole is soft and pleasant to walk on, and gives a light, springy tread.

Then, the Professor is built on sensible lines that conform to the natural shape of the foot. With the Professor there is no forcing of feet to fit shoes---the Professor fits the foot every time.

Isn't this the sort of satisfaction you wish to give patrons of your store?

# Every shoe represents 40 years of concentration

A. CORBEIL

**Y**OU almost need every bit of forty years' concentration to be able to profitably turn out men's shoes to retail at \$3.50 and \$5.00 in these days of high-priced leather and labor. We're doing it just because we have forty years' experience behind us, and because those forty years have brought us an exact knowledge of what is necessary in a shoe of this price.

Behind every Corbeil Shoe is the planning, experimenting and selling of nearly half a century, and the desire to give more in value than can be had in any other shoe.

You can't get the same value in another line simply because there isn't another line that is backed up by so many years of specialized effort.

Those forty years of specialization will surely help you sell Corbeil Shoes.

## Will Rubber Cos. Abolish Prepayment of Freight?

Proposal Favored by Number of Manufacturers and Opposed by Others—Question of Uniform Cartons May Be Considered—Preparation of 1913 Price Lists Will Soon Begin—Revised Tennis Goods Figures Show An Increase

The rubber footwear selling season starts on the first of March, and as the date draws near, the question is naturally being asked by many retailers throughout the country, if there will be any alternation in prices. It will be remembered that last year in March there was an advance of about 5% when every line was taken into consideration, and that a new schedule was drafted which applied west of Port Arthur, the figures there being from 2 to 3% higher than in the east. This departure was made owing to the heavier freight rates, the long hauls and the augmented cost of doing business in Western Canada. The reason given for the advance in light shoes was that materials and labor on this class of goods were very much higher than formerly. The advance of some of the finer lines ran from 8 to 10% but on the whole, the average was around 5%. These figures prevailed until April 22nd, 1912, when another increase went into effect. The second augmentation of prices brought the figures on an average up to about 12½% higher than they were in 1911, and made quotations on a parity with those in effect across the border.

The question now is, will the figures which have prevailed since April last, hold good with respect to the coming season? While it may be a little early to make any predictions, still there is always a certain amount of interest in speculation. From inquiries made in various sources, it is not thought any of the concerns are likely to raise except on a few lines especially as there were two advances last year. The price of raw rubber remains about the same or perhaps a little higher. Wages have also gone up some, and cottons have increased from 5 to 7%, still it is learned, although not authoritatively, that no decided advance is likely unless there is a big jump in the figure for crude rubber.

At the first of last month revised price lists were issued for tennis goods and orders for the coming season are very encouraging. There has been an increase in quotations from 2 to 4 cents a pair due principally to the higher figure prevailing for cottons.

### Abolition of Freight Prepayment

There are, however, some other conditions which may be mentioned and which are being talked about by the various companies. It is felt by some of them that certain concessions, introduced months ago, could very well be eliminated. "These frills," as one of the speakers criticized them, are proving rather costly and the trade really does not expect anything in the nature of such privileges. One is the prepayment of freight. All the companies prepay freight on shipments of 100 pounds and over to the nearest railway station, except one which has a different working arrange-

ment, whereby a rebate of 1% is allowed off for freight. It does not matter whether the shipment amounts to 100 pounds or not, the rebate is being made.

A representative of one of the companies speaking along this line said: "There are two things that we would like to see altered—one is the prepayment on freight shipments of 100 pounds or over. This costs the manufacturer a great deal more than the average person imagines. The retailer, of course, has to pay it in the long run, because it is all figured as an item in the cost of production, when the new price lists are being drafted. To my mind, there is no earthly reason why freight should be pre-paid by manufacturers of rubber footwear. There is no other commodity produced by manufacturers on which freight is included in the quotations. Makers of leather shoes never think of pre-paying such charges and I do not see why rubber manufacturers should do so. There are a number of retailers who do not bother about pre-payment of freight on their shipments, but others are very keen on this point and are anxious to secure every concession that is granted. You would be surprised what this one item costs us. We have paid out \$20,000 to the railways during the last few months. My views are that there is no necessity for this and the companies should cease a practice for which they get little or no thanks."

### What About Smaller Cartons

"Another thing that I would like to see taken up is for the various manufacturers to come to an understanding in the matter of cartons. As it is now many retailers are complaining. The cartons for men's plain overs and women's croquets are altogether too large—much larger than those turned out in the United States. Since practically all goods of first quality are cartoned, retail shoe men tell me that too much room is taken up with the boxes. It is ridiculous to think that many of the cartons for rubbers are as large as those for a pair of shoes when the former do not take up half the room. I am certain that uniform cartons would be a boon that would be welcomed by the trade and it should be easy for all the manufacturers to get in line on this point. At the last meeting of the Ontario Shoe Retailers' Association, I notice that a committee was appointed to interview the manufacturers with reference to a uniform sized carton for leather shoes. I do not see why there is not equal necessity for boxes of like dimensions in the matter of rubber footwear."

### Figured on Cost of Production

Speaking along these lines, a director of another company stated that the prepayment of freight or granting a concession

for same was a nuisance and a disturbing feature. In the majority of shipments, it amounted to only a few cents and retailers would not object to paying the charge, but when taken in the aggregate—the sum was a very large one, as far as his company was concerned. He had done some figuring in this matter and found that the freight bills on shipments amounted, roughly speaking, to about 2% of the total cost of production. It depended upon the point to which goods were sent, but on the whole, he thought that 2% was a fair calculation. This was really paid by the retailer in the end, and while he may think that he is escaping the charge, still he is not doing it. It would be more satisfactory all round to have this feature eliminated. Touching upon the matter of uniform cartons, he declared, "I do not think such a move is likely to be agreed upon by the companies. I know it would be very nice for the dealer to have boxes of equal size and much smaller than many of them are at present, but this topic has been discussed again and again without bearing fruit. However, there may be something accomplished if the agitation is kept up. Whether there will be an increase in prices of rubber footwear on any lines during the coming season, I cannot say. We have not yet started in to prepare our lists and it is too early to speak on this theme."

#### The Bonus for Volume, etc.

A representative of another company practically endorsed all that had been said regarding the prepayment of freight, which he said, was a "spectacular feature" when first introduced, but of late, had not appealed so much to the trade. "I would like to see it abolished altogether," he continued, "and think if this is done, there may be no change in the 1913 prices of rubber shoes. There are one or two other things that I would also like to see wiped out, and they are the giving of a bonus for volume of business done and also the discount at the rate of 1% per month for prepayment. This bonus for volume and the extra discount mean a considerable sum in the end which eats a large hole into the cost of production. I understand that practically all the manufacturers of leather shoes have virtually the same terms of payment and there are no extra concessions granted. I do not see why the producers of rubber footwear cannot also arrive at a satisfactory understanding regarding all these points. This would not be a combination in any sense of the word, but merely an agreement to better conditions such as all trades have. I would like to see the terms continue at 2% ten days or net, 60 days from the various datings, and beyond that the goods should be sold on their individual merits."

"The matter of granting an extra discount for prepayment of one per cent. a month, the prepayment of freight and the bonus for volume are things which, in my view of the situation, could be very well abolished. You will observe that the tanneries throughout the country have been advancing the prices of leather from time to time, there being two if not three advances within the last few months."

Leather shoe manufacturers also increased prices from 8 to 15% for spring delivery, and I understand that higher prices will prevail for fall goods when travelers start out in a few weeks. Under these circumstances, and in view of the increasing cost of labor, the frequent changes of lasts and the advanced cost of raw material, the trade can scarcely expect to obtain rubber footwear at the same figure during the coming year, unless some of the conditions which now prevail are abolished. These are my personal views, and I reiterate that prepayment of freight, especially, is a thing that should be numbered among the practices of the past."

#### Why Uniform Cartons are Impossible

"It is absurd to pay freight rates," declared another company, "and we have always been against it since it commenced. All expenses must come out of the consumer's

pocket. The Western list is approximately 2½% higher than the Eastern list, which is supposed to cover the extra cost of freight prepayment. We have followed this policy only as we could not do otherwise, but even to-day many customers are not aware that the rubber companies prepay their rubbers. Our branches frequently ship 'Collect,' and we have found, in many instances, that the customers are not 'wise' to the fact that the freight should be prepaid, but pay it themselves without any reference to same. This freight prepayment is certainly a bad policy, and one which we are very anxious to get away from."

"We may state further, that on shipments to British Columbia points, we have frequently figured that our freight amounts to as high as 15% and 20% of the value of the goods, these points lying several hundred miles north of Vancouver, and these customers think it is a big joke to have this freight prepaid to their stores. You can readily see that the 2½% which has been placed on the Western prices, in very many instances does not nearly cover the freight."

"In regard to adopting standard sized cartons, we think there would be considerable trouble in getting all the rubber companies to adopt one size of carton, as each rubber company have a size which they believe adapted to the goods they sell. We find that some of our cartons are a little larger than those of some of the other companies, but we have, at various times, gone thoroughly into this, and cannot approve of their sizes. A few arguments why it would be difficult to make such a change are:

"Factory stocks and branch warehouse stocks at this time of the year, running up to anywhere from \$300,000 to \$1,000,000 worth of footwear owned by the several rubber companies, if changed, would show two sizes of cartons in the same kind of rubber, and the trade would thus be able to distinguish new stock from stock made during the last year, and when this was once known, it would be difficult to move the old lines."

"These cartons are usually packed 25 pairs to a wooden case, which fit into such wooden case exactly, and by using two sizes of cartons, it would be necessary to fill the orders in both the old and new sizes to get rid of the old stock, and thus the cartons would not fit exactly the wooden case, and would slip around."

"Most of the companies place orders for the labels for the front of their cartons for at least a year's supply which runs up into large quantities, and the sizes of these labels would also have to be changed."

"The main difficulty, however, would be in the different companies deciding on what should be the correct size of carton, and if this could be decided, it would probably take a whole year to clean out the old sizes. Of course, our supposition is based on very radical changes being made, but if these changes would not be important, it would make very much less trouble. We have gone into this very thoroughly at different times, writing our branches, and having our salesmen ask their customers, and believe our cartons are about right, and on this account would not be inclined to make a change unless we saw that it would be a decided improvement somewhere."

#### Strongly Opposes the Proposal

"No sir, we are not in favor of the pre-payment of freight on rubbers being abolished," declared the sales manager of another company. "The proposition may look nice and attractive at first glance and some of the concerns may think perhaps they would save a great deal by it, but we do not think so. The larger fellows would have the advantage of the smaller. How do we make that out? Well, it is this way. The bigger companies have more distributing warehouses than the smaller ones and, if a retailer is compelled to pay freight on shipments you can bet he is going to do so from the nearest point and not buy his rubber footwear lines

(Continued on page 47)

## Will Oppose the Parcel Post

Secretary Trowern Says That the Merchants Will Protest Vigorously Against Proposed Introduction of the System in Canada.

Hon. Mr. Pelletier, Postmaster General for Canada, has foreshadowed in the House of Commons the introduction of a parcel post system for Canada, on somewhat similar lines to that which went into effect in the United States at the beginning of the year, and has been largely patronized. The details of the proposed system in the Dominion have not yet been made known. There may be a zone limit with a graded rate, as across the border.

J. E. Armstrong, M.P., took heed of the interest of the country merchants and suggested that the system be limited to the country mail routes and, in that event, the big city departmental stores could not starve out the village and town shops. The rural and town merchants and the express companies would strongly oppose the legislation.

"Yes," said E. M. Trowern, secretary of the Ontario Shoe Retailers' Association, and also secretary of the Retail Merchants' Association of Canada, "You can depend upon it that we will strongly and unitedly protest against the move, which is being heralded as one of the means to reduce the high cost of living. That is all nonsense, and a mere catch cry. The retail merchants will oppose the parcel post system tooth and nail. We will not go about it as did the various trade associations across the border, where one section recommended one thing and another section another. The result was that the United States post office authorities came to the conclusion that the merchants did not really know what they were about, as seemingly, they could not agree on anything. We will present an unbroken front, there will be no division in our ranks. We have already begun the campaign to combat this legislation. What are the objections to it? They are so many that it is impossible to enumerate them briefly. The only earthly benefit of the parcel post system to any one will be that it will aid the departmental stores and mail order houses in building up their mail order business to the detriment of the local merchant, who, after all, is the backbone of any community. Take the local merchants out of any town, and what would

you have left? You would not want to live there. The place would be dead. These are the men who pay rents, taxes, local improvements, hire help and give employment to a large number of residents. They erect and improve stores and aid in every way to build up the interest of the centre in which they are located. This iniquitous parcel post delivery system is just what the big departmental stores would like. What a great blessing it would be to them! They could send their wares, broadcast, throughout the country, which will have to pay for the system, and yet these mammoth shops do not pay one cent of taxes to any outside community for the purpose of doing business therein. It may be urged by some that express rates at present are high. Then, I say, bring the express companies to time, make them show up their books and profits. Surely the Railway Commission of Canada has power to do that. I want every retail merchant to assist in fighting this parcel post business. The post office was invented for the purpose of carrying letters and newspapers, and not for transporting packages, some of them the size of a man," concluded Mr. Trowern.

## "The Proper Baiting of the Trap"

How Enterprising Dealers Caught the Fancy and Desire of Holiday Shoppers—Winners in the Window Display Contest—Creditable Work Done.

In the last issue of the SHOE AND LEATHER JOURNAL, announcement of the results in the holiday window trimming contest among city retailers was made, and excellent engravings of the displays presented. In this issue are presented the prize winning efforts of dealers doing business in towns or villages.

The first premium has been given to The Burns Co. Limited, of Oshawa, and the second to A. McDermid, of Ingersoll. There was a large number of entries in the contest, and it was with difficulty that the judges made their decision. The trade will notice that a very high class standard has been set by the footwear firms in the smaller centres who are devoting more and more attention to the matter of window trims. The day has long gone by when the retailer can set a few pairs of shoes indiscriminately in his window

THE FIRST PRIZE HOLIDAY WINDOW—THE BURNS CO., OSHAWA, ONT

and expect passers-by to stop, gaze at and buy the shapes and lasts. Now, he must make a special appeal. Harmony, arrangement, taste and method must be shown in order to arouse the attention and enlist the interest of people.

The holiday window of the Burns Co. Limited, was the work of A. E. Hogarth, window trimmer of that firm. He has exceptionally fine windows to work in, as the front of the Oshawa store is as imposing and spacious as any that can be found in any city in Canada. A little over a year ago, Mr. Burns transformed the front of his establishment at a large outlay, and the wisdom of his expenditure has been amply demonstrated by the increase in business.

The holiday window shows mirrored backs and the up-to-date measurements. The smooth floor and white enamel finish of the upper woodwork needs to be seen in order to be properly appreciated. To dress such windows attractively Mr. Hogarth says is not a heavy task on time and talent, and it is well that this is so, because there are eighty feet of length to keep presentable. The firm aim at showing all seasonable classes of goods in abundance at all times. Between the different displays are seen the low fences now so much in use, and stained to harmonize with the polished floor. Plenty of material is provided by the Burns Co. for effective window displays. Vines, flowers, poinsettia, crimson Rambler, wistaria, morning glory and smilax are supplied in abundance for decorative purposes. This year the firm added eighteen, four foot lengths of lattice in white enamel. By means of eup screws the lattice pieces are hung at regular angles from the window ceilings. On these hangers and down between the mirrors were draped the vines and that portion of the window was complete. The Christmas tickets were specially printed. Each was headed 'useful gifts, sure to please,' and below the price was the message, "A Merry Christmas—A Happy New Year." No mere deference to beautiful effect was allowed to interfere with what Mr. Burns humorously terms "the proper baiting of the trap." Glass shelves and wood stands were used as risers, and in some divisions stands turned and finished like the dividing fences were employed. The firm also had wire pedestals of different heights, several dozen

being in the window. This year certain classes of goods were displayed by means of cheese cloth covering. Nearly everything in the window was ticketed—felt stuff, rubber lines and varieties in leather goods were all set out in the spacious display space with the one object to catch customers; and that the result was satisfactory was attested by the almost constant ringing of the big electric cash register during the busy Christmas rush.

The second prize has been awarded to A. McDermand, of Ingersoll, who installed an attractive holiday window. The effect of the silk draping over the mirrors, which was used as a background, was very striking and artistic. Smilax, holly and spruce were used as accessories. No side pieces were employed at all, and the whole made an inexpensive and inviting picture. Mr. McDermand reports that the window greatly increased his holiday trade, and says that the only thing needed to execute the trim was a little taste in the arrangements.

### Co-Operation Means Success

If retailers would always bear in mind to have their windows and newspaper and display advertising co-operate, the results would be far more satisfactory. For instance, a New York City shoe store sends out periodically a card or circular to a large mailing list they have. A recent card contained the following message:—

"BOOT STYLES THAT ARE NEW. Dear Sir,—Have you looked into our men's window this week? Nearly every one of those styles is new this season. Of course, some of them we couldn't improve much. Among the new ones are water-proof tans, lace and button, five-button low cuts, tan and dull Russia, our new wide toe dull calf in button and lace, etc. High narrow, medium and wide toes in nearly every leather. You know about the quality. We will be glad to see you soon."

A person, on receiving a message such as this, has his or her interest awakened immediately, and nine out of every ten of them will make it a point to see the display.

THE SECOND PRIZE HOLIDAY WINDOW—A. McDERMAND, INGERSOLL, ONT.

# No Guesswork About the Value of Your Salesforce

Do You Know Whether the Clerk Who Sells the Most Goods is Really Bringing in the Most Profits or Just Disposing of the Lines That Go Easiest—Employees Should Be Judged Wholly by What They Do

By A. M. BURROUGHS

"In scientifically managed stores, every clerk is a sales barometer whose readings are always visible to the manager."

The head of a big Chicago department store, looking over the sales figures for the month, noticed that the clothing department showed a slight falling off from the preceding month and from the corresponding month of the preceding year.

"—does he weigh a profit or a loss?—"

On examining the reports for the sales of each employee in the department, he found that three of them had made less sales than during the preceding month, or during the corresponding month of the preceding year.

A further study of the figures proved that these three clerks had shown a steady falling off, while the other two clerks in the same

department had gradually built up their sales.

## The Percentage on Gross Sales

The two clerks were costing about 8 per cent. on their gross sales as against  $9\frac{1}{2}$  per cent. for the same clerks for the preceding year, a nice increase in efficiency.

The other three clerks, who showed a falling off, were costing around 11 to 12 per cent. That is, their salaries equalled 11 to 12 per cent. of their gross sales.

This brought the salary cost for the department up to  $10\frac{1}{4}$  to 11 per cent. of the sales.

It wasn't necessary for the manager to call in the department head. No conferences were necessary. The figures told the whole story. Two of the five clerks were good clerks and three of the five were unprofitable, inefficient.

In a month the department sales had picked up until the salary cost was down to the regular  $9\frac{1}{2}$  per cent.—five good clerks were handling the sales.

In the big stores, clerks are judged and paid on a basis of the amount of goods they sell.

If a clerk is paid \$6 a week, she must sell goods to the aggregate of between \$65 and \$70 a week. That is, her salary cannot exceed  $9\frac{1}{2}$  per cent. of her sales.

There is no guess-work about the value of employees in the scientifically managed stores. Employees are judged wholly by what they do, and the figures which are furnished to the head of the store are figures which enable him to absolutely know without a question of doubt, what every clerk is doing and what he is worth.

## Every Employee is a Barometer

Every employee is a barometer, whose readings, in dollars of sales and per cent. of cost, are always on file in the manager's office.

If the salary runs to 8 or 7 per cent. the employee is scheduled for a raise. If it runs down to 5 or 4 per cent. the employee will soon be promoted.

Have you ever puzzled over the problem of whether

to raise the salary of a certain employee who is looking for a better job?

Have you ever wondered whether the old employee who seems satisfied to stay on with you year after year without much increase in salary is really worth what he is getting?

If you have more than one clerk, are you absolutely sure which is the best one?

Do you know whether one of them is making himself "solid" with your customers by giving them long measures and over-weights?

Do you know whether the clerk who sells most goods is really bringing in the *most profits* or just selling the goods that go *easiest*?

Wouldn't it put some warmth in your words when you tell John that you are going to give him that extra dollar a week he asked for, if you could turn to your records and see that John had been showing a steady increase in sales day by day and week by week for many months past?

## Putting Backbone Into Decisions

And wouldn't it put backbone into your decision *not* to give Henry a raise when you could see by your records that his sales were showing a steady falling off? Maybe you could even find another "John" to take his place.

Let John and Henry make out a sales slip for each sale. Have the figures on these slips tabulated by days, then recapitulated into months. Then you can *know*, all the time which is the *best* clerk.

It wouldn't take much time. The big stores find that it pays *big dividends* in "weighing" clerks, in the prevention of mistakes, in supplying information about sales by lines of goods, by clerks, etc.

It costs them as much per clerk as it would you. Some of them have as high as 5,000 clerks, all making out sales slips on every sale.

## The Cost of Sales Ability

The average big store can find out more about the sales ability of any one of its 5,000 clerks in five minutes than the average small store could tell about its one clerk in a whole month.

The success of big stores proves that it *pays* to keep records. Are you going to let the big fellows crowd you out of business, or are you going to defend yourself with the weapons they have sharpened for you?

(A chapter from "A Better Days Profits," copyrighted by Burroughs' Adding Machine Co.)

"—two clerks beat sales of three others—"

## Shoes Sent to Dead Letter Office

An interesting feature of the annual report of the Canadian Post Office Department just issued is the fact that nearly three million letters, post cards, parcels, etc., were returned last year to the dead letter office. And no less than 37,641 of these contained articles of value. The dead letter branch returned nearly 600,000 letters to the writers, and 14,090 of these had articles of value enclosed. The list of contents of dead letters, parcels, etc., covers a wide and amusing range. There were, for instance, 129 boots, 148 cakes, 3 plum puddings, 131 watches, 15 pairs of trousers, 73 stockings, 28 marriage certificates, 6 certificates of character, 1 sausage, and no less than 5,524 cheques of face values totalling \$436,442.

# There Are Plenty of Dubs But Few Real Salesmen

Ottawa Shoe Dealer Points Out Some of the Weaknesses and Defects in Present Day Clerks—Inattention, Sporting Tendencies, Lack of Punctuality and Levity—Bosses May Not Be Perfect, But Neither are Clerks

To the Editor of THE SHOE AND LEATHER JOURNAL:

Sir:—I notice in the last issue of your paper, under the heading of "The Clerk takes his Cue from the Boss," rather a hot roast for some of the shoe proprietors of the present day. I do not intend paying any attention to these observations, but will treat them with the contempt which they deserve. It is very easy for a hot-headed and warm-blooded young man in the full flush of youth—his brain biased or excited by a contemplation of his own importance or his lofty sense of feeling so magnified that his head will hardly come inside the shop door, to strike a bold attitude and declare this, that and the other thing is "wrong with the bosses." Now, sir, no one class is perfect. We all have our faults, but I doubt if 90% of them are on the side of the bosses, as this egotist would have your readers believe. I have been seventeen years in the shoe business in this city, and during that time, have employed many young men and women. Very few of them, however, measured up to the responsibilities which all earnest, painstaking and thoughtful clerks should do.

## Do Not Take Work Seriously

Getting down to serious facts, I find that the chief faults in salespeople of to-day, are that young men and young women will not take their positions seriously. They lack interest in their work and seem to gaze at the pay envelope or Saturday night as the chief end of their existence. I gave up long ago trying to train women clerks in my shoe store. I do not care, however, to refer at length to this phase of my experience. Men are, in all conscience, bad enough, but there is no accounting for the vagaries of a woman. So I am talking principally of young men. They come late to work and if you allow them certain liberties, these degenerate into license. They perform their selling duties pretty much as does an automatic machine—a nickle-in-the-slot way—but they evince a lively interest in hockey, baseball and other sports and are constantly asking off to go to these attractions. You might as well let a clerk go any way, when he gets "the bug," for if he does not go with your consent, he will, by hook or by crook, go without it. It would not be so bad if clerks dropped sport, when they came to work next morning, but they read the morning paper, on my time, remember—and start to rehearse the different plays and moves—the brilliant stunts or shots pulled off by such-and-such a member of the team. Then the talk veers to betting—the prospects of winning the pennant and all that sort of thing, and very often when a customer enters, the sport enthusiasts are engaged in such a wrangle that no prompt attention is paid to the visitor.

## Habit of Taking French Leave

Then, too, I have had several youths leave me on a day's notice, simply because they could get a dollar or two a week more in some other place. If I had fired them on such short time, they would have thought I was the meanest employer in the country. Very few of the young men will pick up a trade journal to gain any pointers. Not many will ever take an intelligent interest in how a shoe is made or give any study to the various kinds of leather. Of course, they understand ordinary meaning of terms—but such a thing as getting down to a methodical, scientific study of the construction of the feet, the art of fitting, the proper way of treating cranky customers, anticipating the wants of patrons or managing a special department is quite beyond them.

They are often slovenly in their method of stock keeping, yet are very anxious to take part in the buying. They seem

to think that the boss has one great, big snap, that bills and drafts and invoices are automatically met, and that practically all the cash that comes into the till is clear profit.

I have no doubt many of these observations that I have made are general with the shoe trade. I do not say that they are worse than any other class. There are certainly mediocre salesmen galore, but very few top-notchers. Men, whose services are at a premium and who can command the confidence and respect of the largest retail and wholesale houses are decidedly sparse.

## Mastering the Details

When a young man starts in the shoe business, I want to tell him that he engages in as sound and progressive occupation as any other—I am almost tempted to call it a profession, as there is so much to be learned about it that one may study all his life and still find many points to master. About window trimming, leathers, styles, the faculty of fitting, process of manufacture, figuring profits, stock keeping, sacrificing the slow selling lines, learning how to keep things on the move and many other points. I was surprised when visiting a residential store the other day, to drop in and find a young fellow whom I used to know when he was in the insurance business.

"Hello," I said, "are you in the shoe game now?"

"Yes," he answered.

"What do you know about shoes?" I ventured.

"Oh, well," he explained, "not very much when I began three months ago, but I am an expert shoe man just now." And he meant every word that he said. It reminded me of the oft-repeated quotation, that "A little learning is a dangerous thing." A slight experience very frequently wrecks a young man's usefulness.

## Two Kinds of Swelled Head

One of the biggest faults that I have with young fellows of the present day is that they get a swelled head if they meet with even temporary success, and of the "swelled head" type, there are two classes: the fellow who when pay day comes, goes out and gets filled up with fire-water, so that he is incapacitated for duty the next day—and the other is the kind, whose dome of thought is so surcharged with conceit that you cannot possibly tell him anything. Of the two "swelled heads," I hardly know which variety is the worst. I have witnessed numerous examples of both.

I have one word to say before closing, and that is, if any young man is embarking in the shoe business looking for a job he should stay out. It is no place for him, but if he believes that it is a sphere of activity that will engage and enlist the best energies and talents that he possesses, and he is willing to learn, to be instructed and to do as he is told, and keep himself well in hand at all times, and even under the most trying occasions he will be very apt to meet with success.

Too often young men ask me for an increase in wages. Now, no clerk is worth more than from 7 to 10% of his sales, the former being the minimum and the latter the maximum figure. I want the young man who looks beyond the immediate sale, who can paint a vision of that customer returning again and again to that store, of going to infinite pains to please her and not proceeding simply on the principle that if I unload this ancient pair of shop-worn goods, I will obtain 10% commission; or following the motto too often observed in busy establishments on crowded streets, namely, to get the customer's money at all hazards. Perhaps some of my observations may cause clerks to pause a little. They should remember that the boss, like a parent, whom they often dub

"the old man," may be perhaps a trifle slow on some 20th century tricks or kinks, but in the end, he gets there.

#### No Short Cut to Success

It is the fellow who arrives by the safe and sure route and is not pitch-forked, hurled or precipitated into a place of prominence or position, who holds out and wears the longest. A man may go a long way on bluff and bluster, he may bamboozle one or two bosses, but he will not fool all. He

may deceive the public for a while, but sooner or later, they get on to his game and, like Davy Crockett's coon, which ran up a tree, sooner or later have to come down. The dub, the sluggard, the misfit and the slouch we have always with us, but of A1, shrewd, energetic and resourceful salesmen there are very few. I know whereof I speak.

Sincerely yours,

RETAILER

Ottawa, Jan. 21st, 1913.

## Has Faith in His City, His Staff and His Business

How Western Shoe Retailer Has Come to the Front—He Accords a Large Measure of Credit to His Effective Salesforce—The Year 1912 Was the Banner One for Him—The Virtue of Co-operation and Optimism.

One of the most successful shoemen of the West is J. B. Douglas, who is a former resident of Ontario. His business has kept pace with the growing city of Calgary, where he has resided for the last eight years. Mr. Douglas was born in

J. B. DOUGLAS, CALGARY

Harriston, Ontario, and his first experience in the footwear line was gained with Guinane Bros., of Toronto, when that firm was doing business at 314 Yonge Street. He then started for himself in Peterboro, and later went to Calgary. He immediately sought a suitable location and it was not long until he was ready for business. From the outset he determined to sell high grade, reliable shoes, and trade came his way by leaps and bounds. Fifteen months ago Mr. Douglas removed into a fine new store at 107 Eighth Avenue East, in the imposing McLean block.

Last year was the most remunerative in his history, and his business exceeded all past efforts by the amount of \$46,000. While this might at first sound like Western exaggeration, it is a bald fact as the records of the proprietor will show. He is not only proud, but is intensely happy over the unprecedented record. Many retail shoe men in the West would be satisfied with this amount as a total annual turnover, but this sum represents the increased business done by Mr. Douglas in a single year. His store motto is "top class shoe wear," and by wide publicity he makes known the Douglas "Famous Shoe."

Asked to what he attributed his large measure of success, Mr. Douglas said that not only was this very satisfactory condition brought about by a large and carefully selected stock, but also by a capable and most efficient staff. Every clerk in the store is a salesman from the drop of the hat and the spirit of co-operation, unity and harmony prevails throughout the establishment. The service is remarkably quick, courteous and painstaking. The "boys" know the stock thoroughly, and are adepts in proper fitting.

They give callers what they want, and with the ease, facility and insight that comes from long training and study. Travelers, who have spent hours in the store, have frequently complimented Mr. Douglas upon the ability and agility of his sales force, and declared that his staff was capable of attending to more customers, and giving them swifter service and better satisfaction than any they had ever witnessed.

A large factor in the prosperity of Mr. Douglas is also due to the characteristic that he is an optimist. He possesses the public spirit of the West, and believes in the big future that is not only ahead of Calgary, but also the "great inland Empire beyond the great lakes." He is also a firm believer in the future of Canada, and thinks that the retail shoe business should command the best energy, application and devotion of any man who is engaged in it. He has always been a "booster" in the best sense of the word.

THE WINDOW OF A LIVE CALGARY FIRM

# STRAY SHOTS FROM "SOLOMON."

Don't be looking for motives, but when your enemy gets out his soft soap pot, look well to your boots. See if the calks are all right. There are some people who are never sweet unless they are out on a still hunt for something or someone. "When he speaketh fair believe him not." The meanest scoundrel on earth is the fellow who can smile and shake hands with you while he is calculating where he can best get a knife into you. Be wise as a serpent as well as harmless as a dove. There are some people, of course, who are always looking for trouble, but there are thousands who are caught with fox talk who ought to be wiser. Look out for the "soft pedal" fellow who plays the church, the lodge, and even business to catch suckers whose hearts are softer than their heads. Be open and straight yourself and tolerate no crookedness and meanness on the part of those about you. Above all, look out for the rascal with a smile.

An open enemy no man despises. It is a good sign when a fellow has a few good enemies; it shows that he is worth hating. But deliver us all from the gum-shoe thug who comes up behind us in the dark and downs us with a billy or a dirk knife. If you are one of the sort that lies round the corner for his man or lays traps for him set with molasses, you will get yours some day. "Whose hatred is covered by deceit, his wickedness shall be shown before the whole congregation." The crowd is with the underdog or the man who is hit below the belt. Revenge may be sweet, but the man who takes a mean advantage of his foe goes down at the ropes of public opinion. Some of the low down tricks you played last year will get around to you in time. In this "whatsoever a man soweth that also shall he reap."

We hate those we wrong as naturally as the devil hates angels of light. "A lying tongue hateth those that are afflicted by it." Start an evil story about your neighbor and you begin dodging him because you are afraid to meet his eye. You go blocks out of your way to avoid his shop, and you end by hating him for the trouble your idle, vicious tongue gives you to keep out of his way. You have to have some excuse for keeping up the backbiting so you work yourself up into the belief that he is a rascal like yourself. In fact, most of the backbiting comes through jealousy. We want to see people on our own level morally and financially, and if they are a little above us there "must be a reason" and we commence to "bring them down a peg."

Tackle what you know. Stick to what you can do well. Nine times out of ten success comes to the shoemaker who sticks to his last. There are people who are everlastingly changing jobs and they wonder why they don't get on. Find the place you fit. STICK TO YOUR LAST go at it with a will and you will move things. There are preachers who ought to be shoemakers and shoemakers who ought to be preachers; there are doctors who ought to be blacksmiths, and there are blacksmiths who would make a success at the healing art. Are you at home at your work. Does the yoke fit

you, or does it gall and fret you? "As a bird that wandereth from her nest, so is a man that wandereth from his place." The great thing is to be at home at what you are driving at but at the same time don't be a rolling stone. Do your best at your present job and that will fit you better for what may turn up that may prove more to your liking.

You will find in other people pretty much what is in your own heart. Richard Baxter used to say when he saw a drunkard reeling on the street, "There goes Richard Baxter if it were not for the grace of God." The general run of people are no better and no worse than we are. You may shudder at some of the things you see and hear, but if circumstances were different you might be doing or saying the things that shock you. Another thing, you will find people pretty much what you and others make them. Are you quite sure your skirts are clear of the faults you find in those about you? Are they reflecting some of yours? Just ask yourself when you see some of your family or close friends displaying traits that you know belong to you whether they haven't picked up some of them from your example. "As in water face answereth to face, so the heart of man to man." We are all the time giving off or receiving influences.

Keep your eye on your business. Don't leave it to your employees to run the place no matter how good they may be. To get down at ten and quit at four will be all right when all you have to do is to cut off coupons or figure up the interest on your mortgages, but no business that has any kind of competition will run itself. "Be thou diligent to know the state of thy flocks and look well to thy herds, for riches are not forever." This is as good advice to-day as in the times of the patriarchs and applies quite as well to modern business as to land and cattle. Be diligent to know. Diligence in business is quite as necessary as fervency in spirit. If some of the time spent by some people at religious efforts were devoted to looking after their affairs and families the latter would fare better. Riches are very flighty things and have to be well looked after. In any case the man invites trouble who does not watch his income and outgo.

Lots of men who are too cowardly to fight, satisfy themselves with keeping others at loggerheads. A mischief-maker is more dangerous in the community than an anarchist. We have them in the homes, in churches, in business, in society, and everywhere else, going about stirring up strife. They give a twist to every conversation and add an innuendo to every statement. The best agent the devil has in this world is the fellow who sets neighbor against neighbor and friend against friend. Put him into heaven and he would make a hell of it in ten minutes. Some people have this mean disposition who are fairly intelligent and ought to know better, but for the most part this tribe are worse than Indians and ought to be kicked out of respectable society. "As coals are to burning coals and wood to fire so is a contentious man to kindle strife." Are you to any extent one of the devil's stokers? Make up your mind to quit the business and get into better employment.

# Changing Credit to Cash System in Shoe Store

Havelock Retailer Tells How He Inaugurated the New Method in a Town Quite Noted for Credit Business—Preparing Patrons for Change—First Year's Results Have Been Satisfactory—Some Valuable Pointers.

## A CHANGE IN BUSINESS FROM THE CREDIT TO THE CASH SYSTEM—THE REASON WHY

*To enable me to offer shoes to my customers at the lowest possible price consistent with good material and workmanship.*

*The man running a credit business must fix his prices so as to protect himself against losses, and give him interest on the money tied up in book accounts.*

*Is it your desire to help pay for the goods sold to a man on credit, for which he does not pay? Or help pay the interest on the book accounts of a CREDIT business?*

*In a CASH business the customer pays only for what he gets, and it is the only business where the merchant can quote prices based altogether on the cost of the goods.*

*The cost of his goods depends greatly on the merchant's ability to pay CASH for his stock. Goods purchased at the CASH PRICE by the merchant reduce the price to the retail customer. A CASH business enables the merchant to buy for CASH.*

*Consider your best interests and patronize a CASH STORE.*

HAVELOCK CASH SHOE STORE

ED. FENNEL, PROP.

The merits of a shoe business run on a cash basis as compared with one under the credit system are constantly under review. Where is the retailer who is conducting a credit business to-day who has not turned over in his mind time and again the possibility of putting his trade on a cash foundation; who has not seriously considered whether he would not be just as far, if not more so ahead, in the matter of actual profits, if he were to do a smaller amount of business, and receive cash for the goods he did sell. Who has not dreamed of what an ideal condition it would be to receive ready money, for his merchandise, be able to pay cash and thus secure his discounts, and last, but by no means least, to be free from the worry and vexation of mind, body and spirit, which are woven around the work of account collecting.

### All the Merchants Gave Credit

These are the thoughts that have spurred many a shoe dealer on to attempt to put his business on a cash basis. When a man has been giving credit for an extended period of time, when all around him it is the custom to do so, when the people with whom he deals favor this method, he does not rush into a change without giving the matter serious consideration. There are, without doubt, advantages to be cited in favor of both systems. On the one hand, the greatest argument is that a larger amount of goods can be sold when credit is extended and customers who seek credit are not inclined to be looking for "bargains." There are other arguments in favor of credit, but in the majority of cases, this is the greatest. Against these are quite a formidable array of "reasons for the cash system," which suggest themselves to every dealer giving the question serious thought. In the language of the street, it is "up" to the retailer himself to weigh the arguments on each side and decide whether it is to his benefit to operate a cash or credit business.

One Canadian shoe dealer who, after seriously consider-

ing the problem, decided on the cash system, is Ed. Fennell, of Havelock, Ont., who adopted it nearly a year ago, and is well pleased that he made the alteration. He feels that he was following the plan most to his advantage in effecting the change. That Mr. Fennell adopted the cash system and is satisfied with the results is a strong argument regarding the possibility of other dealers following the same course to advantage, because the conditions existing in the railway town in which he is located made it exceedingly difficult to conduct any other than a credit trade.

The other merchants in Havelock will unhesitatingly testify to this fact. Havelock, a village of some 1,600 population, is a railroad town, and those dealers living in such a centre, know full well that that means—a credit town. Most of the male population are employes of the C. P. R. and receive their wages only once a month. Since the early days of the town it has been the custom for customers to run monthly accounts—which frequently extend themselves into a longer period, and sometimes into accounts which adorn the merchant's ledger indefinitely. It was in such a credit community, where every merchant, except one—a druggist—gave credit, that Mr. Fennell decided to introduce the cash system.

### Sizing up the Prospects

He had, however, sized the proposition up in his mind long before reaching his decision. He decided that it was to the advantage of himself as well as his customers for them to pay cash for their footwear. The main advantage to himself was the elimination of loss through bad accounts. He had found this a sum to be reckoned with. That his actual loss through bad debts during a period of seven years averaged half of one per cent. of credit sales. The reducing of the amount of worry was something to be considered, but Mr. Fennell gives the following as the three main reasons for changing to cash business:

To cut out all risk of loss through bad accounts.

To reduce the capital involved in doing business.

To eliminate all chance of loss by neglecting to charge.

Then Mr. Fennell considered it would be to the benefit of customers, and he thought he could convince them of the fact. On this his success depended. He argued that economical people realize that there are heavy losses with the credit plan, and appreciate that expenses connected with collecting, bookkeeping and bad accounts must be allowed for by the retailer in figuring out his profits. In his advertising space in the local paper as well as in a circular distributed to customers, Mr. Fennell gave his reasons for changing to the cash system, and how it would be to the benefit of those who dealt with him.

### Introducing the System

Armed with these formidable arguments, Mr. Fennell says that he did not have a great deal of difficulty in introducing the cash system. Then again, the fact that a druggist in the town had been educating the public to purchase for cash proved of some assistance. There was another thing Mr. Fennell had been doing—the result of planning ahead. For a year previous he gave a ten per cent. discount for cash purchases, and, advertising this fact quite extensively, helped to prepare customers for the "all cash" system.

Mr. Fennell calls his store "The Havelock Shoe Store," but when the change was made, the word "cash" was added, making it the "Havelock Cash Shoe Store." This was done with the idea of impressing on the public that

goods were sold for cash, and thus kept people from asking for credit.

Now comes the question of surpeme importance—"Is the system proving satisfactory?" Everyone agrees that the most trying period of a cash business is the first year after its introduction, and yet with less than twelve months' try-out, the proprietor declares himself as well pleased. He frankly admits that he did not do quite as large a business last summer as the previous year, but every shoe man knows all too well that last year, owing to the cool weather, was not a satisfactory one for the sale of summer footwear. On the day previous to Christmas, this year, Mr. Fennell did nearly as much business as the previous year, and as he says with a smile of satisfaction, "When I counted my receipts at the end of the day, I knew that my profits would not be cut down by bad accounts. There was no additional work in connection with the day's business—no bookkeeping—and no worry. It is a real pleasure to think that you do not have to sit up nights poring for hours over books and accounts the same as I did for years."

#### Brought Up in the Trade

Ed. Fennell, the proprietor of the Havelock Cash Shoe Store, it may be added, began to learn the shoemaking business at the age of fourteen years with his father, John Fennell, sr., in Napanee, Ont., and, in March, 1891, he entered into partnership with him in that town, opening up a small stock of ready-made shoes to run in connection with their custom shop. After four years in Napanee they removed to the village of Havelock, which is a divisional point on the Canadian Pacific Railway between Peterborough and Smith's Falls. There they put in a large and splendidly assorted stock of factory shoes. After seven years Mr. Fennell, sr., withdrew from the business, which has since been carried on very successfully by his son Edward, who, by progressive methods and strict attention to the wants of his customers, has built up a fine exclusive trade in that railway centre.

## The Proper Way to Open a Retail Shoe Business

Beginner Should Not Expect To Do a Paying Business From the Start—Don't Make a Mistake in Estimating Percentages—Operating Expenses Should Be Figured on Basis of Poor Months—Five Timely Pointers

*Be sure you open in the right location.  
Don't overstock; it sounds the death knell of almost any business.  
Don't buy too far in advance; it is a dangerous practice.  
Charge a reasonable margin of profit.  
Play to the big audience.*

These are five pertinent paragraphs which summarize what advice I might give to the young man who desires to operate a retail shoe business of his own, says Henry J. Doty, of Chicago.

The shoe business is to-day in a somewhat peculiar condition. So far as the retail dealer is concerned, it is not highly satisfactory, and to a somewhat lesser degree this may also be said to be applicable to the wholesaler, the manufacturer, and the tanner in about the order named.

What is the cause of this condition? It certainly is not because the consumer has stopped buying shoes, for he has not. It is not that a shortage of shoes exists, because every retailer from the Atlantic to the Pacific has more shoes than really are necessary for the conduct of a paying business. Many of them are so overstocked that much of their merchandise depreciated in value before it can be disposed of.

This matter of overstocking is the milk of the cocoanut. for it shows the real underlying cause of the prevailing condition. During the last few seasons the changes in the styles of lasts have not been radical. Calf in tan and black, patent leathers, suedes, and kids are worn in even greater numbers to-day than ever before. Fabrics have had a large call in the last two years, and their sale has materially added to the volume of business done by the retailer.

Bearing these facts in mind, it may justly be said that the basic trouble is adherence to the old habit of buying too far in advance and buying far too much.

#### Advantages of Good Stand

A poor location can bring about disaster quicker than can anything else. The biggest concern in Chicago found the

sledding extremely tough when they first opened. They did practically no business. One day they realized they had started in on the wrong side of the street. They moved to the opposite side. The difference in location was noticeable from the start. Business grew by leaps and bounds. To-day these people are representative of the retail shoe business in Chicago. A few months more on the wrong side would have driven them into the bankruptcy court. I merely cite this to emphasize the importance of getting in on the right side.

Next, the young man must consider the potency of buying the right goods, shoes suited to his locality. He should buy often and in small quantities. He should know the conditions that obtain at the time he branches out for himself. The styles having the biggest call should find their way to his shelves, and then play to the big audience. The big audience to-day is buying shoes at \$3, \$3.50, and \$4 a pair.

#### Confine Your Buying

The matter of terms on the new merchant's purchase can be satisfactorily arranged providing he does not divide his purchases up into too many quarters—that is, say, not to exceed three or four wholesalers. Naturally he could make more advantageous terms if he confined his buying to one house. In that case he could get practically all the merchandise he needed. For instance, with an available cash balance of \$5,000 he might have credit extended to him to the amount of \$7,500. I would advise him not to exceed \$3,000 for his first purchase. At the outset he should not buy to exceed that amount. With that amount of merchandise he should turn his stock three times a year.

The beginner should be told he could not expect to do a paying business right from the start. He should bear in mind that older and perhaps wiser men are in the shoe game and he will not be permitted to share in their prosperity without a hard struggle.

#### Errors in Profit-Figuring

One of the greatest mistakes shoe merchants are prone to make is in the matter of estimating percentages. Take for example, a business that year after year has run along on

(Continued on page 52)

## Selling Shoes in Prince Rupert

Former Traveler is Meeting With Splendid Success in the Rapidly Growing Pacific Coast Terminal City—Has a Neat Store

"Prince Rupert is on the eve of a tremendous boom. At the present time, we have about 5,000 population, all waiting patiently for the Grand Trunk Pacific, which is expected within two years and inside of five years, we will easily have 25,000 inhabitants," said F. W. Renworth, of the firm of Renworth & Jefferson, shoe dealers of that city.

Mr. Renworth is conducting a progressive business, and has forged his way to the front among the business men of terminal city. The store, a cut of which appears, is an attractive one and presents a bright appearance. The firm of Renworth & Jefferson handle the shoes of many of the leading Canadian and American manufacturers.

Mr. Renworth was born in Victoria, B. C., in 1880 and at the age of 13 he left school. His first job was with the Ames, Holden Co., Limited, as parcel boy. He worked through all the different departments until 1905, when he

AN ATTRACTIVE PRINCE RUPERT SHOE HOUSE

was sent out as a traveling salesman. After five years experience on the road, he left the firm to go into business for himself in Chilliwack, B. C. He remained there about a year and a half and then sold out. He returned to the Ames, Holden Co., and resumed his position as a traveler, at which he continued until June last, when he again went into business in Prince Rupert. His partner is W. J. Jefferson, who is not an active member of the firm, but is manager of the Wallace Fisheries Plant at Alberni, and has been connected with that concern for the past twelve years.

Mr. Renworth is a bright, active shoe man who has faith

### FINDS IT A HELPING HAND

*I find your Shoe and Leather Journal a helping hand when climbing the ladder in the shoe business. Wishing you every success.*

*Yours truly,*

*J. H. Flaherty.*

*Amherst, N.S., Jan. 24th, 1913.*

in himself and in Prince Rupert. He thinks that the retail trade is large enough to command the best energy and earnest study of anyone who desires to succeed in a business which, like the art of tailoring or dress making, approaches the status of a profession more than any other branch in the merchandising world.

## Twin Brothers in Shoe Business

Twin brothers, who are in partnership in business, and who resemble each other as closely as one shoe resembles its mate, are Geo. D. and Herbert D. Wallace. The former established the business in Halifax, buying out the old firm of P. J. McManus, in December, 1911, and recently took in his brother as partner. The firm name was changed to Wallace Bros. Geo. D. Wallace, while still a young man, has been connected with the footwear trade about 20 years. He was with the well-known firm of Wm. Taylor & Co., Limited, Halifax, for some 12 years previous to going into business for himself. Wallace Bros.' store is 55 feet deep and has a frontage of about 15 feet. At present they have the three carton style of shelving, but are considering a change for something more up-to-date. Wallace Bros. say they are not troubled much with approbation, and endeavor to keep it down as much as possible. They never send out more than two pairs to anyone on approval. The firm do not conduct a repair shop, but have all work done outside. They think however, if they had room, it would pay them to keep a man on the premises. Wallace Bros. advertise regularly in the evening papers and change their ads frequently. They run two special sales a year—one in January and the other in mid-summer. They believe in making these sales genuine, through and through, stock reduction propositions and not mixing up bargains during the regular season. The firm make a strong point in the matter of window decoration and change the trims every week. They believe that good window displays are the best business getters, and that it pays to put money into fixtures and trimmings. An idea of the splendid work done in this line appeared recently in the SHOE AND LEATHER JOURNAL, when a holiday trim by them was presented.

## Veteran Retailer Who Was Elected

Among the newly elected aldermen of Berlin is J. Hessenauer. He has been urged for a number of years by prominent citizens to stand, and this year, finally consented to become a candidate. Mr. Hessenauer feels gratified with the result, as he did no canvassing whatever. His experience in the shoe business dates back to 1879, when he began to learn practical shoe making on the bench.

His first insight into the retail line was with W. H. Snyder, general merchant of Mildmay. This was in 1884, and Mr. Hessenauer had charge of the shoe department. Later on, he bought out the stock and continued the boot trade in Mildmay for a number of years. He was afterwards in the same line in Walkerton and Port Elgin, and in 1902 removed to Berlin, where he was connected with the Berlin and Merchants Rubber Co. until he bought the Market Shoe Store from E. W. Becker in 1904. The first year his turnover was small, being less than \$7,000. To-day, it is nearly five times that amount. In July, 1909, Mr. Hessenauer moved to his present commodious store in the Canadian Block and took into partnership his son, William F. Hessenauer, who had been associated with him for a number of years. Mr. Hessenauer, Jr., has many friends among the young people of the city. John Hessenauer & Son carry a large and well-assorted footwear stock, and also handle a complete line of trunks, suit cases and traveling goods.

# Examples of Petty Jealousy Among Retail Shoemen

How Should One Member of the Trade Treat Another—The Spirit of Trying to Corner the Earth Frequently has a Boomerang Effect—The Other Fellow is up Against Conditions Very Similar to What You Are

“O, beware, my lord, of jealousy;  
It is the green-eyed monster, which doth mock  
The meat it feeds on.”

The ranks in which jealousy is uppermost have been classified by one authority as follows:

1st. Musicians and artists; 2nd. Poultry fanciers; 3rd. Members of the medical profession. Of course, the green-eyed monster is present to a greater or lesser extent in all callings from drain digger to the bank manager. Man appears to be not only a selfish animal but also a prejudiced one to a certain extent.

Let a fellow get on in this world, make a little money, take a trip abroad, put in a new store front or erect an attractive bungalow and his less favored neighbors will at once begin to say things. The beauty of co-operation and unity of interest are often preached, but are practised none too frequently. Conditions to-day, reveal some peculiar tendencies. One man will start in the shoe business, for instance, on a certain corner or in a new district, and because another man comes along in a few days and puts in a stock of footwear in a store across the street, retailer No. 1 will possibly not talk to his competitor. Too often he will speak of him in eynical tones or slurring reference. He acts as if he should own that particular spot, and that no one else has a right to invade it and do business in the same line.

## No One Owns the Earth

This observation applies with equal force to the grocer, the hardware, the furniture dealer, the dry goods merchant and members of other trades. It is perhaps well for some men to remember that the world is big and broad, that unless you are a landed proprietor, you cannot fence off one corner of the earth and call it your own. Any man has a right to go into the business if he thinks that he can make money, and can convince the wholesaler that he possesses the required experience and sufficient insight, and necessary energy.

Whether he has capital or not, is largely a matter of arrangement. Some fellows can apparently start in any line without capital, but the majority find it essential to have a certain amount.

There are some humans on this globe who evidently live well without working, but nine-tenths of humanity has to hustle, and hustle long and hard to make matters go. There are a few men in the shoe trade who are narrow and prejudiced; biased and cross-grained; cynical and irascible. They have a jaundiced disposition and nothing goes right. They are always knocking of the other fellow for cutting prices; keeping open too long; trying to steal away their customers; granting credit to certain doubtful people; and spending too much money on stock, advertising, store fixtures, window displays, etc. Happily, however, the vast majority are men of wider sympathies, broader vision and a more optimistic turn of mind. They believe in the principle of “live and let live,” and to a certain extent in the Golden Rule. It is really absurd to what length jealousy will at times be carried.

## When Friends Fall Out

Not long ago in a certain Western Canada city, two fellows had been bosom friends and associates from boyhood up. They both learned the shoe business, but one fellow started out for himself in a certain growing district in the northwest end. He met with splendid success and his friend used to go up frequently to pay him a visit and help him at odd times, and congratulate him on the trade that he was building up. The section was growing at a tremendous rate—new houses were springing up on every side, and the friend, who was still a clerk, thought that he too, would like to get into the game. He told his retailer pal that he thought of starting on another street just within a block or two, and the latter said:—“Very well, John, I think you will do splendidly there. There certainly ought to be enough business here for two of us, and, if you did not launch out, I feel some-

SOME NEW CREATIONS IN MEN'S SPRING SHOES

body else will. I would rather have you for a competitor than a mean, underhand, spiteful chap who will seek to undermine the good conditions that prevail here."

The friend started up, and during the time that his fixtures and stock were being put into position, he called around to see the retailer. The latter was quite cordial until the opening day, and from that time until the present, now two and a half years, he has never spoken to his former associate, never visited his shop, and has tried in various ways to injure his trade and weaken his connection. The reader will say that this is jealousy run mad, that such a state of mind is unreasonable and even idiotic, but it is occurring all the time. Many other instances might be related but generally these jealousies among tradesmen are too petty or trifling to refer to publicly.

### The Spirit of Greed

There is the fellow who says: "If you sell Jones down the street, you cannot sell me." And Jones turns around and asserts: "Unless I can control your output for this whole district, I will not give you any business." Boycotting long ago escaped from Ireland and made its way even into the retailers' and manufacturers' ranks. Of course, there is a reason, perhaps, in a small town why if one man handles a certain line of branded boots, he does not want the others to "get in on it." But this passion, to be a big fellow: to commandeer everything in sight, seems to be one that has run riot with a number of retailers.

Two young men were working for a certain shoe man in a city in the Maritime Provinces. They gained a large amount of experience, and, as ripe fruit falls from the tree, they naturally looked forward to the time when they would embark in the retail line for themselves. The openings in time came about and they each started in the Eastern district, fully two miles away from the place where they formerly worked. A traveler for a big manufacturing firm came along not long ago and sold each of these young men a bill of goods. The former employer heard of it and told the traveler on his next call: "If you sell those two chaps down there, you cannot sell me. You will have to cut them out altogether or else I will cut my connection with you entirely."

Now this man had been a particularly good friend of the house and the traveler was at a loss what to do, but the

ultimatum had gone forth and something had to be done. He visited each of the two young men and told them what had happened. He said: "Black has been a pretty good customer of ours, but he says I must not sell you and White. Now White does not buy from us very heavily, and I have offered to cut him out and have told Black so. But the latter is obdurate, and says I must cut out you (Brown) as well. I am willing to go a certain way to oblige any friend of my firm, but when you are located fully two miles away from Black, I cannot see why Black says that you are taking some friends from his district and that you have been cutting prices on these shoes—practically selling them at cost."

### He Presented an Ultimatum

Brown replied: "That is not the case, sir, because I have to make a profit on these goods, I have to pay rent and clerks and overhead expenses, the same as Black does, and therefore, the allegation is grossly misleading." The salesman after writing the house, returned on his next trip, and going to Black told him "that he was willing to cut out White, but that he could not see his way clear to eliminate Brown."

To this Black rejoined: "Well, you have to shut out both of them or I will eliminate your goods."

"Well," replied the traveler. "Their stores are a great many blocks from here, and you certainly do not want to corral the whole earth."

"Cannot help it," asserted Black. "I have named my conditions and you will have to live up to them or if not, you lose my account, and you know it is a good, safe one."

Then the traveler and Black had a lively set-to, and although the latter had been a steady patron of the firm for years, this is what resulted.

"I am not going to let you dictate my policy or that of my house," observed the traveler. "I have written to the boss with regard to this matter and he is backing me up in the stand that I have taken. I have generously offered to cut out White, but you insist that we also cast Brown overboard. Now, when I venture to meet a man half-way, and he does not make any concessions, it is certainly time to indulge in a little, plain talk. We have valued your trade, but you are too mean, narrow, jealous and petty-minded, especially toward former employees, to ever build up a great,

SHOWN BY E. T. WRIGHT & CO., ST. THOMAS, ONT., AND ROCKLAND, MASS.

or, progressive business. These young men had a right to branch out for themselves, and when they were in your store, they doubtless gave you full return in service for all that you paid them. You made a profit on their labors or you would not have retained them in your employ. Now you are unwilling to let me sell them any of the lines that I represent, and, as it has come to a matter of choice, I am going to stand by at least one of these men." With a few more words in this strain, the salesman departed.

### The Live and Let Live Plan

People in small communities are supposed to know everything about everybody else, their thoughts, their actions, dress, habits, and relatives, but it seems that in larger centres, there is still some jealousy that the age and present day experience have not eliminated.

An old shoe man, when spoken to on this subject, said: "I never allowed opposition to bother me very much. I do not say that I am not interested in what the other fellow does, but I seek to pursue my own path, attend to my own business, look after my own customers and that pretty nearly keeps me busy without traducing, misrepresenting or bothering about my opponents. "Run your own show" is a good motto to follow. Keep abreast of the times, learn what is new in styles, money saving systems, efficient salesmanship,

quick turnover of goods, and never mind trying to find out by stealth, inquiry or cheek how much the other fellow takes in in a day, what rent he pays, how many clerks he has employed, or how much he buys from such and such a house."

### Holding Out the Olive Branch

"Stick to your own affairs if you wish affairs to stick to you," said another dealer. "Step across the street some day and grasp the hand of your competitor, talk to him and wish him success, be open and above board. You will generally find that he is a fairly decent sort of a fellow after all—that he has to put up with pretty much the same drawbacks, disappointments and troubles that you have and that his path is studded with as many obstructions as your own. Learn to know him better. You will usually find on a more intimate acquaintance that you will both draw more trade, and bring about a betterment of conditions by a spirit of helpfulness and unanimity than by each pulling in an opposite direction. If he really will not co-operate with you and you actually find after a fair reasonable trial, that he will break promises and go back on his word, then go your way and let him go his. But for goodness' sake keep your hammer for pulling nails out of packing cases and not for hitting a competitor on the head."

## The Index Hand and How to Make It

A Line Drawing is Best for Temporary Signs, and Can Be Executed Quickly—Keep Patterns of Various Sizes on Hand—The Use of the Air Brush—Good Cards Should Be Framed—Some Errors Frequently Made By Beginners.

By R. T. D. EDWARDS, with the Robert Simpson Co., Toronto  
(Copyright by the Acton Publishing Company Limited)

It is very important that a show card writer should have the knowledge necessary to draw the index hand quickly. It so often has to be used to direct the attention of customers to a certain office or section of the store. The arrow is sometimes used for this purpose, but it is not as suitable as the indexed hand. The reason for this is if you are asked to direct a person to a certain place, the natural thing is to point to it with your index finger, consequently, this is also most natural to use on a show card or sign that is intended to direct.

As speed is, as we have often stated before, a very important factor in the show card writer's work, it becomes necessary that a system which will enable the card writer to draw an indexed hand quickly must be arrived at. It is not necessary in the majority of cases to have a perfectly shaded drawing in order to answer the purpose. A line drawing is best for temporary signs and can be executed very quickly. It is also necessary that the method which you use will assure that the hand which you use is in the proper proportion in each case. In the writer's own experience, it has been found to add greatly to speed to draw a well formed hand on a piece of ordinary paper and transfer it by the use of carbon to the desired place. It is a good idea to keep all sizes of these patterns in stock as are shown in Figure 1. To reverse the hand, that is, to make it point in the opposite direction, place the black side of the carbon paper against the back of your pattern, and on the opposite side of the paper you will have the hand pointing in the opposite direction to which it is on the front. Another method which I have found to be an excellent one is to cut a

pattern of a hand cut of cardboard as shown in Figure 2. This gives you a correct form of the outline of the hand which may be transferred to a show card very quickly and the inside line sketched in afterwards.

One of the older uses of the indexed hand was to place it on a card to direct attention to some particular phrase or price. It has been found, however, that as this does not add any selling force to a ticket, it can be dispensed with.

### Air Brush Effects

The air brush can be used with good effect in shading an indexed hand in natural colors. It should be used only on cards which are intended to stay up for a longer than usual period of time, as it would be time wasted if so much work were put on a temporary card. In the making of air brushed hands stencils play a very important part. These need some explanation. The first step in their construction is to sketch the hand on paper as explained in previous lessons dealing with the making of air brush stencils. From this drawing make two stencils, one to shade the hand and one to shade the background. The effect of each of these stencils is shown in Figure No. 3. The next step is to transfer the drawing of the hand to the card by means of carbon paper. Then draw the outline with black waterproof ink. After this is thoroughly dry place the stencil to be used for the background over the drawing and shade in with a pale green or some other delicate shade. Next place the other stencil and use black first to shade up the fingers and after this is done, tint it with a flesh color. The result should tend to attract attention, and this is what is wanted in such a card.

ILLUSTRATING METHODS OF CONSTRUCTING AN INDEX HAND

It is advisable to have good cards of this nature framed, which will keep them looking fresh and clean and make it possible to use them for a much longer time. Complete brush hand may be seen on the men's wear card in the accompanying illustration.

**The Completed Cards**

The completed card with the word "elevators" shows the use of the hand on a fancy mat board. The hand in this case was drawn with white paint. For this work it is advisable to use a small brush well filled with ink. This will enable you to get a more even stroke than you would by using a larger brush with less paint.

In Figure No. 4 we illustrate a drawing of a silhouette hand which should always be used in black and white. It is not suitable for bright colors.

Figure 5 illustrates two errors that are frequently made by beginners. By carefully considering the hands illustrated herewith, these mistakes can be avoided.

**Will Rubber Co's. Abolish Prepayment of Freight?**

*(Continued from page 34)*

so that they will have to travel a great distance if he can help it. He will want the freight to be as low as possible. The large concerns would thus have the bulge on the smaller ones by reason of their numerous distributing depots where stocks are carried, as the retailer will certainly order his goods from the nearest centre if he has to meet the cost of carriage. The fairest way all round, both to the companies and the retailer, is for the pre-payment to continue."

**Question of Uniform Cartons**

Another leading company, referring to the question of uniform cartons said: "After due consideration and investigation on our part, we have adopted a standard carton. This carton is made as small as can be used, taking into consideration the protection to be afforded to the shoes so en-

closed. We have no objections to other companies adopting our carton, which we beg leave to say was put in as standard after due and exhaustive consideration and investigation. On the matter of the prepayment of freight rates, we have nothing to say at present."

"I regard the matter of prepaying freight as a nuisance, and open to all sorts of misunderstanding," declared another rubber manufacturer. "It leads to trouble. Producers of rubber footwear are the only people in existence who pay freight, and in addition, supply cases free. I think, not only should we do away with the prepayment of freight, but also dispense with free cases, and get our business down to the same basis as leather footwear manufacturers. Often the shipment will only come to eighty or ninety pounds, and a retailer thinks that this is so near the hundred pounds we should pay freight. Or he may be buying from a jobber. As I have said, shipments of rubber shoes of one hundred pounds or over, are supposed to be paid by the manufacturer, but where rubber shoes don't reach one hundred pounds the retailer often gets free transportation for the goods on account of them being mixed up with leather shoes. Some jobbers have many and many beautiful mix-ups owing to this system, and clever retailers seek to order about one hundred pounds worth of rubber footwear, and then get some leather goods upon that, so that they will not have to pay any freight on the latter. The rubber firms pay. There is no valid reason at all for the prepayment of freight or for free cases."

**Hope There Will Be No Advance**

The shoe trade in general will await the outcome of these propositions, which are likely to be considered at an early date, with considerable interest. From interviews with several retailers, it is learned, if any change is to be made the majority would prefer obtaining rubbers this coming season at the old prices, with the prepayment of freight abolished, rather than they would to have quotations elevated substantially and the freight concession continued.

## Helpful Hints for Advertisers

### A Good Seasonable Advertisement

Peel, the Owen Sound shoeman, believes in seasonable advertising. This ad. was printed on November 29th, which is mighty seasonable time for wet weather footwear. The heading is good, also the sub-head. The copy is descriptive and logical. This shoeman evidently believes in the goods he is selling, and the whole copy has a ring of sincerity about it that cannot help but appeal to discriminating buyers. The cut is not a good one. It shows the outline of the shoe plainly enough, but while giving sufficient details

**WATERPROOF SHOES FOR WET WEATHER WEAR**

**Why buy inferior Shoes when Your Health is at stake**

We carry a large range of the noted Slater Waterproof Shoes, made of the best of materials and workmanship with viscolized soles and uppers. These goods are impervious to water and for wear and foot comfort have no equal. We respectfully request you to look over this line of goods as we consider them the best values shown today. Every pair guaranteed by the Slater Shoe Company.

**PEEL, The Shoeman**  
984 Second Avenue East      New Method Shoe Repairing

A THREE COLUMN OWEN SOUND ANNOUNCEMENT

to enable one to size up the shoe it is quite possible to have a line cut suitable for newspaper purposes made so as to look more attractive than this one. The border is attractive and well set, but the copy would look better without the rules running across the ad. in various places. There is also too much black face type about this ad. It would be better if the copy was run in light faced type and the same style of type was used for display purposes throughout. There are three different faces of type used in the display lines of this ad., which is two too many. It is better to use only one style in an ad. wherever possible.

### Too Much Like Business Card

The ad. of Geo. A. Meloney is more like a business card than an ad., and there is a big difference between the two. A business card is a staid and formal affair, which doesn't tell the reader anything and which doesn't do the shoeman

**GO TO GEO. A. MELONEY**  
NORTH SYDNEY - - - C. B.  
With all your  
**FOOTWEAR PROBLEMS**  
The largest and best range to select from.

A SMALL AD. OF NORTH SYDNEY DEALER

much good, for the simple reason that it does not give the reader any line on what the shoeman has to sell. In this case a man may have plenty of footwear problems, but unless the shoeman strikes a responsive chord in his advertising he is likely to go elsewhere with his troubles. It would be better if Mr. Meloney were to use about twice this space

each time he advertised and to fill the space so used with something definite at each insertion. The mere fact that only one thing at a time is mentioned does not prove that there are not a large number of other features in stock worth mentioning. In fact rather the reverse is the case. When a retailer has some one definite thing to talk about in each ad. it is pretty sure proof that there are a lot of other things not mentioned through lack of space that he would speak of if he could. Of course, if a paper is only published weekly the shoeman sometimes has to mention more than one feature in an announcement. In that case he should use larger space to do this in. The above remarks apply only where daily space is used.

### Make Headline Catch the Eye

It would be better to put the top line, "The Palace Shoe Store" at the bottom of the ad. beneath the name of the proprietor. There is more sequence in so doing and the headline will then occupy the centre of the stage, as it should. The headline should always catch the eye first, as that is its function. This headline is good, and tells the object to be sold without any superfluous wording. The cut, however,

**MEN** We have the best and largest stock of Men's Fine and Work Shoes North of Toronto—our store is equal to any city store, both in style, quality and prices—our stock is composed of all the leading leathers: patent colt, valour calf, storm calf and tan calf, buttoned and laced

**The Amount of Business we do speaks for its self who has the Shoe Business you come to**

2 Doors South P. O. } **W. J. HONEYFORD** } Telephone No. 228

THREE COL. WIDE ADVT. OF A COLLINGWOOD SHOEMAN

is merely an eye-catcher. It does not mean anything, and hence is about as good as no illustration at all. Far better employ a good line cut—not a half-tone—of a man's or woman's shoe. The copy is very good and especially definite where the "Ultra" shoe is described. This is doubtless a weekly paper, so the division of the ad. into men's and women's sections is quite permissible. In a daily it is better to stick to one point at a time and hammer it in. Whether the store is the best fitted out with stock north of Toronto might require some proving. Exaggeration, or what appears like it, is always inadvisable. The bottom lines in black are set up wrongly: the last half of the line is evidently a separate question.

## On the Road

### AN OLD TIMER WHO GOT A FEW "JOLTS"

"How am I treated by the average shoe retailer?" remarked a traveler of twenty-nine years' experience. "Well," he declared, "a good deal better than I used to be. I have represented Montreal, Quebec, Ottawa and St. Hyacinthe firms and now I am in business for myself. Of course the treatment that a man receives very much depends upon the personality of the fellow himself. If he is thoughtful and considerate, polite and tactful, he will not fail to have extended to him these same qualities in return.

"There are some retailers who are grouchy and pessimistic, sore-headed and chronic kickers, price-cutters and brow-beaters, bluffers and tricksters—and I might say, liars. There are also some travelers who, no doubt, belong to the same class. I have made it a rule all my life, never to make an enemy of a man when I could make a friend. There is no use in kicking a sleeping dog just for the purpose of arousing his enmity. You could very often go around him much more easily. You can win more with a smile than you can with a whimper; you can capture more by a pleasant word than you can by a clenched fist. This returning 'eye for eye, and tooth for tooth,' may be all right in the old Mosaic code, but it will not bear fruit to-day. I suppose that, in my long career, I have never received more than three or four direct insults from retailers and of these, only two were deliberate and with 'malice aforethought.' Most every business man will listen to a traveler and accord him an agreeable reception, provided that the road representative is not a frost, a blow-hard, a braggart or a sneak. You know that it takes all kinds of people to make up a world and the world would be a queer place without all kinds of people.

### He Tore Up My Card

"I remember it was after I had gone on the road that I met in Ottawa a French-Canadian shoe man. Now I have the highest esteem for that polite and chivalrous race. I had been personally introduced to this gentleman at the home of a friend on the previous night. This particular retailer knew that I was a shoe traveler, but no business was mentioned on the first occasion that we met. Next morning, feeling that I would be accorded rather a pleasant reception, I walked into Mr. A.'s store and presented my card. He jabbered something in French and I said:—'I beg your pardon, sir, but I do not understand your language.' Handing him my card, I said, 'That is the firm that I represent.'

"Again he answered me in French and tore up my card. Even then I did not lose my temper, and asked him if he would kindly speak to me in English, as I knew very well that he was familiar with that tongue, having heard him use it with ease and facility on the previous evening. He paid no attention to my request whatever and went on

talking in a loud tone of voice in the French dialect. This angered me, and I turned on my heel and, as I was going out I saw a clerk who was near the door laugh heartily. I said to him, 'I am sorry that you have to work in such a place as this, sir. It must be awful to be associated with such an ignorant cad as your boss. You can tell him for me that I will never come to this store again. I made it a rule when I went upon the road, that I would transact business only with gentlemen.'

### You Are a Hanged Nuisance

"It was not long after that when I was in Prescott, and it was a few days before the Christmas rush. I wanted to call upon a certain shoe dealer there and he was very busy. It was the first time that I had been in that town, and I was representing a Quebec firm in those days. I called three or four times in the morning and afternoon, but found Mr. G. busy. I did not care to trouble him and it was about five o'clock in the evening or a few minutes after, when the day's rush was over. I was just going in the store as he was coming out. I presented my card and he looked at it, never saying a word, and started to pass on. I told him that I had been in to see him several times during the day and that I had tarried for hours in order not to bother him. He did not seem to appreciate this fact, and declared, as he emerged from the door, 'Oh, you travelers make me tired—you are getting to be a hanged nuisance. I have no time to bother with you or to look at your goods.'

"I said, 'Very well, sir, I will never call on you again. I have not time to devote attention to any other than gentlemen.'

"I happened to relate this incident to three or four travelers and also some retailers, and they said, 'We cannot understand how such a raw deal was accorded you. It was not like G—to use any one in that style, and there must have been strong contributing circumstances.' I heard afterwards from two or three travelers that G— wanted to see me, and that I was to call in the first time I was in Prescott. I made a couple of trips there later, but did not see the man who had so unceremoniously received me. Finally, after getting through my business one night, and having a little time on my hands, I called around.

### He Had Got the Merry Ha! Ha!

"'Hello there, Neffson,' said G—, as he shook my hand warmly. I said, 'How are you, sir,' and he jumped at once to the theme in hand.

"'I am glad that you have come around. I have been looking for you for some time. I want to apologise for the scurvy treatment which I handed you about six months ago. I am not seeking to palliate the offence in any way, but I may tell you, sir, that things had gone wrong that day, which was a very busy one. When I saw you, I had just

emerged from the office where a man, who owed me \$300 had given me the merry 'ha-ha,' and told me to do my worst. I saw that I was powerless to collect from him and he started to add insult to injury by his ironical and sneering remarks. It was little wonder then, that, anxious to hurry home and meeting you at the door, you should become the vengeance of my wrath, or spleen. I am only human, and I am very sorry, and have longed for some time to give an explanation to you.'

"Mr. G.'s apology was so simple and frank that we afterwards became great friends, and I did business with him up to the time he closed out his store a few years ago.

#### Where Another Butted In

"One other instance, and I am done. It was in Montreal, and I called at the store where there were two partners. One generally did the buying and the other looked on. I was selling felt socks in those days and there had been an understanding and the price raised. Of course several retailers decidedly objected to the "hold-up," as they called it. I had some short socks and some long ones, and in order to get a certain figure, it was necessary to take an equal number of pairs of each style. We were having an argument over this when the senior partner, who had been overhearing the conversation, stepped up, and brusquely demanded. 'Why are you trying to force goods on my partner here, when you know that we do not want them?'

"I replied that there was no compulsion or coercion about the affair whatever, that my prices were fixed and in order to secure the best figure, it was essential to take a certain number of pairs of each style.

"Well,' retorted the senior wisacre, 'you know that this is a hold-up game on your part and you are trying to get away with it.'

"I beg your pardon,' I replied. 'I am merely seeking to sell goods and to defend their quality and prices.'

"Oh, you cannot tell me anything like that. Pack up your samples and get out,' was the angry rejoinder from the irascible old man, who had allowed his temper to get the better of him.

#### The Looker On Told to Recede

"I did not lose my balance, but kept a cool head and merely smiled at the eccentric attitude of this highly wrought up individual. This seemed to aggravate him all the more. I left without further displaying my goods. That afternoon, the junior partner 'phoned me at the hotel to pay no attention to the scene which had been enacted and that it was a case of old J— flying off the handle without knowing what he was doing. However, I did not go back to that store for some time and wrote a note to the junior member of that firm that it would be well to have it understood that one man was to do the buying and not have another butting in,, as it was apt to place a traveler in a false position. He answered that he had told his irritable associate where to get off at, and that he was to henceforth hold himself in reserve and beat a hasty retreat when he saw any samples on display, lest he should break out again. In this case I did not consider that I was deliberately or purposely insulted, but it was one of those incidents where a looker-on often sees too much of the game and puts in an oar where it would be just as well for him not to venture out from shore."

A unique device has been on display in the window of the Brockton Shoe Store, Yonge Street, Toronto. It consists of a revolving wheel operated by a small motor to which two handles are attached. From each depends a shoe, and as the wheel turns the sole of each boot is dipped in a pan of water. The demonstration affords evidence that the soles after being treated with a certain preparation are entirely waterproof. The device, which is intended to advertise the wet proof-quality of a new dressing, is a good drawing card.

## Catching the Midnight Train

(By a Traveler)

It was midnight and the rattling  
Of the bus, the driver's call,  
Startled, roused a weary traveler  
Napping in a hotel hall;  
And the sleepy porter nodded  
Partly conscious, half awake.  
As the driver thumped him soundly  
Telling him the grips to take;  
Then the bus the traveler entered,  
Slamming loud the squeaky door,  
Down the village street they rattled  
In time to catch "Old Number Four.

The salesman entered the station  
With a slow and weary tread,  
While the pale light from the lamp-post  
Sputtered loud from overhead.  
And the drawling agent answers  
To his query, "Number Four  
Is an hour late or better;  
It's been late a week or more!"  
When he's checked each piece of baggage  
Out he stretches on the seat,  
Listening to the ceaseless ticking  
O'er the wires in constant beat.

Then he takes a stretch in walking;  
Returns with a nod the agent's smile,  
Pulls his pipe and lights it, saying,  
"Guess she'll be here in a while."  
Soon he's strolling forth and gazing  
At the shining moon o'erhead.  
Wondering if its light is drifting  
Peacefully o'er a curly head.  
Wondering if a smile is playing  
O'er a baby face to-night,  
Dimpled in its rosy slumbers,  
Nestled on a pillow white.

But lo! his reverie soon is broken,  
The engine's searchlight beams afar  
On the ties he feels its throbbing,  
Feels its reverberating jar.  
And the peaceful calm is broken  
By the sudden deafening roar.  
He grabs his grips, prepares to enter  
Through the clanging open door:  
Then "Aboard," a jerk, a puffing,  
Onward—onward—soon he flies;  
Piles into the welcomed cushions.  
Closing then his weary eyes.

This is not a hero-pictured  
As in war-time days of old;  
On fair history's brightest pages  
You'll not find his name enrolled;  
He's just a simple traveler,  
With his grip-sack and his smile,  
And you'll find him up and doing,  
You will find him worth the while.  
It's the common daily story  
Of these countless thousand men.  
Traveling always—ever onward,  
Scarce they know a journey's end.  
So this simple little picture  
I dedicate it now to thee,  
Thou patient, smiling, earnest traveler  
On the land and on the sea.

## A Progressive Young Shoeman

One of the young men who is succeeding in the shoe business and has built up a well established, paying trade is E. C. Scarrow, of Owen Sound. Mr. Scarrow's place of business is at 910 Second Ave. East. After leaving school he

E. C. SCARROW, OWEN SOUND

began his career as a clerk and worked for two retail merchants in Owen Sound for about five years. In March, 1908, he saw an opportunity to go into business for himself, which he has continued ever since with annually increasing success. Mr. Scarrow is well thought of and well liked. He makes a specialty of fine shoes and carries a complete stock of traveling goods. He is a good stockkeeper, a shrewd salesman and a close student of styles. He devotes special attention to window trims, believing that a merchant's windows are the cheapest and best advertising medium that it is possible for him to have.

## Know the Value of Shoes

"A man to be a successful shoe traveler," remarked one of the most expert salesman on the road, "must have knowledge of what he is selling, particularly with respect to values, leathers, etc. To illustrate what I mean. I call upon Smith, and he looks carefully over my line, if I have some specials with me. He likes my lasts and patterns, but remarks that 'your prices are too high,' for he is a close buyer. I show him a woman's dongola blucher, and he boldly tells me that my figure is excessive, and, producing from a carton a shoe of similar appearance, inquires what I think he gets that for. If you are not able to tell him within five cents a pair, he is aware that you do not know your business, and are only guessing at values. To be fifteen or twenty cents out in your calculation, demonstrates to him at once that you are not up in your calling, and are only bluffing. If you can show him, after a close estimate, that your line possesses better stock, both upper and bottom, has solid leather counters, and box toes, is better lined, has neater stitching, lasting, trim, and finish you go a long way toward convincing him that you are *au fait*. He sees that he cannot hoodwink you, and he forms a higher estimate of your ability as a salesman. I called on a certain Eastern retailer the other day. He is a sort of wiseacre, but a very good fellow when taken all through. He told me my prices were too high, and that he could do much better in a certain grade of men's box calf welts. He then showed me some of the goods

that he had been buying, asking me what I thought he paid for so and so. I told him within a very few cents of what each shoe was costing him, and he seemed surprised that the figure was so exact. Of course, no man is expert enough to say offhand what it cost to produce a shoe in a factory, but he can pretty well gauge the wholesale figure if he will give the subject of values close study and the shoes minute inspection. It is not necessary to run down the other fellow's goods, but merely to point out where your own excel, and, in what respects they will command a sale over others."

## White Footwear Again

The white boot is very near to woman's heart—if one may be permitted the expression—and gladly does she welcome the return of the season when white footwear may be worn constantly, says an exchange. Never does she feel so daintily dressed, nor does her costume ever more satisfactorily express her femininity, than when her feet are shod in white boots or slippers and white silk stockings to match.

This summer white footwear is to be more fashionable than ever—as the styles for the southland attest—and the conventional white footwear for out-of-door occasions will be the well-cut buttoned boot of white buckskin with a moderate Cuban heel and vamp on the new, long lines now considered patrician and distinguished. Such a boot is illustrated, showing the high top with fourteen buttons, and the lines of dainty perforated trimming or broguing, in the shoe vernacular, on the toe.

With the smart buttoned boot are shown two new types of piazza footwear; a colonial pump of white calf with a covered heel and an odd trimming of black patent leather laid under a row of perforations. The buckle is of patent

WHITE FOOTWEAR AGAIN THE FASHION

leather studded with rhinestones. To the woman who adores novel effects, the white buckskin oxford will appeal. The arrangement of the buttons on alternating scallops of the white buckskin and black patent leather is an entirely new note in bootwear.

## Leather Manufacturer Elected Mayor

A prominent leather manufacturer who is highly regarded by the citizens of the town in which he does business is R. M. Beal, head of the R. M. Beal Leather Co., Lindsay, who has just been elected mayor of that town. Mr. Beal was born a few miles out of Toronto and spent his early days in Whitby. For several years he worked in the United States. He has been in the leather and tanning business since 1881 and the last fourteen years of that time has

R. M. BEAL, LINDSAY

been passed in Lindsay. Mr. Beal has always taken a leading part, not only in the affairs of the industry with which he is connected, but also as a public-spirited citizen of the town. He has been a member of the Library Board and the Public School Board and in 1911 was elected to the civic chair. He was returned again this year. He is a solid, progressive resident of Lindsay and has done much to advance the interests of that place. In his inaugural address he called attention to many matters of importance that will contribute to the welfare and prosperity of Lindsay.

## Getting Goods Under False Pretences

People who directly or indirectly obtain goods by false pretences are to be brought under the operation of the Criminal Code by an amendment to be introduced by the Minister of Justice, in parliament at Ottawa. The law, of course, provides at present for those guilty of false pretence, but cases have arisen whereby goods or money have been secured indirectly, and this class is aimed at. For instance, a merchant who makes a false report of his affairs to a commercial agency and who, by reason of the report of that concern, gets a line of credit from a third party, will be liable. There is no intention whatever of bringing in any bill for the re-establishment of imprisonment for debt, as has been reported.

## Just Why Leather is So High

Here are some convincing facts and figures set forth in a notice sent out by W. W. Mooney & Sons, tanners, of Columbus, Indiana, showing the decrease in the number of cattle slaughtered at the fourteen leading packing house points in the United States during the years 1912, 1911, 1910. No wonder leather is constantly and irresistibly advancing and will likely go still higher.

Government statistics show the population in 1900, 76

million, cattle supply, 62 million; population in 1912, 95 million, cattle supply, 58 million.

Slaughter of cattle at the fourteen leading packing points during the years—

	1912	1911	1910
Chicago .....	1,681,136	1,715,279	1,741,078
Kansas City .....	1,060,262	1,232,391	1,286,116
Omaha .....	577,138	706,415	798,950
St. Louis .....	884,487	758,012	904,087
St. Joseph .....	297,877	312,242	775,763
St. Paul .....	123,118	130,270	152,712
Sioux City .....	154,293	189,128	199,732
Denver .....	61,710	67,544	84,209
Fort Worth .....	356,990	347,188	529,269
Indianapolis .....	175,097	190,188	169,405
Louisville .....	59,099	58,187	63,076
Wichita .....	92,402	88,301	99,509
Cincinnati .....	182,870	180,033	190,350
Oklahoma City .....	180,903	114,859	.....
Total .....	5,887,382	6,090,037	6,574,247

The above figures do not include calves, sheep or hogs.

Statistics compiled by the Department of Commerce and Labor show the cattle in United States in 1912 numbered 57,959,000 as compared with 60,502,000 in 1911, and 61,803,000 in 1910.

Compared with a couple of years ago, very few cattle are being killed by country or city butchers, who practically buy all their supplies direct from packing houses. This condition diminishes the supply of country hides, and although no absolutely correct figures can be obtained, the shortage is quite considerable.

The above authentic figures show conclusively that less cattle are being killed every year, and this, with a much decreased supply, and our population who wear shoes and consume leather increasing at the rate of one and one-half million people yearly, are well worthy of consideration and study.

It requires three years' time to make a steer fit for the market and despite the diminished slaughter, our cattle are being killed faster than they can be replaced.

Long haired, grubby winter hides are now selling at slightly lower prices than prevailed during July and August, when the best short haired and clear hides were sold but on account of the grade and weight leather produced, even this lower price does not wholly offset the difference of present quality and take-off, of the hides available.

The best posted men in the trade predict that last summer's high record prices for hides will be equalled, and with normal conditions will be surpassed during 1913, for hides will remain scarce in spite of everything that can be done, which simply means higher prices for leather.

## Proper Way to Open a Retail Shoe Business

(Continued from page 42)

an upgrade. Perhaps that business may have fluctuated in its upward course. Now, it is not fair in making a percentage to take the largest sales as a basis for the percentage of business done during all the other months of the year. It is only fair to take a percentage for a number of years.

Another thing, the operating expenses of a store should be figured on the basis of the poor months and not the best months; then when the good months come the showing is far more satisfactory. When this order is reversed an unsatisfactory showing is certain.

In figuring the profit necessary to be added to the cost of goods the dealer must not overlook the "unexpected" expense item, for it always occurs, and if it has not been taken into consideration his showing at the end of the year will be a disappointment.

I would not intentionally hold up the dark side of the shoe business, for it has a bright side. The opportunities to-day for the bright, enterprising shoe merchant are better than ever before.

## Settling Direct With Manufacturers

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir:—In regard to the matter of claims made upon the retailer by customers, I think the retailers have a grievance sometimes against the manufacturers. For instance, a claim is made to the retailer that a certain pair of boots should be replaced by the manufacturer.

The retailer sees the goods, and considering the fault is not one that can fairly be placed upon the manufacturer, and judging by past experience, could not expect them to replace the shoes, he refuses to entertain the claim, or perhaps offers to settle it by rebate at his own expense.

Now we find that customers have got into the habit of applying direct to the manufacturer for a settlement, probably on advice of some rival of the first retailer.

I have no complaint to make with that, but I do think it is unfair to the retailer, who is considering the interest of manufacturer as well as customer, that the former should deal directly with the complainant. In all fairness he should deal with the matter entirely through his agent, the retailer.

I would be very glad if the manufacturer would carefully consider this.

Yours truly,

BLUCHER.

Halifax, N. S., Jan. 24, 1913.

## Stop Sending Customers With Orders

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir.—I noticed in your last edition a letter from a writer who signs himself as "Fair Play," in which exception is taken to the alleged general practice of wholesalers selling too much retail. The usual charges are made and some sweeping assertions levelled at the head of the jobber. Now we are held responsible for many sins of commission, and I would like to point out a few things. There may be exceptions to the rule, but I am not aware of any transgressions of the open or secret character which he affirms.

I want to say right here and now that no man can come into our establishment and secure a pair of shoes without first presenting a written order and signed by one of our customers. We have made many enemies by adhering strictly to a wholesale business, but we know that the retail trade are our best friends, and the ones upon whom we depend for business. We protect their interests in every way, and are often abused by retailers themselves for so doing. Frequently, a dealer will not have a certain shoe or size in stock and he sends his caller down to the warehouse for a pair which he should have in hand if he kept properly assorted. A few dealers will even stipulate that the bearer of the document is to be given the shoes at wholesale price, and they have raised a big fuss when we have charged a fair retail figure and credited the retailer with the balance.

Now, before "Fair Play" hurls such charges at jobbers, as he has done he should make an effort to have his brethren stop once and for all the practice of despatching persons to the wholesale with an order or with verbal instructions to say that "Mr. So and So sent me down and he said that it would be all right." Before stones are cast, it might be well for a few offenders in the retail shoe ranks to stop coming to us for orders for rain coats, furs, furniture, hats, millinery, and many other articles which they want to get wholesale. Only the other day a retailer walked into our establishment and asked us to give him an order on a wholesale clothing house so that he could go around and get a suit for his thirteen year old boy. We refused and he walked out in high dudgeon saying that he bought thousands of dollars worth of goods from us each year, and, if we could not do him that favor, we could go hang. This is only one of many incidents that I might name. I then turned on him and told him that he was doing the very thing which we were not encouraging,

namely, private individuals buying wholesale from the trade, not our own trade, but any other.

A retailer saunters into a sample room and he probably sees some persons looking over a pair of shoes. It may be a woman or two women, perhaps, and he at once rushes to the conclusion, as appearances are deceptive, that we are doing a little retailing on the side. Now, right here in this city are girls and boys of our customers in the province going to school, many others have relatives living here, and still others send in their wives or daughters—all with orders—and these people have a legitimate right to secure their footwear from the wholesale, owing to their father, mother, or brother being in the trade, and buying from us. We refuse all orders not presented from our patrons, and, if "Fair Play" does not think so, let him come around and try to secure a pair. He will see quickly and firmly he will be turned down.

We do not honor orders from wholesalers in other lines of trade, nor do we give any, and have no desire for any retail business at all. In the first place, it is a nuisance, we make no money on a single pair, have no facilities for fitting, lose time, and often sales by attending to those who come with written requests. We can do enough business in a wholesale way without bothering with any private trade. A few dealers themselves are to blame. Let one send a customer to us, and that customer, if he thinks he is securing a pair a little cheaper than he can in a retail shop, ever afterwards will want to haunt the quarters of a jobber. Like the fellow who has once traveled on a railway pass or entered a theatre on a complimentary ticket, he thinks it a crime to pay out his good money for transportation or entertainment in the future, and will seek in every way to secure more concessions of this character, and even boast of his pull.

In conclusion, I would say, let the retailers stop the practice of sending patrons down to the wholesale with an order to secure such and such a shoe, let them keep properly assorted up and there will be no just cause for grievance from this end of the line. I am pleased to say that this practice is ceasing and only a few are transgressing. I might go further into this matter, but much has been said in your columns many times on this subject, and I thought that it was clearly understood that the jobbers are a unit in protecting and safeguarding the best interests of the retail trade.

Sincerely yours,

Toronto, January 28th, 1913.

CONSISTENCY.

## Has Joined Traveling Ranks

One of the new men on the road is E. B. Weiss, of Napanee, who is now covering the territory east of Belleville and the Ottawa Valley for Blachford, Davies & Co., of Toronto. He started at the first of the year. Mr. Weiss is a member of the firm of Weiss Bros., shoe retailers of Napanee, who began business in that town about a year ago and have built up a large trade. H. A. Weiss is the manager. E. B. Weiss is the son of one of the oldest commercial travelers in Canada. At the age of sixteen he began to work in the store of his father who was then in the shoe business in Trenton. After some years he took a position with S. B. Thing & Co., of Rochester, N.Y., later coming to Toronto, he was employed for a while in the Toronto Shoe Co. He then joined the staff of H. & C. Blachford, Toronto, with whom he was a valued employe for five years. In March last the firm of Weiss Bros. was formed. "Bert," as he is familiarly known, is an excellent salesman and understands the wants of the trade. His many friends will wish him every success on the road.

## An Aggressive New Industry

One of the newest and most enterprising companies manufacturing general traveling goods is the Berlin Trunk and Bag Co., Limited. Immediately after its organization, February, 1912, temporary quarters were secured in the Star Whitewear Mfg. Co.'s building and fitted up with the most modern machinery known for the speedy and economical manufacture of leather goods. With these they entered the market. Later a line of fibre trunks was added and this

ALD. A. L. BREITHAUPT, BERLIN

department as well has proven the ability of the men behind it. Early last spring contracts were let for the erection of a modern three storey and basement factory, 66 by 140 feet in dimensions with modern power plant, dry kilns, etc. This is practically completed, and the machinery is being installed. A full line of trunks of all kinds will be made, as well as general leather goods of all grades.

Alderman A. L. Breithaupt, the ever alert president of the company, has been practically raised in the leather business, his forefathers having been tanners through five generations. After completing his University education, he put in a full four years apprenticeship in the tannery of the Breithaupt Leather Company. This was followed by a term in the warehouse and later as the Company's representative "on the road." These various experiences have fitted him well for his connection with this company. In 1899, with several other gentlemen, he successfully launched the Berlin Rubber Manufacturing Co., Limited, which was later absorbed by the Canadian Consolidated Rubber Co. Later Mr. Breithaupt purchased the business of the Star Whitewear Mfg. Co., in Berlin, which he still owns. The trunk factory management is in the hands of Ivey Holman, a native of Berlin. He has had eighteen years of thorough, practical training in every niche of the leather goods department. Associated with Mr. Holman, as foreman of the leather goods department, is J. W. Stoner, another practical and highly capable leather goods man of eleven years' insight. The supervision of the trunk department is in charge of W. E. Reichold, an energetic and experienced trunk man and expert designer.

A firm of manufacturing jewelers in New York City recently received from an exclusive shoe house in that city a novel order. This order was in the form of a decoration to bejewel a pair of black velvet slippers. The decoration

consisted of a solid mass of rhinestones, in the form of a net. Six gross of stones were used on each slipper, exclusive of the heel ornament, and when the pair were sold, the price received was \$100.

## Be a Crank on Proper Fitting

"Very much evidence is laid upon correct buying and not overstocking in the shoe business," remarked a North Bay retailer to the SHOE AND LEATHER JOURNAL recently, "I grant all this, but I am a crank on proper fitting. I endeavor to impress upon my clerks the fact that comfort and ease in the matter of footgear are of the very greatest importance. It may take a little time, but there is nothing, to my mind, that will drive a customer away or, at any rate, make him sore on you and your establishment than if you do not give a comfortable fit. A purchaser does not want to run back with the shoes to have them stretched. It makes him as indignant as it does a customer to take a coat back to have alterations made after the tailor has tried the garment on him before sending it up to the house. Perhaps some shoemen have never known the agony of hard or soft corns, bunions, callouses, chilblains, ingrowing nails, and other ailments, but it is mortal woe to many people—especially when these ailments are accentuated by ill fitting footwear. Their suffering is often intense. I have a dentist friend who never knew the torture of a toothache. He frequently used to make light of the suffering of his patients and thought they should endure the pain much better than they did. But one day he got a raging toothache himself, had to seek the aid of a fellow dentist, and have the molar extracted. Well! that unhappy experience changed the whole current of that chap's life. He became a great deal more sympathetic and considerate. It is the same with shoe dealers. If they have suffered keenly from pedal ailments themselves they can readily attach more importance to the art and skill of fitting, insist upon patrons trying on shoes, taking time and giving the requisite attention in this regard. This may seem trite advice but it goes a long way in retaining customers. How often do you hear the remark, 'This is the most comfortable and easy shoe that I have ever worn. I guess I will go to the same place to secure my next pair.' Take a personal interest in the foot troubles of your customers. Give them the benefit of your advice, experience and tell them about the relief afforded by arch supports, bunion protectors, heel treads, corn plasters, foot powders, etc. It will boom the sale of your findings department and pay every time."

THE WELL EQUIPPED AND INVITING SHOE AND TRAVELING GOODS DEPARTMENT OF CAMPBELL & McDERMID, NORTH BAY, ONTARIO

## New Shoe Window Fitting

Paris Retailer Has Invented a Device Which Enables More Footwear to be Displayed to the Greatest Possible Advantage

A. C. Clark, shoe merchant, Paris, Ont., has invented a special model for show windows. The advantages of this fitting, so the inventor contends, are that a merchant can show four times the number of shoes without crowding that it is possible to display with any other fitting. This particular one has closed shelving and does not obstruct the light. Every shoe can be brought on a level with the eye, just as one sees a shoe in a cut. The fitting is light and attractive, as well as ornamental. Mr. Clark, whose company is known as the Brantford Showall Window Fitting Co., with head offices at 67 William Street, Brantford, says a merchant does not have to spend two or three hours arranging the fitting as it can be fixed in the window or taken out in a quarter of an hour. It is perplexing for a retailer who stocks something like 600 or 700 different varieties of shoes to be able to show only twenty to thirty distinct styles, and

can dress the window with it as it lends itself readily to constant changes.

The accompanying picture shows the window of the Clark Shoe Store in Paris, Ont., equipped with one of the Brantford Showall Window Fittings. This window, it will be noticed, is exceptionally small, having only five feet frontage and two feet of depth. It may appear somewhat crowded, but leaving out the bed which is dressed differently every day, the fitting itself has many shoes displayed on it and each has a space to itself of not less than a nine-inch radius—that is, no shoe is nearer to the other than nine inches, which is ample. There is no limit to the number of boots that may be arranged on the fitting. Every one is on a level with the eye and shown at an angle that would be used in a cut for illustrative purposes. Mr. Clark says one special feature is that the fitting in can be used in conjunction with shoe stands and that it gives the merchant four times the showing capacity in his window, using up all the valuable space that is usually left bare and blank. The standards and brackets are made in nickel, plated brass, copper or gun metal finish and are very attractive. The shelving is of plate glass and no light is lost to the interior of the window. The fitting adapts itself to frequent changes. The window can be trimmed every day during the year and never on two occasions alike. A large number of the Showall fittings have already been sold to enterprising merchants.

THE FITTING AS SEEN IN A WINDOW

necessarily, these have to be for the young man or the young woman. The old man or old woman, says Mr. Clark, never sees a shoe displayed in a window to suit them. Hundreds of people pass the store because they do not see what they require. The day has gone when the old card hung up in the window—"If you do not see what you require step inside," will answer the purpose. Passersby want to see just what they need before they enter. Another special feature of the fitting is the low price at which it can be installed. The company have such confidence it will increase the chance, or catch, trade for any merchant by at least 50%, that they are willing to put the fitting in at a small monthly rental, according to the size of the window on a yearly contract. This would, of course, be done at a loss, but the company are certain that a dealer will purchase the fitting at the end of one year's trial. Another advantage is that an amateur

## Ways of a Wily Foreigner

"I had a mean trick played on me the other day," said a Hamilton shoe dealer. "There was a pair of tan bluchers in my window, and a foreigner came in, and wanted to see them. I took them out. The pair retailed at \$5.00, and cost me about \$3.20. He tried on the shoes and they fitted him perfectly. He then asked the price, and when I told him, he said, 'No, cannot give you that, will give you \$3.50.' To this, I replied, 'They cost me almost that much, and I have to make a profit on it. \$5.00 or nothing.'

"I asked him to take off the shoes, when I noticed that the lining was badly discolored. It was as black as if the boots had been worn for weeks. I looked at the soiled goods and saw that this fellow had evidently put up a job on me, and that his socks had been freshly dyed, or he had sprinkled on them some black powdery substance. He had planned to get that pair for \$3.50 or whatever price he thought he should pay, and had deliberately set about to ruin the boots. I gazed at the pair, and, knowing that I could not clean them or dispose of them to anyone else, I said, 'Alright, take the shoe at \$3.50.' When I got the money and he had the shoes, I went for him. 'You cunning devil, if you ever come into my shop again I'll smash your head. You deceitful intruder, you think that you have done a smart trick, but you'll never do it on me again. I'll know you next time, and I'll take blame good care not to let you try on a shoe without you first pay full price.' The slippery customer simply smiled in a guilty manner, and hustled out of the store."

A petition requesting that the Canadian Government introduce a bill establishing a Canadian Insolvency Law has been forwarded by the Montreal Board of Trade to H. R. H. the Governor-General. The petition points out that by the British North America Act, the jurisdiction with respect to bankruptcy and insolvency is assigned to the Federal Parliament and that there is no federal law on that subject now in force; but instead each province has its own. In some provinces it is possible that in a case of insolvency the honest debtor often suffers a detrimental reflection of his character, as a result of imperfect laws governing the matter. The Montreal Board of Trade has communicated with every Board of Trade throughout Canada, and has received the endorsement of all these bodies on the matter.

## SHOE NEWS IN PARAGRAPH

Benj. Slater, shoe retailer, Montreal, has assigned.

H. B. Lott & Son, shoe dealers, of New Liskeard, Ont., intend discontinuing business.

Hugh White, Toronto, was in Montreal and Quebec last week on a buying expedition.

J. J. Proby has taken over the Fisher Shoe Store on Toronto street, Medicine Hat.

Pearson Bros., Manitowaning, have opened a harness and saddlery store in that village.

James Smith, of Harriston, intends disposing of his business and locating in the West.

It is reported that A. Levy, 260 Yonge street, will shortly open a branch in West Toronto.

Geo. P. Balfre, of the Chicago Tanning Co., Montreal, was in Chicago recently on business.

W. H. Miner, of the Miner Rubber Co., Granby, Que., was in Toronto last week on business.

A charter has been granted to the Menzie Rubber Co., of Toronto, with a share capital of \$40,000.

H. C. Parker, of the Dominion Supply Co., Montreal, has been on an extended trip throughout Ontario.

J. W. Baldwin, shoe retailer of Sault Ste. Marie, Ont., was in Toronto last week calling upon the trade.

George H. Booth, late of Liverpool, England, has opened a shoe repair shop in Cardston, Alberta.

Ald. James Robinson, wholesale shoes, Montreal, spent a couple of days in Toronto last week on business.

F. H. Meinzer, of the Miner Rubber Co., Toronto, spent a few days in Montreal last week on business.

C. A. Davies, of Blachford, Davies & Co., Toronto, spent a few days in Montreal last week on business.

Mr. Goldsmith, of the Progressive Leather Goods Co., New York city, was in Montreal last week on business.

H. Eves of Strathcona has taken over the harness and saddlery business lately carried on by F. T. McElhoes.

C. A. Ahrens, shoe manufacturer, of Berlin, has been appointed a member of the Board of Health of that city.

R. H. Greene, sales manager of Gutta Percha and Rubber Co., Toronto, was recently in Montreal on business.

J. C. Budreo, 1344 Queen street west, Toronto, spent a few days recently in Rochester and other shoe centres.

J. I. Chouinard and M. C. Mullarky, of the Columbus Rubber Co., Montreal, were in Toronto on business last week.

W. J. Thurston, shoe retailer of Guelph, was a caller upon the trade in Toronto this week. He reports a record holiday trade.

Thompson & Elam, of Moose Jaw, have bought out the shoe business in that city of L. H. Carswell and have taken possession.

J. Heffering, of Toronto, representing the Tetrault Shoe Manufacturing Co., has been spending a few days in Montreal on business.

C. S. Corsan, of the Regal Shoe Company, Toronto, has returned from a business trip to Boston and other New England shoe centres.

Leather and traveling goods have recently advanced about ten per cent. due to the prevailing high figure for leather and trimmings.

Reg. Sharman, son of W. Sharman, shoe retailer, of Goderich, Ont., was in Toronto, Guelph, and other cities on a holiday trip last week.

A. Kincaid, shoe retailer, of Madoc, Ont., has recently installed in his repair department a complete repair outfit and is doing a big business.

Percy T. King, Cork street, Guelph, has installed a six-

teen-foot model N shoe repairing outfit with stitcher and is doing a fine business in the repair line.

Hugo Wellein, of the general sales department of the Canadian Consolidated Rubber Company, Montreal, has been appointed office manager of the company's Winnipeg branch, and has already entered upon his new duties.

R. W. G. Bloor, shoe retailer of Ingersoll, Ont., received the sad news last week of the death of his sister, Mrs. E. Simpson, who was drowned in a wreck at Vancouver. The body was brought to Ingersoll for interment.

S. L. Van Blaricom, representing the Chicago branch of the Fred Rueping Leather Co. was in Toronto, Montreal, Quebec and other cities on business during the past few days.

In a recent fire in New Glasgow, N.S., the shoe store of L. Higgins & Co. was burned out, the entire block on Provost street in which the business was located being wiped out by the flames.

Brandon has four new industries, among them being the First Prairie Shoe Co., which has been organized by the W. Percy Gillespie Co., of Toronto. That city has now thirty-six manufacturing industries.

Scales and Carscadden, of Virden, Man., have secured the new store adjoining their old one and now occupy greatly enlarged premises. The new portion will be devoted to boots and shoes and men's furnishings.

George S. May, ex-M.P.P., the widely known leather and findings dealer, of Ottawa, has been elected president of the Board of Trade in that city. Mr. May has for many years been a public spirited resident of the Capital.

H. A. Graham, shoe retailer of Burlington, Ont., has bought a business block on the opposite side of the street to which his present stand is located. He will remodel one of the stores and move into it within the next few months.

J. S. Ashworth, of Toronto, Canadian manager for Sir H. W. Trickett, slipper manufacturer, of Waterfoot, England, leaves next week on a business trip to Winnipeg and other Western cities with a fine range of new felt footwear.

J. McCullough, 866 College street, Toronto, has added considerable space to the rear of his store, which is one of the brightest and most attractive that can be found anywhere. Mr. McCullough possesses many progressive ideas.

Maybe-Kennedy Co., of Moose Jaw, Sask., will likely locate a branch of their shoe jobbing business at Nelson, from which to distribute the goods throughout East and West Kootenay and Boundary. Geo. Maybee is president of the company.

The Thompson Shoe Co., Montreal, have secured the sole control for Canada of J. H. Winchell & Co.'s men's fine welts, made in Haverhill, Mass. This line was until recently carried by P. E. Frank & Co. Fall samples will be shown the trade very shortly.

Fire in the wholesale district of Edmonton recently caused the loss of about \$400,000. The blaze started in the five storey brick structure of the Canada Rubber Co. which was completely wiped out in less than an hour. Several adjoining buildings were also burned.

A dinner to the staff of Blachford, Davies & Co., Toronto, was held at the National Club last week at which all the representatives of the firm were present. A very enjoyable time was spent and those present are already looking forward to the next annual event of this festive character.

J. A. Vallary, lately of P. E. Frank & Co., Toronto, will cover Northern and Western Ontario for the Thompson Shoe Co., of Montreal, starting for his territory about March 1st. Mr. Vallary is an old and experienced shoe man, and well known to Ontario retailers.

H. B. Dowker, leather merchant, Montreal, while boarding a street car a few days ago, fell off in the crush owing to the car starting suddenly. He suffered a dislocation of the shoulder and was badly shaken up. Mr. Dowker was in the hospital for several days but is now able to be around again.

The Berlin Trunk and Bag Company, of Berlin, Ont., have opened a branch in Montreal at 253 St. James street. Harry L. Johnson, who is the manager, recently returned

from a trip to the Maritime Provinces and reports business as good, especially since the winter shipping season opened.

Among the callers on the wholesale trade in Toronto during the past week were G. J. Clayton, Hamilton; J. McPhail, Hamilton; G. M. Lawrence, Brooklin, J. Naughton, Elgin Mills; J. E. Bond, Aurora; F. J. Habgood, Niagara Falls; W. J. Bartlett, Brampton, and others who placed large sorting orders.

Marshall Bros., who conduct a large shoe repair business in Hamilton, but retired some time ago from the retail end, are the principals in a company which is erecting a fine large opera house at the rear of Harper Bros.' and other stores on King street east. Construction work has been commenced.

Chas. J. Winlow, a well known newspaper man of Toronto, and for many years connected with the Toronto Globe, passed away a few days ago. He was a brother to Robt. Winlow, of D. D. Hawthorne & Co., who is widely known to the shoe trade in Canada, having been for years associated with the J. D. King Co.

Daniel J. DeVine, of the staff of the Yale Shoe Store, Winnipeg, formerly of Toronto, spent a few days in Toronto recently, while on his way to New York to be present at the gathering of Hanan & Sons in that city, which was a distinct success. The convention was largely attended and a very pleasant time was spent.

D. Lorne McGibbon, president of the Canadian Consolidated Rubber Co., the Ames-Holden-McCready, Limited, and other large concerns, has bought the Montreal residence of the late Chas. M. Hays, president of the Grand Trunk Railway, who was one of the victims of the wrecked Titanic in April last. The price paid for the handsome house and grounds was \$300,000.

John MacDonald, John Allen, Thomas Hayes and Joseph Gilfoil, who were arrested in the U. C. S. shoe store, corner of Inspector and Notre Dame streets, Montreal, were brought before Magistrate Lafontaine. The men, who were charged with burglary, pleaded not guilty and were remanded for trial. Gilfoil said he was the furnace man of the building, and produced the key with which they had gained admittance to the place.

In an address before the Toronto branch of the Canadian Credit Men's Association given recently, the speaker was Ven. Archdeacon Cody, who emphasized the importance of technical education in Canada. He said that many people wondered at the inroads which Germany was making on British trade, but the reason was plain. Germany is a leader in technical education and by it has revolutionized industry until she can produce more cheaply than any other country in the world.

The Fit-U Shoe Co. have opened a retail shoe store at 1169 Bloor street west, Toronto. The manager, W. B. Parvin, is an experienced shoe man with several years insight of the business in the Old Country. For some time he was in the employ of George Arbuckle, 930 Queen street east, Toronto. Uniform labels of blue and gilt are used and the interior presents an attractive appearance. A large and well assorted stock is carried and the premises have an inviting front with show case window.

J. H. Parker, of the Greenbrook Shoe Factory, Bury, England, maker of shoes and felt slippers, was in Montreal, Toronto, Berlin and other centres during the past week accompanied by H. Dallas of Toronto, the Canadian representative of the firm, who met Mr. Parker at Montreal. This was the first visit of the latter to Canada and he speaks in very high terms of the cordiality of his welcome and its satisfactory business character.

Geo. W. Cowan, whose shoe store in Chatham, Ont., was badly gutted by fire a few weeks ago and resulted in a heavy loss to the stock on the main floor and in the cellar, is having plans prepared for entirely refitting the premises. Mr. Cowan has taken care of the salvage and will put in a new floor. He has been busy arranging for a big fire sale, which started last week, and is proving a hummer. Mr. Cowan expects that when the damaged stock is cleared out

and the interior and front of his establishment is renewed he will have one of the nicest footwear houses in the Dominion.

In a serious fire, which occurred last week at Trenton, Ont., doing damage to the extent of \$80,000, several business places were burned out. Among the sufferers was J. J. Haines, whose shoe store, managed by his son Russel Haines was completely destroyed, with a large loss. The shop was one of the finest in eastern Ontario and carried a heavy stock of general lines of shoes as well as traveling goods. Mr. Haines, whose head store is in Belleville, has branches in Trenton and Napanee and is one of the oldest shoe retailers in Canada, having been in business forty-nine years. Arrangements have been made to carry on the trade in Trenton.

Leonard Barker, accountant for Beal Bros., leather and findings, Toronto, was arrested recently as he was preparing to leave the city, charged with the alleged theft of several thousand dollars from the firm. The exact amount of the shortage is not yet known. It is stated that money turned into the firm has been missing from time to time and was covered up by clever false entries which were not discovered until a few days ago. Barker, it appears, purchased an automobile last summer for \$2,500 cash and, after using the machine for a few months, the novelty of motoring lost its charm and he sold the car for \$1,000. Barker came from the Old Country to Canada about two years ago.

The National Shoe Adjustment and Publicity Co., of New York, recently formed, and managed by R. F. Jenkins, of the Jenkins Bros. Shoe Co., Winston-Salem, N.C., U.S.A., recently sent a circular to Montreal shoe manufacturers requesting their membership in this international association, which has been formed for the purpose of doing away with retailers' abuses of business privileges, such as cancellation of orders, returning shipments in whole or in part, leaving shoes in depot subject to order, giving new shoes for old ones and sending latter back to the manufacturer, taking off for repair bills and taking off discount after the proper period expires. The idea is to list the offending retailers with the members of the association, as a guide for credits and sales. This is a large order to carry out successfully, but evidently an attempt will be made.

The annual round up of the selling force of the Scholl Mfg. Co. was held in Chicago last month. It was commemorative of the eighth anniversary of the business. At the banquet, which marked the close of three days' session of an enthusiastic character, a jolly time was spent. The programme was a work of art and caricature and a number of the salesmen were seen as they appeared while on their way to headquarters. W. G. Hutchins, Canadian manager, and C. Vermilyea of Toronto are shown in characteristic attitudes. An inspiring address on the work of the past year was given by D. W. Landon, general sales manager. The past year has been the most successful in the history of the company. Among those present from Toronto were R. L. Kimber, W. T. Wareham, C. Vermilyea and F. Albany Rowlett, who looks after the Canadian publicity end of this widely known firm of foot specialists. Dr. Scholl, who presided at the gathering, was taken ill a few days after the convention but is now progressing favorably.

The Eastern Rubber Co., of Toronto, have been incorporated with a capital of one million dollars. They have been organized to manufacture all kinds of rubber goods, including tires of every kind, belting, hose, packing, rubber heels, etc. A site of four acres has been secured on Eastern avenue, at the foot of Pape avenue, Toronto. They will erect one building, three storeys high, 250 x 72, and another 72 x 200 feet, one storey high as well as suitable warehouses and power plant. The capacity of the company's plant will be over two and a quarter million dollars per annum. The officers are Roger Miller, Ingersoll president; W. L. Horton, Goderich, vice-president; John J. Main, Toronto, managing director; A. G. Gamble, Toronto, secretary-treasurer; James Playfair, Midland; W. J. Ingram, New York City; W. Dean Tyrer, Toronto; W. R. Blowers, Toronto, and Dr. A. H. Perfect, Toronto. The present headquarters of the company are at 59 Yonge street, Toronto.

## HAPPENINGS IN FACTORIES

Aubrey Davis, of the Davis Leather Co., Newmarket, Ont., was recently in Montreal on a business trip.

The Rena Footwear Co., of Montreal, have installed several new stitching and other machines in their factory.

The P. J. Harney Shoe Co., of Lynn, Mass., will make their own cartons. They have installed a box-making plant.

N. Macfarlane, shoe manufacturer, of Montreal, was in Toronto last week on his way home from a trip to Philadelphia.

John Stephens, Ontario representative of the Rena Footwear Co., Montreal, has been spending a few days in that city on business.

C. O. Shaw, of Huntsville, general manager of the Anglo-Canadian Leather Co., was in Montreal and Toronto last week on business.

James Doucet, a respected employe of the A. A. Durkee Shoe Co., of Truro, N.S., passed away recently after a short illness from pneumonia. He leaves a wife and four children.

The Canada Saddlery Hardware Co., who recently established a factory in Walkerton, have applied to the town for a loan for \$10,000. The matter is being considered by the council.

Thieves recently entered the harness factory of G. A. Rudd & Co., 787-95 King street west, Toronto, and ransacked the office. All the desks were rifled, but only a gold watch was missing.

The C. N. W. Shoe Co., of London, is now in full operation and is already shipping orders for spring goods. All the machinery is in position and the outlook for a busy season is exceptionally bright.

E. Winn has been appointed foreman of the cutting room of Williams & Son's shoe factory at Milton. It is understood that the name of the company will shortly be changed to the Milton Shoe Company.

The employes of the stitching-room of the Hartt Boot and Shoe Co., Fredericton, N.B., presented Miss Nellie Carten, who was married recently, with a handsome cut glass dish and a dozen silver forks and knives.

The plans and specifications of the new "Just Wright" shoe factory which will be erected in St. Thomas have been on view in the office of the St. Thomas city clerk. The architects are Watt and Blackwell, of London.

The fire department was called out recently to extinguish a blaze at the Berlin Leatherette Co.'s works in Berlin, Ont. The fire was under control in short time, but several thousand dollars' damage was done by water.

Frank Williams is the manager of the Elkman Shoe and Supply Co. which has begun manufacturing in Brampton, Ont. Mr. Scully, formerly of the Adams Shoe Co., Toronto, is foreman of the treeing and finishing room.

St. Catharines has landed another big industry, the Goderich Tire Co., of Akron, Ohio, one of the largest rubber concerns on the continent having decided to locate a Canadian branch there. They will commence building in the spring, and start off with a yearly pay-roll of \$100,000.

J. G. Grosch, president of the Grosch Felt Shoe Co., of Milverton, Ont., was presented by the employes of the company with a gold-headed umbrella and a set of military hairbrushes as a mark of esteem and appreciation. The gifts were accompanied by an appreciatively worded address.

An important realty deal recently took place in Brandon when W. Percy Gillespie Co., of Toronto, bought the unsold portion of Richmond Park, amounting to five hundred lots, for \$70,000. The property is situated at the south end of the city, and a portion of it will be used to erect a boot and shoe factory.

George Cowan, an employe of the Nursery Shoe Co. factory, St. Thomas, has been presented with the Hamilton life-saving medal for saving the life of the daughter of Mr.

Crisp from drowning last August, when she was blown off the pier at Port Stanley. This is the fourth person Mr. Cowan has saved from drowning.

A. E. Saucier, of the A. E. Saucier Shoe Co., representing the Rock Shoe Co., and J. B. Drolet, of Quebec, in Montreal, recently returned from a wedding trip of three weeks' duration. Mr. Saucier is receiving the felicitations of his many friends in the local trade, of which he is a most popular member.

Aird & Son's new factory on Ontario street, Montreal, is being finished inside as rapidly as possible, and in two or three weeks more machinery will be in operation all through the factory. The wire-cut brick front makes a most attractive looking factory and it is a handsome addition to Montreal's shoe establishments.

W. H. Miner, of the Miner Rubber Co., has been re-elected an alderman in Granby, Que. Mr. Miner did not meet with any opposition and is looked upon as one of the substantial residents of that progressive town. His uncle, the late S. H. C. Miner, founder of the Miner Rubber Co., who died on June 9th, 1911 was for 28 years mayor of Granby.

The London city council will ask the Ontario Legislature to validate the by-law defeated at the recent election, to grant a loan of \$20,000 to the C. N. W. Shoe Co. of London. The measure was short of the required 2-3 by only about 100 votes and it is thought that no difficulty will be experienced in having the by-law sanctioned by the provincial government.

The Elkman Shoe and Supply Co. have begun operations in Brampton and are making youths' nailed and McKay shoes. The present output of the factory is several hundred a day. G. L. Williams and Sons are behind the enterprise which has bright prospects. Harry Filkins, formerly foreman in Underhill's, Limited, Aurora, has been appointed superintendent of the Milton Shoe Co. at Milton.

At a recent meeting of the directors of the Canadian Consolidated Rubber Co., of Montreal, it was decided to arrange for an issue of new stock in order to provide for increased capacity to plants. The earnings of the past year will show a substantial advance over those of the previous year. President McGibbon reports that the company require much needed extensions of plant and are losing business under the present limitations.

Irving Scott Wedgwood, formerly foreman with A. M. Creighton, of Lynn, Mass., has joined the factory staff of Kirvan-Doig Ltd., Montreal. Mr. Wedgwood will be assistant to George Kirvan in the factory, with special supervision over the making room. This live shoemaker has had a wide and varied experience in the manufacture of women's shoes in all lines, and will undoubtedly prove an acquisition to the ranks of Canadian shoemakers.

W. J. Sisman, of the T. Sisman Shoe Co., of Aurora, Ont. was elected councillor at the recent municipal contest in that town. Mr. Sisman is a young man of considerable business experience, who, after some three or four years service in the Bank of Toronto, joined his father in the shoe manufacturing line. He was educated at Aurora and has always taken an active interest in the welfare of the town, devoting special attention to the matter of electric lighting. He should make a progressive and capable representative.

The big new addition to the Kingsbury Footwear Co.'s factory in Maisonneuve is now practically complete, and will be used for making turns. The older portion of the factory will handle the McKay output. As soon as the final interior rearrangements are complete the enlarged factory will be second to none in Canada for efficient arrangement, continuity of operation, specialization in departments and rapid, finished work. In size it will be one of the very largest in the country.

A new company is being formed in Stratford and a site has already been secured for a factory which will manufacture gloves, mitts, etc. Leather and wool manufacturers will work together and it is possible that one of the knitting factories of Stratford will do the knitting. The members behind the industry are M. Bricker of Berlin, H. S. White

of Des Moines, Iowa, E. F. Kastner, and A. Knechtel, of Stratford. About 25 hands will be employed, which number, it is expected will be doubled within a short time.

Star Shoe, Ltd., Montreal, have remodeled their factory, taking in the ground floor—formerly an undertaking establishment. After the rearrangement has been completed the office, shipping, treeing and sole leather departments will occupy the ground floor. The bottoming and finishing rooms will be on the second floor and the fitting, cutting and lasting rooms on the top floor. This will increase their capacity by over 35 per cent. and is but another instance of the growth of the shoe business in Montreal.

The town clerk of Aurora has written to the authorities at Barrie complaining because Underhill's, Limited, have located a branch factory in Barrie. The corporation of Aurora charges that Underhill's have been established in Aurora for ten years, employing in the neighborhood of one hundred hands, that they received a bonus of ten thousand dollars to locate in the town and that the debentures, which were issued, have ten years yet to run. It is alleged by Aurora that a number of employes have already been removed to work in the Barrie industry and that the act of the latter corporation entering into an agreement with Underhill's, is a direct contravention of the law. Aurora is now threatening legal proceedings. Barrie has replied that it did not offer any bonus to Underhill's to locate a branch factory there and it is difficult to see where Aurora has ground for any action. The plant at Aurora is running to its full capacity and the branch at Barrie was established to provide for augmented output, owing to rush of business which the firm have had for many months.

#### New Woelfle Factory Will Start Soon

The new factory of W. E. Woelfle Shoe Co., Berlin, is rapidly nearing completion. The brick and concrete work of the building is finished and the roof and glass work in place. The company expect to begin operation on March 1st, and will make their fall samples in their new plant. W. E. Woelfle, president of the Company, has associated with him A. A. Armbrust. Alex. Inrig, an old Toronto boy, who has been superintendent of the Western Shoe Co., of Berlin, will be superintendent of the Woelfle factory. Other skilled help will be secured from various places. The distributing organization of the company is not yet completed, but Ottawa Valley and territory from Kingston to Montreal will be handled by E. E. Code, of Ottawa. The ground from Toronto to Kingston will be supervised by a resident of Toronto; Western Ontario will be looked after by A. A. Armbrust, and Mr. Woelfle himself will look after his old ground in Northwestern Ontario. The best of everything has been purchased in machinery and equipment and the company will make every effort to produce thoroughly good and saleable shoes, specializing on women's McKays only.

#### Think Dark Days Are Ahead

Dark days are ahead for the boot and shoe industry in the United States, in the opinion of members of the National Boot and Shoe Manufacturers' Association, says a press despatch from New York City. The parcels post, the reduction proposed in the tariff, and the agitation for "pure shoe" laws, the manufacturers say, are responsible for the outlook.

"There can be only one result from lowering the tariff on shoes," declared President Hanna of the association. "It will mean such a readjustment of wages as must produce industrial conflict, if not stagnation, in the trade. Under the present tariff rates the foreign shoe is gradually but surely invading our market, and it will not be long when it will do so under circumstances of greater disadvantage to the American manufacturer."

A committee appointed to look into the agitation for a "pure shoe law" reported that the present high cost of manufacturing shoes will certainly go higher if the federal bill,

calling for all leather footwear, is passed. Manufacturers who perfect a process by means of which other material than leather can be used in shoes, the committee reported, ought to be rewarded by the Government and not penalized.

Edgar P. Reed, of Rochester, first vice-president, said he had not made up his mind whether the parcel post was "a movement working to the real benefit of the average citizen, or special legislation to make the Government serve as distributor of merchandise for mail order houses."

Mr. Reed thought the parcel post would tend to operate against the small retailer.

#### He Enjoys the Public Confidence

The new chairman of the finance committee of the Stratford city council is Alderman A. Knechtel, shoe retailer, of that town. Mr. Knechtel has been a city father for five years now, and has always commanded a splendid vote. Two years ago he was third highest on the list, and this year he stood seventh without any effort on his part. Even on polling day Mr. Knechtel attended to his own business in the store until 4 o'clock, and then went out to vote. He has been in the shoe trade in the Classic City since 1893, and has al-

ALD. A. KNECHTEL, STRATFORD

ways enjoyed the confidence of the public. This is attested by the fact that he has held many fiduciary positions, such as financial secretary for the Stratford Circle, No. 42, O. C. H. C., for 10 years, sec-treas. for the Centennial Evangelical Church for 7 years, treasurer for Stratford Lodge, A. F. & A. M. for 3 years, and a like position for the Stratford Fraternal Association for 3 years. The store of Knechtel & Co. is located on the west side of Market Street, and the reputation of the firm is one of which any house might well feel proud. The stock of footwear is up-to-date and comprises many well selected, exclusive ranges. Traveling requisites are also handled. The Knechtel bootwear establishment is one of the busiest places in western Ontario.

#### The "Pure Shoe" Legislation

Interest has been shown in some quarters over a Congressional movement toward a "pure shoe," and on the surface the idea seems commendable, but the definition of a "pure shoe" may be varied, says the Boston Transcript. The intention is to insure the consumer against a shoe so made as to be short lived and uneconomical. There is a dread, based

on superficial intelligence, of "leather substitutes," but there is leather and leather, and there are substitutes and artificial leathers, and it is not impossible that some artificial leather is superior to real leather. An artificial leather, such as is commonly accepted in upholstery, if made into shoes, in all probability would outwear pure sheepskin leather, but it would be the "substitute" against the "pure." A heel of composition lifts will outwear one made of scraps pasted together; but one is a "substitute" and the other is "pure." Instances could be multiplied to show that "pure shoes" may not be so durable and satisfactory as those made of substitutes and artificial leather, and instead of insisting on "pure" shoes, a sustained and enforced demand for a clear description of the component materials and how distributed, with each pair of shoes, will reach the desired end—that the consumer shall know what he is buying.

#### More Reminders of the New Year

The Breithaupt Leather Co., of Berlin, who also have tanneries at Penetang and Listowel, have sent out to the trade a decidedly artistic calendar entitled "Heads or Tails," which is reproduced by photo color from an original painting by C. M. Russell. In the picture three cowboys are seen trailing a bunch of cattle to the round-up ground.

Aird & Son, shoe manufacturers of Montreal, have sent to the trade a very attractive calendar entitled "In the Gloaming," from a painting by Bryson. A captivating young lady is shown standing before massed banks of flowers and gazing out of a window in the early evening.

Beardmore & Co., Toronto, have issued a very handsome calendar, in colors, entitled "Old Heads are Best," by Alfred Mohlke. It depicts a scene in an English country house where an aged gentleman is engaged in a game of chess with a younger member of the party. Several interested spectators of advanced years are taking keen delight in the way that the elder member has the youth tied up in the contest.

#### A Handy Booklet for the Trade

An interesting and instructive booklet recently issued by the Boot and Shoe Recorder Publishing Co., of Boston, Mass., is the "Shoe and Leather Lexicon." It is a ready reference work, containing simple yet compact definitions and illustrations of terms used in the sale and manufacture of footwear of all kinds and will serve as a useful and convenient manual for any one engaged in the trade, on all technical points. In shoe terminology names are often misunderstood and misapplied. The retailer or salesman who desires to possess clear, definite knowledge on many matters connected with his calling and even the wholesaler, manufacturer, tanner and findings man will discover a fund of information in regard to the production, distribution and retail merchandising of footwear and allied lines. A few of the subjects treated in the lexicon are the bones of the foot, table of foot and last measurements, standard carton sizes, systems of size making, varieties of low cut shoes, classification of leathers, standard size lengths, hosiery sizes and other timely topics.

#### The Decrease in Cattle Raising

Snow's report on the number and value of live stock in the United States, just issued, is another confirmation of articles on the seriousness of the present live stock situation. This expert states that the number and value of farm animals in the United States shows a decrease in every class of animals. Milch cows show a decrease of 442,000, or 2.2 per cent.; other cattle a decrease of 1,838,000, or 4.9 per cent.; hogs a decrease of 5,559,000, or 8.5 per cent.; and sheep a decrease of 2,373,000, or 4.5 per cent. The decrease in cattle is simply a continuation of the decline that has been noted for a considerable period of years, but the loss in hogs is heavy in spite of every effort to increase them, and is the result of widespread and in many districts very severe cholera losses.

#### Canadian Business Men to Visit Europe

At a recent meeting of the Chambre de Commerce, Montreal, a letter was read from Lord Strathcona, High

Commissioner for Canada, in London, in which he expressed his approval of the proposed tour of a party of Canadian business men to Europe for the purpose of bringing more British and foreign capital to Canada. The General Canadian Commissioner in Paris wrote to the Chambre and stated that he was prepared to do all he could to make the projected trip a success. Communications from nearly all Canadian Boards of Trade promised hearty support of the scheme.

#### The New Manager is Aggressive

H. S. Bond, the new manager of the Slater Boot Shop, which was opened recently at 163 Yonge St., Toronto, is a Cobourg boy, who has succeeded splendidly in his chosen calling. He gained his first experience in his native town and then spent about four years in the Haines Shoe House, Belleville, where he obtained a general knowledge of the trade. He next took a position with the Slater Boot Shop in Ottawa, and was manager of that business for several years, under the proprietorship of J. N. Brownlee. Mr. Bond spent a few months in Montreal before coming to

H. S. BOND, TORONTO

Toronto. He is of a genial disposition, gentlemanly address and possesses sound business judgment. He has many friends in the trade who are congratulating him on his promotion, and are certain that he will make good in his new sphere of activity. He says that in the new store customers will be encouraged to forget all about sizes, and trust to the scientific method of fitting, which is to be a feature of the establishment. "A scientific fit for every foot" is the slogan. A sketch of each person's foot is made on a patent chart which is attached to the foot rest, and thus a perfect fit is assured. Every member of the staff has been chosen for his experience and courtesy. The fittings and settees are in oak in natural finish, and a more inviting interior would be hard to imagine.

BOOT AND SHOE TRAVELER WANTED to carry our line of Men's Goodyear Welt Shoes on commission for the Maritime Provinces. Only experienced men commanding first-class trade. O. B. Shoe Co., Ltd., Drummondville, Que.

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

**MODEL N**

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment :

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work :

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

FULL INFORMATION FURNISHED PROMPTLY ON REQUEST.

LAGAUCHETIERE AND ST. MONIQUE STREETS

MONTREAL, QUE.

122 Adelaide Street West, TORONTO

492 St. Valier Street, QUEBEC

### Get After Poor Hotel Accommodation

The first meeting this year of the Board of Directors of the Commercial Travelers' Association was held recently in Toronto. The chief topic of discussion was the poor conditions in the town and village hotels throughout the country. It was decided to investigate these conditions and report at the next meeting. President S. N. Sterling gave an opening address in which he thanked the members for his election. Committees were appointed to deal with the questions of insurance, finance and transportation, and hotel accommodation for travelers. The secretary's report showed a favorable increase in membership and a balance of funds on hand.

### The Charge Against U.S.M. Co.

Acts of officials of the United Shoe Machinery Co. were up for measurement by the Sherman Anti-Trust Act recently in the Supreme Court at Washington. The court had advanced the Government's appeal from the action of the Massachusetts Federal Court in annulling the indictment against the officials as not charging an offence under the Sherman law.

The appeal of the Government from the holding of the lower court was made by Solicitor-General Bullitt. He declared that the constitutionality of the Sherman Act as a criminal measure was now beyond dispute.

The combination of from seventy to eighty per cent. of all the shoe machinery business of the country into one, he

contended, was itself so great a proportion of the entire business as to constitute a restraint of trade within the meaning of the Sherman law. The Solicitor-General also contended that the adoption of a series of leases containing a so-called "tying" clause was also in violation of the law.

### The Case of Mutual Interest

Here is a copy of the card which a Regina shoeman has sent out to his customers. It is embossed in white letters on a very black background and reads:—

#### A POOR MAN

One Who Has Not Time Enough to Think of Others:  
Their Troubles and Their Pleasures  
We believe our customers' interests are our interests, and we try to treat them accordingly.

### Hotel Guests Lose Shoes

The European custom of putting shoes outside doors of hotel bedrooms recently got a setback in Berlin, Germany. The guests of several hotels lately used up all their stock of shoes, owing to their mysterious disappearance when they were placed outside the doors of their rooms. The shoe stores in the neighborhood did a lively business, but the managers of the hotels were made miserable by the demands of their guests that they furnish shoes to replace the ones that had been stolen. Recently a hotel porter caught a thief who was making off with eight pairs of shoes, which he had gathered in one corridor of a hotel.

Do you know what it costs you to do business, or are you merely guessing? Do you know what items to charge up against the cost? Many retailers estimate their cost, while the only true way of getting the facts is by installing a cost system that will search out all expenses and enable the retailer to know all the things which enter into the cost of doing business. One live merchant who knows charged twenty-two items to his cost of doing business.

## This is a good season for Rubbers

Old Winter seems rather loath to set in in earnest. Wintry days with snow are being quickly followed by days of sunshine or rain. It's great weather for rubbers.

Is your stock of rubber footwear feeling the effects of this "sloppy weather"? Or have you the wrong brands on your shelves.

Great sales of Independent Brands are being recorded from week to week—sure evidence of a good rubber season, and the popularity of Kant Krack, Dainty Mode, Royal and Bull Dog Brands.

See to it that your stock of these high quality goods is not getting too low. If you've never stocked them introduce a few now and watch results. You'll be back for more soon.

**One pair of Rubbers on the shelf  
is worth two pairs on order**

## **Have you plenty of “Miners” & “Sheffords” on your shelves?**

If a customer were to come into your store and say, “I want another pair of ‘Miner’ Rubbers, size 7,” it wouldn’t do you any good to say, “I haven’t your size in stock, but I have some on order.”

Prevent this from happening by keeping your stock of “Miners” and “Sheffords” well assorted all the season. The uncertainty of the weather at present makes for large rubber sales and you must be prepared.

Look to your stock to-day and don’t be forced to turn anyone away because your rubbers are on order instead of on your shelves.

# About Good Felt Footwear

The Mark

on Them

**S**OMETIMES different brands of Felt Shoes look pretty much alike when they are new. You don't know what material is in them. Only time can tell their wearing qualities. But when you buy Felt Shoes with a proven trade mark on them—the mark of makers of standing—which says they are good Felt Shoes, and you know the name means what it says—a trade mark that has been the proven guide to Quality Felt Footwear in the past—you take no chance, and “Elmiras” are above all others the line for the retailer who desires to give his customers the very best Felt Shoe guarantee.

“Elmira” on Felt Shoes and Slippers means a guarantee of Felt Shoe satisfaction backed by years of real merit and unsurpassed felt and shoe manufacturing facilities. It represents quick sales and sure profits for the retailer and absolute Felt Shoe satisfaction for his customer.

The above trade mark stamped on the bottom of all genuine “Elmiras” will solve your Felt Shoe problem for you.

Manufactured by the Elmira Felt Co., Berlin, Ont.

# A New Shade of "Bestyet" Calf

## Why I should have your rubber order this year—

**Y**OU should place your rubber order with one of my salesmen.

Not because you like him, or me, or because I've been in business such a long time and everybody knows me, but because I've the rubbers that'll do you and your business the most good.

I'm stocking Kant-Krack, Dainty Mode, Royal and Bull Dog—brands of the Independent Rubber Co., of Merriton, Ont.

You'll go a long way before you strike rubbers to equal these in general excellence. There are shapes for every shoe, and styles for every taste. High rubbers, low rubbers, big boots, lumbermen's, sole rubbers, storm rubbers—every kind you can think of, or will need.

As for quality—if you've sold them you know—if you haven't sold them let me tell you frankly that you couldn't get better quality in any rubber. They'll back up the best you can say of them. They've been made up to an ideal, and they strike pretty close to it.

One of the boys will be around your way soon with his samples. It'll pay you well to look them over.

## You won't find a better shoe for your good Fall trade

THE qualities that you have always wished for in a shoe for Fall selling are just the qualities that have made the fame and the sales of the Doctors Shoe.

A dressy shoe, is the Doctors, and yet a sturdy one. A shoe that feels good on the foot, and looks as if it did. And it's eminently suited for Fall wear—it's waterproof.

The waterproofing of the Doctors is not a make-believe quality it's very real, and it's ever present. You see, both the soles and the uppers are waterproofed by special process, and to prevent even a feeling of dampness there is a sole of thermal asbestos between the outer and inner soles.

From the standpoint of appearance as well as of utility and comfort the Doctors is an ideal Fall shoe.

Have some in your Fall stock. Your jobber sells them.

*Hartt Shoes for Fall 1913*  
*will be worthy your*  
*best salesmanship*

¶ Are you "sales proud"? Do you like every sale you make to reflect credit on your ability to select the shoe best suited to your patron?

¶ Then, you'll be interested in the Hartt line for Fall 1913.

¶ The Hartt line is complete with the best assortment of lasts that a real classy line could have. It will repay your every effort made to convince your new customers of the advantage of buying "a better shoe." The Hartt Line will back the best style and the best service your customer ever had.

¶ Give your salesmanship a chance.

*The Hartt Boot and Shoe Co., Limited*  
*Fredricton, N.B.*

== CANADA'S BEST SHOEMAKERS ==

# “Perth” Shoes keep their shapes

“PERTH” style is not merely an added feature to promote first sales. It is an integral part of the shoe itself—it’s built right in.

“Perth” shoes appeal to women of taste because of their trig and natty shapes, and because they retain their shape so long. The “style” of a “Perth” shoe is as strong and as lasting as the shoe itself.

Wouldn’t it be good for your business to feature in your women’s department a shoe that holds its shape like the “Perth.”

PERTH SHOE  
COMPANY LIMITED  
PERTH - ONTARIO

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

**MODEL N**

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

FULL INFORMATION FURNISHED PROMPTLY ON REQUEST.

## Satisfaction did it

If the shoes we sold had not given entire and exceptional satisfaction to both merchants and wearer this building of which we are so proud, would not have been made possible. And we are proud of our building. Not because it represents so much time and money, but because it stands as an achievement—the result of straight dealings and honest value.

Aird Shoes for Fall, 1913, samples of which will soon be ready will be just the same honest line that made the Aird reputation. You may depend upon it they'll look good and sell good, in your 1913 stock.

## Why Does My Advertising Fail to Bring Results?

A Chance Meeting of Four Dealers Leads to an Investigation which Develops an Astounding Outcome—Present Some Special Feature of a Shoe and Force the Argument of its Merit in the Public Mind

Returning from Chicago after attending the convention of Retail Shoe Men of the West, four well known retailers sat in a Pullman smoking car discussing the many theories advanced at the gathering of the efficacy of advertising. Two of these chaps were from Canada, and as they were attending this meeting of merchants from all over the world with the one specific purpose of absorbing some new ideas of how to increase their business, and as publicity was a very live topic, they naturally were much interested in the discussion.

The gentleman from Detroit was expressing himself rather forcibly on the subject of advertising through the local press, and said:

"I have followed all the theories advanced at the convention of this subject very carefully, most of which I have applied to my own business, but I have never got results commensurate to the expenditure. I have worked the clearing sale scheme with large canvas signs, bargain counters, supplemented with everything that is incidental in a "sale" of this kind. I have worked the cut sale scheme with marked down tickets, and large window display of old and cut prices.

"I have worked the rush sale scheme of displaying shoes for a week, and selling them only during certain hours on Friday only; but on that particular Friday there has always been a circus

in town that seemed to be more interesting than my advertisements, and I have absolutely failed in any of these schemes. I have increased my business by such methods, but not in relation to the expenditure. The best medium that I have to talk to the public is really through my window display. I am a strong believer in presenting an attractive artistic window, and I certainly believe I get more results from this outlay than from any other."

The other gentleman, who was from Grand Rapids, asserted that he had tried the straight advertising with the "Sandwich Man," and got out some dodgers in red, sent personal letters to customers through the mail, and used

bill posters, all of which had had some results, but nothing like the increase this type of expenditure should bring. To tell the truth, I am pretty well disgusted with advertising. Generally, my experience is, if I give the people value, they will come back."

The man from Ontario, who had been listening very attentively, said: "I must admit that I have not taken very much interest in advertising. My business is an old established one, and I have always given the best values, and I am going along each year at about the same gait. I have had a contract with a local paper for specific space for many years, have considered this cost as part of my expenses, like the gas

And they wondered why their ads. failed to pull

meter, and have really taken no steps to measure the natural results I get from this expenditure. I had a paper sent me from home while in Chicago. I think it has a pretty fair, decent announcement—as good as any of the others in the sheet. I pay one hundred and fifty dollars a year for the space which is two columns wide in the "Leader." I change my reading matter about once a month. I do not know whether I receive any results or not. The ad. keeps my name before the public at any rate, and as most of the fellows in our town advertise, I am in good company, you see. I suppose any kind of publicity does some good. When Jakes, the publisher, calls around for his bill every two months, I pay him by check. He has not raised his rates for years and I have no particular kick coming. Here is a copy of my ad:—

## ATTRACTIVE NEW STYLES

"We invite the public to inspect our New Spring Stock of Ladies' Fine Shoes

"The elegance and style shown in this season's styles is characteristic of high-grade shoes, at popular prices. We have a complete line, all grades, and invite your inspection."

Prices Right

**T. A. ROSS**

397 Main Street

This is an ad. that failed to bring results because it deals only in generalities, and has no particular points of interest

### All Wrong in Their Methods

The shoeman from the West asked to see the ad.—looked it over and smiled. He had been sitting back and saying nothing, but was keenly interested in the discussion. Taking a fresh cigar, he said: "Gentlemen, I have come a long way to get any new ideas that would increase my business, and I have been listening very attentively to see if I could gather from your conversation anything that I could apply profitably to my business, but I have failed to discover anything. I have tried all the schemes that you have been discussing, and have failed. My deduction from your arguments, is that you are disgusted with your results of newspaper advertising, and are ready to give it up. Do not do that—it pays to advertise, and I can prove it. The trouble is not in the mediums you use, but the way you have used them. You have not advanced one single, new, original idea this evening, or any fixed plan of appealing to the public mind in a way that would force them to remember you, or the article you are selling. You are all wrong in your methods, and you frankly admit failure.

"You just miss the most essential part in advertising to interest the reader. The one feature that will attract busy men and women, who seldom read our ads. The idea that will stick, and cause the unusually busy shopper to read your ad. and mention it to her neighbor, so that when her neighbor reads the paper next day, and notices your ad., she immediately says to herself, "Oh, yes, this is the shoe Mrs. Smith was telling me about."

The Detroit chap leaned over to his Grand Rapids friend, and smilingly observed: "Our friend from the West will produce a magazine in about a minute or two, and tell

us how much the circulation is, and how cheap the space can be acquired in this medium."

The Western man noticing this, spoke up: "No. I am not an advertising man and I am not looking for subscriptions, nor am I selling space. Here you have been telling me about schemes of advertising which have failed, and you have not told one-half of them at that. Now I think it would interest you to hear about one that really succeeded, and has made me real money."

The gentleman from Grand Rapids said: "We are now going to hear about some special advertised brand made by Green Johnson or Fenton, in which company you are a shareholder."

"Wrong again, friend, the Branded Shoe is nationally advertised to such an extent that the people are familiar with the name or brand, and come into our stores and ask for them. An agency of this kind is an asset, and in such a case we do not advertise the shoe, we simply advertise the fact that we have them."

### A Fresh Crop Every Day

"The special named or Branded Shoe has been worked to death in my country; the named shoe to-day really means nothing. There is a fresh crop of new titled shoes out every season, and the manufacturer seems to think that all he has to do, is to brand a shoe with a new name, and we retailers will be so egotistically impressed when the salesman presents himself that we will fall to the proposition of offering him a large order for exclusive control."

"No, my friend, this named, stamped shoe has been overdone. The value of a brand of any kind is measured entirely by the value the public place upon it, and the natural demand for this special article which is only acquired by long and persistent advertising and backed up by merit. The cost of this must naturally be included in the expense of the article, which explains in a measure, how the best known brands are usually the most expensive ones.

"No, gentlemen, what we retailers want is to be successful advertisers of some special feature, and force the argument, if it has merit, into the public mind; and if our ads. are forceful they will remember it, especially if it is something novel, new, or out of the ordinary. It is no wonder that the public do not remember a special brand, when more than a thousand of named shoes are being offered in the daily papers. If an argument is made through your space in the local paper, based entirely upon the merits of the special feature, (which you incidentally control) you will find, as I have, that you will have many inquiries regarding the special feature advertised, but the name of the shoe is entirely forgotten.

### The Shoe With a Special Feature

"I have had this demonstrated hundreds of times in my own store where the name of the shoe had been entirely forgotten. Callers simply wanted to see the shoe with the special feature advertised."

The Detroit retailer had been listening attentively, but failing to grasp the idea, he said: "We quite agree that your arguments are lucid and forcible, but you are talking in riddles. Where in the world are you going to get a shoe with a special feature now-a-days; there are no secrets any more in the shoe business. It is a question of 'the survival of the fittest' in business to-day. Your theory is all right but impracticable, and cannot be applied to the ordinary makes of shoes we buy."

"That may be true," said our friend from the West, "but let me give you some figures that will surprise you. Just two years ago, realizing the special feature idea in a shoe, I bought a trial lot of cushion heel shoes made by the Relindo Company, of Toronto. (I certainly am not advertising this brand, but must state the nature of this feature and the

make in order to prove my statements,) I took the regular space in my regular paper, but instead of using this in telling the public that I had such and such a brand, and believing this brand to be the best, etc., what I did was not to advertise the brand as much as the cushion heel idea, followed up with strong logical, forcible arguments. I pointed out the merits of this special feature, that it was patented and controlled exclusively by the aforementioned Company, and I had been appointed their exclusive agent. This is the only mention I made of the brand, and invited their inspection. I had several shoes made by the manufacturer cut through the centre to demonstrate the advantages of the cushion heel.

"You would be surprised how interested the women would become in hearing my clerks tell how this cushion prevented the heel nails hurting the feet, how it relieved all jar in walking, how it made pedestrianism a pleasure, what a delightful sensation was experienced in walking on this pneumatic cushion heel—all of this talk interested them. If I gave the ordinary talk of the best brand in the world, made by the biggest concern, with a wide reputation, who make a 'specialty' of high grade shoes, etc., it would not have held the customer the way this cheap but effective demonstration about this special feature did. The introduction of a new or special feature seems to prepare the mind for a higher cost, but when they find that it does not cost any

Driving one special feature home

more than the ordinary shoe they have been wearing—and can get a good boot from \$4.00 to \$4.50, it excites renewed interest. Where a sale is not made, it so impresses the mind that they often discuss it with some intended purchaser, who will come in and say: "I would like to see that cushion heel, etc., you were describing to Mrs. Henderson;" Now I have had this happen many times, and it convinced me that successful advertising was not a question of printers' ink, but practically the subject itself, and how it was presented.

"Now you are kind enough to show me one of your ads. from which you said you could not see any material results; let me show you one of mine.

"I am not an expert writer, and any success I have had in writing ads. is due to the fact that I have had something to talk about. I have realized that the public would be more interested in a new idea or feature than any price or quality talk I could give them. "The best shoe for the

## SOLID COMFORT IN EVERY STEP

"Did you ever have a nail in the heel of your shoe hurt your foot? If you never had, you are an exception.

"We have just discovered a shoe that is made with a *patent cushion heel*, not placed, but *made in the shoe*.

"It relieves all discomforts of nails in the inside of the shoe, is resilient, comfortable and practical. You cannot realize the comfort in walking until you wear a pair. No jar, no squeak, and with no added cost.

"Come in and let us demonstrate the cushion heel, it is something new, made only by the Relindo Shoe Company, and handled exclusively by us."

**J. R. BEAMISH,** 416 Front Street

This is an ad. that brought results because it appealed direct to the public

money, exclusive styles, fits like a glove, etc., are threadbare, and worn out. The only thing the public will read, and digest is something new, some special feature."

### Had Many Direct Inquiries

"Now, I was so impressed with this idea that I doubled my space in the local paper, and confined my articles entirely to this specialty. I tried to keep a record, so that I could, if possible, place some value upon this method of advertising. During one month I had 58 direct inquiries about the 'cushion heel shoe.' Very few of the inquirers even mentioned the name of the shoe, which proves to me conclusively that none of us fully appreciate the advertising value of a special feature in a shoe that has merit, even though the shoe is no better than any other make. I think we have overlooked the advertising value which such a feature is worth to us."

"Well, my friend," declared the Detroit resident, "it is rather remarkable that we should hear this interesting experience from a Canadian from the West. We think we know a great deal about advertising in this country, and I have followed very carefully all the papers that were read at the convention, dealing with this subject, and honestly this is the only food for thought that I could take home with me. I am mighty glad I met you, and I can tell that my Grand Rapids friend appreciates your theories by the grin on his mug."

"I certainly do," he added, with a smile that entirely changed the map of his face. "I was just thinking of making a special feature of a 'Turkey Trot,' or a 'Bunny Hug' in my window next week. I am certainly going to take up some shoe, with some special feature, if I have to make it myself. I am going to let this idea soak in, as the old theory, "There is nothing succeeds like success," holds good, and you have proved it. Let's have a nightcap, I want to go to bed and think it over."

# How a Retailer Makes or Unmakes His Own Credit

Mercantile Agencies Can, if Given Proper Opportunity, Open Up for Him Wider Sources of Supply—Mistake Frequently Made by Merchants is Presenting Data in Such a Way as to Leave Real Issue in Doubt—The Basis of Inventories.

"The average merchant does not realise how frequently his credit standing is questioned by those who are apparently anxious to sell him goods on any terms. It is only when some sudden necessity requires more than ordinary credit or he seeks sources of supply outside of his regular houses that he discovers his credit standing is not so widely known as he supposes. The Mercantile Agencies have become recognized channels for disseminating this information and there is nothing that gives the credit man more faith in an account than a careful and well authenticated statement obtained through the Mercantile Agency channels. A mistake that is frequently made by merchants, and others, giving their statements is the presenting of the facts in such a way as to leave the real issue in doubt."

"An experienced credit or agency man can tell at a glance whether it is the desire of the man giving the statement to disclose the real facts or not," writes H. G. Kelly, the district manager of R. G. & Dun & Company. "Just for instance, statements are frequently submitted showing real estate equities only. To be of any value, the statement should show the location and value of the property and should clearly state in whose name held; also the amount of mortgages against each property in detail. This gives an opportunity for investigation and corroboration. Where the statement is so compiled as to leave the investigating agency without reasonable means of corroboration, it is the practice of the agency to say, definitely, that no corroboration has been obtained or only partial.

"The agencies do not consider it part of their duty to do the guessing for their clients. They simply submit to their subscribers such information and corroboration as is available and where an issue is in doubt, do not hesitate to say so. This does not necessarily imply that the statement is incorrect in any particular, but it does leave the credit dispenser with a clear impression that some of the information given would have much greater value if corroborated.

"The mercantile agencies do not make or unmake any man's credit. He does that himself. They can, however, if given proper opportunity, open up for him wider sources of supply.

## Duty of Agencies to be Conservative

"Another feature of statement-giving which is of the utmost importance is the basis upon which inventories and valuations are made. If it is established, on investigation, that the merchant has taken his inventory on a conservative basis and placed his real estate at cost price, even where he has reasonable grounds for supposing that realization will show a profit, a statement will carry much greater weight both with the mercantile agencies and the credit men. Ratings are seldom high enough to suit those to whom they are assigned, but it is the duty of the mercantile agencies to be conservative, just as it is the duty of the merchant to himself to underestimate his assets in making his inventory.

"For instance, in computing a rating, a conservative

mercantile agency will not place the stock of goods at more than the fire insurance value, and ratings are regularly withheld from men who carry insurance if their surplus is entirely dependent upon combustible assets. Book accounts, as a rule, are subject to depreciation, and machinery is also liberally underwritten. Conservative business men will deal with their assets in this manner in taking up a statement for their own guidance; if they do not do so, the agency will in computing their rating. Another important feature in considering a trader's position is the proportion of quick assets to liabilities.

## Many Inventories Are Incomplete

"In the district reported by our Toronto office, the records show that 38% of statements were obtained for the year 1912 but, of course, many of these were not actual inventories for the simple reason that an astonishing number of traders do not take inventories, and in many cases, even where they have taken an inventory, they either do not complete it in the form of a statement of assets and liabilities, or when called upon seem to prefer giving approximate figures rather than the actual inventory. If they realized how much these approximate figures detract from the value of the statement given in the eyes of credit men, they would take the trouble to give an exact copy of their inventory.

"It is the practice of the agency to send trained reporter over the ground every six months and each trader is given an opportunity to make a statement of his affairs. It is our opinion that a statement obtained in this way has far greater value than the same statement transmitted through the mails, for the reason that it is obtained on the spot by a trained agency man who knows the territory and has an opportunity to size up the man, his place of business, the district in which he is trading and to consult various local authorities. We do not mean to imply by this that we take his statement and hand it over to local authorities for their opinion. This would not be fair and is not our practice.

## More Firms Are Courteous

"There are many other features of the agency service which we do not touch upon but which would prolong this article into unreasonable length. In closing, we wish to thank you for the interest the SHOE AND LEATHER JOURNAL has taken in this matter. We desire, also to acknowledge the universal courtesy we receive at the hands of, not only wholesale, manufacturing and banking interests, but from the retailers and others we call upon for information regarding their affairs. We try to reciprocate by performing our duties honestly without prejudice, and by keeping ever before us that it is as much our office to promote sales by disseminating information regarding good accounts as to protect credits against those who will not, or cannot, pay."

A Norwegian engineer has succeeded in finding a method to produce artificial rubber of excellent quality from turpentine. The product has been examined by specialists in rubber, who declare that it has both the appearance and the quality of natural rubber. The principal material in the manufacture is turpentine, but kerosene may be used. The product is calculated to cost not more than one-third as much as natural rubber. A Swedish stock company has recently bought the invention and taken out a patent for all countries. For Sweden the large distillery, "Reymersholm," has secured the rights.

# Once Sold Papers and Shined Shoes in Winnipeg

How One of Canada's Leading Retailers Got His Start—A Career That Reads More Like a Romance Than a Record of Achievement and Success in Spite of Numerous Obstacles—What Ambition Can Do

From selling papers and shining shoes on the streets of Winnipeg to becoming one of the largest shoe merchants in Western Canada is certainly journeying a long road and marks the achiever as a man of ambition and persistence. In a nut shell this is the career of Charles F. Rannard, proprietor of the Rannard Shoe Co., of Winnipeg, who, at the age of forty years, takes his place among the men who have won signal success in the trade. He is now on a trip east and is visiting London, Galt, Toronto, Montreal, Fredericton, New York, Boston and other points. Mr. Rannard has conquered many difficulties by personal effort and well directed energy. To be born poor and learn the worth of money and how to save by hard work is what he believes has made his success possible.

Mr. Rannard was born in Fens Farming district, of Boston, England, in June, 1872, and when three years of age he lost his father and his mother emigrated to Manitoba with six children. The family landed there in February, 1880, and began the battle for their very existence in the frozen region. Mr. Rannard feels that he owes much of his success in life to the influence and example of his mother, who passed away in 1909.

## A Tale of Severe Struggle

The hardships and privations of the first four years cut off the two oldest boys and the only sister, and the three youngest boys were left with the mother and that was how it came for these boys to work hard. At twelve years Charles followed the plow and has many a day turned over two and a half acres before sunset in the Treherne district. At seventeen he took up telegraph work and soon was able to manage the commercial work in the Leland, Grand Union and Clarendon hotels, then called the Mackenzie, doing the work for the C.P.R. These hotels are familiar to all old travelers who made Winnipeg in the early days when Capt. Douglas was the most popular hotel man.

At the age of nineteen Charles acted as reporter on the Winnipeg Tribune, but after nine months decided he was

not cut out for that life and was appointed by B. S. Jenkins, who had charge of all C.P.R. Western lines to a position as chief operator of the C.P.R. depot commercial office. He also had charge of the parcel office and lunch counter for eleven years from 1892 to 1903.

In January, 1904, he formed a partnership with H. C. Chapman and the firm styled as Rannard & Chapman took over the retail business of Kilgour, Rimer & Co., 536 Main Street. After four years of successful business, Mr. Chapman retired to reside in California. Mr. Rannard later decided to open a branch at 330 Portage Avenue, first corner across the side street from Eaton's—and, though repeatedly discouraged at the time, the progress in this store has been remarkable. The old premises have been remodelled so much that the two Rannard stores are noted by all travelers as being among the finest and best appointed in Canada.

## The Elements of Success

To the shoe business Mr. Rannard brought all his elements of success for he believes that a man is never down until he acknowledges it himself. He lives up to the motto, "Do unto everybody as you would have them do unto you," and absolute fairness to everybody. He encourages to his clerks "Honesty is the best policy," and "Do what is right, never mind what it costs." His shrewd business instinct is embodied in his method of treating customers, for he thinks the man who wants the most trifling thing or is poorly dressed should have the same courtesy and attention as one who buys the very best. He always sets good examples for his clerks and rewards them for their faithful services, which, in a large measure, have been instrumental in building up his business to its present efficiency. His sales force at both stores is composed of clean cut, bright, courteous men, who would be a credit to any store in America.

Mr. Rannard studies and reads the trade papers and plans his work ahead. He is regarded as one of the shrewdest buyers, and his judgment on styles is always looked upon favorably by travelers. He is reported to have bought

In the sample room—C. F. Rannard is the buyer, who is seated, and the man standing is H. H. Gibbins one of the Western representatives of Getty and Scott, Galt

heavily in staple lines last year before the advance prices took effect.

There is rather a romantic incident in connection with the home associations of this western shoeman. In 1894 he was holidaying at Kenora, Ontario, and rescued two ladies from drowning and for this act of bravery, received a medal from the Royal Humane Society of London, Eng-

land. One of the young women was Miss Marion Black, daughter of ex-Ald. Alexander Black, retired lumber merchant of Winnipeg, whom the subject of this sketch afterwards made his wife. He feels that he has been helped greatly in his career by her influence and example. Mr. and Mrs. Rennard have an interesting family of three sons and one daughter.

## The Purpose of Taking Inventory of Your Stock

Running Along from Year to Year Without Knowing What Stock You Have on Hand is No More Business-like Than Going Along from Day to Day Without Counting Your Cash

By A. M. BURROUGHS

"The Inventory is to the stock record what counting the cash is to the cash register."

A clerk in a retail shoe store sold two pairs of shoes to a customer for cash. As he was wrapping up the order he slipped four extra pairs of good laces into the cartons.

When he rang up the sale on the cash register it did not include the price of the laces.

The cash register didn't yell "murder," and there was no record of the strings removed from stock.

When the owner of the store counted his cash at night, he found in his cash register just the amount which the tape showed should be there. He did not know of these daily little losses.

He thought his clerks were all honest. He never suspected anything to the contrary. Yet this one clerk was as crooked as the negro porter's kinky hair.

At least a dozen of the customers of the store always insisted upon being waited on by this one clerk. Apparently it was friendship and good salesmanship. In reality, in this case, it was—something else.

These customers apparently among the best of the store, came in frequently. The amount of findings they took away unpaid for, and uncharged, however, much more than ate up the profit on the shoes for which they paid.

At the end of the year an inventory was taken. But the method of taking inventory in this store wasn't designed to uncover crookedness. It was only designed to give the owner of the store a rough estimate of the amount of goods on hand.

The inventory was not checked against the sales or purchases. No stock record was kept.

### System Revealed the Crookedness

About three years after this clerk was employed the owner of the store decided that he should have a better bookkeeping system.

Within a month after the complete system was put in operation the crookedness of the clerk was discovered. The loss was estimated at several hundred dollars a year through the dishonesty of this one salesman.

The merchant now takes an inventory four times a year and keeps a stock record which enables him to check his inventories against the stock he should have on hand. It protects him and his clerks.

His purchase record shows him the exact number of shoes, etc., bought of each line. When boots are sent from the stock room into the store, the amount is recorded in the stock book.

At the end of three months when the goods in the store are inventoried, the amount on hand in the store, and in the stock room, must balance with the stock as shown on the stock record book.

His new bookkeeping system departmentizes his store in such a way that if any particular line of shoes, shoe trees, arch supports, bunion protectors, silk laces, etc., was short

he could at once trace the shortage to the clerk who was in charge.

A druggist in a little Pennsylvania town who had never taken an inventory in the ten years he had been in business, got pinched for money and decided to check up his stock in the hope of raising money by a clean up sale.

He found \$15,000 worth more goods on his shelves than he thought he had.

He thought he was carrying about \$10,000 worth of stock. In reality, he was carrying \$25,000 worth. He had kept no records that enabled him to know how much he had purchased; how much goods he had sold; or the amount of profits he had made.

If his store had burned out before taking his inventory he would have been satisfied with \$10,000 from the insurance companies. He would not have known that he was figuring himself out of \$15,000.

After he took his inventory he was so astonished at what he found that he decided to put in a system which would enable him to know exactly where he stood all the time.

With an accurate system he was soon able to reduce the amount of stock he carried and to make a great deal more money.

The amount of capital released by the up-to-date methods enabled him to meet his bills and open another store. Now he conducts half a dozen stores.

### Stock Record is Needed

An inventory without a stock record affords no check against the goods which should show in the inventory. A stock record without an inventory affords no check against the theft of goods from stock.

The inventory is to the stock record what the counting of cash is to the cash register.

Running along from year to year without knowing what stock you have on hand is no more business-like than going along from day to day without knowing what money is in the cash drawer.

Are you only guessing at the amount of stock that you have on hand? Is your inventory only an estimate of the amount of goods you should have?

Can you honestly say that you are able to make as much money out of your business without really knowing all there is to know about it, as you could make out of it if you did have the information at your fingers' ends? Be honest with yourself.

A chapter from "A Better Day's Profits," copyrighted by the Burroughs Adding Machine Company.

No matter how many salespeople you employ, those silent salesmen, the good show cards, will not interfere with anyone's work.

"—slipped 10 yds. of silk—"

"—carrying heavy stock—"

## Business Home that is a Model

Warehouse Recently Completed Which Embodies all the Latest Ideas—The Last Word in Lay-out and Appointment.

The prosperity which has greeted the Ames, Holden McCready Co., Limited, in the Maritime Provinces, is ably attested to in the magnificent new building into which the local office and warehouse staff have now removed, a structure superior to a great many in St John, and equalled by few in the three Atlantic provinces. It is a building which would be a credit to cities much larger than St. John, and is a valuable adjunct to the architectural beauty of the commercial centre of the winter port. From the basement floor to the roof-top, it is thoroughly modern in construction, design and finish, and has been erected not only to fulfil

W. McL. Angus, St. John, N.B.

the requirements of the present, but with an anticipation of what will have to be coped with in years to come, taking past and present business as a criterion.

W. McL. Angus has been manager of the St. John branch of the firm since 1900. He began his shoe career in his home city of Montreal in the office of the Ames Holden Co. twenty years ago, and his ability being recognized by those in authority, he was speedily advanced along the line until the field in the Maritime Provinces offered an opportunity for him to show the material of which he was made. His business acumen and general managerial capability have placed him in the fore ranks in this connection, and he was as well able to attend to the management of the business in these parts after the amalgamation with the McCready house in 1911, as he was before when the trade was not so extensive. The offices of the Maritime branch were then in Prince William Street, and it was seen by him that improved accommodation was necessary. The result was the enlargement of their quarters and the alteration of the building to more modern style, and the consequent increase in business following the more convenient methods of handling the trade.

With each succeeding year there has been noticed an increase of importance in this territory, and Mr. Angus is the man "behind" who is directing his forces of well trained

men both on the road, in the office and in the warehouse. Still, greater things are looked for now that this new building is being occupied for the opportunities for further development are more readily grasped. Mr. Angus occupies a nicely furnished private office in the suite of offices on the first floor above the basement, in the new building, which is centrally located on the corner of Duke and Canterbury Streets, the main entrance being from the latter. The basement is of concrete and brick and has a finishing with waterproof cement. It is very roomy and is used for the storage of goods. On the first floor are situated the offices, and these are considered amongst the finest in the city, being nicely furnished in cypress with beautiful grain effects, beaver board, and nicely panelled ceilings. Both naturally and artificially, the lighting system is excellent, a series of large and wide windows occupying one side of the offices while electric fixtures in neat but rich array are suspended from the ceilings for use when the occasion demands it. The location of the building is such that the office is blessed with plenty of sunlight coming unrestrictedly through the large windows, and it is not expected that the bill from the electric light company will be so very heavy in so far as the lighting of the offices is concerned.

The sample rooms are finished in somewhat the same way as the offices, and are also located upon the first floor, the remainder of which is occupied with shelves for stock in the McCready brands. The second floor is shelved throughout and is used for storage of the Ames-Holden brands. By shelving throughout the expression is not meant to imply that the floor is merely a ware-room with a number of shelves, because an excellent system prevails as to stock-keeping, which enables the handling of business with readiness and quick despatch, the shelves being systematically grouped and arranged in a manner which is simple yet convenient and easily mastered.

Surplus stock in leather goods is stored upon the third floor, while on the fourth are to be found shelves containing

Attractive New Warehouse in St. John

# STRAY SHOTS FROM "SOLOMON."

It is a good thing to confess one's faults or mistakes it is a better thing to leave them behind us and press on to higher things. Don't go and blab your shortcomings to everybody. Sit down and tell yourself what an ass or sinner you have been and quit from doing what you condemn yourself for. The best kind of repentance was defined by a little girl as "to do so no more." "If thou hast done foolishly in lifting up thyself or if thou hast thought evil lay thine hand upon thy mouth." You can't help the crows flying over your head, but you can prevent them making nests in your hair. You can't account for evil thoughts any more than you can for bats that fly into your windows. But get them both on the outside as soon as possible. A house is a bad place for bats and a mind inhabited by evil thoughts is about as good as a house filled with creeping things. "Lay thy hand on thy mouth."

He is a wise man who can say with Paul "I have learned in whatsoever state I am therewith to be content." Now Paul did not sit down and expect to be spoon fed. There are some people who seem to take a great deal of comfort out of the promise "The Lord will provide," and they implicitly follow the injunction "take no thought for the morrow." These are the people who leave widows and orphans for which their relatives, friends and the community at large have to provide. There is a wide difference between contentment and shiftlessness. Paul was content to be wherever he found swing for his indomitable aim and his tireless energy. If you put him down in Asia or in Europe, in Jerusalem or Rome it was all the same so long as he could fulfil what he considered to be his great mission. To be content is to give oneself fully to the filling of whatever sphere he is placed in. There is no happiness comparable to that which comes from the realization that we are occupying to the fullest our niche. There is a great deal of senseless striving after that which is only a disappointment and anxiety when it is attained. Says the Wise Man, "Give me neither poverty nor riches; feed me with the food that is needful for me; lest I be full, and deny Thee, and say, Who is the Lord? or lest I be poor and steal and use profanely the name of my God." Being is better than getting. Learn to be content. Fill your sphere and you will have discovered the secret.

There are some men whose idea of independence seems to be a compound of narrowness, mulishness, selfishness and bumptiousness that is as hard as flint but as mean and cheap as mud. They stand alone and sniff at the very idea of their dependence upon other people's opinions and good will. Theirs is the splendid isolation of the clam who thinks when he shuts his dirty little shell that he has comprehended within it the earth and the fulness thereof. These people have to learn the truth of the apostolic statement as applied to everyday life—"No man liveth unto himself." The man who shuts himself in forgets that the world shuts him out by the same door. The world will leave absolutely alone the man who desires nothing but his own company, so that there is no difficulty in securing isola-

tion. A great many people find fault with the world and the church, for that matter, for their cold, hard indifference to individual interests; but they seldom pause to ask themselves if there be no reason for such a condition in the individual himself. To the open-hearted the world is ever open-hearted. It gives a *quid pro quo* every time. You smile at it and you get a smile in return; turn up your nose at the world and it will as cordially despise you. If you are not getting a share of the world's appreciation look within; "sin lieth at the door" in the shape of some disregard of its golden rule. A man may stand alone for a considerable time and may even thrive in his splendid isolation; but woe to him that is alone when he falleth. Woe to the man when he lies prone upon the earth whose stiletto of cynicism or spite has stilled every trace of sympathy that may have throbbled for him in the hearts of others. Woe to the man for whom, on account of his own self-banishment from the sympathies of a living world, no hand is outstretched to steady his staggering steps or lift him from the slough of misfortune or distress. Yea, woe unto him!

He is a strong man who knows his own weakness. The fellow who has been downed by the drink evil is safest when he puts two or three blocks between him and the saloon. We have all met the boaster who claims to be able to drink or leave it alone, but who seldom gives a demonstration of his power to do the second while he furnishes abundant proof of his capacity for doing the first. If you want to keep clear of gambling give the race track and the faro layout a wide berth. Some men may be able to enjoy a good clean horse race or a game of whist without the additional excitement of a little money upon the affair, but they are few enough to be a warning to most of us hot-heads. If you want to be clean, keep clean company, read clean books and think clean thoughts. "The conies are but a feeble folk, yet they make their homes in the rocks." Run for the rocks. This old game of facing the enemy in platoons and squares in his own country is played out.

There are plenty of talkers but few good listeners. If we were as anxious to hear as we are to speak it would be better for all of us. The trouble is we don't like to hear the things we ought to hear and are forever going out of our way to have our ears tickled. If you had a wise friend or two to tell you "when to get off" it would be even now a great blessing to you; but being told you are such a fine fellow so often has made you believe it, and when someone hints you are shallow or insincere you want to fight. There are plenty "hard heads" around to keep us humble and straight, but we won't let them. Like the man who was telling the minister what a bad fellow he had been before he joined the church, when the former agreed with him, the reformed one retorted that he "wasn't any worse than lots others." "As an earring of gold and an ornament of fine gold so is a wise reprover upon an obedient ear." When you get these two things together, the "wise reprover" and the "obedient ear" conditions move up.

# Why I Changed Jobs Many Times in Selling Shoes

Clerk Tells of His Experience in Trying to Satisfy Some Retailers—Broken Promises, Scant Courtesy, Little Opportunity for Development and Unjustifiable Favoritism —The Boss Has Faults No Less Conspicuous Than the Men Who Wait on Customers.

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir,—Will you allow me space to give my views regarding the injustice shown by a few shoe retailers to some of their employees. There is always a reverse side to any contention.

I might say I engaged as a clerk in a shoe establishment in Hamilton, after serving three years in London. The proprietor was a man who at first greatly impressed me; his manners were affable; his talk was cheery and optimistic, and from the conversation I had with him when applying for the job, I inferred that the feeling of good fellowship was mutual. He told me that he was somewhat of a reader of character and felt sure that in me he had found some one on whom he could rely. Therefore, he wanted me to dig in and work for all I was worth for a few years, in order that I might gain more experience and that he might be enabled to demonstrate his belief in my ability. He was positive that I would make good in that time, and be able to fill a position he had in mind for me.

Then a few confidential remarks followed. I was told to bide my time, that he was not as young and active as he once was, and these business trips to Montreal, Quebec, Boston, Brockton, Lynn, Haverhill, Salem, etc., were beginning to tell upon him. He wanted a reliable and wide awake young man who would relieve him of the buying expeditions—but, of course, it was all between him and myself. He gave me to understand, if not in so many words, yet by inference and broad hints, that the other members of his staff were all right in their way, but that none were quite up to the mark, or just the kind of substitute he was looking for to eventually assume the responsibilities which he pictured.

I must say that the glowing terms in which he sketched these purchasing and holiday jaunts with my expenses all met by the house, the enlarged view of life they would afford me, and the educational value they would be to me, fired me with ambition and made me feel as though I was walking on air. I set them up as a goal and determined to work to that end.

I remained with that firm over four years, made good and worked long and late, but when two years had merged into three and the three into four and not the first step was taken to carry out the enticing programme he had mapped out my hopes gradually sank to zero. Did I ever get a chance to relieve (?) him of those tiresome (?) trips? Not on your life. It is five years since I left him, and nine since he first held out these unfulfilled dreams. He is still vigorous enough to take those eastern jaunts annually, picking up style pointers and making purchases.

## He Has Heard It Too

I might say that some of the fellows he had working for him were mighty good chaps, steady and reliable, in spite of the boss's comments. I wondered why he selected me over their heads, but not long before I left I got chummy and confidential with a rather reserved Scotchman, and learned from him that the boss had filled him up with the same hot air when he had started. I have not the least doubt but that he played us all off, one against another under the guise of strict secrecy. If so, it was certainly an excellent, though an underhand sort of way of getting the best out of his help.

Another thing about this proprietor was his marvellous urbanity. He could wheedle the birds off the bushes if he tried. Whenever there was any particular tough or dis-

agreeable job to be handled—any heavy lifting of cases or something of that sort, he would make a request in such a suave way that you would think he was suggesting something pleasant and healthful. He would dare you to exert your efforts by insinuating your strength was not equal to it, so that before you knew where you were at, you were in the thick of the job.

## A Doleful Dope Artist

I don't know whether my peculiar luck led me to strike against snags, but I have worked for two or three other men since leaving him, and they all showed characteristics that were unattractive. There was Beddingfield, for instance. I entered his service with the experience I had gained and he had all the advantage of my many years' training, yet right over my head in the men's department he placed his nephew—a greenhorn without enough sense to come in out of the rain, incompetent and lazy.

You will most likely consider me a fault finder, but after working like a horse for six months it was exasperating to see this chap come in to do the loafing while I did the slaving. Then, too, the one-half holiday a week in the summer was grudgingly given. Instead of smiling and wishing me a pleasant afternoon, which would have added two-fold to my pleasure, and also been productive of good feeling toward him, a sour visage and a churlish, ungracious manner formed the vision and memory I was obliged to carry away with me. If I could write like some people I might give you an idea of his thousand and one meannesses. He would hand out the pay envelopes with his usual morose look as if he mourned at parting with them.

## Blood Thicker Than Water

And, again, if I happened to be in the rear of the shop arranging the cartons or stock and a customer came in, he would call out in a rough, commanding tone: "Forward here!" until I found I was gradually losing my self respect by submitting to such treatment. There is no doubt whatever that his particular ways were remarked upon by customers, nor did they tend to increase the popularity of his place of business. Then, his nephew, who was taken

## A Progressive Shoe Factory Worker

A young man who has rapidly climbed to a position of trust and responsibility in the shoemaking business is Alex. Inrig, who next month will enter upon his new duties as superintendent of the new factory of the W. E. Woelfle Shoe Co., of Berlin. His initial experience in the trade was with Cooper & Smith, Toronto, where he started in 1890 as an apprentice and gained his first general knowledge of the footwear trade. After three years in the employ of this firm he went with the Ames-Holden factory in Montreal and then moved from one shoe centre to another, finally landing with the Western Shoe Co., of Berlin, at the time of their organization. He has been with them ever since as their superintendent. He will assume his new position with the W. E. Woelfle Shoe Co. on March 1st. Mr. Inrig, who is a son of Donald Inrig, shoe manufacturer, of Toronto, has a clean and capable record and is skilled in every branch of the manufacturing end of the business.

on six months after my arrival and thrust ahead of me, as I have said, showed strong symptoms of following in his uncle's footsteps. The pair of them finally got on my nerves, and I saw there was not much chance for advancement, with the relative always ready to grasp all that was in sight, so, without any regrets, save that I had remained so long with these despots, I prepared for another change and came West. But I was not even allowed to depart quietly. He was infuriated at my dreaming of leaving, and made himself so disagreeable that I was all the more determined to break away from the moorings and be tied to his establishment no longer.

I must give these two men as samples of bosses I have encountered, and will not refer to two others that I ran up against, save to remark that although they were different types, they were about equally as difficult to get along with. Now take these former two fellows. To a certain extent they present a contrast, and I never thought of that till now. One might think that at least Graham, as I will call him, was a pleasant man in comparison with the sour-tempered Beddingfield, and so he was. He was a very pleasant man to talk to—his face was usually wreathed in smiles. And this apparently kindly disposition took me in at first, until I studied it out that a great deal of this pleasantness was owing to getting his own way, and shifting real burdens on other shoulders. He was thoroughly selfish and deceitful. These are two despicable traits, and what does it matter how pleasant a man is when talking to you if he breaks his

promises? His face would sometimes assume quite a sympathetic look, when you were requesting some redress, and you would believe you had really awakened his interest, when listening to his comforting words, and that he would see to it that things were righted. In fact we were all deceived by his apparently fair dealing and wakened up at last to the fact that any good that was coming was absorbed by Graham himself, and we were left out in the cold. I also made the discovery—which I kept dark—that he was a terror at card playing, and for heavy stakes, but luck always was at his elbow for he generally won. This was another reason why he never wore a frown. He took care of himself and had a leisurely survey of life, but "worked" his sales force.

These men may not recognize themselves, as I feel sure neither one knew how obnoxious he was in the eyes of his employees, and I am also certain that each, if put to it, would give quite a different delineation of his own disposition. They did not see themselves as "others saw them." But in any event, I have altered their name from the genuine ones, so I do not fear they'll have me up for defamation of character.

I am about to start for myself in a few weeks and when I have gained experience in the capacity of boss, I will, perhaps, be writing up my ideas on the other side.

Yours, etc.,

Calgary, Alta., Feb. 9th, 1913.

C. F. K.

## Following "System" to the Verge of Foolishness

The boss is on a new tack just now. A slick fellow was in a couple of months ago and got him all worked up on "scientific store management," and since that time he has got batty on "lost motions," "elemental economies," "bed rock efficiency," and has the bug so bad that both the book-keeper and Thompson, the head salesman, are talking of quitting. He subscribed for a magazine to come to the store, and is making the boys soak in long-winded articles on how to cut down time in selling to cranky customers, how to keep track of stock from their different standpoints, and how to dun customers without letting them know you want the money, and so forth.

Smith, the book-keeper, was nearly crying the other day after a lady got through with him on one of the new-fangled duplicate system semi-monthly accounts he sent her, on which he happened to put a few remarks on the mild weather we had in January and the prospects for a windy March and a short bank account. He said after this he was going to send out good old-fashioned accounts on the first of every month or go into the accident insurance business altogether. He has been doing a little on the side since the new account system was started.

The boss introduced a new card index system for circularizing the district for trade and I and Smith are to run it if it ever gets into running shape. He spent three days on it this week and didn't have time to write the ads. for the two weekly papers, and yesterday the boy at Short & Pimply's gave me the laugh about our ad. that spoke about the approach of February. That's what I don't like about these system spurts. The last time the boss got the fever he put in a new stock-taking system that kept us all at the store for two weeks at nights and then we found it wouldn't work. And after all the ads. were slopped up and things put on the bum we went back to the good old way.

He came down the other day a little early and I was half way through the store sweeping. He took the broom out of my hand and started to show me the amount of lost motions I was going through. He said that it should only

take sixty-three strokes to sweep the store from end to end, and the way I was going it would take one hundred and thirty-six, which meant not only a loss of time but lack of efficiency as well as the unnecessary wear and tear of the broom. He didn't see the lost motion I went through when he walked back to the desk. He times me going to and from the post office and says I should go in three minutes and twenty seconds and come back in two-sixteen.

He had an expert on salesmanship in the store for a few days mooching around and watching our methods. He butted in on Jones, the second salesman, the first day he was around and Jones was mighty near swatting him one. He said if the customer hadn't been a lady he would have pulled the fresh Alec's nose for him. Jones says if he doesn't know how to take down goods to show people and how to talk when they are looking at them he won't have a blonde sissy who doesn't know a shoe from a hole in the ground tell him.

The boss had Thompson in the office last week trying to get into his head how a sale should be made with not more than twenty-three motions and one hundred and thirty-six words. You should have seen Thompson trying to look wise and pleased at the same time, and then the boss went off to a meeting of the ad. club looking like a missionary that had just converted a Blackfoot Indian. When I asked Thompson what he had thought of it he said something about damphool ideas, whatever he meant.

The way it strikes me is that if the boss would spend more time in the store keeping the business going and looking after customers as well as the boys, it would pay him better than all this monkey business about system and all that.

Between the ad. club, the citizens' league, the golf club, and the church I don't think we see him half the time, and when he is in lately he is always ripping things up the back or starting some new fake.

In the meantime I get through the morning sweeping in sixty-two motions and a half—nit!

SILAS.

# A Big Opening for Canadian Shoe Manufacturers

Dominion Trade Commissioner at Buenos Aires Does Not See why Canada Cannot Supply Greater Portion of Footwear in the Argentine—Market Has Distinct Advantages—People Buy New Shoes Rather than Have Old Ones Repaired as Cost of Leather is Too Great.

"It is doubtful if in any city in the world better shod people will be found than in Buenos Aires. The fact of there being such a large number of boot cleaning establishments scattered all over the city supports this statement, and a few minutes' observation in the center will amply verify it. Patched or down-at-heel boots are rarely seen, repairs, if properly done, cost so much that it is the custom when these are required to throw the shoes away rather than spend money on having them cobbled. One distinct advantage of this market is that, if so desired, business can be confined to one city, as here in Buenos Aires alone there is a population of nearly 1,500,000 of people."

There is a great trade opportunity in Argentina, South America, for the highest class output of Canadian shoe manufacturers if they will only get after the business, according to a report just presented to the Department of Trade and Commerce at Ottawa, by H. R. Poussette, Dominion Trade Commissioner at Buenos Aires. Mr. Poussette goes thoroughly into the question and pays a tribute to the style, workmanship and finish of Canadian shoes. He adds: "Canada's opportunity would seem to lie in the fact that her factories turn out just as high class a boot as those of the United States, and she has the great advantage of being able to sell her produce as British made. With an equal show of enterprise there is no reason to doubt but that her makers would win a success no less abundant than those of United States firms. To be able to sell their product under a British name is a distinct benefit to Canadian firms, as it is stated that if the English could successfully imitate the lasts of the United States makers they would, solely on their own name, take away from the latter a considerable share of the trade which they now enjoy."

## Some Illuminative Figures

Some portions of Mr. Poussette's report which are of greatest interest are:—

The most interesting feature to Canadian manufacturers is the decided advance made by the United States product during the later years. In 1908, the imports from that country were 1,946 dozen, valued at \$39,561, but in the following year they increased to 4,361 dozen, valued at \$86,154. The number of dozens imported is the only point worth considering, as owing to the arbitrary valuation fixed by the customs, the value in currency is merely an extension of so many dozen of footwear at a certain price. In the "Tariff of Valuations," men's boots are valued at \$25 per dozen, women's at \$22.50, men's shoes at \$20, and women's shoes at \$18 per dozen; sporting boots at \$18 per dozen, and men's "jack boots" at \$50.

The trade returns by countries have only been compiled up to and including 1909, and from the United States trade returns to hand, it is learned that for the eleven months ending last May, they were exported to Argentina no less than 99,685 pairs valued at \$327,164. This would give an average for the twelve months of about 108,000 pairs, valued at about \$360,000. For the month of May the exports of boots and shoes were valued at \$31,057. If we go back to the figures for the quinquennium mentioned above, we find

that for the five years, the figures were 14,443 dozen, or 173,316 pairs; in 1908 they were 1,916 dozen, or 23,352 pairs; and in 1909, 4,361 dozen, or 52,332 pairs. It will be seen that if the average of the eleven months' exports ending last May, be extended to cover June, that the United States' exports for the twelve months would amount to 62 per cent. of the total for the quinquennium ending with 1909, and comparing it with that particular year, it shows an increase of nearly 100 per cent. In making these comparisons, it is necessary to assume that the United States' export and Argentina's import figures, will more or less agree.

There is still a further and very important phase to study. As mentioned above, the imports for the first six months of the present year show a decrease of 11,861 dozen, but from the figures mentioned above it would appear that the diminution of imports has not been at the expense of the United States. Observation bears out that last statement, as in the city of Buenos Aires, boots and shoes from the republic are seen everywhere; and one of the largest United States manufacturing companies, one known far and wide, owing to the extensive advertising and its very aggressive selling methods, has its own shop, situated in the best street of the capital.

## Lesson for Canadian Factories

There is a good deal in the above that ought to be of interest to some of the larger and more ambitious Canadian manufacturers. It is not likely that factories south of the line have any advantage over those north of it, unless it be something not apparent to the ordinary individual. The machinery and labor employed are more or less the same, likewise the raw material. This being so, there does not appear to be any particular reason for Canadian manufacturers not competing for a share of the trade. There is no question of their product being inferior to that of the United States manufacturers; in fact, taking it altogether, it is in some cases superior. It simply seems to resolve itself into a matter of inclination, selling methods, and factory organization, the last of which has much to do with the cost.

Every shape and style of footwear is worn in Buenos Aires, but at the present time those known as "American" are said to be the most popular of the imported goods. The Argentine has a great liking for patent leather, in which class the United States makers are undoubtedly supreme. Amongst the residents of the country who are foreign born—and their number is large—the taste is more or less for black and brown all leather boots and shoes. Fancy cloth top boots are also in demand, to a substantial extent, but it may be only a passing fancy. Whilst many foreigners favor heavy boots, the tendency is towards medium to light weights.

The purchaser of a pair of boots probably first examines the shape, after that the price, and then the quality; but, if the first appeals to his fancy very much, the other two will not weigh with him greatly. A mark has not the importance with this class of goods as with some others; the Argentine cares little for the brand of a boot that does not please his eye. The life of a pair of shoes is very short, three to four months, perhaps; when shabby they are thrown aside. The great majority of women who can afford to do so have their boots made to order in the country, there being many highly competent custom makers in Buenos Aires. The complaint here is that most foreign made shoes are too heavy.

# Can the Shoeman Make Money Out of Hosiery?

The General Opinion Is That It Is a Paying Department When Properly Stocked and Goods Are Carefully Selected—Canadian Retailers Are Taking Up the Idea Gradually and in Time it May Become a Branch in Every Enterprising Store—Some Pointers on Management.

"The hosiery branch of the retail Canadian shoe store is as yet in its infancy, but in time—very shortly, I think, it will be adopted by every up-to-date shoe retailer," declared a Montreal dealer the other day, and this view is held by many city and town footwear merchants.

Several have gone into the question of putting in a hosiery department to see how it worked. Others are still thinking about it and have not gone so far as to stock it yet. Some believe it only pays at Christmas and during the summer months. A larger number hesitate, thinking they are cutting in on the dry goods men and they prefer to wait until the time when it is looked upon as a regular department of the shoe business. Then, again, most dealers think it necessary to hire a lady clerk for this department.

Speaking of his experience in the hosiery line a London retailer said, "I have tried selling hosiery in my store, but it did not pay me. The chief reason seemed to be the fact that the Canadian people do not seem educated to buying hosiery with a shoe purchase. I have been in several American cities and seeing the way this line was looked upon as a natural unit in every up-to-date shoe store, gave me the idea of adding it. Why, any enterprising shoe dealer in Rochester, for instance, would not think of doing business without a hosiery department. I started out to give this line a good test when I came back, and although I have left off handling it, I still am firm in the opinion that it can be made to pay. My reason for discontinuing was that I was in need of money at that time and could not afford to do the thing right. It requires a well varied stock in the first place. It took some months before results began to show, but when they did they kept increasing, especially among women. A lot depends on your stand. The main trouble is in keeping up a well assorted stock, three or four, sometimes more, lines in the one color, but once you do get a customer in the way of buying hosiery in your store, he or she is sure to stick. I certainly will take it up again as I am sure it can be made to pay, and the early bird, you know, gets the worm."

## Selections Must Be Well Made

The opinion that it will pay if well looked after is held by nearly all who have done any experimenting. It requires however, a careful system of management. In the first place, the quality must be good. It is just as important to keep a customer as it is to get him. The average shoe man will do a better business by dealing only in the better grade. A good price can be got for a nice pair of stockings. Careful buying at first and not letting the department run away with too much capital are necessary. One good thing about this department, where it has an advantage over shoes is that the capital can be turned over much more frequently.

Presenting this phase, a Western retailer writes: "It has paid me to stock hosiery because I was very canny in the beginning, without spoiling all my chances by carrying too little a stock. I found it better to have to lose a sale once in a while, rather than have too much stock left over. In fancy foot covering for women I kept a very watchful eye, until I caught on to the situation. I found it advisable to keep stock to match footwear, as a great many, in fact nearly all my sales in high grades are made at the same time as a slipper purchase. For instance, a lady buys a pair of pumps for evening wear. If I am able to show her hosiery to match, I am sure of a sale. Quite a call is made for black and plain colors of different weight and shades.

"Another thing necessary to make the hosiery department a success is goods being displayed to the best advantage. This was a great help to me at first, and for this the windows are invaluable. I never dress a window now, without giving hosiery a strong position, and the line can be placed where a shoe cannot. I get the clerks interested as much as I can, and they seem to be anxious to see this department go ahead. To keep them interested, I allow them a percentage on every sale. This is possible as a pair of silk stockings can be sold at over double the buying price.

"Another thing that helped was advertising. In fact, I featured hosiery for a while and it brought big results. Prices range from forty cents for a good plain pair up to \$4.00 and \$5.00 for the best silk goods. In men's, half-hose begin at about fifty cents, and run up to seventy-five cents, \$1.00, \$1.50, and \$2.00. On the plainer lines, profit is from thirty to forty per cent., and on finer grades all the way up to 100% and sometimes more. The question of a lady clerk need not bother anyone any more than it should in selling hosiery in a dry goods store."

## Outlay is Not Large

As for hesitation in opening a hosiery branch, no department could be opened with less expense than this one, and with so little outlay. A dozen or more pairs of good plain hose can be purchased for the price paid for a first-class pair of boots. Another thing which adds encouragement is the rapid turnover which occurs in hosiery. Money is not tied up for anything like the length of time it is in the shoe department. Leftovers and shelf warmers are also out of the list of worries.

Inexperience should not bother the shoeman, as manufacturers and jobbers are only too anxious to demonstrate the possibilities of a hosiery department, and this, backed by common sense and business acumen, is enough to save a dealer from any loss. Lack of space should not deter any shoeman from carrying the line as a silent salesman show case will hold a good sized stock.

In a recent article on this timely topic Shoe Findings says: "Assuming that 85 per cent. of the shoe wearing public make their shoe purchases in exclusive footwear establishments and that the remaining minority go to department stores to satisfy their shoe requirements; and assuming again that in the distribution of hosiery the situation is exactly reversed, the department stores having the majority sale and the shoe stores taking what is left; then, what is the matter with hosiery as a suitable side line for shoe store sale? Within the past few years, there has been a considerable awakening among shoe retailers to the advantages of catering to every footwear requirement of their patrons, and since the first consideration of this extension of their business has brought forth the undeniable truth that hosiery is even closer to the foot than shoes, the initial departure has invariably been to open up down-to-date and well equipped hosiery departments. Practically the only argument that has been advanced by hosiery manufacturers so far in their efforts to induce shoemen to co-operate with them in the distribution of their lines, has been to emphasize how much a patron would appreciate the saving of time and trouble in being able to buy comfortable shoes and hosiery to match at the same time instead of having to purchase the shoes first and then be compelled to visit another establishment in a frequently vain endeavor to obtain the necessary article."

# How a Shoe Dealer's Kindness Was Poorly Repaid

The Way He Got Others Interested in the Cause of Suffering Wife and Famished Family—Sent Up Boots and in the End Found He was Duped—And all that the Starving Ones Might Buy Vacant Lots for Speculation.

The poor we have always with us, and with equal veracity it may be added the fakir, the imposter and the grafter. If you do not believe it ask any charitable worker. A cold, hard winter will bring all of the designing elements of humanity to the front. Many believe that it is easier to use their cunning to secure assistance than to work with their hands.

Not so long ago a big, tall fellow was up in the Toronto police court for stealing wood from a neighbor and, when arraigned, pleaded that his family of little ones was perishing with the cold and he could not endure their suffering any longer. Investigation by the authorities showed that the prisoner, lithe of limb and rugged of countenance, had been offered several jobs of wood sawing, which toil he disdained. Yet this self-same chap had stayed up nights for a fortnight and put in more time in actual hours stealing fuel—not to speak of the risk of detection—than if he had "bucked" a few cords. He had the wrong viewpoint. Another strapping son of Adam was asked by the city relief officer recently if he did not want employment. Unblushingly he replied, "Naw, thank you, the Ladies' Aid are looking after me very nicely."

## The Kindness of a Retailer

And so incident after incident of petty graft of this character might be related. Every laudable work is beset with snares, but the most glaring example of graft that has lately come to light occurred on Gladstone Avenue, Toronto. A certain Queen Street shoe dealer, who was waiting upon an old customer, was told that a woman with a large family was in the hardest kind of misfortune. Her husband, who had been working at structural steel in Hamilton, had fallen from a dizzy height and was in the hospital three weeks. Later he had joined a gang of railway employees, a train had been wrecked and he was one of the five injured, being in the hospital at North Bay. Then, one of the children was taken ill with scarlet fever and during all these weeks the family had been living on next to nothing. The boot dealer knew the woman and his sympathy was aroused. He gathered together some juvenile garments and sent them over. Then the Sunday school teacher of the children called at his store and said that she understood one boy was going around barefooted—and this, too, only a few days before Christmas. She paid for a pair of shoes and asked that they be sent up to the house. The shoeman sent up a couple of pairs of warm socks and another pair of boots for a smaller child. He was told by a neighboring Parkdale resident that the family had nothing to live on except some stale cakes and buns that a confectioner had taken to the house for three weeks.

## The Shoeman's Good Advice

The following day one of the children called at the dealer's store and told him that his mother had had no fire in the house for three days and the baby was cold. This was two days before Christmas and the merchant commanded the lad to run home and that he would see a load of wood was sent up. The business man, although he could ill afford to leave his busy store, went out and collected eight or nine dollars from those along the street. They all gave generously and the case of the woman was reported to an alderman who said, that he would notify the city relief department. Going to the house the footwear merchant found the baby huddled up in old clothes and the mother and little ones in one room with no fire. The place was dirty and forbidding,

but the woman explained that she had been too weak to attend to the cleaning up.

"Well, you must do something to help yourself," remarked the caller. "Your family cannot live in this wretchedness and squalor."

"Yes, yes," she replied, "but I have not had enough to eat." The shoeman found a pound of meat on the table, but the mother explained that she had no fire to cook the steak.

"What about the family upstairs and in the front of the house," he inquired, "would they not do it for you?" "Oh, I hate to ask them," she humbly replied. "What I want particularly is wood and food. You see since my husband met with such painful accidents I have just leased part of the house to two men and women. They pay me enough to meet the rent but I have nothing else." The

## A Veteran in the Shoe Ranks

One of the oldest shoemen in the Huron peninsula is Wm. Sharman, of Goderich, Ont. He has been at the trade all his life and started to learn on the bench at the age of thirteen years. Born in Manchester, England, he came to Canada with his parents at so young an age that he did not know what a shoe was. After his apprenticeship he started a shoe repair and custom shop in Goderich, which he continued for several years. He then took a position with E. Downing and, after working for him eighteen years, bought out the business. He has conducted an exclusive shoe store

Wm. Sharman, Goderich

ever since 1895. It is just forty-nine years ago since Mr. Sharman began to hammer out sole leather and to wax threads and he can recall many incidents of an interesting character of the early days. He maintains a live repair department on his premises and keeps three men constantly employed. One annual sale is conducted and then a general reduction is made of all stickers and regular lines. This is usually held in the month of February to make room for spring goods, and the knife is applied to everything in stock. Mr. Sharman does not believe in carrying shelf-warmers and he keeps things on the move. His son, Reg. Sharman, has for a number of years been the right hand man of his father and a large and prosperous trade has been built up.

almoner was convinced that here was a really worthy case. He came away with admonition to the woman to clean up and he could see that milk and other requisites were sent. The sympathy of several Parkdale business men was touched by the story of the apparently deserving household. One merchant told his girls there would not be the usual lavish gift of Christmas presents for them, and his daughters all set to making things for the distressed ones. A retired railway conductor who has not worked for years owing to a physical ailment and has barely enough means to live on, went out on the day before Christmas and earned a dollar doing an odd job at fixing water pipes, which he handed over to the family of the afflicted. His wife arose from a sick bed to make a cake for them. An Anglican clergyman told the business men that this was a worthy case and that only a few weeks before he had paid a month's arrears of rent for the suffering ones to prevent them from being dispossessed."

#### And He Was Hoaxed Too

"I have investigated, gentlemen," he added. "I fully believe that it is a deserving case. I gave the woman an order on a grocer and she showed good sense and restraint. She did not take up the full amount at once but had a few necessary things sent to the house and informed the grocer that she would take out the rest of the goods as she required them. I have never known a family but what would 'use up the full amount at one swoop."

Then the police of Parkdale Station—1313 Queen Street West—were notified, and an officer began a quiet investigation. He found that a man of the same name as that given by the woman as her husband was employed in a city furniture factory. His suspicions were stirred and he invited the woman to call at the station and see the sergeant. She fell in with the suggestion, as it was intimated she might secure further relief. She went and told one of the hardest of hard luck stories. Then a detective, who had overheard the pitiable narrative, stepped in and remarked, "Is your sick husband the one who works at — factory or the one who was in the hospital at Hamilton. Is — who has been employed for two years at — earning twelve dollars a week your husband or the man of the same name who was injured in the railway wreck and spent five weeks at North Bay?"

#### And All to Buy Vacant Lots

The woman's courage gave out. She made a full confession, pleading that she would not try such a game again, that this was her first offence and if they would only allow her liberty they would never have cause to regret their generous-hearted action. She departed crestfallen and subdued.

This incident is, perhaps, not out of the ordinary, but the sequel certainly is. What had she been doing with the money that her husband gave her? All her stories regarding want and adversity had been pure invention, the only mishap being that one of the boys had scarlet fever. For weeks she had deliberately given her home and family the gaunt appearance of poverty and neglect and skilfully played upon the liberal impulses of a few persons. The money that had been coming in—so she confessed to the police—had been expended in buying town lots in Welland. Grafting on the community to acquire real estate at the Yule-tide period is certainly a new ruse with which to make "a touch," as many Parkdale victims know to their sorrow.

### A Lower Tariff on Shoes

Will the tariff on American footwear be reduced in the new Democratic administration. It would appear so. An unsuccessful fight to have the house committee on ways and means retain the present tariff of 10 and 15 per cent. ad valorem on boots and shoes occupied most of a day's session

recently in Washington. Chairman Underwood of the committee flatly told the gathering of representatives of the wholesale and retail shoe industry of the country that the tariff was not prohibitive; that there was no revenue and that retention of the present rates was impossible. Questions of the committee indicated a sentiment of the bill to a big drop in those rates.

Numerous spokesmen appeared for the various branches of the shoe business, national associations of the manufacturers, wholesalers, and retailers, and of the labor unions, all favoring the present duties. Mr. Underwood said that the Democrats did not purpose to play favorites as between industries in the work of carrying out the party pledge for revision downward; that while he hoped there never would be a Democratic tariff so below the reasonably competitive basis as to close down any factory in the country he and others of the committee wanted to write such rates as would stimulate a reasonable competition. He suggested that the final arbiter, the American people at the last election, had rendered a verdict for "tariff for revenue" instead of "protection," and that "you cannot expect us to write a protective tariff even if only two per cent."

### Developing Shrewd Salesmanship

"The trouble with most shoe clerks is that they do not take enough interest in the matter of making sales," said the manager of the boot and shoe section of a leading departmental store in Montreal the other day. "If a customer comes in and asks for a shoe the clerk will ask what kind and size, and then get down a carton and place the shoe before the customer without saying a word, or he may possibly lean up against a post and wait for the decision, favorable or otherwise, of the possible purchaser. Now, so much has been written about salesmanship that it is almost impossible to say anything new. I am not pretending to give anyone advice, but the average clerk cannot take his work too seriously. So many people will go into a store and without further instructions say, 'I want a pair of shoes, please.' Now, to start in and ask all sorts of questions does not predispose the customer in your favor. One should possess the ability to size up his buyer, the calibre, disposition and character of the purchaser. I know several young men who have the ability and the shrewdness to make sales so quickly and satisfactorily that their salary is all the time being advanced. The reason is that they know how to go about completing a transaction in the shortest possible time. They do not have to look around for the goods. They know instinctively what size and kind of boot is desired and do not have to display more than three or four shoes before a favorable impression has been transmuted into a desire for possession, and the deal is finished.

"In a word, my attitude is this—if a man or woman comes into the store and asks for a shoe with no other instruction or intimation as to what he or she requires, I can generally tell by the dress, bearing, appearance and demeanor, about what such a one will wear, especially if the visitor is a man. I can tell his size instinctively by close observation and practice. With a woman, of course, we cannot see the shoe as plainly, but we generally use the measuring stick after requesting her to be seated. I generally get out one pair of shoes which I believe will suit, talk pretty strongly on them and then if I think that is about what the customer requires, I procure two or three more pairs, but always return to the first-mentioned shoe if I am of the opinion that it has created a good impression.

"To tell you of all the methods and details of successful salesmanship no one can. Selling requires tact, ingenuity, skill, sincerity and study. But, after all, the real measure of a man's worth to any establishment is the length of his sales string and the number of patrons he makes and retains for the place in which he works. If he is able to make a large conversion of stock into cash, he can secure a good salary and rapid promotion, as practically all the leading stores base their recognition of an employee's worth on the amount of goods that he is able to dispose of. Selling, serving and satisfying are a trinity that lead up to the front rank every time."

## Managing Western Shoe Department

Rod W. Matheson, manager of the shoe department of the Hudson's Bay Co., Edmonton, is an Ontario boy who is doing well in the capital of Alberta. It is eighteen years since he first sold shoes in the town of Lucknow with J. G. Murdoch, who conducted a general store. For a few years he worked in different establishments and then went into business in his own behalf, which he conducted for six years. Disposing of his stock he afterwards spent some time in Peterborough and London, and six years ago came to Toronto. He was with the Royal Shoe Store a year and later with A. Levy for four years, holding the position of man-

R. W. Matheson, Edmonton

ager. Last March he went to Edmonton to assume his present post. In the Hudson's Bay Store a high class of trade is done and only the best American and Canadian lines handled. The motto of the firm is "buy the best," and seldom if ever is a complaint heard from a customer. The present footwear department is sadly cramped and will shortly be enlarged, affording three times the space now occupied. In this section are a number of well dressed, silent salesman show cases which result in attracting a large amount of business. Mr. Matheson has inaugurated a number of improvements in the department and reports matters as brisk. The January trade was very satisfactory owing to snow and favorable weather. Mr. Matheson likes the go-ahead spirit and aggressiveness of the West and, since taking up his abode there, has done considerable curling in his spare time.

## Buttons Still Height of Style

However much the smart French woman may cling to Paris ideas of gowning and the American may clamor for foreign importations, they both show their preference for American footwear. Hence at Nice, with her machine-embroidered morning frock, at Monte Carlo, with gay Oriental evening gown; at the Auteuil Chrysanthemum Show, below her warm fur wrap, and with the plain morning suit along the Paris Bois there is found the Parisienne completing the smartest costumes in the world with the buttoned boots that Americans now accept as the height of the style. And to be sure this is the greatest commendation on the part of the Parisienne, for in every accessory of her costume she is most fastidious, but in none more than in her footwear. Hence the button boot is the Paris preference. The buttoned boots show that the thirteen and sixteen-button styles have greatest fashion favor, while both boots and pumps prove the popularity of the receding toe. In low shoes, too, the buttoned effects will be worn this spring with

better fashion-value than ever. The sixteen-button boot is the most appropriate accessory for the smart Paquin suit worn for the fashionable afternoon promenade. It has a patent-leather vamp, effectively stitcheled and perforated, the suede upper in that light grey so much liked by the French, smart extension sole and ultra-Cuban heel. The buttons have a trimming effect in that they are of light grey pearl, metal riveted.

## Advantage of Counter Check Books

"I think that every shoeman should use countercheck books" remarked a London retailer the other day. "And demand that every person desiring to exchange a pair of shoes should return the bill with the goods. I am not a very large dealer, but I have been taken in owing to not using check books. A woman walked into my shop the other day and asked me to exchange a pair of dongola McKay sewn boots. I looked at them and remarked that I thought she had made a mistake as I could not recall having anything like them in stock. She insisted that she had secured them in my place and, as they were only a \$2.50 pair, I made the transfer for her. On showing them to a neighboring dealer he informed me that another establishment had had them on a bargain sale and that this pair had gone for \$1.65. I do not suppose that I would have changed them only that this woman had made several purchases from me a few days before. Needless to add I have never seen her since and do not expect to run across her again, as I am told that she lives some miles out in the country."

## Repair Men Must Get More Money

The shoe repairers of the present time are studying how to derive a living from their work. On account of the advanced price of leather, the repair shoemaker must do one of two things: get more for his work or put in a cheaper grade of stock.

In talking to people in that vocation the impression is gained that they appear to lack the necessary knowledge of salesmanship. In most cases they have a set price for doing certain jobs of work, and when a customer comes in they tell him the price, without endeavoring to make any explanation.

Now, it would be more businesslike if the repair man would say: "I can half-sole your shoes for forty, fifty or sixty cents, according to the grade of leather you wish put in the work," at the same time stating that there are several grades and weights of leather, each having a different price. Then, he should show the customer some samples of the leather while explaining the difference in the cost of the jobs, and eight of every ten customers would say, "I want a good job; give me the best leather, at the higher price." The repair man would then have a good profit, and the customer would be satisfied.

Just a little talk and explanation would make all things agreeable. But, in most cases, when a customer comes in the repair man states a price and never explains that he has oak and hemlock leather, and heavy and light stock, or poor grades and good ones that could be used for soling.

That is where salesmanship comes in. The reason the salesman is employed to sell goods is because he meets the customer and explains the difference in quality, and uses diplomacy in his explaining.

The naming of a price is nothing, because it could be done in a letter; but a salesman on the ground can argue any questions as to the merits of his goods that might come up. The repair man could in this manner build up his prices and trade on better qualities, and do a more satisfactory business by simple explanations.

Let the repair man try this experiment and he will soon have his customers educated to ask for better leather on their shoes when repaired, his trade will think more of him, and feel that he is a man who knows his business.

## Good Suggestion Regarding Returns

Everywhere along the line shoe manufacturers have shown an interest in and appreciation of our endeavors to throw light upon the returned shoe evil and to find a remedy for that evil, says American Shoemaking.

Each man asked has gladly contributed an opinion and has told what he has done or how he tried to do to reduce the trouble in his own business. Said one such to-day: "I believe much depends upon the matter of education. We strive to educate both the retailer and the wearer of the shoe and to this end we put a slip in the carton with each pair of our high-cuts and heavy men's and boys' shoes.

Since the use of the following slip we find a large decrease of the claims for damages or for poor wear.

Caution to the Wearer

From the manufacturer of the pair of shoes contained in this box

If your shoes are wet, do not place them too near the fire to dry too quickly, as it destroys the life of the leather, especially when they have come in contact with ammonia acids from the barnyard.

The leather in this pair of shoes is known as chrome tanned leather and all animal fat has been extracted from the same, in order to make it soft and pliable.

To overcome the action of ammonia acids which quickly enter the pores of leather it is necessary that the shoes be occasionally washed with clean water and oil or grease applied which is free from salt. This will preserve the leather and keep it nearly waterproof and will also add greatly to the wear.

Manufacturer.

## Tells Time By Her Slipper

Miss Jose Collins, prima donna of "The Merry Countess" at the Royal Alexandra Theatre, Toronto, recently, was the happy recipient of a handsome and very valuable present. It is a dainty little 22k. gold watch, studded with diamonds and rubies and attached to a solid gold buckle to be worn on a delicate little slipper. Miss Collins wears the slipper around her apartment, and on very special occasions when she is out visiting. It is not designed for street wear. The prima donna explained that she had always abhorred the idea of inquiring the time of day or night, as the case happened to be—and, of course, could not very well take a peak at her own watch for fear people would think she was bored. Now she is as happy as a child and has bid farewell to suspense superinduced by ignorance of the correct time. All she has to do now is to protrude her pretty foot and peep downward.

## Shoe Dealers Are Better Equipped

"Yes sir, the average shoe merchant throughout the country looks upon his business to-day with a great deal more pride and satisfaction than he did a few years ago. The retailer believes in himself and his stock," remarked an old shoe traveler this week. "Remember about a score of years ago when I first went on the road many a man seemed to feel as if he should apologize for being in the trade. He did not want to see samples as he thought that you were trying to foist something on him and load him up with stock that he could not sell. Now the majority of the live ones will gladly visit a sample room whether or not they want to buy anything in your range. They like to look at the styles and see what the various firms have to offer. The dealer is growing broader and more enlightend in his ideals and methods. I know that there are a number of unprogressive fellows, but they are being left in the race. Another thing that I remark is that the alert retailer is a much better buyer than he used to be. He knows values and quality to a finer degree and can size up the saleability of a shoe quicker. He is in close touch with the actual needs of his trade and a much shrewder purchaser. He can tell you if you are overcharging him for a certain line and will

soon let you know where he can get it a few cents cheaper, and you have to be ready to show him otherwise. There may be pessimists but the standard of footwear retailing is going steadily up. More intelligent and aggressive men are entering the ranks. No more wideawake business exponents are met to-day than the shoe merchant, taking him as a class. He is specializing, his stock is better arranged, his goods kept cleaner and neater, his windows and his fixtures have improved, his departments are more conveniently laid out, he studies the individual wants of his customers and he is becoming master of himself and his surroundings. He reads trade newspapers, studies the latest styles and the market situation, visits the wholesale centres more frequently and seeks to gain knowledge in every way."

## The Trade was Born in Him

William Davis, of Toronto, was recently appointed representative in Ontario for the Fraserville Shoe Co., of Fraserville, Que. He knows fully as many retailers throughout the province as perhaps any other traveler, for he has covered the ground from Windsor to Cornwall and north throughout New Ontario. He is a Leeds county boy, being born near Lyndhurst. As a youngster he was always playing cobbler and has been identified with the shoe trade in one form or another since he was sixteen years old. His mother then gave him \$100 and he drove many miles with a shoemaker of Lyndhurst to Kingston to buy leather. He took a position in the shop of this son of St. Crispin who, in consideration of being paid a fee, taught the youth all that he knew in the art of repairing and making boots. Mr.

W. Davis, Toronto

Davis also learned pattern cutting and other branches of the trade. He then went to Watertown, New York, and engaged with a shoe manufacturing firm in that city and, after a few months in the factory went on the road. He spent seven years across the boundary and coming back to Canada successfully managed a large retail shoe business in Teeswater for nine years. He then retired from this end and later resumed a traveling position. He covered south-western Ontario for two years for Coates, Burns & Wanless, London. Later he was with the George E. Boulter Co., looking after New Ontario and making special trips throughout western Canada. For some time past he has represented the J. D. King Co., of Toronto, in eastern and northern Ontario. He is meeting with good success in his work in Ontario for the Fraserville Shoe Co. He keeps in close touch with the trade by means of personal letters and frequent calls. Mr. Davis is a genial, good-natured salesman who has many friends.

## Managers Hold Two Days' Conference

A successful conference of the managers of the stores of the United Shoe Dealers was held in Toronto on Monday and Tuesday of this week. This organization has had a very gratifying year in its six establishments at Lindsay, Parry Sound, Owen Sound, Port Arthur, Sudbury and North Bay. Plans for the coming year were discussed and ideas on various subjects exchanged. All the managers, with the exception of M. Wark, of Port Arthur, were in attendance—R. D. Menizes, of Sudbury; Wm. McDowall, of North Bay; James Flett, of Owen Sound; M. H. Sisson, of Lindsay; H. D. Wing of Parry Sound, and J. W. Foy, of Toronto. The stores have just completed stock-taking and the representatives, while in Toronto, did considerable buying. All the shops of the United Shoe Dealers have attractive fronts and splendid display windows, with an electric sign over the entrance "United Shoes." A universal label is used and adds to the inviting appearance of the interior of each place. The label is a neat one in black and white. In large letters are the words "United Shoes," and the slogan of the organization is "Stores of Quality and Fair Dealing." Another feature is that no mid-winter reduction sales are conducted, the managers not deeming this method necessary to boost trade. They watch carefully all slowly moving lines and get rid of any dead stock in other ways and with excellent results.

## Prepare Early for Easter Trade

Retail trade throughout many sections of Canada has been rather quiet for the last fortnight owing to an absence of snow in many parts of the country. When the weather is unseasonable it affects practically all lines of merchandise and shoes are no exception. During January there was almost a summer temperature and very little snow and this set trade back some, but the January reduction sales helped to make things lively with many dealers. The outlook for spring business is good and the alert shoeist is already making preparations for a record Easter turnover which will come unusually early this year, the festival falling on March 23rd. Shipments of spring goods are being made by manufacturers and wholesalers and the merchant who would capture his share of Eastertide sales should see that his stock is well assorted and in good shape for that period. Now is the time to get busy and make plans for a very active season of selling. Do not leave matters off until a week before Good Friday and then wonder why the other fellow has carried off the bulk of the revenue in spring footwear. Forewarned is forearmed in any commercial undertaking.

## Senseless Price Cutting in Rubbers

The interest taken by every retailer in the price of rubbers is actuated not so much because of what they will have to charge the consumer, as on account of the profit that is to be made on the sales, says a leading Canadian wholesaler.

The price charged to the consumer is, unfortunately, regulated to a large extent by the price charged by surrounding competitors, and regardless of profit or loss many retailers will cut rubber prices till the margin of profit is reduced to a narrowness that makes the sale of rubbers practically a profitless transaction.

Considering the importance and magnitude of the sale of rubbers during fall and winter this state of affairs should be met and faced by every retailer who wishes to conduct his trade on the sound business principle of doing the best for his customer at the most advantage to himself.

The retailer who will cut prices in order to undersell his competitor will naturally come to buying cheaper rubbers. This method is suicidal from a business standpoint, and only those who have suffered the consequences of reduced trade through selling cheap rubbers know and realize the fallacy and danger of the cut-price system.

As soon as the retailer commences to cut prices the conditions of all his transactions wear an entirely different aspect. The natural sequence of a cut in price is a cut in profits. This has to be made up by a cut in values, with the result that in the end you are selling an inferior make of goods at a few cents less to consumers who, sensibly, demand and are willing to pay the price of the best.

When rubbers split or wear through after a little use the wearer does not consider that he has paid a few cents less at your store than he would have paid at the store next door—he only knows he had made a bad bargain at your store and will not be inclined to do more business with you. What does the retailer make out of such sales? Nothing!

## New Shoe Manager is from the East

One of the finest equipped departmental stores in Moose Jaw, Sask., will be opened next month by the Allen, Cummings Co., Limited. The store, which is a splendid structure, six stories high and magnificently laid out, will be well equipped in its departments. One of the nicest will be that

L. Finland, Brampton, Ont.

devoted to the footwear branch, where all the highest grades of shoes will be carried. L. Finland will be in charge of this section. He is a son of John Finland, a widely known retailer of Brampton, Ont., and has spent all his life in the shoe business. He began at an early age by learning the practical end of the trade and worked on the bench in his father's shop for a number of years. He then went on the floor and developed into a capable and thoughtful salesman. About a year and a half ago, he took a position with the T. Eaton Co., Toronto, and rose rapidly, occupying the position of assistant in the boys' section until he resigned a few weeks ago to go West. "Lock," as he is called by his many friends, is earnest, energetic and alert, and no doubt will make good in his new and most responsible position. He will have as his assistant Mr. Leslie, late of Scarrow Shoe Store, Owen Sound, and Miss Duffy, an experienced sales-lady who has spent several years in the shoe department of the Murray-Kay store, Toronto. The remainder of the staff will be engaged in Moose Jaw.

Commercial failures in the Dominion during 1912 were more numerous than in either of the two years immediately preceding, but the aggregate indebtedness on the other hand, was the smallest since 1906. Total insolvencies numbered 1,357, against 1,332 in the previous year, 1,202 in 1910, and 1,442 in 1909, whereas the \$12,316,936 of liabilities compared with \$13,491,196, \$14,514,650, and \$12,982,800 respectively.

## Get Around and Visit Others

"I haven't had a vacation in four years," said a certain shoe retailer to another. "There are always so many things here that require my attention that I haven't been able to see my chance to get away from one year's end to the next."

"That's not it," said the other. "The fact is that you get into a rut and don't know it. You don't get far enough away from your work to get the right perspective. If you could go away for a few weeks you could look back and laugh at some of the little things that you have allowed to chain you down here for four years. When you get far enough away big things look little, but when you get too close to little things they look big."

"Yes, I know," said the first, "but my work is different."

"Not a bit of it," protested the other. "I used to think that myself, but once I had to take a trip for sad personal reasons and I discovered that the world really went on about the same. Since then I have frequently taken a trip and it always puts new vigor into my work. I begrudge neither time nor money spent in the right kind of travel."

## Oldest Shoe Factory Still Stands

Very likely the oldest shoe factory on this continent is in Danvers, Mass. It is known as the Putman shop, and was built before the Revolution. In the United States census of 1786, it is mentioned as a manufacturing site, and it was evidently a factory of much importance at that early date. The building is well preserved to-day, and many of the ancient tools, etc., that were then used in the factory, are still to be seen. The tools were made of wrought iron, and the patterns were made of board, very coarse. Cutters who are used to the thin patterns of to-day would find these patterns exceedingly awkward and clumsy to handle. The lasts that have been saved in the old shop are all very crude, and the old books show that they cost from 25 cents to one dollar per pair, according to the style. The shoemakers were paid from 15 to 25 cents per pair for making shoes, and averaged from \$5.00 to \$10.00 per week. At first all the shoes made in this factory were taken to Boston in ox carts, but later they were packed in barrels and sent in horse wagons.

## New Industry Will be a Credit

This is a picture of the new factory of the Dominion Tire Company of Berlin, which is rapidly nearing completion. The structure is the last word in lay-out, machinery and equipment. It will prove an important addition to the large industries of busy Berlin, which is now one of the most important manufacturing centres in Ontario. The Dominion Tire Company, which has been incorporated with a capital of one million dollars, has secured a fine site of forty acres. The main building is of steel and concrete, has dimensions of 432 by 90 feet, 5 storeys including basement, each floor has a depth of 17 feet, the "all-daylight" windows are on every side, and the operatives will be flooded with the light of day. Niagara Hydro-Electric, and also steam power will

be used. Electricity equal to 1,500 horse power will be necessary to start the wheels revolving. Every mill and every calender will be brand new, and of the very latest pattern.

The Canadian Pacific and Grand Trunk Railways will each have their sidings, thus ensuring prompt shipment of goods. Realizing that ideal conditions are conducive to the best work, the Company has instructed Mr. Albert Kahn, the noted architect of Detroit, to harmonize both the external and internal arrangements of the Factory, so that this result may be attained, and that each workman employed will have every incentive to give the best that is in him to the service of the Company. There never was in the history of commerce such a demand made on the manufacturer as that made by the consumer of pneumatic rubber tires. The "best" regardless of price is what the owner of every car demands. The Dominion Tire Company's output will find a ready sale. What the price will be is not yet known, but there can be no doubt that the keen competent men who will direct the destinies of this important Company will furnish the public with a tire that is all right and unexcelled in point of appearance and durability.

The Canadian Consolidated Rubber Company, Limited, will be the sole selling agent and distributor for "Dominion" Tires.

## Pay Hundred Dollars a Day

One hundred dollars a business day is roughly the rental of the Tooke store, St. Catherine St., Montreal, at the corner of Peel St. When the Semi-Ready Co. purchased the business of R. J. Tooke, they wanted to buy the Peel street site as well, but Mr. Tooke refused to sell, claiming it was one of the best, if not the best, site in Montreal. In fact he refused an offer of half a million for it. So an agreement was come to by which the Semi-Ready Co. leases the premises for twenty-one years at the rate of \$30,000 a year, which is practically one hundred dollars a business day.

In connection with the transfer of the R. J. Tooke business to Semi-Ready, Limited, the directors of Semi-Ready to be elected to the Tooke directorate are: C. H. Nelson, president; Alfred Wood, vice-president; C. P. Creamer, managing director; H. A. Nelson, secretary-treasurer; J. N. Brownlee, C. F. Nelson and E. L. Nelson. Messrs. Wood and Brownlee are actively interested in a number of shoe companies as well, being well known to the footwear trade.

## Bringing the People Back to You

Selling for one time represents a mighty short-sighted policy. No matter how big the initial transaction, if it is not the forerunner of other business its value to the store is limited. Few, if any, shoe stores can build up a permanent success on merely transient business. The first transaction should be not merely a sale, but an object lesson. It should exemplify and drive home in the customer's mind the service, the courtesy, the intelligence and the merchandising efficiency of the establishment. Then the customer is pretty sure to come back, and with a continuance of similarly good treatment will become one of the hundreds or thousands on whose trade the future of the store securely rests. "Sell for to-morrow as well as for to-day" is a good motto—one well worthy of adopting and living up to. Or put it a little differently: "Sell for a permanent customer and for an established trade."

Play may combine with work at times, but it should not be allowed to take the whip and reins.

## Cutting Prices From Mean Motives

If your competitor is a price-cutter don't follow in his footsteps. Blaze out a pathway for yourself. Let him plow his furrow alone.

When you have a line of shoes that have been on your shelves an undue length of time, and are eating up interest as well as occupying space that might with advantage be given to more profitable lines, put them on the bargain counter by all means. But that is not cutting prices. It is getting rid of cumbersome goods at the best price that is procurable for them, although that best price may be less than the original cost. It is better to lose 10, 25, or even 50 per cent. than the whole of the sum invested. And then it can sometimes be made a leader to attract transient customers to the store. The price-cutter, on the other hand, cuts from pure cussedness. He is looking for notoriety just as the man who risks his life to gain applause is doing. It does not matter to him whether the shoe is a quick or a slow seller, when the price-cutting spirit is upon him he slashes figures as he would sticks. To him to talk durability or quality is to talk foolishness. But he who talks quality and advertises quality will be in business when the blinds are down on the price-cutter's window.

## Company Wins the First Round

The Federal Government made its third anti-trust move against the United Shoe Machinery Company in a civil suit filed at Trenton, N.J., charging the so-called trust with wielding an alleged monopolistic power and unfair trade tactics to force the Keighley Company, a competitor, into an unlawful contract for the leasing, sale and fixing the price of an "inseam trimming machine." The United States District Court was asked to terminate the contract. The government's position was a severe arraignment of the "Trust's" alleged unfair practices. The vigorous enforcement of its methods was declared to have driven practically all competitors from the shoe machinery industry, giving the \$25,000,000 United Company control of more than 99 per cent. of the trade.

In this connection a recent despatch from Washington says: "The government suffered its first big defeat in the recent anti-trust campaign this week when the Supreme Court held that the officials of the United Shoe Machinery Company had not violated the Sherman Anti-Trust Law by organizing that company. The court, however, did not pass upon the legality of the system by which the company leases machines on terms that "independent" machinery be used.

## Upward Career of a Shoemaker

One of the most successful shoe factories in the eastern part of Canada is that of the A. A. Durkee Co., Limited, in Truro, N. S., and the volume of business in hand taxes the labor equipment to its capacity. It was in June 1909, that Mr. Durkee started in a small shop just about the size of his present office, and it was an object of considerable curiosity and speculation in Yarmouth. In November of the same year the A. A. Durkee Co., was formed, the retail end of the business closed out and the manufacturing end moved to larger premises. In the summer of the following year the plant was again shifted to more spacious quarters, and in July, 1911, the new factory in Truro was completed and the business transferred to that town from Yarmouth. The structure is admirably laid out and the plant equipped with every device to aid good shoemaking. This was a long and important step and the results have justified it. It was thought that the company was anticipating the future, but, at this early date, other plans are maturing to provide facilities to keep in advance of a rapidly increasing demand. Mr. Durkee believes in Canada as a land of young men who are

willing to put their shoulder to the wheel and lift long and steadily. He was born in Canada but got his preliminary business training in the shoe centres of the United States. "The rest of it I have got as I went along," he remarked recently. "I live to learn."

## Takes Interest in Civic Affairs

"If you want anything done get a busy man to attend to it, the others have no time." This is a saying frequently heard, and in many respects it presents a true state of affairs. As vice-president and managing director of the Miner Rubber Co., of Granby, Quebec, W. H. Miner appears to be fol-

W. H. Miner, Granby, Que.

lowing worthily in the footsteps of his uncle, the late S. H. C. Miner, founder of that company, who, although he had many and varied interests, managed to find time to serve the town of Granby as mayor for the long period of twenty-three years. W. H. Miner is described by his friends as a chip of the old block and he is giving considerable attention to municipal affairs. After the death of his uncle in June, 1911, W. H. Miner was elected a member of the town council and, so well has he ministered to the interests of the ratepayers that recently he was re-elected by acclamation for a further term. He enjoys the confidence and esteem of the citizens to a marked degree, many of whom are predicting that, at no distant date, he will be made the occupant of the civic chair in Granby, which his good judgment and sound business experience amply qualify him to fill.

## Why Small Store Should Excel

A store exists principally to sell merchandise. Therefore those who are entrusted with the selling—the salesforce—must receive especial thought when the matter of efficiency is considered. In the large stores the salesforce is directly under the control of the various heads of departments. In smaller stores, where the proprietor attends to practically all of the executive work, or where a very limited number of department heads are employed, the salesforce comes more directly under the supervision of the management. And, unquestionably, the moral influence exerted by the owner of any business is stronger than that which any subordinate head can impart. For this reason it should be comparatively easier for the owner of a small store to increase the efficiency of his help, if he makes a conscientious effort to do so.

## SHOE NEWS IN PARAGRAPH

C. M. Sicotte, shoe retailer, of Montreal, has assigned. John Ament, shoe dealer, of St. Thomas, Ont., is retiring from business.

W. S. Baldwin, of Humboldt, Sask., has sold out to W. R. Stevenson.

The new Hudson's Bay Co.'s store will be opened in Calgary on May 1st.

Reid & Charles, shoe retailers, of Kingston Ont., have dissolved partnership.

W. J. Webster, of Montreal, shoe jobber, has been succeeded by the Webster-Charles Shoe Co.

John R. Peters has bought the harness and leather shop of A. B. Unger at Rosthern, Sask.

H. O. Hart is continuing the leather and harness business of the late Patrick Hart, of Kingsville, Ont.

N. E. Kennedy, grocer and shoe retailer, of Wheatley, Ont., has sold his business and is holding a clearing sale.

E. C. Scarrow, shoe retailer, Owen Sound, was in Toronto last week on business.

George Cain, of Miner Rubber Co., Montreal, was in Toronto and other Ontario cities recently.

R. B. Wanless, of Coates, Burns & Wanless, London, Ont., was in Montreal recently.

R. F. Foote, of Independent Rubber Co., Merritton, Ont., was in Toronto for a few days last week.

J. W. Leslie, of Hamilton Shoe Co., Hamilton, Ont., was in Montreal lately for a few days.

W. V. Ecclestone, manager of the shoe department of the T. Eaton Co., Toronto, was recently in Montreal.

J. Adams of the Rideau Shoe Co., Montreal, was in London and Toronto last week on business.

R. B. Griffith, wholesale shoes, Hamilton, was in Montreal last week on a business trip.

Brown's Limited, of Portage la Prairie, departmental store, will increase their capital stock from \$200,000 to \$500,000.

The Scout Shoe Co. and Jackson and Savage, of Montreal, have amalgamated their interests and will henceforth do business under the style of Jackson & Savage, Limited.

B. D. Neily has bought the shoe business carried on by J. E. Lloyd & Co., of Bridgetown, N.S., and has taken possession.

J. W. Elliott has opened a new shoe store at 630 Barton E., Hamilton. The location is on the corner in a rapidly growing district.

H. G. Middleton, of Middleton & Co., Winnipeg, was on a trip east in the early part of February and spent some time in Montreal.

H. B. McGee, sales manager of Minister-Myles Shoe Co., Toronto, who was operated on some time ago for appendicitis, is able to resume his duties.

Mr. McMartin, of Walter Williams & Co., Montreal, Canadian agents of Brough, Nicholson & Hall, Limited, was on a trip through Ontario recently.

Mr. Casselman is opening a new shoe store on Dundas street west, Toronto, and is having his place of business neatly fitted up.

William Garside, late of the firm of Garside & White, Toronto, has arrived at Los Angeles, California, where he is spending the winter in company with Mrs. Garside.

James Joyce, of St. Clair avenue, Toronto, is opening a branch on Nairn avenue, which is known as the Citizens' store.

Fred Knibbs, who has been covering Northwestern Ontario for Ames-Holden-McCready, Toronto, has been ap-

pointed sample room salesman at the warehouse and assistant to the manager, Charles Bonnick.

G. A. Lyons of the G. A. Lyons Co., dealers in shoe findings, New York City, was in Toronto last week on business.

F. A. Guinivan, general manager of the United Co-operative Shoe Stores, Montreal, was in Toronto this week for several days on business.

J. A. McLaren, of McLaren & Dallas, wholesale shoes, Toronto, is spending a few days on business in Montreal, Quebec and other shoe centres.

O. Dufresne, of the firm of Dufresne & Locke, shoe manufacturers, has again been elected as alderman for the progressive town of Maisonneuve, Que.

The Sussex Mercantile Co., of Sussex, N.B., recently suffered by fire when their branch store at Elgin was burned to the ground with a loss of \$20,000.

Word has been received in Toronto of the death of L. C. Bliss, president of the Regal Shoe Co., who passed away recently in Florida, where he was spending the winter.

H. Dallas, of Toronto, who represents several Old Country firms in the shoe line, left this week for England on a business trip.

E. Arsenault, of Montreal, has been appointed representative for Blachford, Davies & Co., Toronto, in Montreal. He will also cover the province of Quebec.

Warren T. Fegan, of the Big 88, Queen street west, Toronto, who has been spending some time in various southern cities, is expected home next week.

T. R. Trudeau, who until last Christmas represented A. Corbeil, Montreal, in territory west of Toronto, has been appointed manager of the Corbeil retail shoe store at 790 St. Catherine street east, Montreal.

Charles F. Rannard, of the Rannard Shoe Co., Winnipeg, is on a business trip to London, Galt, Toronto, Montreal, Boston, New York and other eastern centres on a buying expedition.

The many friends of Charles Fogelberg, superintendent of Getty & Scott, of Galt, will extend sympathy with him in the death of his only son, a bright boy in his teens, who passed away last week.

William Slater, 20 years of age, second son of Geo. A. Slater, of Geo. A. Slater, Limited, Montreal, lost the sight of his eye whilst playing for the M. A. A. A. senior hockey team at Shawinigan Falls, Que.

D. D. Hawthorne, wholesale shoe dealer, Toronto, who has been ill for several months is now getting along nicely and gaining strength steadily. He contemplates a trip to the South just as soon as he is able to undertake the journey.

J. F. Cairns, of Saskatoon, is rapidly removing the balance of his stock into his new building, the finest of its kind in the city, and expects to have everything going smoothly in Saskatchewan's largest departmental store in a few days.

W. Howarth, 952 Gerrard street east, has opened a branch at 176 Main street east, Toronto, in the store lately occupied by Mrs. A. E. Arthur. Mr. Howarth has done well in the boot business and is working up a big trade in the eastern section of Toronto.

There were thirty pairs of rubbers in a bag which John Marcovitch, 253 Clarke street, dropped, after, as is alleged, rifling the store of Emile Larose, 325 St. Lawrence boulevard, Montreal. Constable Lacroix recovered the booty and took Marcovitch before Judge Leet.

T. H. Bigwood, president of the Ontario Shoe Retailers' Association, who conducts three stores in Toronto, has sold his branch at 630 Queen street west, known as the Ideal Shoe Store, to Harry Benson, late of R. B. Griffith & Co. of Hamilton, who has taken possession.

A change in the business formerly conducted by R. Barrett has taken place in Newmarket. Mr. Barrett will continue the making of harness, and the repairing of shoes, etc., but in connection with this end of the business there will be

conducted a retail boot and shoe store under the proprietorship of Andrew Lockhart.

The Menzie Rubber Co., of Toronto, Limited, which has recently been incorporated with a capital of \$40,000, is empowered to deal in and manufacture rubber goods. The provisional directors are William Menzie, Edward D. Apled, William C. Sloan, L. Donaldson and L. Hunt.

Bert Sproul, who is a member of the McCall Shoe Co., 666 Queen street west, Toronto, was married recently to Miss Sadie Pearl Patterson, daughter of Mr. and Mrs. John Patterson, of Caledonia, Ont. Mr. and Mrs. Sproul have taken up their residence in Toronto.

Damage through water to the extent of \$2,000 was done to the stock and premises occupied by A. F. X. Beaudry, leather merchant, Montreal. Stock was fully insured, however, and the firm have moved across the street at 278 St. Paul, which they will occupy permanently.

Fred. R. Foley, shoe retailer, of Bowmanville, Ont., has purchased a new store on the opposite side of the street on which he is at present located and is converting the premises into an up-to-date and well appointed shoe shop. Mr. Foley expects to move into his cosy business home in a few weeks.

F. J. Lashbrook, of London, who has for several years represented Getty & Scott, of Galt, in Western Canada, and is one of the best known salesmen on the road, has joined the traveling staff of Kirvan-Doig, Montreal. He will represent that firm throughout the West, which he has covered twice a year for a long period.

Raymond Hitchcock, who appeared in Toronto in "The Red Widow," was once a shoe clerk in John Wanamaker's store in Philadelphia some years ago. Then "art" burned within his rickety chest, and he joined an opera company, and acted as a chorus man. One night the opportunity presented itself for him to show what he could do, he was given the principal comedy part, and he made good. Since then Mr. Hitchcock has never had to look for an engagement.

E. F. Hutchins, president of the Great West Saddlery Co., Limited, was in Saskatoon recently in connection with the opening up of business of the Saskatoon branch of his company. The building is a handsome brick and stone structure, seven floors in height, and 50 x 120 feet in area. G. R. Fogg, formerly sales manager at Winnipeg, is now manager in charge of the Saskatoon branch.

Nobody ever gets a pair of boots repaired in Buenos Ayres; it is cheaper to buy a new pair. At least that is the statement of H. R. Poussette, Canadian trade commissioner to the Argentine Republic. American boots and shoes are being imported in large quantities, the total value of such imports rising from \$39,561 in 1908, to \$327,164 in 1912. Canadian boot and shoe men do not seem anxious to compete. American boots sell at about \$3.50 against \$6.50 to \$10 for British-made boots.

A daring robbery was committed by a gang of yeggmen, who got away in an automobile recently when they smashed and entered the boot and shoe establishment of Mr. J. L. Saucier, 1112 Rachel street, Montreal, and carried off several hundred dollars' worth of goods. Shortly after the robbery the police noticed a big touring car rushing along Rachel street at a high rate of speed. This is the second time since October that this store has been robbed by a gang of automobile bandits.

Among the callers on the trade in Toronto during the past few days were: R. A. Briscoe, Galt; O. M. Kinzie, Preston; D. McTavish and H. B. McGregor, of the T. Eaton Co., Winnipeg; D. Johnson, of G. G. Lennox, Winnipeg; T. E. Vanstone, of Yorkton, Sask., who recently bought out the Yorkton Supply Co.; Percy Horseman, of Clinkskill, Limited, Saskatoon, and Alfred Price, who is starting business in Camrose, Alta., under the style of Cunningham & Price.

In connection with the fire which took place last month in the handsome new warehouse of the Canadian Consolidated Rubber Co., of Edmonton, J. L. Bond, manager, reports that all the stock of the company had not been transferred to the new building. The company had quite a stock of

winter footwear which escaped the flames and this leaves them in a first-class position to handle all orders. No customers have suffered owing to a shortage. The company have secured temporary premises at 640 Third street, Edmonton, and are doing business as usual, having been greatly assisted by the fact that the branches at Calgary and Saskatoon carry heavy stocks on which they were able to draw.

Frank Mercer, who has been representing Hanan & Son, of Brooklyn, N.Y., and covering the Southern States in the interests of that house, has returned to Toronto and taken a position with the Relindo Shoe Co., with which firm he was formerly identified. He is a capable salesman, and of a bright, cheerful disposition. His many friends in Ontario are glad to welcome him back to his old ground. For some years he was in the shoe business for himself in Toronto and gained a thorough knowledge of the trade from the retail end.

A new wholesale shoe establishment has opened in Hamilton on King William street. The men behind the enterprise are John Townsend, late with the London Shoe Co., and Arthur Angus, who was in the retail shoe business in Hamilton some five years ago and is now a manufacturer's agent. Messrs. Townsend and Angus are both well known to the trade and have a large number of friends, who believe that they will do well in the jobbing line. Their location is within a block from the city hall, they having taken one floor of a large new building.

Writing to a Toronto jobber a significant note is sounded by a Montreal manufacturer who says, "The price of sole leather is from 30 to 35 per cent. higher than it was last winter. Hides are reported higher than at any previous time, and 20 per cent. higher than in 1911 and 35 per cent. higher than in 1910. We are not buying any large quantities of leather at current prices, but there is a steady demand for medium sized lots. Shoes are likely to make another advance in price before long.

Some of the independent rubber companies have decided that they will not carton lumbermen's duck goods this year. They say that very few dealers desire them to be put in cartons and the cost has been heavy. The average outlay for good cartons is about four cents each, or about forty-eight cents per case. Then there is the warehouse space, extra freight, etc., and the cartons being so bulky they break very easily. Cartons are also reported to be going up in price all the time.

The C. S. Hyman Co., Limited, of London, Ont., have been newly incorporated with a capital stock of \$3,000,000, divided into thirty thousand shares of \$100 each. Under the federal charter granted them the company are empowered to export and import hides and skins and carry on the business of leather manufacturers, dealers, tanners and wool pullers, to manufacture and deal in all kinds of leathers and leather goods, and to carry on many other lines of allied business. Various additional powers are also conferred upon the company, such as to produce or accumulate electricity and to sell or dispose of any surplus, and to establish and support associations, funds, trusts or conveniences calculated to benefit employes or ex-employes of the company; to grant pensions and to make allowance and to make payments toward insurance, etc.

A. R. Clarke & Co., Toronto, are opening a branch office in Quebec city, where stock will be carried. Griffith Clarke is now in that city making the necessary arrangements. The firm have just completed an extension to their enamelling department, 82 x 88 feet, one storey high, which will add to their facilities of patent leather. During the past week a permit was taken out for another building 135 x 56, which will be of brick, four stories high, and will be used for the glove manufacturing, sheepskin coats and workmen's shirt departments. The structure will cost about \$25,000 and, when completed, there will be a rearrangement of the foregoing branches, one flat being devoted to each, which will enable the firm to augment their output and install additional plant. They report that the demand for patent leather is constantly on the increase and the outlook for the coming year is very promising.

## HAPPENINGS IN FACTORIES

The Rock Shoe Co., Quebec, report their factory as being very busy at present.

The Elkman Shoe and Supply Co., of Brampton, Ont., have added several new machines and are now in full swing.

Most of the shoe factories in Montreal and Quebec say things have slackened a little during the last five or six weeks, although they are all busy with fall samples.

Young Bros., Limited, Toronto, who have been incorporated with a capital of \$40,000, are empowered to manufacture and deal in leather goods, novelties, etc.

U. Bouliant, vice-president of the Rena Footwear Co., Montreal, has been ill recently, but is reported better and is around again.

The Plessisville Leather and Shoe Co., who until recently only engaged in the tanning business, have opened a factory for the manufacture of McKays.

A new No. 5 lasting and other machines have been installed in the factory of the Wayland Shoe Co., Montreal, by the U. S. M. Co.

Mr. Brimblecombe, formerly with the Kimmel Felt Co., Berlin, has taken charge of the cutting room of the Murray Shoe Co., London.

The cutting of shoes began this week in the new factory of the W. E. Woelfle Shoe Co., Berlin, Ont. The machinery is now being installed.

E. Fournier, manager of the Plessisville Leather and Shoe Co., Plessisville, Que., was in Montreal recently on a business trip.

The Relindo Shoe Co., Toronto, will install more machines and increase the output of the factory from twenty-five to forty per cent.

A. Brandon, of the Brandon Shoe Co., Brantford, Ont., was in Boston, Brockton and other shoe centres recently, on a business trip.

B. Law, who has had charge of many tanning yards in Scotland, South Africa, and other countries, has come to Canada and taken a position with a firm in St. Catharines, Ont.

The plans for the new factory of the Galt Shoe Manufacturing Co., Galt, have been approved. Tenders for the big building will be called for at once and work begun in the spring as early as possible.

Mr. Porter, who has been in charge of the making room of the Slater Shoe Co., Montreal, has returned to Boston owing to the poor health of his wife. Those under him presented the departing member with a fine traveling bag.

The Superintendents' and Foremen's Association, of Montreal, held a highly enjoyable ball and euchre party in Stanley Hall recently. The event was a decided success and the officers are to be congratulated on the manner in which it was managed.

P. I. Hersey, treasurer of the Regal Shoe Co., Boston, and Paul Tetzlaff, of the Philadelphia factory of the company, were in Toronto last week on business. It is understood that the Regal Company are considering extending their Canadian factory at an early date, but definite plans have not yet been decided upon.

St. Catharines has landed a big industry in the Canadian branch of the B. F. Goodrich Rubber Co., of Akron, Ohio, where the concern employ 1,500 hands. The Goodrich Company, which receives 17 acres of land and exemption of ordinary taxes on all assessment above \$10,000, expects to employ 1,000 hands. The company guarantee to expend \$100,000 in wages annually.

Coquitlam, B.C., will shortly have a shoe factory if present plans materialize. It will be established by the R. B. Johnson Co., of Water street, Vancouver, and occupy the building known as the Coquitlam roller rink. The new com-

pany, which will be a private one, will be capitalized at \$25,000 and local citizens are taking large monetary interests in the proposed industry.

Booteries, Limited, which have recently been organized in Toronto with a share capital of \$250,000 are given wide powers under their charter and are empowered to manufacture and deal in all kinds of footwear, leather goods and findings of every sort. The company, which have succeeded the C. C. Cummings, Limited, have opened up a shoe store at 163 Yonge street and, it is understood, may open new stores in other parts of the province.

A Boston despatch says that in the fiscal year to December 31st last, the United States Rubber Company did the largest gross business in its history, but there was material shrinkage in the manufacturing profit, with the result that the final net fell below the 1911 results. The United States Rubber earnings were affected most of all by the return from the Rubber Goods Manufacturing Company, one of its subsidiaries.

The Williams Shoe Company, Limited, of Brampton, and Messrs. Horace Foster and George L. Williams, its secretary and treasurer, respectively, are the defendants in an action entered at Osgoode Hall, Toronto, by Walter G. Downing, who asks for a mandatory order transferring to him thirty shares of stock in the firm, and for an injunction restraining the defendants from holding their annual meeting until such transfer has been entered.

A. O. Giroux, secretary-treasurer of the Superintendents' and Foremen's Association, Montreal, was a visitor to Boston recently and at a recent meeting of the association gave a very interesting report of his trip, speaking on the advisability of transferring members from one association to another when changing their factory positions and locating in the various centres. He also gave some outlines of a scheme by which it could be done, and the result was that the Boston Association appointed a committee to investigate and consider the idea.

A charter has been granted to Corbeil, Limited, shoe manufacturers, of Montreal, with a capital stock of \$1,000,000, divided into 10,000 shares of \$100 each. The incorporated members are Avila Corbeil, Emile Corbeil, Leonard Blais, Theophile Desrochers and H. J. H. Morrier. The company are empowered to purchase and take over all the assets and liabilities of the business carried on by A. Corbeil, shoe manufacturer, Montreal, and to make and deal in all kinds of footwear, either wholesale or retail, appertaining to such business.

W. Percy Gillespie, who is promoting the First Prairie Shoe Co., in Brandon, Man., has decided to open up an office in that city from which the Western operations of the W. Percy Gillespie Co. will be conducted. Mr. Gillespie was in Brandon recently and reports arrangements are now complete for the erection of a factory and that construction will start early in spring. Shoemaking operations will begin by July first and from fifty to sixty hands will be employed at the outset, which number will be increased as the business develops. The factory will be a four-storey structure, 154 by 50 feet and should prove an excellent industry for Brandon.

The contract for the new factory which will be built by the corporation of St. Thomas for the shoe firm of E. T. Wright & Co., of Rockland, Mass., who are now operating in temporary quarters, has been awarded to A. E. Ponsford, of St. Thomas, for the sum of \$33,953. This is exclusive of a sprinkling system, vault doors and electric elevator, which will bring the cost of the structure up to \$37,629. It was found that some \$8,000, over and above the \$45,000 vote<sup>d</sup> by the ratepayers will be needed to complete the building. The building alone costing some thirty-seven thousand dollars, leaves only about \$8,000 for other expenditures, viz., the purchase of the Victoria Block, repairs to the latter, the three stores east of the Victoria Block, the McPherson Block, repairs to the latter, architects' fees, inspection and other incidentals. The latest figures show these expenses will reach \$25,229, necessitating a further expenditure of \$8,000.

### NEWLY ORGANIZED COMPANY WILL EXTEND

Chas. A. Ahrens, Limited, is the new name of the progressive company which has long been carrying on business in the thriving centre of Berlin under the style of Chas. A. Ahrens & Co. The authorized capital is now \$100,000. Chas. A. Ahrens is president and manager of the newly incorporated company; Fred. H. Ahrens, secretary-treasurer, and H. E. Wettlaufer, sales manager. All these men have been connected with the company for years and are acquainted with their respective ends of the business.

C. A. Ahrens

H. E. Wettlaufer

F. H. Ahrens

Architects are at work on plans for a large addition to the present factory, which, when completed, will double the floor space and capacity. The present structure was completed a little over three years ago and in that time the premises have been very much outgrown. The improvements will consist of a fine steam power plant; operating dynamos for electric lighting; two pumps for supplying water from a well and cistern, and a Webster heating system of the latest type. Chas. A. Ahrens & Co. have been manufacturing shoes and slippers in Berlin for 25 years, and in the person of F. Burghardt, have an employee who has been with them continually from the time that they commenced operations in a small one-room factory away back in 1888. Recently, in commemoration of the quarter century anniversary of the firm, Mr. Ahrens presented Mr. Burghardt with a purse of gold and an appreciative address.

Mr. Wettlaufer, the capable sales manager, has been with the Ahrens Company for nearly 14 years. He covers Western Canada from Port Arthur to the Coast and makes a trip from Toronto to Cornwall semi-annually. He is widely known in hockey and musical circles and as the efficient President of the Ontario Hockey Association. Mr. D. H. Musselman, who has been an inside man with the firm for some years has been added to the staff of salesmen and a material increase in output is looked for.

Several new lasts and patterns will be shown for next fall, along with those added this spring, which will mean an entirely new range of goods next season. The company make honest, solid leather staples, as well as finer lines, which have full fitting qualities.

### RETURN OF ENAMELED LEATHER

A London correspondent of the *Haberdasher* says: Footwear just now includes the enameled shoes. These enameled shoes are rather stouter than ordinary patent leather and they have all the disagreeable impenetrability of the latter, but they certainly keep their shape very much better and do not so greatly tend to crack. The underlying leather is split cowhide and the tops of the shoes are made in the best goods of kid. Over them are worn the suede spats or gaiters already mentioned. These are an expensive and decidedly exclusive product. To be made wearable they must be made to measure by a bootmaker, but their pliability makes them very snug and smart looking and they cannot be imitated at a cheap price, so that the taste for them is a decided note of exclusive fashion.

### SHOE LAST TRUST DISSOLVED

The Boot and Shoe Last Trust, fixing, it is alleged, the price of practically every last sold in the United States, was

dissolved at Detroit recently by the Federal Government in quick time. Immediately following the filing of a civil anti-trust suit against the Krentler-Arnold Hinge Last Company and numerous other last manufacturers, with whom it was allied by agreements, U.S. District Judge Tuttle entered an agreed decree, terminating license agreements in so far as they fixed the price of unpatented lasts and dissolving a club through which the alleged violation of the Sherman law was accomplished. The decree, in effect, lays down the broad principle that it is unlawful to tie together patented and unpatented articles so as to fix the price of the unpatented commodity. Neither the government's petition nor the decree questions the right of a patentee to fix the price of a patented last.

### ACTIVE CAREER OF A LEATHER MAN

There is no man in the leather business more widely known in eastern Ontario and Quebec than George S. May, of the firm of Geo. May & Sons, Ottawa. He recently retired as president of the Ottawa Board of Trade, in which he has always taken a deep interest, after a two year term. He is at present a member of the Council of the Board and has filled practically every position in the gift of that body. Mr. May was literally born in the leather trade. His father, the late Geo. May, who died a number of years ago, founded the present business in 1858. The sons, Geo. S. and W. C. May, were taken in partnership about 25 years ago and the firm became Geo. May & Sons. They do a large wholesale turnover in saddlery, hardware and horse clothing, harness upper and bottom leather, shoe findings, etc. They conducted a tannery for making harness and upper leather at Mount Sherwood until 1982, when the rapid growth of the city rendered the site so valuable that this end of the business was given up. G. S. May was one of the representatives of Ottawa in the Ontario Legislature for some years. He has

Geo. S. May, Ottawa

occupied many other positions of influence and has always taken an interest in outdoor sports. He is president of the Ottawa Amateur Athletic Association, also of the Motor League of Ottawa, and for 16 years was a member of the public school board, occupying the chairmanship for two terms. Last September he represented the Ottawa Board of Trade at the International Chamber of Commerce in Boston. Although a very busy man in the trade Mr. May is managing to devote a good deal of time to public service and is well thought of and highly respected by the residents of the Capital and all those with whom he does business. He is to the forefront in every move calculated to advance the prosperity of the Capital city of Canada.

### A BREEZY BUDGET FROM WINNIPEG

H. G. Middleton & Co., wholesale shoe dealers, Winnipeg, have been re-organized and two well-known shoemen have entered the firm. The new managing director is A. N. Douglas, who has been in the shoe business for several years. He was formerly with Mr. Arthur Congdon and the James McCready Co., until the merging of the McCready and the Ames-Holden concerns. He then was created district manager of the western division of the Canadian Consolidated

A. N. Douglas

R. M. McGowan

Rubber Co. R. M. McGowan, who is also a member of the re-organized company, taking the position of sales manager, has had a long experience on the road and in other capacities. He was manager of the James McCready Co's business at Edmonton for several years and after the merger took a position with the Canadian Consolidated Rubber people, looking after the footwear department of the western division, which post he held until joining the Middleton Co. Many improvements will be made by the new organization and it is expected that a large development of business will result. H. G. Middleton has been east on an extended buying trip.

J. B. Kilgour, of the Kilgour-Rimer Co., wholesale shoes, is spending some weeks in Florida.

Business during the past month here has been very brisk owing to the decidedly cold weather.

Mr. Charles, of Peters & Charles, Montreal, agents for Sir H. W. Trickett and many other lines of footwear, has been spending some time in the city.

D. J. DeVine, of the Yale Shoe Store, has returned from an extended trip to Toronto, Montreal, New York and other centres. He reports having had a very pleasant outing.

Kilgour, Rimer & Co. have recently added considerable space to their findings department and have issued a neat and complete catalogue, fully describing the equipment in this branch of the business. Mr. Beal is in charge of the findings department, and is a man who is well acquainted with the wants of both the shoemakers and shoe stores.

P. L. Higgins, who was formerly with James McCready, and later with the Ames-Holden-McCready organization, is now engaged in business in Saskatchewan. He is doing a fine trade. He has been spending a few days in the city and is making arrangements for removing his family to his new home. Mr. Higgins is a jolly, good-natured chap and well liked.

Hugo Wellein is the new manager of the Winnipeg branch of the Canadian Consolidated Rubber Co. He also fills the post of district manager of the western division, succeeding A. M. Douglas. Mr. Wellein arrived recently from Montreal, where he spent many years in the sales department of the Consolidated Co. He is a Berlin boy who is making a name for himself in the rubber arena. F. Roschman, of the Montreal office, and a former resident of Berlin, will have charge of the rubber footwear division under him.

C. F. Stanley, who is now managing director of the W. A. Marsh Co., Western, Limited, came originally from Quebec. The Winnipeg branch of this progressive firm started on Portage avenue west in 1907 in a very small way. They moved later to 88 Princess street in 1908. In 1911 they took over the adjoining warehouse. The Western branch is the real distributing post of all the territory west of Port Arthur. R. K. Jenkins, who was with this firm for

four years, returned recently after a visit of a year to his old home in the United States. His father has been a shoe manufacturer for thirty years, where his son received his first training.

Geo. G. Lennox, wholesale shoes, intends opening a branch in Calgary in the near future to look after the requirements of his customers in southern Alberta. He established a branch in Edmonton about three years ago. During the past seven years Mr. Lennox has built up a wonderfully successful business. He is a firm believer in the durability, style and high-class character of Canadian made shoes and says that Canadian enterprise is making its way to the front and that factories in the Dominion are now holding their own by reason of specialization and skilled workmanship in a territory which formerly was noted for the large amount of American goods bought.

### A WORKER IN MANY GOOD CAUSES

N. B. Detwiler, president and treasurer of the G. V. Oberholtzer Co., Limited, Berlin, is entering upon his second term as alderman in Berlin, being returned at the last election. He has been connected with the shoe business for 15 years, all of which he has spent with the firm at the head of which he now is. Mr. Detwiler is a man of broad sympathies and actively interested in many matters outside of his line of business, which tend to the welfare and uplift of Berlin. He was a director in the Y.M.C.A. for a number of years, while it was established in Berlin, and has taken a general insight in moral reform movements. He has also been engaged in Sunday School work for a very long period and is still superintendent of the school. Recently he gave an address in the council chamber at Berlin, in connection with the work of a special committee, which was appointed

N. B. Detwiler, Berlin

by the city council with respect to the curfew bell bylaw, and other measures, to safeguard and protect the young. The address was spoken of in the Berlin papers as being one of the most interesting and timely ever delivered, and set forth many valuable suggestions.

### FORGING AHEAD IN FELT FOOTWEAR LINE

A new plant for the manufacture of felt footwear, which will be erected in Tavistock, is a branch of the Hamburg Felt Boot Co., New Hamburg, and will be a brick structure, 220 feet long by 45 feet wide, 3 stories high, and erected on the mill construction plan. The goods

**LOW HEELS AND RECEDING TOES**

Reports from leading shoe manufacturing centres across the border say the most important development in lasts is an increasing demand for both boots and Oxfords on a flat last with a low heel and narrow recede toe. This demand has been sufficient to cause manufacturers generally to make samples on a last of this character, and the last makers are busy supplying the demand. While this is a development that was predicted some time ago, it did not seem to meet with wide approval until recently, and it does not represent any large part of the orders that have been placed up to date. The bulk of the orders now in the hands of many manufacturers are for high, wide and medium round toes. This applies to the volume business in medium grades. The narrower, recede toe is still the prevailing style in high-grade goods.

**NEW FACTORY FOR NATIONAL CASH REGISTER**

To spend \$300,000 on new buildings on land which was bought about a year ago, is the announcement made by Mr. H. J. Daly, manager of the Toronto factory of the National Cash Register Co. The work of excavation will be started early next spring. The purpose of the new structure is for the installation of their new plant which is to be located just north of the C.P.R. tracks on Christie street. The plans for the new plant are nearing completion and will comprise three separate buildings of 400 feet, 310 feet and 200 feet by 60 feet each, two storeys high, with provision for lighting from the side windows of 85 per cent. of the area of the wall space. The buildings will be constructed of steel and brick with stone trimmings. A particular feature will be the provision made for the welfare of the employes in the shape of individual wash-rooms and athletic grounds and a social room. The new factory will employ 500 male mechanics and all parts of the cash register will be made in it.

**INCREASE IN WORLD'S RUBBER SUPPLY**

The cause of the downward trend of prices in crude rubber is the fact that Ceylon rubber is coming in in such quantities despite the fact that consumption is growing at a rapid rate, and by some authorities is regarded as keeping ahead of production. Production of Ceylon rubber is increasing at the rate of nearly 50 per cent. a year. It is estimated that the crop will total 28,000 to 30,000 tons this year, and next year is likely to reach 40,000 to 45,000 tons. The total rubber crop of the world in 1912 is estimated as high as 100,000 tons. The fact yet remains that the rapidly growing consumption of rubber cannot adequately be determined. The rubber tire companies are expanding constantly, many of the larger ones are doubling their capacity and new ones are being formed. These are chewing up the crude rubber supplies at a tremendous rate. It is interesting to note in connection with the question of production and consumption that Hecht and Company, of Hamburg, Germany, estimate the 1912 crop at 93,669 tons against 79,305 in the previous year, an increase of 18 per cent. Consumption they figure at 99,564 tons, against 74,082 in the 1911 year and increase of 34 per cent. It is well to note, however, that these figures have stirred up considerable controversy in rubber circles, some authorities holding that production figures are too low.

**SHOE MANUFACTURER STEALS FROM ANOTHER**

An astounding case of a shoe manufacturer entering his rival's premises at night and making valuable hauls, has just been discovered at Earl Shilton, in Leicestershire, England, and the prisoner has made full confession of his guilt. For many months large quantities of boot and shoe materials of a very costly character have been missed from Hurst, Cotton and Hopcroft's factory, but how the robberies were effected was a mystery. There was never any trace of the premises having been forcibly entered, and the firm put their losses down to some very clever method of pilfering.

The mystery has now been solved. About midnight a constable saw a man near the factory carrying a bag on his back, and turning his light on discovered, to his astonishment, that the man was a rival boot and shoe manufacturer of the same village, named George Breward. The constable was not satisfied with the man's explanation respecting the

leather in the bag, and took him to the police station. Next morning under a hedge near the factory of Hurst, Cotton and Hopcroft, eight bags were found concealed, containing leather valued at £70. The prisoner's premises were then searched and leather valued at over £100 was found, which was identified as the property of Messrs. Hurst, Cotton and Hopcroft. When charged with breaking and entering the premises, the prisoner replied, "I am guilty and I am very sorry." The magistrates were informed by the police superintendent that the prisoner has made a statement describing how he carried out the robberies. The stoker went at night to bank up the boiler fires, and the prisoner, who was concealed near, crept into the factory gates and hid himself till the stoker left. He then crawled through a hole in the wall which had been made for the driving belt to operate the machines in the factory, and was thus enabled to reach a shed in which the leather was stored. He had a key which fitted the lock of the shed, and, collecting the leather into bags, he removed it outside, concealed it under the hedge, and carried it, one bag at a time, to his own premises. The magistrate committed the prisoner for trial.

**HANDY TAG FOR THE REPAIR SHOP**

Various forms of keeping a record of repair jobs, when wanted, what is required to be done, name and address of owner, etc., have been suggested and presented in these columns from time to time. Here is the form used by a leading repair man in Winnipeg. He fills out the name and

NAME \_\_\_\_\_

STREET ADDRESS \_\_\_\_\_

ALL WORK NEATLY EXECUTED AT REASONABLE PRICES . . . . .

No. \_\_\_\_\_

HALE SOLE \_\_\_\_\_

HEEL \_\_\_\_\_

PATCH \_\_\_\_\_

RIPS \_\_\_\_\_

HAVE FINISHED BY \_\_\_\_\_

---

FIRM NAME \_\_\_\_\_

STREET ADDRESS \_\_\_\_\_

CUSTOMER WILL PLEASE RETAIN THIS CHECK . . .

No. \_\_\_\_\_

address in full and draws a V or X opposite the space left for indicating the nature of the work required on the shoes. Of course, it is not necessary for the customer to bring back the stub at the bottom of the tag which is detached and given to the caller but, if it is returned, it facilitates identification. The tag itself is attached to the shoes in order to guard against any mistake. With both a name and number there is less liability to error and delay than if only a name was taken or a number given out. Both act as a double check.

manufactured will be similar to those now produced at New Hamburg—a full line of felt boots and shoes, fancy slippers and leather staples. The capacity of the new Tavistock branch will be from 600 to 700 pairs a day, which, together with the output of the present factory of the company at New Hamburg, will give a production of 1800 to 2000 pairs daily. Mr. E. Merner, who is at the head of the New Hamburg Felt Boot Company and the Tavistock Felt Boot Company, has been connected with the shoetrade ever since 1898. In that year he organized the Hamburg Felt Mfg. Co., which in 1905 was taken over by the Hamburg Felt Boot Co., Limited. Previous to becoming identified with the manufacture of felt footwear, Mr. Merner was in the mercantile line. Starting at the bottom rung of the ladder in felt making, he has steadily climbed and is to-day one of the most successful manufacturers. He began making on a small scale, but has kept pace with the business and has proved himself a careful manager, a shrewd buyer and an excellent salesman. He is a firm believer in the principle that "Eternal Vigilance is the Price of Success," and it is to his untiring efforts and unceasing application that the upbuild of the firm can be attributed. W. H. Umbach is the efficient secretary of the Company. It is expected that auxiliary plant in Tavistock will be in operation by the end of the present year, and that construction work will start in the spring. The future of the Company appears very bright.

#### ANOTHER FACTORY COMES TO CANADA

The by-law to bring another shoe factory to St. Thomas was carried recently by the people by a large majority. There were 1,053 votes recorded in favor of the measure, or 317 more than was necessary in securing a two-third majority of the total number of ballots cast. The firm, which will come to St. Thomas, is the Snedcor and Hathaway Shoe Co., of Detroit, and the amount that will be spent in bringing the plant of the company to St. Thomas must not exceed \$8,000, according to the terms of the by-law. In Detroit the Snedcor and Hathaway Shoe Co. have been doing business for years and the \$8,000 will be expended in shipping and paying the duty on their goods and machinery. They will employ eighty hands during the first year of operation and after that not less than one hundred hands. The company will find their own premises. The firm make men's, boys', and youths' Goodyear welt and nailed.

#### NEWS JOTTINGS FROM QUEBEC

Dr. M. Brunet, of the Rock Shoe Co., who has been ill for some weeks, is now able to be around again.

Isidore Pouliot, proprietor of the Quebec Fur Manufacturing Co., was in Detroit, St. Louis, Chicago and New York recently on a business trip.

The many friends of G. Tardif, foreman of the cutting department of Duchaine & Perkins, will sympathize with him in the loss of his father, T. Tardif, who passed away recently.

Among those in the city recently were J. Rosenthal, of Winnipeg; J. O. St. Jean, of the Colonial Fluid Beef and Specialty Co., Montreal; L. S. Odell, of Fisk, Limited, Montreal; L. H. Dupre, of the Independent Box Toe Co., Montreal, and H. Crochier, of L. H. Packard & Co., Montreal.

The new addition to the factory of the John Ritchie Co. is now completed and will add considerably to the facilities of the plant. Every department has been enlarged. The private and general offices now have their entrance on St. Valier street. Joseph Pleau, formerly of the Louis Gauthier Co., has taken charge of the sole room.

Paul A. Valentine, secretary of the Canadian Credit Men's Association, Montreal, was the guest of the Quebec members of the association recently and a very successful banquet was held at the Chateau Frontenac. C. A. Vandry presided at the gathering and much interest was aroused in

the aims and objects of the organization. Among those present were Wm. A. Marsh, Jos. Picard, E. T. Nesbitt, Robert Stuart, A. W. Ault and others.

#### FRESH AIR SHOES LIVE THE LONGEST

Fresh air is good for most things, including shoes. But in this instance as in many others the value of fresh air is not rightly estimated. At night the least-thoughtful shake out their clothes, brush off the day's dust and slip each garment over a hanger; and many garments are thrown over a chair before an open window. But how many of even the most fastidious germ-fighters think to air their shoes? Clickety-click into a close closet, or closed shoe box they go, instead of being brushed, pulled into shape and placed where the air can play freely about and through them.

A windowsill is an excellent shoeairing rack and is convenient for all. Shoes placed there for an hour or so after wearing each day will not only prove refreshing to the feet, but will harbor no foot odors, and the dampness from feet warmth and weather conditions will evaporate, leaving leather and lining renewed to resist the next day's wear.

#### Business Home that is a Model

(Continued from page 35)

the Granby and Maple Leaf rubbers and rubber supplies. The fifth floor is used for emergencies. Each of these floors is finished with a preparation of alabastine on the walls and ceilings giving the ware-rooms a bright refreshing appearance, and as they are roomy enough for all purposes, the staff find work developing into a matter of pleasure.

The building itself is of mill construction, is entirely up-to-date and occupies a prominent position in the coming commercial district. Since it has been erected on the chosen site, three other business houses have arranged for putting up large buildings in the immediate neighborhood. The new government post office, to cost upwards of \$350,000, is to be erected only a short distance away, so that it will be seen that the Ames, Holden, McCready people have certainly chosen a desirable site for their quarters. It is 100 by 50, but on account of its height and general finishings looks really larger. Great quantities of rock had to be blasted before the foundation could be properly laid, but now that the final touches have been made, the firm is supplied with a thoroughly waterproof basement as the result of extra precautions taken in this connection. Throughout the five storeys and basement the building is equipped with most modern fire appliances, having its elevators and staircases in brick enclosures going from roof to cellar, with fireproof floors on each flat to all of which is affixed an attachment of fusible link. So thoroughly modern are the precautions taken to make the building fireproof, almost in its entirety, that insurance inspectors have pronounced it one of the best and most safely equipped in the city.

There is an inter-communicating system of telephone connection in use in the building which is found most convenient. A steam heating plant with a tubular boiler and capable of generating thirty-five horse power is a valuable adjunct. On the rear of the building is printed the name of the firm in large letters several feet high, and they stand forth so distinctly that the names "Ames Holden McCready Co. Limited," can be read by people from two to three miles away, and this sign is recognized as a very serviceable advertisement by the management.

The position of the leather trade in Toronto is firm. Every outstanding condition of the industry tends to strengthen and tighten the situation. Chief of these are actually lower world live stock supplies, and a more extensive use and demand for leathers.

## A Big Opening For Canadian Shoe Manufacturers

(Continued from page 39)

Of the overseas article, the most liked is that which is made in Austria. At the present day boots are seldom worn, the demand being almost entirely for low shoes of leather or cloth.

The main reason for the success of the United States makers is the excellence and style of their product, which up to the present no European or local manufacturers seem to have been able to quite successfully imitate. The Argentine manufacturers go so far in their attempt as to give to their products names that smack of the States, and unscrupulous dealers endeavor to pass them off as coming from there. There seems to be an indefinable something about these lasts that appeals to Argentine taste. But this does not account totally for the sale of the New England article. The men who made it have faith in its selling qualities and are not afraid to put these to the test. So they send down their representative to study the market, and to make arrangements for future business. They do not mind putting the price down at the outset if they can see ultimate success; they know that they can recompense themselves later when their goods have established themselves.

Although United States manufacturers have been successful, still, if one is to believe all that one hears, they are not universally liked. It is alleged against some that their goods are not always up to sample; that they start out well, but that later on the quality shows a tendency to deteriorate; in a word it is complained that they are inclined to be too smart, and to get the best of their customers. Another fault is said to be their failure to ship up to time, thus causing great inconvenience to importers, and needless to remark, intense irritation. But, in spite of all this, they have that to sell which the Argentine desires to buy, hence the large and growing orders. And they are willing to afford the importers the usual terms of credit, that is, 90 days to 120 days from arrival of the goods.

For a manufacturer interested in the South American market, the first point to consider is the possibility of success. If his boots follow closely the styles of the New England manufacturers, are not inferior in quality, nor higher in price, he has every encouragement to investigate the subject more closely. The f.o.b. steamer price of United States boots runs from \$3.20 to \$3.80 a pair, with an average of

about \$3.50; English boots range from 12s. to 16s. per pair f. o. b. steamer; the local price of these would run from \$15 to \$25 mn, (\$6.37 to \$10.61 Canadian). The next points to consider are: Can deliveries be made as promised, and can usual terms of credit be granted? If these questions can be answered in the affirmative, there is every reason to anticipate success, and it only remains for the manufacturer to command it.

The preliminary operation should be to purchase a few samples of the boots and shoes most popular in this market, and to study them closely. When this has been completed, a capable representative should be despatched, equipped with a full range of samples suitable for the South American trade. He should be entrusted with as wide discretionary powers as possible, to obviate cable references to his firm. He should also be able to speak French in addition to English; of course Spanish is the medium, but it is as yet, too much to expect to find commercial men in the Dominion possessed of that qualification. It is essential that he be of good address, and very tactful. In referring to the qualifications required in representatives from North America, it is most noticeable, the unanimity with which that of "simpatico" is insisted upon. "Simpatico" in its use here, means more than sympathetic, it embraces tact, affability, lack of brusqueness and "bounce," a suave manner, and last but not least, a genuine desire to try to see questions from other persons' points of view. Goods are generally ordered about four or five months before required. Winter stock is usually ordered in October and November, summer stock in May.

The terms of credit may seem long, but it should not present insuperable inconvenience. Whilst a 90 days' sight draft would, in the case of South America impose upon a shipper a delay of five or six months before realizing the cash proceeds of his sale, presumably if his credit be good, the banks would advance him the amount against shipping documents. As this is the practice the world over, the banks of Canada doubtless afford the same facilities to Canadian manufacturers to engage in foreign trade.

The majority of dealers buy direct, and there are not many jobbing houses.

# Passing YOUR Door Every Day

Passing your door every day are many possible customers. The problem as to how to reach them is quickly solved.

**These people want and demand shoes bearing the Boot and Shoe Workers' Union Stamp.**

Such shoes appeal immediately to these people, and you are sure to secure a large part of their patronage once you cater for their trade with footwear properly stamped.

**The Union Stamp** is an emblem of Quality, Workmanship and Honest Prices, and as such is a safeguard to the consumer when purchasing shoes.

Put **Union Stamp** footwear into your store, and you will quickly realize that you have secured the key that unlocks the door to a large and profitable clientele. The time to do this is now—upon request we will send a complete list of manufacturers who use the **Boot and Shoe Workers' Union Stamp**.

# More than One and One-Third Million Pairs Sold of this One Walk-Over Last

THAT is a new shoemaking record and proves several things.

¶ One is that Walk-Over designers know how to anticipate and meet the demands of shoe wearers.

¶ Another is that the firm which controls the output of Walk-Over shoes for any town or city has the assurance of the patronage of that part of the community which knows, appreciates and buys the most stylish and up-to-date footwear.

¶ We want an active, aggressive Walk-over representative in every city and town in Canada. If there is none in your town we'd like an opportunity to explain our proposition in detail to you, either through our traveler or by correspondence.

¶ The "Dope" last, shown above, is carried in stock in various leathers and patterns.

## GEO. E. KEITH COMPANY

## Let the "Bestyet" Twins help

*When it comes to selling tan shoes for Fall, Mr. Manufacturer, a great deal is going to depend on the leathers.*

*Whether in the sample **your** customer examines or in the shoe **his** customer tries on the appearance of the leather as well as its quality will, perhaps, as much as any other feature determine whether or not there'll be a sale.*

**"Bestyet"  
Tan**

*Let the "Bestyet Twins" help your shoes to a sale everytime.*

*"Bestyet" tan and "Bestyet" brown are two shades of Russia Calf that give the wearer of your shoes everything he asks from a leather.*

*They are even in color---always---they can be washed with soap and water---they will not fade in the sun, nor bleach with polish and their texture has not been injured in the tanning process. They make up into as fine-appearing shoes as you, your customer or the public could wish for. Their smooth, even texture and beautiful colors give to your shoes a sales argument that is a real help.*

**"Bestyet"  
Brown**

*Deliveries as prompt as you like.*

**DAVIS LEATHER COMPANY, LIMITED**  
Newmarket, Ontario

*Dorothy Dodd*

## Are Your Profits Right ?

Shoes should carry 33% gross profit on the selling price. This does not mean on one special number, but on the average. Does your department show that? Shoes should show a yearly turn-over three times the stock. Does your department show that? The quickest, surest way to ensure right shoe profits is to feature a real named shoe. Why? Because real named shoes carry as much gross profit, style, wear and satisfaction to the customer as un-named shoes, and then something more—

That something is the co-operation of BOTH the manufacturer and the public. The consumer knows the real named shoe—has seen it advertised year after year, perhaps has worn it, or her friends have, and have told her about it.

It takes only about half as much local advertising and expense to bring her into your store and sell her a good named shoe as it does an un-named one. The manufacturer stakes his reputation with every dealer who handles his line. His trade-growth depends on the dealer's success. He won't overstock you. He carries a tremendous reserve stock so that the dealer may do the biggest business on the smallest investment. In season there are half a million dollars' worth of DOROTHY DODD shoes in our warehouses forming practically a reserve stock for all retailers handling the line. The DOROTHY DODD shoe has friends all over the country. Years of past advertising, years of past service, as well as our present campaign, make it easy for the retailer to make customers quickly and surely with the help of the DOROTHY DODD agency.

An agency for the DOROTHY DODD shoe adds to your own reputation, service and selling force, our co-operation and the ready-made interest of hundreds of women in your city deliver the goods and bring the business.

You have three forces to your competitor's one. Ask us to prove it. Write to the

# You know the price every man wants to pay

A. CORBEIL

There are plenty of men paying over \$5.00 for their shoes. But not because they think it's right. It's doubtful if there is one out of a hundred who doesn't consider that \$6.00 or \$7.00 is an imposition.

They have become accustomed to being "soaked" as they term it, but they certainly do not relish it a bit.

They have an idea that good shoes can not be had for less than \$6.00 or \$7.00. They haven't been shown the "Landover" and "Leader" brands that retail from

## \$3.50 to \$5.00

"LANDOVER" and "LEADER" shoes will educate them not to judge the quality of a shoe by its price. They'll learn that price does not always count --- that it's style and wear, and shape-keeping qualities that really make a shoe, and that every one of Corbeil's shoes has quality of far higher degree than its price would indicate. You know, yourself, that 99 per cent of the men who come into your store consider \$3.50 or \$5.00 sufficient for any shoe. Well, why not sell them shoes like these which prove it?

## A. CORBEIL, Montreal, Quebec

Ask Your Jobber's Salesman  
to Show You This One

**T**HE fact that this shoe is one of the famous "Doctors" is alone a very good recommendation for it. The fact that it strikes the happy medium between the waterproof shoe with too much weight and too little style, and the one with too much style and too little weight, makes it an ideal shoe for fall selling.

It's a shoe that looks dressy on a city street, and serviceable on a rough country road. Its peculiar style hides some-

what its appearance of sturdy strength, but the strength is there just the same.

Don't let your jobber's salesman get away without showing you this shoe. It's on the Fitzu Last.

The rough weather, the weather in which Ruthstein's Steel Shoes shine the most is not so far away.

Because of the excellent service and general satisfaction they have given to those who have worn them and because of the extensive advertising we have done to make well known a good work shoe, there will be a much greater demand than ever for Ruthstein's Steel Shoes.

Mr. Merchant, how are you situated to take care of this demand in your locality? Have you a good supply on hand? Are you prepared to make money on Ruthstein's Steel Shoes? If not we would suggest your getting in touch with our agents as soon as possible. In fact it would be best to do so right away and get them to send you our descriptive booklet.

## Our Sales Force is Now Showing Fall 1913 Rubber Samples

Your earnest consideration of the lines shown is requested, as the range is unusually complete.

Four brands are offered: Kant Krack, Dainty Mode, Royal and Bull Dog, all made in the modern Independent Rubber Co.'s plant at Merritton.

The lasts on which these rubbers are made were specially ordered to match the lasts used in making Fall, 1913 shoes. Retailers stocking these brands can be sure of having in stock rubbers that will fit to a nicety every foot that comes to the store for a rubber next Fall and Winter.

Rubbers bearing these brands run uniform in quality, always reliable, flawless in manufacture, and they are beyond criticism in style.

We are in a position to guarantee these rubbers and also to promise **PROMPT DELIVERY.**

One of our salesmen will see you shortly with samples. The time you spend with him looking these over will be profitable to you financially, and you will, as well, get some new ideas as to how to combine fit, finish and endurance.

Brands of  
Independent  
Rubber  
Company

# Can Recom- mend These Rubbers

Every year I handle the Independent brand of rubbers, I like them better. In fact, I know they've been getting better every year, both in wearing and fitting qualities.

The fact that I sell more every year, not only new customers, but to old ones, proves that Independent brands are "catching on" strong with the general public.

I recommend them to you because to me they seem to be just about the ideal rubber.

They've strength because of pure para rubber and an excellent quality of duck.

They've style because of smart lasts and patterns.

They've fit because they're built to conform to all shoe shapes and sizes.

They'll wear because of their strength and excellent workmanship.

They'll sell because of their style and their fit.

In everything in which good rubbers should excel they are practically perfect. Why shouldn't they find a place in your 1913 stock.

My salesmen will be around your way shortly, and they'll have a full assortment. Give them an opportunity to show you how nearly Independent rubbers come to being ideal.

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

**MODEL N**

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

## Some Fall Styles That Will Please Your Customers

*just a few from a large line of attractive footwear*

---

On our new No. 35 last we are showing a natty shoe in gun metal calf, with a military heel, close edge, medium high toe and "chic" perforations. A McKay shoe.

—and still another in like style with a heavier sole and rope stitch.

No. 16 last—also a new one—comes in a patent vamp with a grey buck top, Cuban heel; plain toe, close edge. This will be one of the most popular welts of the coming fall season.

In evening footwear we are showing a most complete line in red and grey kid, grey buck, black and white ooze calf, white calfskin, also some handsome samples in velvets, patents and nubuck.

Flat and pom-pom bows as desired.

# About Good Felt Footwear

**S**OMETIMES different brands of Felt Shoes look pretty much alike when they are new. You don't know what material is in them. Only time can tell their wearing qualities. But when you buy Felt Shoes with a proven trade mark on them—the mark of makers of standing—which says they are good Felt Shoes, and you know the name means what it says—a trade mark that has been the proven guide to Quality Felt Footwear in the past—you take no chance, and “Elmiras” are above all others in the line for the retailer who desires to give his customers the very best Felt Shoe guarantee.

“Elmira” on Felt Shoes and Slippers means a guarantee of Felt Shoe satisfaction backed by years of real merit and unsurpassed felt and shoe manufacturing facilities. It represents quick sales and sure profits for the retailer and absolute Felt Shoe satisfaction for his customer.

The above trade mark stamped on the bottom of all genuine “Elmiras” will solve your Felt Shoe problem for you.

Manufactured by the Elmira Felt Co., Berlin, Ont.

## **Four Leathers of which we are proud**

Specializing on these four leathers has enabled us to put into them a quality that could not otherwise be attained. A trial of any one, or all, of these leathers will prove this to your entire satisfaction.

**Moscow** A really high grade Chrome Leather that can't help but prove satisfactory. Box or Plain Dull Finish.

**Nechro** A proven substitute for high priced Chrome. Has stood five years of tests in the largest factories in America.

**Brown Russett** You have never seen its equal for the price. A really good tannage, and a mighty economical leather.

**Flexible Splits** A leather we can give an extra recommend. Has always proved eminently satisfactory. For either Welts or McKays.

Get quotations and samples.

## No Radical Changes Made in New Fall Styles

The Recede Toe Will Be Leader in Highest Priced Range, With Flat, Blocky Heel, and Last on English Lines—Semi-High Toe is Still a Decided Favorite—Button Shoes Will be Strong, Particularly in Women's—Fabric Tops May Have Large Call—Other Tendencies of Footwear Fashions

The month of March ushers in the selling season for fall and winter footwear, and the question naturally arises with the average retailer, what will "go" during the autumn and winter weather? What will the people buy? What kind of toe, heel, leather, last or trim will they demand? It is, of course, impossible to foretell what the public taste will be. One might as well essay to predict the sort of weather that will prevail, as to outline definitely the exact trend of footwear fashions which often change as speedily and radically as millinery presentations.

It is generally recognized that not many radical departures in style are made by the manufacturers in their colder weather models. Fall affords little opportunity for novelties or decided alterations in shape, pattern or material. In fact, certain manufacturers put in only two or three new lasts for the fall season, and use those which found the most favor in the spring and summer offerings. It may be observed that the general tendency appears to be in favor of plain, quiet effects and very few makers will offer anything in the way of novelty or eccentric footwear.

### The Semi-High Toe Will Sell

From general inquiry, and in the opinion of the majority of manufacturers, there are a few things which may be set down as certain; one is that the high toe is by no means disappearing, and while the altitude of the past will not be witnessed, a more moderate degree of height is prevailing, and what is known as semi-high or medium will command a large amount of the middle class trade. In some parts of the West the extreme high toe is still in very great favor in both men's and women's, but the trend of affairs would indicate that the dome toe, the coin shape or the full round effect—call it by whatever name you please—is the one that will have the largest call by the greatest number of people. In the cities and among the purchasers of the higher class of footwear, the receding, slope or drop or flat toe—it has many names—is the one which is being taken up with a considerable degree of expectancy. This

Booking the retailer's order

toe usually carries a low, wide heel, broad shank and flat tread, and is on strictly English lasts. Invisible eyelets right up the full height of the shoe from the throat to the top, are very popular.

One general observation that may be made is that, while a large number of the broad, flat toes will likely sell, still the semi-high promises to be the most generally appreciated. It is alleged by some that the drop toe has a tendency if the shoe is too narrow, to compress the toes and cause the development of corns, callouses, and other pedal ailments. They prefer a full broader round toe, and thus masculine tastes differ a great deal.

### The Call of the Leathers

The button boot may win a certain measure of popularity with men, but its sale will by no means increase to any great extent. Men are more conservative in their likes and dislikes than women, and the larger proportion of them adhere to the Blucher cut or the straight bal. In men's, it may be said that the gunmetal leather has first call and then tan, which is worn by a certain number of males the year round. The popularity of patent leather will not diminish as it is the recognized proper thing for all dress and social functions, and there has nothing been found that would in any way take its place. The dressy youth may still demand the military heel, the fancy wheeled effects, elaborate perforations and various other adornments, but the majority of the male persuasion require the shoe that gives the largest measure of comfort and ease, and is not too striking or elaborately embellished. An inch or an inch and a quarter heel is the most popular. The wide shank and flat tread, along with the straight last, bids fair to command a wide measure of esteem. A number of button shoes with cloth tops—grey, black, corded, tan, striped, etc., will be shown. Some have deep tips and no perforations. The bal seems to be gradually replacing the blucher and a large number of fall samples will be shown with blind eyelets. In many instances no hooks will be used at all. One leading maker

After the order is booked

declares that tans on severe lines and free from conspicuous features will have the largest call, and the proportion of buttons will remain the same. There will be some offerings in vici kid, box calf, glazed kid, and storm calf with viscolized soles, rubber welting, etc., to keep the feet dry. Another thing noticeable is that while heels on all the highest grade of men's shoes are low and broad, they have a strong tendency to flange effect. There is the flange and the half flange heel. Many manufacturers are eliminating the pull strap or reducing it so that it merely affords a grip to pull on the shoe and not catch the trousers as formerly.

#### Patent Becoming More Staple

Regarding patent leather, an Eastern authority declares that while this shoe was practically a leader several years ago, both for men's and women's wear, it has sold a little

Men's dull calf bal., blind eyelets, receding toe, whole foxed, low heel slightly flanged—By Regal Shoe Co.

better for the coming season than for the preceding season, but is far from occupying its former prominent place in the trade. The reason given for this is the fact that several years ago patents were worn not only for dress and evening use but for daily use, by nearly all classes. Business men, clerks and even working men wore patents day and evening. The shiny leather shoe seems now to have settled into its most useful sphere, that is, a shoe for dress and evening wear, for which it is unexcelled. The class of trade having use for shoes for dress and evening wear is a class as a rule able to pay a good price for a shoe for this purpose, and manufacturers of patents are profiting by this fact in putting only high-grade, first-class workmanship into patent lines and getting good prices. The shoe manufacturer demands first-class patent leather and gets it, as no other kind will stand the severe test of ordinary wear.

#### A Summary of Men's Styles

Here is the prediction of one who claims to be in a position to know what will sell well this fall.

In high grade shoes for men the English last, with broad shank, low heel and flat last, will be received favorably, and promises to be a leader.

The medium high toe, modified from last season, will still be prominent in medium grades.

The leading leathers will be dull and tancalf and patent. New tannages of split side leather are being used largely with satisfactory results, in the cheaper grades.

Heels vary in height from 7-8 inches to 1 3-8 inches, striking an average of the trade.

A fair percentage of button shoes will be sold in medium and better grades.

Balmoral and Blucher lace patterns will have the largest

call in men's high-grade shoes, with a good demand for the button type with cloth tops.

#### The English Boot for Women

In women's foot covering there is generally a larger variety and more scope afforded for trying out certain ideas and conceptions. Although a great deal has been said against the button boot, and while many dealers would like to see its sale eliminated altogether, still their wish is not likely to be gratified. There is little doubt but that there will be fully as many button shoes sold during the coming fall as there have been during the season which has just closed. Reports from various manufacturers indicate that of the sales made, the button shoe represented from 40 to 70% of their output. One authority states that tan buttons with short vamp, medium high toe and Cuban heel will unmistakably retain their measure of popularity for fall wear. Another states that the patent leather with cravenette, whipcord and other fabric tops, will command a large sale. Various colors in suede are also predicted as being likely to come to the front. Some manufacturers are presenting decidedly English styles in walking shoes for women. They are of gunmetal with mat calf top, have wide broad heels of about an inch or an inch and an eighth in height and low receding toes. They are built on a straight last and have blind eyelets.

#### Bal is Coming to Front

There appears to be a tendency among the women's for the bal or replace the blucher, and the short vamp is likely to be as popular as ever. There seems to be a weakness among the feminine portion of shoe wearers in favor of a boot which makes the foot look small, and at the same time gives the requisite amount of comfort and ease. In button shoes, the tops will be cut about the same height as last year, the fourteen and fifteen button being the leader. Heels are a little lower and blockier. For ordinary street wear, dull and tan calf will be leading leathers, while a fair number of patents are likely to be worn. The medium high toe will

Woman's gun metal bal., blind eyelets, receding toe, three-quarter foxed, low heel—By Minister, Myles Shoe Co.

continue to be prominent in all medium grades, while in the higher class, the receding toe will probably have the call.

#### Why Button Shoe is Popular

Speaking of the fall styles for 1913, a leading shoe manufacturer remarked: "No, there is no danger what ever in my opinion of the button boot going out of fashion. I know it

(Continued on page 70)

# Do You Know the Real Talking Points of a Shoe

Some Clerks Say Too Much, Others Too Little—The Part Personality Plays—Do Cut and Dried Arguments Count For Much?—The Different Features to Emphasize—Effect of Concentrated Effort

By A. E. EDGAR, Author of "How to Advertise a Retail Store"

It is one thing for a clerk to be able to recognize good values, to keep posted on styles, to know how to fit difficult feet, etc., and an entirely different thing to be able to tell the customer in the right way, just enough to effect a sale. Some clerks talk too much, some too little. It is perhaps impossible to lay down rules for all clerks to follow, or for clerks to adopt in all cases. The personality of the salesman must largely govern these things. The personality of the customer enters just as largely into the consideration.

There are points in common in all human beings. We have to a great extent the same ideas, the same emotions, the same prejudices, the same superstitions, the same mental feelings. What one of us feels, the other is likely to feel

under similar circumstances. If it were not so—if there were no laws of averages, this would be a very difficult world to live in, and to get along in.

In many of the larger sales organizations, special and wholesale, the selling talk is laid down by an expert sales-manager. He lays down the line of action to be followed, and very often, gives the exact words that are to be used in explaining the proposition.

To many of the less experienced, this may look like a hard proposition to follow, and one that, if pursued very closely, means failure instead of success. Yet we are informed upon the best authority that the National Cash Register sales organization has succeeded along these very lines—cut and dried sales arguments being given the credit for the large sales effected.

It has been suggested that these methods might be as successful in our retail stores, and in our shoe shops, too. Why not? It is even whispered that the greatest living merchant of to-day has such a book, containing some eighty

## AN INVITING PICTURE OF EASTER STYLES

A pleasing and artistic Easter window, showing leading lines in men's shoes, by Geo. G. Gales & Co., Montreal

six selling points of a shoe. This may or may not be so, but it is not even improbable. Selling has been reduced to scientific lines in some departments of commerce, why not in the shoestore? There are lots of selling points in footwear. Let us look at a man's box calf, Goodyear welted, slip sole, solid leather shoe for a moment, and pick out a few of them.

Take the style points first. These may be new and snappy, the latest novelty, smart, swell, dressy, etc. Broad toe, narrow toe, medium toe, knob toe, English receding toe, etc. High heel, medium, low, etc. Blucher, lace or button. Black, tan, etc. Dull or shiny, contrasting leathers, cloth top, etc., and everything else that goes to make up the appearance of a shoe.

Quality is of great importance. Note these points: Our shoe standards are unusual, they must be better for us, honest values, best materials and highest grade of materials, not made at a price, but the price made to fit the quality, after the shoe is built, solid leather, high grade inside and out, etc. The material used can also be shown and made up into a selling talk.

### The Question of Price

The question of price usually enters. Note these ideas: The price is low enough so that all can afford to buy, think of the saving you make by buying now, purchased at a price concession offered to retail at wholesale prices, a great fall in the price of shoes, style quality as good as in higher priced shoes, higher priced shoes often do not wear any better, a just price, etc.

Fit means a whole lot. Why not tell why they fit. Because left on last long enough to shape, not rushed through a cheap factory, but made as in a custom shop, plenty of sizes, half-sizes and widths, your feet can be fitted, no matter how hard they are to fit, we can do it, if a shoe is not comfortable, it is not a proper fit, corns usually begin in the lasting room of a factory, tired feet are due to poor fitting shoes, etc.

The above are merely suggestions, ideas rather, to be woven together in forming selling talks. The idea to be selected that is thought will bear most fruit in the customer's mind.

Let us presume a customer seated with a shoe on his foot. He is apparently in deep thought—and the Lord knows what he may be thinking of. Let the clerk state in positive and insinuating tones that, 'You will recognize the goodness of these shoes at a glance. They are built to give the utmost service and to stand the most trying wear. The soles are of oak-tanned leather, heavy enough to stand wear, yet flexible and comfortable. The upper is genuine calf, soft as a glove and as tough as a nail. Every part of the boot is solid leather and we guarantee it to give entire satisfaction.'

Such a sales talk will swing every man, who considers value as of importance, into line and effect a sale. But it would be foolish to use such a sales talk unless the shoe fits and is apparently what the customer desires.

### A Poor Rambling Talk

The following is a poor salestalk because it rambles. It does not concentrate the mind upon any one point, but drags it from one to the other before any real decision can be arrived at.

"Those are the best shoes we carry at that price—they are solid all through. We could get more money for them, other dealers do, but we sell them at the old price because we do not like to change when once we establish a price. It's against our principles—that's all. That last is a comfortable one and just suited for your foot. We don't go much on styles that are freakish and new-fangled. We stock to the best of the established styles. Prices of shoes are advancing, etc., the same style in a kid makes a neat dress shoe, etc."

A concentrated talk of one sentence is often of greatest value. Ideas must be brought forth quickly. Often it is

the quickest thinker in a shoe shop that can sell the most shoes—not the best informed, or most experienced in shoe fitting.

There are also the customer's moods and characteristics to be considered. If a man shows impatience with the talk of the shoe salesman, he should not talk much. If, on the other hand, the customer is talkative, the salesman may usually go as far as he wishes.

### The Weapons of Attack

A writer on salesmanship names the following twenty weapons of attack:

Knowledge, interest, inducing forgetfulness, suggestion, enthusiasm, wonder, desire, voice, manner, sympathy, surprise, expression, self-attention, imitation, gestures, persuasion, fear, persistence, excitement and propitiation.

All of these weapons can be utilized in forming sales talks and in connection with the selling points of a shoe.

The salesman's first attempt should be to create in the customer's mind a confidence in his ability and willingness to serve him properly. By a clever salestalk on the quality of the shoe being offered the salesman shows he has a knowledge of his goods and the customer has become convinced of his ability, and allows himself to conclude he can depend upon the truthfulness of his every statement.

W. A. Corbin gives us a psychological chart of suggestive salesmanship that might be worth repeating here.

"Some faculties and sentiments of the mind susceptible to suggestion in the sale of merchandise.

#### I. Intellectual or Mind

##### (a) Faculty or judgment of

1. **QUALITY** (In a demonstration of the form, substance, or value of merchandise).
2. **USE** (In establishing the purpose or need of a certain thing).
3. **PROPOSITION** (Adaptability of certain merchandise as to construction, style or effect).
4. **VALUE** (By suggesting the advantage of price, finish, suitability, etc.).
5. **CONSTRUCTION** (Showing utility of particular parts, or advantage in make).
6. **COMPARISON** (In perceiving or indicating the relative values of merchandise).

##### (b) Sense of

1. **IDEALITY OR BEAUTY** (In illustrating the design, style, finish, etc., of merchandise).
2. **IMAGINATION** (In citing the history or sentimental value of an article).
3. **ECONOMY** (In proving value from an economical point of view.)
4. **HUMOR** (In the sale of quaint things or comic pictures, books, toys, etc.).

#### II. Emotional or Feeling

##### (a) Sentiment of

1. **BENEVOLENCE OR FRIENDSHIP** (As in the sale of gifts, etc.).
2. **PRIDE OR SELF-ESTEEM** (In proving gratification in the appearance of purchases of personal or home use).
3. **APPROBATION OR COMPLIMENT** (By giving credit to a customer for his judicious views or selection of merchandise).
4. **CURIOSITY OR WONDER** (By demonstrating make of merchandise or construction or working of a mechanical product).
5. **LOVE OF HOME** (In the sale of home furnishings).

##### (b) Instinct of

1. **PARENTAL LOVE** (In the sale of merchandise to parents for children).
2. **PRUDENCE OR POLICY** (In showing the value of selecting merchandise as to make, design, finish or construction).

3. ACQUISITIVENESS (In proving the advantage or need in buying certain merchandise for personal or home use).
4. CAUTIOUSNESS (In proving the need of buying the right thing).

### III. Vocational or Will

1. DECISION.
2. CONVICTION.
3. EXECUTION.
4. CONCLUSION.

Resulting in a purchase by proper appeals to the customer's faculties and feelings—Suggestive Salesmanship."

This chart is of course, far from being complete, but it is enough so to found a system of salesmanship upon.

We would suggest that each clerk in the store experiment with little selling talks. Use these enough times to

demonstrate their value.

Take the new spring style tendency as the subject of one talk. When showing a customer a shoe, and that customer asks for the latest, or shows that he wants the latest, spring the little speil about the new spring styles on him.

Try out another along the order of real worth of the shoe. Use the two sale talks given above as models.

Comfort and fit might be made the subject of another.

These salestalks must not be long or rigmarolish. Don't sing it. Don't use it except it is appropriate to do so.

[Note—The SHOE AND LEATHER JOURNAL will be glad to hear from shoe salesmen who have tried out this scheme, say in a month's time. The salestalk used should be quoted and as faithful an account of the trial given as possible. Tell us about your failures as well as your successes.]

## A Man is in the Shoe Business to Sell Goods

He is not There to Keep Books or be Shut Up in a Cage—If He Can Save Ten Minutes a Day to Think Out New Plans It Will Well Repay Him—Paying For What One Does Not Get

By A. M. BURROUGHS

"If a man needs a thing in his business, it is likely to cost more not to supply the need than the thing itself would cost."

A traveler, walking into a hardware and implement store in the corn belt, found the proprietor back in the warehouse setting up a stove.

After watching the work for a few minutes the road man interrupted him.

"There's a chance for a man to get a good place as manager of a big store down the state," he began. "It's owned by a stock company. At present they're without a manager.

"The position will pay \$200 a month to the right man. I'd like to find some hustling fellow I could put them in touch with. They're good customers of the house."

"Say, that looks good to *me!*" the merchant returned. "You know I've found it pretty hard here, for lack of capital. I wouldn't mind *making a change* if I could get a place like *that.*"

"Do you consider yourself a \$200 man?" the salesman asked, with a twinkle in his eye.

"I certainly do!"

"Well, *you* wouldn't do at all. That company wouldn't stand for a manager who spends his time putting up stoves while a \$60 clerk is out in the store trying to sell a hard customer."

The traveler may have been only joshing about the \$200 job to teach the hardware man a lesson, but the story has a point just the same.

A man who allowed himself a salary of \$200 a month was doing his own bookkeeping by hand.

He spent two hours a day on his books, not including the monthly trial balance.

At that rate it cost him about \$1.75 a day, \$45 a month, to keep his books.

He bought a Bookkeeping Machine. Immediately he cut the amount of the time required to one-half. This gave him even better records at a cost of less than \$25 a month.

But that is not *all* this man saved.

He found that he could get a girl to keep his books

—boss setting up a stove—  
cost him a \$30 sale—

on the machine as good as *he* could keep them by hand

Working full time she cost him but \$1.50 a day and gave him so much valuable information that he soon *doubled his business.*

### What Books Are For

A man is not in business to *keep books*, any more than he is in business to sweep out his store. He is in business to *sell goods.*

Books are kept to give him, every day, a complete statement of his business, so that he may know what steps to take to sell *more* goods profitably.

When a man is cooped up in his bookkeeping cage, who is running the business for him? It is being run by his cheap clerks.

Can a \$60 a month clerk run a business as well as a \$200 proprietor?

Of course not. When the business is being run by a \$60 man, it is a \$60 business. When it is run by a \$200 man it is a \$200 business.

That is the difference. A \$200 man can sell *more* goods. He will drive away *less* regular customers. He can convert more of the *transient* customers into *regular* customers.

If he is a \$200 man he can *use* more of the *figure-information* shown by the bookkeeper—if he saves the one hour to *think* in and keeps his mind fresh to work out ways of increasing his business.

One new customer added to a store's regular patronage every day, means an increase in gross business which at the end of a year would amount to \$1,500 a week—\$63,000 a year.

Five per cent net profit on that volume of business will buy a mighty fine automobile.

If *you* can save one little ten minutes every day and use that ten minutes to *think* with, *you* can increase *your* business enough to pay for several bookkeeping machines in one year.

—one new customer—

A chapter from "A Better Day's Profits," copyright, by the Burroughs Adding Machine Co.

# The Making and Marketing of Synthetic Rubber

Its Cost of Production is Yet Too High to Be a Success Commercially—The Scientific and Historical Side of the Product Ably Reviewed—Will It Ever Equal Higher Grade Gum Rubber?

An English chemist named Tilden was working on a substance called isoprene in 1883 and 1884. Having temporarily concluded his work, he sealed up the remaining isoprene in glass tubes and set it aside. After the lapse of eight years he had occasion to examine the tubes and found that in place of a clear, benzene-like liquid, they contained a viscous material, in which were floating lumps of a solid substance. Such was what may be called the real discovery of Synthetic Rubber.

## The First Serious Effort

Though the subject was of more or less scientific interest, it was not until the phenomenal rise in rubber values that any serious efforts at commercialising synthetic rubber were made. The continual increase in the world's consumption of rubber, and the possibility of a shortage, primarily resulted in the development and exploitation of plantation rubber. It has been proven beyond a doubt that rubber of a very high grade can be produced from plantations of the Hevea. But at best, a plantation requires from ten to twenty years to mature and give a profitable yield of rubber; while statistics can show that the consumption of rubber increases from 15 to 20 per cent. per annum. So that any material drop in the price of crude rubber could not be anticipated for some years.

The eagerness with which the market absorbed, and still absorbs, guayule, pontianac and other gums of comparatively low quality encouraged the search for further supplies, no matter how distant, scanty, or inferior.

The eyes of scientists, too, were turned to rubber as a field for useful and profitable research, and the foremost men in England, Germany and France devoted their attention to it. The International Congress of Applied Chemistry, held in New York last fall made more public the progress that has been achieved. Dr. W. H. Perkin and Dr. Carl Duisberg, representing respectively the English and German groups of scientists, gave notable addresses on the subject. The latter exhibited specimens not only of synthetic rubber, itself, but of balls made from it, and a set of tires which, after having run upwards of 4,000 miles, were in extraordinary good condition. Two sets only have been made, the set exhibited and one presented to, and used by the Kaiser. So no doubt is left that the manufacture of synthetic rubber is an accomplished fact, though its commercial future is problematic.

## Process of Working Backward

A glance into the scientific and historic side of synthetic rubber may be of interest. To the study of rubber, the chemists applied the well known system of working backward from the finished product to its simpler components. Rubber was broken down by the so-called process of "Destructive or Dry Distillation." Among other substances, a light liquid somewhat like benzene, was isolated, called isoprene. That was first accomplished in 1860, and at the same time the observer, Williams, noticed that by treatment with ozone, this substance was changed into a rubber-like body. In 1875 Boucharddt, in France, treated isoprene with hydrochloric acid and produced rubber. But to Tilden belongs the real discovery. He had obtained isoprene from the distillation of turpentine and that was the isoprene which turned into rubber on long standing. Tilden was the first to test the product by vulcanisation, and to identify it as rubber. Even at that date he prophesied the value of isoprene for the commercial production of artificial or synthetic rubber. His specimens were again exhibited in

1906, and Dr. Perkin showed them in New York during his lecture, probably their last appearance before being put in the British Museum.

The greatest developments, however, have come during the last five years. It was found that hydrocarbons of particular form could be changed, or "polymerised," by agencies such as heat, acids, etc., to produce substances of an entirely different nature. But two only produced rubber, viz., "isoprene" and "butadiene." It was to those, then, that chemists largely confined their efforts.

The majority of the processes suggested required such length of time that they were of little or no commercial value. In 1910, working independently, Matthews, in England, and Harries in Germany, discovered simultaneously that the results were produced in a few days through the agency of the metal sodium. That method has been generally adopted as the logical method of manufacture.

But after this discovery the supply of raw material became a serious consideration; and it was found that the world's supply of turpentine, even at prevailing prices, would not yield sufficient isoprene for the manufacture of rubber on a commercial scale. So the problem resolved itself into a search for a cheap source of isoprene. It was calculated, also, that with the development of plantation rubber, the synthetic article might have to meet a price of 25c. per pound.

## Materials as Starting Points

Four classes of material naturally suggested themselves as starting points, viz., wood, coal, petroleum and cereals or starchy materials. The first two were discarded, the former owing to smallness of supply of acetone, which would be the product of wood employed; the second by reason of difficulties and lack of method. Petroleum offered some promise; but, the fourth appeared the most feasible, embracing as it did the products of corn, potatoes, etc., with initial cost of less than 2c. per pound. Appreciable developments have been made along that line, though the production of isoprene had been affected only through fusel oil, a product of the fermentation of sugar. Butadiene, however, can be obtained more readily from butyl alcohol, resulting directly from the action on starch or even on sawdust, of new ferments discovered by Fernbach in the Pasteur Institute of Paris, though his results have not yet been fully established. An alternative method for the production of butadiene is from formaldehyde. The English group of chemists claim that the rubber from butadiene is equal to that from isoprene; the Germans dispute that fact, and, confining themselves to isoprene, have achieved considerable success with coal as the initial material.

None of the methods hitherto advocated have resulted in satisfactory yields. Rubber as produced now, aside from manufacturing costs, would be extremely expensive, from considerations of raw material alone. And until good yields are obtained there will be no possibility of its becoming a serious factor in world markets. Moreover, the difference between operations on a laboratory scale and on a factory scale must be appreciated. Again, while the basic materials are at present low in price, the effect of a greater demand would inevitably raise their value.

Figures have been quoted to show that to produce 80,000 tons of synthetic rubber, 120 million gallons of proof spirit would be necessary, about one-fifth of the world's supply.

The great authorities are unanimous in saying that the obstacles ahead are not great. They are optimistic,

and, though none claim that synthetic rubber will appear on the market in a very short time, they say it is only a question of a few years at most. So great is the confidence of the Englishmen that it is reported a factory is under construction for the production of acetone and fusel oil. The German syndicate have declared their willingness to spend a million pounds on the problem.

The samples that have been exhibited may not represent the rubber as it will ultimately be marketed, but it is extremely doubtful if rubber equal in quality to the highest grade gums can be produced synthetically. If it can, its freedom from dirt and impurities will cause it to be welcomed by rubber men. It is suggested that it may be necessary to incorporate a small quantity of resins, which seem to have some effect on vulcanising qualities. For the production of a quantity sufficient to make an impression on the rubber market, an immense amount of capital, plant and raw material would be necessary. That would affect to a greater extent the market for materials as well.

Perhaps one of the greatest menaces to the commercialisation of synthetic rubber is the plantation rubber. It

is continually prophesied that the output of plantations will force rubber down to such a figure that Para can not be put on the market at a profit. On the other hand, it is also shown that the world absorbs all the rubber offered, large quantities are reclaimed, and still prices remain firm. The plantation industry may have its own difficulties to overcome. Its very nature makes it in many ways a gamble with providence, aside from possibilities of labor difficulties, which will complicate the situation.

The scientists, however, are not concerning themselves about the future; their problem is to manufacture synthetic rubber cheaply, and on a commercial basis. Whether it will come, and how it will affect the rubber market, are yet to be seen. For nearly twenty years chemists worked on the synthetic production of indigo, and finally it became an accomplished fact. It may be that we shall wait twenty, or twice twenty, for commercial synthetic rubber, but who will deny that it will come?

Every employe has more to do with the amount he earns than has the employer.

## SUGGESTIVE OF THE SNOWY SEASON

An appropriate and distinctive cold weather window trim by A. Lecompte of Montreal.

## Would You Give Credit to This Woman Customer ?

¶ Mrs. John Ardley has been in the habit of dropping into your store every month for four or five months, buying shoes for herself or her three young children. She came in one afternoon, however, and picked out a pair of tan button shoes on the "Acro" last, Goodyear welt, and right up-to-the-minute in style and build, retailing at \$6.00. After she had been properly fitted and the footwear had been wrapped up, she said to you:—"I am sorry but I have not the money to pay for this pair just now. Will it be all right if I take the shoes along with me and settle for them at the end of the month when my husband gets his regular cheque."

¶ Now Mrs. Ardley has every appearance of being a strictly honest and reliable woman of middle age, but you know absolutely nothing about her or her husband, apart from the partial acquaintance you have formed upon her shopping expeditions. She has always taken her parcels home with her and you have never been afforded an opportunity of finding out her name or the occupation of her husband, consequently, you feel it is rather risky to give the credit required.

¶ On the other hand Mrs. Ardley is liable to develop into a good, permanent customer, and if this favor is refused she may go elsewhere for the shoes of herself and family.

¶ Did you or did you not give credit to Mrs. Ardley, and what are your reasons for the stand you adopted in this particular case?

¶ For the best answers the SHOE & LEATHER JOURNAL will award cash prizes of \$3.00, \$2.00 and \$1.50, and for all those outside the prize winners whose replies are considered worth publishing, \$1.00 will be paid. Send in your letters at an early date and do not be afraid to state your views. Instances, such as the foregoing, arise quite frequently in the retail shoe business and some new light may be shed upon a perplexing problem.

¶ The competition closes March 20th and results will be announced in an early issue.

# Are Salesladies in Shoe Store a Help or Hindrance?

The Number of Women Clerks on the Increase—Some Retailers Declare They Are Just As Efficient and Pains-taking as Men and Cost far Less—Other Dealers Say That They Lack Patience and Judgment, Are Too Thoughtless and Will Not Acquire the Necessary Knowledge.

"Yes, I am sure lady clerks have their advantages in a shoe store," declared one of the largest retailers in Winnipeg the other day. "Of course, a lot depends on location. I am right in the centre of a live suburban district. I do a large general and family trade and although I employ several saleswomen, I have no more complaints than those bound to occur in any retail shoe store regardless of the sex of help kept. I have been in business the last 17 years, my store being in the heart of the business section until three years ago, when I located at my present stand. Up to that time, however, I had always employed male help, as lady assistants would not be possible where men's trade is catered to almost exclusively. When changing I decided to give the lady clerk idea a fair trial, as curtailment of expenses was absolutely necessary on account of the present high price of doing business. I am glad to say that it worked out in a first class manner. I employ half a dozen clerks at times, all women or girls, and you can imagine what a difference that makes in the expense sheet at the end of a year's time."

This store is a large one, and its brightness certainly does strike one on entering. The proprietor believes in keeping up-to-date in everything, and is always open to anything in the way of suggestions for the improvement of store or service.

## Has His Force Divided

A St. John shoeman writes: "I have three clerks, two men and one lady, and I think, taken altogether, the three of them accomplish more than three males clerks would under the same circumstances. Working together, they are much more able to satisfy all customers, as a person desiring to be waited upon by a salesman can be turned over to one of the men, and the same method used with a person wishing to be served by the lady clerk.

"Making a choice between the two, however, I would take a man every time, as he takes things more seriously than a girl, who, in a majority of cases, seems to regard her position as a temporary one only, and does not think of her future the same as a young fellow with lots of ambition and an eye for advancement, and is willing to work hard if he sees any chance of promotion. A woman prefers to think of marriage in the future instead of a career in a shoe store.

"Then again, a shoe store is more a place for a man than a woman, as a good deal has to be learned before one can become an efficient shoe salesman. I have never yet met a girl who was willing to apply herself steadily to master all necessary details, which are essential in the selling of footwear.

## Wherein Women Excel Men

"Salesmanship is what counts," is the opinion an Edmonton dealer gives. "And from tests made by myself, lady clerks have time and again been proven just as efficient as men, more so in some instances, especially with children, whose confidence will be won much easier by a woman than by a man. A lady clerk can also make women feel more at home than a male clerk. Saleswomen please mothers very often, as they will always show an interest in her children, and understand her more than a man would. Neither are they so much inclined to take advantage of a child as a male clerk.

"Our salesforce is about equally divided, half male and half female, and we can generally tell which a customer prefers to be waited upon by. A lady is as good as a man

we find in selling to our average customer, who to bring matters down to a fine point, is more interested in the purchase that he or she is making than in the seller. We let the men look after the men's section, while women preside over the women's and children's departments, with the men to do the heavier work around the store. I think this is the proper method, and it saves us quite a sum in wages."

## Afraid of the Suffragettes

A Hamilton dealer, asked for his views on the subject was not backward in expressing them, although he requested that his name be kept out of the matter for, as he puts it himself, "The suffragettes might get after me if they heard me talking in such a manner about the gentle sex.

"I do not employ lady clerks," he went on, "because I don't think the average girl knows or puts herself in a position to know the quality, value and specially important points of a pair of shoes. She is therefore not able to talk as intelligently or instructively on the subject to a customer. Another thing—a man generally suits every customer, man, woman or child, but very often a male customer will not hear of a saleslady attending to his wants, feeling that she is not capable of selling him what he needs. He prefers to place his confidence in a man, having always done so in the past.

"Then again, there are innumerable jobs to be done around a shoe store that a girl would be insulted if asked to perform, such as unpacking goods, helping to hustle packing boxes, getting up stock from the cellar, dusting and a dozen and one odd jobs which a man takes as a matter of course I think too, men are better stock keepers and are a good deal

## A Successful Shoe Store Manager

B. D. Menzies, manager of the Sudbury store of the United Shoe Dealers, began his experience in the shoe line in 1898 in Lindsay with Robert Neill. He started as parcel boy in his home town and two years later, was sent to London to work under Frank Mercer, who was then manager of the London branch. There Mr. Menzies was engaged as a junior until 1902, when he resigned and returned to Lindsay as senior clerk for F. A. Robinson, who took over the business of Robinson & Ewart. About three years later, J. W. Foy bought out Mr. Robinson, and Mr. Menzies was appointed manager of the Lindsay branch. In August, 1908, Mr. Foy opened his second store in Sudbury, where Mr. Menzies was sent as manager. In February, 1911, there was a change made in the Port Arthur branch, in which Mr. Foy took over full charge and the subject of this sketch was then sent to manage that branch. The Sudbury business had grown to such an extent in the meantime that it was Mr. Foy's wish that Mr. Menzies return to Sudbury, which he did in November of last year. Trade has been remarkably brisk in that thriving town and this shop is now doing the biggest volume of any of the six stores of the United Shoe Dealers. Mr. Menzies is looking forward to an exceptionally busy summer. He is alert, and aggressive and has the faculty of gaining the confidence and esteem of all those with whom he does business.

steadier and more reliable. Women customers will always be satisfied to have a male clerk wait on them, but often raise an objection when a girl tries to serve her. They value a man's opinion regarding the style and durability of a pair of shoes far more than they do a woman's, feeling that he is better versed in the art of fitting and judging, except when crossed herself in one of her own pet theories, and that he is not inclined to waste so much time as a woman in small chatter and society gossip."

### **Selling Shoes is a Man's Business**

"I do not employ women clerks because I think, to begin with, that men are better salesmen," writes a Hastings St. shoist, Vancouver. "I look on the shoe business as a man's business, and think a woman is as much out of place in a footwear store as a man would be in a millinery parlor or a dressmaker's salon. A girl will not or cannot seem to grasp the knowledge regarding the quality and make of a shoe, which is absolutely necessary in the making of an efficient salesman. Acquiring knowledge of leathers, lasts, patterns, styles, etc., seems to be an impossibility with most girls, and questions of this sort are fired at a salesman a dozen times during the course of a day. Women do not show as much patience as a man either, and if patience is a necessity in any business to-day, that business is the shoe game. A girl's limit in the amount of work to be done is not anything like a man's. She is generally ready to quit about the time a man has got a good start in a busy Saturday evening's work. A man can work around a store the whole day long without asking the aid of anyone, but a saleslady always has to have someone reach up to that top shelf or go down into the cellar for a pair of shoes called for."

### **It is the Women Who Buy Most**

Thus opinions differ, and this is a question which will largely have to be determined by individual circumstances and the respective requirements of each store.

One shoist puts it: "The help problem is one that you must govern for yourself. You can doubtless find capable clerks, both male and female—persons who take their vocation seriously, seeking to improve themselves, and establish a strong personal relationship with your trade. It requires as much tact, talent, study, and cultivation to become an alert and successful salesman in the shoe line as it does in any other arena. You must recognize this fact before condemning lady clerks, and that it is the woman in every house that does three-quarters of the buying. Seek to please her. The two chief troubles a shoeman has to encounter are the man who wants to buy shoes for his wife and the woman who wants to buy shoes for her husband, if this expression may be permitted. Most persons can buy to suit themselves, but not others. They are foolish to attempt it. In certain cases it may be necessary, but very seldom."

At any rate the tendency to employ women as clerks in Canadian shoe stores seems to be growing, and one shoeman who takes an interest in the subject, and has done a lot of figuring estimated that about one-fourth of the shoe stores employ women, so they certainly must give fair satisfaction, or the movement would go back instead of ahead.

## **What Service Means in the Shoe Store**

### **The Good Service That You Render to Customers Soon Crops Out—The Importance of Courtesy At All Times.**

The retail shoeman realizes that service is one of his most valuable assets. Without it he could not keep his business ahead of, or even on a level with, that of his competitors. The store service must be watched carefully and improved whenever possible.

This service must be in the way of prompt deliveries' the retailer's ability to have the choicest selections of new and well-selected styles, well arranged stocks of reliable and clean footwear, and last, but by no means of least importance, the service rendered by the salespeople.

### **Employer and Employee**

The "boss" probably realizes the importance of this service more than does the employe, and if he is shrewd and is a success as a merchant, you will notice that he is continually endeavoring to improve this important item of service. He must lend suggestions to the clerks, it is true, but he cannot keep a close watch on all of them, so it is up to the salesperson himself to make good.

The good service that you render the customers soon crops out, and don't forget it, the "wind" of it gets to the "boss" just as soon as it would if that service had been bad. You will find that the satisfied customer is your best friend, and this is further proven by the calls a good salesman or saleswoman will have from patrons who have been well pleased by the treatment they have received at your hands. If the customer is well pleased with the service she gets from salespeople, she will make these facts known to the "boss" at the first opportunity.

### **A Matter of Popularity**

The salesperson who grows in popularity with the customer will soon find that he is growing in popularity with the "boss." Any man or woman knows what this means. It means that you will get the salary that you deserve. It means that you will be in line for promotion, and that you will always get "what is coming." It means that if ever a head of a department or assistant manager of the store is needed, you will receive consideration. It means that if ever any stock in the concern is for sale or a partner is to be taken into the business, you will be the one given this preference.

The young clerk can scarcely see these things as he first enters the store, but to constantly bear these things in mind and work consistently toward that end will ultimately bring results.

### **Coaching and Absorption**

The new and inexperienced help will get coaching from the proprietor or from some older employer, and he should absorb all the information he can get. He should learn the technical and trade names in footwear, learn the prices, widths, sizes and qualities of the shoes he has to sell, so that to every customer he can talk intelligently and make a sale like an "old head."

### **Be Courteous Always**

Older clerks should bear these same things in mind; and in addition they must never forget to be courteous at all times. Another important thing in fitting customers is to give them your undivided attention. Don't allow other employes to carry on a conversation with you while you are waiting upon the customer, and don't do it yourself. If something comes up that is absolutely necessary to divert your attention, excuse yourself from the customer for as short a time as possible.

When through making a sale and the customer is waiting for the package, don't deliberately walk away unless another customer is waiting. If another salesperson is standing near, do not leave your customer to start a casual conversation, but be sociable if the caller is inclined to talk. Get the shoes as soon as they are wrapped or wrap them as soon as possible, if you have to do it yourself.

At any rate, be courteous above all things to the customer. This and other necessary traits behind the counter will make you a success.

## Making Spring Season Selling Cards

Calling Attention to Your Opening or the New Things in Your Travelling Goods Department—Bradley is an Alphabet That Can be Quickly Made and Offers Opportunity for Illumination of Capitals

By R. T. D. EDWARDS, with the Robert Simpson Company, Limited, Toronto  
(Copyright by the Acton Publishing Company Limited)

The ambition of every card writer should be, and undoubtedly is, to produce for this spring season cards that are just a little better than he ever had used before. These must be new and fresh in appearance so that they will harmonize with the new styles which they are to advertise.

They will then present a much better appearance in the window than if you used three or four entirely different styles of tickets. Another feature of importance is the colors. These should harmonize with the season which they are to represent. For example, on Spring showcards

Fig. 2

There are many ways in which the style of a fancy card may be changed. The shape of the card, type, layout, the general color scheme all can be worked so as to give the finished product an entirely original appearance. Another point which the card writer should keep in mind is to have all his spring cards uniform in lay-out and color scheme.

pale shades should be used instead of the cold, dark colors which are more suitable for fall and winter.

### The Product of Foresight

Your attention is drawn to two cards illustrated at the lower right corner of figure two. These cards are the pro-

duct of much forethought. It is not possible to make a card with so much detail unless some careful planning has been done beforehand. The card to the left, which we shall call No.1, shows scroll work used very effectively and still not overdone. To make this card properly every line and curve must be laid out before any lettering or air brush work is attempted. Three stencils only are required to make this card. Two ovals and a straight piece to be used for the centre space. The lettering is done in black ink and the background tinted with brown. After the stenciling has been completed the scrolls are to be painted in the same shade

abcdefghijklmnopqr  
... stuvwxyz ...

Fig. 1—Lower Case Bradley

as the card board. The finished article will be a very effective card if lettered in dark brown and shaded up in lighter shades of the same color.

Card No. 2 (Spring Millinery Opening) shows the silhouette of trees and shrubs on a lake shore. In order that these may have a natural appearance, considerable care must be taken in drawing them. The figures "1913" are cut in. After this corner has been completed the lettering should be laid out. Use waterproof ink for the lettering and rules so that air brush work will not run the black. Considerable care must be taken in air brushing the sky and water. Lay two strips of card board about one-third of an inch wide across the card to cover the ruling. Fasten this down with

small weights or push pins. Now cover up that part which represents the water, having a straight line where the horizon is intended to be. Air brush the sky in natural colors, such as green and blue, making cloud effects. To finish the lower half of the card cover up the sky part and air brush the water in dark green, using most color at the horizon and blending it gradually to the shore.

#### The "Bradley" Alphabet

In connection with this lesson we are illustrating in Fig. 1, an alphabet known as "Bradley." This form of lettering is often mistaken for Old English on account of the somewhat similar formation. Unlike Old English, this type is much used and is very easy to construct. To a card writer, who is used to all styles of letter formation, it is the most quickly made type. It can be executed with much greater speed than any other. One reason for this is that the end of the strokes do not require any touching up. Another reason is that the line of the letters suits the natural swing of a chisel pointed brush. This alphabet requires no explanation. Careful study will explain all details. It is necessary in using it to keep the brush flatly pointed at all times. Make the wide stroke with the flat side of the brush and the narrow with the edge.

#### Illuminated Capitals

The capitals of the Bradley type are as easily executed as the lower case letters. No other type affords a wider range of opportunities for illumination. For this reason we have not given a regular alphabet of the upper case but have illustrated several illuminated capitals in Fig. 2. The four small cards and large traveling goods card show this style of lettering in actual use.

## Should Retailers Get More for the Button Shoe?

**Very Few Charge Higher Than They Do For Bal or Blucher, Yet They Admit It Takes Much More Time and Trouble to Fit and Sell Button Boots—Shifting the Buttons and Other Details Cause Delays—Why is the Price Not Raised in Consequence?**

How many retailers in Canada get more for a button shoe than they do for a laced shoe? Some of the more enterprising receive 25 cents a pair additional, but a large number will sell the same kind of a shoe whether laced or button for same price. So far as one may judge from the expressions of the trade, there is likely to be as pressing a demand for a button boot during the coming summer as there was last year. In fact, many wholesalers and manufacturers openly declare that in the better lines, the popularity of this class of footwear is increasing, and that its measure of favor is likely to extend for two or three more seasons. They cannot account for this, except style, and as one is influenced by his or her neighbors, so when the wearing of button boots begins the craze extends. The women will have this kind or none. With men, while a certain number of button Oxfords and button high cuts may be sold, still the demand has never been very heavy on this side of the line. The cost of manufacture is considerably more, from the fact that more leather is required than in a bal or blucher. The sewing of the button holes is more costly than the operation of eyeletting, unless very costly eyelets are used, and good buttons are dearer than the average laces.

#### Afraid to Make the Move

"Yes," said one enterprising Eastern Canada retailer, "I have to pay from five to ten cents a pair more for most button boots than I do for a laced one—the average is 7½ cents and yet I do not get more out of this kind of shoe than I do from a straight bal or blucher. I frankly admit the reason is because the other fellows will not raise the price,

and therefore, I cannot afford to do so. This may be an admission of weakness, but if you are in business you have to do as the other chap does to a certain extent and you cannot branch out on strikingly bold lines. I know that I can sell two or three pairs of laced boots while I am disposing of one pair of button, but it is all part of the game, and we have to put up with it. We have to alter the buttons on practically every pair that we sell and this takes time. Then, perhaps, the buttons come off and a woman returns and wants others put on, and in some cases, we have to shift buttons as much as two or three times before a shoe will properly fit the instep and ankle."

#### Does Time Mean Money?

A Montreal traveler says: "I went into a certain shoe store the other day to buy a pair of shoes, and as I was not in a hurry, I told the salesman to go ahead and attend to some ladies. He sold two pairs of button shoes, and had to change the buttons on each pair. I am sure that he could have sold four pairs of bals or bluchers in less time and with less expenditure of energy, patience, effort and have made more money. He told me that he did not get any more for a button boot than he did for a laced production on the same last and made of the same material. I told him that he was very foolish as, if time was money, he should certainly charge at least a quarter more for the button boot. He agreed with me and thought that retailers should come to some understanding whereby they should get more for this kind of shoe.

An old Nova Scotia retailer says that "buttonholes frequently tear out, and in fact, to make a long story short,

we have all kinds of trouble with them. In the laced shoe there is a certain give and take, which is met by the lace, but in the button, there is a constant stress and strain, and ladies often return to us complaining of pains across the instep by reason of the fly being drawn too tight." The reason button holes tear out is because the fly is faced only with kid and in some cases sheep skin, and it is on the very best lines that calf facing is used.

A St. John retailer in discussing this matter said that they obtained from 25 to 35 cents per pair more for button boots than they did for the straight lace, and he thought, this being the case, the profit from either class would result in the same, considering the extra time consumed in fixing the buttons. "Of course," he went on, "if we pretended to sell button boots at the same price as we do bals or bluchers, I think we would lose money, owing to fitting and shifting the buttons. We would gladly welcome the straight laced in preference to the button. It would not be so bad if one shifting of the buttons would answer, but we are continually requested to alter the buttons on both new and worn shoes. Particularly on fabric tops do the buttons pull out. This is a problem that will no doubt cure itself in time, and no amount of agitation will possibly change the public attitude. Fashions seem to run in channels, and the majority of people run along with the tide. To think of charging a customer for changing buttons or for putting on a few new ones is entirely out of the question. A retailer might as well ask five cents from a patron for an extra pair of laces, which we are often requested to throw in at the time of a sale of a lace boot. It is better to fix your selling price at such a figure so as to allow for all these changes and exactions and insure for yourself a good profit. That is the reason we always get 25 cents, and in some of the higher grades, 35 cents more for the button shoe. We have to pay the manufacturers more. You can bet your life we are not in business for the sake of our health. The trouble is, too many fellows are doing a shoe trade to-day, for the simple reason of making a living."

#### Buttons Will Stay for While

A Calgary shoeman writes that he does not think that button boots will go out of vogue for at least three seasons more, and in the West, among the better classes of trade, there is a lively demand for this type of shoe. So long as manufacturers furnish good uppers and properly re-inforce the fly, there is not a great deal of tearing out of the buttons.

"I know that manufacturers tell us that balmorals are likely to come into favor, but so far the tendency has not been very strong, and we are not going heavy on them. I admit that the button boot looks very pretty and artistic for a while, especially those with the high toc, Cuban heel and short vamp made up stylishly in various shades of tan leather, but for a shoe that will retain its appearance for a greater length of time than the button and never appear slouchy or sloppy until worn out, the straight bal is the most snappy and attractive of anything that we carry in stock."

#### And They All Fall In Line

Other dealers when interviewed, with few exceptions, stated that they did not get any more for a button shoe than they did for a lace, although they admitted that the weight of argument was largely in favor of securing at least 25 cents a pair additional. An analysis of the reasons on all sides seems to show that retailers recognize the fairness and justice of securing more for the button shoe, but they did not care to make this change for various reasons—competition, a radical departure; fear of loss of trade and other considerations. It is one of the things they put up with like the approbation evil, giving extra pair of laces, etc., but some day all these nuisances and set backs will be numbered among the things of the past.

## Forty-Six Years in the Shoe Business

To be in the employ of one company continuously for 46 years, is a record which few men in any line of endeavor can claim. In a nutshell this is the career of J. Alfred Hamel, manager of the shoe department of the Paquet Co., who conduct the largest departmental store in Quebec city. This house is one of the historic establishments of the city, being established in 1850, and in expansion and development, has kept pace with the growth of the ancient capital. Mr. Hamel entered the service of the Paquet Co. when 16 years of age. He attended school in the little building on St. Joseph Street in which the late Mr. Paquet first did business. He began like other boys hustling parcels, sweeping floors, running messages and executing other juvenile tasks, but it was not long before he rose in the

J. Alfred Hamel, Quebec

service and to-day, he is one of the most trusted and respected heads of any department. The shoe section was some time ago removed to a fine new building which affords ample room and splendid facilities. The stock is well kept and this branch is ably conducted by Mr. Hamel, who is a genial, kindly man, of quiet disposition and unpretentious demeanour. He inspires confidence in those who work under him and his long record of nearly half-a-century with the one firm, speaks more eloquently of his many good attributes than could any extended reference in cold type. The Paquet Co. have a habit of keeping many employes for very long terms, which shows the regard in which the company are held by those who work for them.

## The Rise in Leather Prices

Chicago packer hides are about two cents a pound higher than a year ago. Country hides are a cent a pound higher, and Buenos Ayres dry hides are seven cents a pound higher. Union sole leather is selling at 40 cents a pound. Grain side leather is selling at record high prices, and splits are scant in supply, even at above market offerings. Calf, kid and sheep leather also shows tendencies to go upward. This new rise once more emphasizes the fact that farmers will have to raise cattle, or shoe manufacturers must find some satisfactory substitute for leather.—American Shoemaking.

## No Radical Changes Made in New Fall Styles

(Continued from page 58)

has been predicted that the balmoral and blucher would supersede the button, which was only a passing fancy, and, owing to the objection raised by retailers, would soon pass out of existence. Of course, the average retailer would much prefer selling a laced shoe to a woman. He can fit her more easily and does not have to re-adjust the buttons. It means quicker sales and more turnover. But you can take it from me that the button shoe has come to stay—for several seasons, at least. It is now made to fit much better than in years gone by, when it was first ushered in. Then women were more stiffly laced than now, and objected to bending so much to fasten their shoes. But now there is more ease of movement so I am told, on the part of the make-up of womankind. Then again, the fly of the old style button shoe used to be scalloped, which weakened it and caused the buttonholes to pull through or to be jerked out at many points. Now, our facings are made with a special grade of calf skin instead of sheep skin as before, while the edge of the fly is sewed with double rows of stitching. It is almost impossible, with the well worked buttonholes and the strong stays and re-enforcements that are used, for a buttonhole to pull out. There is no doubt whatever about the trim, smart and elegant appearance of well-made button shoes, particularly in the latest shades of tan. Their popularity is by no means on the wane. Heels will be a little lower and buttons a little more closely put together. Everything pertaining to the button shoe will be as attractive and smart as possible."

Regarding prices, some manufacturers declare there will be an increase of five or ten cents per pair, while others assert there will be no advance over the figures of spring footwear.

Travelers will be out by practically all the leading firms before the close of the present month. Nearly all makers are busy with samples, and some will not have them completed before the middle of the month. All producers of Canadian footwear are looking forward to a record selling season.

The foregoing is only a general survey of the Canadian footwear world so far as the trend of certain styles is concerned. In later issues the SHOE AND LEATHER JOURNAL will deal specifically with several pronounced features, and provide a closer detailed analysis of the fashions for fall and winter.

### Some Attractive Models

For fall, McDermott Shoe Co., Montreal, are showing on their new No. 35 last a gun metal calf button McKay with a

military heel, close edge, medium high toe and perforations that looks exceedingly "chic" and is sure to be a good seller. Also another gun metal calf shoe similar to the above on the same last with a rope stitch and wide perforations over toe. A handsome shoe is shown in patent with a plain toe, close edge and a fabric top made of "corkscrew" topping material.

Another gun metal calf button McKay has a heavy sole with a rope stitch "corkscrew" fabric top, a high broad toe with medium large perforations, military heel. This is a shoe that will afford the acme of comfort to every woman wearer. Then this firm show a very natty button McKay shoe in grey kid with fine perforations on toe and foxing, Cuban heel, close edge, on a narrow last with a rather tapering toe. This shoe would be especially becoming when worn in conjunction with grey whipcord, so extensively used for suitings.

On a new No. 16 last is shown a patent vamp with grey buck top and buttons to match. This shoe carries a close edge, Cuban heel with a plain high toe of medium width and is a welt.

They also show a patent bal. with a dull kid top, medium heavy rope stitched sole, fairly small perforations with dark grey eyelets for the laces. This is also a welt. Then there is a full line of slippers in red and grey kid, grey buck, black and white ooze calf, white calfskin, velvets, patents and nubuck, with both flat and pompom bows.

The Rideau Shoe Co. have a new "Bull Moose" last for men on the market for fall selling. This comes in bals., bluchers and buttons. This is a fairly wide last with modified high toe and medium length vamp. This shoe has a full double sole and is lined throughout with grey calfskin. It has small, yet very neat perforations and is sure to be an excellent seller because it combines comfort with snappy appearance. A tan calf shoe in blucher, bal. or button is also shown. This shoe has a high toe medium wide "deck" and large perforations. A stylish receding toe last with a whipcord top in gun metal and patent is also shown and with a top seven buttons in height. This is bound to be a good seller among those liking a medium toe.

This company is also showing a new Columba last in a hazel brown tan and Russia calf with a broad, comfortable toe and heavy quarter and toe perforations. This, like all the above mentioned lasts, is a men's last.

A very nice gun metal calf for women is being shown and this shoe has a heavy sole with a modified high toe and medium heel. It comes in blucher, bal. or button and is lined with chocolate colored leather. This is the "Patricia" last. Another shoe somewhat similar to the above is shown but is a bal. with new style hooks and eyelets. These are only a few of the new lines on exhibition in the salesrooms.

Woman's gun metal, fourteen button, three quarter foxed, medium toe, 14-8 heel—Relindo Shoe Co.

Woman's dull calf blucher, medium high toe, perforated foxing—Rena Footwear Company

Woman's patent button, grey buck top, with plain high toe, cuban heel—McDermott Shoe Co.

Rowen & Ogg Co., of Guelph, Ont., believe that there is a tendency toward a return of the laced shoe in women's and misses' and several large orders already to hand show that the button boot is not as strong as it was. The firm have prepared an exceptionally attractive line for fall and the samples are neat and artistic. They are sampling fairly heavy on nut brown, patent leather and suede lines, with both slip and single soles. The tendency in the matter of toes seems to still range on the high toe. The manufacturers are, however, using several lines of the receding, but as yet there seems to be no great demand. Rowen & Ogg have added three new lasts, two of these with the high toe and one with a modified receding toe.

## "Bosses" Who Do Not "Stock Up"

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir.—After reading in a recent issue of the SHOE AND LEATHER JOURNAL under the heading "Plenty of Dubs but few real Salesmen," I feel that a view of the other side, that is the real salesman's side, might be equally refreshing, and instructive to your readers. To illustrate my contention, I will have to quote largely from my own experience, but it will describe the endeavors and aims of all conscientious and earnest workers in the shoe selling game, and there are plenty such, in spite of the assertions of this sorely-tried magnate of the Capital city.

I may say, having been for the past fourteen years steadily grinding, and holding at present one of the best positions in the retail salesman's line to be found in the East. still, it would profit me to exchange my weekly pay envelope for that of any plumber or carpenter or boilermaker working the same number of hours. I notice that our Ottawa friend concedes 7 to 10% of his sales to be the worth of the average salesman! I sold shoes in one of the largest department stores some years ago, and being too conscientious over careful stock keeping, allowed my percentage of cost to the firm to run up to nearly 5%, for which I was reprimanded, and after that managed to keep down among the leaders at 2½ to 3%.

### Keeping Down the Percentage

In big city stores it is the aim of the management to provide a separate salesman for each customer during busy hours, and no salesman is allowed to serve two customers at the one time. It is obviously harder for the salesman, during a slack season when customers are scarce and salesmen as numerous as ever to keep down his percentage of

cost to the firm. Right here comes a point that seldom if ever, gets an airing. How many proprietors ever consider or acknowledge that that salesman who has only sold \$70.00 during the day, would have easily made it \$100.00 had the proprietor kept a better watch on the stock and sorted up lines badly broken in sizes, and lines completely sold out, because of exceptional demand for same, and let run, week after week, by the proprietor, in spite of mild suggestions regarding the same from the salesman.

### No Clerk is a Hypnotist

I have known salesmen, real experts in the matter of courtesy, winning personality, and persuasion, but have yet to meet the hypnotist, who can by clever argument induce a determined lady customer requesting to be fitted with a tan button slip sole and short vamp, because such a line is completely sold out, accept a patent or black calf button in its place. Now such a condition as the above is not an exception; in fact, it is the ordinary everyday occurrence in many stores, although I notice our friend, the Ottawa dealer, carefully says nothing about it whatever. In fact, to put it mildly, I think I can fairly say that one-third of the salesman's everyday sales are what I call substitutes, that is, lines sold in place of what is asked for, because of same being out of stock.

I strongly suspect a large portion of the drawbacks and failings of the average shoe clerk might be attributed to the manner in which he is engaged, very often without any previous experience in salesmanship and principally because he is willing to work for low wages. An Ottawa lecturer, speaking to an advertising club recently said: "There is a great demand for \$40 a week men, but little demand for \$15 men. How does this measure up the average shoe salesman in the medium sized towns, and even in the large cities, whose wages range from \$6.00 a week for girls, and \$8.00, \$12.00 and rarely \$15.00 for men.

Can you expect the services of college professors at these princely prices?

In conclusion, I may say if the proprietor were to apply what is known to-day as the science of elimination to a portion of his staff, cutting out the deadwood and the drones, and making it worth while for the hustlers to stretch out and give an occasional word of encouragement to this type, his troubles would largely disappear.

Very truly yours,

EARNEST SALESMAN.

Hamilton, Feb. 24th, 1913.

Men's dull calf blucher, with perforated quarters and eyelet row, 12-8 heel—Regal Shoe Company

Men's gun metal blucher, blind eyelets, receding toe, whole quarter—Brandon Shoe Co.

Men's patent blucher, full round toe, circular foxing, 12-8 heel—Brandon Shoe Co.

# Some Suggestions for the Easter Window

CONDUCTED BY A. A. DAoust, MONTREAL, QUÉ.

## SKETCH No. 1.

### How To Put In An Elaborate Window in Appearance But Quite Inexpensive to Build Up.

The egg shape panel should be cut out of half inch lumber and covered with white felt. An egg shape opening should be cut out of the upper part as in the sketch, and a spring design put in the opening. This canvas could be easily painted by the trimmer with a little talent in that line, or it could be made by a local man at a small cost. Large artificial Easter lilies should be used partly around this, or if not used for Easter any kind of spring flowers would do as well.

Use stuffed white doves such as can be purchased from houses selling decorations, and suspend them with extra fine black thread, which will be invisible.

The pillar and fence effect can be cut out of lumber in a shape as in the sketch or altered to suit the trimmer.

Make the upright pillar first and cover with white felt. Then make the part which lies flat on the bottom of the window and cover with white felt.

When this is done, make the box at the foot of the pillar the same width as the upright pillar, height to suit yourself, and cover this with royal purple felt. Then flower box should be cut out of half inch lumber and then gilded;

use tulips if possible in the flower box. All around the bottom of the window, ferns should be used to give a garden appearance. The tree in the background can be purchased from a firm selling artificial flowers or it could be built by the trimmer.

Take an ordinary branch, and have a round bulb the size wanted made of wire. Cover this bulb with muslin, and pin or glue on the flowers and leaves which you want this tree to represent, then fasten this bulb to the branch.

The little fence effect should be made of small strips of wood put together as in the sketch and then gilded.

On the box at the foot of the pedestal, a large artificial Easter lily in a jardiniere should be used.

Use light green felt on the bottom of the window, and drop a few leaves here and there to break the bareness.

## SKETCH No. 2.

### Here is a Window That Can Be Put in at Practically No Expense—The Way to Instal It.

First of all take a board about the length of the window and measure off where the six little wood hangers want to go to make everything look even and balanced.

When this is done, wire each little arm ready to receive

For a city store or a very large town

Suitable for store in a small or medium size town

the shade, and connect on one wire for the whole thing at the back, then make your shades as shown in the sketch in connection with this article. Cover the frames of shades with purple paper, and in the inside have white tissue with a purple tissue letter pasted inside, so that the light will show the 'etter plainly. The six letters then will spell the word 'Easter.'

If you should want to use this idea for spring instead, use five shades and spell the word "Spring." Use artificial Easter lilies made of crepe paper around the shades as in the illustration. These cost about 75 cents a dozen.

The next thing to do is to make a square box to put the rabbit on. Cover this with purple felt, and cut out crosses of white felt to paste on the sides.

If you cannot afford a real papier-mache rabbit, make one out of cardboard, as shown elsewhere on this page. Have small purple baby ribbon from front paws to the shoes.

The doves can also be made of cardboard as shown in this article, or if the trimmer can afford it, use real stuffed doves, and hang them with fine black thread.

To make the upright panel seen at the right hand side, take two half inch boards out of a shoe case, nail together and then cover with white felt.

Get a local card writer to make you a card showing a broken egg with a chicken just coming out of it, and have the words "Easter Styles" put on it in purple. Put this to the panel, which should be held straight with a small support from the back.

Cover the bottom of the window with white felt or some other white material stretched tightly.

**A Pretty Cardboard Bunny**

To make rabbit out of cardboard, draw a rabbit as Fig. 1, and cut out of heavy cardboard, then outline from the one

you have already cut and cut a second one. When this is done paste the two together, to make it more solid. When

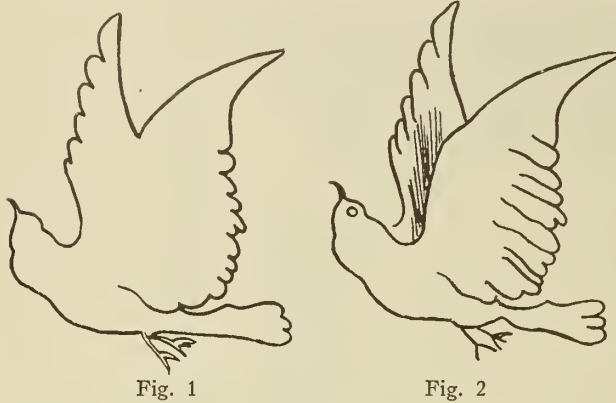

Fig. 1

Fig. 2

this is done, draw the face, paws, etc., as in Fig. 2, and you have a good looking rabbit. Use a heavy cardboard to hold this straight from the back.

**How To Make the Dove**

To make the dove out of cardboard, draw a dove as Fig. 1, and cut out of heavy cardboard, then outline from the

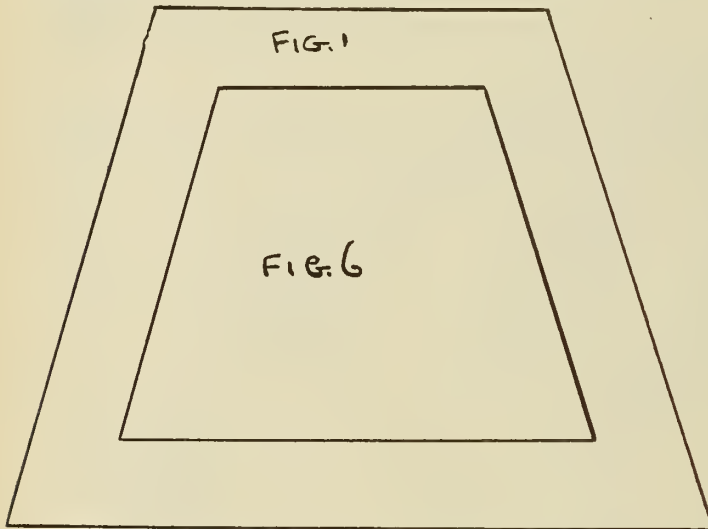

one you have already cut, and cut a second one. When this is done, paste the two together to make it solid.

When this is done draw the inside of the wings the eye and tail, as in Fig. 2. Suspend these from the ceiling with fine black thread.

**The Making of the Shades**

To make the shades cut frames out of cardboard size wanted as Fig. 1, then cut the top of shade out of half inch

lumber, Fig. 2, bore a hole in the centre for the wire to go through.

Glue the four frames together with small strips of muslin, Figs. 3 and 4.

Make fringe from tissue paper, about eight sheets in thickness, pin together to hold straight while you are cutting, Fig. 5.

When sufficient fringe is cut, paste to the shade on the inside of the frame, nail the frame when it is glued together to the top piece, Fig. 2. Just before the shade is already for the fringe cover the frame with tissue or crepe paper, and fill in the opening, Fig. 6.

Fig. 2

**Value Of Window Decorations**

Do you know the inestimable value of your show windows? If not it is time that you were fully aware of their potentialities. They are the cheapest, readiest and most effective advertising means at hand. They are the most tried and traceable medium. The goods are actually shown at the place where sold. No distance between the desire and the shoe, except to step through the door. Show windows represent a fixed space, and the question is how to best utilize the full amount. A change should be made in the window display at least once a week, preferably every three days. A color scheme should be carried out; not necessarily a big variety. A tan window, a patent window, a dull black window; each can have its turn, but a mixture of the three should be avoided.

When a novelty is shown it is advisable to have a small card describing the principal features; the card should carry out the color scheme of the window, small, artistic, but descriptive. Price tickets are advisable on the lower priced shoes and can apply on shoes up to \$5 in price. Above this price it is unnecessary to have price cards, as people who are willing to pay over \$5 are not so apt to consider the price.

There are several kinds of windows as follows: The bargain display, the appeal to common sense, the beautiful window, the display showing purpose.

The bargain window is usually sensational and is an appeal to economy based on price, either to get rid of slow moving stock or certain styles that have been overbought. This type of display often influences new customers.

The "appeal to common sense" display will show the ordinary staples, and efforts must be made to show that the shoes are good shoes for the price, and quality talk usually accompanies these types of windows.

Beautiful windows appeal to the aesthetic sense; quality is the basis of the appeal, and this window suggests the character of the business and does much to prove that the very best is on display. "The window with a purpose" is, let us say, a display of hunting boots or a display of Easter slippers, and may be sometimes called the specialty window.

Met Sir Ernest Shackleton in a grill room a day or two ago and found him rather displeased with a tough steak. "I am reminded," he said, "of a boot-maker who said to one of my fellows on returning from our last expedition: 'How did you like the boots I made for you?' 'Best I ever tasted,' was the reply."

# Advantage of Holding a Spring Opening in Shoes

How It May Serve As An Introduction to New Lines—Good Windows Will Be Found Essential—Suggestions for Decoration—A Hearty Welcome Should Be Extended to Everyone

"The spring opening is my best method of advertising:"

This statement made by a Canadian shoe retailer, expresses only one of the many advantages to be derived from a spring opening. A few years ago, the larger stores were the only ones to utilize these occasions, but latterly smaller shops have held an opening and found that they were repaid many times over for any time and trouble expended.

The spring opening is properly planned, attracts special attention to a store. Besides stimulating regular customers, it is a means of bringing many new ones, and if they get a good impression, after being extended a cordial welcome, they will surely prefer dealing with a retailer whom they know will look after their best interests, rather than continue to deal with old stick-in-the-mud on the next street, who forgets that a dealer has to go after a customer in these days of keen competition instead of waiting for the customer to come after him.

The fundamental point of the idea of course, is the showing of new stock. However, it is also a good time to dispose of a certain amount of a preceding season's stock if judicious mixing of the old stock with the new is used. Try to make an effective and eye-catching arrangement in this respect. Also place old stock or standard lines well to the fore, without, of course, spoiling the whole idea of an opening, which is the showing of new goods. Nearly every store has its own special features, and these should be studied carefully if the best results are to be obtained.

## Nothing Like a Hearty Reception

A hearty welcome should be extended to all comers, emphasis being placed on the fact that you are desirous of your customers' presence in the store at one of these openings, whether they buy or not.

The proprietor himself, or a reliable clerk should take up his stand at the door and after a few words of welcome it can be seen whether a customer just wants to take a look over new styles or whether he contemplates a purchase. Freedom, however, should be allowed everyone, as a clerk tagging around after a customer makes him ill at ease, and renders all efforts which have been used to get him into the store useless, giving him the impression that the spring opening is an advertising dodge, pure and simple, to extract some dollars from him.

## Styles Make Sales

A stylish showing, however, is sure to make many sales, where customers had no idea of buying, especially among the young people who may have a few spare dollars.

Some kind of novelty greatly increases the success of one of these openings. Every neighborhood has its own special tastes, and some magnet can be found generally by most retailers which is best suited to the class of trade served by them.

Very entertaining features can be had for little expense, music of any kind is always appreciated, and can be indulged in according to the size of your pocket book, whether it allows the service of one musician or the engaging of an orchestra of seven or eight. A good gramophone or a piano also attracts and holds a crowd. Two or three retailers even say that a demonstration of some article in the way of a shoe polish or some such article attracts and helps on wonderfully the sale of findings.

## The Question of Decoration

The question of decoration also requires considerable thought. A holiday attire or air is needed and many sug-

gestions will be presented. As said before, much depends on the class of custom served, and this should be borne in mind when contemplating some sort of decorations. Flowers tastefully arranged form a neat and pretty decoration. Tissue paper used not too lavishly also lends a holiday air. Artificial flowers, wistaria, in fact, almost anything suggestive of the spring and summer seasons are sure to contribute to the attraction, and give an air of brightness to any store. Natural flowers or vines of any description make things look fresher, and especially do they delight the eye of the ladies when these openings are held. Quite a few stores keep one or two vases of natural flowers in the foreground of their store all year around, as nothing appeals to a feminine eye as a fresh looking plant or vase of flowers. but they are not always procurable, and artificial ones are almost as good and are not expensive when the number of occasions that

## Has Held Fast to the Shoe Trade

Clem Coles, of Brantford, is one of the best known shoe retailers in Western Ontario. He possesses a record for those who are admirers of grit and courage. He was educated in Devon, England, and coming to Hamilton, at an early age, studied in the Hamilton Business College under Gallagher. The college was then situated in the old Arcade. When he had finished with the business college, he carried parcels for Dengate and Dougherty of the Telephone City. He has vivid recollections of carrying a hundred cases upstairs on one sweltering July afternoon. After some time Clem

Clem Coles Brantford

and his brother bought Dengate & Dougherty's business. Clem had been traveling for the firm for some years; he has held a Commercial Travelers' Association certificate for 24 years, and still carries one. They styled the new firm Coles Bros., and steady business came as a result of honest trading. Then the name of the firm was changed again, and the Coles Shoe Co. was introduced to the public, with a success that is known to all. Mr. Coles points out that he has been in no other trade but the shoe trade, and that he has studied the business from every end for nearly 30 years, so it is no wonder that he knows quite a bit about it. Mr. Coles is a keen member of fraternal societies and has held the highest position in the Brantford branch of the Sons of England Society.

they can be used is considered. In carrying out one of these decorations a certain color scheme should be selected and adhered to, as a combination of half a dozen or more colors tends to cheapen an otherwise fine piece of work.

Many shoemen find the giving of some souvenir one of the chief assets in bringing people to the store, and it is undoubtedly a first class item in the success of a spring opening. If a souvenir is advertised through the window or newspaper, it is sure to bring a large number of interested persons into the shop.

As regards the souvenir itself, almost any small article may be used, such as cases for stamp and street car tickets, rulers, lead pencils, memorandum books, blotters, envelope-openers, calendars, coin purses, small mirrors, book-marks, ash trays, games, yard-sticks, memo-pads, thermometers, etc. These are only a few of the dozens of odd articles that could be named, costing from a cent up to a dollar or more, and are acceptable gifts to all persons and classes.

Perhaps you may have some small articles in the way of findings, that are not of much value, which are slow going lines or even a small sample rubber or a shoe-dressing sample. The opportunity of procuring any of these souvenirs or novelties is to be had by any merchant as there are any number of firms and agents throughout the country selling these advertising novelties. By getting a few quotations on some of them you will be surprised at the inexpensiveness of them.

#### Window Dressing Important

Another and important feature that can be made use of is the window space. There must be something specially inviting to the eye in order to draw the attention and stimulate the interest of those passing.

Extra illumination is one of the essentials. A well lighted window will always catch the eye. The object of the window is to attract attention to the store, and an ordinary one will not serve on one of these occasions. The customer expects an extra nice window, and if he does not like it he is sure he will not find anything of interest in the interior of the store, and does not take the trouble of going in.

The floral idea for the spring window is a good one and should be worked out carefully. The color scheme in the window should be pretty much that of the store in a general way.

There should be some central object, to attract attention, with smaller and less important goods grouped around it. In one of these windows, exceptional chances are offered. In the first place, the display of new spring styles if properly laid out should, in itself, be enough to catch the eye of anyone going by. A good quality, neatly written show card calling their attention to the new styles, along with anything freakish or out-of-the-ordinary in new styles, also helps to make an exhibit attractive.

Then again, some novelty on the showing of a souvenir is a great drawing card. Souvenirs can be laid around, here and there, in a window to good advantage. So many fine ideas offer themselves in dressing one of these windows that care must be taken so as not to overcrowd it and lose the benefit of it. An outside sign of some kind placed in a conspicuous position is also required to emphasize the fact of your holding a spring opening and to be sure of calling the attention of passersby. This may be composed of canvas or muslin placed over the top of window or door announcing the opening. One eye-pulling method used by a shoe retailer last year was the pasting on of appropriately lettered pennants along both sides of his windows, so that only a blind man could get by without noticing it.

The main thing is to drive home the fact that this is a spring opening and to make it suggestive of spring.

Special advertising should not be lost sight of as it is as necessary as anything else to make the opening a success.

To get people into your store you must let them know of the occasion, and there are half a dozen ways of doing this.

#### Advertising Is a Great Help

Newspaper advertising is the most generally used and in a majority of cases a good ad. will be sure to attract attention. Some dealers however, for one reason or another, do not advertise, and use various other methods. Not least of these is the folder which can be made to look very neat, and is employed extensively by all trades who have occasion to advertise these sales, and they certainly add tone to a spring opening. Another much used method is the hand-bill distributed from door to door and left in a conspicuous position near the entrance of the store.

The newspaper space for this occasion should be enlarged. A full description of entertainment and other features makes the ad. a drawing card, and should be inserted several days before the opening.

### A Factor in the Felt Trade

E. Merner, president of the New Hamburg Felt Boot Company, and the Tavistock Felt Boot Company, has been connected with the shoe trade ever since 1898. In that year he organized the Hamburg Felt Mfg. Co., which in 1905 was taken over by the Hamburg Felt Boot Co., Limited. Previous to becoming identified with the manufacture of felt footwear, he was in the mercantile line. Starting at the bottom rung of the ladder in felt making, he has steadily climbed and is to-day one of the most successful manufacturers. He began making on a small scale, but has kept pace

E. Merner, New Hamburg, Ont.

with the business and has proved himself a careful manager, a shrewd buyer and an excellent salesman. He is a firm believer in the principle that "Eternal Vigilance is the Price of Success," and it is to his untiring efforts and unceasing application that the upbuild of the firm can be attributed. W. H. Umbach is the efficient secretary of the company. The large new plant which will be erected this spring in Tavistock under the name of the Tavistock Felt Boot Co., will turn out similar lines to those in New Hamburg—felt boots, shoes, fancy slippers and leather staples. The capacity of the new factory will be 700 pairs daily which, together with the plant at New Hamburg, will mean an output of 2,000 pairs each day.

## And He "Knows All About It"

A recent edition of "American Shoemaking," under the heading of "A Letter from Canada," contains the following:

Dear Sir:—It is an old saying that, "Where ignorance is bliss, 'tis folly to be wise," and there is one side of your controversy with the editor of "Shoe Factory" that makes one apply the stamp of ignorance to the above editor. I refer to this statement that the better manufacturing conditions in Canada make it possible, or even probable, that Canada will make shoes to ship to the United States.

Wake up, Mr. Editor, from your pipe dream and come across the line and show us where you found those conditions you speak of.

We, who are here, would be willing to give you a welcome hand and enthrone you as an allwise man, if you could even show us that they even "make" shoes here—they simply put them together, but don't really make them.

I am not a knocker against Canada and prefer to praise, but must look at things as they are—not as I would like them to be.

Canada to-day is in the same condition as St. Louis and the West were when they first started to make shoes. They were shoe butchers, not shoe makers. Canada may, twenty-five years hence, be in a class with St. Louis now, but why, Mr. Editor, should you fall out with your brother in the same trade over something that you fear may happen that far off? It is a good motto to "never cross a bridge until you come to it," and also "never hang a man on hearsay evidence." Come over to Canada and see things as they are; don't just look at the samples shown you, but if you are a shoe critic, look at the shoes as offered for sale. Try a pair and see how they stand up; also look into the hundreds of other conditions that could be brought to your attention in the way of labor conditions, labor cost, inefficient machinery conditions, that we contend with here, and indifferent business methods that one finds in all growing countries, then we feel sure you would wake up from your dream.

We are putting shoes together here and expect to continue to do so, but don't look for Canada to gobble up the shoe trade of the United States, for we don't expect to be making them good enough for that, for some years to come, and then we expect Canada will grow fast enough to take care of all the shoes that we can make. Both countries are big enough and should have common sense enough not to fear each other in the sense of trade monopoly by either.

This letter is written by a shoemaker in Canada who is struggling with conditions as he finds them, not as he dreams of them or wishes them to be.

SHOE FOREMAN.

The writer of the foregoing letter is known, for it is impossible for him to conceal his identity behind a pseudonym. With respect to his reflections on the condition of the shoe trade in Canada, no serious attention need be paid to these insinuations and outpourings, considering that they emanate from one who is reported to have held five situations in the United States in as many years, and lost every one through no fault of his (?) of course, but purely on account of being so wretchedly handicapped by labor, business, and mechanical environs that he could not "make good." Now he has come over to Canada and even matters here are so off-color that it will, no doubt, take him a few months to set them aright. He appears to be the only really good (?) man in the factory in which he is employed, and, as he has been on this side of the line but a comparatively short time, he, naturally, understands the shoe conditions in the Dominion very, very thoroughly. He can adequately appreciate the situation better than men who have been engaged in the manufacture of footwear for many years, and seem to be making about as steady progress as the producers of shoes in any other land. It is not unusual to pick up a foreign publication and find

such reflections upon Canadian shoe making. Such effusions are generally contributed by a sore head or dyspeptic, who never finds things "in Kanady" or "the colony" quite as good as "across the line" or "at 'ome."

## New Jobbing Firm Starts

As recently announced, a new wholesale shoe establishment has been started in Hamilton by J. S. Townsend and A. J. Angus. Mr. Townsend has severed a nineteen year connection as traveling salesman for the London Shoe Co., of London, during which he gained a great deal of valuable information and experience. He leaves the company with a great deal of regret and the very best wishes of the house. A. J. Angus, who will be associated with him as warehouse manager, has had many years' experience in the shoe line in the United States and Canada, and for the last two years has handled Blackford, Davies & Co., and Chas. Tilley & Sons' lines in the Ambitious City and vicinity. Their wareroom is located in the new Watkins Building, 43 King William St., Hamilton, and is splendidly situated, being close to the heart of the retail district. The new firm believe they have a bright future ahead. Mr. Townsend will do the traveling for some time for the house.

## Alert Canadian Representative

A traveler who is known as the "slipper man" from one end of the Dominion to the other is Fred P. Beemer, who for seven years has represented H. E. Guptill, of Haverhill, Mass. Mr. Beemer, who is well spoken of and well thought of by a large number of friends, is a shrewd, aggressive representative and during the last few years has built up a large and strong connection for the celebrated slipper maker, whose interests he so faithfully serves. Mr. Beemer was born in the trade, his father being one of the earliest wholesale shoe jobbers in Toronto. For several years "Fred," as he is familiarly known, was identified with the J. D. King Co., of Toronto. In addition to the Guptill goods he also handles the Sorosis Shoe, which is made by Little & Co., of Lynn, Mass., and although he has had the latter line only a few months, he has worked up a very creditable business. Mr. Beemer resides in Toronto and always wears a healthy and happy look and humorously says it is no trouble for him to "slipper" round and see his customers even when the walks are icy.

## Has Been Seeing the Sights

"Ken" Murray, the well known, popular Western Ontario representative of the Murray Shoe Co., has just returned from an eight weeks' trip throughout the West, having visited the leading centres, such as Winnipeg, Calgary, Vancouver, Seattle, San Francisco and Los Angeles. "Ken" looks bigger and better than ever, if such can be imagined. He says the West is certainly some place worth while visiting, and all through his trip he was given a royal good time. He states that he always thought New York was about the liveliest town on the map, but comparing it with San Francisco, he now feels that New York has not quite "woke up." This London, Ont., man must have been going some.

## Handling Stamped Price Shoes

Some Retailers Contend That It Invites Confidence and Trust and Places the Maker On His Mettle

A live question with the retailers during the spring selling season is—does it pay to handle a shoe stamped to retail at a certain figure? Much has been said for and against the shoe that is stamped on the bottom as—the \$3.00 shoe, the \$4.00 shoe, or the \$5.00 shoe. Several manufacturers claim that they have built up their large connection and increasing output by the fact that all their leading lines are stamped to sell at a special figure, and the public have come to recognize that when they buy a price marked shoe—and by this is not meant a shoe with a branded name, but with the selling figure stamped upon the sole—they are getting full value and there is no loophole left for doubt as to whether one customer is charged more than another.

One of the Canadian pioneer makers of a branded shoe, stamped to sell at a certain price, said: "I know what I am talking about, and we find that the great majority of our customers like the idea of the price being placed on the sole. They know that there is a guarantee of worth and workmanship behind it or else we would not put that price and our name upon the product. The idea took from the day that we instituted it some years ago, and we attribute this feature as one of the main contributing causes of our splendid success."

A Halifax shoeman writes the SHOE AND LEATHER JOURNAL that he has for years been in favor of shoes branded to sell at a certain figure. "My customers then know that everybody is treated alike. It leaves no leeway for doubt or price haggling. If the makers are well known, the purchaser is convinced that a shoe so designated would not be liable to come out of the factory unless it was right up to the mark. I have always believed in marking my goods in plain figures. It invites confidence. I use a rubber stamp, and the numerals are plainly seen on the cartons, so that if a customer is wandering about the shop, he or she can at a glance, see the selling figure. You will notice that all the most successful merchants are open advocates of not only the one price, but of the stamped figure. If you see a lot of cabalistic signs or hieroglyphics on any article, you have a lingering suspicion that the seller, unless you know him pretty well, may "do" you. There are many other logical arguments that I could advance in favor of the shoe with a stamped price, and I think that the conspicuous success that has been made in these lines by the manufacturers thereof, should convince any doubting Thomas that the fixed figure placed on the shoe, is one of the most outstanding and conspicuous reasons for the wide-spread sale of these goods."

A Winnipeg shoe dealer doing business on Main Street, takes an exactly opposite view. He writes to the SHOE AND LEATHER JOURNAL saying: "For various reasons, I do not care to have my name used because I want to talk plainly and my thoughts are just as good, if presented anonymously, as they would be with my name at the back. Besides, I may be accused of animus or prejudice. I have the reputation of speaking out plainly and of knowing my own mind, and, while I have no objections to do so in private, I do not care to follow this procedure for the benefit of the whole trade. My reasons are:

"Firstly: I will allow no manufacturer to fix my selling price, that is a privilege I reserve for myself.

"Second: When a shoe is stamped to sell at a certain

figure, as the price of leather and other materials goes up the manufacturer will often raise his figure five or ten cents and yet we are expected to pay him this much more, retail the shoe at the same figure and suffer the loss. Now, on lines without a fixed quotation, if the price goes up ten or fifteen cents, I advance the selling price by at least 25 cents.

"Third: I find there is less profit on shoes made to sell with a stamped figure than on other lines. As to the fact of them inviting confidence, I may say that all my goods are marked in plain numerals on the carton, and the purchaser can see that there is no juggling with figures.

"Fourth: Certain lines take well during the season and are ready sellers. Now if I buy a woman's dongola kid button shoe at \$2.00, under certain circumstances it might have to sell at \$2.75. But supposing these goods are on a pretty nifty last, and come out of the factory looking a little better than the sample, there is no reason why I should not get \$3.00 or \$3.25 for them, if they meet with instant favor. Presuming they were stamped to sell at a certain figure I would not have the leeway to make any extra profit, and reap a good return from this brisk demand.

Fifth: I believe that the selling price of a shoe should be largely determined by what the retailer thinks he can get for it, and what the public is willing to pay. Sometimes a shoe that costs practically little money, will look the part, because of a dignified appearance, graceful lines and smooth workmanship, and if I can make a little more cash out of this popular seller, than on some others, you can depend upon it I am going to do it.

"Sixth: When a shoe is stamped to retail at a certain sum and you have a reduction sale, it is often hard to get the manufacturer's consent to clean out this line at a less figure than the branded price. Now when the former selling price is made by yourself, you can make such reductions as you please to clear out your stock.

"The stamped price shoe may be all right in certain communities and with a certain class of trade. I admit there are some arguments in its favor, but I think the majority of retailers who desire to be independent and to run their own business, will agree with me that the shoe which you can market for whatever you think it will bring, has advantages on the side of the retailer that far outweigh any benefits on behalf of the stamped priced boot. Remember, I am not talking against the branded boot or the named shoe, but only those which have either stamped on the sole, or lining or have it woven in the pull strap as \$3.00, \$3.50, \$5.00, \$6.00, etc."

## Now Represents Ontario Firm

John G. Settle, who has joined the Murray Shoe Co., of London, Ont., and will represent that firm in eastern Ontario and Quebec, is one of the most widely known travelers on that ground. For many years he was identified with the Hartt Boot and Shoe Co., of Fredericton, N.B., and up to 1906 covered the Maritime Provinces for that firm. Six years ago

he was given the territory from Toronto to Quebec city. Among the retail trade he has a large number of friends. Mr. Settle was born in Halifax, but has resided for a number of years at 450 Mount Stephen avenue, Westmount. He is fond of outdoor life, and is an enthusiastic canoeist. He spends much of his time in the warm weather camping in Nova Scotia and in the winter time throws a pretty fair stone at curling. Mr. Settle is also fond of English billiards. He is a thoroughly experienced shoeman and this month enters upon the road for his new house. Just fourteen years ago this month Mr. Settle made his first trip with a sample trunk.

# AMONG THE SHOE MEN.

H. L. Carter, of Trenton, Ont., shoes, is closing this line.

L. S. Odell, of Fisk, Limited, Montreal, was in Quebec recently.

J. Silverstein has started a repair shop at 133 King west, Berlin.

E. J. Tippet, of Weston, shoe dealer, has made an assignment.

Several lawn bowlers have been selected to represent York city.

J. J. Walsh, shoe retailer, of Lindsay, suffered a loss by fire recently.

Charles Vachoux has opened a boot and shoe repair shop in Trenton.

The Dominion Leather Remnant Co., of Montreal, has been registered.

S. N. Sterling, of Sterling Bros., London, Ont., was in Montreal recently.

R. Jones has started in the boot and shoe business at Bruce Mines, Ont.

Mr. Dufresne, of Dufresne & Galipeau, Montreal, was in Quebec recently.

Fred H. Ahrens, of Berlin, was in Toronto this week calling upon the trade.

J. Powe, of Collingwood, is announcing his retirement from the shoe business.

Jos. Daoust, of Daoust, Lalonde & Co., Montreal, was recently in St. Hyacinthe.

F. Harper has opened a harness and leather store at 30 Park street, Niagara Falls.

The Harris shoe repair and shoemaking shop has begun operations in Deloraine, Man.

David McCoy, a widely known merchant, of Midland, Ont., passed away last week.

Henry Lazarus, shoe dealer, Montreal, has assigned. The liabilities amount to \$8,706.

Col. J. W. Miller, of Peterborough, was in Toronto last week calling upon the shoe trade.

C. F. Spaulding has bought a shoe business at 712 College street and is doing a big trade.

Thornton Bros., hardware dealers, of Bradford, Ont., have added a stock of boots and shoes.

T. H. Reider, of the Canadian Consolidated Rubber Co., Montreal, was in Toronto this week on business.

Thos. E. Thurston, of Creemore, has opened a leather and harness shop in the Nelson block, Tottenham, Ont.

Mr. Warmington, of the firm of Ross & Warmington, Chesley, was in Toronto last week for a few days.

Alf. Minister, of the Minister, Myles Shoe Co., Toronto, was in Rochester last week on a business trip.

A recent fire in the factory of the Canada Rubber Company, Montreal, did damage to the extent of \$50,000.

S. C. Cronk, of S. C. Cronk & Co., Toronto, spent the past week in Montreal and other eastern points on business.

L. B. Hutchison, manager of the Toronto branch of the Kaufman Rubber Co., spent a few days recently in St. Louis.

R. M. Beal, of the R. M. Beal Leather Co., was in Toronto this week on business. Mr. Beal is mayor of Lindsay.

Geo. Coulter, representing Thompson Shoe Co. in Toronto, was in Montreal for a few days in the latter part of February.

C. A. Davies, of Blachford, Davies & Co., Toronto,

spent the past few days in Montreal and Quebec on a buying expedition.

Peter Gauthier, of Montreal, is now representing the Parisian Shoe Co. throughout Ontario, and was in Toronto this week on business.

J. M. Petermann and Morris Swartz have left for their western territories with a full line of samples for the Thompson Shoe Co., Montreal.

D. S. Johnston, of Geo. G. Lennox., wholesale shoes, Winnipeg, has returned to that city from a trip to Quebec, Montreal and Toronto.

Horace W. Parsons, of the Nugget Polish Co., Toronto, has returned from an extended business trip to St. John, Halifax and other eastern cities.

Geo. P. Balfre, of Chicago Tanning Co., was in Quebec province last week and also in Quebec city, where he reports most factories as being very busy.

Samuel Oliver, of Warkworth, Ont., where he has been in business for a quarter of a century, was in Toronto this week calling upon the shoe trade.

Warren T. Fegan, of the Big 88, Queen street west, Toronto, has returned from a three weeks' holiday trip to New York, Atlantic City and other centres.

Oscar Vogt, of the Great West Felt Co., Elmira, has returned from a successful business trip to Winnipeg and the West and reports business as good.

J. W. Hendry, of the Granite Shoe Repair Co., 2181 Queen street east, Toronto, entertained a number of his friends recently to an enjoyable "at home."

H. E. Wettlaufer, sales manager of Charles A. Ahrens, Limited, Berlin, left this week for the West on an extended business trip. He will go as far as the Coast.

E. J. P. Smith, of Toronto, is now representing the O. B. Shoe Co., of Drummondville, Que., and the Star Shoe Co., of Montreal, in Toronto and Western Ontario.

W. J. Heaven, manager of the Toronto branch of the Anglo-Canadian Leather Co., has returned from an extended business trip through the Maritime Provinces.

Howard Blachford, of the Blachford Shoe Store, Yonge street, Toronto, has returned from an extended business trip to Montreal, New York, Philadelphia and other cities.

Charles E. Raven, shoe retailer, of St. Thomas, Ont., was in Detroit, recently attending an important function of the Knights of Pythias, of which he is a leading member.

Dufresne & Galipeau, the Montreal jobbers, have taken over the whole building, part of which they are occupying at present, at 276 St. Paul street, and will move in soon.

Harry Leckie, of London, a popular shoe traveler, was married recently in that city to Miss Eva Macdonald. Mr. Leckie and bride have returned from a wedding trip to New York city.

J. Burnett has purchased the boot and shoe business of J. Scott in Galt. Mr. Burnett was formerly in the general store business in Orton. Mr. Scott has removed to the Pacific Coast.

In a recent fire which gutted the Avenue block on Portage avenue, Winnipeg, causing \$150,000 damage, the Nickel Shoe Store was a sufferer, the loss from smoke and water being about \$4,000.

Several lawn bowlers have been selected to represent Canada in Great Britain next summer and the players are expected to sail early in June. H. E. Wettlaufer, of Berlin, has been chosen as one of the visitors from the Dominion.

Among recent visitors to the trade in Toronto were H. G. Middleton, F. Adams, of the Adams Manufacturing

Co., and E. F. Hutchings, president of the Great West Saddlery Co., Winnipeg.

George J. Cowling will represent the Relindo Shoe in Manitoba and part of Alberta and leaves for the West in a few days. H. B. Ohrt will look after the remainder of Western Canada for the firm.

An attempt was made to rob the store of the Fit-U Shoe Co., 1167 Bloor street west, Toronto, recently. Entrance was gained through a window at the rear, but nothing of value was missing except a pair of fur-lined gloves.

In a fire which broke out at 154 King street east, Toronto, recently about \$4,000 damage was done. The Commercial Trunk & Sample Case Co. suffered a loss of \$800, and John Carey, boots and shoes, \$500 damages.

W. F. McNeill, Canadian manager of the Nugget Polish Co., who returned to Toronto recently from a trip to England, has been confined to his home with an attack of the grippe, but is now recovering.

D. A. McKenzie & Co.'s departmental store at Souris, Man., has been completely gutted by fire. The reported loss is from \$50,000 to \$60,000. Mr. McKenzie estimated the loss at \$40,000 on stock alone, with \$23,000 insurance.

The retail merchants of Cobourg have organized an association with the following officers: President, W. J. Maher; vice-presidents, A. R. Sandas and W. M. Fox; treasurer, R. M. Harvey; secretary, A. J. Plunkett.

Tom Stedman, of the Tom Stedman Shoe Co., 719-21 Main street, Winnipeg, has been appointed a member of the Licensing Commission of Manitoba. The Commission now consists of Senator D. E. Sprague, Matthew Morrison, and Tom Stedman.

D. D. Hawthorne, of the wholesale shoe firm of D. D. Hawthorne & Co., Toronto, left last week for the Isle of Pines, which is located about sixty miles off the coast of Cuba, where he will spend some weeks recuperating after his long and trying illness.

The ratepayers of St. Catharines carried the by-law to grant seventeen acres to the B. F. Goodrich Co., of Akron, Ohio, by a vote of 1,223 to 27. The rubber concern will receive a fixed assessment of \$10,000 for ten years and will employ 1,000 hands.

Parrott Bros., late of Chatham, Ont., have opened a fine well-stocked retail shoe store in the Traders Bank stand, Saskatoon, which will be under the management of P. H. Parrott. Parrott Bros. have recently opened a footwear establishment in Regina.

Ed. Stark, of Vancouver, accompanied by Mrs. Stark, was in Montreal, Boston, and Toronto during the past week on a visit. Mr. Stark is a widely known Pacific Coast shoeman and is on a holiday trip, returning home by way of Chicago and other cities.

A. W. Donovan, president of E. T. Wright & Co., Inc., of Rockland, Mass., and St. Thomas, Ont., had a bad fall recently and fractured his hand. He was therefore unable to keep an engagement to address the Canadian Club in St. Thomas on the 25th of last month.

W. G. Fallen, who has covered Western Ontario for the past twelve years for Getty & Scott, has been assigned to the British Columbia and Alberta territory. Mr. Fallen knows the shoe business thoroughly and is looking forward to a very profitable and successful trip for his firm.

J. S. Lovell, of Toronto, one of the veteran shoe travelers of the province, will represent the lines of Corbeil, Limited, of Montreal, in Ontario during the coming season. He is widely known throughout the province and has a strong, active connection with the retail trade.

One of the old landmarks in Dundas went up in flames the other day. The old Lawry tannery which was erected away back in the forties and had nearly always been used as a tannery, fell a prey to the flames. Of late years the building had remained idle and had become an eyesore in the town.

James Heffering, Ontario representative of the Tetrault Shoe Mfg. Co., is confined to his home at 11 Langley avenue,

Toronto, with an attack of pleurisy. He has been laid up since February 18th, but his many friends will be pleased to learn that he is making considerable progress towards recovery.

The Dominion Stores, Limited, a company with a capital of \$1,000,000 has been organized to operate 150 general stores all over the West from Winnipeg to Vancouver. One-quarter of the capital has been subscribed by a group of Coast capitalists and the balance of the stock will be allotted to the different cities where the stores will be located.

Dan MacDonald, in the past representing the Murray Shoe Co. and the Cleo Shoe Co., in the Maritime Provinces, will in the future handle the Cleo line exclusively in Western Ontario. "Dan" was very popular in the East, where his numerous friends will miss his semi-annual good fellowship. They will wish him every success in his new field.

The \$60,000 stock of the P. E. Frank Co., wholesale shoe jobbers, Toronto, who recently made an assignment, has been sold by the assignee, Gideon Grant, to Charles C. Cummings, late owner of the Slater Shoe Stores. The stock sold for 75 cents on the dollar. Besides the goods carried in the Toronto warehouse, \$35,000 worth of goods was bought in bond in transit to the Frank Co. here.

William Murray, second vice-president of the Dominion Commercial Travelers' Association, has been elected president of the re-organized Commercial Travelers' Club, Montreal, which will have permanent quarters. The other officers are: Vice-president, Camile Robichaud; secretary, A. A. Lavoie; treasurer, William Wyse; F. G. Brenton, D. P. Urquhart, Paul Roy, J. Roul Bissallion and H. C. Benoit.

The representatives of the North British Rubber Co., of Toronto, for the present season will be the Scottish Wholesale Specialty Co., of Winnipeg, for the Canadian West; Phoneuf, LaRose & Co., of Montreal, and Roy & Darveau, of Quebec, for the eastern portion of Canada. The Ontario trade will be looked after direct by travelers from the headquarters in Toronto, under the direction of E. L. Kingsley.

It is understood that A. Wellwood, shoe retailer, 1250 Bloor street west, Toronto, has disposed of his business to the McCall Shoe Co., of Toronto, who will take possession at the end of the present month. An extension will be erected to the premises. Mr. Wellwood, who is the treasurer of the Ontario Shoe Retailers' Association, intends retiring from the shoe business in which he developed a large trade.

The Board of Trade of St. John, N.B., have decided to urge the adoption of an Act to be presented to the Legislature dealing with insolvent firms, similar to Acts in force in Quebec, Manitoba and British Columbia. This Act would prevent such firms from selling out their whole stock without giving some return to creditors. It would demand the consent of 50 per cent. of the creditors before stocks can be sold and also provide for the proceeds of such sales being distributed among the creditors.

Charles Fice, of Toronto, who represents J. & T. Bell, of Toronto, in Western Ontario, has returned from an enjoyable trip to New York, Philadelphia and Atlantic City. While in New York he was entertained by S. A. McOmber, President of the New York Shoe Travelers' Association, and representative of Utz & Dunn Co., of Rochester, and Samuel S. Laird, the New York representative of Laird, Schober & Co., of Philadelphia. Both these gentlemen did all in their power to make things pleasant for Mr. Fice, and he speaks of their hospitality in most appreciative terms. At Atlantic City, and other resorts, he says, the popular class of footwear just now has rubber soles and heels.

There will be no shoe and leather market fair in Boston this summer. It has been decided by the Jacobsen company, the energetic promoters of the successful fairs which have been conducted during the past few years to hold the next event in July, 1914. The majority of the shoe and leather manufacturers who have exhibited at previous fairs have expressed themselves in favor of such a gathering every second year and in view of their generous support in the past their request has been acceded to.

John G. Settle and Hazen McGee have associated them-

selves with The Murray Shoe Co. and the Cleo Shoe Co. Mr. Settle will cover his regular ground, Eastern Ontario, including Toronto and Montreal, also province of Quebec, and Mr. McGee will represent them in New Brunswick, Nova Scotia and Prince Edward Island. Both these gentlemen hold an esteemed position in the trade in their respective territories and will undoubtedly continue to have the unqualified success they have enjoyed in the past.

E. E. McIntyre, who represents the Brandon Shoe Co., Brantford, in Eastern Ontario and Quebec, has returned from spending several weeks in Pennsylvania, Ohio and New York states. He visited several of the leading retail stores in Philadelphia, Cleveland, New York and other cities and reports that among the best selling lines in men's high-grade welts are the recede toe on the English last, with broad shank and low flanged heel. A number of button shoes with cloth tops are being featured and bid fair to command a good sale.

W. J. Webster, wholesale shoes, 60 Victoria Square, Montreal, has been succeeded by the Webster-Charles Shoe Co. The new firm is composed of his son, W. Davidson Webster, who has associated with him G. W. Charles, formerly of Kingston. W. J. Webster is one of the veterans in the footwear trade and has retired both from the wholesale ranks and the road, which he followed for forty-six consecutive years, being in business nearly all that time for himself. His many friends will wish him many years of peace and happiness during the evening of a very busy and useful life.

William McDowall, manager of the United Shoe Dealers' store at North Bay, had a thrilling experience recently, when returning to that town from Toronto. The Cobalt flyer was wrecked near Trout Creek, a small station 27 miles south of North Bay. The passengers were all enjoying themselves in slumberland with no thoughts of disaster, when they were awakened by the bumping of the train on the ties. The next moment one of the Pullman cars was hurled against a rock and all the occupants were thrown out with baggage and bedding on top of them. The car caught

fire and was partially burnt before the flames were extinguished. Strange to say, no one was seriously injured, although each occupant received a severe shaking up. Mr. McDowall got off with a bruised side and a cut on the forehead, but is now none the worse of his mishap, although he would not care to go through another experience.

Chas. J. Silver, of the traveling staff of the W. B. Hamilton Shoe Co., Toronto, is able to resume his former ground in Western Ontario, after being laid up for some weeks with blood poisoning in his left arm. He was splitting some wood, when he accidentally made a small cut on his forearm. He paid no attention at first to the abrasion, thinking that it would soon heal. Blood poisoning, however, developed, causing him considerable trouble and pain. Mr. Silver is a director of the Commercial Travelers' Association, and during his absence his territory was covered by W. H. Jardine, one of the Western Canada representatives of the Hamilton Co.

Robert Rogers, Western traveler for P. Jacobi, Toronto, who was on an extended business trip through the Prairie Provinces, was taken ill at Calgary and had to return. He is now confined to his home in Toronto with an affection of the heart and may not be able to resume his work on the road for some weeks. Fred Jacobi left Toronto last week for the West to complete the remainder of Mr. Rogers' route. There are few travelers in Canada better known or more highly thought of than Mr. Rogers, and his many friends hope that he may speedily regain his former vigor.

C. W. Sherwood, who for years past has been connected with the Clafin Company, of New York, is in Regina and proposes to erect a departmental store at a cost of \$1,000,000. Mr. Sherwood is getting every possible support that can be given him by the city, and the Board of Trade has arranged to see that all of the employes which Mr. Sherwood proposed to bring into the city are properly housed. Mr. Sherwood claims that he will not build elsewhere than the capital of Saskatchewan for the time being. As the business increases it is his intention to erect numerous other large stores, using Regina as the headquarters.

# SHOE FACTORY NEWS.

The James Muir Co. Quebec, are removing their plant from Quebec city to Maissonneuve.

Jackson & Savage, Limited, Montreal, have been incorporated with a capital of \$450,000.

E. H. Lightford, manager of the Perth Shoe Co., Perth, Ont., was in Toronto this week on business.

The Barrie Tanning Co., of Barrie, have increased their capital stock from \$100,000 to \$300,000.

N. Tetrault, of the Tetrault Shoe Mfg. Co., Montreal, spent a few days in Toronto last week.

E. O. Russ, of C. S. Hyman & Co., London, Ont., was in Boston last week, calling upon his friends.

Walkerton will vote on a by-law to guarantee \$8,000 bonds of the Canadian Saddlery Hardware Co.

F. Guber, representing the Crescent Shoe Co., of Reading, Pa., was in Toronto last week interviewing the jobbing trade.

W. A. Hamilton, of the W. B. Hamilton Shoe Co., Toronto, spent the past week in Boston, Quebec and Montreal on business.

J. B. Blouin, Limited, of Levis, report business as being very brisk and the factory is working nights in order to catch up with the rush.

Fred A. Lovell, superintendent of the Cooke-Fitzgerald

factory, of London, Ont., has returned from a two weeks' business trip to Boston.

The J. Leckie Co., shoe manufacturers, of Vancouver, intend erecting a large addition to their factory. They report business as very brisk.

Thos. Gillis, formerly with the W. L. Douglas Co., Brockton, Mass., has taken charge of the treeing department in E. T. Wright & Co.'s factory, St. Thomas, Ont.

A winding up order has been granted in the A. P. Cimon Shoe Mfg. Co., of Montreal. A meeting of the shareholders and creditors has been called for Monday, March 3.

W. A. Marsh, of the W. A. Marsh Co., Quebec, was in Toronto for several days this week calling on the trade. He reports that business is good and the outlook for spring trade is reassuring.

The Reliance Shoe Co. are running along very smoothly in their new premises, 350 Sorauren avenue, Toronto, and announce that their travelers will be out with the new fall line about March 15th.

The annual meeting of the Canadian Consolidated Rubber Co., which was to have been held on February 26th in Montreal was postponed for a month in order to enable the auditors to complete the financial statement.

Charles C. Hoyt, of Farnsworth, Hoyt & Co., Boston, who recently retired from the presidency of the New Eng-

land Shoe and Leather Association, is enjoying a much needed rest in Augusta, Ga., accompanied by Mrs. Hoyt.

K. D. Gahan, who has been employed by the J. & T. Bell Shoe Co., Montreal, for the past eight years as finishing and treeing foreman, has taken a similar position with the Slater Shoe Co. W. Perreault has taken over Mr. Gahan's former position.

R. Dack & Son, 71 King street west, Toronto, will remove to their new stand across the street in a few days, where the retail end of their shoe business will be handled. Work on the new factory of the firm on King street near Spadina is progressing rapidly.

Charles Fogelberg, who has been superintendent for Getty & Scott, of Galt, for the past two years is no longer with that firm, having severed his connection last week. It is reported that Mr. Fogelberg may embark in the shoe manufacturing line in his own behalf in Berlin.

A. R. Clarke & Co., leather manufacturers, of Toronto, have appointed J. A. Scott as their representative in Quebec city. Mr. Scott, who is well and worthily known to the eastern shoe trade, will carry stock. Griffith Clarke has returned from a business trip to the ancient capital.

Eugene LePine, superintendent of the Kingsbury Footwear Co., Montreal, was recently presented with a diamond ring by his business associates and friends in the shoe trade on his forty-third birthday. The presentation speech was made by Mr. Giroux, superintendent of the Regina Shoe Co., Montreal.

Mr. Prince, who represents the Turner Tanning Machine Co., of Peabody, Mass., was in Toronto recently on business. He placed orders with H. B. Johnston & Co., Toronto, for a hydraulic press and an unhairing machine. The Davis Leather Co. also ordered a new hydraulic press and other equipment.

Jos. H. C. Anderson, for the past three years in charge of the lasting and making at Cook-Fitzgerald Co.'s factory in London, Ont., has taken control of the bottoming room at American Gentleman's factory of Hamilton-Brown Co., of St. Louis, Mo. Mr. Anderson has been on a trip to the Pacific Coast.

More than one hundred thousand head of cattle were imported into Alberta from Montana for feeding and breeding purposes during 1912, according to statistics compiled by W. F. Stevens of Edmonton, Live Stock Commissioner for the Province. Mr. Stevens estimates that the importations will be doubled during the present year.

E. L. Williamson, who covered Northern Ontario for many years for Garside & White, Toronto, will represent that firm on the ground from Toronto to Kingston. Eugene Lefler, who has been looking after this route for the past year and a half has been transferred to the Niagara peninsula, and Richard Craig, late of Montreal, will assist H. L. Geene in the Ottawa valley.

Among the visitors to Quebec city during the past few days were: Eudore Fournier, of the Cie des Cuirs & Chaussures, Plessisville, Que.; Geo. Parker, of the Dominion Supply Co., Montreal; R. W. Milzner, of the Cotton Threads Co., Montreal; L. H. Gilson, of the Brockton Rand Co., Brockton, Mass.; E. A. Jones, of E. A. Jones Co., Brockton, Mass., and H. K. Hammond, of Tower Canadian, Limited, Toronto.

Before the Private Bills Committee of the Ontario Legislature in Toronto, application was made from the city of St. Thomas to confirm a by-law already passed by the people for debentures for \$45,000 to provide a site and buildings for E. T. Wright & Co., of Rockland, Mass., who undertake to rent the buildings erected from the city of St. Thomas at a sum sufficient to pay the municipality 6 per cent. on the investment. The bill was passed.

A new line of fancy shoe buttons, to take the place of the glass and pearl buttons of previous seasons, has made its appearance. The new buttons are made of a celluloid composition in all colors and combinations of color. They are practically non-breakable in ordinary handling in the factory. This means large economy for those adopting

them, as under present conditions the percentage of breakage of glass and pearl buttons is quite large.

Beal Bros., whose tannery was burned at Uxbridge, Ont., some time ago, have erected temporary premises in that town to finish up nearly 200 sides of leather which were in the pits at the time of the fire and escaped damage. It is the intention of the firm to rebuild, but where the new tannery will be located has not yet been definitely decided. Several enterprising towns have offered concessions to secure the industry.

A despatch from Detroit says: Dissolution of the Shoe Last Trust was effected when eighteen firms and a score of individuals accepted the final decree of the United States District Court, which ordered modification of their business methods. The government alleged the trust dominated the prices of shoe lasts of all descriptions, both patented and unpatented, through license agreements. The court's decree held that the firms operated the agreements in restraint of trade.

A Hamilton dealer, doing business on Barton street, writes the SHOE AND LEATHER JOURNAL as follows: "I have a great deal of trouble with the manufacturers in filling orders, as they often ship more shoes than I order, and on returning the goods, they will not give me a credit note until I accept the draft for the full amount, and this, too, in spite of the fact that they had forwarded me more pairs than I had booked with their traveler. One firm forwarded me a draft like this and I refused it. They sent it back again and told me they would give me credit on my next order. There was a difference of \$90.00 and they were getting the use of my money in the meantime. I do not know what the experience of other men is, but I find occurrences such as this quite frequent."

A canvass of the shoe manufacturers of Canada which was recently made by the Boston News Bureau for the purpose of ascertaining the investment position of the United Shoe Machinery Co., as measured by the good will of its customers across the border, shows an interesting result. Ninety-two per cent. of the replies received from 175 manufacturers state that their relations with the company have been most satisfactory, while nearly all of the manufacturers declare they have no objection to the machinery lease. Eighty-one per cent. express their conviction that the charges of the company for leases are reasonable and fair. Out of the entire list only 3.2 per cent. declared themselves dissatisfied with the company and its policy. It's a pretty strong showing for the company in the Dominion.

Prof. Frederick Starr of the Department of Anthropology of the University of Chicago, told his class recently that some time in the future hair, teeth and the little toes would be missing from the members of the human race. "Pre-digested foods, hats and shoes have rendered hair, teeth and the little toes useless," he said. "The time will come when the man or woman, or child possessing these will be a curiosity. The natural man needs hair as a defence and protection against the struggles of primitive life. We, with our hats and our civilization, do not need it. Persons with a scant supply of hair seem to die out among primitive peoples, but in civilization they increase. If teeth and hair and the little toes are to be preserved then it will be necessary for the civilized inhabitants of this world to get back to nature as soon as possible."

Most shoe manufacturers have the heels of their shoes too high. A lower heel would be more acceptable and more economical. Cut down the height and improve the quality, says an exchange. The "log heel" is the best heel made for medium grades, at least that is the honest opinion of the writer. The log heel, as the name implies, is first condensed into long form and then sawed off at uniform height for heels on a circular saw. The heels are applied to the shoes and the height determined by placing the shoes in natural position on a flat surface. The ball part of the whole heel surface should rest on the supporting surface, but not to such an extent as to throw the forepart of the foot toward the toe. A heel that is too low is still more desirable than a heel that is over high.

## Breezy Blasts From Winnipeg

F. Jacobi, of Toronto, arrived in the city last week on a business trip.

Clearing sales have been the order of nearly every shoe store during the past few weeks.

Mr. Miller, president of the Avenue Shoe Co., is making a trip through the shoe centres of United States and Canada.

Charles Newton has been making several interior improvements to the shoe department of the Robinson Co. The changes are greatly appreciated.

Harry D. McKellar, of Berlin, the genial and widely known felt footwear man, was in Winnipeg lately, calling on his many friends in the trade.

W. Wilson, manager of the Diamond Shoe Co., has erected a large electric sign in front of his store at the corner of Sherbrooke street and Portage avenue.

R. J. Orr, of the Yale Shoe Store, has moved into his beautiful new home on Rutland street, St. James, where he intends to give a house-warming in the near future.

Mr. Grimason, manager of the retail shoe department of the Hudson's Bay Co., engaged a large dray to take home the many prizes he won at the Boys' Athletic Club masquerade ball last week.

The many friends of Fred. J. Lashbrook, who has made frequent trips to the West, will be glad to learn he will still cover this ground in the interests of Kirvan-Doig Limited, of Montreal. He is one of the best known and best liked representatives who comes to the West.

No shoe traveler will now be compelled to remain in Winnipeg for two weeks awaiting sample rooms, as they frequently have had to do in the past. A large building has been erected for travelers this season, with 100 fine large rooms. An automobile is placed at their command for the transfer of baggage.

The annual re-union of the Peterboro old boys who reside in Winnipeg will be held at the Royal Alexandra Hotel on March 14th. Big preparations are being made for the function. A large number of shoemen, who are former residents of the "Old Town on the Otonabee River" will grace the occasion with their presence.

At his attractive home, 233 Yale avenue, W. J. Devlin, of the Ryan-Devlin Shoe Co., entertained the members of the firm and the staff. Mr. Devlin is a firm believer in bringing closer together the various members of his organization, and intends that the re-union shall be an annual one. All the members of the party were made to feel thoroughly at home, after which a choice repast was partaken of in the beautiful dining room. Then several toasts were indulged in and many a quip and jest were heard from the different speakers. The remarks of Mr. Devlin and Mr. Godbolt were much appreciated. Afterwards games, music and other pastimes filled in a few pleasant hours and then at 12.30, Mr. Devlin, not being satisfied that each guest had enough, again escorted his big "family" to the dining room, where an excellent cold lunch was served. The gathering broke up at an early hour in the morning and all voted the event one of the most enjoyable they had ever attended.

### LONG CHASE AFTER SHOE THIEVES

A visit to a shoe store, the theft of a pair of boots and then a long chase over slippery pavements, were the events that preceded the arrests of Eugene Garratv and Frank Fitzgerald recently. It was early in the evening that four young men sauntered into the store of J.C. Budreo, 1344 West Queen street, Toronto. One of the party purchased a pair of boots and requested that the buttons be moved forward a little. Before returning the change from a \$10 bill the clerk noticed that one pair of boots had disappeared. On looking around the store he also observed that two of the youths had gone. A detective was promptly on the scene and the case was explained. The detective saw two men dashing toward Brock avenue. Near the corner of Brock avenue

and Queen streets the officer sprinted and closed in on the men. The pavements were so slippery, however, that the pursuer could not get a steady footing. He fell on one man and grasped the other by the leg. This fellow kicked and got away. After sending his prisoner to the station the detective chased the other fugitive, who finally eluded his pursuer. One of the men held in the store was also placed under arrest. The police found a boot in the pocket of the youth who was caught on the street. About an hour after the arrests the front door of Budreo's shop store was opened and the missing boot thrown in. The men were remanded. Mr. Budreo puts all shoes back in the cartons as soon as through showing them, otherwise the thieves might have made a big clean-up in footwear.

### AT THE HEAD OF NEW SHOE CO.

The man who is at the head of a company which is establishing a new shoe factory in Coquitlam, B. C., is R. B. Johnson, of Vancouver. He was first initiated into the business in his father's factory at Ottawa, Kansas, in 1898, where he had a thorough schooling in all branches. He worked in one department or another at different times and in 1907 started for himself in Oakland, California, meeting with success. Ill-health however, made it necessary for him to dispose of his business and retire to the mountains, where he remained for nine months under the doctor's care. In September, 1909, Mr. Johnson came to Vancouver, and

R. B. Johnson, Vancouver, B.C.

opened a small place at 50 Water Street, for the manufacture of shoes. Two years later, his rapidly growing business rendered it essential for him to take over the adjoining premises. Last month, a company was formed and a modern factory is now being equipped at Coquitlam. This will greatly increase the capacity of the concern, and the premises are now ready for occupation. The company, who are removing their plant from Vancouver are making a specialty of heavy boots, such as loggers', miners', cruisers', prospectors', etc. It is their intention later on to manufacture lighter shoes and also a full line of boys' and youths' boots. The citizens of Coquitlam have taken an active interest in the industry, which has apparently very bright prospects. At a meeting of stockholders held recently, the board of directors was elected as follows: Mr. R. B. Johnson, managing director; Mr. R. C. Galer, secretary treasurer; and Messrs. J. R. McKenzie, R. Martin, J. Rowland, and R. C. Welch.

## News Notes From Quebec

J. B. Drolet, of J. B. Drolet & Co., has been confined to his house for a few days by illness.

The retail trade has had a fairly good month and retailers report that collections are pretty fair.

J. M. Gillespie, local manager of Frank & Bryce, Limited, was in Ottawa recently on business.

Jos. Langlois, manager of the Laurentide Mfg. Co., Grand Mere, was in Quebec city last week, accompanied by Mr. Gendron, president of the firm.

Alfred Dupere, of Dupere & Garant, has returned from a business trip to Montreal. V. Coulombe, shoe dealer, of Quebec, was also in Montreal recently.

Hides have recently dropped a little in price but the quality is not very good at this tie of year. Every tanner is working hard to fill up contracts. Black box kip is in good demand at 20 to 21 cents, while sole leather is firm at 28 to 35 cents.

The James Muir Co. will remove to Maissonneuve about the middle of April. About one hundred and sixty people were employed in their factory here. The removal is certainly a loss to Quebec city. The building being vacated by the Muir company will be occupied by the new proprietor, L. Duchaine.

At the annual meeting of the Quebec Board of Trade all the officers of last year were re-elected. J. P. E. Gagnon, shoe manufacturer, resigned his position as treasurer. He leaves shortly on an extended trip to Europe. W. A. Marsh, the veteran shoe manufacturer of Quebec, was re-elected chairman, a position which he has very ably filled.

A hockey league has been formed in Quebec among the employees of the various shoe manufacturers. The cup donated by J. A. Scott was won last year by the John Ritchie Co.'s team. Recently there was a lively match between C. E. McKen & Co.'s boys and those of L. Duchaine, the former winning. At the end of the season the winners of the league will challenge the present holders of the cup.

The Technical school has opened a new course in the draughting of shoe patterns, which is very much appreciated by the workers in the factories here. C. Lachance, of Lachance & Tanguay, has taken charge of the practical part of the instruction, which shows the deep concern he takes in the interest of the trade, although he is a very busy man in connection with his own industry, which is growing rapidly.

### RUBBER SELLING STARTS MARCH 10

The rubber selling season, which usually starts on the first day of March will not begin so early this year and the date of Monday, March 10th, has been fixed as the time when the representatives of the different companies will start out for placing orders. The past few weeks have not been as brisk as they might have been in the retail sale of rubber footwear owing to the absence of snow and wet weather in many parts of Ontario and the West. Some shoemen have considerable stocks on hand and sorting business has been only fair. The various companies have an unusually fine line of samples and are prepared for a good placing order business. The reason for the week's delay in the matter of salesmen going out is attributed to the backwardness of the winter season and also to the fact that some of the companies have not yet received their catalogues from the hands of the printers. Regarding prices it is rumored that there will be no very great increases but that the figure on some of the general lines will be augmented by about two per cent.

### ARE YOU READY FOR EASTER?

The progressive shoe merchant is already alive to the matter of being in good shape for the Easter trade. The festival falls this year on March 23rd and the wide-awake dealer will see that his spring goods are in hand and ready for proper display. There is nothing like being prepared for an event of this kind and there is no reason why the

business at this particular season should not prove a record breaking one with all energetic shoemen, providing they take the trouble to go after the trade hard enough by making suitable window displays, well directed publicity and having their stock in good shape.

### WHAT LONDON SHOEMEN HAVE DONE

Writing from London, Ont., on the work of the retail Shoemen's Association in that city, a leading member says:

"When our association was first organized we were to meet once a month. Now we meet on the request of any three members, when there is business to do. We have kept to our agreement as to prices on rubbers, which was not very difficult, as we kept them down to reasonable figures and no one could well afford to cut. All the dealers are in it and none of us wish to make a break which would bring on strife and so lose other advantages which we have gained—early closing, etc. Expenses are higher and larger stocks necessary in order to do a shoe business to-day.

"We cannot afford to cut prices except on old, obsolete lines. However, as prices are steadily going up we have a chance to increase our profit percentage, of which advance we were in much need. For instance, when a shoe goes up 25 cents we can generally get an advance of 50 cents, so the raises should help the dealers.

"This is always our dull period. I don't think it is more so than usual. If the season opens up with early, fine weather it looks much like a tan season ahead, to me. They are moving well now in both men's and women's.

### CELEBRATES INTERESTING EVENT

To be thirty-three years in the shoe business and to witness the numerous changes which have taken place in that period is worth mentioning. Last month Alfred Hand, sample room salesman of McLaren & Dallas, Toronto, commemorated this event. He began his career as a parcel boy in the shoe store of the J. D. King Co. when they conducted a retail branch at 79 King Street East, Toronto, and remained with that firm eleven years. He next spent two years with J. D. Climie, the veteran retailer of Hamilton,

and for six years traveled for Ames-Holden, out of Toronto. Later he was with the Minister, Myles Shoe Co., Boulter, Davies & Co., and Pocock Bros., selling in various parts of Ontario. Over four years ago he became connected with the firm that he is now with. He knows nearly all the retailers of Ontario and can recall many incidents in connection with the development of the shoe trade in the province. Mr. Hand is particularly fond of fishing, spends his holidays every summer in that pastime.

# WHY DIAMOND FAST COLOR

Nothing so cheapens a shoe as a brassy eyelet. In most instances it is more conspicuous than a break in the leather and even more difficult to remedy. But there is a sure way to protect your patrons from any annoyance in this connection. Diamond Fast Color Eyelets cannot wear brassy, they always look new and help to preserve the appearance of shoes throughout the longest wear. There is also a positive way to tell whether the shoes you purchase are fitted with them. Just look for the little  diamond trade mark raised on the surface of each. It is inconspicuous but very important. Your customers realize it. It is your guarantee that the eyelets are genuine Fast Color, for only the genuine Fast Color have the  trade mark.

"Canada's Best Shoemakers"

Back up your Fall stock with fifty years of reputation and experience and the best equipped factory in Canada

**A**FTER all, reputation is a very big factor in shoe sales. Just as your reputation influences your customer, so does the reputation of the manufacturer influence you. And it's quite right that it should be so, for unless there is something real and permanent behind the samples you see, those samples are more of a snare than a guide to you.

Behind every shoe with the "Yamaska Brand" is the reputation and experience of over half a century, and the facilities of the best equipped shoe factory in Canada. These facts should weigh with you when placing your order for fall, for they form a practical guarantee of quality and saleability.

Let the samples speak for themselves.

# Queen Quality

## Business Adventures with Queen Quality Shoes

In this space, beginning with the next issue, will be found a new kind of shoe advertising. It is based on fact and experience of what the Queen Quality line has done for other retailers and what it can do for you.

It will be the story of some of the liveliest shoe retailers in America, of how they made a paying department from a losing one, established the leadership in their line in their town and put their shoe business on a sound, profitable and progressive basis.

It will carry many points of interest to every retail shoe dealer.

Watch for it.

# CORBEIL LIMITED

Boot and Shoe Manufacturers

MONTREAL, March 15th, 1913.

Mr. Shoe Merchant,  
Everywhere,  
Canada.

Dear Sir,-

The manufacturing business which I have carried on for the past forty years, will from now on be conducted under the name of Corbeil Limited. Corbeil Limited has a capital of \$1,000,000, and was made necessary by the remarkable growth of the demand for "Landover" and "Leader" Shoes. Preparations are now being made to better handle this increase of business.

I heartily thank you for the business you have accorded me during the past forty years, and solicit a continuance of your custom for the new Company on the strength of their ability to give you a good profit and a thoroughly satisfied customer with every pair of their shoes.

For Fall of Nineteen-Thirteen the new Company has added two new Lasts to the already complete line, and these two, I am sure, will prove good sellers. The range of wet-proof, double-sole, leather-lined shoes, in tan and black, you will find will compare favorably with anything on the Canadian market. It will pay you well to see the samples.

*A. Corbeil*

CORBEIL LIMITED

## Most men want them

One of the biggest factors in selling shoes, is proper buying.

If you knew exactly what shoes and what sizes were to be asked for in the coming season, you would see half your troubles disappear.

You know it to be a fact that most men want shoes ranging in price from \$3.50 to \$5.00. That's one buying point settled. You know that if any person or firm put over forty years into some special line of shoemaking they would be most proficient in that line. That's the way with Corbeil shoes. They've been specialized shoes for over forty years.

Doesn't that pretty nearly solve your buying problem for Fall 1913.

See the samples.

# Kant Krack

## An increase of sales that

Every season has seen a wonderful increase in the sales of the Independent Rubber Co.'s Brands. And this season's sales promise to break all records.

There is a reason for this phenomenal growth.

Merchants are getting as good prices for Independent Brands as for other makes. So it can't be the price that has pushed the sales up.

It must be quality.

Of course, each year a larger number of merchants are handling these rubbers. But that's because they know the public wants them. Still the biggest increases are coming

## JAMES ROBINSON, 13

*Dainty Mode*

strongest proof of quality

From merchants who have had experience with these brands, showing that Kant Krack, Dainty Mode, Royal and Bulldog Brands have made good with the general public.

These big increases in "Independent" sales form the strongest kind of proof and guarantee of quality. Without quality there could have been no such increase, and unless the quality is maintained the sales cannot be.

So you see the reason for the growth of sales is the reason why you should order these brands for Fall, 1913.

Let my salesman have your order when he calls

A FEW  
INSIDE FACTS  
ABOUT  
EYELETS

**B**ETWEEN two shoe eyelets that present the same appearance in the shoes, there may be a world of difference in the wear. One can resist wear only to the extent of its none too reliable coating of enamel; underneath is the inevitable brass of the brassy eyelet. The other kind (if it is a Fast Color eyelet) is constructed as shown above, and by the way there is only one kind of eyelet that is Fast Color. They are all made this way, with celluloid tops of solid color and nickel non-corroding barrels. It is impossible for them to wear brassy. They preserve their bright, new appearance throughout the wear of the shoe.

You will readily realize the importance of establishing the identity of these two classes of eyelets and there is a sure way.—Fast Color eyelets have a small diamond  trademark slightly raised on the surface of each eyelet. No others do. Just fix this fact in your mind, and you will be able to avoid mistakes. No diamond  trade mark—no Fast Color.

## It's a better woman's shoe because it's specialized

It stands to reason that the shoemaker who is kept altogether on women's welts is going to put better work into them than would he who was being changed from welts to turns, and from turns to McKays.

The Perth factory works exclusively on Goodyear Welts for women. Every shoemaker there is fast becoming a veritable expert on women's welts. He turns out his work more expeditiously, gets more "swing" and "snap" into it, and finishes it up better.

Moreover, the brains behind the Perth shoe are concentrated on one line. Because they are not wandering from line to line they are enabled to evolve more saleable, more profitable shapes and styles. These things you should consider when you're examining samples of Perth shoes for Fall, 1913.

## Fancy and Plain Cloth Tops Coming to the Front

The Narrow, Pointed Toe Seen in Women's Most Aristocratic Footwear—The Semi-Recede Will Still Lead with the Masses and That is What the Average Dealer Caters To—Tans Will Be Strong—Walking Boots on English Lasts are Seen in All Samples—Nature-Shaped Shoes for Children Abound

What will sell and what will have the call in the way of fall styles? This question is one of much interest to Canadian shoemen, and further observations are presented in this issue on the subject which was dealt with at some length in last SHOE AND LEATHER JOURNAL.

As stated, the general opinion of manufacturers is that no striking changes will be evidenced in fall showings, although many new lasts are being used.

### Popular Leathers

For both men's and women's shoes tans will be popular for fall and winter wear. About the same, or even more, patent leathers will be used as last year, particularly in shoes for dress occasions. Gunmetal is also proving as strong a favorite as ever, and velour calf and vici kid will be fairly active.

### Fabric Tops Increasing

"Fabric tops are coming into their own," is the way one manufacturer puts it and he expresses an opinion held by practically every shoe manufacturer in Canada. During the last two or three years this type of footwear has been gaining in popularity steadily, varying from whipcord to satin finish. In women's shoes suit effects are being

carried out extensively and are bound to prove big sellers in the coming season.

In men's lines, the demand for a button shoe is growing, a heavy call also being shown for the cloth top effect, par-

FRENCH CALF BLUCHER, BLIND EYELETS, PLAIN TIP, LOW BROAD HEEL, RECEDING TOE, ENGLISH LAST  
—BY SLATER SHOE CO.

MEN'S ENGLISH GUN METAL BAL, WITH MEDIUM RECEDING TOE, LOW FLANGE HEEL, WIDE SHANK, FRENCH EDGE TRIM—BY EAGLE SHOE CO.

particularly by the younger generation, as it makes a very stylish and natty appearance.

The receding toe in the more expensive lines is very strong, and many different types are being made as every manufacturer has his own distinctive last in this style. A medium or semi-high toe is expected to have chief call this year although the high toe or bulldog effect will be worn to a certain extent. Heels will be much lower the coming period, particularly in the medium height toe and receding toe shoes. Blind eyelets, too, seem to be used more extensively. Edges will be medium in width and tips will run to plain effects. Manufacturers also report that they are showing a strong line of heavy weather water-proof and rubber soled shoes.

### Leaders in Women's Shoes

In women's lines for the new season button boots are in the majority. Although a lot has been said by the

manufacturer and retailer on the merits and advantages of the laced over the button boot, the demand for button shoes does not diminish, but rather increases. This does not mean, however, that no laced productions will be worn, for there will be any number. It just shows that a woman seems to regard a button boot as a woman's shoe for the same reason that a man looks on a laced shoe as the proper shoe

WOMEN'S HIGH CUT DULL CALF BLUCHER, DOUBLE FANCY STITCHING DOWN EYELET ROW AND QUARTERS  
—BY GETTY & SCOTT

for his own sex. High tops will continue to flourish, running from fourteen to eighteen and even twenty buttons. The standard height in women's shoes is about seven inches. Some manufacturers are easing up on the slanting tops and are making a straight top as they say the slanting top; especially towards the back of the shoe, causes some dissatisfaction, as a boot slanting to the back is a poor fitter due to the peculiar build of that part of the foot. The medium high toe and Cuban heel will probably again create a large demand. One manufacturer has a new last, which he expects will be a money maker, in a tan bal with a low receding toe, broad heel and shank fitted for a walking shoe. It is making a great hit in the cities. Vamps on women's shoes remain about the same as last season. More bals are being shown by manufacturers of women's fine goods. The prevalence is towards slightly lower heels. The average height will probably be around from  $1\frac{1}{4}$  to  $1\frac{1}{2}$  inches. Most women prefer a shoe with a short vamp as it gives a natty appearance, which is almost impossible to get with a long vamp.

The really highest class shoe in women's has quite a narrow pointed toe with the drop effect and is getting dangerously near the old razor toed variety.

#### In Children's Shoes

A staple line of children's shoes are being shown for the fall season. In babies' and infants', vari-colored shoes are shown and will likely prove very popular. Both button and lace with fancy tops will sell well. In children's, gunmetal in button and lace and a number of patents will have a ready demand. Many are shown with slipsole for fall

and winter wear, in natural shapes. Boys', growing girls' and misses' styles are verging more and more on the adult pattern. The style shown last year in children's shoes with a low heel and high cut will be as popular as ever this season. Different manufacturers feel that they have something for boys which will defy rough wear, but the outcome remains to be seen, as it will take a pretty strong shoe to come out victorious after a month's tussle with the average Canadian lad. Fabric tops with moderate toes and heels for growing boys and girls will also be displayed.

#### New Styles for Misses

Several new lasts are seen in shoes for girls and misses for the fall season. It is predicted, however, that there will be no general change other than those noticed in the different women's lines. Samples are being shown in gunmetal calf with cloth tops, and in patent with cloth and leather tops. Gunmetal pumps are also shown in several different patterns. Fabric tops are becoming more in vogue among misses and girls, some styles being shown with tops of whipcord, buck, etc. Tops to match a suiting are also very popular for misses and girls and will be among the big sellers this season. White nubuck will be worn quite extensively. Fawn colored nubuck boots will also be seen to some extent although not as much as the white leather.

#### Young Men Well Looked After

For young men, the roomy, thick, abrupt toe, some showing a receding effect has evidently come to stay. Winter calf is largely employed linked with viscolized soles. There appears an increasing desire for something that will shed water, and wet resisting soles and uppers are more and more coming to the front.

There are a large number of males who will not be bothered wearing a rubber or who do not feel comfortable

ALL PATENT BAL. RECEDING TOE LAST, CLOSE TRIM,  $\frac{3}{8}$  HEEL  
—BY COOK-FITZGERALD CO.

in a rubber, and for this class there are any number of heavier goods.

#### Impossible to Prophecy

No one can predict the extent of the vogue of any of the particular styles or tendencies that have been discussed

(Continued on page 49)

# Credit Drives Many a One Away from Your Store

The Strictly Cash System is the Only Proper One, Declares a Leading Ontario Firm—They Specialize in Hosiery, Findings and Traveling Goods, and Have Doubled Their Business in Last Two Years

"We have been doing a cash trade for three years and find that it is the only way to do business. We have been in the shoe line for six years and three years of credit was enough for us. We believe that credit will drive people from your store. A person owing a bill for a considerable time will not come in to buy for cash, evidently being afraid of being hit up for their account. We have several parties dealing with us now who had quit on account of their growing credit amounts," said Andy Russell, manager of Russell Bros., shoe retailers of Fort William. Mr. Russell took hold of the business when only twenty years old and with only fifteen months' previous experience in the footwear end. Prior to that he had been selling groceries.

"Yes," he added, "it was an uphill grind for a while, but by paying attention to business, following advice given by reliable travelers, and watching stock we have managed to pull along fine."

The firm always order all lines as soon as possible and have goods shipped early and never cancel an order unless the shoes are not up to mark or other valid reason. They make it a rule to push goods in season and push them hard, and when the season is over they go after something else. They do not believe in shoving lines which are unseasonable. Speaking of approbation, Mr. Russell said, "We always try to have callers fitted on the premises. We impress upon them that we can give them better satisfaction and comfort and we find that women are the worst offenders in the approval game. Many people have shoes sent on approval and thus try to work you for credit. They use it as the thin edge of the wedge. We adopt a rule to have all parcels so sent out returned or must be paid for inside of three days."

Another line that this progressive firm specializes in is hosiery. They find this department a good line to work in with shoes. They have tried both the staple and high priced and fancy lines and have found the staples more profitable for

ANDY RUSSELL, FORT WILLIAM, ONT.

their trade. The stock in ladies' varies from twenty-five cents to one dollar and seventy-five cents per pair and in men's the prices range from twenty-five cents to one dollar.

Another thing that the firm go after hard is findings and they intend to feature such accessories of the footwear trade a little more vigorously in the future. They find that there is no line that requires so little space, capital and attention and yet yields such a percentage of profit as findings. With them the firm couple infants' soft sole shoes. The soft soles being prominently displayed induce ladies to come into the store and footwear is thus often disposed of to other members of the family. "This line is just as necessary to a shoe store as are laces, brushes, daubers, and polishes," added Mr. Russell.

Russell Bros. have a neat store at 141 Simpson Street and carry an excellent assortment of traveling goods, which they find a profit-making side line. They believe there is no other adjunct that is a better trade bringer and yet

does not require a great deal of capital. They do not believe in conducting a repair shop on the premises and get all such work attended to on the outside. Two special sales are held twice a year—one in March and the other in June or July. They think this is necessary to keep the stock cleared up. The store closes at six o'clock during eight months and at eight the remaining four in the year, except, of course, on Saturday nights.

Only Canadian made shoes are handled by this Fort

William house. They think such lines are as good and stylish, if not better than American shoes at the same price. "Of course other people may view matters differently," remarked Mr. Russell, "and they are entitled to their opinions. We can not help that. We have more than doubled our business in the last two years with Canadian shoes exclusively although we are up against American lines every day."

An enthusiastic over the business prospect of Fort William

THE INTERIOR OF AN ENTERPRISING FORT WILLIAM SHOE STORE

is Andy Russell. "We have," he added with emphasis, "the best little city in Canada, bar none, and already have 25,000 people. With the new industries that are locating here—five new ones this year—which will employ at least

three thousand men—we confidently look forward to at least nine or ten thousand more people in 1913, and will get them too. You cannot keep the Irish down. The majority of people in Fort William are Irish, so watch us."

## Do You Sell Under Maker's or Your Own Name

If a Brand Means Anything it Should Carry Weight and Possess Value, say Advocates of Factory Named Shoe—Opponents Declare that the Advantage in Retailing Shoes Under Your Own Title Are Many—The Individual Advertising Tallies and Constant Hammering Home a Dealer's Name Tells.

Does it pay to sell a shoe branded with your own name or that of the maker? This is a live topic with the average retailer, and opinions are apt to vary according to the class of trade, location of store, lines handled and individual circumstances of the speaker.

In last month's issue of the *SHOE AND LEATHER JOURNAL*, there was presented several divergent views on the question of handling a shoe to sell at a stamped price. Several of the readers of this paper were strong advocates of carrying shoes on which a selling price was branded, while others maintained the average shoe man is more independent by fixing his own selling price and not submitting to the arbitrary demands or dictation of any maker. There was much logic and cogency on both sides and the problem as to whether it is best for the average shoemaker to handle priced stamped stock is one that he will have to solve individually. Experience will have to teach him lessons of value, or otherwise, on this matter as well as other perplexing problems.

For any medium to set himself up as a final authority would appear preposterous. One might as well tell how long a man should wear a hat, or how often he should wax his moustache,—whether a woman should use a bird of paradise or an aigrette in her headgear; whether she should wear a lace jabot or a very severe stock and tab of bishop's linen with her new spring frock. These are questions for individual consideration.

But, to return to the question of a branded shoe or a private brand. The *SHOE AND LEATHER JOURNAL* has received a number of letters from dealers on this important topic and opinion is about equally divided. Instead of presenting the personal views of the writers, an attempt has been made in this case to give a symposium of the opinions, pro and con, and here they are.

### Good Brand Is Worth Much

For the branded or named shoe of the manufacturers, the following points are urged. If a name stands for anything, it has a certain weight and value. There is much in a name, particularly if it is widely advertised. If it is a title that is easily called to mind and has associated with it the idea of service, comfort and fit, it will at once loom up when a man or woman thinks of purchasing a pair of shoes. The stamped shoe is like a trade mark, and all trade marks are valuable, varying in worth according to the way they have been exploited. When a maker's name goes on a shoe, there is generally a guarantee behind of worth and workmanship. After a name has become associated with a certain make of shoe and a certain price, the goods will sell themselves, or at least the customers will ask for them. It is an asset and also part of the good will of a progressive shoe house to have the exclusive selling agency of a widely known brand. If this were not so, why are certain stores opened in various parts of the country under the name of the Brown Shoe Store, the Underwood Shoe Store, the Vann Shoe Store, etc? If branded shoes are not the leaders in all lines, why is it that practically all the large manufacturers stamp or advertise their goods under a name?

When a shoe is widely known, it is easy to push it—in

fact—it practically sells itself. In advertising one's self as the selling agent of the Scanlon Shoe, the Bryce Shoe, the Hodgens Shoe—or any such name—prestige and dignity are added to one's establishment and immediately the idea is reflected that Mr. Smith or Mr. Jones is a superior sort of retailer or the manufacturers would not have confidence enough in him to give him this line exclusively.

The points advanced against handling branded shoes indiscriminately, are presented in this light:—

"It may be all right to handle one or two nationally known and advertised brands," declares a Winnipeg shoe merchant, "but as for me, I am not going to spend all my money, time and talent in making known somebody else's goods. The majority—in fact nine-tenths of my shoes are sold under my name—as the — shoe. I have this stamped on the sole and on the top facing in some cases, and in other cases, woven right into the pull straps. You may work for a manufacturer for years and finally have some disagreement with him, or he thinks that you are not pushing his branded lines hard or fast enough. The result is that the agency, which you may have controlled, is taken from you and given to Jenkins, across the street. Then what have you reaped for all these years in pushing, say the Harlow Shoe? You have to mournfully confess after this little dissolution or altercation with the manufacturer, that you formerly handled his line. Then, perhaps, you are asked where such a shoe can be secured now, and you either have to confess that a competitor has it, or try to foist some other make on the customer, which is often very difficult, especially if she is a woman. It is not pleasant to admit that you formerly handled a certain line or such a shoe for you cannot very readily turn around and knock that line, because people will say, "If it is no good, why on earth did you sell such a brand for so many years?" If you start to tell the ins and outs of why you have severed your connection with it, that does not interest your patrons. They have enough woes of their own without your retailing your trade troubles.

### Tied Up to No Make or Name

"This is only one of the possible phases that loom up, and there are many others. I do not believe in being tied up to any one manufacturer, or to any one house or any one organization. The widest measure of liberty is attained by not being financially allied to or commercially bound up with any specified article or maker. The customer who pays cash can always obtain the best value, for he or she can select just what suits best and meets his or her individual taste. The same condition applies very largely to the retailer who is in a position to handle just what it pleases and to deposit an order large enough with any manufacturer to have him place a name of his own make and call the shoe the Cameron shoe, or the Smith shoe, or the Rogers shoe, or whatever the cognomen of the merchant may be."

A St. Catherine Street firm in Montreal wrote this paper, stating that they have always sold the better grades of shoes under their own name and will continue to do so. They have built up a wide connection by this means and have not been at the "merry beck" and call of any manufacturers.

They have indissolubly associated their own name with their shoes, and their shoes with the name of the firm. The two have formed a strong combination and the result has been building up one of the best businesses in the East.

#### In Highest Class Lines Only

Speaking on this topic, the head of the men's department said:—"Of course we handle one or two exclusive and very high-class lines, selling for six, seven and eight dollars, on which we allow the makers to have their own name stamped, but on the average shoes that we retail at three fifty, four and five dollars, we have our own name. The reasons for this are many. We think that this has been the most satisfactory and we have tried both plans. We regard it as a fine advertisement for our own establishment, better than having the selling agency for some manufacturer,

who may think his shoes are widely known because they are branded, but at the same time, it must be remembered that there are hundreds and hundreds of branded, stamped or named shoes, whatever you like to call them. They are, in fact, getting to be like a new kind of breakfast food or furniture polish, cough mixture or sweeping composition. A new kind appears almost every week and it is only three or four brands that are backed up by millions of dollars and which are nationally advertised, that count for a great deal. Why, I will venture to say that half of the branded shoes in Canada are not known nearly as widely as our own shoe, which we call after our own name. If there is not a great deal of merit in having your name on your own shoe, why does the average retailer put his name on a sign at his door, or have it on his wrapping paper, his labels, his stationery, his booklets, and his advertisements?"

## WINNING BUSINESS BY A CATCHY DISPLAY

AN ARTISTIC AND EXPRESSIVE HOLIDAY WINDOW BY T. DUSSAULT OF MONTREAL

# STRAY SHOTS FROM "SOLOMON."

Are you giving to fretting against the prosperity of evil doers? Are you asking yourself, "What's the use?" as you see people scrambling into wealth over all kinds of back fences and side paths? It does look just now as though the plodder had little but his plodding for his pains. Fellows are making thousands by jacking up real estate and millions by rounding up stocks and mergers, while it is all a business man can do these times of "high living costs" to keep his wife and the Church going without anything to the good. We need the gospel of content preached to-day more than ever before. Money isn't everything. "Man shall not live by bread alone." If you are running an honest business or following an honorable calling you are doing more for your day and generation than all the get-rich-quick artists from here to the Klondyke. "Better is a handful with quietness than both hands full with travail and vexation of spirit."

It is a comforting thing for a man who is not rich to read that "the abundance of the rich will not suffer him to sleep," but most people would take their chances on sleep if they could get the abundance. We say in effect, if not in words, "Give us the root." Yet none of us fail to realize the blessing of hard work and simple fare. The trouble with the money god is that it is a relentless taskmaster. It never lets up. When we make a thousand we want five thousand ten times as bad, and when we get ten we must have twenty, and like the fellow who thought he would stop when he got fifty, we hold up our hands and say, "Let it all come!" The meanest business in the world to-day is money getting. It deadens the soul of a man quicker than drinking or immorality.

There are enough clean ways of making money to-day without a man making a dog of himself to get a dirty bone. There is honey to be got without robbing another man's hives. There are men so strangely made up that they would rather make a crooked dollar than get one straight from the mint for the asking. There are men who adulterate goods and manipulate stocks to make a turnover that they could get much better by putting their brains to decent uses. A burglar was disturbed the other night after he had drilled three holes in a safe and put off two charges. A man who could get into a store and go about a job like safe cracking scientifically like this man could easily make a fortune by putting his talents to legitimate uses. Are you using your abilities for just such base purposes.

Are you hunting with the wolves and running with the deer? Are you going to Church on Sunday and gouging your brother on Monday? Are you figuring in missionary subscription lists and getting your benevolent fund from skin mortgages and shady business deals? Are you "shocked at the growth of immorality in our midst" and at the same time quietly sneaking into low down shows? There are people who will move and

second resolutions of protest at public meetings who will go out and beat the very devil at his own game on the side. They carry a bible in one pocket and a pack of cards in the other. The meanest kind of a fox is the one that condemns all kinds of poultry as food. Go a mile out of your way to avoid the fellow who is "all things to all men" in order to further his own interests and who fears the priest or minister more than he fears God.

If prospects seem poor don't dump cartloads of woe on your neighbors. Put a few loads of fertilizer on the right spot and go to it with plow and harrow. Hard work raises strawberries where whining gets nothing but pigweed and twitch grass. Get down at it with your hands if the hoe fails and run the scuffler through the patch until the ground is as fine as silk and clean as a baby's head. Good seed even won't grow a good crop of corn, and apples at five dollars a barrel are not gathered from scrub oaks and haw trees. Business is always good to a business getter. You can make money selling shoe laces and lead pencils if you sell enough of them. The trouble with lots of business men as well as farmers is, they leave too much to Providence. "Whatsoever thine hand findeth to do, do it with thy might."

Canada seems to be living on easy street just now. Men are making money so fast they are asking themselves how it happened. There is a healthy crop of millionaires in sight and some to come. Everybody, from the office boy to the "master of finance" is counting more plunks per than ever before. Yet it seems that with all it is "come day go day." While some are piling up the stuff faster than they can shovel it out most of those who are doing well at the game are getting rid of the proceeds as easily as they get it. The high cost of living is caused by the cost of high living. Any fool can make money; the wise man is he who knows how to nail down a few dollars as they slip through. Yes, men are giving liberally to charity and religion, but hunt up the Church that is prospering spiritually in proportion to this financial "revival" that is in progress.

Whatever a man may be he can be straight if he wants to. He may be pulled by the sleeve into a saloon, be cajoled or dragged into the house with the red lights, or be tempted to take a flyer at stud poker or the stock exchange, but the fellow who cheats his neighbor has to sit down and do the thing in cold blood. Now there are men who wouldn't rob a bank in daylight or hold a pistol to a man's head in the street who quietly carry on the business of thug in a respectable way behind counters and at mahogany desks. We have our moral senses sadly twisted to-day. What is the difference between the hold-up man and the fellow who to-day puts a competitor out of business because he is strong enough to put prices down where others can't make a living? Play the game square or quit. Leave the fellows with stolen shoes to blister their heels and those who draw the sword in commerce to perish by it.

# 100 Per Cent Profit Propositions For The Dealer

You Will Not Believe It Because the Opportunity Lies Right at Your Door—How to Boom Findings in the Spring—Certain Lines of which the Public Know Little—The Way to Make Them Known

By GEORGE E. GIRLING, Edmonton, Alta.

Spring is here, and you are doubtless prepared to cope with the increased business that you hope will come your way. What steps are you taking to improve your findings business this year over 1912? What new ideas have you in the way of bringing these small but necessary items of merchandise before the public? Have you made preparations that will net you 100% more profit than you made last year?

Don't feel just because you sell shoes that you must carry findings and yet continue in the same old-fashioned, slipshod manner. You must get away from this idea—that you are obliging the public and that findings are a kind of necessary evil about a footwear merchant's premises. Away with that fallacy!

It is right here where you fail. There are a number of things, useful and necessary things, that the public know nothing about. There are a number of things the public do know about and would buy them if you were to carry them in stock and display them, and create interest by telling your customer all about them.

Suppose at the commencement of the spring of 1913, we make a special effort to increase our sale of shoe findings by placing near the door of the store, a silent salesman or a show case or a round pyramid of shelves or a table to exhibit shoe findings exclusively. Better still is it, if the store is large enough to have an exclusive shoe findings department with a special clerk in charge, who would study the requirements of the customers by first of all studying the uses of the various finding goods. He should be able to advise a customer instantly the right kind of polish or dressing to buy to suit any particular kind of leather. This is where a findings clerk can specialize and make sales by giving the necessary information and time to this part of the business. Shoe findings is a business of itself, and requires lots of intelligence and application in making a success of it.

Another point in selling findings is, that while the shoe clerk can devote more time to selling shoes, the findings man will probably have new ideas or suggestions that will tend to interest the customer. Then it might be as well, when we have our display ready to have a catchy sign over the department or show case something like this:

SPRING IS HERE, IT'S FOR YOU  
TO BE CLEAN AND CLEAR, SO GOOD FINDINGS  
HERE ARE OUR SHOE FINDINGS, YOU NEED SOME POLISH.

You will need to show an assortment of good shoe laces. For laces sold in bulk or that are not already knotted in pairs, a good idea is to use a lace holder. There are very few of these seen considering how useful they are. They hold the laces in good shape by a spring. A pair can be drawn out without any untidiness and it makes an attractive display. The old system is to hang them over a nail so that invariably a few laces are usually under foot. This is a simple and inexpensive contrivance, yet it is surprising what a few there are in use. The idea is to attract and draw attention, even though it be only a shoe lace. Don't forget to display black and tan silk low shoe laces. These are one hundred per cent. profit goods and are worth attention.

Then, there are different polishes, combinations and dressings. These make a fine display if neatly arranged. Tan and white should be shown prominently. Do away with the old fashioned idea that people will ask for what they want. Do not forget that illustration is truly the art of selling.

## Bring Forward Live Lines

Foot powder should be a seller in the coming months. Bring this forward. It eases the tired and aching feet and makes them comfortable. Some good shoe brushes should be shown, also polishing outfits. These are very useful and should sell well if they are attractively displayed and introduced by the findings clerk. Arch supports ease the feet, and the well known foot easer is a hundred per cent. profit proposition. These alone would add considerably to the profits of this department if their use and benefits were better known. The writer himself did not know the real value of these until wearing a pair some nine months ago. This is a line you can confidently recommend and know that you are offering a square deal.

Another very useful findings line is the shoe holder. This also is a contrivance at present carried by few shoe men. Its usefulness and its existence is very little known to the general public. Here is another one hundred per cent. profit proposition waiting to be taken up by the progressive shoe man. Fix one in a prominent place in your findings department. Illustrate with it and prove to your customer how clean it is to use and how quickly and conveniently they can shine their shoes over the old system of putting the foot up on a chair or holding the shoe in one hand and the brush in another when both hands could be used to better advantage. Now is the time to introduce specialties. Every one likes to look trim and clean as the spring breaks in on us.

There are numberless other things that can be brought out and sold if you yourself knew the value of them. Don't forget to bring out your slow sellers; the goods that did not sell last year. Make up your mind to make them quick sellers. There must be some good points about them and there must be a reason for them not selling, so find out that reason in the springtime of 1913 and when the end of the year sets in you will be surprised at the business you have been doing with the slow sellers.

## His Success Due to Hand Work

Melville Wark, who is the manager of the United Shoe Dealers' store at Port Arthur, began his mercantile career in the Hub Clothing store of that city, which also handles boots and shoes. Mr. Wark took an interest in the footwear end of the business from the beginning, and entered the employ of the United Shoe Dealers of Port Arthur a few years ago. He has been a hard worker in the interest of the firm, and last October was made manager. He has developed a fine trade for the store, and is also an expert window dresser, paying special attention to displays of every kind. He believes that the space available at any store front for the purpose of exhibiting the different kinds of footwear is the best and cheapest advertisement that a retailer can get.

# You Cannot Get Co-Operation With a Flat Salary

The Commission Plan is the Only Equitable and Satisfactory Basis of Paying Clerks, Says President of National Shoe Retailers' Association—Fixing the Percentage on Sales of Particular Styles

"You cannot get co-operation with a flat salary. I don't care how much education you hammer into your salesmen, I don't care how much your older knowledge is, I don't care of what advantage that is to them or how to do it, or why they should do it, if you don't give them an opportunity to make other than a salary. That is a solution of the difficulties of proprietors."

The man who uttered these words is A. C. McGowin, of Philadelphia, president of the National Shoe Retailers' Association of the United States. He is the manager of the shoe department of the great Wanamaker stores in which no straight salaries are paid to salesmen. Everything is regulated on a commission basis. It is claimed by Mr McGowin that shoes are retailed at Wanamaker's in Philadelphia at a lower selling cost than is done at any other place in the world, and that the selling outlay in their New York store is less in the footwear branch than that of any other similar establishment in the great metropolis. "There must," says Mr. McGowin, who was on the road for seven years, "be mutual co-operation between the employer and the employee. You cannot overpay a man, if you have brains to figure out what it should cost you. Now, there are bases for figuring that are absolutely safe. If your opinion is not safe, if it is costing you too much to sell your goods, then you have got to experiment and find out what it should cost you on a commission basis, and therein is your protection. Say to your salesman or your sales people, 'It is costing too much money. We are not doing what we ought to do.' We all have too much old stock. And when is a thing 'old stock?' An article is old stock the day after it comes into your store, if it doesn't begin to move. Now, then, to move that class of old stock, how about the shoe that is finally losing its selling qualities and is not paying its rent any longer?—that is, paying rent for the space occupied, though it be a shoe you have had in your stock ten years?"

"It is your business as proprietor to know whether it is going to go finally out. And my method will move it, because you put upon that old stock which came in yesterday, and that shoe that is dying out and which would naturally become broken stock, as well as the old stock,—you put upon them a higher rate of commission than the average cost of your business in past years.

## How the Percentage is Based

Mr. McGowin explained his plan of basing all salaries on commissions ranging from two to six per cent. on the sales price of the shoes. In fixing the percentage on any particular style, the percentage is not fixed on the usual P. M. basis, that of the largest percentages on stock which the store merely wanted to close out. The largest percentage is placed upon those shoes which it was to the store's best and broadest interest to sell the most of. It might be an entirely new and popular style, if it was a thoroughly good and business-building style. Wanamaker's is not a one-season or a one-purchase store. It has thousands of customers who have been customers for a generation.

"Let us take an example. Supposing your rate was from three per cent. to six per cent., which is about what shoes ought to be sold for in Philadelphia. In New York it is

from four to seven per cent. In the West for a while it is considerably more. Now, suppose a sales person sells only your six per cent. stock, the high grade shoes. It takes them longer to sell it. Therefore they may draw a smaller amount of money than the person who is selling the stock all along the line; but you have only a certain quantity of your six per cent. stock, and that is equalized by the three and four dollar stuff that is sold below the average percentage, which would be  $4\frac{1}{2}$ , if your regular commissions were three to six.

"It takes considerable study by the owner of the business, because he must have some records of how many \$6 shoes, \$8 shoes, \$5 shoes, \$4 shoes and \$3 shoes.

"In a general way, I will say the system is, pay about according to the price. That is, 3 per cent., we will say, on the \$3 shoes, 4 per cent. on the \$4 shoes, and so on—not literally, but always about the same.

## Small Commission on Low Prices

"Now, why do you put the small commission on the lower priced shoes? Because it is casier to sell the lower priced shoes, and a person will sell twice as many of the three per cent. stock in the same time that a person sells six per cent. goods. That is something that you can't get over. That person that buys the fine stuff requires more attention and more care, and it does work out absolutely. This reduces the cost in my Philadelphia department about one and two-tenths per cent. over the best and lowest years we have had under the old flat salary system.

"It is simply taking your people into partnership with you, and it doesn't take a whole lot of hours after their business hours are over and a whole lot of their time to educate your sales people, for the simple reason that you have only got to say to them one thing:—state the commission rate which is on the high rate goods.

"We get in, for instance, two lines of shoes as much alike as these two pieces of paper, absolutely, and we have a comprehensive stock in each one—and I am speaking now of new shoes and not talking about the old stock. Now we will say, for instance, that we have a complete stock from double A to E and from  $2\frac{1}{2}$  sizes up to 7's, 8's or 9's, or what ever they run. The factory has made a mistake and the C's in the one style have been delayed and we are short in one size or width. Then, ten days later your stock man takes a line on the shoes and the sales, and he notes that the one style is piling up, and is not selling; that is the one that has the one letter missing. It is evidently dying a natural death; the sale of it has discontinued.

"Each style is \$5, one looks as good for \$5 as the other, but they can pull down from the shelf this other style shoe and know that they have all sizes and widths in it.

"Now, what happens when we find a case like this? We change the rates on the two shoes. Suppose these shoes have each the 4 per cent. rate; that is, for each pair sold for \$5 there is 20 cents added to the salary credit account of the sales person. We can start those slow-goers in just one day. On the bulletin board there is posted a change of rate. We change the fast sellers to 2 per cent. and the slow sellers to 6 per cent. or, if the case is not extreme, perhaps make it 3 and 5. The results are instantaneous, because the difference of 10c. to 20c. is an extra inducement in favor of selling the slow moving shoes. At the same time they recognize the fact that their average is just as good if they sell one of the others at 2 per cent. for every one of the 6 per cent. they sell."

# The Proper Time Now to Stock Traveling Goods

A Profit Making Side Line That Will Net Money for You—Increasing Number of Shoemen Selling These Goods—Publicity Necessary—Every Opportunity Offered by Manufacturers—Windows Important in Making Sales

Seven or eight years ago a shoeman could be excused for hesitating to install a trunk and bag department, but since that time this line of goods has been given thorough tests by different retail shoe dealers and proved just as paying a proposition in its own way as the shoe end of the business. Especially during the last three or four years has this line been taken up seriously, and plans made to make it a success. The majority of shoemen who do not stock trunks and bags fail to realize what a good thing so many of their brother shoe dealers have in this branch.

A large stock for a beginning is not necessary. A good stock can be put in an average store for less than a hundred dollars. One sample of each style is ample, as shipments are received a very short time after ordering. Many orders can be taken also through the catalogue, for a customer who is unable to find what he wants, by looking through a catalogue of one of the Canadian factories as well be given up as a bad job, as manufacturers are now showing lines wide enough and varied to please everybody without exception to class or position.

The average person, when buying a trunk, suit case or club bag generally considers the question for some time before making any move towards the purchase, and if he knows his shoe store stocks this class of goods, he will naturally turn in that direction. Some dealers think it impossible to make this department pay, figuring that a great deal of room is necessary for the proper showing of a stock. This is erroneous as a presentable stock will not only sell itself but will also sell a great deal from the manufacturer's catalogue. Therefore, it can be seen that quite a business may be done in the trunk line without any real outlay, as a dealer is acting as a kind of agent for the maker, receiving a handsome percentage on all goods he sells.

Why should not the shoeman have this business? It belongs

to him just as much as it does to the saddler or haberdasher. If a man wants something he will be more likely to go to a shoe store than a saddler's, with whom he has no acquaintance. And yet such places in an average town get the bulk of trade not handled by the city merchant or a mail order

house. In the cities also, how many buyers are acquainted with the location of a purely traveling goods store? If a customer sees your line of trunks and bags, and he cannot fail to, he will certainly keep this in mind when he contemplates a purchase.

As regards space, many objections are made on this score. One man will claim that owing to the small available space in his store, the question of installing a department is not to be thought of. There are many ways in which this objection can be overcome. If your store is long and narrow, they may be run down the centre. A platform could be built over the

office if the ceiling is high enough. Generally, some corner can be found in every store to make a presentable display. Suit cases, hand bags and other leather goods can be kept on spare shelves, preferably with glass fronts, or in any space corner fitted up for the purpose, provided it is clean and is in a position to catch a customer's eye while he is in the store.

To make this department pay, advertising or publicity is needed, particularly at the start. Use every means possible, and use them intelligently. Impress the public with the fact that you can give them a little better service than anyone else. The public wants information, not mere general claims. Let the goods talk for themselves and be sure you know their strong points yourself. Give your trunk department a fair amount of advertising space in proportion with that given to shoes.

One of the best methods of advertising this department is found in the store's windows. A special trunk and bag window once in a while will

GENUINE WALRUS LEATHER CLUB BAG

HEAVY PAINTED DUCK STEAMER TRUNK

be sure to pay. At any rate, if this is impossible a few suit cases and bags can be set in different parts of a window in a shoe showing, and enhance rather than deteriorate from the value of a display.

A great deal of transient trade will come your way through the window, just as in shoes, and for this reason alone, it pays to give a certain amount of window space to this department. Very little attention is paid to the average leather goods display. Instead of piling goods in the background, have something novel if possible. Good display schemes should be thought out, showing some of these leather goods put to use. Traveling luxuries and necessities can be grouped systematically, making a strong telling display, utterly different from the usual traveling goods window. A good show card in a conspicuous position in the background, will greatly aid in making the window a business getter. Circulars and folders will also be found to be great helps in creating a demand for these goods, when a new department is opened. It is needless to say anything about newspaper advertising as every shoe merchant has his own ideas on the subject, and through past experiences, is generally able to form an opinion as to what it has done for him, and how it will help his traveling goods department.

To interest the feminine element of your trade is one of the essentials for the success of this branch. What woman does not like to be presented with, or to present one of the other members of the family with something in the leather goods line? This department is worth while cultivating, if only for the profits procurable at holiday seasons, as these lines are ideal for Christmas, birthday gifts, or presentations.

#### Use Care in Buying

The leather or traveling goods line offers so many different styles and varieties of goods that extreme care should be exercised when buying. In opening, this new feature or any new feature, it is always better to go slow until you get the "feel" of things, and gradually go further into the matter, as your judgment warrants. Avoid tying up too much capital, but above all things be sure to have a sufficient stock to interest your customers, as it is useless to stock two or three suit cases and a trunk, and introduce it to the customer as the traveling goods department. As regards what class of stock to carry, this depends a lot on the class of trade to which a dealer caters, but it is always necessary to keep a good strong general line. An increasing demand is being made for the better class of goods.

Now is an especially good time to install a department this kind, as the most of the selling in this line of goods

is naturally done during the months of June, July, August and quite a bit in September, these being the months when all the traveling and sight-seeing is done. The same might be said of December, when a great deal of these goods are being bought as presents and the railways carry thousands of people bound for a pleasant holiday. It is then that the shoe retailer who has energy and foresight enough to equip a proper traveling department reaps a harvest by featuring all the new things he has to offer in this line. Of course, there are constant and steady demands for traveling requisites all the year round and they should never be lost sight of, but the traveling seasons are the proper times to push traveling goods.

#### Some Spring Styles

Styles in traveling goods, unlike those of footgear, are very seldom changed, and a shoeman is never left with any of "last year's stock" on his hands, so to speak. During the last two or three years, traveling goods have been made much stronger than formerly, as on account of rough handling received by baggage nowadays, a strong demand for a heavy, lasting line of goods has been shown, the public seeming to prefer paying a little more, and getting a better class of goods. For this call the fibre trunk seems to be one of the big sellers. The output in this type is growing steadily. The fibre trunks look better than the ordinary wooden, tin, and burlap covered trunk. What is more important, they wear better. The fibrous covering is almost as hard as granite and as strong as steel. They are made in all colors, of course, and make a very natty appearance. Steamer trunks will be in great demand again this year. They are light and strong, occupy small space, and are being more and more used for general traveling. This type of trunk is just the thing in a case where a person requires something larger than a suit case, and not so large as a regulation sized trunk, and is used a great deal by persons on vacation trips of short duration, particularly ladies and girls.

Another thing much used for vacation trips along with suit cases is the club bag, which for appearance, capacity and comfort in carrying, cannot be equalled. Fitted bags are becoming more and more in demand as time goes on, as are also fitted suit cases.

#### To Get a Start

More shoemen are handling these lines every year. The first thing to be done when contemplating opening a department is to consult the traveling representative of one or more leather goods manufacturers. From their long acquaintance with these goods, with trade conditions, with the experiences of others who have taken this step you are contemplating, they can furnish you with invaluable advice. This, taken into consideration with your knowledge of local conditions, will enable you to order wisely and effectively.

You may be sure of fair treatment at their hands, as it is in their own best interests to boost your traveling goods department, giving them, as it will you, future trade.

If impossible to talk with a traveling salesman representing this line, send to one of the numerous firms manufacturing the class of leather wares you require. These catalogues will furnish you with funds of information showing clearly the appearance of every type of goods sold, along with information which will enable you to put up a first class line of selling talk when showing goods to a customer, and a careful study of their contents will enable you to come to a fairly clear decision as to what and where to order, as retail prices are plainly stated—off which a liberal trade discount is allowed.

Brampton is talking of granting a bonus of \$15,000 to a new shoe manufacturing concern capitalized at \$200,000.

WOMEN'S AND MEN'S FITTED SUIT CASES,

# How Lack of System Causes Retailers to Fail

Keep Your Eye on the Expense and Income Accounts—When the Former Jumps Dig Into it and Find Out Why—When the Latter Decreases Delve Once More and Ascertain the Cause—Know All the Facts

By A. M. BURROUGHS

"Yes, all these things are true," says the retailer, "but how am I going to stop those leaks. I may be so busy fitting a lady customer that I don't know if a clerk in the men's shoe department is not disposing of a six dollar pair of tan buttons to a bosom chum for five dollars."

That is just why this article was written. No proprietor who may be selling in one department can keep track of all the leaks unless he is in a one-man business and is selling everything for cash to those who carry the shoes home.

Then, the goods on the shelves, and the cash in the bank and in the cash drawer, are his assets.

He may be able to sell the goods, or make a physical inventory, in a single day—and count his money in a few minutes.

What he owes are his liabilities.

## All Under Eye of "the Boss"

Everything is under his own physical eye; he could tell in a short time just what he is worth.

When he begins selling on credit, enlarges his business by adding one or fifty employees, buys goods that are stored below and above, and starts a repair department, then he no longer has all details of the business under his eye. Hence he must have a system that will keep a record of the results of all the activities of his people—of the incoming and outgoing of the goods (which represent his money)—that will tell him the true value of all this activity.

Any system is just a method by which the Boss may keep his eye on the results of his business. With an adequate system he can have in one place an accurate reflection of all that goes on in his business.

The system is an accounting system, because it accounts to him for every penny that he gets and every penny he pays out, in time, work or goods.

According to the thoroughness and efficiency of the system in searching out and telling the whole truth about the activities of the business depends whether the Boss's Eye has a chance to see the things it ought to see.

If the System is right, then it is up to the Eye to see the facts, and the Judgment to use them.

The System will not do anything. It will only show the Eye what ought to be done.

It all comes back to the Boss with the Eye.

No matter how handsomely bound, or prettily ruled the pages of the account books—no matter how bright and new his pens and blotters, or how polished the cash register—these alone won't make a business successful.

They are the most efficient means by which to attain an end.

## The Advantages of System

No matter, on the other hand, how clever the merchant—if he has no books of account, or if he has incomplete accounting books and inefficient methods of handling them, he can't make the profits of the man who is his equal in merchandising ability and who had a thorough system, efficiently handled.

All businesses are "different"—because each one has an individuality—just as all horses are "different," but there are certain horse qualities common to all.

So all retail businesses are alike in the things which make them retailers and not manufacturers, or railroads or even wholesalers.

All accounting principles are the same—always; but the methods of applying them may vary.

You may have loose-leaf books or card-ledgers, but your debit and credit will be the same; you may use a cash register, but you'll have to have a double entry set of books, or your credit won't be as good as the credit of the man who does have such a set of books.

### Assets

Delivery Equipment  
Furniture and Fixtures  
Inventory of Stock (By Depts.)  
Freight on Purchases (By Depts.)  
Customers Ledger Controlling Account  
(Individual accounts may be kept in the same binder with the general ledger, but should be grouped by themselves)

### Chart of Accounts

(Showing the records it is necessary to keep in where a business is headed for and where the profits come from.)

The other day a retailer who had been doing a fair business, said: "My business has been increasing right along year after year, and very much more than expenses have increased. So, it seems to me, that I ought to be making quite a little more money than I am."

He consulted an old business friend about it.

They looked over his books, which had been carefully kept by a young man who had "picked up bookkeeping."

It soon appeared that the retailer's books were not

kept so he could show how the gross profits of any month compared with any other month. The books could not show for any particular period whether expenses had increased out of proportion to other things.

#### What the Expert Found Out

Then his friend's expert bookkeeper was put to work—and he soon found that a trusted employee had been stealing the profits.

The ineffective accounting method couldn't show that fact—therefore the Boss's Eye could not see it.

It is not the purpose of this little article to show a retailer how to install a system of accounts. He should

—THAT THE BOSS MAY KEEP HIS EYE ON THE RESULTS OF HIS BUSINESS—

have that done for him by a man who studies his business and its requirements. It is our purpose to show him why he should have all the facts.

Elsewhere is a list of accounts which a retailer who rents his store, makes his own deliveries and has, or has not, a perpetual detailed inventory, must have, to intelligently manage his business.

This list is offered merely to show the kinds of information which a retailer must have to be safe.

Remember there are three things you must answer:

1—Where is your cash and how much have you?

2—How much do you owe?

3—Where's the stock you bought, how much have you sold, and how much have you on your shelves?

If you have a system of accounts that tell you these things, you have:

1—Protected yourself in knowing what you are doing and by knowing the value of your activity.

2—Protected your family—your wife and children—so when you are called away, your administrator or executor won't have to report that "he left his estate in a badly tangled condition." Neither will they lose through most of what you leave being eaten up in the process of untangling of your affairs.

3—Protected yourself against fire loss, because without a system of accounts, you would probably be unable to prove more than 60 or 70 per cent of your loss.

4—Given yourself a chance to use all the credit you are entitled to at the bank, by having an accounting system that shows what you are doing, and that you know what you are doing.

#### Don't Fool With Makeshifts

Now, get started right in this matter of an accounting system.

Don't fool with make-shift systems—short-cut ideas that cut the essential facts out of the statements you get.

A great manufacturer of accounting systems largely used by retailers wrote the other day:

"I have from my experience come to know that the rank and file of small retail merchants care little or nothing

about system in their business and this accounts for the large proportion of failures. Even after we succeed in installing one of our systems very few of them will use it correctly: therefore, their success with it is limited. They merely want a system or device that will relieve them of the book-keeping, yet they are not willing to do the little extra work necessary to compile the comparative statements of their business which would enable them to more intelligently determine just what progress they are making."

Get the facts. Hire a bookkeeper who knows how to help you. Get started right. Then have an expert come in once in a while (say every three months) and check up your work—just to keep you on the right track.

#### The Two Vital Spots

Then keep your Eye on the Expense and Income accounts.

When the former jumps, dig into it and find out why.

When the latter decreases, dig again and find the reason; when it increases, find out what produces the effect, and push that good thing for all you are worth.

Keep your Eye on the facts of the business. It can't see too many, and you can't know too much about what those facts really mean.

That is why the big business has an accounting system; and why no permanently successful business, big or little, has ever gotten along without an adequate bookkeeping system.

No business man has ever been a failure because he had a bookkeeping system. No business man has ever been successful because he didn't have one.

A chapter from "A Better Day's Profits," copyrighted by the Burroughs' Adding Machine Co.

## Rubber Selling Opens Up Well

The rubber selling season started on March 10th and all the companies now have their representatives on the road. Good business is being booked, and the recent snowfalls helped along the sorting trade considerably. Retailers are being urged to place their sorting orders as early as possible. While the advance in prices over last season is very small, there is every indication that the lists will be revised about the first of May. The advance on all the lines considered averages only 1.6 per cent., the increase being principally on leather top goods, on which there have been raises from ten cents per pair for the seven inch leg up. This has been rendered necessary owing to the soaring figure for leather. On jersey goods and on certain juvenile lines there has also been some advance, but in the main quotations are about the same as last year. There are no changes in discount terms or other selling conditions from 1912. It is urged by all the companies that all retailers place orders for next season early as they have everything to gain by such a course and nothing to lose.

#### FULL OF GOOD POINTERS

I find the "Shoe and Leather Journal" is a good paper and I get many valuable suggestions from its columns. Any shoe merchant who is not a subscriber, does not know what he is missing.

Wishing you every success,

Sincerely yours,

B. D. MENZIES.

Sudbury, Ont., Feb. 14th, 1913.

# When a House Fails to Back Up Its Travelers

Men On the Road Know the Situation and Bear the Brunt—With Two Forces Pulling in Opposite Directions Things Become Disrupted—Why One Man "Chucked" His Job and Got Back Into the Retail Ranks

To the Editor of the SHOE AND LEATHER JOURNAL.

Sir.—Retail clerks and employers seem to have been having a "little set-to" recently in your paper, with reference to the way they are used or abused. I see that representatives of each class have been hurling back and forth certain charges of short comings and misdemeanors. Now, there is a lot of deficiency on both sides of the fence. None of us are perfect, except the Ontario shoe manufacturer that I traveled for until last November. He had not a single fault, in his own estimation. He engaged me three years ago on commission, and painted everything in a roseate color. The harder I worked, the more I was to receive, and, of course, it is a very natural feeling, that when one shares in the profits, he does not object to taking his share of the burdens or shouldering added responsibilities. Well, I stood it all as long as I could, and then I pitched the job, as I told you a few months ago. I am now back in the retail ranks, having charge of the men's department in one of the larger stores in this city. Of course, a large number of readers would like to know who I am, but it is not necessary to disclose my identity, and a great many of your subscribers will be able to spot the shoe maker to whom I refer.

I was to be given the usual five per cent. for selling, out of which I had to pay my expenses. Now, my territory was virtually all of Quebec province, and a few towns in Eastern Ontario. In the first place I had not been long on the road before this man attempted to lay out my route, telling me what towns I should cover on such and such a week, and what merchants I should call on. I naturally followed his instructions for a while, not being as wise as I am to-day. I found that he was trying to steer me clear of certain places in which there were always good accounts for our firm and a fat order generally awaiting the traveler. He wanted me to do a lot of missionary work in a number of non-progressive places and to call upon small dealers who did not buy perhaps \$3,000 worth of footwear in a year. Of course, I could not make my revenue on this pioneer basis, but I endured it for a while in the hope that all would come out well.

## Turned Down Some Orders

Again I have often secured orders from new men, which would be turned down on my reaching the factory. I knew these men to be honest. I would be told that these chaps were no good, that we would never get pay for the shoes, or if we did, that the cost of collection and the smallness of the order did not pay for the getting out of the few dozen pairs.

Another thing that I have cause to complain of is, that the capacity of the factory was represented to me as so many hundred pairs a day, and I took orders actually for \$9,000 more of shoes than the plant could fill. We were stocked up for so many orders, that there were complaints of delayed deliveries all around, and some of my customers did not get their stock of spring shoes until away in June and even July. The natural result was that there were several cancellations, and on this I was allowed no commission. Then, on the business which we were unable to fill, I lost \$450, and I had been to a considerable expense in securing these bookings. Now there is only one way in which a traveler and a factory can get on well together, and that is by co-operation and harmony of interest, a mutual policy of give and take. When the credit man or the salesman pulls one way and the traveler the other, there is going to be some agitation all round.

I was speaking to another man who represents a Toronto house and he told me that he was well satisfied with his

firm, because they allowed him a good deal of latitude. He was held down strictly in the matter of prices and terms. These he could not alter under any circumstances, but in respect of having certain lines made upon certain lasts, of changing the tops, tips, heels and foxing, when the goods were to be shipped, how routed, etc., he was able to confer little favors upon his clients. With me it was vastly different I had to go along as best I could in the dark, and if I attempted to grant any little concession to make a good friend for the company, I was called down by the head of the house.

Some of our men's and women's welts were not trimmed as well as they might be, and the finish bore marks of being hasty and superficial. I told the manager that several customers were complaining and threatened to make returns, but he said that Mr. So-and-So was nothing but a d— crank and did not know a good shoe when he saw it. Then when I brought up the name of another man in Sherbrooke, who also said that the appearance of our goods was not as smooth as it was a few years ago, I was met with the retort that I appeared to be looking around for grievances

## A Progressive Young Official

One of the prime movers in the organization of the Berlin Trunk & Bag Co., of which he is secretary, is H. D. Huber, of Berlin. He is a young man of excellent business training and progressive ideals. He began his career with The Berlin Rubber Mfg. Co. in 1901. It was there he first

H. D. HUBER, BERLIN, ONT.

became acquainted with the shoe trade throughout Canada in his capacity as accountant for the company. He remained with the concern for seven years and was then transferred to the Merchants Rubber Co. In the spring of 1908 Mr. Huber left to take a position with the Star Whitewear Co., which post he still retains, along with his duties at the Berlin Trunk & Bag Co. He has many friends in his native town who are pleased to learn of his success.

against the house rather than trying to defend it and uphold its interests.

### House Should Back Him Up

To my mind, a traveler is virtually the firm, outside of its manufacturing location. By this I mean, he is a movable part of the organization and should be endowed with sufficient power to act in its behalf as his judgment dictates, and the house should have the necessary confidence in him to permit him to carry out what he says, and stand back of him in all his promises. It makes a fellow feel like a Canadian nickel to tell a customer that his goods will be on hand at such and such a time or shipped by such and such a route, etc., or certain specifications followed, and then find out that none of these pledges are kept. It also makes the purchaser feel sore. The traveler has to bear practically the brunt of all these kicks, the house conducting any correspondence or negotiations at a long distance range. If it cannot amicably arrange matters, then the complaint is handed to the salesman with the request that he go down and "fix things up" with Mr. Jones or Mr. Brown. He generally has to obey instructions and do a monumental amount of lying, for which he gets no thanks, and, like the ordinary peacemaker, but little reward.

One year I sold \$73,000 dollars worth of shoes. I expected that this would be a good fat season for me, I had managed to keep my expenses down and so arrange my trips that I was banking on a good income. Well, with cancellations, delayed deliveries, errors on the part of the factory, and returns from customers, this amount was cut down to \$53,000 for twelve months' work. Thus you see, one can never tell where he is at. He may be all right and his goods may be all right, and his customers all right, but the facilities at the factory, the temper of the manager, the process of operation and the daily output may be altogether wrong. I know that manufacturers have a great deal to put up with, broken machines, labor trouble, scarcity of help, the costly character of leather, the constant changing of lasts and other causes, but a traveler has equally as many burdens to bear.

### What Selling Goods Means

After all, I contend that the man who sells the goods is the one to whom the largest amount of credit should be given. It is easy enough to produce an article, or in other words, manufacture it, but what earthly good would all the production in this hemisphere be if no sales were effected? It would simply be an accumulation of junk that would fill the warehouses of the whole inhabited globe. I plead, therefore, for a little more liberty, a little more appreciation and a little more co-operation on the part of the proprietors with their travelers. We are the men who are in the forefront. We do the fighting and carry on the warfare. We dig the trenches, throw up the breast works, build the fortifications and equip the battlements. I have actually grown eloquent on my own behalf. Let me tell you sir, that the next time that I link up with a house, I will find out what its capacity is and its ability to implement all promises before I start out. Some factories have an output of about six or seven hundred pairs of shoes a day, and represent their figures as twice this amount. It is well for the traveler to know just where he is at. I have known other houses to have exceptionally costly goods and wonder why they were not doing the business, when they were being undersold by other firms who offered shapely styles, quality and build at a less figure. Then they find fault with their men because their sales were not as large as on the previous year. The result has been that instead of having a friendly conference on the matter and adjusting little points of dispute, several of these travelers have gone with other concerns.

There is many and many a man who will suffer in silence and let on that he is getting along all right, but some

day when he gets a thorough distaste of the place, he will unbosom himself. Then you will know that his apparently pleased smile has been but a mask and that, deep down, there has been smouldering the embers of rancor and dissatisfaction. Some men have the characteristics of a Sphynx; they simulate good nature and contentment.

I am not one of this kind, and this is the reason that I have written this letter, partly to get rid of a "grouch" and partly that my words may have the effect of opening the eyes of certain producers, that they may "see themselves as others see them."

Montreal, Feb. 19th, 1910.

Sincerely, "GRIP."

## A Mammoth Findings House

One of the latest and most modern buildings erected on this continent is the new home of the House of Krieg, 151-153-155 West 30th St., New York, in which the firm moved recently. The company are expanding considerably since they have secured the increased facilities for handling business from all parts of United States and Canada, and they are going right after Canadian orders. The concern,

which is one of the best known in the shoe business in the United States carries an immense line of findings including a great many specialties which are either very useful in the shoe store or quite salable to patrons of the shoeman.

## On the Road

### BLESSED IS HE WHO CAN SMILE, SMILE, SMILE

"Talk about your rough treatment," said a traveler for a well known rubber manufacturing company. "I certainly have had it handed to me some months ago in a Northern Ontario town. I was making my first call on a probable customer and knew nothing personally about the man, although told he was 'a chump.' I walked into a large store in a village which shall be nameless, and the manager had a small office at the rear. He saw me enter, and evidently thinking that I was a traveler, closed the door. Now the door had a frosted glass, and I walked to the rear of the shop—knocked gently—no response. Knocked again a little louder, and still no answering echo, or the usual words, 'Come in.' The fellow did not even say 'Get out.' I came back to where one of the clerks was standing and asked him if he would mind taking my card to his boss—that I had seen him enter the office and shut the door.

"Oh, that is nothing," he said with a grin. "He does that when any of you fellows who have anything to sell come around. I guess he wants to get rid of you."

"Well, I said, 'Take in my card anyway.'

"So the youth obligingly went back to the office of the manager and presented the pasteboard. He returned in a minute and I asked him what the boss said.

"He says he cannot see you, that he is busy."

"What is he doing?" I asked.

"Not a d— thing," replied the clerk.

### And He Walked Right In

"I had got off at that town and determined that I was going to see this man, so I walked boldly back to the office, again knocked, and entered, threw my hat on one chair and sat down on another. He paid no attention to me whatever, but kept on writing. I guess I must have sat there fully fifteen minutes and he gave no heed to my presence. Then, as the place was a little warm, I got up and took off my overcoat. Still he did not look up. I sat there a few minutes longer and took out a cigar and lit it. Now that office was only a six by eight affair and the place was soon thick with smoke. It was almost impossible to breathe. Finally my man looked up.

"Who are you?" he said.

"I told him I represented the — Rubber Co.

"Well," he said, 'what do you want?'

"I replied, 'I have called on you to see if I could not interest you in some of our goods.'

"I have no time to talk business," he retorted. 'I do not want to see you.'

"Well, I want to see you," I rejoined. 'And here I am.'

"Well, you have nothing I want.'

"How do you know?" I asked.

"Well, I guess I know. Besides, I am very busy to-day."

"What at?" I inquired, noting meantime that his writing had been of a purely formal character.

"It is none of your business what at. I am busy and don't want to see you."

"Well, you have got to see me," I rejoined.

"To make a long story short, he finally gave me a very cold and listless hearing. I told him I would call again when coming through that town. No, this chap did not thaw out one bit. He was not quite so aggressive when we parted, and I said, 'I believe you are a local preacher.'

"Oh, yes," he said, and his face fairly sparkled. 'I occasionally do hold forth on a Sunday.'

"Well," I declared, 'if you do not accord your congregation better treatment than you do travelers, may Providence have mercy upon your hearers.'

"I still call on this fellow, but he is a tartar. I have learned, however, to know how to take him and he sometimes sends his order into the house. This is the formula I go through now.

"Do you want anything?" And he answers either 'no,' or 'yes,' and that is all the conversation we carry on."

### Almost Came to a Scrap

"But I had even rougher treatment in a town, not very many miles away. We were selling certain lines of rubber footwear about ten per cent. lower than our competitors. I wanted to make this a strong talking point with my man in order to secure a hearing. I did not get an order at that time, but when I was back a little later this fellow told me that I had been lying to him and he had found out that all our goods were not ten per cent. cheaper. I told him plainly that I had not said so, neither had I intended to convey that impression. I explained again that on certain lines we were that much less, but taking it as a whole, we were very little below others, if any. Well, a young lady, a relative of his, who happened to be in the office also, chipped in. She said: 'Yes, and you were over to T— and sold my father goods at what you said was your closest price. Then you went across the road and gave a competitor of my dad's five per cent. discount and to another man up the street, you gave a month's extra dating. If you call that a square deal why I don't. You are just playing a sharp game, that is all.'

"Are you quite sure that it was I, who was in T—?" I inquired.

"Yes, it was you all right, or a fellow who looked very much like you."

### Was Never on the Spot

"Well," I replied, 'I have never been in that town and therefore could not have sold these people that you

have spoken of, so I fear that your charge at once falls to the ground.'

"Her uncle then spokc. 'You are taking orders any way under false pretenses.'

"I beg your pardon, I am not,' I observed.

"Well, you are.'

"Well,' I said, 'I am not, and I want you to understand that everybody gets a square deal from me and my house.'

"What did you come here for?' he asked. 'Did you come here to do business?'

"I said, 'Yes, and no.'

"Well, you had better get out,' he replied.

### Would Go When He Was Ready

"I do not know about that,' I declared, for I was as big physically as he was, and I thought in a scrap I could hold my own. One word led on to another and I added that I would make for the door when I was good and ready. He told me to go at once. I said, 'No, I am not here to sell goods now, 'I am here as a buyer.'

"Oh, you cannot land me like that,' he said.

"Yes,' I answered, 'I want to buy something.'

"What do you want?' he inquired.

"I want five cents worth of gum.' He stepped around to the grocery department to get me the gum, and after he had got there and taken it out of a jar, I said, 'Oh thank you, never mind, I have changed my mind now. I guess I won't buy.'

"He came around to the front of the counter more furious than ever.

"Have you any uncles?'

"Yes, lots of them.'

"Any aunts?'

"Yes.'

"Well, bring them all around. It will take the whole caboose of you, the entire family connection, kith and kin to put me out of this store until I am ready to go.'

"Then I told this self same dyspeptic a few plain facts as I did not care whether I sold him or not, for we had a good account in his town. Before I got through with him I read him a lesson on politeness and consideration that will take him many a day to forget. Perhaps I was not altogether gentlemanly, but no man can virtually call me a liar without getting some of my estimate of him in return."

## In the Game of "Making Good"

BY J. R. WORDEN

In the game of making good there is a time limit.

When we were seventeen the future to us was a world unexplored, with time unlimited.

But at thirty-seven or forty-seven our perspective has changed.

We look into the future through wiser eyes and are startled—time has acquired boundary lines.

We look back at opportunities lost—at things done which we ought not to have done—at things left undone which we ought to have done—at long hours and well meant labor which proved profitless.

And it shows in our score.

We stand at the crest of the hill—the game is half over—to win we must capitalize the future with experience gathered from the past.

But we cannot afford to put off till to-morrow.

We cannot afford to miss even one opportunity.

There is a limit—a time limit—and every day, every hour, every minute is reducing just that much, our chance of rolling up a good score in the game of making good.

We can't afford to go through the year not knowing whether we are winning, playing even, or going behind.

A year is 365 precious days—8,760 hours—the best days and hours of our life—and we can't coax them back.

If we are losing we want to know to-day so that to-morrow we can "change the trump."

And next week we want to know how much we profited by the change.

If we investigate we find that a large percentage of all failures are due—not to lack of ambition, ability or hard work—but rather to each man's ignorance of the actual condition of his own particular business.

Further investigation convinces us that the great majority of small retailers are capable, hard working business men—working in the dark—waiting for the end of the year to find out if their score has gone up or down in the game of making good.

But we find the man who is making a "killing"—the man with the best score—is the man who labors less and thinks more—the man who systematizes—who installs a proper accounting system—the man who knows which clerk deserves a raise and which should be fired—who knows which lines should be discontinued and which pushed.

He is the man who knows this week what he made last week.

He is managing.

We have the same opportunity.

What he is doing we can do—we have the same ambition, ability, and energy.

But, we must be up and doing—we've reached the crest of the hill and—

In the game of making good.

There's a time limit.

## A Popular Young Shoeman

An Owen Sound boy, who is making his way to the front by means of the northern route is Wm. McDowall, who was born in 1892 in Owen Sound, where he received his education. He entered the employ of W. F. Gray & Co., of that town at thirteen years of age as parcel boy in the dry goods department. He had always had a great desire to become a shoe clerk. In a few months, so enthusiastic did he become, he was put in that department and was kept busy for some time hustling cartons to various parts of Owen Sound. He was soon given a position on the floor and was later made manager of the bootwear section. He left Owen Sound a little over a year ago to join the staff of the United Shoe Dealers and opened the North Bay branch in March, 1912. An enterprising business has been worked up under his direction. Mr. McDowall is fond of the northern country and speaks in glowing terms of the growth of North Bay. He is a young man who evidently has a bright future ahead of him, and, although only twenty-one years of age, has already won a desirable position as a manager.

### APPRECIATES A GOOD THING

"The Shoe and Leather Journal" is a great instructor to any one in the shoe business. I find it of great interest and read its pages regularly from cover to cover.

J. McGillivray.

Amherst, N.S., March 4th, 1913.

# Why You Should Hold a Spring Styles Shoe Show

It Possesses Many Advantages Over a Set Formal Opening—A Reminder of the Change of Seasons and an Educative Factor for the People—It Marks the Store Holding It as a Leader in its Line

By "OBSERVER"

## THE REASONS WHY

First, to advise the public that the new spring styles are on show; that you are ready for spring trade.

Second, to remind the public that it is time to change from winter footwear to spring shoes.

Third, to draw the public to the store.

Fourth, to show the public, as far as is practicable, as many styles and as great a variety of lines as possible.

Fifth, to disseminate the idea that your store is "it" in every particular, especially in the early showing of new styles.

Sixth, to create a good impression upon all who visit the style show.

Seventh, to have people visit the store who have never done so before.

Eighth,—but why go any further. If these are not sufficient reasons why you should have a style show, seventy times seven reasons will not move you.

Every shoe merchant who has any pretensions to being among the top-notchers in the business centres of his own town or city should have some kind of a spring opening or style show.

The early coming of Easter this year puts us in rather a predicament. In years when Easter is later we can have an Easter and spring opening combined. This year Easter comes so early that it is sure to be here before spring. We can have an Easter opening early enough to feature Easter styles, but in the localities where winter still lingers at that time of the year there is little likelihood of many sales. For that reason we would advise a style show this spring in place of a formal opening.

## Chance to Reveal Ingenuity

In advertising a style show the shoe dealer has an excellent chance to reveal his ingenuity. He will have an entirely new field to work leaving the hackneyed phases of the older spring opening to his lazier brother.

Preparations for a style show to be held late in March, or early in April should be well in hand. There is a lot to do to make the effort worth while and profitable. The advertising should be laid out; the style and extent of the interior and window trims and decorations must be decided upon; the particular styles to feature as "assured styles" must be selected. In fact, the whole establishment should be carefully gone over to make as good a showing as possible. A few new cartons, some new labels and a little paste will work wonders in the appearance of the stock. All painting and decorating should be over with. Everything should be made spick and span.

## How to Advertise It

In advertising a style show we would advise the purchase of suitable illustrations for the newspaper advertisements. Have these of generous size, say, on two occasions use extra large spaces, and on two others use double your ordinary space. This increase applies to localities where there are dailies. When there are only weekly papers the issue

of the week before should be used for the announcement and at least a half page should be employed.

We do not think it is necessary to confine the advertisements of the style show to mere announcements and invitations to be present. We believe it is good business policy to show, by picture and by word descriptions, some of the newer spring styles. These, of course, should be selected from the novelties in stock and should be new.

## Mail Neatly Printed Booklet

There should be a neatly printed booklet showing spring and summer lines. These should be mailed so as to reach the head of every household. Some of them may be reserved for distribution at the style show, or they may be used then and the mailing done after. If the style show is held early we advise the later course; if late, we think the former course more advisable.

This booklet may be as simple, or as elaborate, as the purse will stand. A simple booklet may be made effective by tasty arrangement of the pages and good printing. But every dollar put into this booklet should bring in many dollars in profits and every extra dollar expended will mean that much greater business. Shoe merchants do not realize the value of a well written booklet properly distributed. It is a winner.

The advertisements may all be written out and arranged in advance. It is better if they are. In the hurry and bustle of the final arrangements the merchant will not be hampered by having this to do, and the advertisements are not so apt to show the earmarks of haste that might creep in where they are hurriedly prepared.

## The Drawing Power of Flowers

The decorations come next. Flowers and plants and foliage should, of course, predominate in the decorations. These can be secured, in most cases, from the local florist. Artificial flowers and foliage may also be used. These latter should be in the background or distant from the view. The real thing should be in the foreground where people will come into immediate contact with them.

Bunting, felt, and other materials may also be used in decorating for a style show. If the store is very large and roomy and a booth may be set up, then these materials might be used for decorating or as an addition to the flowers. The colors used should be white and apple green, unless other tints are used to harmonize with hangings or fixtures.

White ribbon streamers and bows of generous size are very effective additional trimming to flowers and foliage for a spring display. Don't overdo it though.

Window cards should be used freely, but not to overshadow the goods. Each prominent style shown should be named in such a manner as to distinguish it from an ordinary style.

The windows may be put in a day or two before the date set for the actual opening.

## Spread It Out a Little

Some merchants favor a very formal opening for a day, or a half day, and make no sales at that time. This usually draws immense crowds who pass along, view the styles and more particularly the decorations, and depart. If the opening is spread over several days it is all more leisurely taken in and sales are made. The clerks have more time to devote to each visitor and may the more effectively talk to

each one. This is the better plan for most shoe merchants to adopt.

Whether or not a merchant will give souvenirs must be settled by himself. It is an expensive practice at best, but it has the sanction of some of the best retailers in the United States as well as in Canada.

If the souvenir is some article of use that will be preserved and frequently referred to or used, it may prove an excellent advertisement. If it is some trifle that is soon thrown away it is an expense incurred for nothing.

#### A Souvenir That Is a Winner

If a shoe dealer wishes to boost his findings trade he can do so in connection with the style show and at the same time pass out a souvenir that will be a trade winner. Let him secure the very best grade of rifle lace he can in 4-4 and 6-4 lengths. Let him have printed a leaflet showing the different lines of laces, polishes, button-hooks, arch supports, etc., that he handles and folding this neatly put a sample pair of the laces inside and put all in a good stout envelope. This will prove a souvenir worth while and will result in boosting the findings department.

Samples of foot powders, corn plasters, and even polishes, etc., may be secured for distribution and inserted with the circular and laces. A hint to the wise is sufficient.

The goods placed on show should be selected for their perfection in style and workmanship. It is not necessary to show large quantities, but the quality should be of the highest. Every shoe should be shown on a form or shoe tree so that there are no unsightly lines or wrinkles to detract from the general appearance.

By all means have style show and show the people of your locality that you are alive and ready for business.

### Historic House Holds Re-union

What has come to be an annual feature, looked forward to with pleasant anticipations by the various members of the different staffs, is the banquet tendered by the well known firm of Waterbury & Rising, of St. John, N.B., to its employes. These annual staff gatherings give pleasure to all alike, from the president down to the office boy, and a general invitation is extended to all departments, and to the members in the different branches, in all about fifty being in attendance. The banquet was held recently two days after the annual business meeting of the firm, at which reports were presented showing that the last year had been a most successful one. The president, E. L. Rising, occupied the chair and after the regular matters of routine interest were dealt with, officers were elected as follows: Edward L. Rising, president and general manager; William C. Rising, vice-president; Harold W. Rising, secretary-treasurer; Richard J. Walsh, C. H. Smyth, and P. M. Rising, board of directors.

It was a jolly crowd of merrymakers who sat about the festive board in Bond & Scott's restaurant in King street on the night of the banquet, and all present had a truly delightful time. E. L. Rising occupied the chair, while the vice-chair was taken by C. H. Smyth, manager of the Union street branch store, who, a month ago, celebrated the thirty-fourth anniversary of his connection with the firm.

The post-prandial exercises were begun after the desires of the "inner man" had been fully satisfied and cigars passed, with the toast to the King, honored in music. C. H. Smyth then proposed the toast to the "President and General Manager," to which Mr. Rising responded happily and fluently. The speaker dealt with the harmony and general good feeling prevailing amongst the members of the different staffs and the bonds of hearty co-operation which had existed at all times. He referred to the faithfulness of many trusted employes and feelingly offered some valuable advice to the younger men, assuring them that the goal of success was only to be achieved through patient industry, unfaltering energy, and rigid adherence to the virtues of

sobriety, honesty and faithfulness. He was proud to see this large gathering all stimulated with the desire to exert their best endeavors in the interest of the concern with which they were connected, and trusted that as their efforts proved availing the gatherings at these annual dinners would so increase as to necessitate the procuring of even larger quarters. In guiding the destinies of a rapidly growing business house, he felt proud to have associated with him men who had been trusted employes from youth, many of whom had grown grey in the service, and after paying to them a very graceful tribute of appreciation, he called upon James J. Gillies, a popular member of the traveling staff, and presented to him a valuable gold watch, chain and emblem in recognition of his twenty-five years of faithful service.

The recipient was greatly surprised, but made a pleasing speech expressing his gratitude. The present which he received was a handsome one. On the inside cover of the watch was inscribed: "Presented to James J. Gillies by Waterbury & Rising, Limited, in recognition of twenty-five years' service. February 27th, 1913, St. John, N.B."

Cheerful speeches were given by C. H. Smyth, H. W. Rising, Arthur Stillwell, J. C. Featherstone and Percy M. Rising. Amongst those taking part in the programme were E. C. Girvan, vocal solo; Ronald Edwards, flute solo; Willie O'Connor, recitation; Miss Jean Walsh, reading; Miss Gladys Fowler and Miss Nellie Short, vocal solos, and Richard Ingleton, mandolin solo.

### Will Look After Western Ground

W. G. Fallen, who will represent Getty and Scott, of Galt, in British Columbia and Alberta this season, has been with the firm for some twelve years and formerly looked after Western Ontario. He is one of the most successful salesmen on the road to-day and his business has increased rapidly from year to year. Previous to traveling he had a thorough factory training and it is confidently expected that he will make a record mark in the West. Mr. Fallen is an

ardent shoe man and also an enthusiastic supporter of all kinds of sports, being one of the warmest backers of the Getty & Scott baseball team. He is also a distance swimmer of note and has won several medals. When not on the road in the summer he can generally be found during his leisure hours on the green of the Galt Bowling Club. He possesses a genial and energetic disposition. Percy Waugh, an experienced young shoe man who has had several years insight into the retail line in Brantford and Hamilton, succeeds Mr. Fallen in looking after Western Ontario for Getty and Scott.

## Fancy and Plain Cloth Tops Coming to Front

(Continued from page 32)

here. Shoe styles are similar to those shown by the milliners, dressmakers, etc., viz., having to catch the public fancy to sell. All that any discussion such as this can do is to give the retailer some hints, that his own knowledge of trade conditions and his common sense can use to ad-

TAN BLUCHER, 3/8-HEEL, PLAIN SINGLE STITCH ALONG EYELET ROW AND ON QUARTERS—BY COOK-FITZGERALD CO.

vantage. If he does not study his own local conditions very carefully and draw upon his past experience for help and guidance, he will likely have quite a few shelf-warmers when he starts to take stock at the end of the season. It is well to remember in all buying that new and novel styles always bulk large and force themselves upon the attention of the retail buyer to a greater degree than their real value warrants. Therefore, it is best not to lose sight of the "old reliable" tried and true lines when buying fall goods.

A general summing up indicates all lines of Canadian manufactures for the fall season as showing dignity and distinction, combined with more quality and style than at any previous period in the development of Canadian shoemaking. The models are calculated to meet the tastes of the most fastidious. Expert designing and workmanship are recognized, avoiding flashiness and ostentation on the one hand and on the other being correct and faultless from the viewpoint of snap, appearance and materials. Below, some showings of Canadian manufacturers are given.

### What is Offered the Trade

The Slater Shoe Co., of Montreal, are presenting a fine line of heavy goods for miners, prospectors, etc., also a complete line of waterproof boots with viscolized soles for fall and winter wear. A great many new lines are in evidence for city wear. One ladies' balmoral in particular, is expected by the Slater Co., to become very popular in the coming season. It is a Russia calf, whole fox with blind eyelets, low flat heel, broad shank and plain beaded tip stitched with two close rows of silk. This is a walking shoe, made for comfort and presents as neat and pretty appearance as is possible to be got. Another last which the Slater people expect big things of is one of their new men's boots, a French calf blucher with a matted calf top, blind eyelets, new style plain tip, no perforations, stitched two rows close silk on a new English last with a low broad heel and wide shank. Here are given a few things of

what Slater Shoe Co. think will be popular the coming fall. Among the many lines are: A slightly raised London toe for the conservative gentleman who likes a straight last which has a slightly raised effect to do away with the old low London toe. Marathon: a great wide toe on a medium raised receding line for the gentlemen of Canada who require large full fitting shoes; Bantam: medium high toe effect, Dignity: a smart medium raised toe for the young men who require a snappy shoe. Bulldog: a medium raised with a slight outside swing. Critic: a shoe for the young man which has snappy and high and full fitting qualities and others. On women's lasts they are showing 201, medium high raised toe, slightly pointed; No. 200, medium high raised toe on the wide effect; No. 204, low receding toe, broad heel and broad shank specially fitted for a walking shoe. This style is making a great hit in New York and Boston and Chicago, and should suit the most fastidious Canadian customers. They are showing these lasts in all leathers and a great variety of fabric tops and suit effects.

### Some Fine Showings for Men

The Cook-Fitzgerald Co., Limited, of London, are showing a remarkably handsome range of samples for fall. The shoemaking and style quality of this establishment have always been noteworthy but for the coming season they have surpassed all previous efforts. The range of 110 lines is so complete that the taste and requirements of the most discriminating patron may be satisfied. For those who maintain that the day of the high toe has passed there are shoes made over lasts of the receding type, while, for the conservative element, there are samples of moderate style, which still possess ginger and attractiveness. There are also medium high toes and high toes for the many who declare that the doggy example of shoemaking still possesses charms, especially for the young man, while for the man who knows what he wants and must have the same year after year, there are broad, foot-easy types that spell comfort. Among the latter type must be classed the "C-F Archease" a shoe designed to relieve fallen or broken arches. This shoe is a boon to those who are tortured by this trouble. It is built on scientific principles, over lasts which conform to the lines

MEN'S PATENT LEATHER BLUCHER, FANCY PERFORATIONS ON TIP AND FOXING, MILITARY HEEL—BY AMES-HOLDEN-MCCREADY

of the naked foot accurately. The shoe is very flexible and is made with a narrow shank, the material at the waist hugging closely and gripping the arch, affording instant relief. It is a revelation to those who have worn steel plates and other supporters, to find such comfort without the use of artificial appliances. The line also embraces another shoe with a long counter and orthopedic heel, designed for the

same purpose. Superintendent Lovell has put many pretty touches in the line, that convey a distinctive quality. There is a new pull strap, aptly named "Nupul" by Vice-President John V. Flanagan. It is a short leather strap with a small knob at the end and affording a good hold for the thumb and forefinger. There are some smart tan and patent leather shoes with fancy leather and cloth tops. In the heavier doubled soles there is a "double decker" in tan that is massive yet conveys a certain air of nattiness that well dressed men term "clas." Many heavy lines have a harness stitch on the vamp, while a number have a handsome crush stitch effect on the sole. A neat and striking waterproofed shoe is shown with a cork sole. The shoe is welted twice, once with cork by hand. There are several lines of tan and black shoes with rubber soles and heels, and some samples have full linings of felt that make a luxurious shoe, when combined with vici or kangaroo. Pumps are shown in both leather and cloth, the latter being a decidedly unique departure in men's footwear. The pumps are made on lasts that ensure a snug ankle fit and they are attractive in the extreme. Among the many new lasts are four. One of them, known as the "Stampede," is a cross between the "Roundup" and the "Itsit." The "University" is another that will win many friends.

#### Favor Moderately High Toe

The John Ritchie Co., of Quebec, believe that the prevailing style and last for the coming autumn season will be the moderately high toe in both men's and women's with a limited quantity of lower and receding toe. They report that button boots are growing steadily in demand, particularly among the ladies. The firm look forward to an increased call in dongolas and kids, although calf in gun metal, velours and tans will hold its own. The Ritchie Co. report that patents are coming back and will be a strong feature for the coming season. White and colored buck will be in large requisition for the summer, and owing to the high price of

MEN'S GUN METAL BLUCHER, HIGH TOE, 10-8 HEEL, STRAIGHT FOXING—EAGLE SHOE CO.

all leathers, cloth tops, plain and fancy, are likely to gain a considerable measure of favor with the trade in both men's and women's.

The Brandon Shoe Co., of Brantford, have completed as fine and comprehensive a line of men's fine Goodyear welts as they have ever turned out. In fact, it is considered to be the most attractive range the firm have ever shown and on the most up-to-date lasts. Their travelers are now on the road, and it is expected that Brandon and Monarch lines

will be booked to a greater extent than previous seasons. Several new lasts have been added. One particularly striking shoe is the men's gun metal blucher, with blind eyelets all the way up, receding toe, plain whole quarter and deep, plain stitched tip. Several other attractive models in tan and gunmetal are shown on plain English lasts. Some samples in button boots for men with five, six and seven buttons, and dark or light cloth tops, receding toe and low heel are decidedly snappy and fetching. A number of bals in gunmetal, tan and patent are also presented along with heavier waterproof lines with full double, viscolized or rubber

MEN'S TAN CALF BAL, BROAD HEEL, RECEDING TOE—BY E. T. WRIGHT & CO.

soles in storm and winter calf. The line is right up to the minute, and one that reflects credit upon the trade. The new factory of the Brandon firm is being operated to capacity.

#### Growing Favor of Patents

The Murray Shoe Co., of London, state that their fall samples are more conservative of style than in the past as they feel that the tendency with the trade is for a more quiet, genteel design. Their new samples show five of the latest lasts in Brockton and New York. Two of these are models in the very latest city English effect being adopted by the most exclusive shoe manufacturers across the line. Two others represent a medium high toe with a low heel for the young men's trade. These are exceptionally attractive. The company are also showing something entirely new in a last especially designed for winter shoes, where heavy leather and soles are desired. The Murray Shoe Co. think that for next season the demand will be very strong for gun metal and velour. Tan calf will still be in favor, but they look rather to a decline in that line, and for a considerable increase in patent leather and vici kid. The straight lace boot they are certain will have considerable interest for the trade, and while in some sections, and in some trade, the moderately high toe will still be briskly in demand, they cannot but feel that the quieter last and the English effect will be purchased in considerable quantities in all of the large cities.

#### The Narrow Pointed Toe for Women

The Minister Myles Shoe Co., of Toronto, are showing a representative and comprehensive range for fall. In the men's, four new lasts have been secured. The "Army," as its name implies, is a walking shoe, and is the last which is used by United States soldiers, typifying comfort and ease rather than any fashionable effect. This shoe has a full round toe with fairly flat tread, low square heel and viscolized sole. It comes in gun metal, tan and box calf. The "Navy" last is somewhat similar and has a wide and high toe with a

10-8 heel. Then there is the English last and City last, both with the receding toe, low square heel, wide shank and a flat tread. They are provided with the "dicky" back strap which is replacing the usual pull strap, and the pyramid stay with the loop. A number of bals are shown and in the high priced line the receding toe is again prominent. A range of men's button boots is also displayed, some with cloth tops, and it is expected that this line of shoes will be popular for a large number of men this fall. There are besides the heavy lines in winter and storm calf. The new ferro tan is very popular, the leather being washable and stainless.

In women's, buttons and bals are particularly represented, although there is a fair quantum of bluchers. Fancy cloth tops in such materials as cravenette, whip cord, etc., are shown as well as some button lines with white buck and champagne tops, the latter having patent vamps. One uniquely attractive model is a woman's English walking boot with low heel, broad shank and straight lines. Another new last for the highest class trade consists of a receding toe that is rather narrow, and in fact, quite pointed. This style is the one raging on Fifth Avenue and other fashionable thoroughfares in New York. The models on this last come in pretty nearly all leathers, and the heel is medium height, being from 12-8 or 14-8. This boot reveals a distinctly smart and dressy appearance. In the better line of women's buttons will still be the strongest, while bals are coming pronouncedly to the front. In pumps a number of lines are shown in gun metal, tan, and patent. The flat bow of silk or leather is being more prominently displayed than steel buckles, and in button boots those of twelve, fourteen and sixteen inches are the favorite, the height of the top being from six to eight inches.

#### Some Finished Shoemaking

The Hartt Boot and Shoe Co., of Fredericton, N. B., are in the vanguard with a representative and decidedly select line in men's fine welts. The showing is unusually strong, and for the coming fall gun metals and tans are being featured. The firm believe that these two leathers will prove to be in the future as they have been in the past season or two, by far the largest sellers, although it is predicted by some that patents will be stronger than they have been for the last year or two. They are of the opinion that medium high toe lasts will have the largest call, carrying slightly lower heels than formerly. There will be among the high class trade

for gentlemen an active requisition for the receding toe, on lasts that have a wide shank and carry wide broad heels, in some cases with flange effect. The line of fall samples represents about 25% in tans, while buttons, some with cloth tops, and carrying five, six and seven buttons, on both recede and semi high toe lasts, are bright features of the display. One decided novelty is a cushion sole, covered throughout and welted so that it cannot wrinkle in any way. This is being featured in certain lines. Another strong characteristic of the lines are shoes with rubber soles, and also others in French wax calf with plain quarters and receding toe and low heel. The Hartt Co. also make a line of felt sole shoes for the West. Their quota of sporting boots in viscolized calf, cresco calf and black winter calf, with legs 16 to 18 inches in height, are exceptionally well represented. These boots have all the style and finish of the finest shoe, and one particular black winter calf has chrome tanned upper and sole leather and is remarkably light. The Hartt line this season evidences the acme of smooth, finished shoemaking. During the past year seven new lasts have been added.

#### Presenting Medium High Toes

The Rena Footwear Co., of Montreal, are showing a number of new lasts in McKays and have a particularly natty shoe in their women's dull calf blucher, with a medium high toe, Cuban heel, and perforated foxing. They are also displaying a men's medium high toe last with a low heel and narrow shank for medium class trade. This firm have only been operating for something like a year and a half, yet the attention they give to their new styles shows that they are up-to-date in every way. They have a fairly large factory, yet even now they are cramped for space and will be forced to move into larger premises within the next year or so if their business continues to grow as it has during the past year.

Dupont & Frere, Montreal, are showing a number of lines embodying nice effects. They think the high toe will still be in demand for fall and winter. The firm are also showing a medium high toe which has a great call, and finds general favor with the trade. They state that help is scarce, and think they will be kept busy right up to the fall season. They will, however, due to the extension added to their factory since last year, be able to handle their fall orders much more expeditiously.

The Eagle Shoe Co., of Montreal, are showing a select

WOMEN'S VELOUR CALF BUTTON CUBAN HEEL, PUP LAST—BY RELINDO SHOE COMPANY

MEN'S GUN METAL BLUCHER, MEDIUM HIGH TOE, PLAIN QUARTERS—BY RENA FOOTWEAR COMPANY

WOMEN'S PATENT BUTTON MAT TOP, CUBAN HEEL—BY RELINDO SHOE COMPANY

new line of shoes for fall and winter wear. This firm has four new lasts in men's and three in women's shoes, which they think will please their customers more than anything they have yet shown. They are sending out a classy men's English medium receding toe bal, French edge trimmed and invisible eyelets with a wide shank and low one-half inch flange heel. This shoe is for high class trade only. Another of their creations is a men's medium high toe with a narrow shank and one and one-half inch Cuban heel, plain effects (no perforation) for medium and high-class trade. They are showing lasts running from the medium recede toe, to the modified high which will be as popular as ever with their trade, and which, used in combination with several shades of cloth uppers, will make it one of the strongest lines shown on the Canadian market.

#### Featuring the Cushion Heel

The range of fall samples by the Relindo Shoe Co., of Toronto, embraces an up-to-date selection in all kinds of feminine footwear. Buttons are strongly represented in tan, gun metal and patent, many with neat cloth tops. The medium high toe and lower heels are favorites in the models shown. Bals. are displayed in a number of pleasing patterns in both welts and McKays with graceful lines and artistic finish. The cushion heel is a feature in a number of the offerings and is taking well with the trade. In buttons the fourteen button line is mostly seen. The range is characterized by simplicity of design, conservative ideals and good fitting qualities. The company believe that cloth tops will prove a winner and that patents are returning to their pristine popularity. Travelers are now out with samples.

#### Believe Dongola Will Increase

J. A. & M. Cote, St. Hyacinthe, report that they are not manufacturers of shoes of style so much as they are for comfort and quality in solid leather goods, mostly for the working classes. They are making these goods in standard screw, McKay sewn, pegged and Goodyear welt, especially in the high lace shoes for miners, prospectors, surveyors, etc. They do not cut any color leather except in high cut sporting bluchers from eight to fifteen inches in altitude, and the demand for these goods is about divided between black and tan and chocolate. The Cote firm find that the demand for button boots is increasing in all lines, and they intend to make a full line of these for next spring's trade in box calf, gun metal and dongola. They believe that the demand for dongola is increasing all the time, and will make a great variety of samples in this leather for next season's trade. They are changing lasts every season, and more especially in the finer lines, although do not claim to specialize on fine goods. They believe that next season's trade will rather be for heavy goods so far as they are concerned, and that the Yamaska brand, which means quality in heavy staple footwear, will be to the forefront.

#### Going Strong on Welts

C. B. Dayfoot & Co., of Georgetown are giving prominence in their fall samples to the Goodyear welt line. Their trade in these lines was double that of the previous one, and shows every evidence of further increase. The company are giving special prominence to their high cut sporting boots which are used by sportsmen, prospectors or hunters, or any class of people who require a high cut class of shoe that will resist water and stand hard service. In this class of footwear the finest line of samples ever displayed has been turned out. Some new lasts and patterns have been added in order that the firm may cater in the lighter lines to the town and city trade.

Be on the lookout all the time for information about the business, and to nail a fact just as a sensible man nails a mosquito—the first time.

## Will Be Made Branch Manager

A new branch will be opened in London by the Kaufman Rubber Co., of Berlin. It is expected that the warehouse will be ready in September next where a complete stock will be carried, enabling the firm to give all sorting orders prompt and efficient attention. The manager of the London branch will be S. G. Amero, who is now representing the company in western Ontario and has proved himself a capable salesman. Mr. Amero is well qualified for the duties of his new position and, previous to going on the road for the Kaufman Co., was for ten years with the United Shoe Machinery Co. at their home office in the United States and also in Montreal and Toronto. Mr. Amcro is familiar with the whole process of footwear manufacture and, judging by his past experience, the right man has been selected to look after the London warehouse. Mr. Amero is a young man of energy, application and pleasant address, and his many friends in the trade will be pleased to hear of his promotion.

## May Start New Shoe Factory

It is learned on good authority that a new shoe company may in the near future begin the manufacture of footwear in Brampton. A large portion of the stock has already been subscribed and a charter is being obtained. The capital stock will be \$200,000. Among the incorporators of the new concern are W. G. Downing, a widely known western shoeman of Brandon. Gideon Knechtel, a traveler of several years' experience and a brother of A. Knechtel, shoe retailer of Stratford, and Mr. McFarlane of St. Catharines. It

G. KNECHTEL

W. G. DOWNING

is probable that the building will be erected in Brampton, but in the meantime the old tannery on Queen Street will be employed. It is understood that a distributing office will be opened in Brandon, under the direction of Mr. Downing, who has for years been in the business in that city. The lines made will be men's heavy goods and special attention will be paid to the needs of the West. Several places in western Ontario are after the proposed industry, among them being St. Thomas and London, but Brampton, according to the latest advices, seems to have the call.

## Will Clean White Shoes Instantly

Frank Mercer, 215 Davenport road, Toronto, has been appointed Canadian selling agent for Nu Bucko for cleaning buck and canvas footwear. No matter how soiled the white shoe becomes it can be effectively cleaned in a second or two with this preparation, which is easily applied. It does not mat the leather like some liquid preparations but raises the nap and quickly obliterates all dirt or stains. It is supplied in white, brown, grey or imperial shades and is commanding a wide measure of favor among the retail trade, who have welcomed Nu Bucko as a most satisfactory cleaner. Mr. Mercer reports large sales.

## SHOE NEWS IN PARAGRAPH

O. Paquin, shoe dealer, of St. John, N.B., passed away recently.

W. M. Carroll has opened a boot and shoe shop in Kentville, N.S.

The assets of Ben Slater, shoe retailer of Montreal, have been sold.

G. J. Galarneau, shoe dealer, of London, has discontinued business.

M. E. Henry has opened a boot and shoe business in Wainwright, Alta.

J. A. Johnson, of J. A. Johnson Co., Brockville, was in Montreal recently.

A. W. Vermilyea, of the Belleville Shoe Co., was in Montreal recently.

C. S. Corson, of the Regal Shoe Co., Toronto, is able to be around again after a few days' illness from pneumonia.

Norman Leach has opened a new shoe store in the Marsh block, Smith's Falls. He has put in a well selected stock.

E. O. Weston, of F. J. Weston & Sons, Toronto, spent a few days recently on a buying trip to Montreal and Quebec.

W. G. Hardie is now traveling for the firm of Hardie & Moore, wholesale shoes, Toronto, and is covering Eastern Ontario.

The partnership of A. F. X. Beaudry & Fils, leather dealers of Montreal, has been dissolved. J. H. Beaudry continues.

L. E. Martin, of Belle Rivier, Que., was in Toronto during the past few days on business connected with the shoe trade.

Work will shortly begin on the new felt boot factory which will be erected in Tavistock, Ont.

M. R. Rennie, shoe dealer, of Hensall, Ont., was married recently in that town and many friends are extending congratulations.

The Toronto branch of the Boot and Shoe Workers' Union held a very successful entertainment recently in the Labor Temple.

J. B. Kinghorn and R. J. McAllister, of Geo. A. Slater, Limited, Montreal, were in Boston and other American shoe centres last week.

H. B. McGee, sales manager of the Minister, Myles Shoe Co., of Toronto, spent a few days in Montreal last week on business.

B. F. Potts, of Smithfield, Ont., has recently added a stock of shoes to his business and was in Toronto last week making purchases.

A. Langlois, shoe merchant, Montreal, is removing from his present stand at 641 Ontario street east to 685 Ontario street early in May.

Alfred Winn has joined the traveling staff of the Williams Shoe Co., of Brampton, and is covering Western Canada for the firm.

J. H. Hamilton, of J. B. Blouin, Limited, Levis, Que., was in Toronto this week on business and called upon several members of the trade.

F. Kibler, of Berlin, president of the Ontario Shoe Retailers' Association, was in Toronto during the past week calling upon the trade.

W. C. Myers, Western Canada representative for the Rideau Shoe Co., of Montreal, left Toronto last week with a full range of fall samples.

Mr. Pearse, of Montreal, general superintendent of the plants of the Canadian Consolidated Rubber Co., was in Toronto last week on business.

H. Megginson, shoe retailer, of Sault Ste. Marie, Ont., spent a few days in Toronto this month and called upon several members of the trade.

C. J. Fitzgerald, of the Cook-Fitzgerald Co., London, was in Toronto this week on his way home from a trip to New York and other shoe centres.

W. Foster, who some time ago opened a modern shoe store in Medicine Hat, is meeting with splendid success. He has recently installed several more new seats to accom-

modate his customers and has removed the wrapping counter to the rear of the repair department.

L. M. Stoek, Western representative of Walker, Parker & Co., Toronto, left this week for the Prairie Provinces with a fine line of samples for fall.

Jas. Lawther, who was formerly with a Toronto house, is now representing the Hartt Boot and Shoe Co., of Fred-erieton, throughout Western Ontario.

R. L. Savage, of the firm of Jackson & Savage, Mont-real, was in Toronto, London and Peterborough last week showing a nice range of fall samples.

John Vallary, of Toronto, who now represents the Thompson Shoe Co. throughout Western Ontario, spent a few days in Montreal recently on business.

W. E. Short, Western Canada representative of the Kingsbury Footwear Co., Montreal, has left on his fall selling trip. He will go as far as Vancouver.

H. E. Thompson, of the Thompson Shoe Co., Montreal, was in Toronto for several days last week calling upon the trade. He reports a good outlook for business.

W. L. Beier, representing the Cross shoe, welts and turns, manufactured by John H. Cross Co., of Boston, Mass., was in Toronto last week calling on the retail trade.

E. Hutchison, secretary-treasurer of Eyeleigh & Co., Montreal, is at present on a vacation trip to Nassau and will be back in Montreal around the end of the month.

"Pete" Cowan, western representative of the Brandon Shoe Co., of Brantford, Ont., left a few days ago for the Prairie Provinces with a full line of fall samples.

J. Heffering, of Toronto, Ont., representative of the Tetrault Shoe Mfg. Co., Montreal, who has been seriously ill for the past three weeks, is able to be out again.

W. J. Duncan, manufacturer of Fit-Rite leggings, Seaforth, Ont., is doing a large business in that line and is now selling to the trade as far east as Quebec city.

Wm. Lindley, of St. Catharines, formerly with Getty & Scott, of Galt, is now with the firm of E. T. Wright & Co. and will represent them in the Maritime Provinces.

J. Brandram, late of Toronto, has bought out the busi-ness of D. I. Seigle, Mount St. Louis, Ont. The latter is opening a new shoe store on Bloor street west, Toronto.

L. S. McKindsey, W. H. Jardine and H. W. Roberts, who cover Western Canada for the W. B. Hamilton Shoe Co., of Toronto, leave next week for their respective terri-tories.

F. Underhill, of Underhills Limited, Aurora, has returned from a trip to Washington and other points. He had the pleasure of witnessing the inauguration of President Wilson.

J. L. Trethewey, of Toronto, Western Ontario traveler for the Brandon Shoe Co., has returned from an enjoyable sailing trip to Georgia, Florida and other points, being one of a jolly party.

Geo. G. Gales & Co., the Montreal shoe merchants, are opening a branch store at the corner of St. Denis and St. Catherine streets and will start business as soon as altera-tions are completed.

Mr. Elliott, of Hamilton, has opened what is known as the Palace Shoe Store on Barton street, Hamilton, which is under the management of Mr. McFarlane, late with Robert Wilson of that city.

J. H. Shinnick, shoe retailer, 311 Roncesvalles avenue, Toronto, has been appointed second vice-president of the Toronto branch of the Retail Merchants' Association which met last week.

C. F. Rannard, of the Rannard Shoe Co., Winnipeg, was in Toronto, Montreal and other eastern cities on an extended business trip. He also visited New York, Boston and other shoe centres.

James Houston & Son, 424-426 Talbot street, St. Thomas, held a very successful spring display of men's shoes during the past week. Neatly printed note paper invi-

tations were sent to the gentlemen of St. Thomas request-ing that they call and inspect the exclusive range of gentle-men's shoes.

Harvey E. Graham, of Toronto, left last week for a trip through the Prairie Provinces in the interest of Jackson & Savage, of Montreal, with a full range of Boy Scout shoes and other lines for the firm.

Getty & Scott, Limited, of Galt, have been appointed selling representatives in Canada for the widely known line of women's evening slippers manufactured by A. & A. W. Flateau, of London, England.

The Rapid Shoe Repairing Company now have five branches in Hamilton: 255 King street east, 451 Barton east, 1094 Barton east, 201 James north, 260 King west, 107 James north, also at Brantford and St. Catharines.

Charles Bayford, who has been with A. Wellwood, 1250 Bloor street west, Toronto, has bought the shoe business of A. Chadwick, Gerrard street east, Toronto, who is retiring to go into the contracting line with A. E. Cudmore.

G. J. Scott, of Toronto, leaves in a few days for the West and will travel as far as the Coast. He will handle the lines of the O. B. Shoe Co., of Drummondville, Que., and the Adams Shoe Co., of Toronto, for the coming season.

J. Lamont, of Winnipeg, late with Getty & Scott, of Galt, will be out this season for fall with samples of the Eclipse shoe manufactured by the Galt Shoe Co. Mr. Lamont has many friends in the West and is a most success-ful salesman.

W. A. Hamilton, of the W. B. Hamilton Shoe Co., J. A. McLaren, of McLaren & Dallas, and John Abernethy, of D. D. Hawthorne and Co., Toronto, were among the eastern visitors to the trade in Montreal and Quebec dur-ing the past week.

J. D. Palmer, president of the Hartt Boot and Shoe Co., Fredericton, N.B., was in Montreal and Toronto during the past week on business and met a large number of friends in the trade. He looks forward to an unprecedentedly busy season for his firm.

Frank Downs, who was for several years with McLaren & Dallas, Toronto, has rejoined the staff of that firm and is now covering his old territory in Eastern Ontario. His many friends are pleased to welcome him back after a season in the West.

Among the callers on the trade in Toronto during the past week were E. A. Wootton, of Maynooth, Ont., Mr. Abraham, of Abraham & Aboud, Cobalt, George Stanyon, Unionville, J. L. Thompson, Port Hope, W. J. Burns, Oshawa, and others.

The annual meeting of the Ontario branch of the Retail Merchants' Association of Canada will be held in Toronto on April 29th and 30th. During the week a Business Systems show will be conducted in Massey Hall, where the gatherings of the association will take place.

At a meeting of the creditors in Montreal of the A. P. Cimon Shoe Manufacturing Co., Limited, Alexander Des-marteau was appointed curator and Edward G. Chartier, Paul E. Lamarch, Jean B. Morin, William Davidson, Hor-misdas Sauve, Edward Still and Frank A. S. Deland appointed inspectors.

Alf. Neale will devote his whole time to the management of the shoe store of Neale & Merner, Bloor street west, Toronto. John Merner, who retains his interest in the store, will leave for the West in a few days, where he will spend some time as one of the selling representatives of the John McPherson Co., of Hamilton.

M. H. Clapp has taken possession of a fine new store in Vancouver, at the corner of Seventh avenue and Main street, having secured a five years' lease of the premises. Five different lines of street cars transfer at the door and Mr. Clapp now considers that he has one of the best cor-ners in the Pacific Coast city.

F. J. Lashbrook, of London, will represent the Mac-farlane Shoe Co., of Montreal, and the Williams Shoe Co.,

of Brampton, in Alberta and British Columbia during the coming season. He leaves shortly for the West. The samples of both firms have been much improved for fall, each having added several new lasts.

The many friends of J. S. Ashworth, of Toronto, Canadian manager for Sir H. W. Trickett, the noted slipper manufacturer of Waterfoot, Eng., are congratulating him on being the father of a bright baby daughter. Mr. and Mrs. Ashworth and child will leave for the Old Country in a few weeks to spend a portion of the summer months.

The premises of the Spanish Leather Co., Waterloo, Ont., used as a tannery and upholstering factory, were destroyed by fire recently. Groom & Carlan, the proprietors, sustained a heavy loss. The damage done was \$4,500 and the firm, which began business only a few months ago, carried no insurance on the building or stock.

After carrying on a successful shoe business for thirty-five years in the same stand, J. Twitchell & Son, of Clinton, Ont., have sold their stock to Harry C. Borbridge, of St. Thomas, who intends removing it to the latter city. Mr. Twitchell will live retired and his son Harry will remove to Western Canada, where he intends starting in the footwear line.

H. E. Gross, of Moncton, N.B., has joined the selling staff of the Relindo Shoe Co., Toronto, and will represent that firm in British Columbia; H. B. Ohrt and G. J. Cowling are covering the Prairie Provinces; F. J. Jackson will look after Northern and North-western Ontario; Frank Meicer Southern and Eastern Ontario; E. B. Snow, of Shediac, N.B., the Maritime Provinces, and G. J. Smith, the city of Toronto.

A. F. Kierstead is again covering Nova Scotia, Prince Edward Island and part of New Brunswick for the Hartt Boot and Shoe Co., of Fredericton. N. S. Steeves is looking after part of Quebec and a portion of New Brunswick; W. L. Jones, Eastern Ontario and eastern Quebec; James Lawther, Western Ontario; L. Farewell, Manitoba and part; of Saskatchewan and W. M. Jardine, the middle West; while British Columbia will be supervised by George H. Ferguson.

The annual conference of the branch managers of Ames, Holden, McCready Co. is being held in Montreal this week and next. Plans for the coming year are being discussed and views exchanged on important topics. Among the managers in attendance at the gathering are: A. B. Erskine, Vancouver; A. L. Johnston, Winnipeg; Frank Morgan, Edmonton; E. A. Dagg, Calgary; Charles Bonnick, Toronto; W. M. Angus, St. John; Alex. Angus, Montreal, and W. S. Louson, general sales manager.

The esteem in which Frederick P. Lawson, who has been a member of the warehouse staff of Ames, Holden, McCready Co., Limited, for some time in St. John, N.B., has been regarded by his fellow employes was attested recently when the manager, W. M. Angus, on behalf of his associates, presented to him a valuable case of silver. Mr. Lawson is severing his connection with the company to enter the Dominion Customs' service, and his departure from the employ is regretted.

J. G. McDiarmid, who represents the Cook-Fitzgerald Co., of London, in the larger cities of Western Canada, left for the West this week. W. G. Downing, Limited, of Brandon, will also have five men showing the line in points not covered by Mr. McDiarmid. James T. Sutherland will as usual look after the ground from Toronto to Quebec, A. A. Orendorff in Western Ontario and L. W. Johnston, the Maritime Provinces and part of Quebec. With nine men in the field, the Cook-Fitzgerald Co. are looking forward to a bumper season.

At a recent meeting of the Toronto Shoe Retailers' Association considerable business of importance was done. T. H. Bigwood, vice-president, was in the chair and a requisition has been sent to all the wholesalers in the city asking that the practice of selling retail be stopped entirely. The agreement has been signed by all the jobbers. On the other hand a petition is being presented to all the retail shoe men requesting that they cease sending customers with

orders to the wholesalers to secure shoes. This document is also being largely signed by the trade. A grievance committee has been appointed to investigate any complaints that may be made.

Leonard Barber, bookkeeper for Beal Bros., leather and findings merchants, Toronto, who recently pleaded guilty to the theft of about \$37,000 from his employers, was last week sentenced by Judge Morgan to two years less one day at the Guelph Prison Farm. The prisoner obtained money from the bank by means of forged signatures on the representation that it was for salaries. Barber had misappropriated funds at the rate of about \$2,000 per month, which he gambled away. He came from England about two years ago and his sentence was made lighter than it otherwise would have been, owing to the highly nervous disposition of the young man.

The members of the office, warehouse and traveling staffs of the local branch of the Canadian Consolidated Rubber Co., St. John, N.B., enjoyed themselves to the limit recently in a sleigh drive and supper. They drove to Barker's place, in the Loch Lomond road, where they had a very tempting supper to which full justice was done. After the supper had been partaken of, there was a fine programme. Walter R. Stewart presided and gave an address of interest, while others taking part in the programme were: F. J. Hunter, solo; J. Walsh, speech; Scottish dance, Wm. Bell and Lloyd Young; solo Thomas Drake; reading, Andrew T. Rainnie, and piano selections, Roscoe Bond. The latter acted as accompanist.

Among the shoe merchants in Western Ontario who have purchased the adjustable display fitting which is being turned out by the Brantford Show All Window Fitting Co., of which A. C. Clark is the head, are: Ludlow Bros., Brantford; H. Hotson, Tavistock; A. G. Gahagan, Woodstock; A. Judelson, G. J. Clayton, J. H. Hodgson, A. E. Reos, of Hamilton; H. C. Clark, Dundas; W. H. Brigham, Chesley; J. P. Cook Co., London; J. P. McCullough, College street, Toronto; A. Levy, Yonge street, Toronto; J. Brotherton, Yonge street, Toronto; M. B. Young, Bloor street west, Toronto; St. Leger Shoe Co., 542 Queen street west, Toronto, and Chas. Allan, Queen street west, Toronto. Many other merchants in the hardware, drug, jewelry and other lines in various towns in Western Ontario have also placed orders for this window fitting, which is very popular with the trade.

"Dan" MacDonald, who for some years has been representing the Murray Shoe Co. and the Cleo Shoe Co., of London, throughout the Maritime Provinces will this season handle the Cleo line exclusively in Western Ontario. Mr. MacDonald has many friends in the trade and is an efficient and energetic salesman.

## HAPPENINGS IN FACTORIES

Harris shoe factory has opened in Deloraine, Man., and is meeting with good success.

J. Niekle, superintendent of Kirvan-Doig Limited, Maisonneuve, Que., has resigned.

Charles Robson, of the Robson Leather Co., of Oshawa, was visiting the markets of Chicago recently.

The Superintendents' and Foremen's Association, Montreal, cleared about \$150 on their recent euchre and ball.

The Sardon Shoe Co. are negotiating with the town of Maisonneuve for the purpose of erecting a large new factory there.

Armand P. Kimmel, superintendent of the Elmira Felt Co., Elmira, has been appointed vice-president of the Kimmel Felt Co., Berlin.

Louis Pion has resigned his position as stock room foreman with the Rideau Shoe Co., of Maisonneuve, and is now in business for himself.

C. O. Shaw, of Huntsville, Ont., general manager of the Anglo-Canadian Leather Co., was in Toronto and Montreal during the past week on business.

John Ryer, who has lately been employed by James Linton & Co., of Montreal, in charge of the bottoming room, is now with the O. B. Shoe Co, Drummondville.

The Robert Taylor Co., of Halifax, have recently added several new machines to their factory which will result in considerably increasing their output of shoes.

B. Labelle, who has been assistant foreman of the finishing department of the Rideau Shoe Co., of Maisonneuve, for the past few years, is now foreman of the finishing department.

E. C. Dorr, making room foreman for the Ames, Holden & McCready Co., of Montreal, has resigned his position and has accepted a position with the Pontiac Shoe Co., of Pontiac, Ill.

The employes of the U. S. M. Co., Montreal, recently presented Thos. Scott, who has been superintendent of the company for sixteen years, with a gold watch and chain as well as an appreciative address.

John Stephens, of Rena Footwear Co., was in Toronto and other Ontario cities last week. Considerable new machinery has been installed in the Rena Footwear Co. factory, Montreal, by the U. S. M. Co.

A. A. Durkee Co., Limited, manufacturers of Security Footwear, Truro, N.S., intend to largely augment their output and will increase the authorized capital stock of the company from \$50,000 to \$400,000.

Chas. N. Holmes, for the past six years superintendent of the Selz Schwab Company's factory at Elgin, Ill., has resigned his position with this firm and on April 1st will become general superintendent of the factory of Getty & Scott, Limited, Galt.

J. T. Tebbutt, of the Tebbutt Shoe & Leather Co., Three Rivers, Que., has been elected president of the Northern Quebec Goldfield and Exploration Co., which is capitalized at three million dollars. Work this spring and summer will include a prospecting party who will follow the range

of mineralized hills through the Grand Lakes and Victoria district following information given in a report by the Quebec government expert, work will be commenced on the properties immediately after the break-up.

The B. F. Goodrich Co., of Canada, Limited, has been incorporated with a share capital of \$500,000 to manufacture, buy, sell and deal in goods, wares and merchandise of all kinds. The head office of the company will be in Toronto and a large factory will be erected at St. Catharines.

The hockey team of A. R. Clarke & Co., have won the championship in the Riverdale Manufacturers League, Toronto. The final game with the Imperial Varnish Co. was a battle royal. The leather exponents finally captured victory by a score of 6 to 4. The struggle was witnessed by a large crowd.

J. Vaundell has accepted a position as foreman of the making room for the Slater Shoe Co., of Maisonneuve. Mr. Vaundell was formerly employed in Boston, Mass. A. Fontaine formerly held this position recently accepted by Mr. Vaundell. Mr. Fontaine has taken a situation with the Whalen Shoe Co. in Montreal.

P. W. Symonds, who has had an extended experience in the factories across the line, has been appointed superintendent of the Western Shoe Co. at Berlin and has entered upon his duties. He succeeded Alex. Inrig, who some time ago was made superintendent of the new factory of the Woelfle Shoe Co. in Berlin, which is now in full operation.

The Minister, Myles Shoe Co., of Toronto, are putting on the market in Canada a real new feature known as Hawthorne's Seal'd Sole Shoe, an illustration of which is presented. The black line over the insole and extending part way up the sides between the lining and vamp shows where the damp-proof material is placed in the shoe. This material is so compounded that neither heat, cold nor perspiration has any effect upon it. It is claimed for Seal'd Sole Shoes

that they are different from others in that no dampness penetrates the soles or the seams of the soles. These shoes have an insole that conforms to and fits every curve of the foot, thus distributing the weight evenly and admitting of perfect blood circulation. The insole is always dry and smooth as velvet. Any shoe desired can be equipped with these soles which relieve perspiring and burning feet and prevent and cure many pedal afflictions. Neither is style sacrificed to secure comfort and ease. The insole cannot break or curl up and the cushion is always dry, while no trees are needed in the shoe when not in use.

## JOTTINGS FROM QUEBEC

J. H. Larochelle was in Montreal on a business trip recently.

Herbert Gale, of Gale Bros., has also returned from a business trip to the same city, where he spent a few days.

C. E. McKeen, of Vancouver, was in Quebec during the past week and called upon a number of his old friends.

P. Ouellet, leather and findings merchant, is confined to his room for a few days with an attack of the grippe.

Henry List, salesman for the Louis Gauthier Co., has been on a business trip to Toronto, Hamilton and Winnipeg.

Mr. Gamont, assistant superintendent of J. B. Blouin, Ltd., Levis, who was confined to his room for ten days, is rapidly recovering.

L. Morency, paper box manufacturer, who turns out a large quantity of cartons for the shoe firms of Quebec, has removed to his new building.

V. Coulombe, shoe dealer and repairer, is making extensive improvements to his shop. He is installing a shoe shine stand which will be the finest one in Quebec.

Now that all the installations of electric motors in the O Goulet factory have been completed the plant is running, each department separate from the other. Orders are being turned out rapidly.

J. B. Blouin, Limited, of Levis, have installed several Ideal Clicking Machines in their cutting department. They are the first manufacturers of the Quebec district who have adopted this machine.

Tourigny & Marois are very busy. Their staff is working three nights a week. They are at present turing out 250 cases of shoes a week and have orders ahead to keep them busy for the next three months.

Alexander Meyers, shoe manufacturer of Montreal; D. E. Sutherland of the Amherst Boot & Shoe Co., Amherst, N.S.; E. L. Rising, of Waterbury & Rising, St. John, N. B.; R. T. Hayes, of J. M. Humphrey & Co, St. John, N. B.; J. A. Lane, of Paul Galibré, Montreal, were in Quebec recently.

Alf. Marois, of Tournigny & Marois, George Bilodeau, representative of the Monarch Dressing Co., F. Blouin, of J. A. Scott, and W. Deslaurier, tanner, were recently on a driving trip of several miles to test the speed and driving capabilities of Mr. Marois' new horse, which is considered one of the best animals in Quebec city.

## AN ATHLETIC SHOE SALESMAN

Ed. Lynch, who is the Western Canada representative of the Minister, Myles Shoe Co., of Toronto, left this week on his Western tour. Mr. Lynch was born in the "Nutmeg" state at Winsted, Connecticut, which is located at the foot of the famous Berkshire hills, and attended college at Worcester, Mass., and at Fortham College, New York, where he took a prominent part in all lines of sport, being proficient in basket ball, football and baseball. He engaged in many a hard fought fray on the campus while taking a medical course. He gained some retail experience in the footwear line in New York city, and during his athletic career became acquainted with C. J. Fitzgerald of the Cook-Fitzgerald Co., of London, who was then a widely known newspaper man and writer on sporting topics in the New York press. One day Mr. Fitzgerald offered Mr. Lynch a good position on the traveling staff of his company and the latter came to Canada and for four years represented the Cook-Fitzgerald Co., covering a large portion of western Canada. He remained with them until August last, when he joined the Minister, Myles Shoe Co. During his five years' residence in Canada Mr. Lynch has made many friends by his genial nature, and his obliging, gentlemanly disposition

## SHOE FIRM HAS RECORD YEAR

The coveted million dollar output was reached last year by the Amherst Boot & Shoe Co., who held their annual meeting recently in Amherst, N.S., it being the forty-sixth annual gathering of this old and reliable industry. Percy C. Black, the president, presided. Remarks were made by several shareholders congratulating the management upon the continued success of their enterprise. Interesting addresses were also made by the president and manager, reviewing, for the information of the shareholders, the year's operations. T. N. Campbell, secretary, who had returned from an inspection of the company's western branch at Regina, gave an interesting report of progress there. The premises now being inadequate, the chairman announced that the directors contemplate an extension to the warehouse in the early spring.

YOUNG MAN who understands the shoe business well desires position as manager of a shoe store or shoe department, good salesman, window trimmer and card writer, with AI references wherever employed. Disengaged when suited. Apply to Box 42, SHOE AND LEATHER JOURNAL, Toronto, Ont.

WANTED—Salesmen to carry on the side twelve samples old ladies' turn comfort shoes, carried in stock by manufacturer, three widths. Excellent proposition. Shoes made right and will repeat. Address and give all facts concerning yourself to Box L, SHOE AND LEATHER JOURNAL, Toronto.

# There's Money in Hosiery— For the wise Shoeman—

Glance over your sales records for the last year! Now total them up and ask yourself this question:

How many of my customers could I have sold Pen-Angle Hosiery to last year without half trying?

Suppose you had sold one-third of your customers and pocketed a nice margin of profit. Your extra net profit would have paid the rent and perhaps the wages of a clerk or two. And all this with hardly any extra work or cost. Why not oblige your customers by stocking Pen-Angle—the popular, Full-Fashioned Hosiery for Men, Women and Children.

Your Lady customers want Pen-Angle Hosiery to match their shoes in shade and color. Your gentlemen customers want Pen-Angle for this and other reasons at your store. Oblige them by keeping a good working stock of Pen-Angle always on hand. If you've never stocked Hosiery before, write to us for full particulars.

## CLASSIC SHOES

### Have a guarantee like t

The best guarantee of the saleability of any article lies in its reputation.

Behind every pair of "Classic" Shoes whether women's, misses' or children's, is an earned reputation for wear, style and fit.

And the best of it is this reputation is being day after day augmented and strengthened by reason of the high quality of every "Classic" Shoe that leaves the factory.

In the "Classic" factory reputation was never a thing to rest upon. Always it has been something to achieve. And every season has seen a greater striving after "something better."

## GETTY & SCOTT, Limited

**CLASSIC SHOES**

Behind your Fall stock

his striving has always borne results. The samples for Fall, 1913 plainly show it. When the "Classic" man comes 'round you'll be shown as fine a line of high class women's, misses' and children's footwear as has been your pleasure to see. And there will be variety enough to suit every fancy and need.

You'll be pleased, we know, with these samples if you only look them over. So when the "Classic" man calls give him his opportunity to show you this line which he is so proud.

## Twentieth Century Welts for the Fall Season of 1913

**Style**

**YOU** will soon be given the opportunity of looking over the samples of Twentieth Century Welts for Fall 1913. They'll be well worth your careful examination, for besides having all the qualities that have made the good reputation of Twentieth Century Welts, they'll show a greater advance in style than previously.

**Comfort**

**Work-  
manship**

**Popular  
Price**

Twentieth Centurys make a strong bid for your co-operation because their popularity with the buying public is founded on more than one good quality. Although built on comfortable lines they always conform in sensible measure to existing styles, they always show the results of skilled workmanship, and their prices are just what most men want to pay. Men's retail at \$4.50, \$5.00, \$5.50 and \$6.00; boys' at \$3.50 and \$4.00.

**The C. E. McKEEN CO., QUEBEC**

## You should see Surpass samples for Fall 1913

**I**T won't be long now until your jobber will be showing you samples of the Surpass line for Fall 1913—as fine a line as you have seen. You won't notice any very radical changes in the shapes, for the Surpass line does not find it necessary to follow blindly every whim of the last maker. Still, you will find plenty of new ideas that'll brighten up your stock, and we feel sure you'll be pleased with the whole line.

Look the samples over carefully, choosing whatever looks good to you, knowing full well that every Surpass shoe is made right up to sample.

THE LOUIS GAUTHIER COMPANY

# Watch for the Ames-Holden McCready Travelers

NOW ON THEIR WAY TO YOU WITH SAMPLES OF

## RUBBERS

*Maple Leaf**Granby**Anchor*

RELIABLE AND SATISFACTORY

About April 1st they will be on their respective territories with what may be termed, in perfect truth, as fine and representative a range of shoes as has ever appeared in Canada—bar none.

Every shoe is a winner—the result of absolutely new ideas, patterns, lasts and styles, the best of leathers, the most expert supervision and workmanship.

We are quite justified in the use of superlatives, because these shoes will measure up.

NOTE—You will also be shown a popular price line of Men's, Women's and Boys' WELTS on the latest lasts. The value will be just as popular as the price. Ask to see them.

*Be sure to see our traveler before you order.*

# About Good Felt Footwear

**S**OMETIMES different brands of Felt Shoes look pretty much alike when they are new. You don't know what material is in them. Only time can tell their wearing qualities. But when you buy Felt Shoes with a proven trade mark on them—the mark of makers of standing—which says they are good Felt Shoes, and you know the name means what it says—a trade mark that has been the proven guide to Quality Felt Footwear in the past—you take no chance, and "Elmiras" are above all others the line for the retailer who desires to give his customers the very best Felt Shoe guarantee.

'Elmira' on Felt Shoes and Slippers means a guarantee of Felt Shoe satisfaction backed by years of real merit and unsurpassed felt and shoe manufacturing facilities. It represents quick sales and sure profits for the retailer and absolute Felt Shoe satisfaction for his customer.

The above trade mark stamped on the bottom of all genuine "Elmiras" will solve your Felt Shoe problem for you.

**Manufactured by the Elmira Felt Co., Berlin, Ont.**

W. L. DOUGLAS

CAPACITY, 17,600 PAIRS A DAY.

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

### MODEL N

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

## The Union Label Plus Influence!

The Union Label means something more than protection to the shoe worker. It means protection to every wearer of shoes, because it signifies good workmanship, good conditions, honest goods, honest prices, all of which mean influence, and influence to you means more customers, more sales, more prestige, more profits.

Our campaign of advertising—educational in its nature—is teaching the public the importance of the Union Label, and the demand for Union Stamped shoes is enormous, and is rapidly increasing. You cannot afford to do without this large and profitable trade.

**CLASSIC SHOES**

Look them over! The  
sales.

Has the "Classic" man been in to see you yet? Make a point of seeing him and his samples. He is carrying the best line of women's, misses' and children's that you'll see this Spring. Right up to the minute in style, and right up to the cent in value.

**Getty & Scott, Limited, Mak**

**CLASSIC SHOES**

# show the “class” that creates

The models that you'll see in the "Classic" man's trunk faithfully forecast the prevailing styles in Canadian women's, misses' and children's shoes for Fall, 1913. They are the result of a comprehensive study of trade conditions and prospects. You can't go wrong on them. Be sure you look them over when the "Classic" man arrives.

## of "Classic Shoes," Galt, Ontario

# New Lasts for Fall

For Fall the Slater Shoe Company are showing a long line of samples on a number of new lasts.

---

242 Lennox. A slightly raised London toe for the conservative gentleman who likes a straight last which has a slightly raised effect to do away with the old low London toe.

238 Marathon. A great wide toe on a medium raised receding line for the gentlemen of Canada who require large, full fitting shoes.

241 Bantam. Medium high toe effect.

237 Dignity. A smart medium raised toe for the young men who require a snappy shoe. Whole fox button.

236 Bulldog. A medium raised with a slight outside swing.

240 Critic. A shoe for the young man which has snappy and high and full fitting qualities

233 Kannuck. The greatest fitter and seller in Canada.

231 Student. A medium high toe slightly pointed effect, a very stylish shoe and a full fitter.

On the new English and American styles we have 239 Windsor, which will suit the most fastidious demand in footwear.

230 British. Made after the finest British lines, fitted for Canadian wear.

234 A pump last with a wide broad heel hollowed bottom having ground gripper effect which will not slip at the heel or come off.

On the women's lasts they are showing 201 medium high raised toe slightly pointed.

200 Medium high raised toe on the wide effect.

204 Low receding toe broad heel and broad shank specially fitted for a walking shoe.

This style is making a great hit in New York, Boston and Chicago, and should suit the most fastidious Canadian customers.

We are showing these lasts in all leathers and a great variety of fabric tops and suit effects.

---

Watch for the Slater traveler. He is on his way to you.

## Our Travelers Have a Brand New Range of Fall Styles to Show You

Sweeping changes have been made in the Ames-Holden-McCready line for Fall selling.

Every shoe in this range is the result of the latest ideas in shoe styles worked out on modern lasts with a splendid range of leathers, under expert supervision. We cannot emphasize this fact too strongly.

Our popular price line of Men's, Women's and Boys' WELTS on the most modern lasts is just the weapon you need to get the trade where price is an object. This line is splendid value.

*Make it a point to see these Fall Styles before ordering.*

# Tetrault Always Has It First!

## SEE THAT NEW PULL STRAP?

You can see at a glance how much superior to the old-style webbing it is.

It will not pull off—in fact, it cannot; and it is much neater in appearance.

This new pull is on *all the better grades* made by Tetrault's. It is splendidly adapted to men's fine footwear.

Opposite is our new Balkan last. It has *three* new features:

*Carries between a high and a low toe with straight effect.*

*Pull strap (as above shown).*

*A cloth top that will give a maximum of wear, and will show a natty appearance.*

¶ This is an especially good example of modern shoe-making, and will be a big seller.

¶ Rubber soles and heels will be popular this coming winter. Note the features of the Tetrault soles and heels.

The metal toe takes care of the wear at a vital point. *Screwed on*, not nailed. The corrugated sole ensures a proper "grip" for the foot for slippery walking.

Catspaw rubber heels also mean a maximum of safety and wear. Nothing is too good or too new for Tetrault Welts—hence the above improvements.

Tetrault shoes with all their latest features can be had from leading jobbers in Toronto, Hamilton, London, Winnipeg, Vancouver, Montreal, Quebec and Moncton.

Travelers are now on the road to you.

**Tetrault Shoe  
Manufacturing Company**

*Doctors*  
 ANTI-SEPTIC  
 SHOE  
 PAT 1908 1909  
 NON  
 PERSPIRO

The Doctors is the shoe that goes through water, slush and snow and never lets even a suggestion of dampness reach the foot.

Both soles and uppers are most thoroughly waterproofed, and besides, it has three soles—two to keep out the dampness, and one to keep out the cold.

A dandy for Fall selling.

**You need  
 your Feet**

A rough-weather shoe, a tender-foot shoe, a hockey-skating boot, and a hockey-player's boot—these are real necessities in any complete Fall and Winter stock.

And here you have them—each one a specialized shoe—each one evolved through study of special requirements.

So if you're out to corral the most of the business in your town you'll need these for good ones. Besides having some special feature that will appeal to some portion of your patrons, each shoe is an example of the shoemaker's art.

*THE  
 Professor*  
 PAT. NO. 119409  
 GOLD CROSS  
 SHOE

Happy feet indeed are those encased in Professor shoes. No pinching or chafing, no distortion of toes, but plenty of room for all to move naturally.

Medicated cushioned inner soles that are soft and springy, and softest kid uppers make walking a pleasure.

A boon to abused feet.

## 'Fits U' Lasts

from Youths' size 11 to  
Men's size 11.

**SHOE &  
LIMITED  
S. QUEBEC**

For all round use—skating and hockey—your young men patrons will choose the "2 in 1." You'll admit yourself, when you've examined it, that it's the best general purpose hockey boot you've seen. It has strength for hockey and lightness for skating.

The "2 in 1" is fitted with our patent aluminum toe protector and with a well padded tongue.

The great "utility" boot.

### Double-Laced Hockey Bal.

Here's the boot all the "hockey boys" are wearing. It's so built that they can protect their feet in whatever part seems necessary. This is made possible by reason of a double upper, between the sections of which is room for pads of felt.

This is an extra strongly built shoe, and can be secured with toe protector and ankle protector if desired.

The *real* hockey boot.

Satisfaction to the wearer and long profits to the retailer—our policy.

It's a pleasure to wear our shoes and a pleasure to sell them.

## Correct Spring Styles for Your Consideration

These are some of the snappy styles in women's boots that we have placed in stock for the season, recommending that you offer them to your Trade as proper for those who are particular in the matter of style.

You can well afford to place a trial order for any of these shoes, for each represents a sales-pulling power that will mean many more dollars of profit to your business.

## What Did Your Shoe Report Show?

Did you turn your stock three times last year?

Did you make a satisfactory average gross profit on the selling price?

If not, your shoe dept. needs a tonic and the best doctor of sick departments is a good trade marked shoe.

That is not theory—it is experience.

Consider the facts—shoes trade marked or un-named may differ little in quality, style and fit.

But when handling un-named lines you go it alone unaided—You have got nothing that your competitor cannot get and sell.

You have bought in the open market and so has he.

But the right trade marked shoe gives you a plus. The instant you put it in you have another man helping the success of your department—the manufacturer.

His reputation as well as yours is at stake. He must help you to be successful.

He dares not oversell you for his name's sake. Therefore, he carries a reserve stock available for your convenience.

He must give you shoes of dependable quality.

He advertises nationally teaching the public the quality of the shoes.

Your local advertising clinches his national advertising—you get double the returns that can be had from advertising un-named shoes.

Tie a good trade marked brand to your store and make it a magnet to draw business.

DOROTHY DODD shoes will help you do the biggest business on the least stock with the least advertising at the greatest profit.

They will sell out cleaner than any unbranded shoe.

Now there isn't a word of theory in this—we are ready to prove by retailers' actual experiences every statement made here.

Make us prove it for you.

## *They Are Coming Back*

**S**TYLES change—A false, manufactured sentiment cannot maintain the sale of any type of footwear not approved by shoe retailers. 90% of the responses in the recent canvass of shoe retailers of this country, made by the National Shoe Retailers' Association, favored in unmistakable terms the purchase and sale of a larger number of shoes fitted with Laces. The customers worth while have faith in their dealers' judgment. Every consideration of fit, comfort and appearance favors the laced shoe. They're coming back, and when you order think of Diamond Brand Fast Color Eyelets.

## More Than Seventeen Thousand Pairs Bought Every Day

From Alaska to Patagonia, from London to the Fiji Islands, in eighty-four countries, Walk-Overs set the style for shoes.

Original Walk-Over designs are accepted as models in Paris, the home of fashion, and in every capital of the Old World. Their style supremacy is unquestioned.

No matter where one may travel, he will find Walk-Overs waiting for him—they have won their way around the world on merit.

The many models, the wide range of sizes and widths, make it certain you can fit and please in Walk-Overs the most critical shoe buyer.

Exclusive Walk-Over stores or agencies are to be established in all cities and towns of Canada.

Perhaps you might like to consider the Walk-Over proposition for your town. If there is no Walk-Over representative there now we'd like to explain our proposition to you.

## *A POINTER TO YOU, MR. RETAILER*

In buying, the retailer must first place confidence in his knowledge of shoes and ability to buy right, and then he must have reliance in the makers from whom he buys. We ask you to place confidence in us and our productions.

By specializing in Ladies' Welts we are enabled to give you the best possible value, and it is by doing so we are going to win and hold your trade and good will.

Give the range of Fall samples that our travelers are now showing your close and careful attention. You will find it worth while.

**PERTH SHOE CO., LIMITED**  
**PERTH ONTARIO**

## “At their own price”

IF you were to advertise to the men of your town that you would sell them shoes “at their price,” and they were to act with strict honesty in the matter you would find yourself selling practically all your stock at from \$3.50 to \$5.00.

Somehow or other the male portion of the public has come to regard these prices as ample for their footwear. They

don't reason from any knowledge of leather prices, labor prices or market conditions. They simply seem to feel that \$3.50 or \$5.00 is enough, and that's all there is to it.

Nine out of every ten men who come into your store have decided that they won't pay more than \$5.00 for their shoes. What's the sense of antagonizing them by trying to sell them \$6.00 or \$7.00 shoes? Why not prove to them that their estimate of shoe prices is correct? You can do it easily and profitably by selling “Landover” and “Leader” shoes.

“Landover” and “Leader” have not made \$3.50 and \$5.00 famous as shoe prices, but they have proven to thousands of men that those prices are legitimate and fair, and give every bit of value expected.

Your Rubber

## FOOTWEAR SALES IN 1913

The way lies open to every dealer. There is no mystery about it. It is simply a cold, business calculation—solved as follows:

Profits from sales depend upon public demand for the lines carried in stock.

Most people have been educated—by advertising—to demand certain brands of Rubber Footwear.

They insist upon getting these brands, because such brands are their guarantees of superiority—backed by the reputation of the manufacturer. Which accounts for the immense yearly increasing sales of

JACQUES CARTIER                      MERCHANTS  
DOMINION                      ANCHOR                      FLEET FOOT

Rubber Footwear—the footwear that is known and asked for in every town in Canada.

Why not bank on a certainty?—and be sure of a quick turnover and increased sales.

Our traveler is headed your way now. He will show you the most complete and up-to-the-minute line of Rubber Footwear—calculated to make a direct appeal to your better judgment.

Don't you think it would pay  
you to look over his lines?

Remember our shipping facilities are unequalled—insuring you prompt deliveries.

## When Will Recede Toe "Arrive"? Trade is Asking

Only Higher Priced Boots Carry It at Present, and Dealers Who Do General Business Think That Public is not Educated Up to It—Lines Going at Popular Figure will Carry Medium Toe and Heels—Attempt to Usher In a "Red Season" for Children and Misses—More Breezy Boot Style Gossip

Travelers are now covering Canada from one end to the other with the finest and most representative range of fall footwear samples that Canadian manufacturers have ever produced.

The early advent of Easter caused somewhat of an interruption to the selling plans of various makers who did not despatch their men on the road until after the holidays.

Retailers generally report having done a good Easter trade, considering the unusually early date on which this festival was celebrated and the fact that winter had not yet lapsed into spring, while the temperature in many places was of a frigid character. Many attractive window displays were witnessed and the new spring models were temptingly featured. Speaking of demands for the immediate present, there comes a general report of many purchases of tan shoes and it is expected that white buck, poplin and other light color lines will meet with a large measure of favor during the early spring and summer months.

### High Priced vs. Medium

In the last two or three numbers of the SHOE AND LEATHER JOURNAL extended reviews have been presented on

will be the strongest sellers for fall, the concensus of views seems to be that in the high priced lines for men the receding toe will prove the favorite. Bals., with blind eyelets carrying a low, broad heel, with wide shank and flat tread on rather straight lines will undoubtedly demand the top notch figure. These are seen in gun metal, velour and tan calf of a rather dark shade. It is foretold by some manufac-

Tan calf walking bal., blind eyelets, with K.K. hooks, receding toe, extension edge—By Walker, Parker Co.

Gun metal blucher with receding toe, 3/8 heel, plain quarters, blind eyelets—By Hartt Boot & Shoe Co.

turers that the demand for patent is growing, while the button shoe will command a certain measure of favor with the well dressed lords of creation. Cloth tops in grey, black, brown and other colors are seen. In all medium priced shoes and in the Western portion of Canada the moderately high toe is going to prove a mighty good seller, while the high toe has not by any means disappeared but it is not of that upright or doggy character seen so much last season. Another forepart that may be popular is the full, well-rounded broad toe, which is conservative in character and affords the wearer ample toe room.

### Button Still Has the Call

In women's footwear the button boot will still have the largest call and in the very highest priced shoes the sharp, pointed receding toe with a rather long vamp is seen, but it is not likely that very many of these will be sold outside of the exclusive trade in the largest cities. The English walking shoe for women appears to have caught on very well.

the leading characteristics, tendencies and style developments in Canadian footwear. While opinions may differ widely and at best are only a conjecture regarding what

The drop toe, wide shank and common sense heel make an ideal boot for fall wear. Patents are also returning to favor and the majority of manufacturers report that the patent button with dull top is the one which many a woman will buy. These generally carry a medium high toe, with short vamp and heel of about an inch and a half high and in some cases a little more.

### Has Slope Toe "Arrived"

Speaking of the styles which will "go" well this autumn a leading manufacturer of women's shoes ventures the opinion that gun metals and patents will still lead and ex-

Norwegian calf blucher, with saddle strap over vamp, ribbon stitched edge, flanged heel, top piece slugged with wooden pegs, rawhide middle sole—By Ames-Holden-McCready

presses the belief that there will be a constantly growing demand for kid boots whose sale, the firm opines, should be encouraged to relieve the pressure on calfskins, the demand for which has largely contributed to the steadily advancing price in footwear. Cloth tops are in increasing requisition and it would seem that they will be among the leading sellers for fall. It is contended that it is good policy to sell them as they give good satisfaction to women wearers. Tan willow, tan box and all the heavier storm leathers and tan oozes will be ready sellers. There is no doubt that button boots will still prove the favorite, although lace boots on the low heel, English lasts are good. Bluchers on snappy lasts are winning approval. In fact all low heel styles will sell in a very satisfactory way. In the East the slope or recede toes on the higher grades will move very freely, but the medium qualities will carry a medium toe. In the West the medium high toe with an average height heel will have the bid in the popular-priced lines. The slope toe, while it is making advances, has not "arrived" yet by any means, but the goal is being gradually reached.

### Will Reds and Greys Come?

Two new colors shown in kid this season by one leading manufacturer of women's welts are what is known as battleship grey and rose red, a deep hue which is being featured very largely across the border. Suedes are also having a very fair call for fall in brown, grey, drab, black and other colors. Many samples have mat kid tops.

One thing particularly noticeable in all lines of men's and women's shoes for fall is that fewer freaks are presented than ever, and what are offered in the samples are merely to brighten up the line or add the touch of variety to the collection. The tendency appears to be in favor of fewer changes than usual. As a matter of fact the general range in women's footwear, except in waterproof and heavier sole characteristics will not differ materially from the spring creations except that heels are lower and toes show an indication to suppression in height. In misses' and children's an attempt is being made to usher in what is

known as the red season. Red kid, calf and suede are among the leaders.

In speaking of general styles it is difficult to furnish a comprehensive view. There seems to be a tendency to make a certain style of toe for a certain priced shoe. A leading retailer, who does an exceptionally high class trade, stated the other day that he was getting seven, eight, nine and ten dollars for women's boots. The fair ones were willing to pay the price providing they got something different from the general run, something significant and yet plain and striking.

### Where Quality Comes In

Generally speaking, there has been an increase in price of about five per cent. The majority of manufacturers prefer to place their figures at a point whereby they are enabled to keep up the quality and standard of their goods rather than devitalize the wear of the shoe, by putting in inferior counters, box toes, trimmings, linings or stock. Quality is what counts more and more with discriminating buyers. Of course in this class is not included bargain hunters and chasers of odds and ends. There is always a certain element looking for "snaps" and it seems to be the general experience that people can easily encounter that for which they are searching. If they are looking for fit, finish, worth and workmanship they can find it all in the new models that are presented for fall buying, and, although dealers may have to pay a little more in view of the constantly advancing price of calfskin and other leathers, still there is the supreme satisfaction in knowing that you can conscientiously recommend an article. In this respect the maker who has raised his prices to the point where quality has first consideration will back up the retailer in every particular. There may be money in cheap, trashy shoes for certain dealers, but the leaders, the men who are forging to the front and making a success in the trade recognize that a good shoe is always worth the price—and so do all worthwhile customers.

### Many Unique Features

The Ames-Holden-McCready Co. have a range of over 1,000 samples for fall selling. Besides the usual range of styles they have always shown in the past in both fine and

Tan Russia calf, whole foxed ball, modified receding toe, blind eyelets, single sole—By Thompson Shoe Co.

heavy goods, the firm is displaying for the first time a nice line of exceedingly high grade welts which equal anything being shown to the trade in Canada at the present time, no matter what the source of manufacture. This new line of men's welts is trimmed throughout with Ayers' calf—an exclusive feature. It also includes shoes in Aztec calf, Norwegian calf and American gun metals. Numerous blind eyelets are a feature of the line as are octagon celluloid hooks

# Satisfaction to the Wearer is the Basis of Success

Historic Eastern Firm Tell How They Have Built Up a Large and Permanent Trade in Footwear Branch—They Pin Their Faith on Shoes Stamped to Sell at a Certain Price—Holding Seasonable Sales to Clear Out Odds and Ends

One of the historic firms of Prince Edward Island is that of Sinclair & Stewart, Limited, of Summerside. They began business in 1874 and became incorporated in 1908. Their store is a large departmental one, but boots and shoes form a leading section and is one of the busiest. The men's branch is situated at the front of the establishment with a good show window and front entrance and is in direct conjunction with the mens clothing and furnishing section. The women's department is divided by an arch from the men's and occupies the lower portion of the store from the arch down and is directly opposite to the ladies' ready-to-wear department. The whole department takes the full wall space with the exception of the archway from the

of attention and space. At stated times an exclusive shoe ad is run, while footwear is featured in the general announcement with other sections of the store.

The firm do not cut prices and believe that the shoe with the stamped selling figure is a good thing to have, as it inspires confidence in the maker and for that reason the customer takes to it more readily than one without a stamp. No repair work is done by the firm and special sales are held at the end of each season of any odd lines that have accumulated during the season's business.

In regard to higher prices on footwear, Sinclair and Stewart declare as a general thing that the public expect to pay more on account of the advanced prices of leather and

A PROGRESSIVE PRINCE EDWARD ISLAND FIRM THE WELL EQUIPPED SHOE DEPARTMENT IS SEEN IN THE CENTRE OF THE BLOCK AS INDICATED

front to the back of the store, and across the end. The depth is eighty-five feet and the section is well-lighted, conveniently arranged and conceded to be one of the most up-to-date footwear departments in the province.

## Their Publicity Plans

Sinclair and Stewart, Limited, specialize in several leading Canadian lines as well as a few American goods. They also handle reliable makes of staples and have always made it a point to avoid cheap, poorly-made products, believing that a business cannot be firmly established on any other basis than satisfaction to the wearer which cannot be obtained by disposing of trashy goods no matter how low the price.

The firm are strong believers in publicity and use three different papers, all departments receiving their fair share

they have no trouble in securing the added figure when patrons know the quality and reputation of the lines handled. Ernest Mills is the manager of the shoe department. He has been with the firm for several years and knows the footwear end of the business thoroughly. The officers of Sinclair & Stewart, Limited, are William Stewart, president and manager; T. D. Ramsay, vice-president; H. G. Muttart, secretary; J. A. Smallman, treasurer, and G. W. Phillips, who is also a member of the Board of Directors of this historic house, which is one of the staunchest mercantile institutions in the Maritime Provinces.

For a cure for squeaking boots and shoes insert an awl carefully between the layers of leather in the sole and with the machine oilcan oil the sole through the little opening thus produced.

# When a Shoe Salesman is Not Loyal to the House

Making Personal Promises to Retailers and Seeking to Cut Prices Leads Only to Trouble—Filling Orders that are Doubtful Causes Firm to Lose Heavily—Best Man Never Sacrifices the House to Win Favor with Customers

To the Editor of the SHOE AND LEATHER JOURNAL:—

Sir,—A letter from "Grip" in your last issue complains about the way that a certain firm did not back him up during the three years that he acted as their salesman. He lifts a number of complaints from his own shoulders to those of the manufacturers, whom he charges with misrepresentation, favoritism, lack of confidence, selfishness, one-sidedness, and many other faults.

Now, the traveler is only part of the equipment of the factory, although sometimes, after a man on the road has sold a few thousand dollars' worth of shoes, he begins to think that he pretty nearly owns the plant and can dictate just what terms he pleases. Here I may as well tell you that this fellow worked for us three years. We have been manufacturing shoes for 17 years and, in that time, have seen many travelers come and go, but this incompetent and inefficient representative, by innuendo and misrepresentation, seeks to stab our business policy and standing. He has seized upon a few incidents and magnified them into momentous episodes. He said he was glad to get rid of the factory and we may tell him that the factory shed no tears over his departure, and, if he will stay in the retail ranks, from which he should never have emerged, he may save himself and any future house with which he may be connected, a great deal of trouble. He said that he sold \$9,000 worth of shoes one year—above what the factory could fill—and that he lost several hundred dollars in commission by this means. That is, perhaps, true, but, on the other hand, he did not tell you that in one city he took an order for \$4,300 worth of goods and in another town an order for \$5,800 worth and, although we did not feel at all disposed to honor the bookings of these firms whose ratings were not satisfactory, still we yielded to this fellow's persuasive assertions and even threats. What did we get out of it when the crash came, as it did in both cases? Twenty-six cents on the dollar in one instance and thirty-three in the other. This man was out only his time and some expense money, but we were out the shoes on which we had expended large sums in labor, lasts and leather.

We are charged with trying to direct "Grip's" route, with calling certain retailers hard names, with failing to back him up in various disputes and with requests to go down and "fix up" matters with certain accounts, and that we were not even grateful for all this. Much of this is pure invention and the distorted outpourings of one whose loyalty to the house we suspected from the very first and which was revealed by an incident a few months after, the details of which are of no interest to your readers.

The complainant did not tell you that he was carrying a side line of boys' McKays, which he thought we knew nothing about, and was devoting more attention to it than to our own goods a great deal of his time. We would not have objected to a side line had he made known the fact to us, but he sought to convey the impression that our factory was getting his time undividedly. Another thing, he would go away and be absent three weeks and for days we would not know where he was and our letters were frequently returned. Once he wrote rather impudently that he was not a school pupil and did not have to account for every hour. He said that he was on commission and was practically his own boss and we were not to follow him around as if we were suspicious of him or his movements. Several times he sought to cut prices and to extend the terms of

discount, or make other secret or "hole-in-the-corner" arrangements with retailers, which we would not under any circumstances countenance.

A great deal of the misunderstanding arose from the fact that he would not adhere to his instructions, and we finally had to put a stipulation on the order sheets to the effect that no arrangement other than here presented would be recognized. "Our representatives are instructed not to deviate from terms and discounts" were the words. This is where more of the trouble arose. We have had several travelers, many of them bright, attractive fellows, but only a few have ever wanted to cut the prices if so many cases were ordered, nor have they extended the discount without first consulting the house.

Any one can cut prices or grant special concessions, but it takes a real, accomplished salesman to hew to the line and sell shoes on their merits without any special concessions to any man—to treat each and all alike. Such a one is more than a salesman—he is the best asset and the strongest foundation for any institution with which he is identified.

We might say much more, but have merely indicated a few phases of this question to show that in connection with every matter there are two sides and it is well to learn both versions before coming to any conclusion as to whether a traveler or a house is generally the most culpable. Co-operation should be the watchword. There must be the ability and disposition on both sides to swallow some things.

Sincerely yours,

WHOLESALEMAN.

## Button Oxfords May Be Popular

Speaking of warm weather styles in men's footwear in New York city, a correspondent of the SHOE AND LEATHER JOURNAL writes: "One feature of the styles for the coming season, when the Oxfords and other low shoes have been resumed, is that white socks, according to many prominent dealers, are to have the favor of the well-dressed man who takes as great pride in his footwear as in any other portion of his outfit. These will be sold in silk and in lisle. Other socks, in various light-weight fabrics and delicate shades of all colors, are embellished with "clocks" in fleur-de-lis designs. It is said by some custom makers that they expect to be called upon to furnish socks embroidered on the ankle with monograms or initials, and some with figures to match the sort that are appearing in the ends of high-class, wide-end flowing four-in-hands. The gaudy striped footwear is not on display, and dealers assure me that it will not be in evidence this year. Many low shoes are to be worn during the spring and summer, and may now be seen in the stores and windows along Broadway and Sixth Avenue, and other shopping centres. What will be considered the very epitome of fashion in this low foot covering is a tan shoe, not laced, but bearing three buttons of the same color as the shoe. With a flat heel and a moderate toe this shoe would look nice and be very comfortable; but with its bulldog toe and military heel it is not becoming to anyone, and affords no aid to pedestrianism. For actual service and satisfactory wear, the laced shoe of comfortable last and moderate dimensions remains the favorite, though many men prefer the six-buttoned shoe, with upper of soft calf or vici kid, for informal-wear.

# Does it Pay the Shoe Dealer to Give Souvenirs?

A Great Deal Depends on the Nature of the Premium, Its Usefulness and the Method of Its Distribution—What Class of Trade Do You Desire to Capture?—The Experiences of Some Retailers Who Voice Their Views for and Against Such Plans

Does it pay the shoeman to give premiums in order to gather in new customers or to boom trade in dull seasons?

Ask any dozen dealers and they will give replies varying almost as widely as the souvenirs which have been handed out from time to time for advertising or trade building purposes. The majority appear to think that such a procedure is little better than money thrown away and that souvenirs invite only school children, curiosity seekers, novelty hunters and transient customers. To this it may be replied that much depends on the character of the souvenir which is given, the conditions under which it is distributed, etc. Many of the things, which dealers donate, are mere trinkets or baubles with only the name of the retailer printed thereon and the words "fine shoes," "stylish footwear," "dependable clothing for the feet," or "the leading shoe house," terms that signify little or nothing

## The Cost and Distribution

Then there is the element of cost to be taken into consideration, and this may amount to a large sum without any resultant benefit. Even if a souvenir comes as low as five cents it soon runs into a pretty penny. For any returns received by the retailer in the shape of added prestige and enlarged trade as much depends on the way the mementos are distributed as on the articles themselves.

It is easy to give anything away. In fact, you do not have to announce it. There are scores of persons in every town and city who are always looking up something for nothing. They will carry away cart loads of such things if you will only give them the opportunity. They will also tell their friends all about these articles even without being asked to do so, and will plead for two or three extra "just to give to a sick relative or an absent acquaintance."

Many dealers adhere rigidly to a well printed artistic and useful calendar as the most serviceable and constant

reminder that Brown or Jones is their shoe dealer or the place when they can obtain all requisites in footwear needs. A Dundas street shoeman in London, writing the *SHOE AND LEATHER JOURNAL* on this point, says, "Yes, we always give a calendar to our patrons. We do not hand it out and make people carry it home, probably causing it to get crushed or be forgotten. We take the trouble to post one to the private address of each patron securing the names from our mailing list, which we keep thoroughly revised. We are then sure of the calendar being hung up in the home and reaching the people whom we want it to reach. If you give a calendar, see that it is an attractive one, harmoniously colored and one presenting a picture or scene that is likely to appeal to the woman of the house who does from fifty to ninety per cent. of the buying of shoes for the family. Do not send out a calendar that is a mere daub or splash. Let it be a work of art."

Another firm in St. John, is in the habit of giving away decidedly pretty wall pockets at the holiday period. These are placed in the window with the announcement. "One of these beautiful wall pockets go with the purchase of each pair of shoes." This stops outsiders asking for them, and, while few people, more bold than the others, will try to wheedle one of "the delightful things" in the window, from the proprietor, he can resist flattery and coaxing and still keep the articles for his customers.

## Premiums in Endless Variety

As already pointed out, there are souvenirs and souvenirs. Under this heading come school bags, scribblers, rulers, yard sticks, memorandum books, blotters, envelope openers, lead pencils, card, stamp, coin, and ticket cases, small mirrors, book marks, ash trays, games, picture books, shoe horns, button hooks, thermometers, dust pans, peak caps, papers of pins, puzzles, small rubber shoes, samples of polish, laces,

## A Live Shoe Store

C. Musselman has been five years in the shoe business in the progressive town of Preston and his trade during the last year increased 59 per cent. over the preceding one. Mr. Musselman has a well-laid out store, which is 55 feet deep and 27 feet wide, with an attractive red brick and stone front. He handles traveling goods of all lines and has worked up a large business in this branch as well as in the general range of footwear.

and a score of other things that cost all the way from a fraction of a cent up to half a dollar each or more. It depends on the quality and the quantity ordered. There are firms galore which supply all kinds of advertising novelties and offer endless suggestions.

### Booming Findings By Souvenirs

Now any kind of publicity is better than no publicity or advertising, but it is well to stop and count the cost before proceeding indiscriminately. What would be suitable for one man's trade may not answer at all for another. Much depends on the locality, the business you desire to capture, the length of time that you have been established, the practice of your competitors and your own selling methods and convictions.

If a souvenir is an article of use—one that is not likely to be cast aside after a day or two—but frequently referred to or employed, it may prove a very satisfactory advertisement—and trade winner. On the other hand, if it is an affair that is soon thrown away, the expenditure has counted for nothing.

Findings are profitable things in the shoe trade to which altogether too many dealers give but scant attention. If a merchant wishes to boost this branch here is a suggestion. Let him secure the very best grade of rifle lace he can in 4-4 and 6-4 lengths. Let him have printed a leaflet showing the different lines of laces, polishes, button-hooks, arch supports, etc., that he handles, and folding this neatly put a sample pair of the laces inside and put all in a good stout envelope. This will prove a souvenir worth while and will result in boosting the findings department. Samples of foot powders, corn plasters, and even polishes, etc., may be secured for distribution and inserted with the circular and laces in each carton or parcel. Some of the leading retailers sanction the souvenir plan and believe the results are satisfactory.

### Be Your Own Judge

Whether souvenirs will pay or not is for each individual dealer to decide for himself. As already stated, a number of merchants declare they have good returns from such an expenditure, while others roundly denounce the gift plan and call it a "graft scheme," and "hollow mockery." This advice may be tendered. If you give anything away to your customers see that it is useful and serviceable—not a flimsy toy or trinket. Have some fixed purpose in view, make the article call attention to something definite in your findings department, the repair branch or the stock of shoes that you carry for certain occasions or for different members of the family. You may have to test out various schemes before you will have results commensurate with your outlay. Three or four men have told the writer that they have secured more new and permanent customers from this proposition than through their newspaper advertising, for they have been able to key results and secure a valuable list of new names for mailing privileges.

A leading Montreal retailer, which has done more or less credit business is developing a plan to convert time customers into cash ones by means of the following method which is outlined in detail for the benefit of any dealer who may desire to follow a like method.

To every customer who pays his account promptly every month a souvenir is given. Premiums and cash commissions are given to every customer who sends one or more new buyers to his store. Anybody who brings to his store a number of names of possible patrons is also given a souvenir. The idea of the management is to secure and hold the goodwill of all customers by a judicious distribution of souvenirs.

Early every month a folder is mailed to every account that is on the books. This shows a statement of the balance

due, and an invitation to present the statement at the store before a date that is specified. When the required payment is made one of the monthly souvenirs is given to the patron. This souvenir is always some little article that the average woman finds useful about the house. These articles are purchased in large quantities, thus reducing their cost to the dealer to a minimum.

### Getting After Customers' Friends

The good work does not stop there, however, as additional use is made of the folder. There are three leaves to the folder, and one of these is a post card which the customer is requested to send to a friend who in turn will receive a souvenir upon presenting it at the store. The object is merely to get this friend to come into the store in order that they may secure his or her goodwill, name and address. It is not required that any purchase be made. It is the purpose of the clerk, however, who receives the card, to ascertain if there is anything wanted in shoes, either now or in the near future, and at the same time persuade them, if possible, to look over some of the new spring shoe styles.

A special card index file is maintained for these friends.

The customer whose friend purchases shoes secures as a special inducement a commission of five per cent. on all such purchases in the form of a credit slip for the amount due.

The souvenir circular sent out to the new list of names is gotten up in a most convenient manner. It is so folded that it is sent without an envelope for one cent. postage. It contains requests to read the descriptions of the styles of footwear that are illustrated and find out the souvenir that is being given away for that month. It is designed to arouse the curiosity of the reader.

To further this souvenir circular idea, each recipient is invited to send a post card to a friend. This may be detached from the circular. The store instructions are to the effect that if these souvenirs given away are worth the trouble the post card part of the folder may be mailed to a friend.

### An Endless Chain of New Customers

This scheme has resulted in practically an endless chain of new prospects, which are brought into direct touch with the store. One could hardly imagine a prospect calling for a souvenir month after month without being influenced to make a purchase of a pair of shoes or going out of his or her way to have a friend do so.

The real secret of the success of this trade stimulating scheme is that the good will of many new possible customers is secured.

Briefly summing up the advantages the souvenir proposition brings the customers to the store to make their payments, keeps them loyal, and gives real positive action of personal interest in their footwear needs. This souvenir idea has, according to the manager of this store, done away with a large portion of his collection expenses, and is paying the house well.

#### HE ADVERTISED—AT LAST

There was a man in our town,  
And he was wondrous wise;  
He swore, it was his policy,  
He would not advertise.  
But one sad day he advertised,  
And thereby hangs a tale,  
The ad was set in quite small type  
And headed "Sheriff's Sale."

# Mrs. Ardley Did Not Get the Shoes on Credit

She Had To Pay For Them, as Once the Door of Deferred Settlement is Opened it is Difficult to Close—If Credit Business is Done, Then Inquiries Would Be Made Regarding the Woman—If Satisfactory, She Would Be Given the Footwear Under Certain Stipulations—A Symposium of Views

Some dealers would have given her a pair on credit, but the majority would have turned her down flat.

In a recent issue of the **SHOE AND LEATHER JOURNAL**, an interesting proposition was presented. In brief, it was that Mrs. John Ardley had been in the habit of dropping into your store every month for four or five months buying shoes for herself or her three children. She came in one day, picked out a pair of high-class tan button boots retailing at \$6.00, and after being fitted, asked that she be allowed to take the shoes home and pay for them at the end of the month, when her husband got his regular cheque.

Mrs. Ardley, it may be explained, had always been in the habit of carrying her parcels away with her. She had the appearance of being a strictly honest and reliable woman, but you had no means of finding out anything with regard to the occupation of her husband, where she resided or anything of that character, as, up to the time of asking credit on the \$6.00 shoes, she had paid cash, and always took her parcels with her. The question—Did you or did you not give credit to Mrs. Ardley, and what are your reasons for the stand you adopted in this particular case?

The winners in the foregoing contest are:

- 1st prize—Miss Jessie Cumming, Fergus, Ont.
- 2nd prize—James Harley, Vancouver, B. C.
- 3rd prize—D. J. M. McGearry, Saskatoon, Sask.

## WOULD GIVE NO CREDIT

Miss Jessie Cumming (with H. L. Harrison) Fergus, Ontario, says: "The merchant who is conducting a cash business always knows just where and how he stands in regard to his business relations.

Mrs. Ardley has been in the store several times, and on each occasion has paid cash for her purchases, but this time, being near the end of the month, is short of money and asks for credit.

Now, we are doing a strictly cash business, and, of course, explain this to Mrs. Ardley in a pleasant manner, telling her, should the mayor of the town want credit, he too would be refused. She may take this refusal as an insult, as she considers herself strictly honest and reliable. She may also take all her business in future to the opposition store, but we would be taking chances of losing, not only the one pair of shoes that she wants, but all her business during the time she is on our books for that one pair.

A few years ago we were doing a little credit business, and to prove the cash system is the only one, I will relate a little incident. A lady entered our store one day and purchased several pairs of shoes and had them charged. Her bill was sent to her several times, but she paid no attention. At last it was handed to a lawyer for collection, and naturally cost her more than it otherwise would have done. She became very indignant and we lost her family trade for over a year; but her name was always kept on our mailing list and she received our annual advertising matter just the same

as our regular customers. We gradually won her back, and to-day she is one of our best customers, and, as we are now doing a strictly cash business, she never asks for credit. We simply lost her business for one year because we gave her the accommodation that she asked, while on the other hand, we would probably have lost her for a little while, because we refused her, but we would not have had the trouble of going to law. Our experience in both cash and credit business has proved to us that the cash one is the best and that 95% of the trouble we have had with our customers in the past has been through giving them credit and trying to collect afterwards. The following are the reasons I would give for refusing Mrs. Ardley credit:—

Because by doing a cash business we can buy better; because we can sell closer; because we can keep down expenses as no bookkeeper is required; because at the end of any day, week, or month, we can tell exactly what our profits are; because the cash system saves lawsuits; because often by

## He Specializes in Window Trims

The window dresser who won first prize a few weeks ago in the competition conducted by the **SHOE AND LEATHER JOURNAL** for the best trimmed, trade-pulling, holiday window in any Canadian town or village was A. E. Hogarth, who is on the staff of the Burns Co., Oshawa. He began his shoe career eleven years ago in the service of the firm that he is now with, starting as messenger boy and embryo salesman. After a period of five years he went to Western Ontario,

where he worked for a couple of years in Chatham and in London. He then returned to Oshawa and rejoined the selling force of Mr. Burns, with whom he has been ever since. Mr. Hogarth is an energetic and alert shoe salesman who has devoted special attention to window decoration and in the Oshawa store he has at his disposal as fine display space and fixtures as any city establishment possesses. There are over 80 feet of glass, the premises being located on the principal corner in the busiest section of that thriving town. Mr. Hogarth makes the most out of the splendid facilities afforded him in his work.

giving credit to people who are not honest we lose their trade altogether as they take their cash elsewhere.

We therefore think that any merchant would be wise to refuse Mrs. Ardley credit at all times.

#### IF DOING A CASH BUSINESS—NO

James Harley (with Wm. J. Orr), Vancouver, takes this stand: If you are doing a strictly cash business, the case presents to my mind very little difficulty. Do not look surprised when the request for credit is made. Do not embarrass the lady, but in a polite and kindly manner address Mrs. Ardley in this wise: "We are very grateful for your custom, but our business is conducted on a strictly cash basis. By doing this we are able to buy better, and therefore able to sell at a very close margin, our customers reaping the advantage. Now, as these shoes suit you, we will be pleased to lay them aside, until it is convenient for you to call, or we will send them to you C. O. D. at your pleasure."

I have invariably found that a talk along these lines proves effectual, and a permanent cash customer is added to the store.

On the other hand, if you are in the habit of giving credit your line of procedure must necessarily be different. The difficulty here is that once a person gets credit even for a few days, it makes it increasingly hard for you to refuse extended credit later on.

You admit you practically know nothing of Mrs. Ardley. It is therefore only right that you should satisfy yourself as to her ability to pay for the goods before you part with them. As she has been resident in the city at least for several months, she will be able to refer you to other merchants she has dealt with. Let her know that on receipt of their report, if things are satisfactory, you will deliver the shoes. At the same time, come to a definite understanding when the account will be settled, and when you send the bill, write the date of settlement plainly.

Should Mrs. Ardley fail to come up to your standard, then, in justice to yourself, you must withhold credit. You may make a mistake once in a while, and drive away a customer, but I am satisfied that your losses through indiscriminate credit giving would far exceed the other.

#### STICK TO CASH PRINCIPLE

D. J. M. McGeary, manager of the Royal Shoe Store, Saskatoon, Sask, says: "In the first place, this question of Mrs. Ardley is the old familiar one, viz., a good cash customer until credit is given, then a customer no more, because of the price of one pair of boots."

I would refuse credit to Mrs. Ardley in a polite way, saying, "We never give credit to anyone, and are sorry we cannot make an exception in your case," and add that we could not run our business and sell shoes so cheaply if we gave credit, not alone because of the possibility of bad debts, but the expense of extra books, bookkeeping and collections. We are always careful to purchase our goods for cash, thus buying in the right markets and at rock bottom prices. I would tell her how much we have appreciated her business and hope she would allow me to put the goods aside for her convenience as I was sure she could not obtain a more suitable shoe and such a proper fit.

My reasons for refusing credit is that Mrs. Ardley, if a good housekeeper, and always paying cash, can plan to get shoes, if needed so badly, on the former pay day, or wait until the next one. Also she should have solicited credit, and not wait until the deal was completed, to make the refusal all the harder. No doubt Mrs. Ardley would be disappointed but on calmly thinking it over, would give me some credit for holding to our rules, and she would remember the points of the shoe decided on, and might find it difficult to get satisfaction in a strange store.

If I gave her credit, the chances are, the account would

not be paid when promised, and I would lose her trade in that way, because she would be prejudiced on account of the amount of dunning necessary before final settlement.

Then again, once a person breaks the "strictly cash" rule, it is much easier to do so again. Firmness to principle combined with politeness is always best.

#### DEPENDS ON STORE METHODS

George E. Girling, of Edmonton, Alta., says: "It would depend a good deal on the methods of the store in question whether Mrs. Jno. Ardley would be allowed to take a pair of shoes away under the conditions given in her case.

If a retail store should be one that is in the habit of giving credit and allowing their customers a thirty days' account, as a good many do, the way to me would be very plain. I should ask Mrs. Ardley right out if she had any other accounts and who they were. Mrs. Ardley would have to wait until I made those inquiries or she could leave the shoes. For one thing, \$6.00 for a pair of women's shoes seems to be a pretty large price, and that point alone would put me on my guard as to whether or not I would give a person credit under such conditions. In this case, according to the report from her other accounts, I would determine whether I would let her have the goods or not. If she hadn't any other accounts my point would be decided then on the class of goods that she had been previously buying, and my judgment of her personality.

I remember well, that I once had a good customer with a very large family, who used to buy her shoes from me, and who always paid cash. This lady was to all outward appearances very well fixed. I never knew her name, and I did not know her husband, but he must have held a good position because of the style of living and the heavily rented house in which they lived.

This lady came to me one day and asked me to supply her with a pair of S— brand shoes. This shoe costs 17s. 6d. retail in England, and is sold near St. Pauls Churchyard, and was a shoe which I did not and could not get the agency for. Now, it was very evident that this person was very closely driven to for money as she offered me 22s. to go and buy a pair retail and re-sell them, but under these conditions she wished to pay a small amount monthly until they were paid for. This is a case very similar to the one of Mrs. Ardley, and I would not entertain the thought of credit in a case like this for one moment, although this person had been spending ready cash with me for some months.

Now, take the stand that the store is being carried on on a cash basis, I would not give credit. It is very plain that such conditions could be explained judiciously and respectfully to the customer and we would rely on our explaining this in an intelligent manner so that we would not cause offence, and we would keep our goods if Mrs. Ardley did not pay.

#### WOULD STRAIN A POINT

J. H. Flaherty, of the Amherst Shoe Co., Amherst, N. S., writes: "As competition is keen, I would not allow \$6.00 to stand in the way of a good customer which Mrs. Ardley would in all probability develop into. After being fitted and suited, she asks for credit until the end of the month. I would tell her frankly that I did not know her or her husband, and, that while I was not in the habit of doing a credit business, I would oblige her, as she had been a good patron for the past few months. Being a middle-aged woman, and having every appearance of being honest and reliable, this would predispose me to grant her this favor. If my method of reading human nature is correct, I would come to the conclusion that she thought, after paying cash for four months she could ask credit in good faith for one pair of shoes until

the end of the month. That being the case, I would not refuse her and would let her have the shoes under the distinct understanding that we were to be paid for them as soon as her husband received his monthly cheque. By this concession, I think we would gain her good will and future business as well as that of her friends."

#### PREVIOUS PROFIT WOULD COVER

J. H. Gillespie, of Springhill, N. S., says: "Yes, I would give Mrs. Ardley the shoes as requested and in the meantime, I would take the trouble to find out all about this woman and her husband. If I discovered that I had made a mistake, I would be satisfied that one has to get 'stung' occasionally, and that the profit on what I had already sold her would cover the loss. Of course, in this case, much would depend on the appearance, manner and general deportment of Mrs. Ardley. One has to be governed very largely by the particular circumstances arising in each case."

#### WOULD PUT THE SHOES ASIDE

Frank Halbert, of Shelburne, Ont., says: "If Mrs. Ardley had been in the habit of paying for what she had purchased during her previous visits to my store and I had no knowledge of her or her husband, and she asked credit for a pair of \$6.00 shoes, I would say: 'Well, I will put them away for you until a certain date,' mentioning the date, and if Mrs. Ardley is an honest and reliable woman, she will call for her footwear on the date mentioned, and will regard it as only business on my part to have the cash paid over at the time she called for the shoes. On the other hand, if Mrs. Ardley did not call for her shoes, I would say she never intended to pay for them, and would consider myself better without such a customer."

#### WOULD DEPEND ON APPEARANCE

George Fissett, who is with D. P. Foster, Cayuga, takes this view: "I would find out from Mrs. Ardley, as carefully as I could, if her husband was holding a responsible position, and if she did all the buying. I would also tactfully ascertain whether it was agreeable to her husband to have her do the buying. At the same time, I would be rather suspicious of her executive ability or her handling of the funds by buying for herself a \$6.00 pair of shoes, having her three children and husband to look after, and yet running in debt before next pay day. I would also be governed somewhat in my decision on how Mrs. Ardley was dressed, her actions and conversation. I think a salesman can read a person by closely observing his or her outward appearance and style. If Mrs. Ardley answered the questions that I put to her agreeably, and if her appearance warranted it, I would let her have the shoes, but if she were dressed in a gaudy manner, with a drug store complexion, I would not let her have them."

#### THE VIEWPOINT OF A SALESMAN

D. J. De Vine, of the Yale Shoe Store, Winnipeg, writes: "Would I give credit to Mrs. Ardley? Well, if the boss were in, I would possibly turn her over to him and let him deal with her as he saw fit. Supposing he were not in at the time, this is the way I would, as a clerk, try to retain her patronage, after the request for credit had been made. I would say: 'Well, Mrs. Ardley, our positive instructions are to collect cash on every sale, or not to let the goods go out of the store. You have been buying from us for four or five months now, and according to your own words, you have had good satisfaction. We have done our best to please you at all times, and we would be sorry to lose you for a customer. If Mr. So-and-So, the proprietor, were in, I have no doubt he would give you the shoes, as selected, but you see my position. I tell you what I will do, though—

I will send you the shoes on approval this evening by our special messenger. I will have our messenger call again to-morrow. If you find that it is impossible for you to have the price on hand, he will bring them back.' Now, in nearly every case like this, Mrs. Ardley will fly around and get the money if she really wants the shoes, and the store would thereby retain its cash system. Mrs. Ardley will also always buy from us when she has the cash, but at other times, she will possibly go some place else."

#### TURN HER DOWN GENTLY

G. H. Scott, of Scott Bros., Pakenham, Ont. "Finding myself in such a position as you describe, I do not give credit to Mrs. Ardley. I realize that I must not offend her by allowing her to get the idea that I thought she was not worthy to trust, so, in a kind but firm and candid manner, I briefly explained to her that, as she was a comparative stranger, I could not accommodate her, it being against my policy to give indiscriminate credit. My reasons for this action and for putting the case in this way, were: First, if she were strictly honest and reliable, she would also be reasonable. People of this stamp are generally able to look at any question from both sides, and by putting my views of the case before her, I think she could scarcely take offence. Secondly, if she were not strictly honest and reliable, I will probably never see her again, as experience has proved that once a party obtains credit, without intending to make good, such a one invariably avoids that store in future and will not go in for anything else, even if he or she has the ready money and is going to spend it somewhere."

#### ONE'S DUTY TO FIND OUT

T. I. Craven, of D. P. Foster, Cayuga, Ont.: "Yes, I would give credit to Mrs. Ardley, because she had been buying shoes from us for four or five months and it was our duty to find out this lady's standing, as she had been our customer for that length of time. If we had not done so, and she got ahead of us in this transaction, we were clearly to blame. Any trouble like this can easily be avoided by having someone on the staff, whose duty it would be to ascertain the standing of every customer who had been purchasing shoes at intervals for several months. Surely if a footwear establishment is alert and energetic it should know who are reliable and who are not. Now this proposition of Mrs. Ardley was not sprung suddenly. She had been coming for several months, paying cash for her goods and giving us no trouble. She walked away carrying her parcel with her, and apparently was honest and reliable. If, at the end of four months, we did not know enough about her or her husband to grant her credit for a few days on a pair of \$6.00 shoes, well, there would be something wrong with our establishment. There is nothing particularly suspicious in the fact that she should ask for credit until her husband was paid at the end of the month. Where on earth is the family or the individual that does not become "strapped" or "stranded" once in a while, and at the same time desire something in the line of personal apparel or house furnishings? It is a decided convenience as well as a gratification to be able to get a thing when you want it, and this woman had paid cash all along. I think she was certainly entitled to an extension of a few days."

Now that English, French and German middle classes are wearing patent leather shoes a great deal, American export trade in that leather is greatly improving. Only a small amount of patent leather is made in Europe, and this is almost entirely made in Germany. It is very high in price and small in supply. For this reason, European manufacturers have to buy a great deal of patent leather from this country. Exports of patent leather amounted to \$1,500,000 last year.—Shoe Topics.

## Refunds Purchase Money Cheerfully

**How Shoe Business of Leading Eastern Firm has Been Built Up—The Advantage of the Cash System—Head of the Department Outlines Some of the Methods That He Has Found Profitable in Enlarging Trade.**

"Yes, I believe in a cash business. No pair of shoes is ever sent out of this department without the money being paid here or the goods being delivered C.O.D. We adhere strictly to one price and at whatever figure an article is marked, that is what we obtain for it. We occasionally throw in an extra pair of laces, but there are no two prices. If a pair of shoes does not suit the customer, he can exchange them or get back every cent he paid for them and no questions are asked. We know our own goods and have our own

J. MCGILLIVARY, AMHERST, N.S.

private marks, and it pleases the patron very much when he knows that his cash will be cheerfully refunded if the shoes do not fit.

"Another thing—this plan saves a lot of fitting on a busy day. A lady may come into the department who perhaps does not want to try on footwear just then or she is in a hurry. The first thing she will ask is, 'Can I get my money back?' We say, 'Yes,' and she will pay for as many pairs as she takes away or are sent up, but if we intimated that she could not get the purchase price returned, we would not be able to make so many sales. Our aim has always been quick sales and small profits."

The speaker was J. McGillivary, who for nine years has been manager of the shoe department of the large store of the 2 Barkers in Amherst, N. S. This firm operate eight successful stores in the Maritime Provinces, four in New Brunswick and four in Nova Scotia. The one in Amherst is the only establishment which carries shoes.

Two catalogues are issued each year by the house, which greatly increases trade. There are a number of flourishing industries in Amherst and "pay day" is every two weeks, which materially assists in keeping business on the move.

Mr. McGillivary has been in the shoe line for twenty years. He was born in North Sydney, C. B., and his first experience was with the Cape Breton Boot and Shoe Company in North Sydney. His initial job was welting, and his next was cutting side facings. When the company moved their factory to Pictou, N. S., he went with them and continued in the cutting room and also looked after the shipping for three years. He later removed to Amherst and was cutter of linings with the Amherst Boot and Shoe Co. for a considerable time. He left that concern to take his present position, and, during the nine years that he has been in charge of the shoe section of the 2 Barkers, he has built

up a large trade and looked after the wants of customers faithfully and well.

Mr. McGillivary is a good stock-keeper, a gentleman of pleasant address and an enthusiastic shoeman, in whom his employers and customers have the utmost confidence. He keeps posted in all that is going on in the trade and is not afraid to tackle any new plans or methods which he thinks will attract more business.

## Trade Marked Shoes Spell Success

The "Boston Store," of Providence, Rhode Island, is one of the largest shoe retailers of the city—perhaps the largest. Moreover, the department is growing steadily though it's old enough to vote. What is still more to the point—it's paying a good, round profit.

Mr. Perry, the department buyer, was recently asked to what he attributed its success:—"Our own reputation and service plus the Queen Quality Shoe and its national advertising." "We figure," he continued, "that it's a great deal easier to draw customers to our store for this shoe than it would be for any other women's line. But we don't believe that there is any profit in doing the thing half way. If you won't handle a trademark shoe in the right way, let it alone. It doesn't pay to dabble. We handle this line exclusively for our \$3.50 to \$5.00 shoes. Of course we fill in above and below that with other lines, but the Queen Quality sells out the cleanest, turns over the oftenest and pays the biggest profit."

"If I could make as good a showing on the other lines as I do on this, I should be very well pleased indeed.

"We have handled this shoe since 1901 and I have still got their first catalog. But the business is growing as fast now as at any time. This year I placed my regular order for Fall and also my duplicate order which amounted to about fifty per cent. of the original. It was scheduled for Fall delivery. The salesman, however, suggested that I would want it by September 10th and although I had not the slightest expectation of wanting it until the first of October, he said he would have it prepared by that time. On August 29th the head of the Queen Quality shipping department wrote me that the shoes were beginning to come through and would be ready for me at any time I cared to order them in. On September 10th I begin to receive them. I had taken all of the first and most of the second order. By October 1st I had all of the first order in. By November I had re-ordered on a number of the styles from the stock. I don't know that we would care to give exact figures but I think the facts as I have related them tell very plainly how we feel about these shoes." It is interesting to note in connection with this story that Mr. Perry has been with the Boston store for twenty-two years. There is a decided connection between success and the shoe buyer's permanency. A good trademarked shoe spells success and permanent connections. Retail stores are looking with favor at the advantages that go with good trade-marked shoes.

## It Is Not Good Merchandising

A great many shoe retailers who are anxious to build up their businesses, resort to frequent bargain sales, believing they are the best form of advertising. The bargain sale principle is a bad one. In the first place, the essence of good merchandising is to obtain fair prices. There is something wrong when a merchant has to dispose of a considerable portion of his stock at bargain prices. Either he has not bought carefully or wisely, or else general trade conditions are bad. It cannot be good advertising which sells merchandise below its real value and which encourages consumers to get the bargain sale habit.

## System Important in Card-Writing

How To Make a Drying Rack and Other Things That Will Enable the Card-Writer to Work More Effectively—Holder For Pens and Brushes—Do Not Be Too sensitive Over System From Outside Sources—One May Gain a Number of Pointers From the Public Viewpoint

By R. T. D. EDWARDS, The Robert Simpson Co., Toronto

(Copyright by the Acton Publishing Company, Limited)

The natural tendency of human nature is to resent criticism. This is particularly true when the critic is one who does not claim to have the amount of knowledge on certain subjects that you possess. You feel that he has no right to criticise. Take, for instance, an observer of one of your show cards who offers you a criticism. Do not pass his comments over as worthless because they may come from one who knows practically nothing about card-writing. It is the public that you want to interest in wording of your show cards and consequently, the views of an outsider regarding them is of the utmost value to you. The writer has had comments on some of his cards, which were known to be the best from a card-writer's viewpoint, but which were thought not as good by others. It would pay you, therefore, to let some one else judge your work. By paying attention to their decision, you should be able to improve many points which you had entirely overlooked previously.

### About Systems

By carefully systematizing your work you may be able to save a great deal of time. Probably you have considered that your card-writing department is not of sufficient importance to warrant it being systematized, but if you figure out the minutes which you will save by being able to lay your hands on anything you want—when you want it—you will find that much more work can be accomplished.

A drying rack is a really good thing for a card-writer

to have. Very often when you slip into a card-writer's room you find cards which have just been made lying all around the floor, where they are liable to become soiled. A very suitable drying rack can be constructed in about five minutes with a piece of board and a cent's worth of nails. Choose a board of some kind of soft wood about three feet long and four or five inches wide. Drive two rows of nails spaced about three-quarters of an inch apart the entire length of the board. The nails should project out about one and three-quarter inches. Lean it against the wall, as shown in the illustration. Keep the cards as nearly level as possible, while they are drying. A rack three feet long should have a capacity of holding about sixty cards at one time. If you are within easy reach of a board partition, a useful drying rack can be made by driving nails into it, pointing them upwards at a slight angle.

### Row of Pigeon Holes

Another little stunt which will be very useful and save time in assorting is a row of pigeon holes, having a section for each department of the store. When the cards are taken out of the drying rack they may be placed here and kept in good condition until they are required to be used.

Most card-writers have considerable trouble getting all of their cards uniformly spaced. A system of stencils can be kept on hand. This will be found of great assistance in laying out cards. The accompanying illustration shows sev-

UPPER LEFT CORNER, BRUSH RACK;  
NEXT, DRYING RACK;  
BENEATH, PIGEON HOLES FOR CARDS;  
THE BALANCE ARE LAYOUT STENCILS.

eral of these which are used for popular layouts. Make a set and keep it near your desk and see how much time it will save for you in the course of a day's work.

In this lesson we are departing almost entirely from the actual making of show cards, because we believe that the ideas which are presented herewith will be of much assistance to card-writers in making their work more efficient. These little stunts come to one out of years of experience.

#### A Pen and Brush Holder

Another little idea which has proved to be very useful is a little pen and brush holder. It is a three-sided piece of wood with small tacks driven in about half an inch apart, along one edge. Place this on your desk so the handles of

NEAT AIR BRUSH CARDS

your pens and brushes can rest between the tacks. In this way you have them always to hand and never have the annoying necessity of picking them up off the floor.

#### The Illustrated Cards

The two large cards illustrated herewith show two varieties of stencil air brush work. The "Spring Style" card is a brown scroll with a pale green background. The lettering is of modified Roman, with pale green shading. The "New Spring Arrivals" card shows the lettering which was illustrated last month.

## Do Not Deceive Your Clerks

To the Editor of the SHOE AND LEATHER JOURNAL:

Sir,—For a long time I have been thinking of writing to express my views in favor of the clerks. Papers often speak as if the clerk were nothing but a drag on a business, always exhorting him to do this or that for his employer,

but you very seldom see anything regarding how a merchant should treat his employes.

There is one thing especially which galls me and that is the matter of what you might call false promises. Pick up whatever paper you wish and look in the advertisements. It doesn't matter much what line it is, shoe clerk, real estate salesman, or office boy, they usually end up with "splendid chance for advancement." This is prefaced by "salary not large to start with," and the "splendid chance for advancement."

In twenty-four cases out of twenty-five there isn't any chance for advancement at all unless you could call a dollar a week advance in wages each year a splendid chance.

I remember one man who approached me one time to work for him in Hamilton. He was looking for a man who would soon take a share in the business, and later on, if everything went well, take over the business completely. He was getting up in years, he said, and wanted some one who could look after the business. Of course, the salary wouldn't be extra large, but look at the chances there were. However, I declined the place and learned afterward that it was as well I had. He had no more intention of losing his grip on the business than he had of paying anyone a decent salary. He had a man with him who had stayed for a number of years lured on by promises that were destined never to be fulfilled. He was actually running the place, and the owner was making a net profit of about three hundred per cent. on his man.

There is another place I know where they promise big things to their employes when they first go to work for them. They wait till an employe gets disgusted and is on the point of leaving and then raise him a dollar a week in salary. If the employe is foolish enough, this can be done several times until he sees that it is nothing but sheer bluff. Why, I wonder, can't they be honest with both themselves and their help? What a pleasant change it would be if a boss would come right out and tell the truth; instead of giving the impression that in three or four years they will have become "captains of industry."

There is another case in this connection which strikes me forcibly, that of a large corporation which has brought out several men from the old land. They have paid some of them the munificent sum of eight dollars a month and board, with a contract running sometimes for three years to this effect. They tell of the chances there will be after the contract has expired. And then merchants complain of the lack of interest their clerks show in business. Is it any wonder? When merchants are sane enough to evolve a system which will prove of mutual benefit they will be beyond the necessity of complaining of lack of interest.

I fully realize the fact that clerks are not perfect. There are those among them who should not be there. As a body, however, they often take an interest in business which the facts would not warrant.

There is one other point I would like to mention, and that is the matter of courtesy, or lack of it, from a merchant to employes. Because a man takes your money it doesn't give you a license to insult him whenever occasion gives the opportunity. In five cases out of ten the recipient is superior to the giver in both character and business ability. The fact that many retailers keep men in their employ is that they are the real makers of the business. Some men think it policy to keep all personal feeling out of their business relation. I suppose it makes it easier to hand out the slurs than if they acted occasionally like human beings.

Having relieved my mind of a few things, I trust you will have space in your paper for them.

Yours, etc.,

A. C. T.

# Don't Blame Others for Your Errors in Business

Study Your Trade, Know Your Goods and Profit By Experience—Pick Up All the Pointers Possible, Read and Learn Get Out of Your Narrow Sphere and See What a Broader Perspective Will Do to Assist You in Buying

"I would not take your paper as a gift," declared a certain Western Ontario shoe man the other day. "A number of years ago I was a subscriber and took a tip from you on styles. I followed the hint given and went in heavily for button boots for spring—whereas, as I afterwards discovered—the laced shoe had all the sale. I was badly stung."

And here is the reverse side of the picture, from a retailer in Eastern Ontario. "I always enjoy reading your journal. It affords me a good many pointers, and, while I do not always agree with the advice given or views presented on its pages, I still admire your fair treatment of many perplexing trade topics. You know this world is big enough for all men to hold different views—to come together on essentials, and let non-essentials take care of themselves."

Here are two diametrically opposed views. One man wants to blame his lack of skill, insight or foresight in buying, on a trade paper, instead of reading carefully gathering information and coming to his own conclusions, as any reasonable and broad-minded man should. Like many another person in this world, when an error has been made by himself, he seeks to throw the onus or unload the culpability on some one else. No traveler, wholesaler, retailer or trade paper in the land can set himself or itself up as a final authority or infallible arbiter on styles, profits or any other problem, for the simple reason that conditions differ widely in various parts of the country, and what will move freely or be the "go" in one town in the east, may not even obtain a foothold in a place of similar size in the west or mid-west. It is for each individual to know his own trade—study it at close range and obtain a thorough grasp of the local situation. Then he can accurately gauge for himself what to acquire and what to exclude in his purchases. No reputable man or medium puts himself or itself up as an unerring guide. One might as well attempt to predict what kind of weather will prevail to-morrow in the different provinces of the Dominion—whether the summer will be long or short, the wheat crop heavy or light.

Then public fancy is unaccountably fickle. There is no logical deduction for the sudden change that buyers of footwear will develop, and because a man has been stung on one or two lines, on tans, patents, colonials or button oxfords, is no reason why he should lose faith in his trade paper, his manufacturer, a traveler, or himself. Everybody in life has to charge up a certain amount of loss in securing experience, and, if experience does not help a man to bridge certain chasms, glide over pitfalls or rectify mistakes, he is slower to learn than the average human. The broad fellow is the one who can disagree with you yet give you credit for the sincerity of your views and the honesty of your stand whether in religion, politics or footwear fashions.

## The Know-It-All Kind

A retailer does not like a traveler who knows it all—who can tell him to a dot what last is going to sell, what toe will be the leader, what leather will be the winner, etc. Neither does a traveler fall in love with that dealer who knows so much about the footwear business that he is not receptive to any new ideas or suggestions. In this world there must be a certain amount of give and take, of taut and lax, and the reading man is the one who is able to discern the sign posts and adopt just what suggestions, pointers or views may be of use or benefit to him and let the others glide by or be passed. Different kinds of soil raise varied productions. It is the same in buying and selling shoes. Each community has its own particular trade. The proprietor must learn in

course of time what is the average price paid by his patrons for shoes, and also know the individual needs of each customer, if possible. For this purpose an index card system, giving a record of the name, address, date of last purchase, kind of shoe bought and price paid proves a valuable help. Plans of this kind has been outlined so frequently that it is not necessary to refer to them at any length. Many suburban retailers take infinite pains to preserve such records, and from them, compile a periodical mailing list, sending out reminders at certain seasons, calling attention to special lines. Thus personality plays an important part in the contact between seller and buyer. After all, personality coupled with service is the surcharged wire or current that keeps business alive.

## I Have No Time to Read

There is still a third type of retailer who comes along and says, "I have no time to read," or he says, "a trade journal is like the Bible—always plenty of them around, but very little read." The man who declares that he has no time to read, does not generally have to proclaim this fact in an audible voice. His manner, his address, his stock, his system and his surroundings are often visible evidences of the fact. The busy fellow can always find time

## Starts Off Well in Shoe Game

N. Leach, who has embarked in the shoe business in Smith's Falls, Ont., is a widely known and highly respected resident of that town. He was employed for some 26 years in the Frost & Wood Agricultural Implement Works and on

N. Leach, Smith Falls, Ont.

the occasion of his retirement from the service, was presented by his fellow employes with a roll top mission oak desk and chair. Mr. Leach is at present carrying a representative stock of staples, but intends to add shortly a full line of finer goods. He finds that business has opened up very well, in fact much better than he expected for a beginner in the footwear game.

to glance through all trade publications and if he has not the time, he will take it. But there are a few doing business on a back street with tumble up stocks, forbidding store fronts, and dust-covered cartons, who have no time to read, or who will very sapiently exclaim, "I will not allow anyone to tell me how to run my affairs or dictate to me, I can direct my own business. I have been here for 33 years and guess that none of these new-fangled notions or fresh Johnnies can teach me anything. They may have a more expensive establishment and a more showy front, but after all, it is the fellow who cleans up the most at the end of the year that has the most satisfactory experience."

There are always enough exceptions to most rules to prove the correctness of them, and now and then perhaps a shoe retailer who does not read and never has read, may make a success of his line, but generally, the more aggressive and wide-awake men, those who are to the forefront in proper stock-keeping systems, good buying methods, effective window decoration, store service, profitable price marking and clean, "live" stocks, are the ones who follow closely the trend of the trade, who meet and exchange views, who seek new ideas, attend either local or provincial trade gatherings, and occasionally get away from their place of business and visit other centres, where they can approach things with an open mind and find out, after all, that the world is a much larger sphere than the small orbit in which they circulate. It pays the average retailer, not only to read but take time to read, and if he does not agree with everything said, he should not jump at the conclusion that the writer or speaker is always wrong. Some statements will bear close examination and new light will be shed upon a subject the more it is studied.

### The Leisure of the Busy Man

With few exceptions, the busiest man is the easiest to see and has the most time to attend to tasks. The chap who has "no time," is invariably the fussiest, keeps open the longest hours, and accomplishes the least. A certain shoe traveler walked into a store in a Nova Scotia town not long ago and told the proprietor that he would like him to come over to the hotel and see his samples. The retailer was sitting at the back with his feet on the stove, smoking a corn cob pipe. The traveler who knew him pretty well, said, "Why can't you come over this morning or this afternoon?"

"Too busy," replied the dealer.

The road representative looked at the man, smiled significantly and said, "Well, you certainly are not perspiring any at present."

"Look here," drawled out this business prince, "Never judge by appearances. Physically, I may be inactive, but mentally, I am very, very busy," and it was not until two days after that, that he wended his way over to the hotel to look at the samples. This is the fellow whom you could not hoist out of the rut if you tried, and there are a few of his kind in every part of the country. Never will all people think alike, although human nature is much the same the hemispheres over. If two persons do not happen to agree, they surely can afford to disagree, if their views are honest.

"Yet it would not do for all people to think alike," mused the oddly philosophical Brother Jones, after 53 years of married life. "When I was courtin' Susannar, few thought the same as I did about her, in fact, I was in a hopeless minority and married her believing that she was a jewel. Now, after a long tug in the traces together, most everybody else thinks she is crackerjack of a wife, with an angelic disposition, but they little know the tongue-lashings that I have endured and that temper of hers. Again, the world thinks differently from what I do."

And thus, most people see only one side of a question and their attitude often shifts according to the angle of their perspective. Engage in a little introspection at times. If

things would appear to you in the right light, get out of the shadow into the sunshine. Step out of the alley into the open, remove your smoked glasses and get in step with your brother across the street or your competitor in the next block. Cultivate him. You will find, that he is a pretty good sort after all, and by association, and intercourse, many misunderstandings, petty grievances, or short-sighted prejudices will disappear, like the fog before the clean noon-tide sun.

## Loves Ladies But Not as Clerks

Editor of the SHOE AND LEATHER JOURNAL:

Sir,—I see that the question, "Is it profitable to employ lady clerks in the shoe store?" has been discussed with considerable vigor in your columns. About the only winning point that I can discover, after reading interviews with respective dealers in various parts of the country, is that where women are employed, some money is saved in the matter of wages. This seems to be about the only valid point brought forward in favor of lady help in the shoe shop. Now, some of the various dealers' views were really amusing. There is one man who says that he employs a lady clerk and that she is a crackerjack and he would not have a man under any consideration. No doubt this lady clerk is his wife's sister. He wants to keep all the money in the family.

Another fellow states that he has one lady clerk and one man clerk, and that he lets the man do the work about the store. Of course, while the man is doing that, a woman comes in and this lady assistant waits upon Mrs. Honey or Mrs. Sugar Bowl, and thus takes her place virtually ahead of the man. This male clerk should take a position somewhere else. The most honest expression of opinion comes from Vancouver, where a retailer says that he does not employ women clerks because he thinks that men are better salesmen, and he looks on the shoe line as a man's business and thinks that a woman is as much out of place in a footwear store, serving the public, as a man would be in a millinery parlor or a dressmaker's salon.

If I were out of a job to-morrow, I would try to get a position with this employer, as he apparently is willing to pay a good salary and to suitably recognize extra efforts on the part of his staff. He does not speak of so much saved in wages in a week or a year.

I seriously doubt if a quarter of the shoe stores in Canada employ women clerks. To my mind, and I have traveled a great deal throughout the West, women clerks are few and far between. I think those merchants who employ them are going backward, and should try some other vocation; and I have no antipathy, either, toward the fair sex. I regard women with adoration. As a help in the shoe store, my admiration would be speedily converted into toleration.

Yours, etc.,

Edmonton, Alta.,

March 12th, 1913.

SALES BOY.

## Develop Personality in Business

The story is related of how the merchants in a fair-sized village quietly stamped out a great deal of the mail ordering habit among their customers. From day to day they observed large shipments of freight and express coming into the village from the big catalogue houses for distribution among the people whom they were supposed to serve. Eventually they became alarmed, and after a consultation decided to talk the matter over quietly with their respective customers to persuade them that they could give just as good values as the mail order houses. This had a splendid effect, and resulted in a great deal of the business formerly sent out being kept at home. Personality gained a victory, and if this phase of a dealer's selling power were more developed, it would mean more business.

## From 1905 to 1913

**Eight years of steady increase have made possible the erection of the most complete tannery in America**

To have been enabled in eight years to increase the output of its establishment over 7900 per cent. is truly a noteworthy achievement, and one of which any firm might pardonably feel proud. To have added to that achievement the creation of a market to take care of the increased production looks to us like a convincing testimonial to the value and honesty of the product.

At Newmarket, Ont., there has been completed a model tannery. There is not a more complete tanning establishment on the continent. Everything that science and inventive genius has been able to devise for the elevation of quality and the lowering of cost of production is in use here. Throughout the establishment the most modern methods of tanning, and the most successful machines are employed under the most favorable circumstances.

**Davis Leather Company Limited, Newmarket, Ont.**

1905

Viewed as the result of eight years' endeavor this completed plant appears as a monument, not to the sagacity of the Davis Leather Company, but to the unvarying high quality of their leathers. Every skin that ever left the Newmarket tannery has been cured, tanned and finished so well that it could be relied upon, if necessary, to uphold alone the whole Davis reputation.

And so it has come about that every skin, and every bundle of skins, that bears the Davis mark can be depended upon for even texture, color and finish. From the beam house to the finishing room, through the process of transforming a raw skin into a finished skin, every step has

but many, are responsible for the appearance and quality of the skin, consequently the possibilities of a defective getting through are very small. Every skin has to pass through many hands, and under many eyes, all on the lookout for some defect in texture, tannage, color or finish. Before the new plant was thought of a reputation for careful, painstaking effort had been won by the old plant. No defective skin ever left its doors. With all the added advantages of system and machinery you will readily understand that it is practically impossible for a poor skin to leave this new plant. Its completeness is, in itself, a guarantee of the quality and high standard of its product.

Davis Leather Company Limited, Newmarket, Ont.

HON. E. J. DAVIS  
President

ANDREW J. DAVIS  
General Manager

E. J. DAVIS, JR.  
Superintendent

AUBREY DAVIS  
Vice-President

In 1905, just eight years ago, the Davis Leather Company, Limited, was formed, and the first portion of the plant was established at Newmarket. At this time, the daily output was 100 skins. By 1912 this had been increased to 3,000 skins. With the present plant running to capacity the daily output will be from 7,000 to 10,000 skins. For sometime past it has been absolutely impossible to supply the demand, especially for some of the better known leathers. Now this big handicap is overcome. Soon every manufacturer will be able to get his leather when he wants it, and in what quantities he wishes. And getting it, as he will, in good order, with every skin perfect, he will have the further satisfaction of knowing that the leather he puts into his good shoes is tanned in the most modern and complete plant in America.

## When Will Recede Toe Arrive? Trade is Asking

(Continued from page 40)

—the very latest wrinkle in up-to-date shoe trimmings. These new lasts have also ribbon stitched edges. The improvements, together with the high grade leathers used and the unusually expert workmanship shown on every sample, make exceedingly classy looking shoes. Especially for city trade this company are showing a shoe on a city last with ribbon stitched edge and flange heel with wooden pegs on top pieces instead of the usual slugging wire. This

Patent colt bal.,  
mat. calf top, blind  
eyelets,  $\frac{3}{4}$  heel,  
"dinky" pull strap,  
recede toe — By  
Ames-Holden-  
McCready.

is an effect which is undoubtedly new in Canada. In gun metal and patent button shoes buttons with a bone black finish are used. This is also a new effect. It is very hard indeed to tell this button from a silk covered button except upon close examination. In the men's line also, fine serge and worsted tops, grey mixture, seamed with California welting, are being used which make very neat and stylish shoes.

In women's lines, as well as the usual range there are seven new lasts including medium wide and medium high toes for the average trade, and strictly city lasts for the city trade. These city lasts have medium recede toes and low, flat heels. Among this city line was noticed a very handsome combination of a fawn colored cloth top, gun metal vamp, stitched and trimmed in black silk with bone finished buttons; also a brown calf lace boot with blind eyelets on a recede last with a low flange heel, having a custom finished bottom with panel effect. Another novelty which is bound to be popular is a 10-inch storm boot, unlined, made of Norwegian calf, on medium high toe and 7 of "K. K. Junior" eyelet hooks—a new invention. This eyelet prevents the skirt catching and also assures easy and rapid lacing when putting on the shoe. Another feature of this boot is the rawhide middle sole which, even if the outer sole were worn through, would stand any amount of wear and tear and come through unscathed. Ames-Holden-McCready are also showing twenty lines of women's high grade turn slippers and pumps. This is an unusually stylish looking line of footwear. Among this is a new slipper made on a strictly pump last which absolutely prevents gaping at the sides. This line of footwear is worthy to be placed alongside of the finest imported goods. In fact there are some features to be found in this range of men's and women's shoes which are hardly duplicated elsewhere to-day.

### Colors and Dull Finish Leathers

The C. E. McKean Co., of Quebec, state that they believe colors and dull finished leathers will sell very freely this fall. Receding toe lasts will be the favorite in high-class goods in the cities and larger towns, but they think that the wide, high toe will still have a big call in moderate

priced lines, and for the general trade. They are showing some exceptionally nice shoes in tans—one being a tan willow calf blucher, medium toe, with two full soles on the "Premier" last. Another is a chocolate willow calf, with two full soles waterproofed, plain quarters and high toe, on the "Binford" last. Another showing is a tan willow calf blucher, leather lined, with heavy slip sole, plain quarters on the "Senator" last. Still one more attractive shoe is a whole foxed, Lotus calf bal. with blind eyelets, medium toe, on the "Premier" last. The line of welts this year of the McKean Co. is the strongest and snappiest ever turned out by this wide-awake firm.

### Some Very Classy Things

Getty & Scott, of Galt, are to the front with a select and splendidly assorted line of fall samples which are undoubtedly the finest and most representative ever turned out by this progressive firm. In children's footwear red kid and red calf button boots are very popular. Other offerings are high cut napoleons in fancy leathers and combinations, with patent collars. In misses' brown and grey buck buttons are leading styles, as well as gun metal button and patent with grey and black tweed tops. Patent button with red, brown and grey suede tops are also seen in other pleasing varieties. Misses' high cut storm leg button in gun metal, tan calf and patent are likely to be in big demand. The wide toe or nature last generally prevails in this range. Buttons are strong, but gun metal and tan calf bluchers are selling well. Little gents' gun metal and patents on wide foot form lasts, together with youths' lines to match, in blucher and button are leading factors. Little gents' storm leg bluchers in gun metal and heavy box calf are meeting with favor. The offerings in growing girls' are shown in all leathers, gun metal and patent being the leaders with full college toe and firm walking heel which has always been a strong feature in this line. Other varieties are shown in both button and blucher in tan, black, elk and gun metal. In women's footwear, the range is more comprehensive than ever. Over one hundred lines are shown on all the popular lasts with the receding and medium high toe predominating. Some fascinating creations are here, among them being a suede button with cravenette top, Cossack cut; black elk,

Cresco calf blucher,  
plain quarters, semi  
high toe, 10-8 heel  
—By Hartt Boot &  
Shoe Co.

high cut blucher, with inch heel and medium toe; black and tan elk, high cut, with K K hooks, heavy viscolized toe, suitable for skiing or outside sports. Another neat shoe is a Puritan waterproof calf bal. on a receding toe last, with wet-resisting sole and blind eyelets. A red kid, high button boot with 16-8 heel on a narrow straight last and white calf trimming is a decided beauty and another winner is a maroon suede button with covered Louis heel on the same last. Patent leather buttons and bals. on recede toe lasts, with grey, brown, red and white suede tops are also very popular. Another impressive line is that with grey silk and tweed tops as well as black cloth,

carrying a patent or gun metal vamp with a height of legs ranging from 12 to 17 button. In bals., gun metal, patent and tan are seen on recede and moderately high toe lasts, some with fabric tops and carrying heels from 12-8 to 16-8. Vici kid shoes with dull kid and black cloth tops made on snappy, nice fitting lasts are also extremely strong and staple in character. A number of storm calf buttons and bluchers on high toe lasts with viscolized soles are proving exceptionally popular, as well as tan elk golf shoes with heavy soles and low heels and the new eyelet hook. One unique feature that may be mentioned is a high felt button shoe with full plain toe, cushion insole and viscolized outsole. This dressy boot is a lively feature in the Western

Heavy tan elk, whole quarter blucher, bellows tongue, viscolized double sole—By Thompson Shoe Co.

trade and is a decidedly comfortable one for cold weather wear or automobiling. Other lines seen are women's cushion soles with ample toe room and 14-8 heel in kid and other leathers with dull tops. An all white buck button boot as well as others in grey and brown suede complete an exceptionally attractive and artistic "Classic" range.

#### Women's Kushion Sole Turns

The Thompson Shoe Company Limited, Montreal, will continue to show and carry in stock a strong and extensive line of women's Kushion sole turn shoes. They are specialists in men's Goodyear welted shoes at popular prices, also in women's Goodyear and McKay shoes of all kinds. Their travelers are all on the road for fall and the firm report much larger orders than they anticipated, which speaks well for their lines. Their catalogue of stock goods has had the desired effect of increasing their sales. It is a handy reference book to have around at all times.

#### Tan Calf is Going Strong

The Tebbutt Shoe and Leather Co., of Three Rivers, report that tan winter calf will have the largest sale with them in their men's fall and winter lines. The Russia and willow calf will be big sellers. The firm believe that tan calf is undoubtedly the most popular and durable leather ever made, and that the blucher cut is back again in favor for three reasons:—It fits all kinds of feet; it goes on easily and generally gives the retailer much less trouble to sell. The biggest seller with the firm is their tan winter calf Doctor's Anti-septic on Fits-U last. A black winter calf and box calf on the same and other orthopedic lasts are going nicely. The firm have put in a new boys' Fits-U last, which is surpassing all past records as a seller and they also state that the Professor Gold Cross cushioned lines in vici kid and gun metal are going well from coast to coast.

#### Strong on the Recede Toe

Walker, Parker & Co., of Toronto, are showing a large number of splendid offerings for fall on receding toe lasts in patent, gunmetal and tan. They believe that bals are replacing bluchers and that the demand for the button shoe is somewhat on the decrease. Fifty-two per cent. of the out-

put of this firm last season was lace-shoes. Heels are lower while tops are about the same height. There are no freak offerings, everything evidencing plain, quiet, conservative effects. A number of offerings have blind eyelets, while others have the eyelet hooks, which are a new thing, and warranted not to catch the skirts or clothing of women. One very attractive model is a glace kid bal. with wide rounded full toe. A dark Russia calf bal. with blind eyelets, carrying about an inch heel, is also decidedly snappy. Various styles are seen in button with slant and straight cut tops and carrying from fourteen to eighteen buttons. One particular feature about the line is the number of receding toes shown, the firm believing that this toe will be very popular during the coming season. No high toes are displayed at all in the range. A number of walking shoes, with wide shank, low heel and extension edge are also seen. The Empress line this year is stronger and more impressive than any ever turned out by this well known firm.

Lachance and Tanguay, of Quebec, believe that the ordinary high toe will be popular for this season at least and in the representative range for fall which they are offering to the public, they are of the opinion that the best selling leathers will be patent, gunmetal, calf, tan calf and box calf. Bals and buttons will have the strongest call in their range.

The Williams Shoe Co. of Brampton, have a representative and well-selected line of shoes for fall and winter. Their heavy welts in elk, tan, black and green and other shades are splendidly made and finished and are guaranteed absolutely waterproof. Their staples are popular with the trade and this fall's samples are more comprehensive in character than ever, while several new lines have been added for waterproof winter shoes. A. Winn, formerly of the Winn Shoe Co., Milton, Ont., and F. J. Lashbrook, of London, Ont., are covering the west from Fort William, Ont., to the Coast in the interest of the Williams shoe.

The Dumford Elk Shoe Co., of Stratford, Ont., have produced a fine range of samples of prospectors, outing work and boys' shoes which are most comprehensive in

Men's tan elk blucher, slip sole, low heel — By Western Shoe Co

character ranging from the heavy, wet excluding sixteen inch hunting boot to light flexible boys' outing shoes. The stock is all of the celebrated Dumford elk tannage and the soles are Goodyear welt, pegged or standard screwed. The line is the best and most representative ever turned out in the history of the firm. The travelers are now on the road with fall and winter samples.

#### Both Moderate and Recede Toes

The W. B. Hamilton Shoe Co., of Toronto, have a very nice range for fall and winter. They have put in two new lasts for men. One is an English last with recede toe, low heel and broad shank, which is shown in all leathers, with blind eyelets. Another last carries a moderate toe with one

inch heel and is known as the Excel. It comes in gunmetal, tan calf, velour calf and patent colt. The usual heavy lines in storm and winter calf, with full double and viscolized soles are shown. Buttons are well represented in men's. In women's footwear the firm are featuring three lasts and are turning out a large proportion of buttons. The recede toe with ten-eighth heel, in all leathers, bids fair to be a winner. Then there is the Comfort last, with a moderately high toe, which makes an excellent walking shoe. This is built in three-quarter length. The toe is moderately high. Another striking shoe is built on the College last with fairly low heel, round wide toe and cushion sole, which is designed to give solid ease. It comes in gunmetal and vici kid, with mat calf top. The showing in patent, in all lines, is strong, while tans are well represented.

**Look for Little Change**

Regarding fall and winter styles. The G. V. Oberholtzer Co., of Berlin, Ont., say they expect the conditions of last season to prevail largely as regarding last, etc. Medium toes will be the leading lines. As to bals., bluchers or buttons, they doubt whether any bals worth mentioning will be sold in the staples, but understand, in the finest lines bals are becoming somewhat popular. The firm are not in a position to give any views as to what will sell readily in the coming season. The fact that prices have to be advanced again this

the coming season than there has been in any during the last number of years. This is very welcome to the shoe manufacturer who has too often been obliged to discard patterns and lasts which had scarcely begun to pay for themselves. They believe that the leading style for fall will con-

Glazed kid walking bal. full round toe, low heel. By Walker, Parker & Co.

Women's kid blucher, round toe, cushion sole. By W. B. Hamilton Shoe Co.

tinue to be the medium high toe and medium high heel, the same as during the past season, and while some manufacturers are endeavouring to push the receding toe on the market, as far as they can see, in ladies' work at any rate, the call is for high toe. They believe patent leather will be the leader, but there will also be a large call for glazed dongola kid. Tan calf and gunmetal will follow. This would not apply to men's work of course.

**Some Choice Lines for Men**

The fall samples of the Regal Shoe Co., Toronto, surpass any previous showing made by this firm. They have added three new lasts. The Arlington carries a recede toe, low heel, wide shank, and is built on distinctively English lines in bals. and button, in both black and tan. It is a decidedly attractive creation. The Arena possesses a higher and wider toe, which is a compromise between the extreme recede and the knob. It is especially made for young men, carrying a nine-eighth heel, with a moderate swing effect and comes in bals., bluchers and button in both black and tan leathers. The Siesta is a nature form last, with low heel and broad shank and is designed for men of portly carriage, coming in all widths, from the narrowest to the widest. A

season, makes it somewhat uncertain as to what lines will sell most readily under these conditions.

The Hurlburt Co., of Preston, Ont., say that they are now working on their spring samples for 1914. They report a big demand for their infants' soft sole shoes and specialties in boudoir slippers. They have sold a large number in bals. and bluchers for fall and expect that these will predominate during the next season in preference to buttons, which have for some time held the lead in children's footwear.

**Moderately High Toe to Fore**

Luc Routier, of Quebec, say that the moderately high toe is still to the fore in their samples of men's, boys' and youths' lines for fall. They think that this style of toe is likely to prevail for some considerable time, especially in medium priced goods. Gunmetal and velour calf are the strongest sellers and they find a tendency toward the brighter finish in these leathers. A good class box kip and calf are in good demand for the coming season and in the heavier leathers black and tan chrome and combination stock are in active requisition, being ordered freely for fall trade. Business with the firm is booming, and they report that the prospects for the future are all that could be desired.

**Patent is a Strong Factor**

The Weston Shoe Co., of Campbellford, Ont., say so far as they view matters there will be less change during

Men's slip sole tan calf blucher, medium toe. By W. B. Hamilton Shoe Co.

number of excellent showings are made in black and tan winter calf, with full double sole. A heavy tan, cresco calf blucher, with piano felt lining and insole, plain quarters, felt slip sole and rubber outsole and heel is worthy of mention. Another offering is a tan, whole quarter blucher, with rubber

welting and viscolized sole. There is a liberal representation of button boots and the usual number of patents. Several models carry slightly flanged heels and invisible eyelets, and for the most part trimmings are very plain. Smooth, expert, classy shoemaking is seen on all the samples which are most comprehensive in character and are bound to command

Men's tan calf, double sole, military heel, blind eyelets, harness stitch, and perforation on shank, leather pull strap—By Cook-Fitzgerald Co.

attention for their graceful lines, superb finish and varied character. Tans are shown from the warm, medium shades in popular prices to the darker, light chocolate hue in the higher priced range.

#### Summary in Feminine Footwear

A leading shoe manufacturer in New York state, in summarizing fall styles for women, furnishes the following interesting summary of features:—

Lace shoes comprise 20 per cent. of the samples, an increase over last year of 50 per cent. The opinion prevails that of the fall purchases 15 per cent. will be lace styles at least, which shows a gradual return to favor of this style, dormant for seven years.

Shoe cut six instead of seven inches in height.

Square rather than slant tops.

Fourteen rather than 16 buttons, and in high grades 12 buttons.

Lower heels, 13 and 14 eighths rather than 15 and 16 eighths.

Close edges prevail, with few perforations.

Newest tip is plain stitched with no perforations.

English last in all samples. Selling well just now.

Materials: Patent first, dull second, tan and suede good sellers, usual amount of kid shoes and some velvets, cloths and red champagne and grey calf boots and undressed effects.

Lasts: For the West, medium height and wide; for the East, longer vamps and drawn-out effects, with toes more pointed.

Blind eyelets giving way to small metal eyelets in high grade boots.

Prices generally advanced 10 to 35 cents a pair.

The eternal change of fashion, which is forever taking place in the dress of women, cannot be said to apply to the new styles in women's footwear for next fall and winter, says the Shoe Retailer. While new fabrics, leathers and combinations have been and will be introduced from time to time, the lasts of the shoes practically remain the same. If a record had been kept of the various shoes sold to the high-grade trade of the large cities during the past few

years, it would be found that but little changes have been made in the lasts themselves. What change there has been made in lasts has come principally from Western retailers, who insisted upon having the new lasts in the different raised toe effects. The higher grade of trade in the East has been and is using recede toe lasts with either long or medium-short vamps.

The really new thing in women's lasts is the longer forepart, which is reflected in the introduction of the long French vamp made with a square throat. No extended vogue is expected of the strictly French forepart. On the other hand, longer vamps and medium narrow toes will meet with greatest favor in high-grade lines.

### An Active Career in the Trade

Selling shoes for thirty-three years, a number of which have been spent in Owen Sound, is quite a good record. In a nutshell this sums up the career of James Flett, of Owen Sound, manager of the establishment of the United Shoe Dealers in that progressive centre. Mr. Flett was born in the city of St. John's, Newfoundland, and leaving school shortly after he was fourteen years of age, he entered the employ of Childs, Charlesworth & Co., in their branch in Brantford, known as the "Toronto Shoe Store." He remained with this firm for three years and then left to take a position with Daniel Dengate & Co. in the same city, where he remained for two years. His next situation was in the wholesale warehouse of Charlesworth & Co., at 16 Front Street East, Toronto, where he remained for several years until the firm went out of business. He was then a city traveler for two years in Toronto, and also represented the house of John McPherson & Co., of Hamilton, on their

eastern ground, covering the territory from Toronto to Montreal, including the Ottawa Valley. His next post was in Owen Sound as manager of the shoe department of McColl & Lee for five years, when the firm dissolved and gave up the footwear branch of their business. For over seven years Mr. Flett managed the shoe section of W. F. Gray & Co. In his present post as manager of the Owen Sound Store of the United Shoe Dealers, he has built up a large connection. He is an excellent stock keeper and salesman, knows the trade thoroughly and has made many friends in all the centres where he has worked by his obliging disposition and strict attention to the wants of customers.

# Where Will Men's Popular Price Welt Come From

Retailer Says Canadian Makers are Charging too Much and Forcing Retailers to Go Across the Line for \$4.00 Welts—Want Dealers to Pull their Chestnuts out of the Fire—Manufacturer Retorts that Certain Shoemen will Take any "Junk" from Outsiders so long as it Has "Looks."

"Where are the four dollar shoes to come from in the future?" asked an Ontario shoe retailer, the other day. "I believe that I do as good a class of trade as anyone in this town. I want to tell you that, among the young men, there are eighteen pairs of four dollar shoes bought to every two pairs of five dollar shoes. I am speaking of the fellows between seventeen and twenty-two and twenty-three years of age. It is out of the young men that we make our money. They will buy more boots than any other class of my patrons, and four dollars is about as high as the majority of them can go.

"Of course, to talk to some retailers you would think that the average price of the shoes they sell is five dollars or more, but let me tell you that misrepresentation is easier than realization. When it comes to making a fellow pay five dollars who is in the habit of paying four, it is easier said than done. Now, I have no fault with the women's end of the business. We can get a first-class women's welt, either button, bal or blucher, to retail at \$3.50, \$4.00 and \$4.50, but in men's, there seems to have been, owing to the increase in the price of leather and other causes, a concerted action on the part of the manufacturers, to raise the figure for Goodyear welts so high that the dealer cannot possibly put across a really good calf skin shoe, with a smart appearance and neat trim at \$4.00, that is, if he wants to make any money.

"No, I am not a grouch, a sorehead or crank—but I want to tell you that I am in business to make money for myself. I am here to sell shoes and to clean up a profit, not primarily for the manufacturer or the wholesaler, but for myself. The sooner retailers throughout the country realize this, the better for their interest. At one time we could buy an excellent men's calfskin Goodyear welt blucher for \$2.60, \$2.75, \$2.85, which we could retail at \$4.00 and make a very good margin. But nowadays nearly every manufacturer, who pretends to get out of the staple line and be somebody is asking anywhere from \$3.35, \$3.60, \$3.80, \$3.90, etc., for his shoes, which means that they have to be retailed at \$5.00, \$5.50, and \$6.00. It is all right to talk about people paying higher prices for their shoes. They do pay more, but there are comparatively few in the smaller towns who will give \$5.00 for a shoe, and if they do, it must be a crackerjack. For the working men, who want a Sunday-go-to-meeting pair and the young men who do not care to pay more than \$4.00, where is the shoe dealer to get a good, well-made, stylish last to retail at this figure? You must at least make 33 1-3 per cent. profit on the selling price to do business to-day, and if we have to pay the figures already named for the kind of shoes that we desire, we cannot retail them at \$4.00.

## Wanting To Be Too Big

"Now, to my mind, the Canadian manufacturers are overdoing the thing in their haste to make so-called high-class stock and be "big fellows." I want to tell you that the so-called high-class trade is limited to just one-twelfth of the buying public. About one-half or six-twelfths of the regular purchasers are what you call medium class buyers, and the remainder—five-twelfths, are perhaps looking for bargains, snaps, or the cheaper lines generally. This wanting to be a big fellow and retail \$5.00, \$6.00 and \$7.00 shoes may be all right in the thick of the fray on St. Catherine Street, Montreal; Yonge Street, Toronto; Portage Avenue, Winnipeg; or Hastings Street, Vancouver, but in the smaller centres and suburban districts, it is a differ-

ent tale. Now, I know that a number of Canadian shoe dealers, although they do not care to do so, are bringing in shoes from the other side, where they can buy very fair men's welts as low as \$2.15, \$2.25 and \$2.35. They pay a duty of thirty per cent. and lay down the goods here at about the same figure as they would have to pay for a similar class shoe from a Canadian manufacturer. Now, if the makers in the Dominion cannot turn out as good a product at less money, when the duty is considered, it is time that somebody saw an opening and came to the rescue, so that we can secure reliable and presentable Goodyear welts that will retail at \$4.00. It is all right to talk about educating the public to buy higher priced goods than \$4.00, but I want to tell you that when a proposal of this kind is put up by the manufacturers, it is easier to theorize about than to put it into practice.

"A young or middle-aged man comes into my store. He has been in the habit of buying a certain shoe for \$4.00.

## An Aggressive Western Traveler

One of the best known Western travelers is A. C. Paddock, who has been selling the shoes of the Amherst Boot and Shoe Co., of Amherst, N.S., in Alberta for the past ten years. Along with E. J. Blaquier he introduced the line in the West and later the Amherst Central Shoe Co. was formed with headquarters at Regina, this being a sale company. Messrs. Blaquier and Paddock held a part interest in this organization, which is their present business location in the capital city of Saskatchewan. The Amherst Cen-

tral Shoe Co. have a large trade and employ a staff of six men who cover the territory from Port Arthur to the Coast. Mr. Paddock was born in St. John, N.B., and his first position was with the Ames, Holden Co. in their maritime branch. After remaining with them about a year he went West and has met with a large measure of success. He is only thirty years of age and is looking forward to many more years in the shoe business. He comes East each winter and spends a few weeks at his old home in St. John.

I inform him that the price of leather, linings, etc., has gone up and that the manufacturer has jumped his quotations so that I can no longer let him have that shoe for less than \$5.00. I explain to him the quality, style and conditions which have given cause to the advance, but he has firmly made up his mind that he cannot afford to pay more than \$4.00 for a shoe, and I have not time to carry on an argument or conduct a debate with that fellow. His mind is already made up and he will possibly go some place else, where he can secure a \$4.00 shoe or else he will not buy at all and will get his old ones re-soled.

"Now, I could sell half a dozen pairs of the regular \$4.00 shoe, which has been my strong feature in the past, while I am carrying on a campaign of education—as it is called—to make a purchaser buy a \$5.00 shoe, or in other words, loosen up for an extra dollar. He will not do it without a struggle, and in many cases will not do it at all, and I am not a-going to be the one to teach him. I, therefore, think that Canadian manufacturers should hesitate before they compel every retailer to pay a price that will make him sell his men's welts at \$5.00.

#### The Other Side of the Picture

"A word to the wise is sufficient, and probably some manufacturers will realize the truth of what I am saying and see the point of view from the ground of the retailer who is trying to do business, making a reasonable profit and satisfying a trade that he has been catering to for the last sixteen years."

"Yes," said a well known traveler, "I admit that there may be a good opening for a firm in Canada who are able to make a snappy, catchy welt shoe for men that the retailer can sell at four dollars. Of course, if a man is bound to handle this class of trade he can secure what he is looking for, but the trouble is that many of the shoemen will take and buy an American shoe which is nothing but a mere shell, and is skinned at every vital point and robbed at the toe, the counter, the heel, the innersole and the lining, and regard it as superior to an honestly made Canadian shoe. It may be a 'looker,' but it is certainly not a wearer. Yet, many a Canadian shoeman will buy it and pay thirty per cent. duty on this shoe and if we come along and offer him a better made shoe at a few cents more than he pays the American house (but considerably less than it costs him after he has paid the duty), this fellow will tell you that he prefers American goods, that they sell better, are brighter, snappier, or dressier.

"It seems to be a case of distant pastures looking green, and if a Canadian firm attempted to put such a miserable and cheap creation across as some of the United States makers of cheap welts do, we would be looked upon as little better than thugs. Mind you, I am not saying anything against the makers of the better class of men's goods across the line, but there are houses which turn out flashy "crabs" on eccentric lasts, built and made for display only, and yet some retailers will sell this shoe in which there is not one foot of good leather stock.

#### They Have Strange Ideas

"When we attempt to give them a much better shoe that they can retail at four dollars they will say, 'Oh, no, we can do better across the line.' I have been invited several times by three or four capitalists to organize a factory that can put men's welt calf skin shoes into the hands of a retailer at about \$2.60 or \$2.65, so that he can sell it for \$4.00. Of course, in order to do this, with the present high price of leather and labor, we would have to devitalize the shoe, or in other words, use leather board, straw board, leatheroid, fibreboard, hiteite, or some other substitutes for leather in order to produce this looker. It would, however, be what a certain class of retailers are aiming at, namely, putting across a shoe at four dollars, and on which he can make a

good profit and never stop to consider the worth and wear.

"I believe it is because welts have been turned out at such a low figure on the other side, that the present agitation has arisen in many states in favor of the 'pure shoe' bill which is designed to stop manufacturers using substitutes, or if they do use substitutes, to make them stamp on the shoe the kind of 'ingredients' contained. I see that a number of prominent retailers and trade journals are in favor of the bill. Oh, yes, when it comes to making a shoe down to a price and not up to the standard, I want to tell you that it can be done. The great majority of reputable manufacturers in Canada have not the slightest ambition to excel as makers or creators of cheap shoddy goods. There may be an opening for a shoe that will sell for four dollars retail, but I think the move is too precarious to warrant any capitalist starting to feature this line, and to depend solely upon Canadian trade or dealers for sufficient support would be like leaning on a bruised reed. We can afford to let American makes of cheap Goodyear welts selling at \$2.10, \$2.20, etc., come in, but as a retailer I would hate to handle them or build up a trade by means of such shoes as were recently handled by a Toronto wholesale firm which went to the wall. What is the use of talking? The retailer and the maker will never see eye to eye, although I admit their relations are improving."

### Soaring Prices of Some Lines

The Department of Labor's index number of wholesale prices was slightly lower in January, standing at 136.2, as compared with 136.8 in December. Grains and fodders, dairy products, fruit and vegetables were lower, while animals and meats and fresh fish were upward. Winter wheat and barley also were upward. Hog products were easier. Iron and products of iron showed some advances. Compared with January, 1912, for which the index number was 133.2, a rise of three points is shown. The chief increases appear in the groups, animals and meats, fish, hides, leathers, boots and shoes, textiles, furs, metals and fuel, with decreases in grains and fodder, dairy products, fruits and vegetables. The index numbers are percentages of the average prices during the decade, 1890-1899. They are based on 272 commodities representative of Canadian production and consumption. In retail prices, the feature of the month was the easier market for dairy products, eggs declining in many cities, and butter being much easier, while milk declined in two cities. Some other lines of food were lower also. A year ago at this time meats, dairy products and potatoes were strongly upward.

### The Demand For Cloth Tops

Indications seem to point to a return of the fabric top shoes. Present demands, says the Commercial Bulletin, have lowered the in-stock department supplies of this type of shoes, and many manufacturers are making up additional supplies. Black cloth top boots, button style, are selling well and likewise black velvet boots. Shipments of the latter to a number of sections of the country are ahead of a year ago.

Some manufacturers and some retailers are pushing fabric and fabric top boots for the purpose of checking the advance in leather prices. Black worsted, black velvet and white canvas have proved serviceable substitutes for leather, and a large sale of these is looked for in 1913.

Rubber sole shoes with black, tan and white uppers, some of the white uppers of duck, will also sell in 1913. The rubber soles will not be offered as a substitute for leather soles, because they will cost more than twice as much as do other soles. But their use will have a tendency to lessen the demand for leather soles.

# Make All Your Advertising Pay—You Can Do It

Some Critical Remarks on Retail Publicity Showing Wherein Certain Dealers' Announcements Excel and Wherein Others Fall Short—Frank Discussions That May Help Readers to Get New Viewpoints

The spring season offers a particularly favorable opportunity for the average retailer to do some effective advertising. Whether the space used is large or small, the returns reaped are largely determined by the use which the footwear merchant makes of the facilities afforded him, either through the daily or weekly press, or other advertising literature.

Without attempting to lay down any specific instructions, it may be considered that a too common error among the ordinary users of advertising space is that they want to get too much for their money, or, in other words, they seek to crowd too many adjectives and too great detail in what is often a small space. It is the same mistake that the average dealer frequently makes in dressing his windows. While there may be safety in numbers and wisdom in the multitude, yet neither numbers nor the multitude have ever stood out significantly for individuality, personality or specialization.

## Be Brief, Bright and Direct

Have something definite to say and say it quickly, briefly and instructively. Watch the announcements of other merchants, even if they are in different lines to what you are, and when you see what you regard as a valuable idea or a helpful pointer, seize it. After all, we are only a world of imitators to a large extent and, while certain individuals receive credit for originality, still, if one could probe through the surface, or go behind the screen, it would be discovered that much of the ingenuity and so-called cleverness is really the result of adaptability, application, research and intuition.

Much depends upon the use of good illustrations. If the cuts employed are not appropriate or modern, far better not to use them at all, and to let the type tell the story. Then again, a good, catchy head-line of four or five words is to the ad. what the head-dress is to an individual. It may not be everything, but when once the attention of the eye is captured, the inclination of most people is to read through the entire announcement, if it is not too long. This is the first step and a very important one and creates a favorable impression which will frequently lead up to sales if supported by good service, nice window display and reliable shoes.

## Good Display—Concise Copy

Redden's ad. is a good example of an unusual form in shoe advertising—a long single column ad. It wisely sticks to two featured lines, and gives selling points in a brief, yet satisfactory manner. The type is harmonious all through; the whole ad. is an example of good display plus concise copy. Such ads. can be duplicated with benefit to all concerned.

## Full of Good, Sound Sense

Craig's Red Seal Shoe Shop has also a forceful, attractive method of advertising.

The heading is an old Biblical phrase adapted to surroundings in a logical manner through a play on the word "last." From this start the ad. goes on to show how important a part the up-to-date last plays in modern shoe-fitting and satisfaction. This is strong copy in that it is away out of the ordinary stereotyped "rot" about having "the best shoes on earth," which is not real advertising, but buncombe pure and simple, and it is treated as such. One column space could hardly be better employed to the advertiser's advantage and it will well repay the reader to study closely the displays and wording made in leading city papers by trained shoe advertisement writers who specialize on pulling trade and making their announcements "hit you in the eye," metaphorically speaking.

## To Get Worth While Results

While much has been said on the subject of quoting prices, it may be put down as a safe rule that, with the majority of retailers doing what is called a family trade, the presence of figures often leads to a visit being made to your store. Some retailers do not advertise in the newspapers because they claim they do not know how to write an ad.—have not time to attend to it, obtain no direct returns or give some similar stereotyped reason. If this is the only objection, it can be easily overcome by a little practice, study and attention. There are always some spare moments or hours during certain periods of the day when a shoeman can be thinking out what he should be featuring in his advertisements, booklets or general literature. Monday is often a good time to take an hour or two for such work, when the store has been put in order and the stock assorted after the usually large Saturday trade. It may be put down as a safe maxim that anything that is worth while in this world, anything that counts effectively in the up-build and expansion of a business, requires the expenditure not only of money, but of considerable time, talent and attention to detail.

Atlanta-Made-Shoes

A WELL DISPLAYED TRADE PULLING  
ANNOUNCEMENT

Worth while results imply and impose worth while methods, and when the latter are not in evidence, no wonder the rewards are not satisfactory.

From time to time there are presented in the pages of the SHOE AND LEATHER JOURNAL criticisms of the ads. of retailers taken at random from the daily or weekly press. The observations on these announcements are presented in a frank, helpful spirit. If the reader does not always agree with the remarks, he can, at least, accord the critic the merit of sincerity and remember that all cannot, and never will, see "eye to eye" as long as "the sun shines or water runs."

**An Ad. With Balance**

The Yale Shoe Store ad. is a splendid example of forceful, well displayed copy. Note the perfect "balance" of the component units of the ad. and how well each part fits in with the whole display scheme. Each side balances the other and every section tells its own story, yet all appearance of clashing type is obviated. Everything "fits in," as it were. For a big sale ad. this is a model that every shoeman should hold before him, and it reflects great credit on Mr. Affleck's grasp of the main essentials as well as the important details underlying the problem of successful retail advertising. This alert Winnipeg merchant has built up a strong, active hustling business and in this work his publicity plans have very materially contributed.

**Where Cut Is Not Up to Mark**

McDonald Bros.' ad. is well displayed. As the copy says, the headlines tell the story—but in a very general way. The cut used is useless. In fact it takes up space that might otherwise be used in the ad. by a slight rearrangement of the copy. It would be far better to use a good line cut of a shoe in this space. This copy is all right for an introductory notice, but it should be followed up if a daily newspaper

is being used by specific detail bargains with prices and full description each day. If only a weekly can be used this announcement should be followed by a vigorous poster campaign or else by an announcement distributed by car-

# 5 Day Shoe Sale

SEVEN COLUMN WIDE ADVERTISEMENT OF WINNIPEG FIRM

**Of Too Sombre An Aspect**

The Gavin ad. is scasonable and as such no doubt pulled business. But it savors too much of the "stock list" style of advertising. Two or three representative lines picked from this big range, with a snappy, informative selling talk would be more effective in drawing people into the store. Mention could be made that the lines talked about were only samples from a big range of felt footwear. One from each class—men's, women's, and children's shoes—would serve to build up a splendid and telling ad.

The border is too black—looks like a funeral notice—which feeling is not in harmony with a live shoe store's policy. The same applies to the heavy headline, which should also be lighter in style and more in harmony with the balance of display type used in the ad. One thing to be commended about this ad., however, is that the advertiser

concentrated. It is like trying to kill a deer at long range with a shot gun—"can hardly be did," as the Hoosier poet would say.

**It Stands Right Out**

The Jordan-Marsh ad. is one of the "classiest" footwear ads. that has appeared in any newspaper for a long

## Shoes for Easy Walking

**WHAT** a pleasure to stride off across the Common for a brisk walk with a friend. Tell the chauffeur to pick you up at Copley Square.

To walk well—easily, swiftly, gracefully—the right kind of shoes, of course. We study your feet and give you shoes that will make walking a new joy—also you will be correctly shod.

*Here's a Shoe That is  
Perfection for Easy Walking*

## Men's "Back-to-Nature" Shoes

A hand-made shoe most skilfully designed for Easy Walking. It hugs the arch closer than is possible for the ordinary shoe. Its firm fitting character causes it to gently massage the foot while walking and thus stimulate the circulation instead of retarding it. The muscles of the arch play as freely as when walking barefoot.

*Made in soft, wet kid, wax calf and soft grain tan leather*

Price to the Elect Who Appreciate Good Comfortable Shoes ..... **7.50**

*Expert Shoe Fitters always in attendance to demonstrate "Back-to-Nature" Shoes.*

Men's Shoe Store—Street Floor, Main Store.

## Jordan Marsh Company

The Largest Retailers of Apparel in New England

AN ADVERTISEMENT THAT MAKE YOU WANT TO GET A PAIR

time. Although the ad. of a Boston retailer, it is inserted here as a vivid example of how retail shoe advertising ought to be done. There is no dodging this ad. It stands right out on any page and catches the eye at once. It has a dignity that is positively refreshing in these days of scare-head lettering and sensational type. The better class of buyer will at once be attracted thereby and will undoubtedly respond.

Of course, the reference to the local "Common" makes the ad. even more effective—and the illustration at the top backs up the tone of the first paragraph. It is a striking line cut. The copy is a splendid selling talk starting with general talk on the art of easy walking and leading from that up to the subject particularly in hand, which is "back-to-nature" shoes. The cut of the two parts of the shoe is also well executed. Type, border, illustration and tone of copy are all extremely harmonious. The paragraph describing these shoes is an excellent example of a forceful sales talk. Display is well balanced and thoroughly attractive.

It is important that your employe has confidence in you, but it is even more important that he have confidence in himself.

## Branching Out in Shoe Line

After conducting a successful fine tailoring and men's furnishing business for eighteen years in Fenelon Falls, Ont., M. H. McCallum is branching out and is adding a line of men's fine shoes, in order to complete the covering of his customers from head to foot. Previous to locating in Fenelon Falls, Mr. McCallum was in the tailoring business in Neepawa, and Drayton. Born in Fenelon Falls

in 1872, he has held many positions of honor in his native place. At the present time he is president of a very progressive Board of Trade, and also chairman of the Public and High School Boards of Education. He believes that manufacturers can secure as desirable facilities in Fenelon Falls as in any other place. The town is as well situated and operates its own electric power plant, furnishing power in any quantity at ten dollars per horse power. Mr. McCallum is an enthusiast over the future of his town, which, as a business man, he has done a good deal to build up and develop.

## Changes in the Trade

Some years ago there was much talk about shoe departments in general stores driving out retail shoe dealers, although the latter claim to handle a better quality of shoes, and are experts in fitting shoes, says a traveler. These dealers have made a life study of their business and the wants of the public, and score a strong point in giving more special and individual attention to customers than is possible in general stores. But now we have special retail stores, belonging to the big shoe manufacturing corporations displaying in their show windows not only handsome and varied lines of new shoes, but also old shoes, which need half-soleing, samples of shoes after being half-soleed, also half soles and samples of the leather from which they are cut, with the announcement that shoes will be repaired for 50 cents per pair while you wait. Most shoe repairing shops ask 75 cents to \$1 for this work, done by hand, and many men in this line of trade, considering the high price of leather and other materials, are talking of demanding more money. With the large shoe manufacturers offering to do the work so cheaply in the stores where their shoes are sold it would seem difficult for custom shoe repairers to get more money.

## From Errand Boy to Director

A period of thirty-one years in the same store is in itself a record to be proud of, for it speaks volumes for the recognition of worth, energy, and honest effort, but when there is combined with this stretch of years the knowledge that he has risen from errand boy to one of the directorate of New Brunswick's big shoe house, Richard J. Walsh fully merits the heartiest congratulations. The firm of Waterbury & Rising, now merged into the "Waterbury & Rising, Limited," are one of the oldest business houses in St. John. Brought into existence in 1878 with a scanty capital and a small business, they have become one of the leading factors in the shoe trade in Canada, with three large retail establishments and a wholesale trade that covers the three Atlantic provinces. A few years ago, upon the retirement of G. H. Waterbury, the business was formed into a joint stock company and the former parcel boy was made a director. In 1907, in recognition of the fact that he was observing his twenty-fifth year in the employ of the firm, he was made the recipient of a handsome gold watch, chain and charm. Not only in the leather world is Mr. Walsh well and favorably known, but in social circles he takes a prominent position as well. A Catholic in religion and a Liberal in poli-

tics, he has held many important positions of trust and honor. At present he bears the distinction of being Grand Deputy of the C. M. B. A. in New Brunswick, and is also president of the second largest branch of the order in Canada. He is an ex-president of the Father Mathew Association, and also of St. Peter's Temperance Society, and for years was treasurer of the Young Liberals' Club. On several occasions he was the representative of Lorne ward at the Liberal conventions. He is also a justice of the peace for the city and county of St. John. He was born in St. John in 1862 and left school at the age of fourteen years, entering the employ of M. Harrison, shoe dealer, as errand boy, and later joined

the staff of Waterbury & Rising as junior. He has frequently contributed able and interesting articles on matters of importance in the shoe world to leading journals, and has been the winner of valuable prizes in articles on store furnishing, arrangement, salesmanship, etc. The St. John Telegraph of March, 1904, said: "He is a ready and trenchant writer, wields a facile pen, and is a frequent contributor to the press at home and abroad." In his being awarded the second prize for an essay on "What Constitutes a Good Salesman?" and the first prize for an article on "Store Furnishing and Stock-keeping," the judges observed: "The impression we receive from Mr. Walsh's handsomely penned essay is that he is thoroughly familiar with his subject, treating his theme in language so fascinating that we devour it like a dish of ripe, fragrant strawberries."

## Now Covering Western Ground

"Meeting with great success in the West," is the report sent in by Maurice Schwartz, who is now covering the larger portion of Manitoba and Saskatchewan for the Thompson Shoe Co., of Montreal. He is conversant with the shoe making trade in all its methods and has had a well-rounded experience. For some time he was with the Murray Shoe Co. and the Cleo Shoe Co., of London, and ably looked after the territory between Montreal and Toronto. Previous to that Mr. Schwartz was with the James C. Bartlett Co., slipper manufacturers, of Haverhill, Mass. He clerked for a couple of the largest retail stores in Montreal before taking a position on the road. He possesses a frank, generous disposition and has the rare gift of making and retaining friends.

# AMONG THE SHOE MEN.

L. P. Pelletier, shoe dealer, has registered in Montreal. A. Lockard, of Lucknow, has started in the shoe business.

W. M. Carroll has opened a boot and shoe shop in Kentville, N.S.

Mr. Felsen, sr., has started a shoe and harness business in Pembina, Alta.

J. T. Tebbutt, of Tebbutt Bros., Three Rivers, was in Montreal recently.

R. W. Bradley, shoe dealer, of Manor, Sask., has discontinued business.

H. A. Beatty, of the Slater Shoe Co., Montreal, was in Toronto a few days ago.

Griffith Clarke, of A. R. Clarke & Co., Limited, was in Montreal and Quebec recently.

A. M. Jarvis is covering Western Canada for the Murray Shoe Co., of London.

P. J. Wiggett has purchased the shoemaking business of L. W. Tillison, Kamloops.

Alex. Angus, of Ames-Holden-McCready Co., Montreal, was recently in Ottawa.

J. Planty, shoe repairer, Bathurst St., Toronto, is putting in a stock of boots and shoes.

R. J. Kidd, manager for Robt. Neill, Peterboro, was in Toronto this week on business.

Mr. Richard, of J. H. Winchell & Co., Haverhill, spent some days in Montreal recently.

The Boston Shoe Co. has taken over the business of the Dominion Shoe Co. in Winnipeg.

M. L. Savage will represent the McDermott Shoe Co., Montreal, in the West this season.

M. Rosenstein has opened a new boot and shoe store at 459 Queen street west, Toronto.

Andrew Casey, of St. John, N.B., has joined the staff of the Brockton Shoe Co., Toronto.

The assets of the Boston Shoe Co., of Montreal, are advertised to be sold on April 2nd.

J. A. Johnston, wholesale shoes, of Brockville, was calling upon the Toronto trade this week.

John Fishkin, of Owen Sound, is opening a new shoe store at 615 Queen street west, Toronto.

W. J. Henry, of the Royal City shoe store, Guelph, was in Toronto calling on the trade last week.

F. Wagner, of the Aylmer Boot and Shoe Co., Aylmer, Ont., was in Toronto last week on business.

Ald. James Robinson, of Montreal, was in Toronto last week calling upon several friends in the trade.

W. C. Metz, of Elmira, Ont., has sold his shoe business to Aaron Hoffer, who has taken possession.

N. Macfarlane, of the MacFarlane Shoe Co., Montreal, was in Toronto this week on a business visit.

J. Thompson Allen, shoe retailer, of Mount Forest, Ont., was in Toronto last week calling upon the trade.

Thomas W. Simpson, of Berlin, is now representing the McKellar Shoe Co., of Berlin in Eastern Ontario.

D. S. Pettes, of the Thompson Shoe Co., Montreal, spent a few days in Ottawa last week on business.

Thos. Tobin, an employe of the R. M. Beal Leather Co., Lindsay, died recently from an attack of pneumonia.

There will be no shoe and leather market fair held in

Boston this year but in July, 1914, a fair will be held which it is expected will be the greatest ever.

George Toureau has left the Scout Shoe Co. and is now traveling for Dufresne & Locke, Maisonneuve.

The shoe store of Mrs. Couture, Marie Anne street east, Montreal, was somewhat damaged by fire recently.

A. J. Starkman, of Grand Valley, Ont., has opened a new boot and shoe store on Arthur street, Toronto.

Lamontagne, Racine & Co., of Quebec, manufacturers of heels and shoe findings, have dissolved partnership.

J. E. Hopkins, proprietor of the Model Shoe Store, 2152 Queen St. E., Toronto, has moved into a fine new store.

Fred. Jacobi, of Toronto, has returned from an extended business trip to the West. He went as far as Edmonton.

J. Huycke has opened a shoe department in connection with the men's furnishings business of Hall & Co., Cobourg.

M. H. Carscallen, shoe dealer, 1267 Bloor street west, Toronto, spent a few days in Montreal on business recently.

Andrew Casey, late of Hawkesbury, Ont., has removed to Toronto, where he has secured a position in the shoe line.

I. Ducharme, of Hull, has erected an addition to his shoe store which gives him considerable extra flooring space.

Arel & Deslauriers and the Singer Shoe Co., of Montreal, are among the new firms which have recently registered.

Walter E. Yates, warehouse manager for McLaren & Dallas, Toronto, is spending a couple of weeks at Janetville, Ont.

P. Leroux, shoe retailer, of Hull, Que., has recently built an extension to his store in order to take care of his increasing trade.

E. T. Jacobi, 5 Wellington street east, Toronto, is spending a few days in Boston and other New England centres on business.

C. S. Pace, who is widely known in the footwear trade in the eastern provinces, has established a new boot and shoe store in Saskatoon.

W. H. Galt, Montreal, manager of the Gutta Percha and Rubber, Limited, was in Toronto for several days last week on business.

R. E. Jamieson, general sales manager of the Canadian Consolidated Rubber Co., Montreal, paid a visit to the Toronto branch recently.

Robert Wilson, representing the Walker-Whitman Shoe Co., spent the last few days in Toronto displaying a full range of select fall samples.

J. B. Kilgour, of the firm of Kilgour, Rimer & Co., wholesale shoes, Winnipeg, has returned home after a three months' visit to Florida.

R. E. Jackson, of Brockton, Mass., is covering Western Canada in the interest of the Walk-over Shoe Co., and visiting all the principal cities.

R. Murphy, representing the Julian-Kokenge Co., of Cincinnati, was in Toronto and other cities last week showing a full range of fall samples.

W. E. Smith, who for some months past has been engaged with A. McGillis, shoe retailer, of Fort William, has returned to his home in Toronto.

W. F. Martin, sales manager of the Kingsbury Foot-

wear Co., Montreal, was in Boston and other New England shoe centres recently on a business trip.

Arthur Wellwood, shoe retailer, 1250 Bloor street west, Toronto, has sold out his business to the McCall Shoe Co., who now have four stores in Toronto.

R. W. Bradley, who for the past thirteen years has been in the shoe business in Manor, Sask., has removed his stock to Ogema, where he has engaged in the same line.

R. T. Hayes, manager of J. M. Humphrey & Co., St. John, has returned from an extended business trip to New York, Boston, Lynn, Brockton and other shoe centres.

J. J. Walsh, shoe retailer, of Lindsay, has made extensive renovations to his store. He has put in a metallic ceiling and otherwise added to its interior appearance.

H. B. Pollock, of the Regal Shoe Co., Toronto, left this week on an extended trip through Quebec and the Maritime Provinces with a full line of fall and winter samples.

T. Davis, shoe dealer, 256½ Queen street west, Toronto, has sold his business to J. Barlow and intends opening in a new stand on College street, near Ossington avenue.

Mr. Dubois, representing Charles K. Fox, Incorporated, Haverhill, Mass., was in Toronto last week displaying an artistic line of women's fancy slippers and turn shoes.

Mr. Dunford, late of the Dunford Elk Shoe Co., Stratford, has taken a position with Williams & Son's factory at Milton and is now representing that firm on the road.

J. M. Peterman and Maurice Schwartz, both representing the Thompson Shoe Co.'s lines in the Western provinces, are now calling on the trade in their respective territories.

L. B. Shafer, representing the Moore-Shafer Shoe Manufacturing Co., of Brockport, N.Y., was in Toronto during the past few days showing a splendid fall line of goods.

W. G. Downing, of Brandon, is spending a few days in Toronto and other points in Ontario. He has been engaged in the wholesale shoe business in the West for a number of years.

Sloan Bros., St. Catherine street west, Montreal, are moving into a new and well equipped store located farther west on the same street in the block owned by Ald. James Robinson.

The Owl Shoe Store, 123 Yonge street, Toronto, will shortly add a stock of women's high grade shoes and fit up a well equipped department for this branch of the business. Ed. Cook is the proprietor.

Mr. Gorman, late manager of the shoe department of Perry & Alport, Orillia, is opening a new footwear establishment in that town under the name of the Orillia Shoe Co. He is a brother of Stephen Gorman, shoe retailer of Belleville.

The Rapid Shoe Repairing Co., of Hamilton, which has established branch stores in various parts of that city, has purchased the machinery of the Marshall Shoe and Leather Co., and has removed it to the Rapid store at 255 King street east.

The following are representing E. T. Wright & Co., of St. Thomas, for the selling season for fall: Fred. A. Macfarlane, from Winnipeg to the Coast, J. M. Macfarlane, through all Ontario, and W. W. Lindsley, from Montreal to Halifax.

J. A. Allard, who for nearly a year has been in charge of the boot and shoe business of A. E. Wry, Limited, of Sackville, N.B., has bought out the business. Mr. Allard has had twelve years experience in making and repairing boots and shoes.

Jas. Whitehead, who has been in business in Walkerton for thirty-one years, sold out recently to T. R. Murdoff, of Toronto. Mr. Whitehead conducted a grocery, boot and shoe and clothing establishment and gives possession to Mr. Murdoff on May 1st.

Griffith B. Clarke, vice-president of A. R. Clarke & Co., Limited, Toronto, leaves this week on a trip to Europe. He will be away about three months traveling through Italy

Germany, France and England. The trip will be taken for business and pleasure.

The Brockton Shoe Store, 119 Yonge street, Toronto, of which A. R. Trudeau is manager, announces it will henceforth specialize in four dollar shoes instead of three fifty as previously in order to better the quality. The store deals exclusively in men's welts.

W. H. Stagg, who lately covered Eastern Ontario for the Toronto branch of Ames-Holden-McCreedy, Limited, is now looking after the north-western portion of the province. His former ground is now being covered by W. J. Drysdale, who has had his territory extended.

The Two Macs, Ottawa, were recently awarded the contract for supplying shoes to the members of the Ottawa fire department. The shoe accepted by the committee was a box calf blucher, Goodyear welt, on a straight last, with bleached calf lining and full double viscolized sole.

Julius Kuechler, formerly Canadian representative of the Moore, Shafer Shoe Manufacturing Co., of Brockport, N.Y., has taken an important position with the Regal Shoe Store in Winnipeg. He is well known to the trade in the Dominion, upon whom he has called for a number of years.

A. C. Kitchener, 239 Victoria St., Toronto, has returned from a business trip to England. He brings back with him several new styles in rubber heels manufactured by the Palatine Heel Branch, which are being well received by the trade and for which he has secured generous sized orders.

"Here is what I call a just cause for complaint," remarked a Wellington county shoeman. "These are some samples of short rubber boots just in and I have to return them on account of poor quality. Look, see how your fingers stick to them; and they are so soft in the leg that they will not stand up."

G. W. Murphy, of Sydney, C.B., who opened a shoe repair and custom shop in that city about eighteen months ago, has now a line of machines for new work and repairs and employed six men last season. He will shortly install a stitcher. Mr. Murphy is meeting with splendid results and has built up a trade which is constantly increasing.

E. G. McCough, of St. John, N.B., now represents the Thompson Shoe Co., of Montreal, in the lower provinces. "Ed." as he is familiarly addressed, is well known in the Maritime Provinces, he having conducted retail shoe stores in St. John and North Sydney. He reports favorable results so far with his new line.

Thomas Rankine, of Thomas Rankine & Son, of Edinburgh, Scotland, makers of the "Gael," "Keltic," and "Rara" shoes for men for walking, golfing, shooting, skiing and climbing, is spending a few weeks in Canada on a trip of inspection. He has visited Montreal, Toronto, Halifax, St. John and other cities, and will go as far West as Winnipeg.

Hide and Leather says: J. S. King, of the Relindo Shoe Co., shoe manufacturers, Toronto, was a buyer in the upper leather market in Philadelphia. Mr. King says business is fine.

E. J. Davis, president of the Davis Leather Co., Kingston and Newmarket, Ont., was in Boston last week. He reports business active in Canada, where he is a leading tanner.

Robert Gray, of Weston, has sold his shoe business to David Henderson, lately employed with W. Powell, 1682 Dundas street, Toronto, who has taken possession. Mr. Gray has purchased new premises at 1520 Dundas street, Toronto, and erected an addition to his store. He is opening up with a well assorted stock of shoes and expects to do a large family trade.

A despatch from London, Eng., says: A new caprice of fashion shown in a smart shop in Oxford street is a watch worn on the shoe. A window displays a grey suede pump with a tiny jewelled watch worn as a buckle and fastened with a tiny silver chain. The proprietor says that several society women patrons have given orders. He asserts his belief that it will be as popular a fad as the wrist watch.

Getty & Scott, of Galt, have been appointed selling

representatives in Canada for the celebrated line of women's evening slippers manufactured by A. & A. W. Flateau, of London, Eng. These dainty creations embrace all the latest expressions in style, beauty and smooth workmanship and the models are decidedly attractive. They come in a variety of leathers and brocaded satin, gold, silver, blue, pink and white, with extremely pretty ornaments of jet, cut steel, corded silk, pom poms and rosettes.

The business known as James Twitchell & Son, boot and shoe merchants, passed out of the business circle of Clinton recently. Over 35 years ago Mr. James Twitchell started business and later added boots and shoes. The new purchaser is Harry C. Borbridge, of St. Thomas, who will run off the stock at once. Harry Twitchell, the junior member, will probably go West, where the other members of the family are. The senior member will stay in Clinton and look after his shingle business.

Messrs. Philip Jacobi, Toronto, have made arrangements to double the output this coming season of their celebrated Non-Rip Barefoot Sandal. The superiority of this brand is so well known to the trade the demand necessitates an extension of the plant. The upper and sole leather are of the very best selected stock, tanned in Canada, thus insuring first class wearing qualities. A cheaper grade of sandals is also handled by Philip Jacobi for those who require them, but both grades are very stylish in appearance.

A despatch from Montreal says: Under the Winding-up Act, the property of the A. P. Cimon Shoe Manufacturing Company, Limited, was offered for sale at auction last week by Marcotte Bros. A bid of \$39,000 was made for the land, factory, machinery and stock in process of manufacture, but it was too small to suit the liquidator, so the sale was postponed until next week. The factory is four storeys in height, a solid brick building, and measures 45 by 173 feet, but the

area of the lot, which is situated on De Fleurimont street, is considerably more. The stock of finished boots and shoes, amounting to \$5,942, was sold to J. G. Watson for 72½ cents on the dollar.

Contracts for the erection of a five-storey building, the new Calgary home of the Northwest Commercial Travelers' Association, will be awarded in a few days. The building will be of brick, and will be thoroughly modern in every respect. A number of bids for the construction of the building have been received by Burroughs & Richards, the architects, and the tenders have been forwarded to the executive council at Winnipeg for consideration. The structure when completed will cost about \$100,000.

H. L. Scythes, who has been in the shoe business for the past eight years at 611 Dundas street, Toronto, has sold his block of stores and will retire from the footwear line. He will remove to Edmonton, where he will go extensively into building operations, having just returned from an extended visit to Calgary, Regina, Winnipeg, Saskatoon and Edmonton. Mr. Scythes, who did business under the style of Scythes Bros. (his brother having been with him a few years ago), has a large trade and an exceptionally attractive store.

The Easter trade this year, owing to the early advent of the festival, was not as satisfactory with most retailers as when the event is observed in April. The weather was generally of a wintry character, except for a very few fine days and not conducive to the heavy selling of spring lines. A number of retailers complain that, owing to Easter being honored so early they did not receive shipments of their spring footwear in time for display and in certain sections reports are to hand that spring goods have not yet arrived, although factories and wholesalers are doing their best to make prompt shipments.

AN EFFECTIVE, WELL DISPLAYED AND ATTRACTIVE EASTER WINDOW OF THE TWO MACS' SHOE DEPT., OTTAWA, OF WHICH J. HOWARD CARKNER IS THE MANAGER. THE WINDOW WAS TRIMMED BY J. L. BEAUDRY

# SHOE FACTORY NEWS.

An addition is planned to the shoe factory of the H. H. Crosby Co., Limited, of Hebron, N.S.

Charles A. Ahrens, shoe manufacturer, of Berlin, and wife spent the Easter holidays in Findlay, Ohio.

The shoe workers of Berlin, Ont., have elected new officers and recently held a very successful social gathering.

W. Carroll, superintendent of the Aylmer Boot and Shoe Co., Aylmer, Ont., was in Toronto last week on business.

F. W. Knowlton, of Montreal, Canadian manager of the United Shoe Machinery Co., spent a few days in Toronto last week.

C. S. Corson and H. B. Pollock, of the Regal Shoe Co., Toronto, spent the Easter holiday in Boston and other shoe centres.

A by-law will shortly be submitted to the ratepayers of Stratford in connection with a proposed leather factory to be erected by B. F. Kastner & Co.

Oscar Dufresne, of the firm of Dufresne & Locke, shoe manufacturers, has been appointed chairman of the finance committee of the Maisonneuve council.

The T. Sisman Shoe Co., of Aurora, recently installed an inside lacing, a five-foot sole cutting and other machines, as well as a new seventy-five horse power engine.

The Amherst Boot and Shoe Co., of Amherst, N.S., after paying semi-annual dividends on preferred stock have ordered a six per cent. dividend to holders of common stock.

The Elkman Shoe and Supply Co., of Brampton, Ont., have recently added several metallic and heeling machines for making boys' and youths' nailed and standard screw shoes.

St. Stephen, N.B., will likely erect a building for a shoe factory and will endeavor to raise stock to the amount of \$25,000. It is almost certain that the project will go ahead at once.

A leading tanner writes: "In the face of the advance in hides recently—the poorest quality of the entire year—and judging from the available supply, we are likely to see record breaking prices as the clean, short-haired stock comes in."

It is understood that George A. Slater, Limited, Maisonneuve, will build an extension to their factory during the coming summer in order to keep pace with the increasing demand for "Invictus" shoes.

P. H. Secord & Sons, of Brantford, have a contract to erect a new shoe factory, four storeys high, of stone, brick and cement, for the Galt Shoe Manufacturing Co. The cost will be \$35,000.

Eastern capitalists have made a proposition to Port Arthur to locate a boot and shoe factory in that city. They have written the city council asking what inducements the city can offer toward the proposition.

Chris. J. Fitzgerald, formerly of New York, now president of the Cook-Fitzgerald Co., London, has been offered the management of the new London Jockey Club, but has declined on account of business reasons.

Peter Kramer, father of F. W. Kramer, superintendent of the Dominion Rubber Co.'s plant at St. Jerome, Que., has retired from the service of the Granby Rubber Co., Granby, Que., after a record of a quarter of a century. He was the recipient of several presentations.

A new Montreal organization known as the Sunlight Shoe Co. are, through the A. E. Saucier Shoe Co., putting

out a new line known as Sunlight Shoes, which includes boys', youths', and little gents' McKays and imitation Good-years and misses' and children's shoes and women's pumps in McKays, turns and imitation Goodyear.

The Snedecor & Hathaway Shoe Co., of Detroit, expect to commence the cutting of shoes in St. Thomas this week, and to have their plant removed and be manufacturing within a month. The company have leased temporary premises on Curtis street, but expect to erect a building of their own in the near future. G. J. Murdock, president of the company, has been in St. Thomas making final arrangements.

The Canadian Consolidated Rubber Co. have declared a regular quarterly dividend of one and three-quarters per cent. on the preferred shares and one per cent. on the common shares of the company for the past quarter. The Canadian Consolidated Felt Co. have declared a dividend of one and three-quarter per cent. on the preferred shares of that organization.

H. E. Burnham, for some time past superintendent of the T. Sisman Shoe Co., of Aurora, has resigned to take a similar position with the newly organized W. G. Downing Shoe Co., who have obtained their charter and will shortly establish a factory in Ontario. The company will make men's standard screw and Goodyear welts in elk and other leathers. Among the members of the new organization are W. G. Downing, of Brandon, Gideon Knechtel, of Brampton, and Geo. W. McFarlane, of St. Catharines.

Getty & Scott, Limited, of Galt, have, during the past few months increased the capacity of their factory by seven hundred pairs a day, making the daily output 2,500 pairs a day in women's, misses', children's, youths' and little gents' footwear. It is expected that within a few weeks the factory will be turning out 3,000 pairs a day, which will place this enterprising Galt industry among the big people of the continent in the production of high grade footwear. This largely increased output has been brought about through the factory systematizer and chief.

The Barrie Tanning Co., of Barrie, who recently increased their capital stock from \$100,000 to \$300,000, will, during the coming summer, complete their new tan yard and extension to their beam house, which was commenced last fall. The firm were obliged to call off construction, however, on account of not being able to get material in time to have the building closed in before the cold weather arrived. Ample supplies are now on the ground ready for spring operations. When the new tan yard and beam house are completed, the Barrie Tanning Co. will have a capacity of eight hundred sides a day.

Construction work will shortly be commenced on the First Prairie Shoe Co.'s factory in Brandon, at the back of which are W. Percy Gillespie & Co., of Toronto, who recently opened a Western branch in Brandon. The building will be 150 feet long and 50 feet wide, four storeys high, with basement. It will be erected of brick and concrete and will be exceptionally well lighted and admirably arranged. Frank Patton has been engaged as superintendent of the new plant. For several years he was with the Murray Shoe Co., of London, and has held other important positions, having been connected with the United Shoe Machinery Co.'s office in Toronto for some time.

It is understood that the Nova Scotia Shoe and Leather Co., which obtained a charter providing for the tanning of leather, the manufacture of shoes and harness, and wool pulling with a share capital of \$100,000 are not likely to go

ahead with the erection of the proposed new factory in Sydney, C.B. At a meeting held recently only a few of the subscribers were present and there was a division of opinion regarding whether the industry should be located in Sydney or St. Peters. Some of the subscribers were in favor of a tannery and nothing else, while others did not see their way clear to endorse the shoe factory project. The matter has in the meantime been dropped.

The J. Leckie Co., Limited, of Vancouver, B.C., are adding a new addition to their factory. The plans are now ready and tenders will be called for at once. The building will be alongside the present building and will be 143 by 33 feet in dimensions, seven storeys and basement, mill construction, and equipped with automatic sprinkler and supervisor. The three upper floors and basement will be used for factory purposes to increase their output from five hundred pairs to one thousand pairs per day. The Leckie Co. manufacture men's, boys' and youths' Standard screw and Good-

year welts, making a specialty of high cut prospectors', surveyors' and hunting boots, and the finest grades of heavy welts.

James T. Sutherland, of Kingston, Eastern Ontario and Quebec representative of the Cook-Fitzgerald Co., Limited, of London, and manager of the Frontenac Hockey Team, was in Toronto during the past few days showing a splendid range of samples. Mr. Sutherland was for many years a traveler for American shoe firms, but says that he now represents a line of men's welts that has no superior on the other side. He also looks after a hockey team that can hold its own with the foremost aggregations on American ice. Recently the Frontenacs took a little jaunt to Boston and defeated the Pilgrims by six goals to five, although the latter team vanquished the all-star septette from Winnipeg by six goals to four. This is certainly going some and Mr. Sutherland adds that he does not care whether it is on sole leather or ice, his organizations always come out on top.

The foregoing is a group picture of the hockey team of A. R. Clarke & Co., of Toronto, champions of the Riverdale Manufacturers Hockey League. They won the handsome challenge cup donated by Hon. A. E. Kemp. The leather men captured seven games during the season and lost only one. The second annual banquet of the Association was held on Thursday night last. About one hundred were present and spent an enjoyable evening. The Hon. A. E. Kemp Challenge Cup, as well as solid gold lockets for the individual players and manager, as gifts of the management of the different concerns represented in the league, were presented to this year's champions of the league, the A. R. Clarke Company's team. C. P. Borland, who is one of the trustees

for the cup, presented same to Griffith Clarke on behalf of the A. R. Clarke Co., Limited, team and President J. D. Robinson presented the lockets to the individual players. This league, although only in its second year, has proven to be a decided asset to Riverdale in the sporting line and promises to become one of the best in Toronto in a very short time.

The following are the members as seen in the group portrait:—Front row, from left to right—H. A. Sailor, treasurer; J. Spanton, goal; Griffith B. Clarke, president; A. Cramer, right; H. H. Diggon, secretary. Back row—W. Mellmurray, centre; N. Nicholson, right; J. Sullivan, point; G. Owens, cover; A. Collins, manager; Ed. Randall, rover (captain).

### VETERAN TRAVELER'S LAST JOURNEY

The shoe trade, from one end of Canada to the other, will learn with deepest regret of the death of Robert Rogers, who passed away at his home, 52 Shannon street, Toronto, on Monday, March 31st. He was fifty-five years of age and had been identified with the firm of Philip Jacobi, shoe store supplies, Toronto, for the long period of thirty-eight years nearly all of which was spent on the road. Mr. Rogers was born in Warboise, Huntingdonshire, England, and came to Canada as a lad with his parents, locating in Toronto. When seventeen years old he entered the service of Mr. Jacobi and had covered the Dominion from ocean to

THE LATE ROBERT ROGERS

ocean many times in the interest of the house. Of late years he was in the habit of making semi-annual tours to the West, going as far as Vancouver and, at Calgary a few weeks ago he was taken ill and had to return home, reaching Toronto early in February. Mr. Rogers was several years ago a victim in a wreck on the C. P. R. near Montreal and suffered an injury to his heart. Recently cardiac and other ailments developed and hastened the end. "Bob" Rogers, as he was familiarly known, was a man of honor, integrity and worth. He made warm friends by the score in every branch of the trade by his obliging disposition, his sterling character and his high principles. Possessing unflagging energy, he was in love with his work. He never spared himself; he never broke an appointment nor violated his word, and his record was clean, progressive and faithful; a credit to himself and to the house which he so ably represented. A widow, two sons—Harold and Clifford—and a daughter, Miss Hilda, all residing at home, are left to mourn his departure. Alfred Lewis, who for forty-two years has been with Mr. Jacobi, and James Acton, president of the Acton Publishing Co., are brothers-in-law of the deceased.

### BREEZY BLASTS FROM QUEBEC

E. Goulet, manufacturers' agent, will remove about the first of next month to Crown street.

Alfred Marois, of Tourigny & Marois, recently bought one hundred and forty lots in Montcalmville.

P. Daigle, shoe retailer, of Crown street, suffered from the recent storm, his plate glass window being wrecked by the wind.

Clovis Blouin, lumber merchant, J. P. Beland, accountant, Henry Rochette, manufacturer, J. E. Villiers, accountant, and Albert Rochette, foreman, all of Quebec, have been

granted a charter under the name of the National Shoe Stock Co., Limited, with a capital of \$20,000, to make counters, heels, box toes and other parts of the shoe.

Alfred Garant, accompanied by his father, M. V. Garant (formerly of Goulet & Garant), is on a business trip to Boston and New York.

Thos. Duchaine, lately in the shoe manufacturing business, accompanied by his wife and daughter, spent the Easter holidays in New York.

Trade in general has been good both in retail and wholesale lines during the past few weeks. Dealers have been kept busy selling rubbers, while manufacturers are also running to capacity.

The Canadian General and Shoe Machinery Co., of Levis, have gone into liquidation. The demand for liquidation was made by the Chinc Hardware Co., of Quebec, who are creditors to the amount of \$2,060. It is said that the company are doing a good business and it is likely that some settlement will be made whereby operations may be placed on a sound footing.

Among the visitors in the city during the past few days were Philip Pocock, of the London Shoe Co., London, Ont.; R. T. Hayes, of J. M. Humphrey & Co., St. John, N.B.; W. C. Rising, of Waterbury & Rising, St. John; J. A. McLaren, W. A. Hamilton, John Abernethy, H. White, and E. O. Weston, of Toronto; Alexander Meyers, Alf. Lambert, A. E. Jackson, and R. L. Savage, of Montreal, and J. S. Townsend, of Hamilton, who recently started in the jobbing business in that city.

### NEWS NOTES FROM VICTORIA

James Maynard, of Victoria, is starting a new shoe store on Yeates street.

The C. E. McKeen Shoe Store Co., Limited, of Vancouver, are opening a store in Victoria.

G. D. Christie, shoe retailer, who has been spending the winter in the East, has returned home.

R. E. White is opening a branch at Duncan, B.C., where he will carry a well assorted line of goods.

Young & Manton, 636 Johnson street, who have been doing a big repair business, have added a stock of shoes.

J. H. Munsell, who was with J. Fullerton, of Victoria, has opened a shoe store on Johnson street and is stocking men's and boys' lines.

Retail trade in Victoria has been very good, but, as usual, the banks are shutting down on some dealers, which is causing them to reduce stock. However, travelers report having received a number of nice orders for fall lines.

### WINNIPEG EVENTS OF INTEREST

Mr. Mackay, of Moose Jaw, Sask., spent a few days in Winnipeg recently.

It is reported that F. Burt intends opening a men's fine shoe store in the new Lindsay block, Winnipeg.

W. Fleming, late of the Moyer Shoe, Limited, has taken a position with Mackay & Co., Moose Jaw, Sask.

W. Goodie has purchased the Lightning shoe repair shop from Mr. Affleck, of the Yale Shoe Store. Mr. Goodie expects to carry a good line of men's working shoes in connection with his repair business and doubtless will make a success of his venture.

### SOME NICE OFFERINGS FOR WOMEN

Murray W. Crosby, representing Utz & Dunn Co., of Rochester, N.Y., was in Montreal, Toronto, Hamilton, London and other cities during the past few days showing an exceptionally attractive and artistic range of fall styles in ladies', misses' and children's high class shoes. The collection embraced one hundred and twenty different samples, the major portion of which were button. Mr. Crosby re-

ports that there is an active demand for the receding toe in the high class trade, while in the medium priced goods the moderate toe prevails. Gun metal and patent buttons with cloth tops bid fair to be very popular in fall footwear. The most fashionable models have a long vamp and narrow, receding toe and carry a heel from 14-8 to 16-8 high. There is also a strong showing in seude, grey, brown and black being the leading colors. The demand for patent leather shoes appears to be on the increase. Heels are a little lower if anything than last year, the edges are close trim and the models evidence plain, conservative and artistic lines. Some bals. are shown and in the heavier lines of winter calf with waterproof soles a very pleasing display is presented. In misses' shoes the wide medium toe has the largest call, with a common sense heel and exceptionally neat fitting features. Mr. Crosby reports a record business in the interests of this widely known Rochester firm whose daily capacity is nine thousand pairs in ladies', misses' and children's turns, welts and McKays.

#### A SALESMAN OF ENERGY AND OPTIMISM

Twenty-eight years in the shoe business and still in the "pink" of condition is the record of William E. Gerrish. When he attained his majority he weighed only 160 pounds. His parents and friends were afraid he was in delicate health and that consumption or some other dread disease would overtake him. Instead of any fearful malady claiming him as a victim, adipose tissue has been accumulating and to-day Mr. Gerrish tips the beam at 225 pounds. He got the sobriquet of "Pink" from the fact that it has been a lifelong custom with him to wear a carnation boutonniere. He began the shoe game with Winch Bros., of Boston, with whom he rose from messenger boy to one of their principal salesmen, being in the service of the firm twenty years. He

next spent five years with Endicott, Johnson & Co., of Endicott, N.Y., and for the past three years has been on the staff of the P. J. Harney Shoe Co., of Lynn, Mass. Mr. Gerrish has been coming to Canada for several years and covers the Dominion for his present firm from Quebec to Winnipeg. He is now making his fall trip with a representative and artistic line of samples, embracing over one hundred and fifty lines in popular priced women's welts, McKays and turns. Mr. Gerrish maintains a permanent sample room in Boston. He possesses a genial disposition, is an optimist and a booster and no one ever heard him "knock" the goods of a rival. He has a hearty hand grasp and welcome slogan for every one. Mr. Gerrish resides at Malden, Mass., and when at home spends considerable time at all the leading ball

games. He is an ardent fan and has witnessed all the world's series for a number of years. He is also interested in other lines, but principally in the splendid line of Harney shoes.

#### RUBBER PLACING IS VERY FAIR

The various rubber companies whose salesmen have been out since March 10th report that business is very good and that placing orders for next season are coming in nicely. A large number of retailers say that the rubber footwear trade has on the whole been very good, although, in many sections, not equal to last year when, owing to specially favorable weather, sales took an abnormal jump, particularly in the early winter months. Cloth goods have not been as active during the past season and some dealers have considerable stocks on hand. The advances in price have been very small, except in leather top goods, although second quality lines and the smaller sizes for children and misses, boys and youths are from one to two cents higher. The companies strongly advise all dealers who have not already placed their orders to do so before April expires, as there will be a revision of prices toward the end of the present month. What the increase will likely be cannot as yet be learned.

#### BIG INCREASE IN THEIR SALES

Canadian Consolidated Felt Co., at the annual meeting of the shareholders held in Montreal last week, reported net earnings of approximately \$113,000 for 1912. After a deduction of \$29,000 bond interest and \$35,000 preferred stock dividends, the company showed surplus profits for the year of \$49,000, equal to 3.3 per cent. on the common stock. About \$25,000 was set aside for improvements, etc., and the company carried forward a balance of \$24,000. Earnings on the \$500,000 preferred stock of the company were equal to about 17 per cent. The sales of the company last year showed an increase of nearly 100 per cent. Two factors operated again larger profits than were actually shown. One was the high price of leather and the other trade conditions resulting from the open fall and winter.

The annual meetings of three subsidiary companies of the Canadian Consolidated Rubber Company were held last week. The companies were the Canadian Rubber Company, Granby Rubber Company and Merchants Rubber Company. President D. Lorne McGibbon presided. The directors were all re-elected. At the annual meeting of the Canadian Consolidated Rubber Co. on March 27th a very gratifying report was presented. The directors' annual statement showed net sales during the last year to have been \$8,000,000, an increase of 25 per cent. on the previous year, and net profits \$832,846. Dividends, interest, etc., absorbed \$813,843. The surplus account now totals \$1,991,627.

#### WILL HOLD SALESMEN'S CONVENTION

The annual conference of the branch managers of Ames-Holden-McCready, Limited, which was held for nine days in Montreal, was a very successful and profitable gathering. All the factories were visited and spring styles for 1914 considered. A. J. Johnston, Winnipeg manager, E. A. Dagg, Calgary manager, and Frank Morgan, Edmonton manager, spent a few days in Toronto on their return to the West. The company have just placed on the market two new lines which they believe will make a decided hit with the trade. One is a range of popular priced men's and women's welts and the other is an exceptionally high grade welt for both sexes, which W. V. Matthews, general superintendent, believes will command a very wide patronage. It is proposed to hold a big convention in July next of all the travelers of the various branches of the Ames-Holden-McCready Co. at headquarters just before the spring selling season for next year. It is expected that the event will be one of great profit and interest to all concerned. At the headquarters of the company in Montreal a large room has been fitted up for travelers, which is a decided convenience.

# ❖ RUTHSTEIN'S STEEL SHOES ❖

## ❖ REAL PROFIT PRODUCERS ❖

If you will just figure out the number of men right in your own locality, who are prospective purchasers of good work shoes, you will see the possibilities there are for Ruthstein's Steel Shoes.

There are no shoes made which are so well fitted to withstand the extraordinary wear and tear to which heavy working shoes are subject, and if you will hand out Ruthstein's Steel Shoes whenever you have a call for shoes of such a nature you will be putting over a good business proposition.

Because the satisfaction each customer will derive will show him the best value he has ever experienced in working shoes, and you will be making a good profit.

Any way, get to know about Ruthstein's Steel Shoes by having us send you our descriptive booklet, for they are surely real profit producers.

# No Sole Rubbers Needed Damp-proof and Dust-proof

**A Dry  
Cushion**

CANADA PAT. JULY 4th, 1911

**Insole  
Smooth  
as Velvet**

CANADA PAT. JULY 4th, 1911

The black line over insole, and extending part way up the sides between linings and vamps, shows where damp-proof material is placed in shoes.

This damp-proof material is so compounded that neither heat, nor cold, nor perspiration has any effect on it.

**Hawthorne's Seal'd Sole Shoes** are different from all other shoes, as no dampness penetrates soles or seams of soles to foot, have an insole that conforms to and fills every curve of the foot, distributing weight evenly and admits of perfect blood circulation.

**Hawthorne's Seal'd Sole Shoes**, are ideal for many reasons—no acid from perspiration can enter leather insole and in-seam (which causes insoles to break and curl up) relieves perspiring and burning feet—relieves corns, calouses, bunions, etc., in fact prevents and cures afflictions caused by ordinary shoes. No shoe trees needed in shoes not in use.

**Once You Wear Them  
You Always Wear Them**

They don't sacrifice style for the above features.

**(Not in Any Trust)**

A STRIKING APPEARANCE in your window does not naturally mean big sales to you. It's not always the most "stylish" shoe that brings the best results. And so don't buy just for high or receding toes, but for good sensible toes and heels, and excellent workmanship all through, and good honest leather—buy Yamaska Brand. They'll give you all the style that's necessary, and a great deal more value.

## "Classy"

That's the one word that most aptly describes B. T. & B. Baggage. Plain, neat and strong, it is made in the careful B. T. & B. way that ensures perfect service and utmost satisfaction.

To be most profitable your traveling goods stock should be a B. T. & B. stock.

No. 385—Men's Deep Cowhide Bag

## Berlin Trunk & Bag Co., Limited

BERLIN - ONTARIO

Your order to any of these selling agencies will receive immediate attention:  
C. H. Griffiths & Co., Calgary, Alta.; Thos. J. Spence, 559 Banning Ave., Winnipeg, Man.; H. T. Johnson, 253 St. James St., Montreal, Que.; W. C. Mullins & Co., St. John, N.B.

## Don't be style-wise and sales-foolish

What's the good of knowing all that's to be known of new styles if you forget that most of your customers are more concerned about the quality and wearability of their shoes? Style is all right—if it helps sales. But if it is not tied up to good leather and good workmanship it's a menace to business.

In Surpass Shoes you get style enough, and such value that your customer will surely come again. Every pair must live up to the Surpass reputation. You couldn't wish for a stronger guarantee.

Louis Gauthier Co. Limited, Quebec

**H. E. THOMPSON**  
President and General Manager

# Why You Should Link Up With THOMPSON Service—

Because the THOMPSON idea is not to load you up with big stocks, but to give you a small yet comprehensive range of styles that "go like hot cakes."

You can re-order as your needs dictate. Our "Instantaneous service" policy assures your getting shoes as you want them.

This means: quick sales, quick profits, quick turnover, a jingling cash register, instead of dust covered stock on the shelves.

Moreover, in THOMPSON shoes you have something more than mere "style" to talk about.

We give you a *special feature*, a Kusion Sole in Women's shoes, that never fails to *double sales*. It is something *concrete* to talk about.

We want to tell you more about this Kusion Sole, also our "instantaneous service" proposition. It is all explained in our catalogue. *There is a copy here for you for the asking.*

Our traveling representatives are now on their way to you with a splendid range of up-to-date men's, women's and children's footwear.

This range for Fall selling is very classy and complete. Do not order before you see the THOMPSON man in your territory.

**"Make it while you live"**  
**Yours for a QUICK TURNOVER**

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

**MODEL N**

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

## 100 cents of value in every dollar of price

In selling Rideau shoes your big argument should be value. For while Rideaus can well be called "classy," it's the great stress that's laid on leathers and workmanship that makes them so absolutely worth-while. And the very fact that you can show a shoe as snappy and stylish as a Rideau, and at the same time talk quality, is, in itself, one of the strongest sales arguments possible.

Stock these shoes that make for easy selling because of "good looks" and 100-cents-on-the-dollar value.

**The Rideau Shoe Co., Limited**  
**Montreal**

# Two "reason-why" leathers —and three of the reasons

*The "Bestyet" Twins--"Bestyet" Brown and "Bestyet" Tan are distinct achievements in leather making. They base their claim to be in your shoes on their ability to give you advantages you cannot get in ordinary leathers. Listen:—*

## **Their color is even**

*You won't get one skin of these leathers that isn't the same shade from skirt to skirt, and from head to tail. And, what's more, every skin will be exactly the same shade. Shoes from them do not require to be matched up.*

## **They are washable**

*Any stain these leathers may pick up in your factory can be easily removed with castile soap and water. The bugbear of soiled shoes need never cast its gloom over you. Every shoe you send out will be perfect in color and finish.*

## **They won't fade**

*Neither of these leathers will lose its original color from exposure to the sun. Your customer can take your shoes of these leathers from his window in as good condition as when he put them in. And shoe polish won't bleach them either.*

## **Just one more reason why**

*Right now you can get either or both of the "Bestyet Twins" in any quantity you wish, but you'll have to hurry. With a big season of tans coming on these leathers are liable to be scarce soon.*

*Order yours right this minute.*

# There's Money in Hosiery— For the wise Shoeman—

Glance over your sales records for the last year! Now total them up and ask yourself this question:

How many of my customers could I have sold Pen-Angle Hosiery to last year without half trying?

Suppose you had sold one-third of your customers and pocketed a nice margin of profit. Your extra net profit would have paid the rent and perhaps the wages of a clerk or two. And all this with hardly any extra work or cost. Why not oblige your customers by stocking Pen-Angle—the popular, Full-Fashioned Hosiery for Men, Women and Children.

Your Lady customers want Pen-Angle Hosiery to match their shoes in shade and color. Your gentlemen customers want Pen-Angle for this and other reasons at your store. Oblige them by keeping a good working stock of Pen-Angle always on hand. If you've never stocked Hosiery before, write to us for full particulars.

# *Style that's for sales and not for notoriety*

**L**OOKED at with the eyes of a retailer, or with those of the fashionably dressed woman, Perth Shoes look remarkably good.

In style and shape they are "correct." They are not conspicuously "different," and yet they add just that air of "distingue" so much desired by the woman who is particular in regards to dress.

Perth styles are right, not by accident, but by design---they're designed to sell. Their styles and patterns are evolved not to make them talked of, but to make them sell steadily and easily.

When you see the Fall samples you will agree that there's less noise and more real business in Perth Shoes than in many other lines.

*Perth Shoe Company, Limited*  
*Perth, Ontario*

of Montreal, Limited

J. I. Chouinard - - Selling Agent

## Up-to-the-minute Business Bringers

Our sales on "Monarch" and Brandon shoes for Fall 1913 have exceeded 50 per cent. to date over last season. Merchants looking for values should wait and see our samples. Salesmen are now on their different territories.

**Brandon Shoe Co., Limited, Brantford**

# Union Made Shoes Should be on Your Shelves for the Coming Season, Mr. Retailer

When the salesmen visit you this season, Mr. Retailer, ask if his shoes are Union Made. The Retailer who carries the largest volume of business, who is seeking better profits, honest footwear and maximum service invariably carries Union Made footwear.

The Union Stamp has been widely advertised in all the leading labor journals of the country, and the Union Made Shoe is absolutely demanded by Union workers throughout the United States.

The Union man understands the value of the Union Shoe which he demands, not only for himself alone, but for his family.

Retailers have come to realize that the best made shoes are the product of Union labor, which means footwear of quality produced by the most efficient workmen, and sold at reasonable prices.

No Stamp is the seal of Union labor except the official stamp of the Boot and Shoe Workers' Union. This Stamp, and this Stamp alone, is the one genuine guarantee of Union made shoes.

With shoes bearing the Union Stamp you are prepared to cater to *everybody*, with shoes that represent the highest quality in footwear for men, women and children.

BOSTON STORE  
PROVIDENCE, R.I.

*Queen Quality*

**T**HE Boston Store of Providence is one of the largest shoe retailers of the city—perhaps the largest.

Moreover, the department is growing steadily though it's old enough to vote.

What is still more to the point—it's paying a good, round profit.

We asked Mr. Perry, the department buyer, to what he attributed its success:—

"Our own reputation and service plus the QUEEN QUALITY Shoe and its national advertising.

"We figure," he continued, "that it's a great deal easier to draw customers to our store for the QUEEN QUALITY Shoe than it would be for any other women's line.

"But we don't believe that there is any profit in doing the thing half way. If you won't handle a trademark shoe in the right way, let it alone. It doesn't pay to dabble.

"We handle the QUEEN QUALITY line exclusively for our \$3.50 to \$5.00 shoes. Of course we fill in above and below that with our other lines, but the QUEEN QUALITY sells out the cleanest, turns over the oftenest and pays the biggest profit.

"If I could make as good a showing on the other lines as I do on the QUEEN QUALITY, I should be very well pleased indeed.

"We have handled the QUEEN QUALITY Shoe since 1901 and I have still got their first catalog.

"But the business is growing as fast now as at any time.

"This year I placed my regular order for Fall and also my duplicate order, which amounted to about 50 per cent. of the original. It was scheduled for Fall delivery. The salesman, however, suggested that I would want it by September 10th, and although I had not the slightest expectation of wanting it until the first of October, he said that he would have it prepared by that time. On August 29th the head of the QUEEN QUALITY shipping department wrote me that the shoes were beginning to come through and would be ready for me at any time I cared to order them in. On September 10th I began to receive them. By October 1st I had all of the first order in. By November I had taken all of the first and most of the second order, and had re-ordered on a number of the styles from the QUEEN QUALITY stock.

"I don't know that we would care to give exact figures, but I think the facts as I have related them tell very plainly how we feel about QUEEN QUALITY Shoes."

It is interesting to note in connection with this story that Mr. Perry has been with the Boston store for twenty-two years.

There is a decided connection between success and the shoe buyer's permanency.

A good trademark shoe spells SUCCESS and permanent connections. Department stores are looking with favor at the important advantages that go with good trademarked footwear.

The department store management that does not look into the advantages of trademarked shoes over unnamed merchandise is overlooking something that may mean the difference between loss and a handsome profit.

If there is anything in this story that interests you, write us. We can and will get you more evidence and tell you frankly if QUEEN QUALITY will fit your store.

# No Need to Stock Heavily for Fall

---

---

What's the sense of loading yourself up with a big stock of shoes and rubbers when you have a friend who is willing to carry the big stock for you?

I don't wish to see you overstock yourself, because I know you won't feel right towards me if you do. So I am going to keep a big stock ready for you to order from when you need anything.

Place your order now with my salesman who will call to see you. Lean a little to the safe side, resting assured that whatever sorting you need to do in season can be done quickly and safely from my big stock.

**We Advise  
You  
To Place Your  
Rubber Footwear Orders Now**

For the following "business" reasons:

Immediate orders mean early deliveries.

Giving you ample time in which to arrange your stock to the best advantage.

And satisfy the early demands of your customers—in a manner calculated to increase your prestige.

An immediate order also means that you won't be caught unawares—and have to pay expressage on a rush delivery.

**By Placing Orders At Once You Will Be Protected  
Against the Future**

This is the situation as it stands—now. And we urge you again of the wisdom of acting immediately.

**If Our Traveller Has Not Yet Called Upon You  
Please Notify Our Nearest Branch**

Remember—We guarantee deliveries only on orders placed in good time.

Ask Your Jobber's Salesman  
to Show You This One

**T**HE fact that this shoe is one of the famous "Doctors" is alone a very good recommendation for it. The fact that it strikes the happy medium between the waterproof shoe with too much weight and too little style, and the one with too much style and too little weight, makes it an ideal shoe for fall selling.

It's a shoe that looks dressy on a city street, and serviceable on a rough country road. Its peculiar style hides some-

what its appearance of sturdy strength, but the strength is there just the same.

Don't let your jobber's salesman get away without showing you this shoe. It's on the Fitzer last.

## People Must Buy All Their Shoes at Retail Stores

How Merchants Are Taking United Action to Persuade Wholesalers to Discontinue the Retail Practice—The Latter Will Co-operate to Get Rid of the Nuisance—Petitions Have Been Largely Signed—Luncheon Will Be Held at an Early Date—Other Important Topics

At the last meeting of the "Boot and Shoe Section" of our Association, a resolution was unanimously passed, requesting that a letter be sent to every wholesale boot, shoe and rubber dealer, and manufacturer in Canada, stating that a great many complaints have been laid before our meeting, and sent in to us by mail, setting forth that some wholesale dealers and rubber manufacturers were selling goods to other persons than those engaged in the retail trade, and to request that this practice be discontinued, as it is unfair to the legitimate retailers who pay their wholesale accounts, taxes, rent and store expenses, and are endeavoring to honorably serve the public and give them good service.

We feel sure you will agree with us, that when goods are sold below the regular retail price, by

wholesale dealers and manufacturers, to the retail public, it leaves the impression that the retail dealer is charging too much, and when the wholesale dealer or manufacturer sells to the public at the full retail price, and the public are under the impression that they are purchasing at wholesale prices, the public are deceived, and no good purpose is accomplished to either section of the trade, all of which are necessary, the one to the other.

We feel certain that by calling your attention to this trade grievance, that you will give us your hearty co-operation and support in assisting us to remedy it, and we will be pleased if you will let us know as early as possible your views on this subject, so that we can place the same before our members.

The foregoing is a copy of a letter which has been sent to all the wholesale shoe men and manufacturers of Canada by the Ontario section of the boot and shoe dealers of the Retail Merchants' Association of Canada.

This section was organized in August last and is doing practical and effective work in the interest of the trade and in seeking to amicably adjust several vexed problems.

Favorable replies have been received by E. M. Trowern, of Toronto, secretary of the Association, from nearly all the wholesalers who have been communicated with. They express themselves as in hearty sympathy with the object in view and have promised to give it active support.

At a meeting of the Executive held last week several important matters were carried out. The Grievance committee presented their report and it was decided to hold a luncheon in the near future to which the wholesalers will be invited, when certain questions of mutual importance will be considered. The date has not yet been fixed. Copies of the retailers' petition will be presented to the wholesalers for signatures. This document has been signed by scores of retailers, and is as follows:

(1) "We, the undersigned Retail Boot, Shoe, and Rubber Dealers, doing business in the Dominion of Canada, believe that the practice, adopted by some

wholesalers and manufacturers of boots, shoes and rubbers, and other leather goods and findings, of selling goods direct to the public, is injurious to the best interests of those retailers who are carrying stocks and paying rents, taxes and other overhead expenses, as well as being injurious to all branches of the trade. In order to express our disapproval of the above custom, and to ask you to co-operate with us, we are attaching our names hereto."

(2) "We, the undersigned boot, shoe and rubber dealers, doing business in the Dominion of Canada, believe that it is not in the best interests of the retail trade, to send orders by their customers to wholesale houses and to manufacturers, to have them filled; nor do we believe that it is in the best interests of the wholesale houses or manufacturers, to fill such orders, or the orders of clerks from other wholesale houses and manufacturers in other lines, and we, the undersigned, therefore request you to assist us to remedy the same."

Having read the above, which meets with our hearty approval, we therefore agree with the retail trade through the officers and members of "The Boot and Shoe Section" of "The Retail Merchants'

Association of Canada," to carry out, under all circumstances, as far as we are concerned, the conditions as set forth above.

**Co-operation of the Jobbers**

The following is what the manufacturers and wholesalers will be asked to sign:

"We, the undersigned manufacturers and jobbers of boots and shoes, rubbers and findings, are fully in accord with the wishes of the retail boot, shoe, and rubber dealers, as set forth above by the "Boot and Shoe Section," of "The Retail Merchants' Association of Canada," in their desire to have the retailing of boots, shoes, rubbers and leather findings, and the filling of orders from retail dealers sent to us, through their customers, discontinued—as presented in the petitions submitted to us.

It was decided to hold the next meeting of the Executive on Thursday, April 24th, when further important topics arising out of the convention of last year will be taken. Signs have been printed at the request of the wholesalers, and are being sent to them. They are to the effect that "positively no goods will be sold retail."

**Grievance Committee's Work**

A Grievance Committee has been appointed, of which the following are members: J. H. Shinnick (chairman), Joseph Johnson, M. H. Carscallen. A Wellwood, T. Davis, Fred. Kibler (Berlin), A. Chisholm, T. H. Bigwood, W. T. Fegan, J. W. Jupp, A. R. Trudeau and E. M. Trowern.

It was also recommended that a slip be prepared and sent to every member of the "Boot and Shoe Section" whereby they can place on it the names and addresses of any persons whom they know have purchased goods from wholesale houses, and send the said slip to our office.

**Nothing Said About Quality**

The Grievance Committee also presented the following report:

A publication is sent out by the Department of Labor, at Ottawa, entitled, "Wholesale Prices, Canada, 1912." In this report mention was made of the wholesale prices of boots and shoes, and no reference was made to the quality; therefore, it was the impression of the committee, that the publication, as far as the "Boot and Shoe Section" was concerned, was of little value; and it may be the means of leading the public to believe that the profit in boots and shoes was considerably more than it is; therefore, the committee recommended that a request be made to the Executive committee of the Toronto Branch, asking them to deal with this subject, and to present views of this Section before the Minister of Labor, expressing our disapproval of the facts (as stated above) in this publication.

J. H. Shinnick has been elected second vice-chairman of the Toronto Section, to take the place of Richard Stephens.

The Executive of the Ontario Association has decided to meet every two weeks until further notice.

**Big Assembly in August**

Another provincial convention will be held in Toronto in August next during the progress of the Canadian National Exhibition. Preparations for the event are already in progress, and it is expected there will be an enthusiastic gathering.

**Do Not Be Careless in Fitting**

Just as there are no two faces alike, there are no two feet alike. It is not hard, therefore, to understand that shoe retailers have a very difficult problem to face from morning to night in their business when it comes to fitting shoes properly to their customers' feet. A shoe improperly fitted is hard on the wearer and also hard on the shoe, giving general

dissatisfaction and trouble both for the wearer and shoe retailer. It is easy to fit people properly if time and care are exercised. The reason that so many are improperly fitted is due to pure carelessness on the part of the retailer. Shoe dealers today have a stronger tendency to stick close to the lines carried than in years past. There is less tendency to change. This tendency works both ways for the shoe salesman. It makes it easier to hold old customers, and it makes it harder to get new ones.

**Buy Sizes to Match Demand**

A season of "Special Sales" like that just ended ought to call attention to the question of stock efficiency in retail stores. One large manufacturer of shoes has put on record his belief that ninety per cent. of the retail shoe business of the country is done with fifty per cent. of the stock maintained. Dealers, he thinks, do not base their buying (so far as extreme sizes and widths are concerned) on their records of shoes sold in previous years. Within the middle range of sizes—from seven to nine and one-half for men—they forecast their wants pretty closely, and usually all but exhaust their stocks. In the sizes above and below this range, however, they either fail to study their records or else allow their ambition to start the new season with a full stock to over-balance their purchasing.

For a case in point, study the size chart below which was clipped from a recent newspaper advertisement. It is

Clearing all leathers in 1911 shoes; they're our \$4 and \$5 values, now **\$2.85**

Look in the size chart for your size.

Widths	MEN'S SHOES, Lace and Button.												
	5	5½	6	6½	7	7½	8	8½	9	9½	10	10½	11
A	0	✓	✓	✓	✓	✓	✓	✓	0	✓	0	0	✓
B	✓	✓	✓	✓	✓	✓	0	0	✓	✓	✓	✓	✓
C	✓	✓	✓	✓	✓	✓	0	✓	0	✓	✓	✓	✓
D	✓	✓	✓	✓	✓	0	0	0	0	0	✓	✓	✓
E	✓	✓	✓	✓	0	✓	✓	✓	0	0	✓	✓	✓

good advertising, since it sets every reader looking for his size and width. But it apparently was not good buying, since more than two-thirds of the "outs" shown are concentrated in the four columns listing what might be called the "average sizes" in four and five dollar shoes. Though printed in a Chicago paper, it tallies closely with stock conditions in ninety-six retail shoe stores studied by Harvard University investigators last summer. Seeing it, one of them recognized it at once as typical:

"That is correct," he declared, "the majority of the size charts I made of season-end stocks had a hole right in the middle—men's shoes and women's shoes alike."

The "hole" represents sound merchandising. Service, of course, must be considered in buying, no less than sales. The big shoe manufacturer already quoted says, however, that the "outs" can be spread over a larger area of the chart if a retailer will only dig into his records, and the average number of sales for each size and width in past years and buy, then, to match demand.

This size chart taken from a recent newspaper advertisement is an interesting study in stock efficiency. It shows that the demand was closely forecasted within the middle range of sizes. Below and above this range, however, the stock record does not indicate careful buying. One prominent shoe manufacturer says that the "outs" can be spread all over the chart if the retailer will buy according to the average records of the sale of sizes in past years.

# Handling Hosiery and Umbrellas in a Small Town

Ontario Retailer Tells How He Makes Money Out of These Lines—They Work in Well With Leather and Rubber Shoes—Does Not Hold Sales in Regular Busy Seasons—Believes Newspaper Publicity is the Best of All

"Hosiery? Yes, I added this line three years ago, and have met with splendid success in this branch of the business. On a good many occasions hose have sold shoes for us and vice versa. They work in so well together that I wonder I did not try it before. We carry about \$200 worth of hosiery which, we find, is a sufficient stock, as it is easy to sort up at any time. Our lines retail from 25 cents to \$1.00 a pair in both men's and women's. We find the best way to sell hosiery in a town the size of this—about

H. L. HARRISON, FERGUS, ONT.

2,000 population, is to get a well known and widely advertised brand, which helps us, along with newspaper cuts, window cards, etc.," declared H. L. Harrison, shoe dealer, of Fergus, Ont.

He is an alert member of the footwear trade, as shown by the fact that he has one of the neatest and nicest hosiery departments that any small store could desire. He is always eager and anxious to take advantage of new ideas. For instance, he saw in the SHOE AND LEATHER JOURNAL some time ago that a certain shoe man was selling umbrellas and making a success of this line. Mr. Harrison thought the matter over and decided to stock them. He finds that umbrellas give very little trouble for shoe men to carry and they work in splendidly with the rubber footwear department. "On a damp or rainy day, it requires little or no effort to sell an umbrella to either a lady or gentleman, when fitting them with rubbers," remarked Mr. Harrison. "We find that the umbrella end is run best by putting a lot at one price, in the window, say at \$1.00, \$1.50 or \$2.00, as the case may be. We stock about \$75 worth in assorted qualities and appropriate handles, for men and women, retailing from \$1.00 to \$2.00. We are certainly glad that we took up this idea. The hosiery stock and our umbrella stock give us no trouble whatever, and yield a very fine profit."

## How He Broke Into Trade

It may be mentioned that Mr. Harrison has been in business in Fergus for the last eight years, starting in the

spring of 1905. He was born in Sussex, England, and came to Canada in 1886. He learned the harness trade first, and after working at Atwood, Listowel, Harriston, Palmerston and Kincardine, began for himself in Ethel in 1894. From there he moved to Southampton, putting in boots and shoes with the harness. After being in Southampton for eleven years, he removed to Fergus, having sold his stock in the lakeside town. In Fergus, he decided to go out of the harness business, owing to two others being in the same line, and he has specialized in shoes, proving a most successful and wide-awake retailer.

Mr. Harrison does not believe in sales at regular times, for then the people will soon learn to put off their buying until the regular sale comes along. He buys principally from the manufacturers twice a year and says he is sure to get broken lines sometimes. These are disposed of at a price displayed on a board hung at the door. Mr. Harrison does no credit business. Occasionally he sends out shoes on approbation, but not if he can possibly avoid it. He always advises his customers to get fitted at the store if possible, where every advantage is presented in the way of being suited. In this way, he has no bad debts. Mr. Harrison added that he does not think that he has lost \$25 in the last eight years.

## Different Kinds of Publicity

Speaking of the matter of advertising, Mr. Harrison observed that he has tried almost every kind of way and thinks that there are no two localities which can be treated in the same way. "We have," he said, "distributed articles from door to door—given souvenirs to school children—sent dodgers to the farmers and advertised in the newspapers all the time, and we think that, perhaps, the latter is the best way of all for our trade. We vary the space according to the season or the holiday, using from one-eighth to a whole page."

No repairing is done in connection with the business. There are two men in Fergus who attend to this work exclusively and most of the people go to the repair shop direct. If a shoe gives out at a vital point or proves faulty, and the proprietor thinks that an allowance should be made to the customer, instructions are given him to take the boot over to the repair shop and have the work attended to at Mr. Harrison's expense.

## Lemons Cure for Corns

Humanity has suffered with corns ever since shoes that pinch the feet have been worn, but there is no need of even those who will persist in wearing tight shoes having any more suffering due to this difficulty. The Italian people have less corns than any other, so it is said. The reason for this fact is simply because they resort to the most certain corn cure known in the world. When an Italian finds his corn is appearing he goes to the lemon for relief. A piece of the juicy lemon skin is tied on the toe completely covering the affected part, and allowed to remain there all night, when it is removed. The new corn will simply disappear, and the old offender will stop hurting, and in most cases dry up and disappear. In a few cases where the corn has been a bad one of long standing, it will require more than one application. The acid in the lemon reduces the inflammation and the tissues soon become normal. The remedy is safe, cheap and effectual, and should be tried by every one who knows what it is to suffer with a corn.

# Shoe Repairer Must Adopt Better Business System

More Progressive Methods Needed in Building Up Their Trade—As a Class They Have Not Kept Pace With the Small Retailer—Tell the Public the Advantages of Your Shop

Why is it not possible for shoe repairing to be conducted along the same lines as shoe retailing, and why is it not possible for the same methods of business to be pursued? There are many repairers whose volume of business is greater than that of many shoe retailers, and yet the small retailer will oftentimes have more so-called "system" in his work than the repairer, which necessarily means, in the end, a wider margin of profit, says the 'Shoe Repairer and Dealer.'

Repairers, as a whole, are conservative. Of that fact there is no doubt, and only in the last few years have they begun to assert themselves and make more of the opportunities that have always been knocking at their door. The average retailer will run charge accounts, he will send goods to his customer's house, he will do a certain amount of advertising and soliciting, not expecting that the average man will seek him out, and by neatness in his store, courteous service and attention to all the details that will please his patrons, he builds up a business that makes his "good will" valuable to his successor when he dies. By this we mean that the name of the retailer becomes a valuable asset in itself, and he can sell it at a certain price, exactly the same as merchandise when he disposes of his store. Too frequently this goodwill degenerates with a change of ownership, but the point remains true that every retailer seeks to build up a prestige about his name in order to have an asset for the future.

## Some Doubt on This Point

The methods of the progressive type of shoe retailer could well be followed by the repairer who wishes to broaden out his work. Why not allow goods to be charged? Because the margin of profit is not large enough, is the reply of many repairers. If this is true, it should certainly be remedied, because if profits are as short as that, they are absurdly small and not enough to allow any repairer to hold a place in the running any length of time. Charge accounts to responsible people is the first step in the growth of the repairer's business. They could be begun with a few people whose financial means are unquestioned and the repairer would find a rapid growth in trade particularly from women and children who will have much more work done than if they had to pay for it instantly, because they carry very little cash with them.

The subject of advertising for repairers we have frequently mentioned. It has become a positive necessity, and practically every repairer must realize the fact. There are dozens of methods of publicity, and the progressive repairer uses the one best suited to his needs, because his shop will never be on rush time if he waits for the business to come to him without any effort to go out and bring it in by showing what he has to offer the public. You honestly believe, if you intend to succeed that your own repair shop offers advantages that no other shop can equal, and it is up to you, in some way or other, to tell the public so, if you wish their patronage. Otherwise they will follow the path of least resistance, go to any shop that is handy, but last of all seek you out, unless they believe there is an advantage in so doing.

## Not "Easy Picking" Now

The repair game and shoe retailing ceased long ago to be "easy picking," so to speak, for anyone. Prices are too low and competition is extremely keen, but there is no reason at all why repairing should not advance as much as shoe retailing and it certainly will, if repairers will utilize the same progressive methods that their retailer friends have used.

Make the coming year one of bigger, better and busier business through progressive methods and energetic effort to make the most of possibilities, not through working down by price cutting and knocking your opponents, but by building up by the modern methods that have made other workers successful.

## Retail Merchants Coming

They Will Gather in Toronto from All Parts of Ontario on April 29-30—Live Issues on which Action Will Be Taken—The Bulk Sales Bill.

The shoe retailers of Ontario will be interested in the announcement that the fourteenth annual provincial convention of the Retail Merchants' Association will be held in Massey Hall, Toronto, on Tuesday and Wednesday, April 29th and 30th.

Many of the leading footwear dealers of the province are members of the Association, which is doing a good work for retail trade betterment.

During the same time there will be the Annual Business Show in Massey Hall when account systems, store and office equipment, etc., will be displayed to which all merchants will be given a complimentary ticket.

The officers of the Ontario Provincial Board are: Ald. A. Weseloh, Berlin, provincial president; E. C. Matthews, Toronto, provincial 1st vice-president; N. C. Cameron, Peterborough, provincial 2nd vice-president; E. M. Trowern, 21 Richmond W., Toronto, provincial secretary; M. Moyer, Toronto, provincial treasurer.

Do not forget the date, April 29th and 30th.

Secretary Trowern in his official notice says in part: "The proposed 'Bulk Sales Act,' which has been introduced in the Ontario Legislature, whereby, if it becomes law, every retail merchant desiring to sell his business will be compelled to place the selling of it in the hands of a trustee, and pay him a commission on the sale price, will be explained, and also the reasons for our opposition to it.

"The question will also be considered, 'Should Retail Merchants be subjected to the unfair competition of the big retail catalogue houses, who pay nothing for the upkeep of the various municipalities?'

"The Special Committee who waited upon Sir James Whitney and the members of the government, to urge upon them our request for a reduction in the rate of our business tax, will bring in their report, and the proposed amendments to the Peddlers' and Transient Traders' Act will also be explained. The proposed 'Employees' Compensation Act,' which we are opposing, will also be fully discussed.

"A report will also be presented of our proposed amendment to the present Ontario Act, whereby the employment of females after six o'clock is now a criminal offence. We consider that the Act should be changed.

"A report will also be presented by the Committee who waited upon Mr. Borden and the members of the Dominion Government, to request the abolition of the fees for the inspection of weights and measures, and also for other Dominion Legislation in the interests of the retail trade.

"An address will be delivered on 'The Effect that Reduced Parcels Post will have on the Trade of the Cities and Towns of Canada,' also 'What Retail Merchants Should Do to Hold and Develop the Trade of Their Home Town,' and 'Why Co-Operative Society Stores Should be Opposed by Legitimate Retailers.'"

# A Family Active in Business for Over Half a Century

The Name Wright has Played an Important Part in the Mercantile and Industrial Life of Strathroy—How Large Shoe Business Has Been Built Up—A Well Lighted Store that Features Traveling Requisites

There are fewer, if any, better known shoe houses in western Ontario than those kept by the Wrights in the thriving town of Strathroy, where the family have been in business for over half a century and are closely identified with the progress and stability of the place.

The accompanying cut affords some idea of the fine premises of F. J. Wright & Co., of which F. J. Wright is manager. A few doors away is another shoe store owned by his father, James Wright, who is so well established that his name is a household word throughout a large section of the country. Outside of the footwear business the Wrights conduct a large hardware store and stove and furnace store, which also has the agency for several agricultural implements.

But even the energies of this aggressive family are not confined to retail lines alone, for they are largely interested in the Wright Piano Co., which employs a number of highly skilled workmen earning good wages.

One feature of the up-to-date store conducted by F. J. Wright, which has been in progress for twenty-two years, is the admirable way that it is lighted.

F. J. WRIGHT, STRATHROY, ONT.

Besides two ample show windows at the front, there are large windows at the rear. There are no dark corners anywhere on the premises, which are eighty-four feet in depth and twenty-four feet wide.

The firm carry a footwear stock of about twelve thousand dollars and keep things on the move. They buy from leading manufacturers on the most favorable terms and have a repair shop in connection with the store where a first-class shoemaker is employed and all work promptly and neatly done. They consider the repair branch an important and profitable adjunct of their business.

They stock traveling goods of all kinds and do an extensive business in trunks, suit cases, and bags. Upstairs they have a large trunk room. They feature these requisites in window displays and during the holiday seasons.

While credit is given, they do not encourage it, and are first assured of the responsibility of the parties to whom it is extended. They report that their losses are very small in this regard.

"We attribute our success in the shoe line," added

PROGRESSIVE SHOE STORE OF F. J. WRIGHT & COMPANY, STRATHROY, ONT.

Mr. F. J. Wright, "to the fact that we handle reliable foot wear, seek to fit all customers properly, and never misrepresent our goods. We try to give the best service possible and endeavor to play fair with everybody. That is the reason our business keeps up. We allow customers to take out goods on approval, and while now and then a pair

of shoes will come back soiled, we have on the whole little cause for complaint. The country surrounding this town is good, the farmers are well-to-do, and business conditions are sound. If we did not have faith in Strathroy, its people and its future the Wrights would not have been identified in its mercantile life for half a century."

## What Advertising Should Do For the Shoe Retailer

Don't Talk About Yourself—Make the Light of Publicity Shine in Your Goods—You Are in the Shoe Business to Get Business, and Well Directed Expenditures Will Help You Do It—New Illumination On An Old Subject

By F. W. J.

As a matter of fact, it is doubtful if there exists any such thing or condition as "general advertising." This is an age of specialties in all lines of professions and business. It is equally so with respect to the different departments of all kinds of business. All of these apply to the advertising. General advertising carries the thought of promiscuous publicity, a programme this month, a few newspaper lines next month, a window card the following, and so on indefinitely. While this kind of advertising is better than none, it lacks the forcefulness in concentration and the convincing pulling qualities of the advertising which discloses system, consistency and persistency.

Anything beneficial which I can say must be along the lines of urging more serious consideration of the subject of advertising in your business. This is based upon the knowledge that what advertising retailers have done has been done in very recent years; upon the fact also, that the probable majority of shoe retailers have for one reason or another, not adopted the advertising of their goods as a part of their business, and upon my knowledge and faith that advertising is in this age a necessity to the achievement of that degree of success that we all strive to attain in our several fields.

### A Fact, Not a Question

The general benefit of advertising is not a question; it is a fact. It has made fortunes for thousands who had something good to sell, but who never would have sold it and would otherwise have remained poor and obscure. You may know how to make the best shoes and yet you cannot sell them unless you know who does make them. Even if you know you cannot sell them unless you show them and talk to the people about them. Your advertising should be a sort of general salesman for you. It must tell the people what you have to sell. It must create a demand for the goods that you handle or manufacture. It must make the public know that you have what they want. It must make the people want what you know to sell.

Make your name a guarantee of quality—the best quality—the quality the people want. Don't talk about yourself. Talk about your goods and the quality first, last and always. This kind of talk is the "general advertising" which makes pleased customers, increased business and large profits. Grapple well the admonition of Him who said, over nineteen hundred years ago "Hide not your light under a bushel." Set it forth where it may be seen and its rays.

### The Evolution of Demand

I have seen the fact demonstrated that simultaneous campaigns of advertising by competitors have been a decided benefit to both instead of having, as commonly supposed, a sort of nullifying influence. If I were to choose a new field of activity in the shoe business, I would have a great preference for that one where there was a top-liner of the progressive type, seeking new and more business through advertising. Advertising calls attention to goods and gets people into the habit of buying more of them.

As fast as you strive to improve your goods and keep them before the minds of the people, just so fast will your sales increase. It is not so many years ago when the clothing, caps and shoes worn were home-made. The time is not far distant when the housewife will no more think of making her own bread, cakes, and pies, than she does now of making suits and overcoats for her husband and sons. The one to reap the reward then will be he who had the goods that the people want, and who makes them known through advertising.

Advertising should be a part and parcel of your regular business as much as it is to see that men are engaged to sell your shoes or fit your customers. The cost should be looked upon as necessary a part and parcel of your equipment as the paying of your gas or water bill. Many retailers in large and small centres have learned the lesson of advertising and now regularly appropriate a certain percentage of the sales, say 2 per cent, 3 per cent or 4 per cent, and credit it to a publicity account to be spent in that department.

It certainly is most essential to watch outlay and curtail unnecessary expenses, but don't let this stand in your way of progress. Suppose you spend today \$100 for additional business. But wait, figure a minute! You will have made 50 per cent. per annum on your money. Doesn't that pay? Cut that profit in half if you like, and answer me: is not 25 per cent. clear a fair profit?

### Do Not Be a Back Number

Systematic, continuous advertising has other benefits than those of increased business and greater profits. The business man who does not advertise is not considered as up-to-date in the business world. He is often referred to as a "back number."

While he counts his coppers his more progressive competitor is counting his gold. Where will you find a community which does not look up to and honor the merchant who advertises? His adoption of top-line advertising methods stamps him in the public mind as a wideawake fellow. Their business and their trade will invariably follow their admiration. Just ask your banker if this is not the fact. Advertising, particularly in the present condition of the shoe business, is the greatest entering wedge for new trade which has ever been devised.

Make your advertising constant and continuous. Make your efforts follow and lap over each other. Spasmodic efforts are generally failures and seldom pay. Keep advertising if you want to be successful.

Lastly, remember, you are in business for business, so it's your business to get business.

To ease a tight shoe, wring out a cloth in very hot water and place it over the spot where the shoe pinches. Repeat this as soon as the cloth becomes cold. After two or three applications the leather will have become stretched to the foot.

# The Way Many Small Lines Increase Net Profits

Why a Findings Department Pays—Some Pertinent Pointers—Large Profits and Quick Returns are the Rule—  
Making Effective Window Displays of Certain Seasonable Lines

Can you afford to pass up a line giving a profit varying from 25 per cent. to 125 per cent.?

Most shoe merchants do not realize what they are missing by not carrying a well-equipped findings department. These goods are the easiest things on earth to sell if given a proper amount of attention, although very little is necessary if it is of the right kind.

Another important reason is that they are the greatest feeders for the shoe department proper that can be placed in any store. When located in a central position and well displayed, many people who come for findings alone will stay to buy shoes if a skilful salesman is attending to them. A findings department can thus be made most attractive and compelling.

Some people have a kind of hazy idea that a small stock of laces, brushes and shoe polishes comprises this department. This is far from being correct. A glance over a catalogue of any Canadian findings house will dispel this idea and the procuring of one is the first step required when opening or extending your present findings section.

Some goods going under this heading that might be mentioned are laces, polishes, blackings of all kinds, white canvas cleaners, over-putters and leggers, rubber heels, shoe trees, insoles, arch and ankle supports, heel cushions, bunion protectors, ice-creepers, button-hooks, heel plates,

shoe-lifts, etc. These are only a few, named just to show what "findings" really mean. Surely the salesman does not lack opportunity to exercise his talents with such material to work on.

## Small Outlay Needed

The dealer who is desirous of starting a department will be surprised at the small amount required for the initial investment. A good, well equipped stock can be procured for a price ranging from \$100 to \$200. What will make this seem doubly small is the rapid turnover attained, as a stock can be turned over in a very few weeks. It certainly is worth while when the profits are considered. On account of the rapid sales stock can always be kept new and complete with little subsequent outlay, and there is not the slightest risk, or reason for hesitating over the proposition, in view of the undoubted benefit reaped.

To ensure success, this department should be kept separate from the rest, and is best located near the entrance of the store, where it will at once attract attention of those entering. Very little space is necessary. A fair-sized stock can be shown in an ordinary sized silent salesman showcase, which must necessarily be up-to-date and of good quality. Plate glass shelves enable the placing of a complete showing of practically every line that goes under this heading. As every shoeman is posted on the prices of these cases, it

## CO-OPERATING WITH THE HOME PRODUCER

The accompanying illustration affords an idea of how an enterprising shoe dealer can encourage home manufacture. It is a special window trim put in by Mr. Chas. Seyler, of Berlin, of the various lines of shoes manufactured by Chas. A. Ahrens, Limited, of that city. Mr. Seyler is a great believer in solid leather shoes and has worked up a good reputation in a few years as a quality man. In solid leather staple lines he has always featured the Ahrens shoes, and it was his suggestion that a window display of them should be made at the time of the Easter holidays. All the lines exhibited were from his regular stock and he also used as a background the different kinds of leather in the whole skins and sides from the cutting room of the factory. The result was mutually beneficial to Mr. Seyler and the Ahrens Co.

is not necessary to go into figures and values. Customers, when entering the store cannot fail to notice a tasteful display, and if they are waiting to be served it takes up their attention and suggests a needed purchase, where they would otherwise be fuming at the slightest delay in service, which, as every dealer knows, is sometimes unavoidable. When leaving, the competent salesman will always draw attention to a display. A caller when securing a pair of shoes does not require a great deal of urging to further add to his foot-comfort by buying an ankle support, a pair of rubber heels, or some such item. Particularly with young men and women do these goods appeal.

### The Methods of Management

The majority of dealers generally place this department in the hands of one particular clerk, he making it his duty to concentrate on the findings branch. Others prefer to give it their own personal attention, allowing their clerks a certain commission or p. m. on findings they sell to shoe purchasers, believing it proves an incentive to them to push these lines. It is rather hard to say which method works out best. It is a well known saying, "Two heads are better than one" and if it is to the advantage of the whole staff to keep in mind and push findings, the sales should certainly be larger than if one special clerk has charge. Every man who can add a few extra dollars to his pay cheque will certainly do so.

On the other hand, those retailers having one clerk giving his attention to this department, instructing him in the sale and making him responsible for results think that by this method the department is more likely to be better looked after. There can be more frequent changes of displays and there is less likelihood to run short of different lines. Both methods have their distinct advantages and drawbacks, but, as every shoeman has and understands best his own particular class of help, he is able to decide without much trouble which plan is the better for him to follow. In either case it should be watched carefully and records kept of all findings so that the department will get proper credit, enabling the dealer to know just where he stands and what his profits are.

### How Advertising Pays

Although, in the case of the findings department, people will naturally gravitate towards the shoe store when in need of something in the way of footwear accessories, just as an automobilist does toward a garage, much trade can be secured, and a wholesome interest stimulated through advertising. Impress your customers with the fact that you have a stock of first-class goods, that you are in earnest in your desire to please them and feel sure that you can satisfy them.

### Use Window Displays

The windows are really your best manner of advertising this line and through the large variety and different shapes and forms of goods, a strong, telling window display can be secured. Many shoe dealers who have made a success of their findings branch think it pays to have an entire findings window once in a while, saying it boosts sales wonderfully, as well as impresses customers with the fact that you have a good, strong representation. Even in a shoe window different articles can be distributed here and there to balance things, making an ordinary window look fresh and neat. A striking background can also be obtained sometimes through the judicious use of various findings. With button hooks, shoe trees, over-gaiters and leggings, all sorts and colors of laces, arch supporters, insoles and other articles, the window will not lack for contrast and can be arranged in effective combinations. Study out a plan before dressing a window.

### Observation is Invaluable

One great advantage in expecting each salesman to boost the sale of findings is in the opportunities he has of suggesting findings which are needed by the customers on

whom he waits. You know what fine chances a clerk has of suggesting different articles. For example, a young fellow comes into the store and asks for a pair of rubbers. The clerk will see when fitting them that his heels are run down. He can suggest having them trimmed and a pair of rubber heels put on. Nine times out of ten, with the average young man, a sale can be made. Perhaps a man or woman is purchasing a pair of rubbers or some such like. It seems a small matter to suggest that you notice the condition of the laces in the shoes. The matter is far more important than it appears. If the customer's laces are in a worn condition he or she likely knows it but has overlooked it for the time being, having decided probably that morning to buy a pair the next time when passing a grocery or shoe store. If you draw the attention of such a man or woman not to the laces in their own shoes, but to your own complete stock, you will make the sale. When working towards this do not attempt to sell only a single pair, but get into something bigger. You generally end up by selling half a dozen pairs just as easily as you can one. Take the matter of polishes. Suppose you have a polish that you can particularly recommend for certain leathers. There should be nothing more simple than selling a purchaser of new shoes a box or two of it. He or she will be sure to buy if you tell them it will improve the look of their footwear a great deal more than an ordinary polish. Shoe polish is not a losing proposition.

As stated previously, you can very often suggest a pair of arch supports or heel cushions to a purchaser who complains of weak feet or asks for a special shoe to remedy some pedal defect. If you tell a parent that the heels of a pair of children's shoes will last twice as long if heel plates are placed on them you will be sure of a sale. All these articles yield a profit of a hundred per cent. or more.

### Tact is Necessary

Of course, in learning by observation as outlined above, great tact must be used in making these suggestions, so that no offence can be taken. This would do a great deal more harm than good, and the salesman must study the question from all sides, profit by past mistakes, strive to make such sales and still have the patron's good will. Quite often the latter will thank the salesman for some suggestion thrown out which means much added comfort for him.

### Proper Tone Required

This is necessary to make the department a success. What is meant by these two words is the general appearance of the findings department. Keep your stock up to the highest notch at all times; you can afford to do this, as all profits are extra profits, without overhead expense. You will find the net margin will pay your minor expenses and still leave you a handsome sum at the end of the year. It will also procure many shoe sales that otherwise would have gone elsewhere. Exact courtesy and observation from your salesmen. Above all, boom your findings department in and out of season. Push seasonable lines. There are always several articles that have a very heavy demand at certain periods, the sales of which will often pay for the upkeep of the whole department, as well as staple things that go well all the year round. In these days of high expenses and keen competition every cent must be made to count, and as a well known, successful retail merchant stated with much truth, "Many lines under one roof diminish the ratio of expense and greatly increase the net profit."

### WORD FROM AN OLD FRIEND

'I have taken the "Shoe and Leather Journal" for the past twenty-four years and have noticed a steady improvement in its pages. It is a great help to the trade.'

Sincerely yours,

J. B. BADOOR.

Stratford, April 3, 1913.

# Fall Selling Season Yielding Encouraging Business

What Representatives for Various Manufacturers Have to Report—Fabric Tops and Suede Shoes are Favorites—The West Still Likes the High Toe—Some Firms Report That Recede Toe is Not Taking Well in the Smaller Centres

The fall selling season is now well advanced and travelers who have been out for the past few weeks with samples, are sending in encouragingly large orders to their houses. Many different reports come to hand of what is selling best. Certain localities, which are more conservative than others, still adhere to the high toe. The popularity of this in the West and in the smaller centres is yet strong. In the medium class trade the moderately high toe or the wide full forepart is having the biggest call.

The low heel also seems to meet with a large measure of favor, and among the best sellers in women's are patent shoes with cloth tops. The demand is exceptionally strong. The recede toe is going nicely in the cities, and in the highest class lines. Among women who can pay an exceptionally high price for their dainty footgear, the shoe with a long French vamp and pointed drop toe is taking remarkably well. Buyers of the costliest lines seem to think that there will be an active demand for this boot for fall trade. The requisitions for storm and winter calf shoes is decidedly brisk, particularly those built on flat tread, foot-form lines. In men's there is a very good demand for broad, full, round toes, and also those constructed on strictly English lasts. Such walking boots for women also bid fair to have a big city trade.

One authority on styles says it looks as if the button boot is still going to retain its superiority, as, for some reason or other, women cling to the button creation. In the higher priced lines, bals are selling better than bluchers, while in the medium class trade, the blucher is having a little stronger call than it had. However, it is too early yet to forecast with any degree of certainty, what the proportion will be of buttons, bals or bluchers in either men's or women's,

GUN METAL BLUCHER, LOW HEEL, CIRCULAR FOXING, FULL TOE.  
BY AMES, HOLDEN, MCCREADY

although the button is not likely to be a very strong feature in men's except where they carry cloth tops. A fair number of shoes with blind eyelets are selling, but there has been no great call for them so far. Retailers generally welcome a return to plain conservative patterns, and the elimination of eccentric or freakish models. Many manufacturers think that fabric shoes for women will be made to a very large extent for fall. The new recede toe, which already has come into style in the cities and is slowly winning its way in the

towns, is a good last for the all fabric boot. One manufacturer says, that when the high, wide, toe lasts were in style, fabrics could not be used for vamps of women's shoes, because they would tear if subjected to the unusual strain necessary to pull them over the unusually high wide toes, but with the narrow toe, it is possible to make a good satin boot with comparative ease.

Fabrics are easily pulled over the new recede toe and a

CHOCOLATE WILLOW CALF, LOW HEEL, PLAIN QUARTERS,  
WATERPROOF DOUBLE SOLE. BY C. E. MCKEEN CO.

number of makers of women's shoes, are pushing button creations for all that they are worth.

A recent despatch from Lynn, says: "Many of the new fabrics are light and dainty, and make up into shoes that are feminine in character, and that please refined women. Often the fabrics harmonize with the fashions in dress. For example, the "battleship gray" velvet boots match the battleship gray velvet dresses that are now being worn. Then fabric boots may be kept neat and clean quite easily, and that is another factor that women tend to very much. Some of the fabric shoes may be kept clean with an ordinary brush, even as can a hat, or a dress. This saves the cost of shines, a fact that is approved of by thirty purses.

To satisfy the demands of the shoe trade, the mills now are producing cloths especially for footwear. The "vestings" that once were used for tops of novelty style boots, have given place to strong fabrics, so woven that they will form over lasts and wear upon the feet, in about the same way as will leather. Many of these new fabrics are especially adapted for women's shoes. Fabrics are much more proper for women's shoes than for men's.

There are a hundred and one varieties of fabrics for footwear, just as there are a hundred and one varieties of leather. The fabric shoe may be more expensive or less expensive than is the leather shoe. Generally speaking, the buyer gets as good fabric as he pays for. The time is not yet here when the common use of fabrics is so extensive as to permit the production of shoes at less than present market prices. It is fashion that is forcing the run on fabric shoes for women."

Jackson & Savage, Limited, Montreal, are showing a splendid line of Boy Scout shoe samples for fall. The sizes in youths are made from 11 to 2, while the boys run from 2½ to 5½. Four new lasts have been added. They are the College, Normal, Varsity and Laval. The former two have wide, full nature shaped toes, while the latter two

are slightly narrower and a little higher. These shoes are made in both McKays and Goodyear welts, and come in tan calf, patent colt, boarded calf, gunmetal calf, velour veal, gun metal veal, box veal, etc., in both button and lace. Little gents' run from 7 to 10½, and an exceptionally fine range is presented. No extreme styles are offered, the whole

BOY'S GUN METAL BUTTON WELT, WITH MAT TOP—BY JACKSON & SAVAGE

line of Boy Scouts, which is very much larger than former y, owing to a considerable number of Goodyears, are all splendid every day sellers. The Girl Guide shoes are also attractive and most representative in character. Besides, the Boy Scout run of samples, the firm have added a line of men's shoes under the name of the Scout Master. These are made in all leathers and on a nice range of lasts, in button and blucher, on reede, broad, medium and high toes. The

TAN CALF BLUCHER, SEMI-HIGH TOE, ON "PRINCETON" LAST—BY JACKSON & SAVAGE

firm report an exceptionally good business so far this season, and believe that their line is the best that has ever been turned out by them.

The Regina Shoe Co., of Montreal, are showing a smart and dressy line of women's Goodyears and McKays for fall. They have added several new lasts, one being a growing

girl's, with wide, full toe, 12-8 heel and of splendid fitting qualities. Another last carries a slightly higher and fuller toe, with taller heel and makes a remarkably good walking shoe. One feature of the range is the large number of button boots on snappy lasts, there being several in patent with cloth tops, which are selling exceptionally well. The 14 and 16 button models are the favorites. There are several samples with Roman silk top in all colors and also with plaid tops. A special range is being shown in storm calf bluchers with viscolized soles, some lined with leather and others with felt. These are built on the new lasts and are taking well with the trade. A large proportion of the models have slip soles. The principal leathers are gun metal, patent, tan and storm calf. The Regina range is wide in character and selection, and evidences good shoe making, smooth finish and neat lines. The Regina Shoe Co. report an active demand for the medium, high and wide toes, with buttons still predominating.

The Tetrault Shoe Manufacturing Co., Montreal, are showing a very comprehensive and representative line for the fall selling season. They expect a big call for men's

GUN METAL CALF, LOW HEEL, RE-INFORCED ARCH, FLAT TREAD, FULL ROUND TOE ON "ARCHEASE" LAST—BY COOK, FITZGERALD CO.

black button gun metal, velours and patent, with black cravenette tops on a dressy last. They are going heavily into this line for the coming season. So far, judging from orders received from travelers, these expectations will be justified. They think the principal call this season will be for a medium high toe shoe, and toes on a good many lasts are being slightly moderated. The Tetrault company have a couple of new lasts which are expected to sell well. The Balkan has a medium high toe with a 1¼ inch heel and a steady call is being made for it so far. The "Stag" is built a good deal along the proportions of their old "Flirt" last, and is also taking well. One of the principal points in the Tetrault lines is the rubber soled shoes which are reported as making a bigger hit than ever this year. The advance in the sale of this style of shoe during the past few seasons has been phenomenal. They are making a specialty of them further adding to their usefulness and distinctiveness by the use of steel protectors on the toes which do away with the objection that the rubber wears away too fast. These protectors are screwed on, making them much more solid than if nailed on. Another big improvement, which is

something new to the Canadian shoe trade is the "Balkan" back-strap on all better grade lines. This is made of rolled leather, is very strong, and also adds to the appearance of the shoe. The Tetrault travelers are now calling on the customers and are all sending in nice orders for fall delivery. They are M. L. Savage and Harry Foote, from Port Arthur to Vancouver; J. Heffering, Toronto and Ontario Province; Wilfrid Lessard, Montreal and Quebec Province, and F. Laskey, Maritime Provinces.

**Big Demand for Cloth Top Patents**

The Smardon Shoe Co., Montreal, are presenting a choice fall line in women's turns and Goodyear welts and in men's pumps and slippers. Buttons are strongly repre-

GROWING GIRL'S STORM CALF BLUCHER, WIDE FULL TOE, VISCOLIZED DOUBLE SOLE—BY REGINA SHOE CO.

sented, five new lasts being shown. The buttons number thirteen and seventeen and a variety of toes are displayed, practically all being of the recede character, while many models carry the narrow, drop toe. The showing in patents with cloth tops is large and they are selling remarkably well. Heels run a little lower than in the past season, the lowest pedestals being 11-8 up to two inches. Kid button boots with a kid tip and cravanette and cloth tops are going very well. Among the other showings are English walking shoes with low heel, broad tread and drop toe; a grey kid button with Queen cloth top of a similar shade, and suedes in black, grey, blue, tan and brown, which are moving freely. Automobile shoes, fleece-lined, of seventeen and twenty button, with rubber soles and heels are also exhibited. A number of bluchers in all leathers for women are shown as well as some tans, in both button and blucher. Pumps are seen in patent, kid and suede, the foreparts being ornamented with silk pom poms and beaded effects, in gold, steel and jet, while a few have flat bows. Men's pumps in patent and gun metal, with plain silk bows, and slippers in Romeo, Juliet and opera style are well represented. The entire Smardon range for fall is characterized by plain, quiet effects and is most comprehensive in its nature.

My lady's new boots are half black and half white, says an exchange, the white portion being on the outer side of the foot and the black sides coming together over the ankles. There is no division between vamp and buttoned upper part, the foot being, so to speak, a "two gore" model, with seams down the centre front and back, and one gore is of black calf and the other of white buckskin. The heels are white and also the buttons, which run up the outer side of the boot in a straight line.

**Giving Premiums that Win Women**

The accompanying contest card has been used recently by a number of retailers in various parts of Canada. They declare that it proved a good trade booster and worked up a vast degree of interest among the women who do the largest amount of purchasing in family footwear. The following conditions printed on the back of each card explain themselves. They are simple and worth reading.

**Contest Card—Save This Card**

A contest card will be given to you each time you make a purchase at this store amounting to \$1.00 or more.

The amount of your sale will be punched out of this card and on the day and hour specified below you present all cards at this store.

On that day the person present holding the card showing the largest amount of purchases punched out will receive a beautiful 42-piece dinner set absolutely free.

Only one set of dishes will be given to each family—this gives everybody that trades here a fair chance to secure a set of dishes free.

If your card does not entitle you to a set of dishes at the first distribution save your cards anyway as you may have the high card at later awardings.

Thirty dinner sets will be given away one each week. On the thirty-first week we will give away a beautiful sewing machine.

Present cards on Wednesday of each week at 4.00 p.m.

**A Variety of Useful Articles**

One retailer writes the SHOE AND LEATHER JOURNAL that it is not necessary to adhere to a set of dishes. He substituted a nice line of oak rocking chairs. Others could try ladies' writing desks, oak china cabinets, kitchen cabinets, sewing machines, vacuum cleaners, washing machines, electric irons, portable lamps, parlor tables, carpet sweepers, traveling bags or suit cases, the latter often being carried in stock by alert dealers. In fact the field of selection is very wide and the outlay for articles may range anywhere from three or four dollars each up to twenty or twenty-five.

Name \_\_\_\_\_

Address \_\_\_\_\_

This card represents cash purchases made by the person above named. Present this card at our store each week on the day named - there will be a free distribution of dinner sets to the patrons of this store. See particulars on reverse side of card.

The contest may be carried on for a month, two months or six months. All these details are for the retailer to decide. He knows best his resources, his trade and its possibilities.

"I gave away dishes," declared one shoeman, "and the competition aroused the liveliest interest. When Mrs. Brown or Mrs. Black took home the set she had won, she would call in all her friends and the whole street or neighborhood would get talking about my enterprise. I found my sales greatly increased and scores of women entered my store to make purchases whom previously I had never seen inside the door. Everything was conducted fair and above board. There was no guessing, chance or luck, the same as in a drawing contest. The one who held the card with the largest amount in purchases punched out received the premium each week."

# STRAY SHOTS FROM "SOLOMON."

Hard work is better for a nation and individual than ease and sloth. This "land of the north" has a future to carve out that will not stand forth in the strength and

## WOE UNTO THEE

beauty of highest nationhood if we are to take on the ideals and methods of our southern neighbors. Already luxury and greed of gain are getting in their insidious work and it will not be long until vanity and vice begin to mar the fair features of the sculpture. We need to have the warning of the wise man sounded loud in our ears, "Woe unto thee, O land, when thy king is a child and thy princes eat in the morning; blessed art thou, O land, when thy king is the son of nobles and thy princes eat in due season for strength and not for drunkenness."

It is true that fools never change their minds, but the man who is always turning his coat inside out needn't complain if people think it is a strait jacket he needs.

## DOUBLE SHUFFLERS

Look out for the fellow whose opinions change with the weather, who blows hot one day and cold the next. There are people who say yes to everybody who comes along. Their mill runs every day and Sundays, and it doesn't matter whether you take musty corn or Manitoba hard wheat they will turn you out chicken feed or family flour at will. There are always with the winning horse and look to see the side the butter is on before they take a bite. Like the man said to his wife when she was tired keeping him by going out scrubbing: "Leave you? Never, my dear, while you have a dollar!" The double shuffler we have always with us.

Don't despise the poor fetich worshipper if you are making money the one thing needful. The thing you sleep with and walk around with in your waking hours

## THE MONEY GOD

is no better than the fat-headed god of the African. When this money worship gets hold of a man it is worse than booze. It makes him meaner than a skunk. You don't need to be a miser to be a dollar worshipper. There are men who throw about gold in handfuls who have the idol habit as confirmed as the worst old screw. They size people up by the money they have or are making, and every man to them is an opportunity for making or losing. They wouldn't admit it, but they would sell the nails out of their mother's coffin or dispose of the bones of their father to a blacking factory to turn a penny. This habit we are getting of measuring men by the dollar standard is growing upon us.

Fools are not all dead or rogues would not make the fat living they do. It takes two to make a deal. And one must ever be a little "easier" than the other to keep the pawns

## FOOLS AND MONEY

going. "The simple believe every word, but the prudent man looketh well to his going." Before you buy Western town lots find out whether they are on "sloughs" or dry land. There are some people so anxious to get rich these days that they will bite at a proposition to sell water lots in hell. You can sell real estate three thousand miles away more easily than you

can get people to look at a good business proposition at home. We are legislating against bucket shops and race-track gambling, while ministers as well as laymen are putting up money on chances that have the faro layout or book-making skinned forty ways. "Fools and their money are soon parted."

Far fields have a green tinge, but often when you get to them they have neither the looks nor pasture value. The man who is always bragging about what he would do

## WANDERING DESIRE

if he got the chance, lets chances by while he is mouthing. "Do with thy might what thy hand findeth to do." Put in good honest hard licks where you are placed and you will get success there, and prepare yourself for bigger things farther on. The biggest thing a man can do is to do well what he is at. Opportunity has no use for laggards and boasters. David was minding sheep when he was sent for to take a kingdom. Elisha was plowing when Elijah called him. Work, don't wait for the call. "Better is the sight of the eyes than the wandering of the desire."

Just now science is waging a vigorous war against the fly. It is being "swatted" in the papers, in medical gatherings, health bulletins, women's associations, and even in

## SWAT IT

sermons. What a pity in getting after the house fly we do not make up our minds to swat the species that gets not into our milk, tea and gravy, but into and spoils our lives. "Dead flies cause the ointment of the apothecary to send forth a stinking savor." That which should be healing becomes deadly, that which is aromatic, nauseating and pestilential. Man! You might be a power in the community if you let drink alone or curbed that secret deadly vice. You are smart enough in business to be finance minister, but all your ability seems to run to tricks instead of helpfulness. You have a kind heart and a genial countenance but you have a bad tongue—you are a reputation assassin. "Now Naaman, captain of the host of the king of Syria, was a great man with his master and honorable, he was also a mighty man of valor, *but* he was a leper."

All the world despises a blatherskite. Even fools can sense a fellow who is all talk. When you hear a man shed words like drops in an April shower you can put him down that he has water on the brain.

## JUST BLATHER

"A fool also is full of words." We have the evidence in every public meeting as well as every newspaper we pick up. The man with a case or something to say worth saying doesn't waste time and breath getting his ideas out; but the fool, like the brook, goes on forever. Even the frost of public contempt does not seem to stop the flow. Just go into any gathering from a council meeting to an ecclesiastical conference and see if it is not the fellows with the few ideas that have the flow of language. A loquacious lawyer attempting recently to be funny with a spinster who was on the witness stand asked her if she had her "chances," meaning offers of marriage. The witness, who was a Scotch body, replied. "Chances or no chances, I wadna hae a blether like you."

## What would you say to close this shoe sale?

Mr. Thos. Billings is a wealthy farmer and well known to you by reputation, but he has the name of being able to drive a rather close bargain. He comes into your store and asks to be shown some "Sunday-go-to-meeting" shoes.

Apparently he means business, and you show him several lines at \$4.00, \$4.50, and \$5.00, giving him your best attention. You explain to him where the value lies in your men's fine welts, their shape, fit, comfort and durability. He tries on two or three pairs of your \$5.00 range.

Mr. Billings agrees with you in every particular. He likes what he calls the "look of the boots," appreciates the quality, and thinks the five dollar figure is not too dear to get shod for a wedding or a tea-meeting function. He admits you would not sell him anything that would not fit his foot or give satisfactory wear. **Still he does not buy.**

You know that he has the money in his pocket and you feel that he wishes to purchase a pair for "best," but he won't add the final word.

This is an embarrassing situation, for nearly every day a retailer encounters one or more customers who seem desirous of buying, have no fault to find with the goods, and yet apparently cannot or do not come to any definite decision.

### **What would you say to Mr. Billings in order to make this footwear sale?**

For the best answer, the SHOE AND LEATHER JOURNAL will award cash prizes of \$3.00, \$2.00, and \$1.50, and for all those, outside of the prize winners, which are considered worth publishing, \$1.00 will be paid.

Competition closes May 10. Send in your replies as soon as possible. Results will be announced in an early issue. Any one may take part in this discussion.

# Does It Pay to Control a Certain Line of Shoes ?

Manufacturers Often Expect Too Generous Orders in Return for Exclusive Handling—Dealers Now and Then Seek to Corral Too Many Lines and Trouble Comes—A Problem on Which Maker and Merchant May Never Agree

How many hundreds or thousands of dollars worth of shoes should a dealer buy from a manufacturer before he can obtain the exclusive control of that line in the centre in which he does business?

This is a question upon which neither the manufacturer nor the retailer is likely to agree. There is always a certain amount of selfishness and narrow interest on both sides, and the parties are apt to look at the problem from different angles. Some manufacturers want to literally "hold up" the retailer if they give him control in a certain town, while certain dealers think by buying a few dozen pairs, the makers should appoint them as special or exclusive representatives and not sell to any one else in that centre. How large an order should a retailer place with a manufacturer of branded shoes before being given the exclusive local supervision of that line? It is doubtful if this ever will be settled. Much depends upon the size of the town, the number of shoe stores in the place, the class of trade catered to, whether the factory is a large or small one, and also whether the dealer is progressive and alert, or whether he is a dead or stagnant one.

"Here is where the chief difficulty comes in," said a traveler of a well-known Ontario factory making men's

welts exclusively. "Some fellow in a small town thinks because he gives us an order for a few hundred dollars, that we should not sell to any other dealer in the place. I call around next season and find that he has done little or nothing to push our goods. When I tell him that I will sell Brown or Smith down the street, he grows indignant, and says he is practically the only man there who can do business for us, and the other dealers do not count."

## How Retailer Falls Down

"Now, this taking the agency from one man and giving it to another is a constant source of friction and misunderstanding. I am in the habit of telling a man straight, that, if he does not give me an order for such and such an amount, that I will sell to others in the town. We make a range that nearly any shoe man is glad to handle, and therefore I have no difficulty in placing our business.

"The chief trouble, as I have intimated, arises over the fact that nearly every retailer who wants to control your line, also wants to control three or four other lines as well. The result of it is—none of them get the attention that they should. Then, if you kick, he gets hot and doing business with him becomes a bugbear instead of a pleasure. We do not like

## AN ENTERPRISING SHOEMAN GOING TO THE WEST

Scythes Bros., who have been in business for the last sixteen years on Dundas St., Toronto, are conducting a clearing sale and will retire from the shoe trade. This firm has been one of the most aggressive and enterprising character. The business was established by W. G. F. Scythes in 1897. Some eight years ago the block in which the store is now located was built, and this has now been sold at a very gratifying figure. Mr. W. G. F. Scythes retired from the firm about five years ago and is now conducting a large music house in Regina. His brother, H. L. Scythes, who has been identified with the business for eight years is leaving Toronto shortly for Edmonton where he is going into the contracting line. The accompanying illustration affords some idea of the neat and attractive interior of the store at 611 Dundas St., which the firm have occupied since 1905. H. L. Scythes has proved himself to be one of the shrewdest business getters and most wide-awake retailers of any in the trade. The way he has gone after the family trade as well as that of moulders, milkmen, carpenters, builders, school children and other classes has often been referred to in the columns of the SHOE AND LEATHER JOURNAL.

Each caller, for instance, received a yellow (the store's color) private post card after every purchase, which was dated and signed. It read as follows: "We thank you for to-day's purchase. Remember that we stand back of all

our shoe selling with our guarantee of satisfaction in every case. We make it a point to shoe customers so that they will continue to come back. Satisfaction and shoes go in the same parcel here."

Mr. Scythes feels that there is a great opportunity in the building arena in Edmonton and, now having sold his business block to advantage he intends to take up his abode in the hustling capital of Alberta, where he spent a portion of last winter.

the idea of giving one man control of our goods, unless he is a particularly heavy buyer. We find that, by selling to two or three or four customers, we do a much larger aggregate trade in any centre. After all, it is an exemplification of the old saying, that 'Many mickles make a muckle.' Retailers, on the other hand, do not view this the same as some manufacturers do."

#### Held Out Big Inducements

Speaking to the SHOE AND LEATHER JOURNAL the other day, a Quebec retailer said that very often manufacturers approached him and suggested that they would give him the agency for their shoes, provided he placed an order for such and such an amount. One maker presented the matter so strongly that he thought he could get away with this alleged superior brand. Later, he found the price was too high for his class of trade, and next year, the company tried to make him nearly double his order, although he had a large stock on hand from the previous season. The result was a lively dispute.

"They used the argument that a named shoe carried with it a prestige and potentiality that an unnamed shoe did not," continued the speaker. "They also urged that by having exclusive control, I got something that my competitors could not. Then it was maintained by this smooth speaking traveler that their national advertising campaign, plus my local announcements and the reputation of the shoe would make me a highly successful dealer. The virtues of the named shoe in the way of dependability, quality, wide reputation, favorable notice, and all that sort of thing were preached to me, and I 'fell for the agency,' giving an order for, as I have already told you, several hundred dollars more than I have ever placed. The result was, I found that I was loaded up, and as each season brings its changing styles, I could not get rid of these shelf warmers. Yet, in spite of this, the traveler came along next season and intimated that the reason I had these stickers was because I did not know how to push my goods, was not a good stockkeeper, had not the genius or capacity for shoving a nifty article or the fine discriminating taste that should create a big sum for me in handling a leading brand like his.

"It is generally the way, you know, that, when the other fellow does not do something to suit or satisfy you, or you do not do something to suit or satisfy the other fellow—slurs and imputations have to be cast. Reflections often descend into personalities, and personalities divide men and make business a torture, instead of a pleasure."

#### How Much to Control

Regarding how much a man should buy in order to control the line of any make of shoe, a great deal depends upon the character of that range, its reputation, its history, the advertising at the back of it, and the wearing and fitting qualities of the shoe. No one can settle, except the retailers and the manufacturers themselves, how much the former should buy in order to get the exclusive agency of a certain make or style of boot. One might as well attempt to say how much credit a retailer should be given, how much rent he should pay for his store; how many clerks he should employ on a Saturday, or how many times he should sweep his shop, or wash his windows.

All these things depend upon circumstances, and no doubt, if there is a spirit of give and take—mutual concessions and a desire to come to an understanding on whatever business a town can support—there need be no very wide differences of opinion on a subject, which has caused more retailers and manufacturers to fall out than perhaps any other source of annoyance or bickering outside of cancellations, goods not up to sample, or delayed deliveries.

New machinery is being installed throughout the Scout shoe factory in Montreal by the U. S. M. Co.

## Western Firm's Forward Move

Decide to Inaugurate Cash System in District Long Noted for Credit—How They Came to a Final Decision and Took Immediate Action.

After doing a credit business for many years in Treherne, Man., the enterprising firm of Staples & Anderson have decided upon a new departure. Henceforth all their trade will be on a cash basis.

How they decided to take the step is indicated in the following interesting letter. "Yes, we noticed in the February 1 edition of the SHOE AND LEATHER JOURNAL how Ed. Fennell, shoe merchant of Havelock, Ont., changed his business from a credit to a cash one. We had been thinking for some time of converting our trade to net cash. We could not help being convinced that it will and can be successfully worked in any town. We thought the arguments of Mr. Fennell so sound and timely that we determined to take the step, using his arguments and a few of our own. We have inaugurated strictly spot cash. We feel there is no doubt but that the new system will work out to our entire satisfaction. We observe it was stated that Havelock was noted for being a centre for granting credit. We can say the same about Treherne, and this country of ours, Manitoba. In fact, this district has been settled for the past thirty-five years. Credit has always been with us. We have considerable opposition in this town, but we are going after the cash business.

The following is a copy of a notice which we have mailed to our customers:

Dear Sir.—We wish to make the following important announcement regarding our terms:

Beginning on April 15, we will change our present credit business to net cash. All goods will be marked at net cash prices and no discount will be deducted. As we purpose marking our goods at the lowest possible spot cash prices we have to eliminate the cost of bookkeeping and all purchases will have to be paid for on delivery. Butter and eggs taken the same as cash. We could give you a hundred reasons in favor of a spot cash business, but it is not necessary, for you know the advantages of dealing at a spot cash store as well as we do.

#### Here are a Few Reasons:

It enable us to offer our merchandise to our customers at the lowest possible price. The man running a credit business must fix his prices so as to protect himself against losses and give him interest on the money tied up in book accounts.

Is it your desire to help pay for the goods sold to a man on credit for which he does not pay?

In a cash business the customer pays only for what he gets and it is the only business where the merchant can quote prices based altogether on the cost of the goods. A cash business will enable us to buy for cash, thus reducing the cost of the merchandise to the customers.

Consider your best interests and patronize "Quality cash store."

Thanking you and all our customers for their generous support in the past and trusting to merit a continuance of your patronage and good will. We remain,

Yours very truly,

STAPLES & ANDERSON.

Treherne, Man., April 3, 1913.

## New Plant is a Revelation

Extensive Additions to Davis Leather Co.'s Factory More Than Double Output of High Grade Calf Skins

The Davis Leather Co., whose splendid new buildings at Newmarket, are now completed, might be called a development of the old firm of A. Davis & Son, which was established at King somewhere about 1867 by the father of Hon. E. J. Davis, who is the president of the Davis Leather Co. Mr. Davis was taken into the business when he reached the age of 21. The tannery at King was burned down in 1903. A. Davis & Son then took over a concern in Kingston. In 1884 Mr. A. Davis retired, and the business was carried on by his son, Hon. E. J. Davis. In 1904 the first building was erected in Newmarket, and the Davis Leather Co. formed with an authorized capital of \$750,000, with the following officers; President, Hon. E. J. Davis; Vice-President, Aubrey Davis; General Manager, Andrew J. Davis, and E. J. Davis, Jr., director. Raw hides were first brought into the Newmarket tannery in January of 1905, and the first lot of finished leather was on the market about the first of June on the same year. At this time the output was about 100

HON. E. J. DAVIS  
President

AUBREY DAVIS  
Vice-President

ANDREW J. DAVIS  
General Manager

E. J. DAVIS, JR.  
Superintendent

skins per day. In 1912 this had increased to 3000 skins per day. Despite this increase in output, the advance in business was much greater, so that it had become imperative that much larger premises should be at once acquired. With the present addition in operation—as it started last month—it brings the full capacity up to between 7,000 and 10,000 skins per day, according to size. On this extension, and its equipment, over \$100,000 was spent in 1912. It gives the Davis Co. the largest, most modern plant in Canada and probably the largest in the British Empire for the manufacture of best calf leathers, at the most reasonable cost. The building is of concrete, and mill construction. There is a most complete plumbing system throughout and an up-to-date sprinkler system in all parts of the structure. The drying system is exceptionally complete. All machinery will be operated by Niagara power. It is not necessary to go into details regarding the machinery. Sufficient to state that everything which could be had or is calculated to manufacture better and more economically, has been installed.

The new building is four storeys in height, 200 ft. by 75 ft. with a basement under a portion of it. A beam house has been added to the old portion of the tannery, and this addition is 60 by 160.

The new addition has been arranged so that in conjunction with the original building, everything will be carried on, on the endless chain principle. That is to say, no skin will ever travel back but will continue from the time it is taken in in the raw state at one end, until it comes out at the other end all finished. The raw skin is first taken into the beam room where it is limed and dehaired by machinery, and then gone over carefully by hand to make sure that it is perfectly clean. From here it goes to the bating and pickling department where it is cured and prepared for the tanning. Next it passes into the tanning room, where the final step is taken in its transformation from a skin to leather. In this room the hide is given its proper coloring. This, however,

is not nearly all that is necessary to make a skin ready for the shoe factory. In fact, it is merely the first stage. After the hide is colored it passes into the setting out and shaving department. There are 20 machines here. This is the first stage that is taken up in the new building. The hide then passes up to the drying room, where it is suspended from the ceiling. This room is equipped with a large number of splash-er fans, and is kept at a temperature of 110 degrees F., which permits of even drying in 12 hours. After the hide is thoroughly dried, it is put in the cooling and tempering room. This is kept at a temperature of about 65 degrees F. The skin remains here about one week. It then passes into the damping room, and from there goes to the staking room. Here the hide is stretched and smoothed on the staking machines, after which it is tacked out on boards to dry thoroughly, when it is ready for the shoe factory.

The offices, stock room, sorting, packing, and cooling rooms are in the front portion of the new building, which is divided from main portion by a thick fire wall. The necessity for this precaution is obvious, when one remembers the high temperature maintained in the drying room.

It is but fitting that a word should be said of Hon. E. J. Davis, the present head of the firm. He started to learn

the tanning business with his father in King. He was then 16 years of age, and he has been steadily at the business ever since. At the time of Mr. Davis' apprenticeship, everything was done by hand, and some very primitive methods were in vogue. During his lifetime as a tanner, Mr. Davis has seen the whole process of tanning change many times. Every machine that has been invented, and every process that has been evolved for the making of better upper leather, has been thoroughly tried out by him in the plant at Newmarket. In the early days of Mr. Davis' experience, all leather was tanned with hemlock bark, while now nearly all upper stock is chrome chemical tannage. Mr. Davis comes of a family of tanners, his grandfathers on both sides being in the trade, as also was his father. He is widely and favorably known, having for some years been Provincial Secretary and also Commissioner of Crown Lands, and an honored member of the Ontario legislature. He is prominent in temperance and moral reform circles, and a thoughtful, progressive leather manufacturer.

### IT WILL REPAY READERS

*Please find enclosed \$1.00, my subscription to the "Shoe Journal." The "Shoe Journal" is a great source of knowledge to any retailer or wholesaler. No matter how busy, I always take time to read every page and it well repays me. I gain a great deal of shoe knowledge and information from your splendid paper.*

*Yours very truly,*

*G. W. Wilson.*

*Markham, Ont.,  
March 26th, 1913.*

# Will Canada Enter U.S. Shoe and Leather Market?

Democratic Tariff Bill Will Wipe Out the American Duty, but Canadian Producers Do not Anticipate any Appreciable Trade Benefit—American Plants are Very Large and Specialization Highly Developed—Sole Leather Industry May Profit by the Change—Some Views of Tanners and Shoemakers

In the new Democratic Tariff Bill, which has just been launched by President Wilson at Washington, sweeping reductions are made. Among the articles which will be placed on the free list, if the measure passes Congress—as it is felt that it undoubtedly will—are boots and shoes, leather of all kinds, and tanning materials.

An interesting question arises regarding whether Canadian leather and shoe manufacturers will be able to enter the American market and command any large share of business. It seems to be the general opinion that while the bill may be of no direct benefit to the shoe making industry in the Dominion, the United States, being the greatest shoe making country in the world, still, the elimination of the American duty can do no harm to Canadian producers, and some good may accrue.

In reference to leather, the men engaged in the manufacture in the Dominion think that, while the tendency will be to broaden the market, trade possibilities across the border are not very promising, at least for the present. The only leather shipped over the line to any extent is sole leather on which the present duty is five per cent. Placing leather on the free list may, however, mean a good deal to the tanners of Canadian bottom stock and time will tell. It is not thought that the proposed bill will have any material effect on our prices. A number of leather and shoe producers believe it is too early to speak, preferring to wait for the full text of the bill, or until the measure passes Congress.

Some views on the situation and outlook secured by the SHOE AND LEATHER JOURNAL are:—

Fisk, Limited, Montreal, say, "What the ultimate effect will be upon the tanning industry in Canada we cannot say at present. It is our opinion, however, that under present conditions, the effect of the changes, if adopted, would not be appreciable. What is of more concern to Canadian tanners at present is that we should have a tariff of our own to protect our market from being a dumping ground for the surplus stocks of other countries, notably the United States."

## No Great Change Expected

Marlatt & Armstrong Co., of Oakville, Ontario, declare, "That until the text of the new bill is before us we would hesitate to express an opinion as to what effect the removal of the duty will have on the Canadian leather market. We do not think that placing leather on the free list will make any great changes in prices in Canada, although it will have that effect in some instances where the American prices are higher than the Canadian. Sole leather in Canada is likely to be dearer, but this will be due to the continued high prices of dry hides."

W. D. Beardmore, of the Beardmore Co., Toronto, said, "The placing of leather on the free list will give us a chance to sell leather across the line and will naturally have the tendency to broaden our markets. It will not make any difference so far as prices go, for the figures are about the same on both sides of the line. As long as Canada is not asked to reciprocate it will be an advantage to us, and although it will not strengthen the price, it will altogether likely give us a larger market, on the same basis as wheat or flour, with the duty removed."

## It May Do Some Good

"One thing sure," said A. R. Clarke, of A. R. Clarke & Co., Toronto, and Chairman of the Toronto section of the Canadian Manufacturers' Association, "the removal

will not do us any harm and may do us some good. It may give us a chance to compete with the manufacturers over there, but because the American tanneries are so large and so many controlled by the Meat Trust, it may be difficult at that to dispose of our goods on the American side. It will not affect the price at all. The only leather shipped across the border to any extent is sole leather. There are some lines that European countries can ship into the United States despite the duty, because labor is much cheaper, and no doubt any reduction would be an advantage to them. We pay the same price for labor here as in the States, so that we will not benefit very greatly."

Paul Galibert, of Montreal, in an interview, had the following to say: "Of course, horsehides, pigskin, and cattle hides were already on the free list. The only change that the Democrats propose to make is placing leather on the free list. As regards dressed leather that will make very little difference to us. They have as many, if not more, facilities for dressing as we have, and although Canadian dealers will not be harmed by the changes, they will not benefit either. But, as regards sole leather, we will be the gainers. Canada has a practical monopoly of bark for tanning, so far as this continent is concerned, and we will be able to undersell the American dealer, at least with our tanned sole leather. This is where the proposed tariff changes are of tremendous value to leather dealers throughout Canada."

## Has Already Received Inquiries

John Sinclair, manager of the Barrie Tanning Co., Barrie, and Chairman of the Tanners' Section of the Toronto Board of Trade, sends the following reply: "We have been watching with interest the new Democratic Tariff Bill brought before the House at Washington, and if the same should go through, it will, no doubt, open up a field for various lines of Canadian leathers. We might say that we have had inquiries already for sample lots which, we presume, is a forerunner to what some of the manufacturers intend doing if the bill passes in its present form. As regards price, we do not think it will have much effect on values in Canada other than some readjustments in different lines."

L. J. Breithaupt, of the Breithaupt Leather Co., Berlin, says: "We naturally think the new Democratic Tariff Bill, if it passes at Washington, will be of some benefit to Canadian business at times when there may be surplus stocks in the Dominion, and also for some lines and weights that may find better sale on the other side than here. There is nothing in the contention of the American tanners that Canadian tanners can produce cheaper than they can, as bark, labor and everything else is equally as high here. We do not think the new bill, if passed, would have any effect on Canadian prices."

## Foundation Is Too Uncertain

Another leading leather firm writes, "In our opinion it would be of great advantage to many Canadian tanners in having a market of one hundred millions of people thrown open to them, but, at the same time, we consider it a very unreliable market upon which to build and extend our factories. As long as leather entering the United States remains on the free list, Canadian tanners would continue to benefit, but it would not be likely to remain free very long. A change to Republican rule would undoubtedly mean a revision of the tariff, when many articles, made free under the Democrats, would again be taxed, much to the injury of those on the Canadian side who had developed

business with the United States. Canadian prices would not likely be effected one way or the other."

### Vegetable Tanned Leather Prospects

Wood Bros., tanners, of St. Catharines, speaking of the situation, say:—"The abolition of the duty on leather entering the United States should enable our large tanners to market their product to advantage in that country, as all raw materials, including hides, enter this country free of duty. Where bark is used for tanning purposes we are nearer the base of supply, as many of the American tanners draw their supply of bark from this country and it is, we believe, subject to export duty if taken from Crown lands. Where chrome process is used instead of bark, the Canadian tanner is on an equal footing with our neighbor, and we would only get a preference by producing a better quality or be satisfied with a lower return for capital invested and shade the price to command the trade."

Another well known tanner sends the following communication, "We would say we are more hopeful of the benefits we would derive from the new Democratic tariff bill than we are of its adoption. We think the less powder we put into the hands of the opposition of the bill, the better its chances are of being carried."

### Canada Lacks National Spirit

Wm. A. Marsh, of the Wm. A. Marsh Co., Quebec, says:—"I would say that conditions in the United States for the manufacture of boots and shoes both with reference to machinery and the production of leather, and the conditions on which sole leather can be purchased by manufacturers, that is partially prepared, and also the long and varied experience in shoe manufacturing which has been one of the United States' biggest industries, have been so great, that at present time I am not of the opinion that the removal of duty would be any great boom to the Canadian manufacturers. As our country grows and conditions improve this will change. Regarding the export of shoes to the United States, and the keeping out of the million and a quarter of American shoes which are now brought into the country and subjected to a duty of 30%, what I think is lacking in Canada, is national spirit, which should be taught in all school houses on which the Union Jack should fly all over this great country; and that the youth should be taught to feel that Canadian shoes and goods "made in Canada" are good enough for him or them."

### Some Points Well Taken

W. V. Matthews, general superintendent of Ames-Holden-McCreedy, Limited, Montreal, observes:—"In regard to the Democratic Tariff Bill and the possibility of shoes being placed free thereon, effecting us in any way, will say that it would not benefit the Canadian manufacturers at all, for this reason. Considerable material that the Canadian manufacturers use in constructing footwear has to be imported from the United States, and the duty attached thereon is of fifteen to thirty-five per cent. The reason for this is, there are no Canadian manufacturers making the materials referred to. This, naturally, would raise the price of our shoes and we could not meet the American prices. As far as the workmanship is concerned, I am afraid we would be poor competitors, as shoe manufacturing in the United States is no longer a trade but an art, while in Canada it is a trade. A great many people claim that we can manufacture shoes cheaper in Canada than in the States, but our experience has taught us different. When we wish to secure the services of a first class operator or foreman we have got to go to the States for him, and, in view of this fact, have to pay him an advance in salary over what he is commanding in the United States. In other words, a man who is getting twenty-five dollars per week will not come to Canada unless he is given thirty-five or forty dollars

per week; this, of course, increases the cost of our manufacturing. As for machinery used in the construction of footwear, while we have excellent services in many respects from the United Shoe Machinery Co. of Canada, there are many machines used by the American manufacturer that are not on the market in Canada. These machines are made for efficiency, improvement in quality, and have a tendency to lessen the cost of labor. In view of all this you can readily see that if boots and shoes are placed free on the Democratic Tariff Bill it will be of no benefit to the Canadian manufacturers. With these obstacles it would be useless for us to invade the American territory."

### No More Business for Shoemen

Speaking of the prospects of the shoe manufacturers doing business across the border, Joseph Daoust, of Daoust, Lalonde & Co., Montreal, former chairman of the Boot and Shoe Section of the Montreal branch of the Canadian Manufacturers' Association, says, "I do not anticipate any effect as we cannot manufacture shoes in Canada any cheaper than they can in the United States, and I do not think that any Canadian manufacturer could export any shoes across the border and make a profit. Conditions will be still in favor of the American manufacturer as he can produce goods a little cheaper than we can on account of the big turnover and by specializing. I do not believe that we will derive any benefit by the duty being removed on shoes and leather. Moreover, I am of the opinion that shoes could not be sold any cheaper to consumers than they are at present, unless a reduction in the scale of wages was made; and any reduction would not be very popular. In conclusion, let me say that the only country that I know that would benefit is certainly England, as the labor is cheaper there than anywhere. Moreover, England is a good second to-day in shoemaking, and with the advantage of cheaper labor, may be the strongest competitor to American manufacturers."

### Midland's District is Happy

In this connection a recent despatch from London, England, to several Canadian papers is of timely interest and contains the following:—"President Woodrow Wilson is to-day the most popular man in England, especially in the Midlands. Bradford will particularly benefit by the tariff reductions. Woolen and piece goods manufacturers, and merchants generally, have maintained some trade, despite the tremendous tariff wall. This will now soar ahead. Cotton manufacturers anticipate a stimulus to the fine cotton goods trade, in which England leads the world. British tailors are already contemplating enlarging their premises. The most remarkable development will probably be in the shoe trade. Twelve years ago British shoemakers, alarmed by American competition, modernized their plant methods. They swept American shoes out of the English market and have recently exported to the States. They believe that, owing to the high quality of British leather, this trade will now grow in leaps and bounds. Manufacturers anticipate that the ultimate result of the reduction of the American tariff will not make the States a much more formidable competitor in this market by forcing a lowering in the cost of living, and thus reducing the vital costs in American manufacture."

### Not Looking Abroad

C. J. Fitzgerald, of the Cook-Fitzgerald Co., London, has the following view on the situation:—"We do not know what the sentiments of other manufacturers may be concerning the invasion of the United States market since Congress is likely to take the tariff off shoes, but as far as we are concerned we shall in the future, as in the past, endeavor to give our own people the very best footwear possible. Can-

(Continued on page 64)

## SHOE NEWS IN PARAGRAPH

N. Shulman has bought out the Vivian stores at Sault Ste. Marie.

J. A. Fontaine, shoe dealer, Montreal, has assigned to N. St. Amour.

C. S. Smythe, of London, Eng., has opened a shoe shop in Quesnel, B.C.

Welter Bros., of Biggar, Sask., dealers in clothing and shoes, have assigned.

W. E. Metz, shoe dealer, of Elmira, Ont., has been succeeded by A. W. Hoffer.

J. T. MacLennan, of Dunehurch, Ont., has added a line of shoes to his general stock.

Thomas Mason, 640 Pape avenue, Toronto, has installed a complete shoe repairing outfit.

W. Segel has opened a new shoe store in Toronto on Bloor street, west of Lansdowne.

Geo. Dietrich, of Port Lambton, Ont., has installed a shoe department in his general store.

C. A. Davies, of Blachford, Davies & Co., Toronto, is in Montreal and Quebec on a business trip.

R. Bradley & Co., of Manor, Sask., have removed their harness and shoe business to Omega.

J. Richer, shoe manufacturer, Montreal, spent a few days in Toronto last week on business.

H. M. Stephens, general manager of the Regal Shoe Co., Boston, spent a few days in Toronto recently.

H. Lawrence, shoe dealer, of Nelson, recently moved into much larger and better fitted up premises.

W. E. Smith, late of Fort William, has taken a position with Walter Burnill, 75 Queen street east, Toronto.

C. S. Corson, of the Regal Shoe Co., Toronto, left this week on a six weeks' trip through Western Canada.

Des Brisay Jobbing Co., of North Vancouver, B.C., dealers in groceries and hardware, are adding shoes.

B. Taylor, 1920 Powell street, Vancouver, who has carried on a repairing business, is adding a stock of shoes.

Walter Powell, shoe dealer, 1682 Dundas street, Toronto, has opened another store west of his present stand.

R. W. Smardon, representing the Smardon Shoe Co., Montreal, was in Toronto this week on a short visit.

H. A. Beatty, sales manager of the Slater Shoe Co., Montreal, spent a few days in Toronto last week on business.

Sydney Franklin, of Galt, Ont., is installing a twenty-two foot, Model N shoe repairing outfit, with Goodyear stitcher.

A blaze broke out in the Carmichael boot shop in Portage la Prairie but was extinguished before much damage was done.

L. T. Blair, who handles men's furnishings, clothing and shoes, in Kamloops, B.C., has moved his No. 2 stock to his new store.

The Anderson Clothing Co., of Bowmanville, Ont., have recently installed a men's shoe department and have added a complete stock.

George Ryan, of Thomas Ryan & Co., wholesale shoes, Winnipeg, has returned from a recent successful business trip to the Coast.

W. J. Heaven, Toronto, manager of the Anglo-Canadian Leather Co., left last week on an extended trip through the Maritime Provinces.

Among the travelers who have been spending the past few days in Toronto are J. G. Settle, representing the Murray Shoe Co., London; N. J. Bourdeau, representing Jaek-

son & Savage, Montreal; J. P. Buehanan, of the Smardon Shoe Co., Montreal, and Frank Power, of the Rideau Shoe Co., Montreal.

Ald. James Robinson, of Montreal, has sold the property at No. 150 Craig street, in that city, to Mr. Frederic Frankel, for \$60,000.

Johnson & McCormick, 19 Second avenue, St. Thomas, Ont., are starting in the retail shoe business and will carry a representative stock.

J. P. Fry, of the Smardon Shoe Co., of Montreal, is now in the West visiting all the important centres with fall samples of his company.

Patrick Coyne, a veteran shoemaker, who formerly resided in New Haven, Conn., died recently in London. He was about sixty years of age.

Among the new companies which have been granted federal charters is the Graveline Shoe Co., of Montreal, the share capital being \$100,000.

L. J. Breithaupt, of the Breithaupt Leather Co., Berlin, has returned from a recent business trip to New York city and other Eastern leather centres.

Cairns' new departmental store in Saskatoon was recently officially opened and during the day twelve thousand people passed through the doors.

Charles E. Slater, formerly president and general manager of the Slater Shoe Co., Montreal, spent a few days in Toronto last week on business.

G. H. Loekett, representing the Midland Shoe Co., of Kingston, is covering the Prairie Provinces in the interest of that company with a full range of fall samples.

R. C. Galer, dealer in boots and shoes at Port Coquitlam, B.C., has been elected one of the first aldermen of the new town and is receiving the congratulations of his friends.

The Orillia Shoe Company, composed of James Gorman and N. Thompson, are opening a new store in Orillia, having leased suitable premises three doors east of the Union Bank.

W. E. Sinclair, shoe retailer, of New Westminster, B.C., has moved into his new premises in that city and now has one of the finest and brightest footwear establishments in British Columbia.

Cooper & Herman, of Goderich, have assigned to Osler Wade, Toronto. Some time ago they bought the stock of men's furnishings and shoes of S. Robbins, who recently started business in Sault Ste. Marie.

Rubberine, Limited, is the name of a new company organized in Toronto with a share capital of \$150,000. The Booth Felt Co., of Gananoque, has also been granted a charter. The capital stock is \$40,000.

G. J. Trudeau, district sales manager of the Slater Shoe Co., Montreal, is resigning to go into business for himself, having formed a company that will place on the market a new process for giving leather a patent finish.

Alex. Ross, late manager of the shoe section of the McKimmon department store at Weyburn, Sask., has taken a similar position with Herbert Snell, Limited, Moose Jaw. Mr. Ross is a former resident of Collingwood.

S. A. Parsons, of Chilliwack, B.C., dealer in men's furnishings, shoes and clothing, has taken in as a partner Mr. Nelmes, who has been his head salesman for the past seven years. The name of the new firm is Parsons & Nelmes.

St. Stephen, N.B., may issue bonds to the extent of \$15,000 for the purpose of erecting a building to be used as a shoe factory. A new company is willing to start operations and will pay rental for the building at the rate of seven per cent. on the investment.

W. E. Tait & Co. have opened a new shoe store in Kelowna, B.C. The firm have a large establishment in Kamloops, where they have been doing a nice trade for five years. The branch at Kelowna is attractively fitted up with a plate glass front and good fixtures. The best Canadian and Ameri-

can makes of footwear have been stocked and Mr. Tait is personally managing the store. He had a long association with the Ryans of Winnipeg and the Starks of Vancouver before starting in business for himself and his ventures have met with success.

The Slater Shoe Store, which has been conducted for several years by C. C. Cummings, Limited, 117 Yonge street, Toronto, has closed, Mr. Cummings having some months ago transferred his interest to a new company. The stand will be occupied by Hennessey's Drug Stores, Limited.

During the recent heavy wind storm in Ontario a section of the roof, about 20 x 35 feet, was taken from the factory of the Walker Bin and Store Fixture Co. in Berlin. About \$300 damage was done and the firm consider themselves lucky in not having the upper storey of their premises wrecked.

E. C. Mumford, who for the past sixteen years has successfully managed the shoe business carried on under the name of the Heckman Shoe Store, at 161 Lower Water street, Halifax, has acquired the business in his own right and will carry on the stand under the name of the Canadian Shoe Store.

J. Heffering, who represents the Tetrault Shoe Manufacturing Co., the McFarlane Shoe Co., and the Regina Shoe Co., Montreal, spent a few days recently in Montreal and Ottawa. He maintains permanent sample rooms in Room 709, Lumsden Building, Toronto, and has completely recovered from his recent severe illness.

At the annual meeting of the Boston Boot and Shoe Club held recently Alfred W. Donovan, who for the past five years has been president of that organization, retired and was accorded an appreciative vote of thanks for his sterling services. He is a brother of E. E. Donovan, manager of the Canadian factory at St. Thomas of E. T. Wright & Co.

The Sterling Leather Dressings, Limited, of Toronto, have been granted a charter. The capital stock of the company is \$40,000 and they are empowered to manufacture, sell and deal in leather dressings and polishes, varnishes and other preparations for the treatment of leather and similar goods. John H. Hamilton is one of the promoters of the new company.

Squires & Dickenson will open a new and up-to-date boot and shoe store at the corner of King William and James streets, Hamilton. A complete line of the newest and smartest footwear will be carried. E. W. Squires and E. H. Dickenson are both well known in the shoe trade, Mr. Squires having been manager of Stanley Mills & Co.'s shoe department, Hamilton, for a number of years.

The International Harvester Co., which has made a special study of the prevention of accidents, recommends that its employes should wear Congress shoes, and close fitting, neatly finished trousers. It finds that lace boots and trousers with frayed edges are a source of accidents. The Congress boots are smooth and have no laces to catch in machines, and they may be pulled off quickly if the foot is caught in any machine.

Ed. Cook, of the Owl Shoe Store, Yonge street, Toronto, is installing throughout his establishment new uniform cartons, which are of moire silver pattern and decidedly attractive. They add materially to the inviting character of the store. There are also displayed in the windows several gilt shoe stands and tables of ornate design. These pedestals are among the finest ever seen and are an effective contribution to the imposing front of the Owl establishment.

Jackson & Savage, Limited, of Montreal, have issued a handsomely illustrated and artistic spring catalogue. The publication consists of some 36 pages and is replete with illustrations of Scout Master, Boy Scout and Girl Guide shoes, which are carried in stock and ready to ship. The firm announce that they are prepared at all times to submit sample pairs for inspection, which can be returned if unsatisfactory. All the cuts are made from drawings of original shoes and are remarkably clear, showing in detail the beauty

of outline and graceful curves of every boot in the representative range of this progressive firm. The catalogue will be found a very neat reference for any retailer. Prices are given and orders may be easily placed by a reference to the stock number and name.

T. R. Trudeau, of A. Corbeil, Limited, Montreal, was married in that city on April 8th to Miss Mariette Marian. Mr. Trudeau and bride were in Toronto for a few days on their way to Los Angeles, Cal., where they will spend some time. He is a brother of A. R. Trudeau, manager of the Brockton Shoe Store, Toronto. It is understood that A. Corbeil, Limited, will shortly open a store on St. Catharine street west, Montreal, to be known as the Brockton store, and T. R. Trudeau will be in charge.

An Alberta dealer has original ideas on the matter of advertising, and he finds that most of them pay. He recently presented to each school child in his town a blank scribbler, the cover of which contained racy advertising showing the different lines carried by the store, and why it would pay both children and parents to buy at his place. When this book is completely filled, it is brought back to the store and any time the child or its parent is making a purchase to the value of \$2.00, the child gets a present of 10 cents in cash. This plan has worked out very well.

Fred. R. Foley, who has been in the shoe business for several years in Bowmanville, Ont., and has made the Parlor Shoe Store a feature among the business places of that enterprising town, has just moved into his new shoe home "on the sunny side of the street." His premises are admirably fitted up, very conveniently arranged and inviting and cozy in appearance. Previous to his removal Mr. Foley conducted a big stock reduction sale which was a great success. Some of his advertisements were admirably illustrated and clearly set forth the various lines presented with suitable cuts, prices being given in each instance.

The Brandon Shoe Co., of Brantford, report that they have just finished cutting for their spring deliveries and that the increase is 50 per cent. over last year's fall sales. The enlarged factory has been taxed to its utmost capacity to meet the orders for their goods and the fall run has now commenced. Mr. Brandon says that the season just closed was the best they ever had and owing to the big advance in business, there has been no shut down between spring and fall seasons. The outlook for 1913 is the most encouraging in the history of the company.

Retail dealers in many leading centres report that there is a lively spring demand for women's patent and gun metal boots, with black cloth tops. Last season at this time the chief inquiries were for tan button shoes. There are a fair number of tans moving for spring, but the demand is not as pronounced as last season. The sale of oxfords in gun metal and tan for men has begun, but pumps in various leathers are preferred by the majority of women. Wholesalers report that a fair sorting business is being done and that spring orders with some factories in the East, placed as far back as September last have not yet been delivered. The insistent inquiry for staples keeps up and all the plants producing this line are behind in their output.

H. W. Lindley, of Gouveneur, N.Y., representing Endicott, Johnson & Co., of Endicott, N.Y., was in Toronto last week with a full range of all the lines manufactured by this great manufacturing concern which, in all their factories, make fifty thousand pairs of shoes per day. The firm have just completed a factory, six hundred feet long, one hundred and fifty wide and five stories high, which will be devoted exclusively to the production of boys' and youths' McKays and welts. Endicott, Johnson & Co., have one hundred salesmen on the road and do a business of over twenty million dollars a year. They have their own tannery, which is over 1,100 feet in length, and over a million dollars worth of leather is in constant use in the varied operations of their factories, while goods to the extent of a million and a half dollars are always on the floor ready for shipment. The company also conduct a large number of retail stores in the United States.

## HAPPENINGS IN FACTORIES

It is said that another shoe factory will shortly locate in Galt.

H. Noonan is now packing room foreman of the Slater Shoe Co., Montreal.

N. Petrault, of the Tetrault Shoe Manufacturing Co., Montreal, was in Toronto this week on business.

T. N. Campbell, of the Amherst Boot and Shoe Co., Amherst, N.S., has returned from a trip to Regina.

William J. Baggs, of Toronto, representing the Anglo-Canadian Leather Co., was in Chicago and other Western cities last week on business.

C. H. Aborn & Co., Lynn, Mass., for whom C. E. McKeen & Co., Quebec, are agents, have moved into larger quarters in the old Logan factory.

J. A. Beaudoin, who has held the position as lasting room foreman at the No. 2 factory of the Ames-Holden-McCready Co., Montreal, has resigned.

On account of some unforeseen difficulty the project of the Hamburg Felt Boot Co., of New Hamburg, to erect a factory in Tavistock has been abandoned.

It is understood that the T. Sisman Shoe Co., of Aurora, Ont., will shortly erect a large addition to their factory in order to take care of their rapidly growing business.

The Nursery Shoe Co., of St. Thomas, at the head of which is A. E. Medcalf, have increased their output by one-third during the past few months and are very busy.

A. Shelder, foreman of the cutting room in the Relindo Shoe Co., Toronto, has resigned and returned to Boston. He has been succeeded by K. Daymore, of Freeport, Maine.

The Dominion Shoe and Slipper Co., of Berlin, manufacturers of felt slippers, are working overtime in order to fill the large number of orders for fall that they have received.

The ratepayers of Tillsonburg, Ont., will vote upon a by-law to grant certain concessions to the Snedcor & Hathaway Shoe Co., of Detroit. The measure will go before the people on April 28th.

The R. B. Johnson Shoe Co. have begun operations at Coquitlam, B.C. The output will soon be 350 pairs daily of heavy and medium grade. The manufacture of finer lines will be undertaken later on.

Work has started on the new factory of the Galt Shoe Manufacturing Co. at Galt. The building, which will be rushed to completion, will be four storeys high and erected of brick, stone and cement.

A despatch from St. John, N.B., says that the secretary of the Board of Trade has received inquiries from a large shoe manufacturing concern in Quebec who desire to establish a shoe factory in St. John.

Ald. S. Morley Wickett, of the firm of Wickett & Craig, leather manufacturers, Toronto, leaves early next month as one of the Toronto city representatives at the town planning convention to be held in Chicago.

H. H. Hastings, general manager of the Independent Rubber Tire Company, Limited, says that their new factory at Guelph, Ont., was started last week. The machinery and equipment are working smoothly.

Owing to the recent heavy rains the water in a sewer in Guelph backed up and flooded the cellar of the Rowan-Ogg shoe factory, putting out the fires. The factory had to close down until the trouble was removed.

Bert Cote, who has been for a great many years associated with the Thos. G. Plant Co., of Boston, has accepted a position as foreman of the lasting department with the Ames-Holden-McCready No. 2 factory, Montreal.

The U. S. M. Co. will once more set aside a plot of land near its plant at Beverly, Mass., for a farm for its employees.

It is expected that 50 or more employes will take up garden lots, and will cultivate them on a co-operative plan.

Mr. Kirwin, of North Grafton, Mass., has, it is understood, acquired an interest in Dunford's Elk Shoes, Limited, Stratford, and will act as supervisor of the industry, which is very busy and reports a large number of orders for fall.

Charles N. Holmes, for the past six years superintendent of Selz Schwab Co.'s factory at Elgin, Ill., has entered upon his new duties as superintendent for Getty & Scott, of Galt, who have recently installed several new machines—pulling over, sole cutters and Goodyear auxiliaries.

Construction work has started on the new building which the city of St. Thomas is erecting for the Canadian factory of E. T. Wright & Co. Excavation has been going on for some time and workmen are now busy with the walls. The Wright company expect to be in their new premises in a few months.

Joseph M. Libby died in Brockton recently in his 92nd year, after a short illness. Mr. Libby was probably the oldest living last maker in the United States. He was at one time head of a firm manufacturing lasts in Auburn, Me., and was employed for many years by the Brockton Last Co. Mr. Libby retired from active business about ten years ago.

Edward F. Leonard, superintendent of the Slater Shoe Co., of Montreal, and president of the Montreal Association of Superintendents and Foremen, was a visitor in Brockton, Mass., the past week. He is a Brockton boy and stated that the shoe business in Canada looked very promising for the future.

At a meeting of the creditors and shareholders of the Canadian General and Shoe Machinery Company, held recently in Quebec, R. E. Lefavre was appointed liquidator. By the consent of all the business will be continued as heretofore under the supervision of inspectors and until such time as a reorganization of the company can be effected, which it is expected will shortly take place.

The directors of the U. S. Rubber Company declared a quarterly dividend of 1½ per cent. on the common, thus placing it on a six per cent. annual basis. Since October, 1911, the concern has been paying quarterly dividends at the rate of 4 per cent. a year. The usual dividend of 2 per cent. on the first preferred stock was declared, as well as one of 1½ per cent. on the full amount of second preferred outstanding.

The Northern Tire and Rubber Co., Limited, with a share capital of \$160,000 and headquarters in Warton, Ont., have been granted a charter. They are empowered to manufacture and deal in all kinds of articles made from rubber or rubber products. The incorporators are T. A. Fleming, C. S. Fenton and A. G. Roberts, of Cleveland, Ohio; Wm. L. Neilson and John H. Cole, of Owen Sound; J. W. Albaugh, of Canton, Ohio, and Chas. E. Price, of New Berlin, Ohio.

The Downing Shoe Co., who will make men's Standard screw and Goodyear welts in elk and other leathers, have, it is understood, decided to locate in Brandon, Man., where Mr. Downing has been connected with the shoe trade, both retail and wholesale, for several years. This will make two factories for Brandon. The First Prairie Shoe Co., which was organized some time ago by W. Percy Gillespie & Co., of Toronto, are already building a large factory in that thriving Manitoba city.

An attempt to secure a bonus for an industry after the proposal had been rejected by the civic ratepayers was condemned by the Private Bills Committee of the Ontario Legislature recently. The matter arose when a clause in the city of London bill to authorize the issue of \$20,000 debentures for a loan to the C. N. & W. Shoe Company came up for discussion. The question had been submitted to the ratepayers and defeated, so the promoters of the company had the clause put in the bill on the advice of the mayor and city solicitor.

The new shoe factory to be located in Berlin, Ont., will be known as Gourlay & Fogelberg, Limited. The company

will secure temporary premises until their proposed large factory is erected. Some members of the new concern are Charles Fogelberg, late of Getty & Scott, Galt; A. R. Gourlay, formerly of McGregor & Gourlay, Galt, and his son, S. A. Gourlay, of Berlin. It is stated that manufacturing will be under way before long. It is understood that women's high grade McKays will be the specialty of the new firm. Mr. Fogelberg is well known to the trade as an expert, thoroughly trained and conscientious shoemaker and Berlin is rapidly developing into a great shoe and leather centre. It is rumored that more industries in this line will follow in the near future.

The financial year of Ames-Holden-McCready, Limited, ends in May and it is estimated the gross sales will have increased for the year about one and a quarter million dollars. The record for ten months to the first of February shows an increase of over one million. This is expected to work out in a big advance in net earnings. In 1911 net profits, after providing for administration, selling and other expenses, were as follows: Net profits, \$281,348; bond interest and preferred dividend, \$240,000; surplus, \$41,348. The percentage earned on preferred was 8.65.

It is probable that Sydney, N.S., will have a new shoe factory after all. In a recent interview G. W. Murphy, one of the promoters, said: "I have been trying to interest a number of capitalists in the proposals. What success I will have seems to depend upon the money market. I am confident, however, that a boot and shoe concern would be a paying one in this part of the province and if my ideas of a fully equipped shop cannot be completed I have other plans for the opening of a factory in Sydney. I have already ordered a small amount of machinery for my own shop and have an option on some shoe machinery now at Boston which I consider one of the best bargains in that line on the market. This option is good until April ninth, with the privilege of extension for six months. Ostensibly this was secured for the Nova Scotia Tanning Company, but it is unlikely this company will attempt the manufacture of boots and shoes in the near future. I have determined on the establishment of this industry in Sydney, and if the necessary capital is not forthcoming at present I will operate a one or two line shop until the opportunity for enlargement is ripe."

#### SEVENTY-EIGHT YEARS IN ONE STAND

After being seventy-eight years in the one business stand, a record unsurpassed perhaps in the history of any firm in Canada. R. Dack & Sons have removed their shoe store from 73 King street west to 80 King street west, Toronto, which is located just across the street. The retail branch will be conducted in this store, which is nicely fitted up, being about sixty feet deep and twenty wide. Manufacturing will be carried on in their new factory at 337 King street west, where a four-storey, brick building has just been completed and will add materially to the facilities of the firm. The name "Dack" has been associated with the shoe trade for over 100 years, beginning in Dublin, Ireland, in 1810. In 1835 Edward Dack came to Toronto and started a custom shop at 73 King street west, which has just been vacated in order to make room for the erection of the new Hotel McConkey. R. Dack & Sons make practically all the men's Goodyear welts which they sell in their retail establishment and also do a large made-to-order business. Robert Dack has been at the head of the business about thirty years and associated with him are his two sons, R. G. and S. E., the former looking after the retail end and the latter being engaged at the factory. Six dollars is the price of the cheapest shoe carried. Heretofore the manufacturing and retail lines have been conducted on the same premises but, as already announced, they will be carried on in different places in the future.

#### AN HISTORIC SHOE FIRM

The Robert Taylor Co., Limited, of Halifax, N.S., who will shortly branch out into the manufacture of Goodyear

welts, are the oldest boot and shoe manufacturing firm in the Maritime Provinces. It was established by the late Robert Taylor about 1860. The present manager, Robert D. Taylor, is the son of the late Robert Taylor. He entered his father's employ quite young in 1885, and has worked his way through every department of the factory, as well as the office, and has seen many changes and increases in the business. To-day he is devoting his time chiefly to executive office work but keeps in close touch with the manufacturing end. W. B. Taylor, who is a son-in-law of the late Robert Taylor, joined forces with him some twenty years ago, and has thus practically grown up in the business, looks after the jobbing end of the business and has just returned from an extended trip to shoe centres looking up samples and novelties for fall trade. This firm, while the oldest in the Maritime Provinces has kept pace with the times and is to-day turning out a splendid line of McKays, nailed and peg goods, suitable for any walk in life. In 1911 the growth of the business necessitated the erection of a four-storey brick addition to the buildings, giving about 6,000 feet extra floor space. A number of new machines were installed at the first of this year, amongst them a model B McKay sewer and a model C Goodyear rapid stitcher, and it is the intention of the management, as already stated, to shortly undertake the manufacture of Goodyear welt goods.

### News Jottings from Quebec

J. A. Langlois, of the L. Gauthier Co., was in Montreal recently engaging operators for the lasting machines. He brought back a number of good men.

Salesmen for the different last factories were in Quebec during the past few days with several kinds of nice lasts both for men and women. The high toe lasts seemingly are going out rapidly and are being replaced by a wide, full toe or a medium raised for a snappy shoe.

Some shoe manufacturers who market their product direct with the trade, are busy taking stock and expect to start their fall run next week. They have finished up their spring run fully a month ahead of last year, the orders having come in more promptly. The prospects are that most of the factories will be busy all summer.

Mrs. L. Gauthier gave an enjoyable sugar party at her country home, situated at Petit Pre. About thirty were present and spent a pleasant time. There was music, song and story, while speeches were made by Mr. Leeks and others. In the afternoon a "barn dance" was given. Each guest was presented with a nice souvenir of the day.

The James Muir Co. have finished all the shoes that they had under way in their factory in Quebec and this week are packing their machines and stock preparatory to removing to their new factory in Maisonneuve. The Messrs. Muir presented many with whom they had done business in Quebec with interesting souvenirs.

Robbers entered a shed of J. & A. Martin, shoe manufacturers, on April 8th and stole one hundred sides of tan kip which had been stored there during the day. The leather represented a sum of about \$500. It is believed that the same gang went over to a building belonging to Richard & Frere, where the sole leather of the firm is kept. The thieves did not succeed in getting anything, and departed after partially breaking the door. The detectives are after the marauders.

Among the callers on the trade during the past few days were A. L. Baldwin, of the United Shoe Machinery Co., Montreal; H. Parker, of the Dominion Supply Co., Montreal; H. H. Dalton, of L. H. Packard & Co., Montreal; H. Bonner, of the Bonner Leather Co., Montreal; R. G. Balcom, of Herman Behr & Co., New York; P. Morency, of Sultana, Limited, Montreal; A. Bouchard, of La Compagnie des Cuirs et Chaussures de Plessisville, and R. Brayley, of Doon Twines, Limited, Doon, Ont.

## LIVE YOUNG SHOE DEALER

Starting to learn the shoe trade when he was sixteen years old, it was only a few years later before Chas. J. Seyler, of Berlin, was in business for himself. In 1908 he began in his own behalf on a cash capital of \$200, and to-day he has a stock of over \$9,000. He was only twenty years old when he started his store, and he finds that his sales are increasing every month. Mr. Seyler is a Waterloo county boy, who is making a success in his chosen line. He worked for a number of Berlin shoe houses before branching out for himself. He does not believe in special sales, as he thinks they tend largely to load up customers with a lot of shoes and when the busy times come the footwear merchant may find it rather quiet.

Mr. Seyler is of the opinion that if you have some lines which are not moving as freely as desired, they should be prominently displayed in the window with price tickets attached. He finds one of the best advertisements is to give patrons a nice artistic calendar at the end of each year. It must be something so distinctive that it will be kept, and thus the name of the retailer is constantly before the public.

## RETAILERS SAY BILL IS UNJUST

Representatives of ten thousand wholesalers and manufacturers lined up against the agents of some forty thousand retailers when the Bulk Sales Bill introduced in the Legislature by W. D. McPherson was considered by the Legal Committee of the Ontario Legislature recently.

The leading provisions of the bill are in brief:—If a man wishes to sell his business, he must first furnish the buyer with a statement of his liabilities, exceeding the sum of fifty dollars. This statement, of course, is sworn to be correct. And he must obtain a waiver from at least 60% (both as to amount and number of his creditors).

When the Retail Merchants' Association presented their side of the case the bill was thrown out for another year by the Legal Committee of the Ontario Legislature. The decision was almost unanimous. The opponents pointed out that not only was the measure "class legislation," but that it would restrict the buying and selling of business because the vendor must obtain a waiver from his creditors.

E. M. Trowern, secretary of the Retail Merchants' Association, declared, "There are more than 40,000 retailers in the province, and if they knew that legislation of this character was being considered, this room wouldn't be able to hold the men who would come here to oppose it. We are not in sympathy with any proposal to put a rope around the necks of 99 merchants in 100 to catch one thief. What do we care what other provinces are doing? Why should we follow Saskatchewan?"

Col. Brock said he represented the Ontario Associated Boards of Trade and represented the interests of 10,000 business men who were members of the association. "Two weeks ago this bill was considered at our meeting in London, and there were only two men who said anything in opposition to it."

J. R. Dargavel, M.P.P., of Leeds, again spoke against the bill. He said that he stood for the sentiments and feelings of the great majority of small retail dealers in Ontario. He considered that the bill was "class legislation of the worst kind," and claimed that a farmer could sell his stock and abscond just as easily as a merchant. He then stated that if the bill passed, men who had no capital whatever, would be able to start in business and that the wholesalers would grant them any credit that they asked for. "If I had had fair opposition in my business," he said,

"I would be worth a hundred thousand dollars. Honest trade will be ruined if this bill goes through. The villages and towns will be filled up with a bad class of people."

The bill will probably come up again next year, and in the meantime the retailers will be given a chance to express their opinion on the measure.

## THE PRESTO PNEUMATIC TREEING MACHINE

A remarkable new machine has been introduced in America by the W. J. Young Machinery Co., 416 Union Street, Lynn. It is called the Presto Pneumatic Treeing machine, and by actual test abroad has been found more practical than any other machine now in use. A year ago last November, president G. B. Grover, of the W. J. Young Machinery Co. visited Europe for the London fair. Mr. Grover made a trip to Germany, and while in Pirmasens visited the shoe machinery plant of Schon & Co., the manufacturers of the Presto machine. Mr. Grover immediately recognized the value of this machine, five hundred of which have been sold in Germany within two years, and the result of his visit is the introduction to-day of this machine in America. The W. J. Young Machinery Co. has secured the entire rights for its manufacture in the United States and Canada.

The machine itself, built in the form of a round table, works on the principle of inflating rubber feet with air. The machine comes with either two arms, four arms, or six arms, and the feet, when inflated with air, absolutely fit all widths and all styles of shoes—one pair of feet only being required for sizes from 2½ to 4½, and a second size for all sizes from 5 to 6½, absolutely provides for any width or any style of shoe that may be used upon it. Not only are these rubber forms flexible, but when the shoe is taken off, it is impossible to bend or crack, for when the air is taken out of the pneumatic feet they become thoroughly pliable, and the shoe is taken off without the slightest injury. The various rubber feet are fitted on the arms which extend about three feet from the main joint from which air is pumped into the feet by a single downward pressure of the foot. These feet are made of chrome calf with a rubber interior and when inflated fit snugly into every curve of the shoe. A nephew of Mr. Schon, Mr. Erwin Zeller, has come over from Germany to the W. J. Young Co., in whose employ he is now acting as a demonstrator of the machine.

Only two of the machines have been brought to this country at present, on which the duty alone paid was 45%. Manufacturers interested in this new machine are cordially invited to inspect it at the W. J. Young Machinery plant at 416 Union Street, Lynn, Mass.

## HAS A WELL ROUNDED EXPERIENCE

The manager of the Lindsay store of the United Shoe Dealers is M. H. Sisson. He started business in Lindsay in 1892, and after being in this line for some years, sold out to W. White and took a position as traveler for J. Redmond, of Toronto. The big boot and shoe strike was then on in Montreal and no goods could be obtained, so that Mr. Sisson had to retire from the road and came back to the retail trade. He was with N. Hockin, shoe dealer, for a number of years and also with P. J. Hurley, who succeeded Mr. Hockin. Mr. Sisson was with Mr. Hurley until the latter's death, when the business was sold. He has since been with the United Shoe people. Mr. Sisson has been selling footwear in Lindsay for over twenty years and is one of the progressive men of the trade. His experience has been broad and well rounded and there are few better equipped shoe men to-day than the manager of the United Shoe Dealers in Lindsay.

### HE LIKES THE SHOE BUSINESS

"Like the shoe business well and would not change it for any other as it is one of the few lines which give a young man a chance to get into business for himself on a small capital," remarked Ed. L. Cormier, of Moncton, N.B., who is manager of the Red Front Shoe Store, a branch of L. Higgins & Co. He was born at Dover, a small country village and came to Moncton with his parents when twelve years old. He attended school until at the age of sixteen he was forced to shift for himself. Mr. Cormier got his first job with L. Higgins & Co. as elevator boy and general

help around the warehouse. He gradually worked his way up to be head shipper and after five years' service, went to New Bedford, Mass., where he took a situation with one of the leading shoe establishments of that city. At the end of a year he returned to Moncton and re-entered the employ of Higgins & Co., being given his present post. He has filled his present post with credit to himself and to the firm and succeeded in building up a very gratifying trade.

### A PALATIAL SHOE HOUSE

C. F. Rannard, of the Rannard Shoe Co., Winnipeg, is enlarging and reconstructing his Portage Avenue store. In order to obtain sufficient space for the enlargement of the present stand, he has acquired control of the business premises in the rear of the present Portage Avenue establishment and has workmen busy turning the three stores into one. When necessary alterations are complete, Mr. Rannard will operate the largest and finest shoe store in Canada, the floor space occupying no less than 3,000 feet. A special feature of the new store will be a separate fitting department for ladies and children, with the view of obtaining a necessary privacy for lady patrons. All interior fittings and electric light fixtures will come direct from New York, where Mr. Rannard has lately been studying the most approved methods.

### CANADA'S YOUNGEST SHOE TRAVELER

Possibly the youngest shoe traveler in Canada to-day is Bert Tipping, son of A. J. Tipping, 110 Macpherson Ave., Toronto. He has been on the road now over a year and a half in the interests of D. D. Hawthorne & Co., and during that time has opened many new accounts. "Bert" is only twenty years old, his father has also traveled for Mr. Hawthorne for some ten years, and it would appear that the son is a "chip of the old block." Previous to starting on a regular route for himself Bert was engaged as clerk in a retail store on Yonge Street. He likes the selling game and has been told by several of the oldest travelers on the road that he is the youngest man filling a permanent place on a staff and covering a territory. He traverses the ground from London to Windsor, and has made many friends with the

trade. His father, who was born in Manchester, England, had a thorough training for the boot business before coming to Canada. His first position was a city traveler with the J. D. King Co., Toronto, afterwards he was with the firm of McKellar and Dallas for six or seven years, looking after Western Ontario. For the past decade he has been one of the hustling representatives of D. D. Hawthorne & Co.

### News Briefs from Winnipeg

J. Caron has taken a position with the Rannard Shoe Co.

Mr. Jenner, of Fort Rouge, reports that business is very active with him.

R. P. L. Higgins, of Assiniboia, Sask., was in the city last week on a buying expedition.

The Boston Shoe Co. have opened a neat store on Portage avenue. Mr. DeTaube is the manager.

R. K. Jenkins, of W. A. Marsh, Western, Limited, has been on a trip throughout the Prairie Provinces.

John Sparling, of Portage la Prairie, has taken a position on the staff of the Yale Shoe Store of Winnipeg.

Mr. Congdon, jr., of the Western branch of Ames-Holden-McCready Co., was in the city for a few days.

Mr. Bohan, formerly with the Avenue Shoe Co., has taken a position as head window trimmer for the Nickle Boot Shop.

The alterations of the Rannard Shoe Store on Portage avenue will make a big improvement to that shop, transforming it into one of the finest in the West.

Parker Bros., of Norwood, are rapidly forging their way to the front as a widely known business firm, and are handling the best lines in men's shoes.

Among the shoe travelers who have been calling on the trade here lately are Mr. Morrow, of the Aylmer Shoe Co., Aylmer, Ont.; Mr. Tobin, of the Galt Shoe Co., Galt; J. G. McDiarmid, of the Cook-Fitzgerald Co., Limited, of London, Ont.; Percy Fry, of the Smardon Shoe Co., Montreal; L. Godbolt, of J. & T. Bell, Montreal; Mr. Gibbins, of Getty & Scott, Galt, Ont.; Mr. Bell, of G. A. Slater, Limited, Montreal; Mr. Davidson, of MacFarlane Shoe Co., Montreal, and F. J. Lashbrook, of the Williams Shoe Co., Brampton.

W. Wilson, manager of the Diamond Shoe Co., says that the last Saturday in March resulted in the biggest sales since that firm started business. Other firms which report a splendid Easter trade are "Spinny" Caldwell, of the T. Eaton Co.; Mr. McCaffery, of Rannard's Portage avenue store; Mr. Bloor, of the Avenue Shoe Store; Mr. Buckler, sr., of the Cut-Rate American Shoe Store; Mr. Balfour, of the Regal Shoe Store; Mr. Thompson, of the Nickle Boot Shop; Mr. Newton, of J. Robinson's; Mr. Stark, of the Slater Shoe; Mr. Mulhall, of the Ryan-Devlin Co.; Mr. McKinnon, of Wellband & Robinson's; Mr. Simpson, of the T. Stedman Co., and others.

Mr. Larson, of the Moyer Shoe, installed a decidedly artistic and inviting Easter window. The Regal Shoe Store also excelled itself in the line of an effective trim. Both of the large windows in the Moyer store are backed with white material and have wings to match. This drapery has been carefully arranged and hangs in loose, curtain-like effects. The doors are covered with white muslin, upon which the "younits" displaying the samples are placed. These "younits" are of handsome polished brass, and the samples are well chosen and varied. The centre of each window is occupied with a stool bearing a large palm, while pennants of green ribbon adorn the white of the backgrounds. The Regal Shoe Store windows are backed with mirrors, which always make an effective ground for this type of exhibition. The doors of both are covered with white muslin, upon which a number of violets are scattered, while further decoration is afforded by the introduction of large clusters of Easter lilies. The samples include many tasteful models, both of men's and ladies' shoes.

A. CORBEIL

## The Line of Least Resistance

It's far easier to sell a man the pair of shoes he wants at the price he wants to pay, than to convince him that he needs another pair at a higher price.

Selling high-priced shoes may be all right—if it doesn't cost too much to consummate a sale.

It takes your time, your sales-people's time, and plenty of good newspaper space to convince men that they should pay more than \$5.00 for their shoes. Even then the sales at that figure are few.

Every shoe dealer knows that any man is quite willing to pay anywhere from \$3.50 to \$5.00. In showing him shoes of these prices there is never any long price argument.

These are acceptable prices. Every man believes them correct.

Sales of "Landover" and "Leader" Shoes steadily increase because their prices have been already accepted by your men patrons. They'll accept "Landover" and "Leader" styles and shapes just as readily.

## Will Canada Enter U.S. Shoe and Leather Market?

(Continued from page 56)

ada is a growing country and those who keep pace with its growth, in any industry, will have no idle time on their hands."

### The Advantage of Specialization

Charles A. Ahrens, of Berlin, sends the following reply:—"We would say that in case the Democratic Tariff Bill should be endorsed in Congress we do not see how it could possibly be of any benefit to Canadian shoe manufacturers. The price of most leathers is lower in the United States than in Canada; in fact, they do come here and compete and sell leather, plus the duty. Then, again, they have such a large market that they can and do specialize, making thousands of pairs per day of one kind of shoe, while we in Canada are obliged to make a great many different kinds in the same factory. We consider that specializing is a great reducer of cost on account of not being obliged to carry such a large quantity of the different kinds of leather, etc. Our answer to your questions, first, would be, that we could not enter their market and command a large share of business; second, we could not compete with concerns across the border in any line and secure favorable consideration; third, we do not see how any direct benefit would accrue to shoe manufacturers if the American duty was removed from shoes and leather, nor can we see how Canadian prices could be affected unless European concerns could enter the U. S. and beat them on prices. If the latter can be done, then there is no telling what would happen."

J. A. & M. Cote, of St. Hyacinthe, Que., say, "In our opinion the elimination of the American tariff on Canadian boots and shoes will do no harm, and ought to help some the export of boots and shoes to the other side. We do not believe, however, that the reduction will be sufficient to enable the Canadian manufacturer to compete with the American manufacturer, as in many instances we have to import from the States, goods on which we have to pay duty, and we do not see how, after manufacturing these goods here, with part of American products, we could go and sell the Americans the manufactured article, when they produce it all without having any duty to pay. We do not believe that the new bill will affect Canadian prices at all."

### Canadians Could Not Compete

G. A. Blachford, sales manager of the Murray Shoe Co., London, Ont., adds, "If the American duty is taken off shoes I do not think that Canadian manufacturers could compete in their market except possibly it might be in some of the cheaper and heavier lines, about which I know very little. We read occasionally that some American manufacturers are frightened about competition from this country, but how they figure this out, personally, I cannot see. Of course, I cannot speak for the cheaper grades of shoes, but in Goodyear lines, which retail in Canada for \$5.00 and \$6.00, there will certainly be no chance for us to sell them shoes at the present, unless it might be to some occasional retailer who wanted, perhaps, for some particular trade, a Canadian made shoe. While I feel that, in grade for grade, the Canadian manufacturer gives more actual value than will be found in the American shoe, there is, nevertheless, no denying the fact that the American product is more uniform and the details more minutely and successfully taken care of than in our Canadian factories. This is no criticism on our home product; it is due to conditions existing on account of the size of our plants, which in turn depend upon the market we have in which to dispose of our product; and also because we have undoubtedly to make a larger range in one individual factory here, than is usually found in

American factories; or if found there, on account of their tremendous output, they are able to specialize different lines and grades in the same factory where we cannot do so. Personally, I am very enthusiastic over Canadian shoes, and I honestly believe that considering our conditions, the product which we produce is a greater credit to us than the product in American factories is a credit to American makers. To enable us to compete with American manufacturers means that we must be able to buy as cheaply as they can, and this we cannot do. We must also be able to manufacture goods on the same large and economical scale that they can do and this is impossible, because we have not the market. I do not believe we could sell sufficient shoes in the United States so as to enable that market to bring us up to the same manufacturing conditions as are found in the country to the south of us. Personally, I would only wish that we could find an export market for our goods. It would help the trade wonderfully, but to-day none exists that the Canadian manufacturer can take advantage of on account of cost conditions in producing which he is under."

George A. Slater, Montreal, writes that he does not care to express an opinion at the present time regarding the possibility of Canadian shoe manufacturers being able to enter the American market and secure business. "I think it would be better to wait," he adds, "until Congress first endorses the bill."

### Have Not the Facilities

Charles P. Creamer, managing director of one of the largest clothing manufactories in Canada, but an American citizen, born in Salem, Mass., thus writes to his brother, Walter H. Creamer of Lynn, Mass., says American Shoemaking:—

Your letter of yesterday came this morning, and it has kept me hustling to get the information wanted to send you within the 24 hours.

The labor cost on a woman's kid button boot, McKay sewn, that retails for \$1.50, is 18 cents in Canada. This price does not include foremen's or superintendents' time and is for actual productive labor, and this cost, I am informed, is authentic. This is against the cost in the United States of from 14½ cents to 16 cents.

There are a few men's Goodyear welts retailing from \$4 to \$5, and a few ladies' fancy slippers, medium price, in English-made goods, that are sold in Canada, but only a few, as English styles do not take as well here as American styles. In this connection I might say that I understand the English factories have installed the very latest American machinery and are planning to manufacture American styles for this market.

Answering your question, what grades of American shoes are sold here, would say both men's and women's shoes in welts, retailing from \$4 to \$7, and costing from \$2.25 upwards, plus the duty. I may say a good many American shoes are sold here.

The duty on shoes into Canada from the United States is 30 per cent., and from England into Canada, 20 per cent.

You ask my opinion, with free trade in shoes, if Montreal manufacturers could undersell American manufacturers in their own market, and, in reply to this, would say no. We might sell a few shoes in the border towns, but unless the duty were removed on upper leather from the United States into Canada, and unless some changes were made in the Canadian labor law, permitting labor to come here from the United States, we would not be able to compete. The price of leather made in Canada is gauged by what the price of leather from the United States would cost, plus duty, and our labor cost is fully as high, if not higher.

I do not know whether this information suits your argument, but nevertheless, it is true; and I might say, in addition, that the Canadian manufacturer at the start, would labor under the disadvantage of a larger percentage of overhead expense from the fact that we cater to 9,000,000 people, where you cater to 90,000,000, and your factories

are equipped to do a larger volume of business, and geographically, we are not situated as conveniently as your manufacturers are to your home market. Another thing owing to the smaller population here in Canada, our manufacturers have to make many different kinds of boots and shoes in order to get the volume, where in the United States they can specialize on certain lines and manufacture their product, for this reason, more economically; and, take it altogether, we would certainly be very much handicapped from the start.

### Their Fears Are Needless

We have before us a clipping from a recent edition of the Toronto Globe, in which is advertised a bargain list of a leading retail store there, says the Shoe and Leather Reporter. Among the bargains, we notice women's fine boots in patent leather, box calf and kid at \$1.00 per pair; also men's boots, blucher style 5½ to 11, at \$2.00 per pair; men's hockey boots in large sizes, comfortable shape, low heels, sizes 8½ to 11, 65 cents per pair; women's boots for early spring wear in fine calf leather, bright or dull finish, in patent leather in blucher cut, Goodyear welts, sizes 2½ to 7, at \$2.00. These prices are for bargain day it is noted, but even at that they are lower than any bargain prices we have seen in this country for corresponding quality of late years.

One American manufacturer is already equipped to make shoes in Canada and has now broken ground for a new five-story shoe factory there to cost about \$50,000. This is the E. T. Wright Co., Rockland, Mass. They expect to have the new factory in operation before the end of the summer. The argument has been made that Canadians could not undersell the American market even with the duty removed. It may be that Canadians cannot, but it is not improbable that enterprising American manufacturers could establish factories in Canada and accomplish that object.

One very large shoe manufacturer has already stated that in the event of the duty being removed from shoes in the United States, he would establish a branch factory in England and begin making shoes for the American market. He would also then be in a position where he could not be stamped by European competition in the event of his American business being affected.

### Shoe Machinery on Free List

A despatch from Washington says: "Shoe machinery, now taxed forty-five per cent., and on which a reduction of

twenty-five per cent. was proposed by the tariff revision bill, was ordered transferred to the free list by the Democratic caucus of the House lately. It was the first real break of the Democrats from the Ways and Means Committee rates. For three days there had been a great deal of speech-making from members without grievances, but all amendments proposed had been steadily voted down, with majorities satisfactory to the Democratic leaders. The shoe machinery amendment, proposed by Representative Borland, of Missouri, and carried by a viva voce vote without substantial opposition from the members of the committee, followed a lively discussion in which Representative Oglesby, of New York, a new member, arraigned the so-called United Shoe Machinery Trust and pointed out the free list as an opportunity to let in competition."

### CLASSIFIED ADVERTISEMENTS

2 cents a word first insertion—1 cent a word subsequent insertions. No advertisement less than 50 cents per insertion accepted. Please remit cash with order.

FOR SALE—Boot and shoe business on one of Toronto's best business streets; a going concern, stock about, \$3,500; new, clean, staple and up-to-date. Reason for selling and other particulars on application: Apply Box 44, SHOE AND LEATHER JOURNAL, Toronto.

# BUYING EXPERIENCE

Will you use the knowledge  
I have gained in my many  
years in business?

---

---

Every year that I'm in business—and you know there has been a good many of those years—I learn something new about the art of buying. Just the same, my customers tell me that I very seldom make a mistake.

Now, no matter how keen you are, you can't have the same opportunities for "good buys" as I have. That's my business—buying for you.

Let me help you with my experience. Let me buy your stock now—and then let me keep it until you need it in your store. Place your Fall order with my traveler now and when you need to sort use my big In-Stock Department, where mail orders are promptly filled and shipped and where practically all sizes and styles are stocked.

Use my experience in buying your Fall stock.

99. Duplicate of 35, made in Urus Calf, a soft Oiled Leather. Good in the water and very tough.

## Where Work is Hard and Ways Are Rough

In any place where the strain on shoes is great there you'll find Williams shoes standing up honestly. Every portion of them is leather, and every stitch is exact, and true and honest. There is no shoddy material or shirked workmanship in a Williams shoe. It is an honest, solid leather, work-a-day shoe which is making a big hit with people who require value with a capital V.

See the Williams man who is in your locality. Ask him to show you all the good, strong features that made the Williams shoe such a selling success. He can show you that you need it in your stock.

## Williams Shoe Company

BRAMPTON, ONTARIO

# Two "reason-why" leathers —and three of the reasons

*The "Bestyet" Twins--"Bestyet" Brown and "Bestyet" Tan are distinct achievements in leather making. They base their claim to be in your shoes on their ability to give you advantages you cannot get in ordinary leathers. Listen:—*

## **Their color is even**

*You won't get one skin of these leathers that isn't the same shade from skirt to skirt, and from head to tail. And, what's more, every skin will be exactly the same shade. Shoes from them do not require to be matched up.*

## **They are washable**

*Any stain these leathers may pick up in your factory can be easily removed with castile soap and water. The bugbear of soiled shoes need never cast its gloom over you. Every shoe you send out will be perfect in color and finish.*

## **They won't fade**

*Neither of these leathers will lose its original color from exposure to the sun. Your customer can take your shoes of these leathers from his window in as good condition as when he put them in. And shoe polish won't bleach them either.*

## **Just one more reason why**

*Right now you can get either or both of the "Bestyet Twins" in any quantity you wish, but you'll have to hurry. With a big season of tans coming on these leathers are liable to be scarce soon.*

*Order yours right this minute.*

RETAIL

\$3.50

to

\$5.00

## What is an Inside Discount?

Usually it is something cut out of the inside of the shoe

where you can't see it. But the customer finds it in minus wear and it tells in the sales of your store.

Let's apply a moment's thought to this inside discount question.

The average shoe manufacturer is well satisfied with a 5% profit on his year's business. Where do you think he is going to get the profit to give you an extra 3 or 5% inside discount? Well, where?

Out of the shoe and out of your reputation—that is the only place it can come from.

The retailer should make from 30% to 35% on the selling price and that is all any merchant should ask.

He should make his showing by turning the stock frequently, by doing a big business on a small investment and that is where the right profit comes from and not out of the quality. That's where the good trade marked shoe makes good. The right trade marked shoe sells quickly. It is known to the consumer by years of national advertising and wearing satisfaction. But little introduction to the public is necessary.

It draws trade to the retailer at the least cost in local

advertising or selling. It gives the retailer an exclusive feature by which to draw trade.

It enables him to get the right price, carrying the right profit without question because it has a reputation.

It enables him to turn his stock oftener and sell out more thoroughly than un-named brands.

The trade marked shoe makes the manufacturer responsible. His success or failure is tied up with the retailer's.

He carries a reserve stock for his dealer's benefit.

This is true of the DOROTHY DODD shoe and here's just one little insight as to where the money comes from to do all of these things for the retailer's benefit.

The average shoe salesman is paid on the basis of 5% of his sales. Our salesmen get considerably under that percentage and yet it is a notable fact that they are the best paid salesmen in the trade. Our selling cost in per cent. is less, because our goods sell easier and our accounts stick.

The trade marked shoe has cut down our selling expense and it can and will do the same for you, which means increased net profit and greater stability.

Think it over. Try it out.

Put it over.

METROPOLIS  
OF QUEBEC

# MAISONNEUVE

The Ideal City

**MR. SHOE MANUFACTURER:** You are seeking the most advantageous location for your factory. Then you will have regard for these facts about Maisonneuve, the most rapidly-growing industrial city in Canada. There are reasons.

**ACCESSIBILITY.** Maisonneuve is easily reached from all points, lying directly alongside Montreal, with its stores and supplies, affording convenient market for the purchase of raw material and marketing of finished products.

**SHIPPING FACILITIES.** The C.P.R., C.N.R. and the G.T., with a terminal electric railway linking them all together, furnish sidings for practically all sites, besides which there is the St. Lawrence River with its great docks for ocean liners and up-the-lake boats.

**IMPORTANT CONCESSIONS.** Ten years' exemption from taxes are freely offered the bona fide manufacturer.

**SPLENDID SITES** along the terminal railway and elsewhere are available at low prices.

**ALL THE IMPROVEMENTS,** gas, electricity, water, sewers, power, are readily obtainable.

**LOW POWER RATES,** the result of competing electric companies, give the manufacturer in Maisonneuve a very distinct advantage.

# NEUVE

THE COMING  
INDUSTRIAL  
METROPOLIS  
OF QUEBEC

## For Your Factory

**FREEDOM FROM LABOR TROUBLES** is offered by Maisonneuve, which has the finest labor market in the Dominion of Canada, male and female, skilled and unskilled, for practically all the workmen own their own homes.

A **CONSUMING MARKET** of six hundred thousand at your very door is an advantage every manufacturer will recognize, particularly when joined with the economy and convenience of a moderate-sized city.

**MAISONNEUVE** has a population of thirty thousand people, churches of all denominations, schools, both Protestant and Catholic, theatres, shops, department stores, parks, beautiful shaded streets, mammoth industries, including the UNITED SHOE MACHINERY CO., THE MONTREAL STEEL WORKS, the VICKERS-MAXIM CO. It has already several large and progressive shoe factories, employing thousands of skilled workmen.

**GET IN TOUCH** with this enterprising town. We can make it worth your while to locate here in Maisonneuve, the Pittsburg of Canada.

N. M. RUTHSTEIN  
THE STEEL SHOE MAN

## Here's a Big Need and a Profitable Way to Fill it

For many years workmen in all parts of the country have wanted a shoe that would stand up properly under severe conditions. They wanted a shoe whose sole would last longer than mere leather—a shoe that wouldn't leak and that would protect the foot.

Every day more and more of these workmen are discovering the fact that Ruthstein's Steel Shoe is the name of the shoe they've been looking for so long. As soon as they get this information they make tracks for the store that has these wear-resisters in stock. Are they coming to your store?

Better get in touch with our nearest agency and find out how profitable it will be for you to fill this big need of the workingmen. Our advertising will help you.

# WALK- OVER THE SHOE FOR YOU

"Dope" Model—Stock Dept. No. 1042

## More than One and One-Half Million Pairs Sold of This One Walk-Over Model

**T**HAT is a new shoemaking record and proves several things.

One is that Walk-Over designers know how to anticipate and meet the demands of shoe wearers.

Another is that the firm which controls the output of Walk-Over shoes for any city or town has the assurance of the patronage of that part of the community which knows, appreciates and buys the most stylish and up-to-date footwear.

We want an active, aggressive Walk-Over representative in every city and town in Canada. If there is none in your town we'd like an opportunity to explain our proposition in detail to you either through our traveler or by correspondence.

## Inspect the “Kingsbury” and “America’s Beauty” Lines Carefully

- ☞ They gain your instant favor. It does not take a long argument to convince you that these shoes are right in every sense of the term. They speak for themselves. Their sales value is instantly seen.
- ☞ In the same way your customer will be convinced that she needs “Kingsbury” or “America’s Beauty” shoes. They attract her fancy greatly. That sells the first pair—and in future she is a repeat customer
- ☞ Remember that the Flex-Welt feature alone will greatly boost your sales. Order some Flex-Welts and feature them.

# Our New High-Grade Line for Men and Women Is a Sure Winner

Every shoeman will be interested in this line—city and large town merchants **particularly** so. It is a new departure—new lasts, new patterns, the very latest of new ideas throughout.

It includes shoes in Aztec and Norwegian Calf and American Gun Metals for men—trimmed throughout in Ayers' Calf, We might mention in passing, blind eyelets and octagon celluloid hooks on lace shoes, bone black buttons on button shoes—all new ideas—and fine serge and worsted tops seamed with California welting.

Our womens' lines are quite as distinctive. Among them are seven new city lasts that are exceptionally classy.

Our travelers are also showing twenty lines of womens' high-grade Turn slippers and pumps. You can suit every taste with this line to pick from.

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brusines              |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

## *—from the hands of a specialist*

Do you know that every stitch that goes into a Perth Shoe is put there by the workman who knows best how to put that stitch in? Do you know that every workman in the Perth factory is a Goodyear Welt workman, that is, he puts all his time on women's Goodyear Welts?

That's what we mean when we say that Perth shoes are specialist shoes. They are made by men who have grown expert by keeping continually at one special job. The combined efforts of these Women's Goodyear Welt specialists give you a shoe that is more valuable to your customer and more profitable to you.

Get a specialist's profit from a specialist shoe.

## A Rideau Shoe gives scope to your good salesmanship

- ☞ One thing that endears the Rideau shoe to earnest salesmen is the fact that every shoe backs up all the nice things that are said of it.
- ☞ You see, the Rideau is the shoe you have always wished to sell. It's built just as you would have it built. And it gives to your customers all the style, all the comfort, all the wear that you would have it give.
- ☞ The making of it is the result of study of what the retailer wants to sell, and what his customer wants to buy. It is a shoe that answers every requirement of its wearer, and satisfies every desire of its seller. It will back up the claims of the most enthusiastic salesman on the staff.
- ☞ Try it on your salespeople and get their verdict.

**The Rideau Shoe Co.**

**A solid leather  
shoe on the "Fitz U" Last  
Men's      Youths'      Boys'**

A Tebbutt line that is to be given considerable prominence in many stocks this Fall, is our solid leather shoe in Chrome Box Calf and Chrome Box Kip. This is a Standard Screwed Blucher with oak soles and leather innersole. It is made on our new "Fitz U" last, and is a dandy for fit and wear. It comes in sizes from youth's 11 to men's 11.

This is a shoe for which there is a large call, and you can fully rely on its ability to become popular.

The time you'll spend in looking over samples of this shoe will be well invested. Make sure you see them.

# Consider first these Rubbers---and then--- the firms who sell them

If "A man is known by the company he keeps," no doubt a rubber is known by the firm who sells it.

Judged in this manner Independent Brands should enjoy a remarkable popularity. The firms who sell them are the best in Canada. Their integrity and business acumen are well known. They are noted for the remarkable foresight with which they choose their stocks. What they buy, sells.

So when you see rubbers being sold by the best jobbing houses in Canada, isn't it about time that you were looking into the merits of these rubbers? We just want you to satisfy yourself as to the profit of handling Independent Brands. We are sure that when you do you'll not rest until you have them in your stock.

A post card will bring you information.

If you could  
sell to  
**Ninety Per Cent.**  
of the men in  
your town

A. CORBEIL

Nine out of every  
ten men in your town  
would buy "Landover"  
or "Leader" Shoes if their case was properly laid  
before them.

Because:—

The majority of men in your town cannot afford more than  
from \$3.50 to \$5.00 for their shoes. And those who can  
consider it altogether too much to pay.

Consequently, with a well assorted stock of "Landover" and  
"Leader" Shoes on your shelves, you are prepared to fill the  
needs of ninety per cent. of the men in your town.

And remember the strong feature of those good shoes is  
S-E-R V-I-C-E. They will satisfy so thoroughly as to hold all  
the custom their fair price brings you.

## Buy for your customers' feet— not for your window

You can't build a permanent business on "eye service." You know there are not enough people in your locality to keep you busy unless the shoes you sell them satisfy their feet. You must get your people coming back to your store regularly before you can hope to have a "regular" business.

Then, don't buy for "eye service," don't buy shoes because they'll look good in your window, buy for "foot service"—buy shoes that'll feel good on the feet of your customers. Buy from the Aird Line.

It comprises men's, women's, boys' and youths' Turns and McKays, and every pair fits—and fits comfortably—and wears like iron. They'll bring your customers back.

## Aird & Son, Montreal

Makers of Men's, Women's, Boy's  
and Youths' McKays and Turns

Your Gloves will not become stiff and bony from hard usage or exposure to wet if the leather is right.

Gloves made of "P & V" leather remain soft and comfortable under the hardest conditions of wear and weather.

In the manufacture of heavy gloves for out-door workers "P & V" glove leathers are without an equal.

They are made in horse, cowhide and split, and in various colors and weights.

Send to-day for our free sample book of glove leathers and convince yourself of their superiority.

## --why do McDermott's wear so well?

One of the big reasons why McDermott Shoes wear so well, and hold their shapes so long, is that every shoe is correctly fashioned.

It fits—and fits all over.

There is no question about the fit of a McDermott Shoe. As soon as your customer gets it on her foot she knows that it will fit perfectly. This perfect fitting quality is a big help in quick initial sales and a sure bringer of repeats.

A shoe that is built to fit like a McDermott naturally wears long, and holds its shape. It won't "run over," or become "sloppy," because it fits snugly. It won't crack, nor will the seams burst, because it is not too tight.

You see, the perfect fit of a McDermott has a great deal to do with its long life.

## The McDermott Shoe Company

Women's Shoe Specialists

Montreal

## Comfortable Heavy Shoes

THERE is nothing left out of Yamaska Brand Shoes that would tend to make them wear longer, and yet the comfort of their wearers is always kept in view. The result is that, while "Yamaskas" are sturdy and strong, and long-wearing, they are easy on the feet, and are not burdensome to their wearers.

Your customers who need heavy shoes will appreciate the comfort as well as the long service of "Yamaska" Brand of heavy shoes.

excellence and  
true worth.

Look for it.

MR. DEALER,  
WE WOULD ASK YOU—

*Are the shoes you sell  
The kind that tell  
The merits of your store?*

Or do you think more of big profits than reputation? Every man likes to hear something good said about himself, and the man who handles "CANADIAN BOY SHOES" has the best possible recommendation to the shoe buying public.

Some men are judged by their works, but the retailer is judged by his stock; so, in fairness to yourself, you should stock "CANADIAN BOY SHOES" and try to live up to their standard.

## How Much of Your Net Profit Do You Get?

**Y**OUR success is determined, not by the volume of your sales, but by the net profit you actually receive. Losses caused by carelessness, mistakes, forgotten charges and temptation must be paid for out of net profit---you have just that much less for your family, your future and yourself.

A modern **National Cash Register** stops losses and increases trade and profits. It shows how much money should be in your cash drawer and how many sales were made by each clerk. It records all charges, bills paid and money received on account.

It insures your getting that part of every dollar which rightfully belongs to you as a fair return on your labor and investment.

## Fitting a New Shoe Style to All Types of Feet

How a Salesman Must Exercise Judgment, Alertness and Common Sense—All Fitting Systems Have Some Shortcomings—Clerk Who is Conscientious in His Work Will Have Little Trouble—Some Reliable Rules to Follow

Written Expressly for "The Shoe and Leather Journal" by A. E. EDGAR,  
author of "How to Advertise a Retail Store," and other business literature

"Apparently shoe fitting is deteriorating. It is almost impossible to go into any of the large stores in large cities and get decent service out of a salesman. Only last week a young lady was sent to one of the most exclusive shops in a great centre and inquired for a salesman who had sufficient experience to be a good fitter. The exclusiveness of the shop alone should have guaranteed this young woman a proper fit. She paid \$6.00 for the shoes. The fit was so poor that it was almost a crime to let the footwear go out of the store."

The foregoing item of so much importance to all shoe merchants and salesmen is from a Chicago trade paper of recent date. It shows how badly the shoe business can be managed. It does not require a college course, nor any particular study of anatomy to correctly fit the foot. A knowledge of the anatomy of the foot is, of course, a great help in fitting a shoe properly, but it is of greatest value in fitting deformed feet. At a rough estimate, it would not be out of the way to say that at least eighty per cent. of the feet we are asked to fit are normal, or so near it that they may be treated as normal.

The proper fitting of a shoe depends upon two things to-day. One, the variety of the sizes and widths or fittings, as our English shoemakers say, which, in the writer's mind, is a far better expression than widths, that is available for fitting purposes. If a salesman is restricted to one width in a shoe it will be impossible for him to fit a fair number of customers correctly.

### Need Real Measurement Standard

At the present time we need a standard of measurement for shoe sizes, not a pretended standard that no manufacturer follows strictly to the letter. With such a standard it would be possible to fit at least ninety per cent. of the feet that go to the shoe stores of Canada for shoes, perfectly and comfortably. As it is, it is up to the salesman to use his knowledge of the stock and his best judgment, which is the second thing upon which depends a proper fitting of shoes.

A salesman who is conscientious in fitting will have but little trouble with his customers. It is the man who is unscrupulous, neglectful and downright lazy that gives poor fitting service. Every salesman should make it a point to find out how every line of shoes that comes into the store

fit. The writer has fitted shoes upon customers that he knew would not fit, and the customer did not want; just for the purpose of finding out how they did fit the particular type of foot the caller had. This was done without the latter knowing what was going on, and as a part of the process of finding out the best fit for the foot. In this way a salesman knows before his customer sits down the peculiarities of his wares, the shoes that will fit short, thick feet, those that will fit long and narrow feet, and other kinds of pedal extremities.

### The Customer is at Fault

Right here it might be said in defence of the salesman that it is very often the fault of the customer that he or she does not get a perfect fit. Here is an instance: A young man trying on a gun metal button shoe, one of those modish creations with a high toe and short fore-part, and a high forward-pitched heel. The salesman knew his customer and appeared to be upon intimate terms with him, a trick that salesmen ought to cultivate.

"What is the size of this shoe?" inquired the caller after he had walked up and down, and examined it in every attitude.

"None of your business," was the clerk's reply, "What you want is a fit for your foot, not a number to carry around in your noddle."

This was a little familiar, but the clerk knew his customer. This kind of an answer would not do for a prim old maid. Another case may be cited: A lady was trying on a shoe and the salesman knew that it fitted her perfectly. His customer had admitted that it felt comfortable. She asked the salesman what the number of the shoe was. "Why I don't know, I never look at the numbers that are marked on the shoes, I took your measure and got the shoe that corresponded with it. I should judge that if the number was marked in them that it would be 4A." This was the size the lady had asked for. She expressed surprise that there was no size marked in the shoes, and not knowing the meaning of French sizes that were marked on the lining, was satisfied.

This clerk knew his business, but this game would not work in a store catering to a general trade.

One more case along this line and we will leave it. A patron had on his foot an oxford that the salesman knew

fitted him perfectly, but they were a half-size larger than had been asked for. The young fellow buying them was one of those kind who know it all, and are a good deal harder to sell than the most finicky of women.

"What size is that?" he finally asked. The salesman felt that his doom was foretold, but he very calmly told the size. "I can't wear a seven, I had a pair and they rubbed my heels and made blisters." And he stopped to take them off, instead of putting out his foot for the salesman to do so. The salesman was mad enough to take them off and throw them at the fool's head, but he did not show it, that is where a salesman's training comes in. He very masterfully took the foot and shoe out of the others hands and tied up the shoe lace again. "Just a minute, I think I said that it fit you; it can't be possible that I was mistaken." And he felt all over the shoe as if assuring himself that he was right, and said: "I knew I was right, I know my business." He then went on to explain why the oxford the customer had before slipped and rubbed his heel, and why the one he had now on could not, and ended up by stating that he would be glad to take them back if they did.

#### Customer Was Not Satisfied

The customer was not satisfied but wanted a half size smaller. The salesman quietly got them down and they were tried on and found too small. This was a case where common sense and argument were apparently wasted, but the salesman was game and went through it all for the benefit of the future business he could do with his man. At last the customer gave the salesman the opening he wanted. He said, "If they were not so much longer than the ones I am wearing I would try them, but there is no use me taking a seven, I know they are too long." The clerk pulled out a rule and measured the two shoes and found that the seven measured nearly a quarter of an inch shorter than the old shoes. The fastidious fellow was cornered and knew it and was badly put out about it. He took the shoes, but before he got away the salesman had engaged him in conversation on a topic that he was interested in and sent him away satisfied and in a good humor.

These incidents show the human nature side of fitting shoes; but behind this the salesman must know what a good fit is and how to give it.

The salesman should have no difficulty in finding out the proper size of a shoe to try on a customer. In fact, the clerk of experience can almost always fit the foot with the first pair he tries on. The visitor will almost invariably state the size that is wanted. This should not always be considered as the correct one. The size marked on the inside of the shoe is the next indication of what the size ought to be. The condition of the boot being taken off should add the remaining information necessary to a proper conclusion.

In a department where high grade goods are sold, the measuring stick may be used for the effect it has on the customer, but its too frequent use only spoils the influence desired. After the size is known, it is only necessary to decide the style of shoe that is best suited for the peculiar type of foot. But it is not always easy to sell the proper kind of shoe to insure a perfect fit. The customer has his own ideas of the style of shoe he wants. The man, who wants a straight last, very often ought to have a full swing to give him comfort and ease. He goes around complaining about what tender feet he has, when a change of style of shoe would remedy the trouble and he would not know that he had feet.

#### Good for Some, Bad for Others

One of the American (United States) ideas of fitting is "long and narrow" shoes. This is a good idea for some feet, but it is the worst policy for others.

Some years ago the writer was called upon to fit a lady

who had on her foot a 4½E oxford. The toes were bunched up in the toe, the toecap had split away from the vamp because of the great pressure there was against it every time the lady put her foot down on the ground. She was fitted to a pair of shoes, 7A, and has always worn that size since. Now, what ever kind of a foot-fitter had fitted the short wide shoes to that foot it is hard to say, but it is more than likely that this lady had thought that 4½ was her size, and had always asked for them, and been given what she asked for, without regard to fit.

This is an extreme case and shows that there are a few salesmen who do not pay enough attention to fitting shoes properly. This lady made no reference to the change in size, other than to remark, "That's the prettiest shoe I ever had on my foot." She was pleased at the change.

But take another case and we find the other extreme. An American, while sojourning in Canada, dropped into a shoe store and made a purchase of a pair of shoes. He had gone in with a 9½AA on his feet and gone out with an 8½D. In this case also, the change was for the better. This man weighed one hundred and eighty pounds and had some trouble with the shoes he had been wearing, but always attributed it to his tender feet. The AA last was too narrow across the sole for so heavy a man.

Without going too deeply into the matter here are a few rules to follow in fitting shoes. They are not put in any particular order but as they suggest themselves to the writer.

#### SOME IDEAS ON FITTING

1. Fit a foot at least two sizes longer than the foot measure shows the foot draws. Sometimes, for a lean, thin foot a half size more may be added, but never fit a foot shorter than two sizes longer than the foot draws when at ease.
2. If a foot shows a high arch, fit with a shoe having a high shank, and necessarily a high heel to give the proper arch.
3. If the arch of the foot does not show much curve, fit with a lower heel and arch.
4. If the toes of the foot are square, full, round and spread, fit with a wide toed shoe. The toes should be given a full house to live in. It is not always best to fit this kind of a foot with a wide width, but the best results are had from fitting with a wide toe and ball.
5. If the toes are long and run out to a point, a narrower shoe is best. This kind of a foot can be fitted to a straight last very well.
6. See that the ball of the foot comes across the tread of the shoe. This is one of the best indications of the best size (length) to give.
7. The shoe should fit snugly to the inside of the foot at the shank. This is sometimes hard to secure, but is necessary to a comfortable fit.
8. The instep must be fitted so that there is not room enough for the foot to slip forward in the shoe. This is one of the faults with cheap shoes. It is almost impossible to get them with a narrow enough instep. If the foot is fitted snugly from the waist of the shoe back, allowing the toes plenty of room there is always sure to be a comfortable fit.

If the shoe salesman uses these eight rules in fitting he will not go very far astray. But he will also have to use them with good judgment, and more common sense.

# Is the Repair Department Really Worth While?

Many Shoemen Think That It Is, Especially in the Smaller Centres—Some Larger Dealers Declare That Outside Repair Shops Are So Numerous There is no Necessity to Bother With This Branch—Much Depends on the Kind of Help Engaged, the Prices Asked, and Other Things

"I think a repair department is one of the most important assets in any shoe store." This is what one Canadian dealer thinks of a department of this kind. Much has been said time and again about the repair branch, some merchants saying it was a first class idea, and others looking on it as a source of trouble and expense. Of course, it is like anything else—It is a difficult proposition and can be made to pay some people where others fail.

The writer has canvassed many shoe stores on this question, and while a good many do not like the idea of a repair shop, they mostly all agree that it is a necessity these days in every respectable sized town or village store, in order to meet the keen competition which has to be encountered. One dealer who conducts a fairly large store has the following to say on the subject: "I am sure that if a strict eye is kept on the repair department and a certain amount of judgment used, a shoe dealer can make a nice thing out of

this branch, or at any rate, every shoe retailer will agree with me that a repair department is necessary if only to keep customers satisfied. There is no reason why they should do worse than to break even on the proposition.

## Handy for Small Repairs

"For example, one of the important things a good repair department will take care of is the making of various small repairs that are often necessary on a pair of shoes, due to negligence or faulty workmanship. The number of these requiring some kind of repair is really surprising. It prevents the returning of the pair and also saves them from the shelf-warming class. Of course, these repairs have to be made free of charge. If you sent them to an outside shop it would be a straight loss, a loss that is saved when a store has a good repair department.

"Then look at the question from another standpoint,

## AN IMPOSING ARRAY OF NEW STYLES

AN ARTISTIC AND IMPRESSIVE DISPLAY OF WOMEN'S SPRING FOOTWEAR, MADE BY JOHNSTONE WALKER, LIMITED, OF EDMONTON, ALTA. THE PLEASING ARRANGEMENT WAS CARRIED OUT BY FRED V. HOLLANDS, WINDOW TRIMMER OF THE FIRM

Every pair of shoes sent outside, means the loss of 10, 15, 25 cents or whatever the extra profit may be. Compare the number of repairing jobs which are bound to come to you if you encourage this department, and you will find that its means a good many dollars a year that you might just as well have as the other fellow."

#### Going At It In the Right Way

But the foregoing is really not the proper way to look at the matter. Any shoeman can make a profit, and a mighty good one from a repair department if he runs it in as careful and economical fashion as possible. If he goes at it the right way he can make almost as much as he procures from his findings department. To do this he must have as much machinery installed as the volume of his business warrants. This is one of the principal essentials in the success of a repair section. A shoeman should never waste time doing a job by hand if it is possible to be done by machine, which performs the work much quicker and a good deal better than is possible by hand. Doing the job quicker means a saving of time, enabling a larger volume of business to be attended to in the same amount of time, and consequently, more net profits. It is right here where many a shoeman fails to make his repair department pay. He looks at the present outlay instead of at the future profits. Even the present outlay is comparatively small these days when a shoe dealer can always lease a repairing outfit on a royalty basis or on some kind of similar terms. "I have only a fair sized repair department myself, but I am clearing from \$30 up a week from my repairs. I keep two men busy all the time. Do you think it is worth my time?" asks one eastern man.

This is what one man says, but it is representative of what a good percentage of shoe dealers think. One large city dealer, talking to the writer said. "Three or four years ago, I did repairing on a very small basis, but I saw what there was in it for me, and pushed it hard, with the result that I now employ eight men and keep them working steadily. Latterly I have been doing a certain amount of custom work, of which there is always quite a bit floating around. The only trouble I have now with this department is the lack of good repair men. What is troubling me more is the securing of men to do the jobs I receive, not the securing of the jobs. They come alright, as fast as I want to take them. I did not do any advertising other than hang a sign outside announcing that I did all kinds of shoe repairing. I did the work well and the trade came almost faster than I could handle it."

#### Too Much Bother and Worry

Naturally, there are two sides to every question. Here is what an anti-repair man says: "I would not have a repair department in my shop for any money. Why? Because, when you figure up the profit in it you have to take into account the trouble necessary to procure this profit. I think there is just as much work expended on a pair of shoes to be repaired as there is in selling them—sometimes a good deal more. If I spend as much time looking after my regular departments as it takes to look after the shoe department, I am able to make just as much money as I would on repairs without all the extra bother necessary when conducting a repair shop. Some people say this department will aid in bringing business to the other branches, but I do not put much faith in this theory. The way I look at it is that the class of trade I handle should be the type of persons who buy new shoes when necessary, not the ones who are continually running to have their shoes repaired instead of buying oftener.

#### Not Much in It Now

Another retailer said there was not much these days in repairing when the high price of repairing material was considered, especially all kinds of leather. Sole leather, he said, formed the bulk of the repair man's purchases and it

seemed to be getting higher all the time. Add to this the trouble it entailed and a man would be better off to leave it to men who made it their particular business to look after this trade. "I send all my repairing to one man in consideration of which, I get it done at a twenty per cent. discount. I have no bother, and find I can get good business. I attend to the small wants free providing I think the shoe at fault is not satisfactory. In the matter of claims for free repairs, if I think the claim is a just one, I get the shoe attended to. I believe the best way is for every shoeman to send out all his repairs. It does away with a lot of free jobs you are expected to make when you have such a branch in connection with your store."

"No, I do not keep a repair shop. I regard it as a source of unnecessary trouble and expense which is saved by keeping my repair business in close check and sending what I have, in order to keep my customers satisfied, to an outside man. He does my repairing for a reduced figure, enabling me to charge customers enough to cover all expenses and yield me a fair profit," says a Northern dealer.

"I was thinking of opening a department of this kind a couple of years ago, but found it a rather hard proposition, so I let it go. The principal difficulty seemed to be in getting a good repair man," declared another shoeman. "Of course, I attribute this to the fact that my store is in a rather small town and a cobbler is harder to procure in a place like this than in a larger town or a city. For this reason I did not go any further with the matter. At present I send out all my work to a repairer, and this seems to work out satisfactorily. I have found that it was necessary to cut down free repairing as much as possible. It is a habit which seems to grow on customers. This is another reason why I am not in favor of a repair department in connection with my store."

#### Depends on the View Point

Evidently the personality of the shoeman has a good deal to do with the side he takes to the question. On both sides contradictory statements are made. If a shoeman is looking out for all the profits he can get, he is likely to see the great advantage possessed in a good repair department. On the other hand, if he does not desire to be tied up with any side issues that prevent his concentrating on the main business in hand, he will likely contend that there is nothing in a repair shop. There are good points on both sides, but it seems to reveal, judging from the number of interviews and different opinions expressed, that the repair shop in connection with the regular shoe business, is an advantage to every shoe dealer, in the smaller places especially, when properly looked after.

A large number of dealers admit that a repair department ought to pay. Their excuse for not opening one is that they have not the time. Of course, there may be a lot in this, and the old proverb about having too many irons in the fire might be recalled. On the other hand, a great many people think this branch requires a lot more attention than it does, and certainly, when talking with some of the dealers who have made a success of their repair department, the writer was impressed from the manner in which they spoke that they regard it as one of their best side lines and one well worthy of the time and trouble expended towards making it a success.

#### A Source of Information

A leading manufacturer recently said: "I think that every retailer of shoes should have a repair department as a part of his business, not only as a convenience to his customers but as a sort of bureau of information for his own use. There's no way in which a shoe dealer can so well size up the workmanship in a shoe as to see it after it has been brought back for repairs. Many dealers have made changes in their lines through the insight which they have obtained in regard to the goods which they purchase. Poor workmanship and

(Continued on page 66)

# What Way Do You Figure Profits, Mr. Dealer?

Certain Calculations that You Think Correct Are Liable to Bankrupt You—School Arithmetic vs. Business Arithmetic—The Importance of Figuring Costs on the Selling Price Instead of the Cost Price—Tale of a Stove

A retail merchant bought a suit of clothes at wholesale for \$16. How much would he have to sell it for to make profit of 25 per cent?"

This is a problem found in nearly all arithmetics used in school. This department of the book was called "Gain and Loss." The result as given in the key to answers found in the back of the volume was \$20, says H. C. Lenington in the Southwestern Merchant.

That does very well for a boy in the fifth or sixth grade at school. But, for the man conducting a retail clothing store, the real question is: "How much would a merchant lose who figured his profit and loss account in this manner?"

I have sprung the following problem to several of our school boys: A retailer handled a stove costing him wholesale \$10. He wished to make a profit of 10%. His cost of doing business he estimated at 18%. What should be his selling price?

The answer is not \$12.80, but \$13.89.

My way of figuring has caused some excitement among our school teachers who claim that I have not worked the example correctly. They seem to think that this is just a "grafting" way the merchants have of figuring up their profits.

In the problem of the suit purchased at wholesale for \$16 and sold for \$20, the difficulty is not so much with the method of working the problem itself as it is with the things the problem takes for granted. As a simple problem in percentage it is correct, because 25 per cent. of \$16 is \$4 and the sum of \$16 and \$4 is \$20.

## Business Works Out Different

This method is probably correct from a pedagogical point of view, because in the school room every problem must be simplified to the comprehension of the student.

The school boy is not interested in (but the business man must know) just how that per centage figure is found. If, at the end of a year he figures his profits on the basis of his total sales, the method is wrong. If he figures his profits on the basis of the sum total of the purchase money turned over to the jobbers and manufacturers for goods sold during the year, the method is correct.

But, in actual practice, most merchants figure profits on the basis of total sales. Applying this percentage of profit computed on the basis of total sales to the purchasing price of any individual item has been the reason why many seemingly prosperous merchants have left bankrupt estates to their widows and heirs.

## A Most Important Science

The science of cost accounting is a very recent study, but a very important one. Each kind of business has had to work out its own particular problems in this direction, but even in its more general phases it is just now beginning to receive attention on the part of textbook writers. It is, therefore, no reflection on our schools or teachers to point out the fact that there is much confusion in the minds of those to whom we ordinarily look for direction.

But that there is a great deal of confusion cannot be questioned--a confusion that is so current in the business world itself that it readily accounts for the large proportion of business failures that occur every year and for the bankrupt estates of apparently prosperous business men.

The problem of the stove is one of comparatively simple percentage. The confusion very naturally arises in applying percentage figures originally arrived at on the basis of total sales to the individual sale.

To get the terms of the problem clearly in mind we must know just how the percentages with which we deal are arrived at.

Suppose, for illustration, that a retail merchant is going over last year's business. Suppose that he finds that his total sales amounted to \$10,000. That includes every last cent he took in over the counter. In other words, that \$10,000 exactly equals the gross total selling prices on merchandise sold during 1912.

## Finding Out His Expenses

Now he goes over his books again and finds that his various necessary expense items, rent, salaries, deliveries, light, heat, advertising, insurance, losses, depreciation, bad accounts, etc., amounted to \$1,800.

That \$1,800 is just 18 per cent of \$10,000, his gross sales. If he made \$1,000 profit (net), that is 10 per cent. on the same \$10,000 gross sales. The cost of doing business added to the profit therefore equals 28 per cent., not of the cost of the merchandise, but of the selling price of all the merchandise sold. The first cost of the merchandise is

## A Shoe Dealer With Public Spirit

Ten years in business for himself in Fredericton, N.B., is the record of H. S. Campbell. He was born in Brighton, Mass., in 1872. Shortly afterwards the family removed to Prince Edward Island, and about thirty years ago came to the Capital city of New Brunswick. Mr. Campbell's first experience in the shoe line was with the late Nelson Campbell, in 1888. He remained with him until his death

in 1903, when he afterwards purchased the business from his estate. Mr. Campbell has been one of the most progressive and public spirited citizens of Fredericton for a number of years. He is a prominent member of the Fredericton Board of Trade, of which enterprising body he has been secretary since 1910, and other public organizations. He has built up a large business in fine footwear.

found by adding the business charges (\$1,800) and the profit (\$1,000) together, making \$2,800, and subtracting this from the \$10,000, the answer being \$7,200. This is 72 per cent. of the \$10,000 gross sales.

Stated concisely, this means that the \$10,000 gross sales equals 100 per cent. of which 18 per cent. is the cost of doing business, 10 per cent. of the profit and 72 per cent. the cost of merchandise at first hand.

#### The Way to Price an Article

In pricing an article, you have the cost of the article as charged to you by the jobber or manufacturer—the selling price must be figured. From the figures and percentages compiled from the last year's records (as per above) you know the cost of the article is 72 per cent. of the selling price you must charge if you are to continue to do business on the same basis.

The stove was billed to you at \$9.25 and the freight charge brought this cost up to you to \$10.00. Many people who are not familiar with the practice of business may imagine that you are charging that 75c. twice—once on the cost of the article, and again in the cost of doing business. Of course this is a mistake, as the first carriage costs are charged to the merchandise account and not general expenses.

If the cost price is 72 per cent., the selling price (100 per cent.) is found to be \$13,889.

This may, perhaps be made still clearer by showing that costs and profits can be figured on the basis of first merchandise costs, but the percentages would then be different.

Take the same figures as above: Cost of doing business, \$1,800; net profit, \$1,000; cost of merchandise, \$7,200; total sales, \$10,000. But \$1,800 is not 18 per cent. of \$7,200, but 25 per cent. The \$1,000 profit is not 10 per cent. of \$7,200, but within a slight fraction of 14 per cent.

#### Fixing the Selling Price

With these latter percentage figures, the same problem of the stove can be worked on the basis of the cost price of the merchandise. Now the cost is 100 per cent.; cost of doing business, 25 per cent., and profit nearly 14 per cent. The selling price is, therefore, 139 per cent.

That is to say, as we have already shown, that 18 per cent. of the selling price is equal to 25 per cent. on the cost price, and 10 per cent. on the selling price is equal to 14 per cent. (nearly) on the cost price. Adding 25 and 14 per cent. together, we have 39 per cent. to be added to the cost price. 39 per cent. of \$10.00 (the cost of the stove) is \$3.90, making the selling price \$13.90. The difference of one cent between this and \$13.89 as figured the other way is merely the slight fractional difference in estimating the profit at 14 per cent., which, strictly speaking, is just one-ninth of one per cent. too much.

The whole matter with problems of this class is to make your gross figures consistent. If you figure out your percentage on gross total sales, make your percentages apply to selling prices—don't switch them unconsciously to cost marks.

We have emphasized the importance of figuring costs on the selling price instead of on the cost price, because the former method is more generally used, is easier, and on the whole much simpler.

It can be done the other way, but the same method of figuring must be used on the individual items as on the annual volume of business. Confusion at this point is fatal.

#### A Dicker on a Horse

An old story goes that a certain man had a horse that cost \$50. Later he wished to sell the animal and met a horse trader who offered to sell the horse for \$75 if the owner would allow him a commission of 33 1-3 per cent. It looked like a nice profit. The horse was sold and the trader handed

over \$50, or \$75 less one-third for commission. There was no profit in the transaction because the owner did not think to figure on the selling price rather than on the original cost.

The same figuring will bankrupt any retail merchant.

In the discussion of this kind of a problem, the mere arithmetic may bother some merchants, but much of the difficulty others find is not mathematical at all. The idea that a buyer at retail is compelled to pay \$3.90 more to the retailer than the retailer paid to his jobber or manufacturer is more often the stumbling block to the right comprehension of the solution of this problem.

Every retailer should be prepared to show his customers just how it would cost the manufacturer vastly more to place the same stove in the buyer's home than is ever charged by any reputable retail dealer. The manufacturer who attempts this must be prepared to advertise in every national and local publication read by householders, and this would be not only a vast expense in the aggregate, but one that would be felt in every individual sale made. Delivery charges are far heavier on such individual shipments than on the carload lots that retailers handle. Then, errors and misunderstandings would constantly arise in ordering and delivery and all the way down the line there would be expenses that would greatly over-balance the thrifty retailer's method of doing business.

In the retail store the customer can see exactly the article that is to be delivered, he can take it or leave it—someone will want it to-morrow if not to-day. There are no long delays and few disappointments. The retailer attends to all the mass of detail incidental to ordering from a distance.

#### When Brothers Fall Out

A case comes to mind now of two brothers in a northern city who manufactured stoves and consigned their product direct to consumers. The stove was a good one and a jobbing friend pointed out where he could handle the distribution of their stoves more economically for them than they could for themselves. One brother saw it this way, but the other did not, and they fell out over the matter, finally settling it by the first brother selling out his interest in the business to the other. Then this first brother set up in business for himself, manufacturing practically the same stove under another name and selling it through the jobber and retailer. The two stoves retailed at the same price (except when some retailer for one reason or another saw fit to reduce the regular retail price) and both prospered. Cutting out the "middle man" does not reduce prices—frequently it raises them.

The retailer is performing a real service—and a service that has its costs as well as its profits. The good book says: "And the servant is worthy of his hire." He earns it and he should get it. If he does not he will soon be brushed aside and another will perform the service and receive the reward.

Right now the public is busy figuring up the "high cost of living," and laying the blame for same on the present method of distribution. And the investigations now going on are, no doubt, a good thing. The light never hurt any institution or any method that had any real value. But retail merchandising was never so efficient as it is to-day. Never before were retailers so anxious to discard wasteful methods and to adopt more progressive and more economical ones. This very discussion of how to figure profits is such an indication. It means that in the future there will be fewer failures and far better service than ever in the past.

The retailer is here to stay, but the Twentieth Century store is benefitting by the criticism of the failures of the past.

When you find a customer who likes to argue, let him argue in somebody else's store and he will be more apt to buy in yours.

# Suggested Improvements for Some Retail Advts.

Showing Why Some Retail Ads. Appeal to the Reader Immediately, and Why Others Fail to Interest—An Interesting Study—A Profitable One, Too, For Every Retailer Who Likes to Make Use of Result Bringing Publicity

The ad. of the Popular Shoe Store deals too much in glittering generalities. Describing value as "a long stick" is mixing metaphors with a vengeance. One does not usually coax people into a store with a stick; the suggestion, therefore, is certainly an erroneous one. Instead of saying "all

The copy lists such cold weather footwear and is one instance where general copy serves a purpose. The border here might be better printed, but the ad. as a whole, is well displayed and valuable.

Morris & Smith also assert that they keep only the best. Why not give a few good rubber selling points? It would help a lot more than the copy they use in the ad. shown here. To mention mere prices is not much use unless price is connected with the idea of value. The mere quoting of figures in itself conveys nothing unless one has some conception of the worth and quality of the goods.

Evidently the Relindo ad. in G. L. Hodgsons space is a plate sent out by the manufacturer to retail customers. The heading is not very artistic, though everyone can see the idea, desired to be emphasized which, perhaps, is the main

**Archie McGillis**  
Your Money's Worth or Your money Back

THREE COLUMN AD. OF PORT ARTHUR SHOEMAN

Archie McGillis has a large, well displayed ad., and each article listed has one or two good selling points mentioned.

It is a good idea to put the price figures in black face type. The slogan beneath the firm name is also appropriate and catchy, but it takes considerable effort to live up to it, as it sets a high standard. The border is quite attractive. Mr. McGillis is not afraid to use space to give his message. More retailers could profitably fashion after this method.

The ad. of John Agnew, Limited, is a general announcement only. The cut used is a very good one, but it would be better in using a cut like this to use descriptive copy giving more details. Our remarks in the case of one other

# May Benefit Canadian Producers in Some Lines

General Opinion, However, is that Neither the Tanners nor Shoe Manufacturers Have Much to Gain by Reason of the Removal of American Tariff—How the U. S. Producer Has the Advantage over Canadian in Supplies, Large Runs and Specialized Products—Dominion Does not Need to Take Back Seat.

The details of the new Democratic tariff bill, which have been received, show the following on the proposed free list:—

Band, bend or belting leather; rough leather and sole leather; grain, buff, split and gaffre leather; patent, japanned, varnish or enameled leather; dressed upper and all other leather not specially provided for in this section; leather cut into shoe uppers or vamps or other forms suitable for conversion into manufactured articles; boots and shoes made wholly or in chief value of leather; harness, saddles and saddlery, in sets or in parts, finished or unfinished, composed wholly or in chief value of leather; leather shoe laces, finished or unfinished.

## Some Leather Exceptions

Kangaroo, sheep, goat and other skins (including lamb and kid skins), dressed and finished, bookbinders' calfskins and chamois skins; all the foregoing not specially provided for in this section, 15 per centum ad valorem; skins for morocco, tanned, but unfinished, 5 per centum ad valorem; morocco, 15 per centum ad valorem; pianoforte and pianoforte-action leather and glove leather, 10 per centum ad valorem.

Up to the present the duty on boots and shoes entering the United States market has been ten and fifteen per cent. The duty levied on shoes coming into Canada is thirty per cent., excepting pegged or wire fastened shoes on which the duty is twenty-five per cent. Under the preferential tariff the duty on shoes from England is one-third less or twenty per cent. and 17½ on pegged or wire fastened goods.

The Canadian tax on leather dressed, waxed, or glazed (dongola, cordovan, calf, sheep, lamb, kid, or goat, kangaroo, alligator, etc., is 15 per cent.; sole leather 17½ per cent.; leather japanned, patent or enamelled, 25 per cent.; harness leather, 15%.

The shoe tariff in some other countries is as follows:—

Austria-Hungary, from 70 to 106 crowns per 100 kilos (a crown equals 20.2 cents; a kilo is about 2 1-5 pounds).

Belgium, 10 per cent. ad valorem.

France, per pair, high shoes, 39 to 58 cents; low shoes, 19 to 29 cents; shoes reaching to the ankle, 24 to 37 cents.

Germany, from 60 to 90 marks per 100 kilos (a mark equals 24 cents).

Italy, one lira per pair (equivalent to about 20 cents).

Holland, 5 per cent.

Russia, \$2.14 per cwt.

Cuba, 13 cents per pair, plus 9 per cent.

Mexico, children's shoes, 70 cents per pair; men's boots, \$1.48 per pair; women's footwear, from \$1.15 to \$1.75 per pair, with a surtax of 10 per cent. added on all classes.

Argentina, men's boots, approximately \$19.30 per dozen pairs; men's high shoes, \$9.65 per dozen pairs; men's low shoes, \$7.72 per dozen pairs.

Uruguay, 56 per cent.

Australia, 35 per cent.

China, 5 per cent.

Peru, 10 per cent. and 40 cents per pound.

Japan, 50 cents per pound.

South Africa, 15 per cent.

Some further interviews of interest regarding how leading Canadian tanners view the situation have been received by the SHOE AND LEATHER JOURNAL.

## Majority Will Benefit

James P. Donald, manager of the Logan Tanneries, says:—"I may say that I believe that wherever restrictions to trade are removed it cannot help but benefit every body concerned. It may take some time to adjust matters and in the adjusting some may be put to inconvenience but in the end the majority benefit. I do not think that the reduction of the American duty on leather will particularly help us in Canada as the Americans can tan leather as cheap if not cheaper than we can. There may be times and there may be spots where our people will get in some of their leather, but I do not anticipate any steady trade. I do not expect that the American people will get cheaper leather, but the

## HITTING THE IRON WHILE IT'S HOT

The four regular issues of the SHOE AND LEATHER JOURNAL—March 1st, March 15th, April 1st and April 15th—devoted to information on styles and mailed PROMPTLY on those dates, contained a fund of valuable and timely information on the tendencies in footwear fashions. A feature, appreciated particularly, was the showing of practically all the new lasts now being incorporated in fall styles, before most travelers were out. Congratulatory letters have been received on the complete and up-to-date character of the articles; the early presentation; and the artistic beauty of the numerous cuts shown.

One Winnipeg subscriber writes:—"Your review of styles certainly did credit to you, and the enterprise of Canadian manufacturers was well reflected in your journal. The Canadian trade is surely forging to the front in the matter of smart and attractive footwear. Some makers may have been years on the way, but they have certainly "arrived" and need not now take a second place. I consider the SHOE AND LEATHER JOURNAL, in featuring so many styles, and giving the earliest information, is a credit to the industry it so ably represents. Being posted in advance on "the most likely to be popular" new lasts, aided me very materially in my selection of shoes for fall, when I visited the sample rooms of various travelers as they came to the city."

In the four regular editions there were over twenty pages of bright, interesting data ON STYLES ALONE, and on what Canadian makers believe to be the most salable during the coming autumn. Over fifty half-tone shoe cuts were shown, representing nearly every model that the manufacturers are offering for fall.

The majority of these cuts were drawn from the original shoe, for these issues, by the Art Department of the SHOE AND LEATHER JOURNAL, which is admirably equipped for the prompt execution of the highest class of work, having unequalled facilities for supplying classy shoe drawings.

fact that the duty is off will assure them that they are getting it as cheap as any nation in the world, and they will be, for there is no nation that is in a position to tan leather as cheaply as they can. I do not think it will make one particle of difference in our prices. As a matter of fact, the Canadian tanner seldom gets more than a fair profit. When hides go up he foolishly contracts for his output at the low prices, and when hides go down his contracts are no good and he cannot sell his leather except at a loss, a case of "heads I win, tails you lose." It has always been so and presumably will till the end of time."

Duclos & Payan of St. Hyacinthe, Que., say:—"Your favor asking our opinion on the advantages to Canada that may come from the new American customs bill to hand. In reply, we would say that it is very difficult to say what the result will be. The change from 5% on sole leather to placing it on the free list is not very great, but we are inclined to consider it an advantage to the Canadian tanner. When trade is bad in the American market it will not affect us very much, but in good times it certainly ought to open up a good market to take part of our surplus stock and thereby help to maintain prices here."

#### Not Much Gain or Loss

Paul Galibert, of Montreal, states:—"Of course, horse-hides and cattle hides were already on the free list. The only change that the Democrats propose to make is placing leather on the free list. As regards dressed leather, that will make very little difference to us. They have as many, if not more, facilities for dressing than we have, and although Canadian dealers will not be harmed by the changes, they will not benefit either. But as regards sole leather, we will be the gainers. Canada has a practical monopoly of bark for tanning, so far as this continent is concerned, and we will be able to undersell the American dealers, at least with our tanned sole leather. This is where the proposed tariff changes are of tremendous value to sole leather tanners throughout Canada. I see that the glazed kid and morocco leather are still on the 15% duty clause when going into the States."

#### Canada's Surplus Is Not Large

A representative of the Anglo-Canadian Leather Co., with tanneries at Huntsville and Bracebridge, said:—"Should sole leather be placed on the free list in the proposed tariff bill, Canadian sole leather tanners would undoubtedly be benefited to a certain extent principally by reason of the larger market which would be open to them in which to dispose of their surplus product. As to whether Canadian sole leather tanners would be able to make shipment of their sole leather to U. S. in a large way, I would say, that although Canadian sole leather tanners are to-day producing, or have the capacity to produce, a surplus of sole leather, that is, more than is consumed in the home market, the total amount of such surplus is insignificant when we consider production and consumption of sole leather in U. S. I venture to say that the total surplus of sole leather manufactured in Canada and which would be available for exportation, would not be sufficient to supply one of the larger shoe factories in the U. S., and as Canadian tanners have already established in England a market for their sole leather, it is not at all likely that the surplus which is produced by Canadian tanners would be entirely diverted to the U. S. market.

As to the Canadian sole leather tanners being able to compete with American manufacturers, I would say that from statements which I have read in various U. S. and Canadian trade journals, there is, I believe, a wrong impression as to the comparative costs of producing leather in Canada and U. S. In the writer's mind with free tanning materials which the Democratic tariff bill proposes, the advantages in cost of production would appear to be almost entirely in favor of the American tanner for various reasons

not necessary to here enumerate, excepting, perhaps, to say that the American tanner, under free tariff for extracts, would have cheaper tanning materials than the Canadian tanner, and, in fact, has had cheaper tanning materials in many localities than the Canadian tanners, even considering the duty which they have had to pay heretofore on foreign tanning extracts. They have as cheap, and in many localities, cheaper labor than the Canadian tanner. They have very much lower price to pay for fuel—coal, natural gas, etc.—lower insurance rates, lower cost for machinery, lower average freight rates, more favorable climatic conditions, and, on the whole, lower cost of supplies and many materials nearly all of which pay duty into Canada, and which are obtainable at a lower cost in the U. S. And above all, this, the American tanner, having a much larger home market, is able to produce in larger quantities in much larger plants, all of which tends to reduce fixed charges on the article produced, and decrease the cost of same. On the whole, although I would consider the Canadian sole leather tanner would benefit under the new tariff law as proposed, I would not consider it at all likely that Canadian tanners would be inclined to increase the capacity of their plants with a view to exporting to the American market, but would be quite satisfied to have the privilege of exporting to that market in a small way such surplus lines of leather as they might from time to time have. Naturally, this would tend to make prices of sole leather in Canada somewhat firmer should the Canadian tanners be able to dispose of part of their surplus in the U. S. market duty free."

#### Will Not Affect Prices

A. O. Beardmore, of Beardmore & Co. Toronto, adds:—"We do not expect that the removal of American tariff on leather will have any appreciable effect on our leather market. American tanners get all their raw material as cheap, or even cheaper than we do. They have the advantage also of buying machinery cheaper than we do, as a large percentage of tanning machinery used in tanneries is made across the border and not in this country, and we have to pay 35% duty on machines. The slight advantage in wages which the Canadian tanner had formerly has vanished, so if anything, the Americans can make leather cheaper than we can. Of course, it must necessarily be a slight advantage to the Canadian tanner to have the American market as it gives him a wider field. We do not anticipate that it will affect prices in the slightest."

B. F. Bell, of Delhi, Ont., says, "I have no opinion to offer as I am not now in the leather tanning line. I am now interested in the Delhi Mfg. Co., and am more concerned in the tariff on glove leather coming into Canada than in the export trade. As we import large quantities of glove leathers, etc., for use in our business, and as these leathers are not made in sufficient quantities in Canada, there should be a good opening for a tannery in these lines."

#### Will Push His Goods There

F. C. McCordick, tanner, of St. Catharines, says:—"Regarding the proposed free entry of leather to the United States market, I see no reason why we cannot sell our goods over there if the tariff is removed. I know of tanneries in the United States making lace leather that are not nearly so well equipped as I am and with whom competition would be an easy matter. Some manufacturers of lace leather in the United States export considerable quantities into Canada which they sell entirely on the measurement basis. Our leather is sold by weight, which we consider the fairest way and by comparison is disposed of at a lower price than the American product after deducting the duty. I intend to push my goods over there if this bill goes through."

The Davis Leather Co., of Newmarket, say they would not care to express an opinion at the present time in reference to the United States proposed change in the tariff on leather.

They think that the less the press has to say on this question until the act is passed, the better it will be when final action takes place. When the details are fully announced it may then be in order to go thoroughly into the matter, and the effect that the change may, or may not have on the business of the Canadian tanner.

#### No Benefit to Them

The Bonner Leather Co., of Montreal, glazed kid manufacturers, say:—"As regards the proposed new Democratic tariff bill, we understand that glazed kid and sheep leathers were not placed on the free list, therefore it will not be of any direct benefit to us."

John J. Lamb, of Omeme, writes:—"I am not sufficiently conversant with United States leather markets to express an opinion as to effect proposed tariff changes will have on Canadian market."

F. G. Clarke, of Clarke & Clarke, Toronto, sheep skin tanners, and former Chairman of the Tanners' Section of the Toronto Board of Trade, said:—"As the proposed American tariff changes do not include sheep skins, which still remain at 15 per cent. ad valorem, the larger market situation is of no interest to us. Any remarks that I make would be largely speculative since they would not apply to our end of the leather business."

#### American Tanners Have Advantage

J. Guay & Fils, tanners, of Quebec, send the following:—"In reply to your inquiry for our opinion as to the proposed new Democratic tariff bill, in putting leather and shoes going into the United States, on the free list, we should say that we really think that it will favor Canadian leather producers, in placing their leather on the great American market. It will likely enlarge the output of Canadian tanneries, for as it is now, the supply is in excess of the demand, and therefore, there will be no necessity of increasing the Canadian output, unless this bill goes through, thus opening up the American market to the products of Canadian tanneries. If, on the other hand, our Liberal Government had put leather and shoes coming into Canada from the U. S. on the free list, we are of the opinion that it would prove the ruin of Canadian leather producers, for the American tanners have several advantages over the Canadian

tanners. First, they can compete in prices; their climate is more advantageous than that of Canada, especially that of the Province of Quebec. They have navigation during the 12 months of the year, and their harbors are more accessible in connection with ocean ports for receiving raw materials, and green salted hides from abroad. Although we also obtain raw materials from the same source, still we cannot avail ourselves of them to the same extent as do the Americans, having only six months navigation during the year. The expense to Canadians has also to be considered, for raw materials have the extra journey by rail to Canada, shipped from the German and other foreign ports to Boston harbor."

#### Will Not Cut Our Own Throats

S. R. Wickett, of Wickett & Craig, Limited, Toronto, in an interview said: "I am of the opinion that the leather tariff as outlined by the present United States Government will have but little effect upon the industry in Canada. Our tanners are well occupied in our home market, and in sole leather the surplus finds a ready sale in England where the United States tanners enjoy an equal market. American shoe industry is distinctly American in every respect, and I think they would be slow to take on foreign made leather. Besides their large tanners have for many years been extensive exporters of various leathers. Again, while leather may be put on the free list, many articles entering into its manufacture that heretofore bore a duty are also put on the free list, thus affecting a material advantage. Our neighbors are not the people to cut their own throats in matters of trade."

#### Will Get a Chance Anyway

J. C. Breithaupt, of the Breithaupt Leather Co., said regarding the leather trade: "The placing of that commodity on the free list will give us a chance to sell leather across the line and will naturally have the tendency to broaden our markets. It will not make any difference so far as prices go, for they are about the same on both sides of the line. As long as Canada is not asked to reciprocate it will be an advantage to us, and although it will not strengthen the price, it will altogether likely give us a larger market on the same basis as wheat or flour, with the duty removed. One thing sure, it will not do us any harm and may do us some

# Why Shoes Cost the Retailer a Great Deal More

Some Information Which It Would Be Well for the Trade to Keep at Hand—The Maker or Retailer Not at Fault—The Increase has been Forced Upon Both Through Irresistible Upward Movement

The following news item will be of interest to all shoe men, and to the public as well, for it is convincing illustration of one of numerous causes which have absolutely forced a higher price for shoes, says the Boot and Shoe Recorder, and the observations herein apply practically in the same ratio to Canada.

"Sole leather is now a very interesting proposition to men who deal in it. Union sole leather, which is commonly looked upon as the market barometer, is now quoted at 42 cents, a record high price for the present generation.

"Decreasing supply of cattle is the fundamental reason for the rise in sole leather prices, just as it is the fundamental reason for high prices of beef. The slaughter of cattle in United States according to the latest government reports, was 1,500,000 head less in 1912 than in 1907. This means a decrease in the supply of sole leather by 3,000,000 sides."

## The Burden of Explaining

The retail dealer in shoes, standing nearest to the consumer, finds thrust upon him the burden of explaining why the \$3 shoe of ten years ago cannot be had for less than \$4 now, with proportionate increases in other grades.

The fact of the matter is that the numerous uses of leather are crowding closer and closer upon the world's supply of hides and skins. In the U.S. alone the following remarkable disproportion manifests itself: From 1900 to 1910, the population increased from 75,000,000 to 90,000,000, or 20 per cent.; but in that same ten years the number of cattle in the country decreased from 67,000,000 to 61,000,000, or about 10 per cent.

One result was to force our producers of leather into foreign markets for their hide supplies, and during the year 1912 they brought into United States \$120,000,000 worth of hides and skins, bought abroad.

One well known new use of leather is for covering the seats of the most expensive vehicles ever produced by man, namely, the automobile. More than 400,000 sides of leather were used last year for this purpose alone, or enough to afford the foundation for some millions of pairs of shoes.

Most assuredly, the retail dealer in shoes is not to be blamed for an increase in price which is forced by such remarkable basic conditions, relating to the principal material from which shoes are made.

## The Manufacturing Cost

Taking the comparison one step farther into the totals of manufacturing cost, the United States Census Report shows the rapid increase in cost within recent years. For example, the total product in all factories in the United States for 1905 was 216,000,000 pairs, at an average manufacturing wholesale price of \$1.48 per pair, this average price per pair being reduced, of course, by the large number of children's shoes, some 76,000,000 pairs, which sell as low as 40 or 50 cents per pair.

The product in 1910 was 247,000,000 pairs at an average price of \$1.64, or an increase in five years of about twelve per cent.

Since 1910 the increase has been at an even more rapid rate, forced, as we have stated above, by an irresistible increase in the price of materials.

The American consumer may depend upon it that the American manufacturer of shoes and the American retail seller of shoes have been doing their utmost to resist this rise, and to serve the wearer of shoes as economically as possible. The great fact stands out before us with impressive significance, as the Recorder has formulated it, that

"One day's wages will buy a better pair of shoes in the United States by more than 40 per cent. than it will anywhere else in the world." This statement will sustain the severest test, and will apply to any line of work and any country which may be designated by the investigator.

The great inventions in shoe manufacturing which have revolutionized economies of production have been American inventions, these including the sole stitching machines which attach the sole of a shoe in less time than it required the old-time cobbler to fix a bristle in his waxed thread, and the lasting machine and a score of others. American shoe machinery is to-day the world's standard, and American manufacturing methods bear the same pre-eminence.

## Sold at Lowest Profit

As to the retail selling of shoes it has been shown beyond question that, with the exception of groceries, shoes are being sold to-day at the lowest percentage of gross profit of any commodity in our stores, a percentage that is in very many cases too low, inasmuch as it does not afford the shoe dealer any real return on his capital, but merely grants him moderate wages, with nothing at all for the use of his capital.

The truth cannot be too strongly stated that it is not the American shoe dealer or the American maker of shoes who is responsible for the increased cost of shoes. The increase in price has been absolutely forced upon both branches of the trade, through an irresistible upward movement in the price of leather as a shoe material.

Naturally, this remarkable increase has lent impetus to the development of materials other than leather for use in shoes. Some relief has been obtained in this way, or it might be more proper to say that to some extent the skyward march of leather prices has been slightly retarded thereby. Among these materials are not only the fabrics which are used for shoe topping, but strong and well-made inner parts of the shoe, many of which are guaranteed to outlast the rest of the shoe, and all of which are better than poor leather.

## Rules That Make Things Go

A Western retailer got to talking recently on his favorite topic—his store and how he has built it up from a very small establishment to its present commodious proportions. "One day I was in the office of one of our city's big newspapers, giving them some instructions regarding my advertising," he said, "and noticed a neatly framed card on the wall. It contained a set of rules for the guidance of the reporters on the staff.

"Most of the rules referred to words and phrases which were not allowed to appear in their columns. After reading them over I got to thinking, and when I had some leisure I jotted down a set of rules for my salespeople, especially with regard to their dealings with customers. These rules have been added to and elaborated since, and I have found them of splendid service in breaking in new clerks to our methods. One rule, for instance, warns clerks not to say 'I' when they can possibly say 'we.' The latter sounds more dignified and appropriate, and in keeping with our store's idea of united service.

"Then, again, slang is absolutely tabooed, and such adjectives as 'swell' and 'dandy' in describing our shoes, are not allowed. We believe adjectives such as 'stylish,' 'attractive,' 'modish,' not only sound better, but are really more suitable and descriptive."

# What is Really Beneath the Surface of Leather

A Good Exterior Appearance Cannot Be Had Unless the Leather is of Good Substance—Some Instructive Data and the Various Processes of Treatment—How Lubricants are Properly Worked Into the Skins.

Most shoe retailers choose leather by its finish. They judge it by its exterior appearance, which is quite natural, for a great many things in the world are judged by their exterior appearance. But there are many people, among whom are shoe dealers, who want to know what is beneath the surface, says the Commercial Bulletin.

For the benefit of these inquisitive, and at the same time keenly intelligent retailers, the following short sketch is given of what makes up the finish of leather. So that it will not be confusing, technicalities and formalities are omitted, perhaps to the disgust of practical tanners, but, let it be hoped, to the satisfaction of the shoe dealers.

Leather must be of good substance to take a good finish. A goodly exterior appearance cannot be put on to a piece of pulpy leather any more than plaster of Paris can be made to look like genuine marble. But some surprisingly good imitations of finishes of high grade leather can be put on to shoddy leather, and the careful shoe retailer will be watchful that he is not thereby deceived.

In one factory, which makes a speciality of finishing leather, thousands of yards of cotton cloth are received each month, and are treated with much the same chemicals and machines that are used for finishing leather. This cotton imitation of leather is used chiefly for bookbinding, upholstery and novelties. But some of it drifts into the shoe trade.

## Necessity of Well Nourished Skins

Leather that is of good substance must be made of well nourished skins; that is, of pelts of animals so well fed that their pelts, as well as their flesh, are solid and substantial. The fibres of such skins are strong, and are firmly woven together. The chrome tannage, or the combination processes of tanning, preserve in the pelts the network of fibres, and the gelatine substance around them. And, if the pelts are of good quality, and well tanned, the foundation is laid for a good finish, or the excellent exterior appearance that the shoe retailer and the shoe wearer appreciate.

In former times, tanners were content to tan their leather sufficiently to preserve the pelts, and then to dress it with oil, or grease. The famous "russet leather" of England, which was used for clothing by Robin Hood and his merry men, was bark tanned and finished "natural" as we would say to-day. It was oiled to soften it, and colored in the sun.

And, by the way, some very fine bookbinding leather of to-day is colored in the sun. Likewise, patent leather is dependent for its final finish on the sun, after the last varnish coat is applied.

Indians used to tan buck leather with brains and fats of deer. The fats grease the leather. The savages were as wise in leather making as are moderns. Practically all leather of to-day must have in it grease, or oils. These lubricants are worked into the leather in a process that is called "fat liquoring." The "fat liquor" is made in the tannery of an emulsion of soap and oil. Or various kinds of "fat liquors" may be purchased ready made. The "fat liquor" gives leather its smoothness, softness, and flexibility, and its silky appearance, too.

Many tanners consider the "fat liquoring" process as important as is the chrome process of tanning. It must be done with a great deal of care. If there is too little "fat liquor" worked into the leather, the leather is dry and hard. And if too much is worked in, the leather is greasy, catches the dust, and becomes offensive to the eye.

Tanners who use oil for "fat liquoring" their leather

have to be very particular about the quality of their oil, for there are plenty of substitutes for the best oils, porgy oil in place of cod liver oil, and an inferior oil will do as much damage to leather as an inferior lubricant will do to an auto engine. The best cod liver oil used for "fat liquoring" leather is the same as the medicinal oil which is used for coughs and colds.

Dull calf leather, in the metallic lustre finish, furnishes about as good an example as there is of a leather that is properly "fat liquored." This leather has just enough oil in it to make it soft, silky and durable, and at the same time, not so much oil that the leather will gather dust. Indeed, dull calf leather holds a shine in a remarkable way.

The popularity of Russia calf leather during the last few seasons has been due, in a large extent, to the fact that tanners learned to "fat liquor" it in the same way that they "fat liquored" dull calf leather. They overcome the dryness and the brittleness of Russia calf of former times. The decrease in the popularity of patent leather, which many shoe retailers experienced a few years ago, was due to the fact that a great deal of patent leather that was pushed on to the market did not have enough oil in it. It was dry and brittle, and it cracked.

The surface finish of leather is secured by the use of machinery. The operation corresponds very much to the home occupation of laundering linen. The skins are worked out on "staking machines," so that they are of full measurement and are free from wrinkles. This operation corresponds to the work done by a laundress, when she smooths out a sheet to its full measurements, to free it from wrinkles.

## A Progressive Eastern House

This is a view of the large store of L. A. Guertin, St. Hyacinthe, Quebec, who has been in business in that thriving centre for thirty years. He does a large trade and

handles the Regal and other lines of up-to-date footwear. Mr. Guertin is one of the most widely known merchants in Quebec province and stands high in the community where he has resided so long.

# How to Make Money by Handling Sporting Shoes

The Advantages Which the Retailer Gains by Having a Well Equipped Athletic Footwear Department—Methods to Attract Trade—Featuring the Different Lines and Pushing Seasonable Goods

"What's the use of a summer vacation if your feet aren't comfortable?"

This is how somebody put it the other day, and if one takes the trouble to observe, he will certainly find that the foregoing is the way everybody seems to feel, judging by their holiday footwear.

Of late years the number of persons who do not take a couple of weeks during the hot months can be put down as a small percentage. Most people manage to grab a week or so—maybe longer—and hie for some cool spot in the country, where they may live easy and dress in a negligé way.

Naturally, these people require certain articles of different kinds—clothing and otherwise. The very first thing on the list always is a pair of lacrosse or tennis shoes. No holiday seems to be complete without them. "Where can I get them?" is the next question asked.

## Get In On This Early

This is where the shoeman should come in, instead of the sporting goods man, as is very often the case. Sporting goods dealers count different types of footwear as one of the best branches of their business—both in winter and summer weather. However, this chap hasn't been having it all his own way the last few years as he once had. Shoe dealers are realizing more and more as time flies the value of various sidelines such as findings, hosiery, sporting shoes, etc., meaning as they do, more extra profits without any real overhead expense, speaking generally. Indeed, many shoe dealers have been compelled to put in these departments in order to meet the increasing competition which they are forced to encounter, and the heavy cost of doing business, due to high rent, wages, advertising, etc.

There are several different types of sporting shoes, a few of the headliners being the lacrosse, tennis and running shoes, baseball and hockey boots. These few lines alone offer exceptional opportunities for many up-to-date shoe dealers and if the sporting goods department is properly conducted and given a fair amount of attention it has simply got to turn out a big success. Different shoemen have been canvassed by the writer on the subject and they all take this view of the subject, every one talking from experience.

## The Nervous Brigade

Of course, there are always a certain number of retailers who are a little nervous at branching into anything new such as sporting goods, having their reasons, as they suppose; some saying too much capital is required to purchase a sufficient amount of stock necessary to make a proper display; others believing too much space is needed, and still others with their own set doubts. A good many hesitate merely because they are a little apprehensive and prefer to wait until their brother shoe dealers make this department a shoe store fixture. As regards capital, a great deal is not required to lay in a nice, comfortable stock. Sporting goods are of much lighter quality and of cheaper material than the ordinary, everyday footwear and as a result sell cheaper; although a good profit is allowed, very often better than that made on regular lines. A good deal less space is taken up in this department than one would imagine. One section of shelves—not too large an amount of space—will hold an ample stock to supply all demands for this class of goods to begin with. By going slowly at first every dealer can judge for himself just about how to distribute his different varieties of sporting shoes and what space they require, as some of them naturally have a larger demand than others. Then, there are a lot of accessories for these goods which can be stocked in the findings department.

They not only advertise themselves with profit, but are a great aid in making an eye-catching window display, adding as they do just the proper amount of tone and variety to

a window, thus saving it from being a rather colorless affair. No matter what shades are used in the background, it is the stock the public look at when passing. A display with a certain number of sporting shoes and accessories also does a lot towards attracting the attention of "the younger set," who are always interested when some method of amusement is suggested to them.

## Making Use of Accessories

They also enable the dressing of a window to make a showing that will draw special and favorable attention to a display that cannot be obtained by any ordinary window, even though it may be perfectly dressed. Take, for instance, during the holiday season. What is more in keeping than a good holiday window featuring skating boots suggesting them as suitable for Christmas gifts? A window was shown by a Montreal firm during the past holiday season, having a large tin skate, trimmed with batting to represent snow, with skating boots displayed to best advantage throughout the window, and cards with various suggestions set in different positions, the whole backed up by a fireside scene. The proprietor of this store told the writer that the sale of this class of goods during that season was enormous and he gave full credit to the window, saying it was the easiest display he had ever made.

They may also be featured in the interior. Most shoe establishments nowadays have a couple of silent salesmen showcases placed near the entrance and these have been found invaluable in boosting any special lines which a proprietor may desire to feature, or they very often are one of the main assets when a new line of any kind is being stocked. In one Winnipeg store there may be seen on entering one of these cases devoted to sporting shoes alone, always, of course, being dressed to suit the season—which ever one it may be—as skating boots in June are not calculated to stimulate any very lively interest; although a good display of them around December is one of the very best methods of advertising. There are, however, lots of these shoes to suit the various seasons of the year. If one of these showcases is not convenient, or if a dealer feels he cannot spare one, sporting goods may be shown in different parts of the store, as there are always some spots in every shop where a few pairs can be shown advantageously.

Many dealers think the giving of premiums a very effective manner of advertising any department of their store, while others hold views which are very often quite the opposite. A lot might be said for and against the premium system. A great deal, perhaps, depends on the premium itself, the locality of the store and the class of customers to which it caters. Many dealers who have been favored with good conditions have found this method of advertising one of the best business getters. Premiums can be secured at prices ranging from half a cent to half a dollar or more. By looking through a list of these, which lists can be procured from all Canadian novelty houses, any number is noticed that will be appropriate for distribution through the sporting shoes department, advertising at the same time both this branch and the store's regular departments.

## Newspaper and Circular Advertising

To get any new line under way and to make a sideline pay its presence in the store must naturally be made known to the public, and one of the best methods of doing this is through the newspapers. A strong, catchy ad. in a good newspaper always helps along a line and special announcements and appeals can be made to customers, as well as those who are not customers through these mediums, which are finding more favor with the merchants—the whole of the retail trade in fact—than ever before.

Dealers who install a sporting shoes department should

give it a fair amount of space in their advertising if they are anxious to make it a success. An ad. devoted entirely to this department once in a while will, if properly set up, bring into the cash register many times over the price of the ad. The same might be said of the windows. A neat sporting shoe window display is as good a method of advertising as any and is sure to sell many pairs of shoes. Dealers who do not care to advertise, or who feel they cannot afford to for some reason or another, have resort to other methods of advertising, one of the best known being the use of circulars and folders. This method can always be used effectively and these circulars can, with a little trouble, be made very attractive and interesting. They are especially useful when the desired customer or probable customer cannot be reached in any other manner directly. If a premium is given by the store, mention of it can be made in this circular and the conditions necessary to procure it. By an offer of this kind the consumer's interest is stimulated and he will very often put himself out so far as to drop into the store when passing.

An effective way adopted by some retailers for the past

couple of seasons or so has been the selling of skates as well as hockey boots; showing the customer how much less expensively and conveniently he can be supplied with both articles if he buy both at the shoe store.

A Toronto dealer had a nice, neatly printed card in a conspicuous part of his main window last winter announcing that he would put on skates free if the shoes and skates were both bought in his store. This proved to be one of the best money procuring ideas he had put into execution for a long time, and added wonderfully to his sale of hockey boots as well as creating a demand for skates. This one instance merely goes to prove that almost any line which has the slightest connection with footwear can be installed and successfully operated if gone about in the right manner.

If some shoemen are not only selling sporting shoes, but are breaking in on a line like skates, and making a success of it, surely the average dealer with an average amount of brains and common sense need not hesitate in an endeavor to control lines such as sporting shoes, which surely belong to the shoe profession a great deal more than they do to the sporting goods store.

## Some Shoemen Who Have "Made Good"

### WOULD RATHER SELL GOODS THAN SLEEP

His sole hobby is "selling goods." He would willingly remain up all night to dispose of his wares. He has not made a fortune, but he has earned a good living, and got

along very well—better than some of us. This is the characteristic spirit of William Conroy, of the Conroy Shoe Store, Charlottetown, P.E.I.

He was born in Gloucester, England, and, although now in his sixty-third year, recently remarked, "I feel good for at least forty more, to sell shoes." His experiences have been of a rather stirring character. When two months old, he crossed the Atlantic with his parents on the barque "Prince Edward." That was in the days before steamships began to plow their way across the ocean. The barque on which they sailed was dismayed during the voyage of seven weeks, and the passengers were nearly all lost at sea. Mr. Conroy has been sixteen years in the shoe business in Charlottetown. He calls his store, "the headquarters for the best values in footwear of all kinds." Prior to launching out for himself in the Capital of Prince Edward Island, he spent eight years in the United States, part of that time as

clerk in large shoe stores, and the remainder in business on his own behalf.

In his earlier days, he conducted a general store at Souris and other parts of the Island. He also traveled twelve years on the road, selling goods for himself. Mr. Conroy learned shoe making, and, while he worked for some time at the trade, he never cared for the producing end. His energies are solely concentrated in salesmanship, and there are few men more successful in this line.

### HAS WELL ROUNDED INSIGHT

One of the prosperous shoe merchants of Ontario is J. T. Heath, of Orillia. He has been doing business in that town about seven years and has worked up a large trade, which is annually increasing. He has a well rounded experience, both in the retail line and on the road, being a successful traveler for many years. His start in the shoe game was made with S. M. Clapp & Co., Queen St. West,

Toronto, about twenty-four years ago. He was with that firm some three years, and then went out as traveler for G. V. Oberholtzer Co., of Berlin. He remained with that

house for three years. Later he was with McKellar & Dallas, Toronto, and with Whitney & Brown, of Montreal, whose interests he upheld for some years. About fifteen years ago he went into the shoe business for himself in Brantford, and sold out in 1906 to J. S. Townsend, after which he removed to Orillia. Mr. Heath is a genial, companionable man, well liked by the travelers and the public and keeps a well assorted stock. He has always taken an interest in the progress of Orillia and is one of the most enthusiastic residents of that live centre

#### BRANCHING OUT IN SHOE LINE

For the past thirteen years interested in the shoe business is the record of A. E. Saucier. His early days were spent with Roy & Maranda of Quebec. He then came to Montreal and was for a few years with the Tetrault Distributing Co., as head salesman. His ability and straightforwardness at all times have procured for him the agency of the Rock Shoe Mfg. Co., and J. B. Drolet & Co., shoe manufacturers of Quebec, for which firms he covers Montreal and suburbs, having sample rooms and stores depart-

ment at 15 Bonsecours Street. He controls the A. E. Saucier Shoe Co., wholesale jobbers through which he is selling the "Sunlight" shoe, and is also interested in the Maple Leaf Manufacturing Co., of Lanoraie, Que. He is in partnership with his brothers in this concern, which is enlarging the present factory and will manufacture a heavier line of shoes than they are turning out now. They will make a line of men's and boy's low and high cuts suitable for harvesting, etc. Mr. Saucier anticipates a big demand for men's tan button, rubber soled and viscolized soled shoes for next fall.

#### BELIEVES IN BRIGHT PREMISES

To succeed in business, you must have a good front. It counts materially on the road to prosperity. Joseph McCully, of Elora, believes in attractive premises, and has recently renovated his establishment and put in one of the latest style shoe store windows. He was also the first man in Canada to import the Crowe loose nailing machine for his repair department. This was about two years ago. He considers this machine the best that has ever been made for the repairing branch and after discovering what a good thing it was, he secured the Canadian agency. He has been

successful in placing about forty of these machines which, he says, are all giving satisfaction. Mr. McCully has been in the shoe business in Elora for sixteen years. Before starting for himself, he was for five years in the employ of W. A. McKay, of Palmerston. He was born in the village of Paisley, in 1872, and spent his school days there. He learned the shoe making trade with J. Sergison, of that village, and also spent some months in a shoe factory in

Walkerton, before engaging with Mr. McKay, at Palmerston. Mr. McCully succeeded J. Godfrey & Son in Elora, who had been in the footwear line in that town for the past forty years, and has made a decided success of the business.

#### THIRTY-SIX YEARS ON THE ROAD

"I have traveled steadily for thirty-six years and have never missed a trip. I am now beginning to like the road first-rate," humorously remarked Martin J. Burns, of the wholesale shoe firm of Coates, Burns & Wanless, London. He was born in the Valley Town, known as Dundas, Ont., and conducted a retail business there for a few years. After this, he started traveling for the wholesale boot and shoe firm of John Garrett & Co., Hamilton, remaining with that house until it retired from business. About 1885, Mr.

Burns commenced with Jas. McCready & Co., of Montreal, to look after the same territory—Toronto to Windsor, and stayed with that house for twenty-one years, or until 1906, when he embarked in the wholesale shoe business in London, under the firm name of Coates, Burns & Wanless. Mr. Burns is one of the most widely known and respected shoe men of western Ontario, and his associations with every branch of the trade have always been of the most pleasant

character. He was one of the first subscribers to the **SHOE AND LEATHER JOURNAL** and says that he has always taken great pleasure in reading its pages.

#### CELEBRATES HIS EIGHTH ANNIVERSARY

A London firm, who celebrated their eighth anniversary on the first of April are Casselman Bros., who call their

establishment "the family shoe store." The members are Ward A. Casselman and Kenneth W. Casselman. The former is the energetic president of the London Shoe Retailers' Association and has always taken an active interest in the trade. Ward A. Casselman has spent practically his whole life, since leaving school eighteen years ago, in selling shoes. He was born in Morrisburg, Ont., and entered his father's store with whom he spent three years. He then went to Montreal and was with the Slater Shoe Co. in their retail branch on St. James St., for nearly five years after which he was transferred to Toronto as manager of their store at 117 Yonge St. He remained in that post until 1905, when his brother and he took over a store in London.

#### A SHOEMAN, A HUNTER, AN ANGLER

The son of an expert master shoemaker of Liverpool, England, in the same year that the different provinces of

Canada were welded together into confederation—in 1867—was Tom Stedman born. He received his education at St. Francis Xavier College, Liverpool, and worked in his father's store in the seaport city until he was twenty-one. Afterwards he took a position of first salesman with the William Reynolds Shoe Co. at their chief Liverpool store. Later, he assumed the management of the store and three years afterwards purchased the business from his former

employers. He then developed the shoe line more extensively and ran a chain of twelve stores in the Liverpool district. Ill health, however, decided him to try the Canadian climate, and just ten years ago, with Mrs. Stedman and seven children, he left England. The second day after his arrival in Winnipeg he started in the shoe line by purchasing the H. J. Middleton business on Alexander Ave. Two years later he bought a larger store on Logan Ave. and three years after acquired the Guest & Cox business on Main Street, from the hands of the trustees. Mr. Stedman to-day is president of the Tom Stedman Shoe Co., at 719-21 Main Street, and also head of the Western Shoe Distributing Co., Winnipeg. His recreations are shooting and fishing. He is a member of the Manitoba Fishing and Hunt Club, the Adanac Club and the Knights of Columbus. He was recently elected a member of the Board of License Commissioners for the province of Manitoba. Mr. Stedman is one of the solid, substantial business men of Winnipeg.

#### A TRAVELER WHO CAN "TRAVEL"

A great lover of horse flesh and good shoes are leading characteristics of C. H. McGee, of St. George, N.B., who

is now covering the Maritime Provinces in the interest of the Murray Shoe Co., of London, Ont. Ten years ago he started on the road with the Hartt Boot & Shoe Co., of Fredericton, and was with that firm until last fall. He has also been carrying the Macfarlane Shoe Co.'s children's goods for four years. He is widely known to all shoe dealers in the down-by-the-sea provinces, and is a successful and energetic salesman. When not on the road Mr. McGee may be seen dashing along the streets of St. George and surrounding country behind a good, clean cut, fast traveling stepper. He knows good horse stock and takes nobody's dust on the king's highway. He can also "travel" some himself, for in a municipal race he was elected mayor of St. George. He has served three years in all, winning twice in a walk—or politically speaking, by acclamation. Hazen McGee is a genial, well liked fellow whether you meet him "mayorally, equinly, socially, or bootologically."

A London newspaper offered a prize for the best definition of money, and it was awarded to a young man whose definition was: "An article which may be used as a universal passport to everywhere except Heaven, and as a universal provider of everything except happiness."

## SHOE NEWS IN PARAGRAPH

P. Doig, of Montreal, was in Boston recently for a few days.

P. Kelly, shoemaker, of Vankleek Hill, Ont., died last week.

The Walkover Shoe Co. has taken over the Avenue Shoe Co., Winnipeg.

E. J. Kinsella, of Winnipeg, was in Montreal for a few days recently.

Saillant & Lessard, dealers in shoes, Quebec, have recently registered.

Guthrie & Risdale, of Battleford, Sask., were burned out in a fire which visited that place.

Swartz & Zimmerman, shoe dealers, of Eglinton (Toronto), have dissolved partnership.

W. H. Bates, of Dundas, Ont., was a caller on the trade in Toronto during the past few days.

A. O. Russ, of C. S. Hyman & Co., London, spent a few days in Chicago last week on business.

W. G. Downing, of Brandon, Man., spent a few days among the trade recently in Winnipeg.

R. Weston, of the Weston Shoe Co., Campbellford, Ont., spent a few days in Toronto last week.

William Young, formerly of Montreal, has been appointed Toronto city traveler for P. Jacobi.

Paul Galibert, leather manufacturer, Montreal, has been elected a director of the Laprairie Brick Co.

G. L. Hodgson, who opened a new shoe store in Walkerton, Ont., some time ago, is doing a good business.

Jearson & Sons have purchased the hardware and leather business of R. T. Wright, Little Current, Sask.

W. Helburn, jr., of the Helburn Leather Co., Salem, Mass., was in Toronto last week calling upon the trade.

John Bird, formerly with McLaren & Dallas, has taken a position with A. Chisholm, 1687 Dundas street, Toronto.

John Sinclair, manager of the Barrie Tanning Co., Barrie, was in Hamilton and Toronto last week on business.

Geo. Cain, of Montreal, general sales manager of the Miner Rubber Co., has been spending a few days in Toronto.

Clarence Smith, of the Ames-Holden-McCreedy Co., Montreal, has returned from spending a month at Atlantic City.

The Invictus Shoe Store, 249 St. James street, Montreal, has been thoroughly renovated, much improving the appearance.

W. F. Martin, sales manager of the Kingsbury Footwear Co., Montreal, is spending a few days in Toronto on business.

William Morley, Colborne street, Toronto, has been spending a few days in Ottawa and other eastern centres on business.

A new store has been opened in Montreal on St. Catherine street a few doors east of Bleury street, known as "Webb's."

John A. Gratto, shoe dealer, of Truro, N.S., has removed to a new store in the Craig Building, Prince street, in that town.

Ed. R. Lewis, leather dealer, 50 Front street east, Toronto, has been spending a few days in Quebec and Montreal on business.

J. J. Connor, representing McLaren & Dallas, Toronto, left last week on an extended business trip through the Prairie Provinces.

The handsome and artistic Easter window which was a feature of the Moyer Shoe Store in Winnipeg was put in by H. A. Arbuckle, who is secretary-treasurer and sales

manager of the store. Mr. Arbuckle's efforts reflect the highest credit on his skill and ability as a decorator.

The shoe store of Robert McGeehan, Fairville, N.B., was broken into recently and several pairs of shoes, as well as some money, stolen.

J. I. Chouinard, of the Regina Shoe Co., Montreal, has returned from spending a few days in New York, Boston and other trade centres.

John A. Walker, of Walker, Parker & Co., Toronto, is spending a few days in New York, Boston, Lynn and other shoe centres on business.

J. J. Kilgour, of Kilgour, Rimer & Co., wholesale shoes, Winnipeg, who was seriously ill recently and underwent an operation, has completely recovered.

Mendelsohn Bros., shoe retailers, of St. Lawrence, Main street, Montreal, have recently put in a handsome new front, which improves their store.

The Kenny Co., of Parry Sound, Ont., have leased a new store and installed a shoe department in connection with their men's wear and tailoring business.

A. McKillop, wholesale shoes, and J. F. McFarland, of Calgary, Alta., were in Toronto, Montreal and other eastern points on business during the past few days.

F. W. Raven has bought out the business of J. E. McRae at St. Williams and has added a shoe department. Mr. McRae is going to Western Canada to reside.

W. G. Damer, Western Canada representative for F. J. Weston & Sons, Toronto, left last week on a business trip to the Coast, carrying a full line of fall samoles.

A. E. Hogarth, lately with the Burns Co., Oshawa, has been appointed manager of the shoe store of Bradley Bros. in that town. He has entered upon his new duties.

Geo. G. Gales & Co. have almost completed alterations on their new store at the corner of St. Catherine and St. Denis streets and expect to be open for business in a few days.

W. A. Ross and D. C. McCauley are opening a fine new shoe store in Embro, Ont., in the premises now occupied by Mr. McCauley, who has been a practical shoemaker for years.

W. E. Metz, who recently sold his shoe store in Elmira, has taken a position on the road with F. J. Weston & Sons, Toronto. He will cover north-western Ontario.

In a serious fire which visited Brockville recently the glove works of Halls, Limited, had a close call. A large frame structure used as a tannery was wiped out by the flames.

The West Toronto Shoe Repair Co., A. Warriner, proprietor, have purchased a sixteen foot Model N shoe repair outfit, with stitcher, for their business on Dundas street, Toronto.

Johnston's Big Shoe House in New Westminster is installing a skylight and making other big improvements which will add much to the interior attractiveness of this progressive establishment.

Wm. L. Douglas, of the W. L. Douglas Shoe Co., Brockton, Mass., was married last month to Mrs. Alice K. Moodie. Mr. and Mrs. Douglas have gone to Europe, where they will spend several weeks.

A. Ramsfelder, of Ramsfelder, Erlick & Co., Cincinnati, Ohio, manufacturers of the "Restshu," was in Toronto last week calling upon D. D. Hawthorne & Co., the Canadian representatives of the firm.

H. A. Graham, who recently purchased new premises in Burlington, Ont., for his shoe store, is building an addition to the rear, on the completion of which he will remove his stock from its present stand.

Rubberine Limited, which company has just been incorporated, with a capital of \$150,000 and head offices in Toronto, is empowered to manufacture, buy, sell and deal in tire filler, rubber and rubber goods of all descriptions.

The J. P. Cook Co., shoe retailers, of London, have

recently installed one of the finest and most up-to-date shoe fronts in Western Ontario, which adds materially to the attractiveness of the store.

J. H. Bruton, of Alvinston, Ont., has sold his shoe and grocery business to J. S. Wilkie and J. I. Tucker, of Forest, who have taken possession. Mr. Bruton intends removing with his family to the Canadian West.

George P. Balfre, Canadian manager of the Chicago Tanning Co., Montreal, is at present on a selling trip through Ontario. While he is away Mr. Balfre will also call at the head office of his company in Chicago.

The Boston Shoe Store have opened out at 239 Portage avenue, opposite the post office, Winnipeg. The company announce that they have only one shoe store and their slogan is "Your money back if you are not satisfied."

Squires & Dickenson, shoe retailers, who have started in business at the corner of James and King William streets, Hamilton, had a most successful opening on Saturday, April 19th. They carry a nicely assorted stock and have a well equipped store.

Casselman & Thompson, Montreal, are moving on May 1st from their present premises at 440 St. Catherine street west to the store 633 St. Catherine street west, now occupied by Sloan Bros., who are also removing and taking premises in the Guy Block.

O. J. Killam, who is manager of the Kaufman Rubber Co.'s branch at Truro, N.S., was in Toronto and Berlin on business last week. He also has charge of the company's branch in Fredericton, N.B. New premises have recently been secured in that city.

An addition is being erected to the store of the McCall Shoe Co., which was recently acquired from A. Wellwood at 1250 Bloor street west, Toronto. The enlarged premises will be 80 feet deep and the establishment is now one of the brightest in that section of the city.

The Trenton Shoe House of J. J. Haines, which was burned out in that town some time ago, will move in August next into handsome premises. Good progress is being made in the erection of the new business home. Russell Haines is manager of the Trenton branch.

S. G. Amero, of Toronto, is representing the Perth Shoe Co. of Perth and the Nursery Shoe Co. of St. Thomas in Western Ontario. He will continue in the fall with the Kaufman Rubber Co. and will take charge of their new warehouse which they will open in London, Ont.

The fine house occupied by F. J. Boyden, of the Ames-Holden-McCready Co., at St. Hyacinthe, was visited by fire last week. The dwelling was saved but the effects of Mr. Boyden were damaged by water to the extent of several thousand dollars. The residence is owned by Jules Payan.

The Foley Shoe Store in Bowmanville has adopted a neat, artistic, red and green colored label. It bears the slogan, "If it's new we have it; if we have it it's new." The banner "Foley Footwear" diagonally crosses a green-tinted maple leaf and in outline letters are "The Shoes that Satisfy."

J. H. McGee has been appointed manager of the women's department in the Rannard Shoe Company's store on Portage avenue, Winnipeg, which has recently been enlarged and fitted up in a splendid manner. He is a brother of H. B. McGee, sales manager of the Minister, Myles Shoe Co., of Toronto.

A. J. Harris, superintendent of The Reliance Shoe Co.'s factory, Toronto, was in New York recently on a business trip. The Reliance Shoe Co., makers of the "Canadian Boy Shoe," are looking forward to a busy fall season, if present indications are to be relied on; as the early orders sent in by their representatives are away ahead of last year. They say that the best selling lines are gun metal and box calf blucher, whole quarter, medium weight for fall wear. Button boots are going but not so freely as in the spring samples.

A. R. Trudeau, of Toronto, who has been Ontario sales manager of Corbeil Limited, Montreal, is resigning that position to devote his whole time to the management of the

Brockton Shoe Co., Toronto. He will be succeeded as provincial sales manager for Corbeil Limited by Jas. S. Lovell, of Toronto, who is widely known to the trade.

Several new appointments of managers have been made by the McCall Shoe Co., who now have four stores in Toronto. James Long will have charge of the branch at 1250 Bloor street west, formerly the business of A. Wellwood. Bert Ockford is manager at 846 College street, and Alex. Lindsay at 190 Queen street west, while the headquarters store at 666 Queen street west will still be under the direction of Bert Sproule.

James V. Markey, of Brockville, has purchased the boot and shoe business of J. H. DeWolfe, Gananoque. Mr. DeWolfe is now moving to Vancouver, B.C., to take up his residence. Mr. Markey always followed the boot and shoe business and is thoroughly conversant with its many details. Of late he has been with H. W. Gilhooly and his courteous and painstaking disposition made him scores of friends in Brockville.

H. L. Carter, who has been in the shoe trade in Trenton, Ont., for the past thirty years, has discontinued business temporarily owing to having to give up his premises. Mr. Carter is, however, making arrangements to secure new and commodious quarters and will re-open in the footwear line about September 1st. His present address is Orser Implement Store, Trenton. Mr. Carter spent a few days in Toronto last week calling upon many old friends in the trade.

Fire recently destroyed the well equipped plant of the Sovereign Mitt, Glove and Robe Company at Delhi, Ont. It was a two-storey brick building, and none of the contents were saved. The loss will be \$25,000 to \$30,000, partly covered by insurance. The plant employed thirty hands, and the origin of the blaze is unknown.

F. G. Lockett, of The Lockett Shoe Store, Kingston, Ont., has returned from a holiday trip to Bermuda, where he passed a couple of weeks at the place bearing the same name at his home town.

At the last meeting of the council of St. Stephen, N.B., a communication from the council of the board of trade stated that the required \$25,000 in stock for the proposed shoe factory was now subscribed or in sight and asked that the town take action in reference to raising the \$15,000 or less required for the erection of a factory building, according to the expressed desire of the public meeting of the citizens.

W. F. Lane, of Montreal, was in Toronto this week and in company with Paul Galibert, jr., visited several shoe industries in Western Ontario. The Toronto office of Paul Galibert, of Montreal, is now well established at 60-62 Front street west, where a full stock of shoe leathers, including chrome kid, calf, sheep and cabarettes are carried. The branch is in charge of Paul Galibert, jr., who is a practically trained tanner.

John Wood, of Wood Bros., St. Catharines, who is an enthusiastic curler, has received from bowling headquarters detailed instructions for the trip to England of the Canadian contingent. It is proposed to give the rink winning the greatest number of games gold medals. Mr. Wood approves of this, but thinks that something should be done in the way of souvenirs for the team losing the most games. He has had a number of highly ornamental leather medals made, and will present them to the tail-enders.

THE SHOE AND LEATHER JOURNAL has received from the Findings Publishing Company, of Cleveland, a very complete directory of the manufacturers and jobbers of shoe store specialties and findings. The work affords a ready reference of the name and address of any manufacturer or jobber. All the articles have been arranged and classified under a proper heading. The manual is divided into three parts—manufacturers' department, trade names and directory and directory of leading jobbers—each printed on paper of a distinctive color to facilitate quick reference.

## HAPPENINGS IN FACTORIES

Montreal factories report conditions during the past month as having been fairly brisk.

N. B. Detwiler, of the G. V. Oberholtzer Co., Berlin, spent a few days in Toronto last week on business.

The B. B. Shoe Co. is removing from Three Rivers to La Tortue, about 18 miles from Three Rivers, Que.

Mr. Ceely, late with J. M. Stobo, Quebec, has taken charge of the fitting room in the Murray Shoe Co., London.

Mr. Lacasse, formerly with the A. P. Cimon Shoe Co., Montreal, has taken charge of the fitting room of the Rena Footwear Co.

Walter Smardon, of the Smardon Shoe Co., Montreal, has returned from a business trip to Boston, New York and other shoe centres.

V. D. Lincoln, late of Whitman, Mass., is now superintendent of the sole leather department of Ames-Holden-McCread, Limited, Montreal.

A. G. Reimold, president of the Woburn Degreasing Co., of Woburn, Mass., was in Toronto last week and called upon several members of the leather trade.

E. T. Weaver, late with the Nursery Shoe Co., St. Thomas, has taken charge of the cutting and fitting departments in the Relindo Shoe Co., Toronto.

James Hovlihan, foreman of the welt department of Getty & Scott, Galt, was in Rochester, N.Y., last week attending the funeral of his grandmother.

The new story which is being put on the factory of the T. Sisman Shoe Co., Aurora, is well under way, and when equipped will add materially to the output of the plant.

The C. N. W. Shoe Co., London, which started operations a few weeks ago, are making good progress and are now turning out about two hundred pairs daily of women's welts.

Thomas Gillis, formerly employed by the W. L. Douglas Co., of Brockton, Mass., has taken charge of the treeing department in the factory of E. T. Wright & Co., St. Thomas.

A large number of shoe factories are stocktaking at present preparatory to beginning their fall runs. Some factories are through with their spring runs and others are just closing up.

The German Shoe and Leather Fair will be held at Leipsic, Germany, from August 31st to September 3rd. A number of invitations to attend have been received by Canadian shoe manufacturers and tanners.

A branch of the Canadian Manufacturers' Association has been established in Brandon, Man. Among those who have been elected on the executive committee are William Crouch, of the Brandon Tannery and W. Borbridge, of the Borbridge Saddlery Mfg. Co.

The A. A. Durkee Co., of Truro, N.S., manufacturers of Security Footwear, are increasing their capital stock from \$50,000 to \$400,000. Part of the new issue will be preferred stock. There will be no change in the company except to enlarge their capacity so as to handle the fast increasing business.

Two new shoe companies have just obtained provincial charters. Gourlay & Fogelberg, Limited, have been incorporated with a share capital of \$100,000 and will erect a factory in Berlin. The former company of Williams & Son at Milton has been changed to the Milton Shoe Co. and the capital stock is \$100,000.

The Booth Felt Co., with a capital of \$40,000 and head offices in Gananoque, Ont., has been incorporated. The company is empowered to manufacture and deal in wool, cotton, felt and felt specialties of all kinds for commercial and mechanical purposes, etc. The incorporators are N. E. and

E. W. Booth, and T. R. Brawley, of Brooklyn, N.Y.; E. S. Sheppard and Benj. A. Booth, of Gananoque.

The Graveline Shoe Co., of Montreal, with a capital stock of \$100,000, has been granted a federal charter. The company is empowered to manufacture and deal in boots and shoes, to erect factories, etc. The incorporators are E. R. Bouchard, David R. Kennedy, A. R. Perrault, C. H. Woodhead, and Joseph W. Boisvert, all of Montreal.

G. L. Murphy placed his proposal to build a one line shoe factory, costing about \$10,000, before the Sydney board of trade. The details call for a plant to manufacture the staple grades of men's and children's boots, including a waterproof line. The factory would employ about thirty-five hands.

A despatch from Tillsonburg, Ont., says: Voting took place here on Monday on the granting of a \$25,000 and a free site to the Smedicor-Hathaway Shoe Co. Very little opposition was manifested, the by-law carrying by a vote of 366 for and 26 against. The company has conducted a successful business in Detroit for thirty years, and will now move its factory to Tillsonburg, starting operations with fifty hands, which will be increased to one hundred after the first year.

The Edmonton Leather and Shoe Co., of Edmonton, Alta., whose difficulties with regard to the extension of utilities seem likely to be satisfactorily solved, was formally opened last week. The company is incorporated for the manufacture of shoepacks and all manner of leather goods for sporting and general use. At present the shoepack plant, built at a cost of \$6,000, is in operation. A tannery, built at a cost of over \$25,000, is almost completed and will be ready in a month's time. The forty-eight vats, which will be the first instalment, are all in position. It is expected that the company will employ at least 75 men, and important developments are pending.

Dunford's Elk Shoes, Limited, of Stratford, Ont., is undergoing a complete reorganization. John E. Kirwin, who has had a wide experience in shoe factory management in the United States, has taken over the active management of the concern and there is no question but that he will make his presence felt in the shoe manufacturing trade in the Dominion. Mr. Kirwin says the quality will be improved and greater facility will be enjoyed by both the firm and the shoe buying public. His efforts will be to give the trade good, long value for their money, and in the course of a short time samples of the new shoe product will be sent to all patrons of the firm. He fully expects to have the best accounts in Canada on his books, and the shoes that are made will be their best advertisement. W. J. Ellingwood, late of the Forbush Shoe Co., North Grafton, Mass., is associated with Mr. Kirwin in controlling the business of Dunford's Elk Shoes.

Peter A. Doig, lately of the firm of Kirvan-Doig, Limited, has assumed charge of the leather department of Fisk Limited, Montreal. Mr. Doig is well and favorably known among the shoe and leather trades from one end of Canada to the other. Starting as a junior with G. S. Hubbell, of Montreal, he spent seven years learning the intricacies of the leather business. He deserted the commercial field for the time being to enter Y.M.C.A. work in Montreal, in which he has always taken a keen interest, but, after two or three years the lure of the commercial field proved too strong for him and he entered the employ of A. R. Clarke & Co., tanners, of Toronto, representing them in various parts of Canada very successfully. In the interests of this firm he also made two trips to Australia for the purpose of opening agencies and establishing the Clarke Co's business in that country, and this venture was also very successful. For the last three years or more he has been a partner in the shoe manufacturing firm of Kirvan-Doig, Limited, which business he is now leaving to enter the employ of Fisk Limited. Mr. Doig is a genial, good fellow and also a mighty fine salesman. His many friends wish for him great success in his new work.

**A POPULAR SHOEMAN RETIRES**

Walter E. Yates, for many years warehouse manager for McLaren & Dallas, Toronto, has retired and will take a prolonged rest. He has been in rather poor health for some time and will spend several weeks in the country. With the withdrawal of Mr. Yates from the wholesale shoe business he severs a connection of over twenty-one years

with the trade. He was born in Hamilton, Ont., and his first position was with John Eastwood & Co., in the stationery line. He later entered the wholesale footwear establishment of R. H. Greene & Co. in the Ambitious City in 1891. The firm afterwards became Greene, McLaren & Co., and the business was removed to Toronto. Mr. Yates was also with J. A. McLaren & Co. and for several years past with McLaren & Dallas as warehouse manager. He has always been a well liked member of the trade by reason of his genial manner and obliging disposition. On Saturday last he was presented by the travelers and warehouse staff with an appreciative address and a valuable case of pipes as a mark of esteem.

**CANADIAN RUBBERS IN ENGLAND**

J. E. Ray, Canadian Trade Commissioner at Birmingham, Eng., writes to the Department of Trade and Commerce, Ottawa, as follows: A comparison of Great Britain's imports of rubbers (goloshes) during the last five years seems to indicate that the demand is increasing annually. Competition is keen on account of the well-equipped home factories, but the United States have increased their sales from \$515,695 in 1907 to \$576,730 in 1912. Germany has also increased her sales during the same period by \$25,000. On the other hand, imports from Canada have fallen from \$35,465 in 1907 to \$130 last year.

The retail prices of goloshes in Birmingham are as follows:

Childrens' .....	43c. to 61c.
Men's .....	86c. to \$1.09
Women's .....	61c. to 85c

**RUBBER PRICES WILL ADVANCE**

The rubber footwear selling season which began on March 10th last is drawing to a close. All the companies report a good business and placing orders have come in very well but are not as large in the various amounts as last year, owing to the fact that 1911-12 winter was an abnormally active one in rubber goods, due to the early snow. Several shoemen have considerable stocks on hand at present but, on the whole, the season has been very fair in volume. It is understood that an increase in the present prices will go into effect on May 5th. It would have been inaugurated

on the first of the month but some companies have not their costs systems figured out. There will be a small advance on several lines and the schedule of prices in the West is going to materially advance it is said on account of rather slow payments from that section of the Dominion. Owing to the tight money market and real estate speculation craze one manufacturer reported that paper was not being met as well as it should be. Payments from the Prairie Provinces have been small. Several firms report that notes and other obligations maturing on April 4th have not been met by more than twenty-five to thirty-five per cent.

**Newsy Briefs from Quebec**

Uld. Leveille, shoe manufacturer, of Portneuf, Que., died last week.

The premises of Benj. Crepault, shoe manufacturer, were visited by fire last week and the damage done amounted to \$1,000. The insurance was \$1,500.

The following visitors were in Quebec last week: L. S. Odell, of Fisk Limited, Montreal; J. L. Perura, of The New England Blacking Co., Boston, and A. G. Whitley, of Fred. Whitley & Co., Montreal.

Louis Migner, a former shoe manufacturer of Quebec, died last week at the age of sixty-five years. He was a brother of the late Octave and Thomas Migner, who were also shoe manufacturers.

The James Muir Co. have completed removing their machines and stock to Maisonneuve, where they will continue doing business. Ludger Duchaine, who has purchased the building lately occupied by the Muir Co., is making considerable alterations. He expects to be ready to commence operations in about a week.

J. B. Drolet, a prominent shoe manufacturer of Quebec, died on Sunday, April 13th, after an illness of about two months. He was buried at L'Ancienne Lorette and the funeral was attended by a large number of friends, relatives and the employes of J. B. Drolet & Co. The late J. B. Drolet was born at St. Ancienne Lorette, Quebec, on November 16th, 1856, and was married to Marie Louise

Blondeau of the same place in 1883. He is survived by a widow, five sons and one daughter. About thirty years ago he commenced manufacturing turn shoes, and in 1900 he removed to Quebec and added Goodyear Welt and McKays to meet the increasing demand for his goods. He devoted considerable time to the well known "Unicus" Goodyear Welt and "Long Life" McKay Shoe. Mr. Drolet was a member of the Canadian Manufacturers' Association and also the Quebec Shoe Manufacturers' Association.

## Canada's Oldest Leather Dealer Celebrates 84th Birthday

The oldest leather merchant in Canada, and possibly the oldest in active service on the Continent, is Charles Parsons, 79 Front street east, Toronto, who celebrated his 84th birthday on April 19th. Mr. Parsons is still young in spirit, and supple in limb, considering his advanced age, and may

be found every day at his desk in the establishment with which he has been identified no less than sixty-four years. When one reviews the development of the shoe and leather industry for a half-century, many changes come to mind, but to go back to a period several years anterior to Confederation is within the memory of very few readers of the SHOE

AND LEATHER JOURNAL. Mr. Parsons was born in Thornhill, a few miles north of Toronto, his mother and relatives on her side bearing the name Thorne, after whom the now prosperous village is named. The father of Mr. Parsons conducted a flour mill and tannery at Thornhill for a number of years.

It was there that the subject of this sketch attained his first insight into the leather trade. In company with his brother John, the business of J. & C. Parsons, leather and shoe findings dealers, was established on King street east, at the corner of George street, way back in 1849. The firm afterwards became Thorne, Parsons & Vennor. On the death of Mr. Vennor, another change took place, the style being Thorne and Parsons, Richard Thorne later succeeding his father, William Thorne, as senior member of the firm.

Mr. Parsons can recall reminiscences of the development of the trade. He remembers when his father shipped flour from Thornhill to the Old Country. They owned tanneries at Thornhill, Holland Landing and Niagara-on-the-Lake, turning out a large number of sides of upper and sole leather. Although a Canadian by birth, Mr. Parsons' people were natives of Dorchester, England, and some years ago he journeyed across the water to visit a brother whom he had never seen, although that member of the family, who died several years ago, was considerably over three score and ten. The firm of C. Parsons & Son have had their ups and downs, like other concerns. Many years ago they were visited by a serious fire, which cleaned out their entire stock. The firm to-day are one of the most widely known and strongest in the leather arena, and have the selling agency of several leading tanneries. W. G. Parsons, who is associated with his father, has been connected with the business for over thirty years. He is the president of the Leather and Shoe Findings Association of Ontario, and has held other responsible positions in the trade. C. Parsons & Son have built up a reputation which is aptly described by their trade mark "Sterling." Many friends of the honored head of the house trust that he may live to see several more years of activity and usefulness.

### Some Crisp News Notes

W. A. Marsh, of the W. A. Marsh Co., Quebec, was in Toronto last week on business.

Doyle Bros. have started in the men's furnishings and shoe business in Prescott, Ont.

H. W. Stark, of H. W. Stark, Limited, Winnipeg, was in Montreal for a few days recently.

J. S. Hentig has opened a shoe store at 1045 Dundas street, Toronto, and has a well laid out store.

A. Lecompte, 521 St. Catherine street east, Montreal, will remove his store to 488 East St. Catherine street.

Geo. St. Leger, jr., of the St. Leger Shoe Co., Toronto, spent several days in Montreal and Quebec last week on business.

Fifty operators in the J. W. Hewitson shoe factory, Toronto, went on strike last week. Negotiations for a settlement of the wage dispute have been under way for several days.

A winding-up order has been granted in connection with the affairs of Kirvan-Doig, Limited, shoe manufacturers, of Montreal. Alex. Desmarteau has been appointed provisional liquidator.

The Ames-Holden-McCready Co. will have an exhibit on the Made-in-Canada train which leaves Montreal on May 14th on a seven weeks' trip to the Coast, making stops at practically every town of importance on the way. There will

be four exhibition cars from Montreal and five from Toronto.

Joseph Beer, who has been in the tanning business in Galt for twenty years, has sold his tannery to a new firm who will take possession in August and go in for making a special line of leather.

Among the callers on the trade in Toronto during the past week were: H. L. Harrison, Fergus; Kenney Bros., Acton West; D. Ruben, Picton; J. C. McGill, Oshawa; Book Bros., Beamsville; A. Riendeau, Warkworth.

W. D. McDougall is now covering Cape Breton for the Robert Taylor Co., of Halifax. J. W. Kaye is looking after New Brunswick, J. E. Duncan, eastern Nova Scotia, Geo. Graham having western Nova Scotia, E. H. McEachern, Prince Edward Island, and W. H. Doddridge the Gaspe coast.

Hon. C. H. Pelletier, of Quebec, has been appointed by the Minister of Labor chairman of the Board of Conciliation to consider the dispute between the boot and shoemakers employed in factories in Quebec City and their employers. The other two members of the board are Felix Marois and G. Hebert.

A. J. Mireault, who has been connected with Ames-Holden-McCready Co., Montreal, ten years as accountant, was recently made the recipient of a very handsome cabinet of silver on the occasion of his marriage which took place on April 21st. An address was also read. Miss Surphy, who has for the past eight years held an important position in the sales department of the Ames-Holden-McCready Co., was recently presented with a cabinet of silver by the office staff on the occasion of her coming marriage.

## May Benefit Canadian Producers in Some Lines

(Continued from page 51)

good. It may give us a chance to compete with the manufacturers over there, but because the American tanneries are so large and so many controlled by the Meat Trust, it may be difficult at that to dispose of our goods on the American side. It will not affect the price at all. The only leather shipped across the border to any extent is sole leather. There are some lines that European countries can ship into the United States despite the duty, because labor is much cheaper, and no doubt any reduction would be an advantage to them. We pay the same price for labor here as in the States, so that we will not benefit very greatly." Mr. Breithaupt considered that the measure will benefit the leather dealers as it will afford them a wider field for the sale of special lines.

### What Shoemen Have to Say

The James Muir Co., late of Quebec, now of Maisonneuve, say that they are of the opinion that Canadian boots and shoes cannot be successfully sold in the United States. Were it possible to do so there would appear to be no necessity of having a Canadian duty to prevent American goods coming into the Dominion, which most Canadian manufacturers admit is required.

H. E. Moles, of J. & T. Bell, Ltd., Montreal, states if the Democratic tariff bill is endorsed by congress, he does not anticipate that Canadian shoe manufacturers will be able to enter the American market and command any large measure of business. He is of the opinion that factories in the Dominion would not be able to compete with the large and highly specialized concerns across the border in any line, and secure favorable consideration for their goods. Mr. Moles does not think that any direct benefit will accrue to the shoe manufacturers in the Dominion by reason of the lowering of the tariff walls and does not anticipate there will be any change in price.

### The Future Will Tell

With regard to the proposed removal of the duty on shoes going into the United States, and as to its effect upon business in Canada, Getty & Scott, of Galt, say:—"We do not look for Canadian manufacturers to profit to any extent by the change. There may be a few lines of staple goods that will be worked in, but under conditions as they exist to-day, we do not expect to see any large amount of business result. Conditions may, however, change very rapidly, for certainly shoe manufacturers in Canada, at the present time, are making good progress and improving their product. It may be that at a later date some business will result."

### Not Looking for U. S. Orders

Dufresne & Locke, of Maisonneuve, Que., declare, "We do not expect to receive any orders for shoes from the American market, if the duty is taken off, even if our shoes are better. We are of the opinion that Americans would not take them, as coming from Canada. If the cost of living, through the removal of the duty, is reduced on the other side of the line, and the cost is raised on this side, we anticipate keener competition with American manufacturers than we have to-day."

Dupont & Frere, of Maisonneuve, Que., remark:—"Our opinion is that there will certainly be a market for Canadian manufacturers in the United States, but only to a certain extent. If we can make a good article, they are able to make a cheap quality with a better appearance, and, of course, can sell at a better price than any Canadian manufacturer. Regarding our idea that Canadian goods are of better quality than most of those made in the United States, there will always be trade, as we always find lots of people that prefer to buy good goods instead of appearance

only. As we have to buy different kinds of upper stock on which we have to pay a duty, it will be difficult to think that we can compete with United States manufacturers. There may be an opening for some very large manufacturer.

John Ritchie, of the John Ritchie Co., Quebec, writes:—"I do not think it can affect our Canadian trade in any way. Owing to the fact that the American shoe trade is so highly specialized, they can produce cheaper than we can. While the earning power of labor is probably about equal on both sides of the line, specializing makes labor more productive and more efficient, therefore they can produce cheaper and give a better finish than we can at present. The same thing applies to leather conditions, as most of our material costs higher in Canada. Business is also conducted on a much larger scale, several American firms having each an output equal to the whole manufacturing trade of the Dominion. This, again, reduces cost."

### Benefit a Long Way Off

N. Lemieux, manager of the Fraserville Shoe Co., Fraserville, Que., declares:—"If the Americans put boots and shoes on the free list I do not think it will have any effect on the manufacturers and wholesalers of Canada. If it were not for the duty which exists at the present time in this country on American boots, our market would be glutted with American shoes. This speaks for itself, and in my estimation, the days are far ahead when Canadian shoes will find a market in the United States, taking into consideration the number of American shoes imported in this country even in the face of a 30% duty."

### Will Push Hockey Shoes

Concerning the possibility of Canadian shoes being sold in United States, providing the duty is removed, J. A. McPherson, of Hamilton, says: "I do not imagine it will be possible to do any business in the States, unless it would be on a novelty such as our Lightning Hitch Hockey boot. I have great hopes of being able to market this skating boot in the States. On ordinary footwear, Canadian factories are too small to be a factor in the American market. Canadian tanners should benefit greatly in the line of sole leather."

### Consider the Situation Now

H. H. Lightford, the manager of the Perth Shoe Co., Perth, Ont., thinks it would be some time before Canadian manufacturers would be able to enter the United States and compete with the manufacturers there even if the Democratic tariff bill is passed at an early date. "The only way that we really would have to judge," he adds, "is when you stop to think the duty on shoes going into the United States is only 10% and consider the amount of goods that Canada is exporting into that country, then recall the duty of 30% on shoes coming into Canada and the heavy shipments of footwear that are yearly imported from the land to the south—well, that practically tells the whole story. It looks very doubtful if Canadian manufacturers could command any business across the line. We do not feel that the change in tariff will in any way alter prices, nor is it likely to injure the Canadian trade."

### Not Afraid of American Goods

Speaking on the subject, A. Brandon, of the Brandon Shoe Co., Brantford, and chairman of the Boot and Shoe section of the Toronto Branch of the Canadian Manufacturers' Association, says:—"With reference to removal of duty on American shoes, I am familiar with the product produced in the United States. We, in Canada, can produce quite as good shoes as the manufacturers in the United States. Our details of manufacturing are so close to theirs that one cannot distinguish the difference between American

shoes and Canadian shoes, that is, in fine footwear. The most of our findings that go into our shoes in Canada are imported from the United States, and we have to pay duty on them. A great deal of our calf leathers are imported from the United States. In fact, about 75% of the material going into the making of fine shoes is procured, or can be procured in the United States. On all material produced in the United States and exported out of Canada, we get a refund of 99%. This enables the Canadian manufacturer to compete in the field with the American manufacturer. It is quite probable that the Canadian manufacturer may be able to enter the American field and compete with the manufacturers there, by taking it on the same basis as the export trade to Europe and other foreign countries. At the present time, our Canadian shoemakers are getting well schooled, and we are not afraid to put our goods against American goods any day. The quality of our shoes is much superior to the goods shipped into Canada at the present time. It is too early in the day to give strong opinions on the business for the United States, as the tariff is in force yet, so I am not anxious to give much information until we know where we are at."

#### Where Specialization Comes in

J. B. Blouin, Limited, of Levis remark that they do not consider that it will make a particle of difference to the Canadian manufacturers whether the duty is off or on, "We do not consider it possible for the Canadian manufacturers to compete against the factories on the other side, and for the following reason: the manufacturers in this country have not specialized as they have in the United States, and are, therefore, not in a position to compete and manufacture goods at as close a figure as they are on the other side. The leather market would not permit us to manufacture shoes here, and to export them and compete with the American

manufacturer who can buy his leather at a lower price than we do, and can also obtain the exact selection in quantity and quality seems impossible. Owing to tanners there having a large trade they select their stock much more closely than the tanners can do in Canada, and if the manufacturer wants a certain class of leather he can get it without having to buy other grades and manufacture goods to use up his stock. Wages on the other side, though they may not appear to be as low as ours are on a great number of operations, still, the American manufacturer has the benefit of the price. He is able to give his employees one or two lines of shoes to make, and they can turn out a greater quantity with a great deal less trouble and work, and make more money by the piece even at a low price."

#### Where U. S. Maker Has Advantage

P. M. Goff, sales manager of the O. B. Shoe Co., Drummondville, Que., replies:—"I quite agree with the opinions expressed in your last issue by some of the shoe manufacturers in Montreal and Quebec, that putting boots and shoes on the free list by the Democratic party of the United States will not in any way benefit the shoe manufacturers of Canada. The upper leather tanners of the United States can market their product to the shoe manufacturers there at a less cost than the tanners in Canada here. Principally owing to the grading of the hides and leathers, every shoe manufacturer can get just what he requires to produce the maximum value in the particular kind of shoe that he is making; specialising on a very short range of prices and a very large production, together with cheaper labor, and less cost for marketing his product, all helping him to produce a shoe at a less figure than we can. There are some lines of men's and women's shoes made in the United States that it is quite impossible for a Canadian manufacturer to understand how they arrive at the price. Admitting that the leather cost

## ENJOYING LIFE ON PACIFIC COAST

L. M. Stock, western representative for Walker, Parker & Co., Toronto, is an enthusiastic amateur photographer, and on his present Western trip took his camera along with him. He has succeeded in kodaking a few of his brother "knights of the grip." Picture No. 1 reading from left to right, shows "Pete" Cowan (with the Brandon Shoe Co.), and W. G. Fallen (with Getty & Scott) taken on board the Princess Alice, going from Vancouver to Victoria, on Sunday, April 6th. Picture No. 2 shows Mr. Cowan and J. M. Peterman (with the Thompson Shoe Co.) and W. G. Fallen taken in the rear of an observation car of the Imperial Limited, at Field, B.C., on April 5th. Picture No. 3—snapshot, taken at Revelstoke, B.C. on the same day, reveals Mr. Fallen, Mr. Stock and Mr. Peterman in a contented mood.

would be the same there as here, the actual wages paid out for making the shoe would be at least 20 cents per pair less than in the Dominion. The United States shoe manufacturers undoubtedly lead the world. When we get a population of twenty-five millions in Canada we may be able to give them a run, but as conditions are now I think that it is out of the question."

John A. Walker, of Walker, Parker & Co., Toronto, does not look with very much assurance on the prospect of Canadian manufacturers seeking a market for their shoes across the border. He said: "While the removal of the duty will do us no harm, neither do I think that it will tend to broaden our market, as Canadian concerns are handicapped in many ways when compared with the immense plants across the border. I believe that there was one Canadian firm which tried to market shoes across the line some years ago but did not meet with any success."

W. A. Hamilton, of the W. B. Hamilton Shoe Co., replied: "No, I do not think that the removal of the tariff will in the least benefit Canadian shoe manufacturers. Conditions are so different that it seems hopeless to think of our competing with the highly specialized plants on the other side where they have got the cost system on certain lines of shoes down to the finest fractional point. While I believe that Canadian shoes are as well made and contain better materials, still, if one is producing a job wholly for appearance and not for wear, our neighbors can put over an article that is likelier to command a more ready sale than a Canadian shoe."

#### Why U. S. Shoes are Cheaper

W. F. Martin, general sales manager of the Kingsbury Footwear Co., Montreal, is of the opinion that the proposed removal of the duty will in no way affect the Canadian trade. He writes, "As I see conditions in the United States, that country is already producing more shoes than the people there can use, and with the advantages that the American manufacturers have over the Canadians in being able to get the raw material—in many cases partially manufactured—it enables them to figure the cost of the shoe much closer than we can in the Dominion, where we cannot get selections. This is one of the reasons, I believe, why U. S. manufacturers can produce shoes cheaper than we can in Canada. I could furnish many other instances, which, I believe, would make it impossible for Canadians to sell shoes in the United States, but I do not think it necessary at this juncture to go more deeply into the question."

#### Paying More for Our Labor

The Rideau Shoe Co., Maisonneuve, forward this view:—"Although a broader market might be opened, the Canadian shoe manufacturer would not be in a position to take any advantage from it, as he is to-day paying a duty of 10 to 35% on his raw materials; and do not think for an instant that the Canadian manufacturers of leather and supplies are not taking advantage of this rate of protection. The Canadian shoe manufacturer is paying more for his labor than the American manufacturer, and even should he be able to import his materials free of duty, this added cost of production would place him outside competition. We doubt very much whether a Canadian house could place their own brand of goods in the American dealer's hands, as the American dealer has no confidence in Canadian made goods of any description, and the prospect of flying the British flag over his store would appeal to him about as strongly. In order for the Canadian shoe manufacturer to enter the American market, it would be necessary for him to import his raw materials and manufacture for export; thus making his raw materials free, and then distribute through an American jobber under the jobber's own brand, and at that the higher costs in Canada would restrict his sales. The greatest effect the adoption of the measure would have, would tend towards increasing the cost of

leather, as the Canadian tanner already benefits by free hides, and should he manufacture for the American market the supply here would materially lessen and a restricted supply always mean increased values. We think that if the Canadian tanner can get his tannery running more on American system, he can give the American tanner a run, as our leather is superior for wear but woefully lacking in assorting for selections, weights and spreads. On the whole we think it would benefit the Canadian tanner, but we fail to see any benefit accrue to the shoe manufacturer, or the public, as the application of the measure will certainly increase rather than decrease the cost of footwear. Don't you think that the American tanner would be inclined to retaliate in some manner if the Canadian tanner went into competition with him? Here is the American hide and leather, and the Western packers also tan leather and we very much doubt if they would supply the sinews of war, i. e., hides."

C. S. Sutherland, manager of the Amherst Boot & Shoe Co., Limited, Amherst, N.B., says:—"I may say that I do not think the action of the United States government in placing shoes on the free list will have any effect on the Canadian manufacturer. The fact that most lines of leather are lower in the United States than in Canada, gives the American manufacturer the advantage and precludes the Canadians from competing with them on their own grounds."

#### Remove Import Duty on Brains

Fred. W. Weston, of the Weston Shoe Co., Campbellford, Ont., answers:—"I am of the opinion that there will be no great changes in the Canadian shoe trade for the following reasons: I believe that the effect of political trade legislation is always considerably less than it is expected to be. The Canadian factories have already all they can do to supply their home market. Great enlargement is impracticable on account of scarcity of labor. There is little hope of our being able to supply more than the home market while the present stupid "Alien Labor Laws" and "Immigration Regulations" are in force. The import duty on brains, as usual, does not have the full effect intended, of keeping skilled labor out of the country, but it is sufficient to make efficient mechanics scarce, and the available labor of a lower average standard of efficiency compared with that in the United States. As the American duty on the manufacturers' raw material will be removed, while the corresponding duties in Canada will be retained, the former will continue to have that much advantage over the latter. I also suspect that money costs more here than in the United States."

Concluding, Mr. Weston adds, "Possibly, English manufacturers may get a chance as they have no duty on their raw material, and their labor, while still less efficient than ours, costs much less. It remains to be seen whether this lower cost of material and labor is sufficient to offset the inferiority of the help, and the costs of transportation."

#### Handy to Large Buying Centres

A. A. Durkce, of Truro, N.S., remarks: "I do not think that the reduction in the American tariff as proposed will be of any benefit to Canadian manufacturers as they are operating at present. None of us operate our factories systematically. The requirements of the trade we supply and the territory it covers prevent us doing so. Even if we were able to specialize as we might desire we would still be at a disadvantage, as we do not buy our new material at the same price. The Canadian tanner takes advantage of the duty and stock is almost invariably a cent or more a foot than the same grade in the American market, and many lines of supplies and findings are not made in Canada at all. The American shoe industry is one of the most highly specialized industries in existence. There is a large over production and consequently keen competition and only the fittest survive. Shoe manufacturing with them has got to a

point where success comes only to the manufacturers who make a minimum number of lines and have a maximum production. We cannot compete with that condition. The Canadian shoe industry is badly scattered and makers are compelled to operate continuously to hold their employes. The American shoe industry operates in seasons and by driving operators during those times get a higher output per man than we can. Their selling expenses are less. Large buying centres are within easy access of one another and little time is lost in travel. All these factors, and others that I could name from my intimate knowledge of American conditions, combine to get a shoe at a marketable price that would be ruinous to a Canadian manufacturer. Conditions may change but at present a reduced tariff means nothing to us."

### Some Factors That Count

The Minister, Myles Shoe Co., Toronto, think that the removal of the tariff on footwear will have no appreciable effect on the Canadian footwear situation, either in the matter of prices or output. "It may," they say, "eventually influence a few lines for which a market may be found on the other side, but not at the present time. One reason why a Canadian company cannot compete with big American firms is that our plants are too small, and then it might be that a certain kind of leather desired could only be secured from the other side. How is the Canadian maker going to pay fifteen per cent. or more duty on that leather, turn it into shoes here and then expect to find a sale for his product across the border? It would be impossible. Even if there was no duty on leather coming into the Dominion there are other things entering into the make up of a boot on which the local user has to pay a levy and which the American maker secures first hand. Our plant is among the larger ones in Canada making exclusively high-grade men's and women's welts, and we are enabled to obtain our share of business, but, as compared with the gigantic concerns over the border, where specialization and immense turn-over reduce expenses per shoe to the lowest possible point, we would not have much of a chance. Reverse the conditions and if we had to go up against these mammoth enterprises, without any protection, we believe that the outcome would not be very satisfactory."

The J. Leckie Co., of Vancouver, reply: "The removal of the American duty on boots would be of no benefit to us as we do not think that we could compete with the manufacturers of the United States, seeing that they can sell in this market even in the face of the Canadian tariff."

John S. King, of the Relindo Shoe Co., said: "When one considers the immense output of American plants, the specialized lines, minimized cost, and the immense market they have to cater to, it seems absurd to talk of Canadians competing with American footwear producers. In the first place we may be able to do so in fifteen or twenty years from now, when we have a population double or triple of what we have to-day, but until such time as our output is larger and our industry more highly developed, no Canadian factory can enter the American market and do business. The American shoemaking industry is the greatest in the world, and that the manufacturers over there are not much afraid of competition is shown by the fact that you will find their shoes in every country on the globe, no matter where you travel. I might go into this question very minutely, but would say that we go to the other side to learn all we can on styles, labor-saving methods and factory cost, then come back to Canada and put our newly acquired ideas into execution. How, then, are we going to compete with those across the line from whom we are constantly seeking advice and instruction? It is like the pupil competing with the master. Canadian shoes are of better material and will outwear the average American pair, but when it comes to cheapness of production, owing to labor conditions, overhead costs, the number of small new factories and the duty that we have to pay on certain materials entering into the shoe, we are completely handicapped from securing a market for our wares on the other side."

## Fitting a New Shoe Style to All Types of Feet

(Continued from page 41)

When a customer demands a shoe that does not suit the type of foot the attendant can do one of two things. He can fit the foot properly, if permitted, or he can do the best he can and at the same time suit the customer's idea of the style wanted.

Now that the low heel is to become a feature of the style, The Proper Style, the salesman will be called upon to fit high arched feet with low arched shoes. This will mean the increased sale of arch supports. The fact that the style of the shoe in vogue at any time will not fit all types of feet, certainly makes the fitting of shoes a difficulty thing for the man who wants to give his customers conscientious service. The only thing he can do is to obviate the bad effects as much as possible, and when he can do so, sell a modification of the latest style containing as few objectionable features as possible.

## Is the Repair Dept. Really Worth While?

(Continued from page 44)

inferior materials are readily exposed when brought into the repair department. It offers an excellent method of comparison and one which gets down to hardpan, so to speak.

"Shoes may closely resemble one another when new, but after they've been worn for a while, a difference in workmanship and material will develop. Retailers of shoes, like all other people, want to get a full value for the money expended. I would recommend that retailers make a careful study of the shoes which are brought to them for repairing, whether sold by them or by others. There's no better way of estimating their real value than by examining the shoes which are brought in for repairs.

"Cigar dealers, when making their purchases, often cut open cigars to see the quality of tobacco which is used. This can't be done by shoe dealers at the time of the purchase of their goods. When the shoes are in need of repairs, however, retailers can in a way follow the cigar dealers' plan. The shoes are then shown for what they really are and not for what they pretend to be when they're sold.

# Union Made Shoes Should be on Your Shelves for the Coming Season, Mr. Retailer

You want shoes, next season, Mr. Retailer, for all your customers, and to satisfy EVERYBODY, YOU MUST CARRY UNION STAMPED SHOES

The Union employee demands Union made goods. He has been educated to insist on Union stamped shoes through our advertising of Union stamped shoes in the labor journals of the country. The Union man knows that only shoes bearing the stamp of the BOOT AND SHOE WORKERS' UNION are Union made.

There is nothing to lose and every possible profit to gain by handling UNION STAMPED shoes. They are shoes of the highest quality, made by expert workmen that satisfy the demands of all your patrons.

You can secure shoes from Union manufacturers every day in the year, for in the Union factory, under our agreement, there is no chance of delays by strikes.

The retailer who handles Union stamped shoes is endorsing the fair policy of arbitration with no strikes.

DO NOT BE MISLED BY THE CLAIMS OF NON UNION MANUFACTURERS. THE OFFICIAL STAMP OF THE BOOT & SHOE WORKERS' UNION IS THE ONE POSITIVE GUARANTEE THAT THE SHOES ARE UNION MADE. ALL OTHER STAMPS ARE WORTHLESS.

# HARTT SHOES

They stand at the top for STYLE, FIT and FINISH. The following is an example of their wearing qualities received unsolicited from a customer a few days ago :

LYTTON, B.C., March 28, '13.

Messrs. The Hartt Boot & Shoe Co., Limited,  
Fredericton, N.B.

Gentlemen,—

I have an illustration of the wearing qualities of No. 653 which might be of interest to you.

Eight months ago I sold a Mr. Goldstraw, who is a Camp Missionary for the Church of England, a pair of these boots. He has traveled about 2,500 miles in them, over exceptionally rough and rocky trails, and has had them half soled once and they are in fairly good condition yet. I sold him another "Hartt" a few days ago when he was in.

Yours truly,

(Signed) N. P. WOODS.

# P. J. HARNEY SHOE COMPANY

*Manufacturers of Women's Fine Shoes*

ADAM, MELDRUM & ANDERSON Co.  
BUFFALO, N. Y.

*Queen Quality*

THE ADAM, MELDRUM & ANDERSON COMPANY, OF BUFFALO, is one of the oldest stores in that city. Their reputation for reliable merchandise and good service dates back 43 years.

The Adam, Meldrum & Anderson Shoe Department, one of the largest and best in the City of Buffalo, handles the QUEEN QUALITY Shoe exclusively.

"Years ago," said Mr. Frederick Hewson, the buyer for the Department, "we experimented with the idea of taking the best Specialties from each line. At that time we were handling some QUEEN QUALITY Shoes. Six years ago we concluded that the only way to make a Shoe Department thoroughly successful was to confine our efforts to one or two lines.

"We selected the QUEEN QUALITY Shoe because we believe it offers our customers the best wear, fit and service for the money. Take this particular style," continued Mr. Hewson, picking up a shoe from the counter; "I doubt if it could be duplicated in any other line to sell for less than \$7.00. The shoe is one of our regular \$5.00 numbers.

"Of course, a big factor in the success of this business has been the Adam, Meldrum & Anderson reputation, but we also give large credit to quality and advertising of the QUEEN QUALITY Shoe and the methods used in helping the retailer to do the largest business on a minimum stock and investment, on which the success of a department depends largely."

It is interesting to note that Mr. Hewson's first shoe experience was with a house handling particularly high-priced shoes.

The average department store has manifold, natural advantages for selling shoes successfully. The department store is the natural, convenient and agreeable place for women to buy shoes for themselves and their children. Many department stores are turning this natural advantage into large profits—others into ordinary profits—and others to no profit.

Many of the low profit and no profit departments, could be turned into good paying propositions with the right trade-marked shoe. A good trade-marked shoe minimizes many of the possibilities of injudicious buying and enables the department to do a large business on a comparatively small investment and serve and hold the largest possible percentage of customers.

DEPARTMENT STORE OWNERS AND MANAGERS may well investigate with interest any well established trade-mark branded and largely advertised line of women's shoes like the QUEEN QUALITY, which sells at a popular price, that embodies the best in style, fit and wear and is nationally advertised, where the manufacturer carries the best selling numbers in stock.

Is there anything in this story of one of the most successful stores in America in connection with the handling of trade-marked shoes, that may apply to your business? Do not let prejudice prevent you from looking into the possibilities. On request we will tell you frankly if the QUEEN QUALITY line fits your store.

## 22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

**MODEL N**

**T**HIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- |  |                                   |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls           | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel      |
| 1 Pin Wheel Pad Complete               |                                   |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- |  |  |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll  | 2 Shank and Bottom Brushes               |
| 2 Heel Brushes                             | 1 Stitch Cleaning Brush                  |
| 1 Levelling Roll                           | 1 Bead and Wheel                         |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

## Connect up with a shoe of 100 per cent. sales efficiency

Take two lines of shoes in your store. Why does one line sell more readily than the other?

"Because my salespeople push that line more," you'll say.

True. But why do they push one line in preference to the other?

*Because it comes nearer to their ideal of a shoe.*

And that's the reason why you should sell Rideaus in your store.

Rideaus touch the most responsive chord in a salesman's make-up—his pride of service. They allow him to offer his customer shoes that back up with real value every argument he uses. Moreover they give him many strong selling points in their style, their leathers, their workmanship. In every particular on which a sale may hinge Rideaus are 100 per cent. efficient.

Is it not worth while to give this added strength and incentive to your sales force?

The Rideau Shoe Co. Limited  
M o n t r e a l

# A shoe of remarkable value—

## CLASSIC SHOES

Every sale you make is made on confidence—confidence in you, and in the shoe you sell.

Your customer's confidence in you is your most valuable asset. It will take but a moment to destroy it. One pair of shoes that fails to make good, and this confidence is gone. It is doubly hard to get it back, and without it you cannot do business. It is worth guarding.

There's the beauty of the "Classic" Line. It has the confidence of the women of your town. They *know* it is *the* shoe, and it never fails them or their families. It has the real value that backs up reputation.

## Getty & Scott, Limited

plus a name that is well known

**CLASSIC SHOES**

Then, again, it is much easier to sell a line that is known, than one you have to talk up to your customer. It's easy to say, "This is a 'Classic' Shoe." And that settles it, because your customer has seen "Classic" advertising. The "Classic" shoe has her confidence.

The word "Classic" is easy to remember, and it means something. It is not hard for a woman to recollect that "Classic" is the name of the best shoes she or her children ever wore. Moreover, she will recollect it as such for every shoe that bears the "Classic" mark is a shoe prepared to uphold the "Classic" reputation.

Classic Shoes," Galt, Ont.

# Easy Money for the Shoeman

How many pairs of shoes do you sell in a year, Mr. Shoeman?

Just think of it.

And you could sell at least half as many pairs of Pen-Angle Hosiery if you had it in stock.

Every person who buys shoes buys stockings too, so why not kill two birds with one stone and sell your customers both? You should be doing them a favor and at the same time making a little easy money yourself.

Be the first in your town to stock Pen-Angle Full-Fashioned Seamless Hosiery for Men, Women and Children. The only Hosiery made that is permanently shaped to the foot and leg, and that is both seamless and snug-fitting.

There's money in hosiery all right, and you might just as well get it as anyone else.

## Pen-Angle

### Full-Fashioned Seamless Hosiery

Made by Penmans Limited, Paris, Canada  
UNDERWEAR, SWEATERS, HOSIERY

## PENMANS LIMITED, PARIS, CANADA

Hosiery - Underwear - Sweaters

Can be purchased from any first-class wholesale dry goods house, or through EDWARD BURNS CO., Toronto; A. L. GILPIN, Montreal; BRYCE & CO., Winnipeg and Vancouver; B. S. MACFARLANE, Truro, N.S.

## **A**RE you prepared for all the low shoe business that is coming your way?

With a warm summer due to arrive in full glory almost any day now, it behooves you to look carefully to your stock of lightweight shoes, Oxfords, pumps and canvas shoes. A little toning up of your stock at this time may mean, in a few weeks, the gathering in of dollars that otherwise you would have had to turn away.

How does your stock stand to-day? Is it in perfect shape to stand the rush that will be made upon it shortly? If it is not, take advantage of my In-Stock Department and put your stock in ship-shape. Don't delay. It means money to you to have your Summer stock in shape right now.

Send on your order.

**James Robinson**

We are Sending Customers  
to You for

**FLEET FOOT**

“Best Quality Sporting Shoes”

Over 1000 newspapers are carrying the “FLEET FOOT” message to the people of Canada to-day.

The advertising in your local papers will send numbers of new purchasers to your store for “FLEET FOOT”

Will you be prepared to supply them? It's simply a question of whether you would prefer to make quick sales with “FLEET FOOT” or stock some other line that has neither their reputation nor the standard of quality back of them.

The new styles in “FLEET FOOT” Sporting Shoes are even better than heretofore—styles your customers will be asking for right away. The quality, of course, is unequalled.

We Will Ship Your Order Immediately. Just Say When

Of course the specialist  
makes the best shoe

WHEN you have something very important to be done why do you get a specialist to do the job?

You do it for the same reason that we made women's Goodyear Welts exclusively—you're particular.

We're mighty particular as to the class of shoes we turn out. That's why all the men in our factory are women's Goodyear Welt specialists. They do much better work without increasing the cost. Consequently we can offer you in the Perth Shoe, a much better shoe for the price than could be made in a factory where all classes of shoes are made.

**Perth Shoe Co., Limited**

**Women's Goodyear Welts Only**

“Where Quality Counts, We Win!”

# Brandons

for sales every time

## The Best Value-Indicator

What does it mean when Monarch and Brandon sales go on increasing every season?

Why, it means that dealers are finding that they have the value that induces sales. They know that Monarch and Brandon Shoes give their customers what they want in greater measure than other shoes, and at a price that suits them better.

—And it means, also, that dealers have an eye for the extra profit that comes through our “direct to dealer” selling.

Don't miss seeing Monarch and Brandon samples.

# YOU KNOW IT TO BE A FACT

A. CORBEIL

That most men want shoes ranging in price from \$3.50 to \$5.00. That one buying point settled. You know that if any person or firm put over forty years in some special line of shoemaking they would be most proficient in that line. That's the way with Corbeil Shoes. They've been specialized shoes for over forty years.

Doesn't that pretty nearly solve your buying problem for Fall 1913?

## Have this appreciation shown in your store——

*THE  
Professor*

PAT. N<sup>o</sup>.  119409  
GOLD CROSS  
SHOE

Any man will appreciate a shoeman's efforts to provide for the comfort of his feet. No shoeman can better provide for the comfort of his customer's feet than by fitting him to a pair of Professor Gold Cross Shoes.

They are shaped on absolutely correct anatomical lines — they are natural. They hold the foot in a perfectly easy and natural position preventing chafing, and pinching, with consequent corns, bunions and callouses.

The Professor shoe has a medicated, cushioned inner sole that will make your customer think that he is walking on air. This feature is a sure pleaser—one that makes a hit always, and helps greatly in increasing the sales of The Professor Shoe.

Show the men of your town that you have regard for their feet. They'll show their appreciation.

**Consider first these  
Rubbers---and then---  
the firms who sell them**

If "A man is known by the company he keeps," no doubt a rubber is known by the firm who sells it.

Judged in this manner Independent Brands should enjoy a remarkable popularity. The firms who sell them are the best in Canada. Their integrity and business acumen are well known. They are noted for the remarkable foresight with which they choose their stocks. What they buy, sells.

So when you see rubbers being sold by the best jobbing houses in Canada, isn't it about time that you were looking into the merits of these rubbers? We just want you to satisfy yourself as to the profit of handling Independent Brands. We are sure that when you do you'll not rest until you have them in your stock.

A post card will bring you information.

**How about  
the  
Customer?**

If every time before placing an order for a line of shoes you asked yourself the question, "How about the customer?" you'd save yourself a deal of trouble and "dead" stock. Too many shoes are bought by retailers without regard to the wants and needs of their customers. And then they lie on the shelf.

Every shoe in the Aird Line is made with that thought in mind, "How about the customer?" The advantage and gain of our customer is based on the satisfying of your customer. And shoes are made to be profitable to their ultimate wearers. That's why they are profitable to you.

## The Way to Get Ahead in the Retail Shoe Game

Some Practical Pointers on Method—What and How to Buy—Importance of Keeping Shelves Clear of Dead Lines—Too Many Dealers Trust Too Much to Memory—Handling Fancy and Novelty Lines

Written Expressly for "The Shoe and Leather Journal" by WM. BRYANS

This is the age of science. The shoe merchant,—in fact, the merchant in any line of business, must to-day apply scientific management to his business if he would succeed, or at least if he would secure the greatest possible success. There are, undoubtedly some dealers to-day who are drifting along, using methods that are not progressive, and who are making a little money, but think how much more they might be making by a display of scientific methods. The merchant now must be scientific in all his work—in his buying and selling, in his bookkeeping and profit figuring, in his advertising and his display.—If he is not he will be worsted while the race is still young.

The shoe business now is on a much higher plane than in days gone by, and the summit of efficiency has by no means been reached. There has, indeed, been great developments in recent years in the retailing of footwear and the end is not yet. The older school of merchants, unable or unwilling to devise better and greater methods of merchandising, is passing away, and is being succeeded by a live and progressive class, who not only can adapt themselves to changing conditions as they arise, but who are constantly alert to detect or originate new and more practical methods.

### Gaze in Better Class Stores

The most outstanding feature in those establishments which are securing the greatest success to-day are science and system. Take a trip through any of the better class stores and you will have the fact driven home in a convincing manner. In speaking of high-class stores, I do not necessarily mean large ones, for there are many of the smaller ones that have excellent systems—system is needed there as in the larger. I know of a comparatively small man in a small town which I believe is making a maximum profit on turnover, at least much larger than several other stores that I know of are making on the same turnover. It is not because he is getting a larger profit on his shoes, but by a proper system, he is conducting his business with the least help and least labor. A proper system of checking eliminates all leaks which might creep in as in non-charging of goods, wrong extension of invoices, loss of customers by mistakes, wrong change making, etc. By introducing

system into the collection of accounts he has reduced loss through bad debts to a minimum.

System is essential in every store and particularly in the shoe store. The establishment without system courts disaster. It is like a ship without a compass. It may, for all the merchant knows, be heading straight for a rock. No business is so small that it does not require system, and rigid system, too. It is best to start while the store is still small—train the child in the proper way while he is young if you want him to follow the right principles when he grows up. A system that grows up with a business, that becomes improved as the experience of the merchant broadens, until the whole business of the store moves like clock work, is the kind that counts. For this reason a proper system should be introduced into all departments of a business at as early a time as possible and improved from time to time as found or deemed possible.

### Lack of System is Menace

System in every department saves labor and therefore time, and as the old proverb says, "Time means money." Without it there can be no proper check on losses on the guarding against mistakes which is necessary in the well conducted store. Carried far enough it tells a merchant exactly how he stands and how he is progressing.

True, system like many other things, may be carried too far. It may make more work than it saves. It may be a burden upon the clerk and his employer also. An examination of shoe stores to-day, however, shows that there are one hundred stores suffering from lack of system to one that is suffering from an excess of it. Scientific management is so urgently needed and of such vital importance that the series of articles which is to follow should be of both interest and value. They will be made to apply particularly to the shoe business so as to be of practical value and will be such as can be applied to any size business. While there may be some different details necessary to suit the requirement of particular stores, the underlying principles are much the same and every dealer should be able to apply them to his own business.

It is well for the shoe merchant to bear in mind the importance as well as the opportunities in his business. By

the use of scientific methods it is lifted from the ranks of labor to a higher plane—that of a science and profession, and at the same time means greater success for the dealer. The man who enters into any enterprise should do so with a determination to make a success of it, and success to a large extent means diligent application. There is no royal road to success. You must travel the same old road that all those before you have covered. It leads up over the hills of incessant labor and down through the valley of obstacles. Unless you are ready to follow this road you cannot expect to succeed or become prominent in your business.

### The Buying End of the Shoe Trade

It has been said that buying is the most important part of the business. "Goods bought right are half sold," is a happy phrase that has been given much prominence. Just whether this is true or not is a question, but undoubtedly one thing is certain—that buying is an exceedingly important factor in retailing shoes. There are many things that enter into the make up of a successful business, and weakness in any one is liable to bring disaster. A chain is no stronger than its weakest link.

A shoe merchant in a fair sized Manitoba town failed the other day. He started out some few years ago with excellent prospects. He had some little capital. He selected a good town and was well located. He had been in the footwear business several years, could gauge the quality of leather to a nicety, was an excellent salesman, and could dress windows—and yet he failed. I asked the head of a wholesale house in quite close touch with his business what was the reason for his failure. "He didn't know how to buy," was the answer.

"In the first place he didn't study the kind of customers with whom he had to do business or gauge the class of footwear they would want. In first opening up, he went ahead and purchased the class and variety of shoes that had been carried in the store where he had previously been employed. It composed, to a large extent, high priced and fancy lines, while the people in this town were in the habit of buying shoes more conservative in style, shape and price. He soon had to add these to his stock, while the more fancy varieties remained on his shelves and found little sale. Then, again, he dealt with many firms, buying an odd lot first from one man and then from another with the result that before long he had a very extensive stock but an awful variety assortment with very few lines complete. Then, as styles began to change, he found a good deal of his unsold fancy stock belonged to the "has-been" class. It was shifted to the rear and new up-to-date stock put in. Things drifted along this way until the inevitable came—he failed. He was a good shoe merchant, but he had not developed his buying ability."

### Stickers Prove to be Curse

There are few businesses in which buying is of such moment as the shoe trade. Unless proper care is exercised, a good deal of money is soon tied up in dead and unsaleable stock. Stickers are, perhaps, the curse of the shoe business and not infrequently the shoal upon which many dealers go aground. The changing styles and whims of the purchasing public make good sellers of to-day, the unsaleable stock of to-morrow. When the shoe buyer, encouraged by the promising sales of a certain line goes back into the market to buy additional stock, he wants to tie the life line short enough so that he will not wade in over his depth.

A dealer in a small town instanced a case the other day that illustrates the point. "It was some years ago," he said, "that I got in my first stock of white footwear. The first shipment went out like hot cakes—the white shoe craze had apparently struck the town. I immediately sent in strapping big order for more stock. It came along and

at the same time came a corresponding flattening in the demand. Overnight, as it were, people seemed to take a sudden dislike to white shoes, and although I put my best selling effort behind them, when the frost was on the pumpkin, those shoes were still loafing on my shelves. That experience, although dearly bought proved valuable to me. I now make more sure of my ground before stocking up heavy on any line that is liable to fall flat."

There is such a thing as being over cautious, to your own disadvantage. It is sometimes the case that a dealer will refuse to take up what might prove to be an excellent selling line because he fears the possibility of the shoes not taking well. Then, again, lack of confidence in the sale of a line may cause the dealer to put in such a small stock that he has not enough to make a showing that would attract attention and effect sales. However, if a dealer gives enough study to his customers he can gauge the selling possibility of a line pretty closely. It is all right to take a chance once in a while, but combine with that chance as much judgment as possible. There is, possibly, more money lost in the shoe business by taking chances than by not taking them.

### The Hope of the Dealer

The ideal of the retailer who is a real business man is to secure the largest turnover possible on the smallest investment. The attaining of this ideal depends largely on the buying—the purchasing of those lines which will prove quickly saleable. With this in view, the merchant will aim to keep his stock down, yet complete enough to supply all the wants of his customers. It is false economy to save the few cents it would cost to carry a certain shoe and lose the sale because you have not got it in stock. There are many dealers, however, who could carry a smaller stock and do as much business if they would keep closer tab on their stock.

Here is where the want book proves its value. It should be kept in a handy place and everyone in the store instructed that when they sell a certain line to run their eye over the stock and note if it will soon need replenishing. If so, it should be noted in the want book. In this way, a comparatively small stock can be kept and yet the possibility of running out of goods guarded against.

I know a dealer who, in addition to keeping a want book, makes it his duty to run over his stock every Monday morning to ascertain if there are any of the staple lines getting short.

Future buying is an important part of the dealer's work and one which calls for the exercise of his best judgment. In regard to staple lines, it is not so difficult. The experiences of previous years can be taken as a guide here in regard to kinds and quantity. In fancy and novelty lines it is more difficult, and the dealer should combine with his own judgment, all the information he can get from the best sources. The trade journal is a valuable aid in acquainting you with the general drift of styles and fashions while the advice of a well informed and reliable traveler is also a help. Yet, behind all this must be your own judgment as to what will sell in your locality. Consult with your clerks. They can often give you valuable pointers in this respect. Members of your family may also give aid. A man cannot be too careful in his buying. There are advantages in going to market in the fact that there is a more extensive stock to choose from and you have a chance to look around and see what different houses are showing.

In buying, you must decide whether price or quality is to be of the greatest importance. To-day, quality is becoming of increasing importance in the foremost shoe stores. A person will remember the good quality of an article long after the price has been forgotten. The "price" system is the sky rocket method of doing business. It makes a big commotion for a time."

# Does Gratitude Play a Part in the Shoe Business

Wholesalers Contend that as Soon as a Dealer, Whom They Have Helped Financially "Finds His Feet" He Does All Kinds of Mean Things—Retailer Instances a Case Where the Manufacturer Handed Him Scurvy Treatment—Some Actual Experiences

The sense of gratitude, while it is an inherent quality in some makeups is an entirely absent element in others. How quickly some people forget their friends and how long they can carry a grudge against their enemies is well known to the most of us. Frequently in this world if a man or woman "gets on a bit" and attains a higher place in the social, the financial or business sphere, they pass up old friends or assume a distant, standoffish air. To dilate upon this phase of human nature would merely mean the recital of an experience more or less common with nearly every firm or individual.

There are many shining examples of gratitude and courtesy in the mercantile world whereby wholesalers who have helped retailers over stoney places have been well repaid. On the other hand, the evidence of the oft repeated expression that gratitude is a lively sense of favors to come (but does not include thanks for any concessions that may have passed) is exemplified every day.

## When Prosperity Comes

A number of retailers and wholesalers with whom this question has been discussed think that the blame is about equally divided. Of course, the retail men censure the wholesalers and the latter in turn have not a good word to say for the dealer. "There is a shoe merchant in a Western town," remarked a well known jobber, "whom I helped and encouraged in every way; in fact, I renewed his notes time and time again and carried him over two or three trying periods while others were anxious to close in and clean him out. Well, by and by a turn of affairs came and this fellow started to make money. He owed me about nineteen hundred dollars and came into the office one day and paid off the full amount. I asked him if he did not want any more goods and he rather abruptly answered 'no.' I inquired if he had any fault to find with the shoes, the service or the accommodation we had given him and he replied, 'Not in particular, but I think I can do better elsewhere, and I have been dealing with you long enough.' No persuasion or logic could change his attitude and to-day this fellow whom we practically carried for two years does not buy \$25 worth of footwear from our house in a season, but I presume it is the old story. A retailer will grant credit to a certain family for shoes when the father is out of work or sickness is visited upon some member of the home group. Just as soon as conditions are normal and that family have a little ready cash they will walk right by the shop of the dealer, with their head away up in the air, and hand their good coin over to a competitor who has possibly refused them credit and will allow the account to remain long overdue on the books of the other fellow. That is one reason why many foot fitters throughout the country are adopting the cash system. Very few of their patrons ever give them thanks for privileges or special favors."

## Grasping at the Shadow

Talking with a retailer the other day he informed the *SHOE AND LEATHER JOURNAL* that, while a number of his class might be forgetful of favors and concessions granted them by wholesale houses and manufacturers, still, he never knew one of the latter class but who would squeeze a retailer if he got a chance. "I had a little experience like that myself," he narrated. "I had the agency in this town for a certain line of women's shoes which I pushed for all I was worth and featured in window displays and advertisements. Three years ago another man sat up in opposition

to me. He came here with a flourish of trumpets and possessed all the fascination and arts of a confidence man. He wrote to the firm (the control of whose shoes I had), and after tactfully finding out about how much business I did for them, promised to double the amount of the order I had annually given if he could secure the agency. He held out various other inducements and, as this fellow had good financial backing but really no other capital in the shoe business except a smooth tongue and a supremely confident air, the manufacturer took the exclusive representation away from me and handed it over to the new rival.

"Did he make good? No, and in less than a year and a half he sold out his shoe stock to a departmental store and left for the west. That was the last seen of him. He did not sell nearly as many goods as he contracted for and it was not many weeks ago that the traveler for this shoemaking firm came around, hat in hand, and with a subdued, pensive air, asking me if I would not resume the agency for the X— brand. He said that his house were deeply sorry that they had been misled by this other fellow and he wanted to let bygones be bygones. I am too old a bird, however, to be caught by this sort of chaff. Thus, all kinds of promises are often held out by manufacturers, that if a retailer will give them so much business they will grant him all kinds of facilities which frequently do not materialize."

In nearly all disputes between wholesalers and retailers it is frequently a case of the pot calling the kettle black.

## Has Grown Up With Business

One of the leading shoe men of Ontario is E. A. Stephens, 187 Sparks Street, Ottawa. He has been connected with the shoe trade in the Capital city for over a quarter of a century. He started in business with his father, A. J. Stephens, who passed away over a year ago. Mr. Stephens, Jr., was born in Ottawa in 1870, and attended the public school, provincial

model school, and later, the Collegiate Institute. He has always done business at the old stand and has made a success of it. His father began in 1868, and the Stephens store is one of the brightest, best laid out and progressively conducted footwear houses in Eastern Ontario. The volume has been built up to its present large proportions by handling superior lines, by courteous service, and by giving undivided attention to the individual wants of customers.

Both branches of the trade seem tarred with about the same amount of pitch, or pitch into one another with equal vigor.

Here are two diametrically opposite types of retailers outlined by a manufacturer the other day. The one lives in the East and the other in the West. "The Eastern youth was head clerk for a shoeman who had been going bad to worse and was on the verge of making an assignment. The clerk came to the city one day and said that he thought that, with assistance from us, he could, with what small capital he had on hand, take over the business. We consented to give him certain concessions on condition that he would bind himself to buy seventy per cent. of his goods from us, and send us a detailed monthly statement of his receipts and disbursements. He faithfully kept this up for sometime and by strict attention and faithful work soon began to surmount all difficulties, when there was no need for a monthly statement. That fellow has not forgot our kindness and, while he does not to-day order nearly as large a percentage of goods from us, still any business he can throw our way he generally does. He seems to think he is under a sense of duty or obligation to us, whereas, he is now perfectly free financially and otherwise to enter the market and purchase where he pleases. He says that he is not going to burn the bridge that carried him, or, in other words, kick down the ladder by which he climbed. This is one sample of appreciative, thoughtful, enduring friendship."

"Here is a specimen of mean, short-sighted ingratitude. A young chap whom we knew thought he would like to go into the shoe business and he had a friend with a little capital. We granted him credit to the extent of two or three thousand dollars until the firm began to get its feet and felt that they could order from other houses. We made no particular objection and, as our account was an open one and was kept down to fairly reasonable proportions, we felt perfectly safe. By and by this sum amounted up to seven thousand dollars and on top of this the firm had ordered from us about three thousand two hundred

dollars' worth of spring goods, some of special make. We had learned that this firm were paying other houses as rapidly as their notes matured, while we, who had extended them the privilege of an open account, were getting only two hundred and three hundred dollars at a time. Well, we thought in view of what we had done, it was better to come to a more definite understanding and accordingly we wrote the senior member to come to the city to discuss the thing. He came and the conference was a pleasant one. He promised to lessen the amount very considerably, and in the course of a few days sent a cheque for about \$2,000."

#### A Mean Kind of Treatment

"We thought now, he is doing very well and accordingly we set to work to make up his spring order. About three weeks after we received a cheque for the balance, and were told that they would not require any of our goods. We wrote back stating that a couple of the lines were specially designed for them, and that already one shipment was on the way. Back came the rejoinder, 'we will take the one lot that is on the way, but if you send any others you will have to pay freight both to and fro.' Of course, this firm had simply gone to another factory and laid the whole situation before them, and the other house, seeing an opportunity to corral all the business, advanced our quondam friends the money to clear off the amount of the open account they had with us, and by this means secure their order for spring footwear. I have only given you the details of the transaction in the rough, but it shows how thoroughly ungrateful some retailers are and the unscrupulous and underhand methods which a rival wholesaler in another city will sometimes adopt in order to get the entire business of a new account and have other contracts cancelled.

"Apparently some competitors go on the principle that anything is fair in love and war and the shoe trade. But there, I have rehearsed enough troubles for one day. Perhaps after all mine are light compared with the tribulations of the other fellows down the street."

THE accompanying cut is a photo of one of the "Nugget" signs which shows the class of advertising done by this enterprising shoe polish firm.

# The Arts and Dodges of Shoe Bargain Shouters

They Yell Snaps and Sale Until They Are Blue in the Face and Wonder Why the People Don't Bite—If You Have a Sale Make it Genuine and Keep Faith with the Public—Some Signs that Are Really Laughable

One wonders how far the bargain craze will extend. It has permeated nearly every line of business and been shouted from the house tops so often, that to serious minded and discriminating buyers, the sound no longer has any attraction.

It has filtered down from the departmental establishments through various lines of mercantile effort—the grocery store, the drug store and now in a number of cities in Canada, one can witness such signs as: Jones' Bargain Shoe House; Big Snaps Every Day; Brown's cut-rate boot shop; Lowest prices in town; Blue's cheap shoes; War on high prices, etc. These, and many other signs, of similar character can be observed on many streets.

Now, if these announcements did duty only one or two months in the year, the public might place some faith in them, and in the motives behind the motto. But there they are, doing service year in and year out. Naturally, like other signs, the public become so familiar with them that they pay not the slightest attention. The writer, in his travels, has noticed one large firm, which always has a different sign out from one year's end to the other. As soon as the cotton banner becomes too bleached or weather worn, so that the public cannot read it, another is put up, and this is the way the announcements go:

"Money or Bust Sale."

"Let Go Sale."

"Round-up Sale."

"Cut Loose Sale."

"Cut to the Heart's Sale."

"Apply the Knife Sale."

"Semi-annual Sale."

"Odds and Ends Sale."

"Sweeping Out Sale."

"Tremendous Slaughter Sale."

Now, passers-by gaze so frequently upon these flashy announcements that they wonder whether the proprietor ever sold any regular line of goods at a fair profit, or a price that would yield a decent living margin for himself.

## Make a Long Lived Sign

In another city, for over a year now, there has been displayed a sign—"Selling Out Sale—Goods must go regardless of cost." Now, if a man is going to hold a clearing-out sale, he can surely dispose of his stock in less than twelve months. But there it is—there the sign does business with occasional variations. Naturally the people must get tired of it, and troop by the store to buy their goods at some other place.

How different is the case of another retailer in an Ontario city, who had always conducted a high-class business, and recently sold his building. He decided to move to the west and issued announcements that a special sale of the stock, with no reserve, would be conducted from April 5th to the 19th. The balance of the goods he intended to take West, or dispose of en bloc.

Now, this was a shoe man in whom the public had confidence, but so accustomed had some people become to thinking that it was utterly impossible for a store to observe its announcements, that on Monday 21st a dozen or two presented themselves at the door, intending to get a slice of the real bargains. They soon discovered that the doors were closed and no more shoes were for sale. Here is a case of where one man lived up to his word. When he made an announcement, the majority of the public had confidence. He did not shout so frequently from the

house tops that people overlooked his announcements. They came in droves, and he marked all goods exactly at cost, plus 5 cents a pair, to be on the safe side. He made careful preparations for this sale and had circular tags of different colors attached to the cartons—each color denoting a particular kind of leather. Stamped on the surface of this disc, was the price in plain figures, so any person passing along and looking at the label could tell exactly what the former figure was and also what the sale price was.

## Bold Strokes in Red Ink

Too many shoe merchants, in order to convince the public, will take a card, cut out in diamond or heart shape—mark \$5.00 or \$6.00 upon it in deep blue ink, draw a couple of red lines through these figures, and then mark below \$3.00, \$3.39, \$3.69 or some other such prices, seeking to convey to the public the impression, that the former price of the article, was the one marked in blue ink, and that the

## He Began to Hustle Early

The good position which R. M. Northgrave, of St. Mary's, occupies as a shoe retailer, has been won by his own unaided efforts. With him it has been a case of "hustle" from early youth. He had to leave school when very young, to carry parcels for a dry goods store in his native town of St. Mary's, where he was born in 1883. Mr. Northgrave started in the shoe business in 1899, with R. T. Gilpin, of St. Mary's, and was with him for two and a half years. He then went to work with J. Ready and remained until the spring of 1910, when he passed a few months in the West. Returning to his home town he bought out T. McGolrick. After being in that store for a year and a half, Mr. McGolrick,

the owner of the building, received a good offer for the property. Mr. Northgrave released him of the lease, and, as the Gilpin store was vacant at the time, he moved into it. This was the shop where he first started in the footwear business. It is one of the finest in St. Mary's, and a credit to the mercantile places of the "stone town." The second year that he was in business, Mr. Northgrave's turnover increased \$4,000 over the first year, and during the present year it is likely to record a larger increase. Mr. Northgrave handles traveling goods, and has worked up a fine connection in this department. He is a progressive young business man who has the confidence of the public.

reduced figure shows the tremendous reduction of \$2.00 to \$3.00 per pair. Now, this game is an old one and has ceased to attract the reputable buyer, because, in the first place, the majority of persons who have adopted this procedure have doctored up the former selling price by boosting the figure anywhere from 15 to 25%. There has possibly been a real reduction from 10 to 15% in the sale, but the impression is conveyed to the creditable people that the reduction is severe—somewhere around 40 or 50%.

In the genuine sale spoken of above, the public were not led astray by any such figuring or pyrotechnics, for on looking at the carton, there was the former selling price marked in plain figures, while the disc told the figure at which the goods were being cleared out.

#### Trying to Fool the Unwary

Another scheme adopted by a certain man, is to have a huge "splasher" that can be seen away across the street, with an immense figure 3. The sign reads—"Any shoe in this window—\$3.00." At least it appears to read that way, but on a close examination, one can discover the small numerals, .49, .65, .75, as the case may be, in an inconspicuous place on the card. Of course, the object of this flaring figure 3 is the hope of getting passers-by inside the shop and trusting that they will not notice the extra cents on the selling price, when he will endeavor by persuasive arts to sell them something in any event.

Many other instances of the bargain sale and its special features might be presented. Like the boy who all the time

cried: "Wolf! Wolf!" and aroused the neighborhood to his assistance, until the people at last paid no attention to the alarm and the youth was finally devoured by a famished beast, so the cry of "Bargain! Bargain!" and "Sale! Sale!" does not capture a percentage of the better class of trade like it once did.

In the foregoing no attempt has been made to cast any reflections or make disparaging allusions to genuine, bona fide sales. In fact, nearly every shoeman has to hold these at certain periods of the year, in order to clear out odds and ends and other lines, which accumulate or prove slow sellers. The success of these sales lies in the fact, as one Western man says, of their soundness and honesty.

"I always have a successful sale twice a year," he added, "Why, because the people have confidence in me and my methods, and when I apply the knife, it is inserted in the figures all over the store. The public can get any shoe in the shop during this sale period, at a considerably lessened figure. If I am only clearing out certain lines, I distinctly say so, both in my window cards and in my advertisements in the press. Too many shoe men make a reduction on a few lines only and seek to convey the idea to the trade that the decreased price applies to every boot in the establishment. Now, this is a huge mistake and sooner or later, your customers will become wise to the deception. If your sale is applicable to only certain lines, say so."

Another fruitful source of gulling the public is cutting the figure on a few lines and leaving the idea that every line is reduced. Be honest with the public if you want the public to be honest with you. As a rule, the trade of the average shoe man is built upon a family basis—upon the constantly recurring patronage of the members of that family, and not upon solitary transactions. The people, who chase here for a bargain one day, will chase somewhere else to-morrow. This transient, evanescent clientele may keep a certain kind of boot shop going, in a crowded section of a large city, but the average dealer, as already pointed out, has to build his foundation upon more permanent soil.

#### No Trick to Slash Prices

Generally speaking, the one who travels to Brown for a cheap pair of slippers to-day, will go over to Smith's for cheap oxfords to-morrow, and on to Green's the next day or week, for a pair of boots for little Willy or Nellie, etc.

Any one can sell shoes at reduced prices or so-called reduced prices, but to market footwear at a reasonable profit is far more creditable and shows a higher type of business ability and salesmanship talent, than to be known as a "cut-rate Johnnie," or a shoe house that has shouted bargains from the days of the flood, and possibly will continue to shout them until the grim reaper comes along.

### The Shoe Clerk of Most Value

An Owen Sound dealer, speaking of the problem of help in the shoe store, writes:

"I see some talks on how a boss should bring up his employees and make them do the dirty work such as cleaning stores and dusting. But I tell you that clerks are too independent. All they try to do is make a showing in their sales and then ask for more money. I have a salesman who asked for an advance the other day calling my attention to size of his sales for the month. I had to give him one. However, I told him that I did not consider he was worth as much to me now as he was at this time last year. He was not paying enough attention to getting rid of stickers but just trying to make a showing in his aggregate sales. I do not consider a salesman altogether by his sale. The man that tries to keep his stock clean and sell goods that are hanging fire I believe the most valuable to me."

### The Latest Thing in Heels

In Paris the high heel is still very popular, and this spring it is more pronounced than ever. In fact, the heels in the upper picture are so high as to necessitate the weight of the body falling almost entirely on the ball of the foot.

# Some Suggestions for a Patriotic Window

CONDUCTED BY A. A. DAoust, MONTREAL, QUE.

## VICTORIA DAY DECORATION

### An Inexpensive Window Idea for a Shoe Merchant in a Small Town or Village.

This window requires very little time to make and should cost practically nothing as it is composed mostly of flags and these can easily be borrowed or rented.

Make the arches as in the sketch or to suit your window. When this is done, cover smoothly with white felt.

At the top and in the back use a large Union Jack stretched smoothly across or draped. Use your own judg-

ment. In the arches drape small Union Jacks, caught in the centre by small artificial wreaths, if these can be had, if not, use large bows of red, blue or white ribbon.

Try to get a large wreath to fasten in the centre between the two arches, using four small Union Jacks as in the sketch, or arrange the flags to suit your display or size of window.

If your window has mirrors at the back you will find that these will improve the appearance of the arches. If not, and you find that the arches look too bare or not attractive enough, stretch white or blue crepe paper where the background shows through the arches, or if you have some blue or white soft material which you can hang from the top as a curtain it would still improve the appearance.

The figures 1837 and 1901 can be cut out of cardboard, gilded, and pasted on the felt at the top of the arches.

Cut out an oval frame from some lumber and cover with blue felt, in which put a picture of Queen Victoria. If this is impossible, try to borrow any large picture of our late Queen in any kind of frame and use the same in the centre.

Cover the bottom of the window with white material or white crepe paper neatly.

This Victoria Day window, with slight alterations, may be made to do service on May 26th which is the birthday of Queen Mary, and continued through until June 3rd, which is the birthday of King George V.

## CANADA AND THE EMPIRE

### A Simple and Attractive Window for Victoria or Empire Day Suitable for City Retailers.

First of all make a base using half-inch lumber, giving it the shape and size suitable for the window in which it is

to be used. When completed cover neatly and smoothly with white felt.

If the window has no cross piece as is illustrated in the sketch make one of lumber and cover with red felt and nail across the window.

Make two frames as shown in the sketch, and paint or cover them with felt. These can be of cheap lumber. Use a piece of white cardboard and nail at the back the same as you would in a picture frame. Cut out two large letters to fit in, using cardboard, gild nicely and when this is completed stick the letters on the cardboard in the frame.

Secure a Union Jack in size suitable for the window and make or secure a flag pole. Attach the flag to the top as in the sketch and let it hang as nearly like as shown in the drawing as possible, using a small piece of wood to hold it at the left hand side, at the bottom. The flag will completely hide this, and the wood will hold the flag in proper height at the back.

Endeavor to obtain an artificial wreath, and fasten it to the pole as shown in the illustration. The ball on the top of pole should also be gilded. Hang white and blue ribbon from the pole letting it fall gracefully on the ball; also use small wreaths at each side with two small Union Jacks.

On the floor of the window use white felt or puffed silk would look very nice. The figures 1837 and 1901 should be cut out of cardboard and pasted on the felt base. This would make a most attractive display as practically everything could be borrowed from people who have flags which they use for decorating. A little care and neatness exercised will bring satisfactory results. Display very few shoes as

this kind of a window requires only a limited number to have the desired effect.

A neat card with the words "Look your best on that day" printed upon it would seem very appropriate, but the trimmer or retailer can easily arrange wording to his judgment.

With a face that vainly endeavored to appear mournful, and eyes that vainly strove to produce a respectable flow of tears, Patrick Murphy O'Dolan strolled into a dry goods store. "I want yer to tell me," he murmured, "phwat the custom is for th' wearin' iv mournin'?"

"Well," mused the assistant, "of course, it varies. If it's a less near relative, a band of black on the sleeve or hat; or, if it's for a friend, just a black tie."

For some moments Patrick Murphy O'Dolan considered. "Well," he whispered at length, "give me a shoe lace. It's me wife's mither!"

# When Quitting a Job Shake Hands With the Boss

It Will Do You No Harm and May Prove to Be a Happy Move Later on—Don't Carry Any Grudge or Spite Out on the Street—Employers Also Have Some Faults that Might Be Corrected—Parting on Good Terms

"Where were you last employed?"

"Oh, with S—— in N——."

"Well, I will write him for a reference, and if he says that you are all right, come around in the course of a week, and I will probably give you a position."

"For gracious' sake," rejoined the applicant, in subdued excitement, "do not apply to S——. Believe me, I left him for a good cause and he is the meanest, closest, most tyrannical, and brow-beating crab, that I ever worked I was mighty glad to get clear of him."

"Well," replied the employer, "it so happens that I have known S—— for many years, and I think that if there is any fault, it is not altogether on his side. He has the reputation of being a thoroughly consistent, upright and square fellow."

"Well, he is not," hotly returned the young man. "There is not a decent element in his make up, not an honest hair in his head."

"That will do," declared the retailer, "You may go. I do not think you will meet my requirements at all. Good day, sir."

How much better it would have been had Broder, the applicant for this position, which was a good one, left his late boss in a friendly manner instead of picking up his coat and shooting out of the door one day, after getting his pay, as if he had a hurry-up call to attend a fire.

There may be lots of faults on either side, but it is not always well to "jump your job" as quickly as you jump into your clothes, when late for work. Scores of illustrations might be furnished of the advisability, as well as the wisdom of quitting a man like a man.

## Leave on Good Basis

When you have a row with the boss and quit the firm—no matter what may have been the cause of your dissolution of business ties, leave on friendly terms. It is not good policy going around knocking an establishment after you have once left its services. You do not know what moment you may require a word in season or a letter of recommendation from your former employer. As a jovial Irishman has said, it is better to have the goodwill than the illwill of a dog even though that dog be a common street mongrel.

The older a man grows the more tolerant he becomes. Youth is hot and the blood rushes to the head. The main spring of action is often too hasty. As a salesman grows in experience and insight, if he has any trouble with the house, he generally leaves it on good terms. It pays him to do so in more ways than one. To go around breathing a spirit of animosity and hurling charges of one kind and another at former paymasters does not come with very good grace, no matter how disappointed you may be or scurvy the treatment that has been handed to you.

"Forget it," is a good motto. You have seen two political opponents on the platform. How they go for one another! You would think that they were life long enemies. They continue to strike until election day, but how soon is all difference forgotten when the result of the ballot becomes known. The vanquished is often the first to congratulate the victor and express pleasure that the better man won. The victor, not to be outdone in generosity of sentiment and good wishes will in turn express the hope that the loser may have better luck next time. It is pleasant to witness a hearty hand shake and hearty greeting.

Inquire of any experienced shoe traveler who knows

his business why he has severed connection with such and such a firm and he will tell you quite frankly that it was because he thinks he can do better with the one he is now with; that he has a little wider territory, or a superior line of goods. Try to get back of all this and ascertain the real primal cause of severance, and you will strike a stone wall or granite pillar. Why? Because the road man, while he sells goods direct to the retailer, is never a retailer himself of trouble, disappointment or annoyance. The majority of men in large positions when they are no longer continued at their post and either resign, or in plain language, are "fired," speak kindly of past associations and do not go up and down the country with their heart on their sleeve asking for pity or pleading for mercy. It is only the office boy or the junior salesman who jumps his job all of a sudden for a dollar or two extra a week and then goes around calling his former employer a tight wad, a skin flint, or a crank, and knocking him every chance that he gets.

## An Instance of Petty Spite

Speaking of his experience the other day, the head of the men's department in a large store said that while he had during the past fifteen years been employed in several different places, he has always left the house on good terms, no matter what might have taken place during the time that he was in their service. "It pays every time," he says "because you do not know what moment you may require some advice, a letter of recommendation or a good word from the man with whom you have been associated. He will grant you this if you are not hasty in leaving, either in word, deed, or action."

On the other hand, employers are, sometimes, unreasonable in their attitude towards employees. Not long ago, the buyer of a large Western Canada shoe establishment felt that there was not much of a future for him in connection with the firm, and his authority and judgment being often questioned, he made up his mind to leave. He gave due notice, but the proprietor was extremely huffy and scarcely spoke to him during the two weeks that he remained.

This particular young man went in to bid his boss good-by, and the latter merely grunted out a gruff farewell. The clerk journeyed farther west, and in another city secured a highly desirable position. The firm that he was about to engage with, wrote to his former employer for a reference, and the answer received ran in these words:—"Mr. T—— was in my employ for three years and, after giving him a fair trial, I was forced to dispense with his services, because of his unsatisfactory selling ability and his poor judgment in buying. He was also rather indolent in disposition and careless in his methods. I can in no way endorse his qualifications."

## Faults on Both Sides

This was certainly carrying vengeance with a high hand, for Mr. T—— had acted a thoroughly honorable and trustworthy part in his relations, and the shortcomings which were charged against him only existed in the prejudiced mind of his former employer. This shows all the frailties and the weaknesses in the relations between "boss" and "bossed" are not on the one side. There are mean, cross-grained and warped individuals in all ranks, but, happily, they are in the minority.

It may be put down as a safe rule that, with few exceptions, no matter what may be the cause that leads up to the parting, it is well to have an agreeable and pleasant

understanding, when separation takes place. No person in this world is immune from sickness, reverses or misfortune of some character.

It is barely possible that an employee may some day want to seek re-employment with a former establishment, or a former proprietor may desire, in an emergency, to get back an old hand. This is easily accomplished when the understanding at leaving is of a nature that permits of a re-union under pleasant and mutually advantageous circumstances. The calm, cool, calculating individual—not the one who flies off at a tangent or grows fussy or irritable over some incident, trivial or otherwise—is the one who wins the greatest measure of success, and attains the higher places in the mercantile arena at the present times.

### Store Keeping Suggestions

Let every day be cleaning day in your store.

The smile that won't come off is a trade-getter and a trade-holder beyond comparison.

Until you have in operation a good accounting system, you are not a good merchant.

It doesn't pay to talk too much. Always remember that you will not offend anyone by what you don't say. Cultivate the good will of your clerks. If they like you, they will make you more money, and be glad to do it. It doesn't pay for a merchant to be too wise. Such an attitude is not relished by the better class of customers.

A combination of ink and paper, properly combined and properly distributed, has its value, but it is not the whole thing.

Business is one continued competition and the fittest always survive. Which is the fittest, you or the catalogue house? Gross profits are often very false and fickle. Don't be fooled by them. Keep your eye on net profits, for that is the only reason for your being in business.

### Began the Shoe Game Early

At the age of 14, Leslie T. Porter began clerking in Wm. Millen's Shoe Store in Yarmouth, N. S. He remained with him four years, after which he went with W. H. Dane, as manager of his shoe store and stopped with him four

years. He then engaged with the late S. A. Crowell, as manager of Crowell's shoe store in which capacity he served for eleven years. Eight years ago, he formed a partnership with J. J. C. Robbins, and the two young men went into business for themselves under the firm name of Porter & Robbins, opening up a fine store in the Studio Block in Yarmouth. Mr. Porter has been 27 years connected with the footwear trade and attributes much of his success in this line to the thorough training that he received as a boy under Mr.

Millen, who was an experienced shoe man, having been with Alexander, of New York, for sixteen years previous to coming to Yarmouth. Mr. Porter is 41 years of age, and has two boys, who are rapidly growing up and some day, will likely prove as good shoe men as their father, and that is saying something for their future.

### Junior Partner Is a Hustler

J. J. C. Robbins, who is junior partner in the firm of Porter & Robbins, dealers in reliable footwear, Yarmouth N. S., was for thirteen years in the employ of S. A. Crowell,

in Crowell's shoe store and later as manager of the Cook shoe store. In 1905 he joined forces with his friend, Mr. Porter, and they opened out for themselves. They have met with splendid success and have the exclusive agency for several leading makes of shoes. Mr. Robbins is 35 years of age, and is the father of four bright boys, two of whom got into the boot business early, according to a picture which was shown of them standing in an immense rubber shoe and published in the SHOE AND LEATHER JOURNAL some months ago. Porter and Robbins have worked up a solid, substantial family trade and are among the brightest shoe men in the province of Nova Scotia. They certainly make a strong team who pull well together.

### Changed Politics 47 Times

A former commercial traveller across the border kept a supplementary expense and statistical account on his last trip through the near south. He showed the result to a few friends the other day:

Traveled .....	2,896	miles
Carried samples.....	400	pounds
Showed samples.....	341	times
Sold goods.....	178	times
Have been asked the news.....	5,621	times
Have told the news.....	1,983	times
Have lied about it.....	2,001	times
Didn't know.....	1,637	times
Been asked to take a drink.....	1,904	times
Had taken a drink.....	1,903	times
Refused to take a drink account sick-		
ness).....	1	time
Changed politics.....	47	times
Flirted.....	987	times
Charged firm expense per day.....	\$7.62	
Actual expense per day.....	\$4.91	
Net profit per day.....	\$2.71	
Cash on hand.....	\$0.00	
This account was not filed with the firm.		

# STRAY SHOTS FROM "SOLOMON"

"Where the carcass is, there will the eagles be gathered together." Graft is the natural heritage of humanity.

GRAFT  
SPIRIT

"What can I get out of the other fellow?" finds its echo in business, politics and even religion. Ottawa or Washington, after an election, is an example of the greed of all classes for the spoils of the fight. What a contrast is the sentiment of the great epistle, "I seek not yours, but you." What a great place this old world would be if people lived on such a plane as that? Not for themselves, but others. It is as true to-day as when Solomon wrote the words that "Many may seek the ruler's favor," whether it be for office, money or financial backing. There are men, fortunately, as there always have been, who have enough of the other spirit in them to think of their neighbors and act for them.

You can tell a man's character by the company he keeps and you can get a good photograph of his heart by listening to his opinions about good people. When

SNARLING  
AT GOOD

a fellow has no use for a straight man you will find that it is because he is knock-kneed morally; when you hear him sneer at virtue or benevolence you can put it down that he is a betrayer of innocence, or a close-fisted, low-browed hater of his own kind. "He that is upright in the way is an abomination to the wicked." There is no hatred so bitter and lasting as evil against good. Birds of a feather flock together, not because of the feathers, but of what is underneath. Hawks and doves, lions and lambs, thieves and honest men do not sort, and the strange thing is that the hatred is all on the side of the oppressor. When you find yourself carping at the righteous take a look within.

To some men the only interest in life's a fight, and whether it be dogs or men, they are right on the spot "helping things on." "Surely the churning of

SIC HIM

milk bringeth forth butter and the wringing of the nose bringeth forth blood, so the forcing of wrath bringeth forth strife." If trouble were not helped along by long-nosed busybodies it would die out, nine times out of ten. It is the devil in most of us that delights in stirring up hell's fires. Families are broken up, friends sundered, businesses ruined, churches split because these cloven-footed, hook-clawed, cruel-beaked, human harpies must have their prey. Better a thousand times be a bone-headed daffy than one of those slow method assassins who put the poison of strife into the heart blood of their neighbors.

Pride is a good thing in its place. Pride in a man's good name, or in what it has been able to accomplish with

ROTTEN  
PRIDE

his hands or brain is pardonable, but the sort that goes around with a chip on its shoulder and its nose up in the air makes angels weep and devils hold their sides. There are people who would not carry a parcel up street or be seen shovelling the snow from the housefront whose fathers carried the hod or shoveled coal at a dollar and a half a day. There is a kind of pride, too, that leads a man pretty near to the penitentiary door and sometimes through

it. This "keeping up appearances" keeps many a family dodging creditors and lands them at last on drudgery street. "A man's pride shall bring him low." Take pride in paying your way. Owe no man anything you can't pay without calling in the auctioneer.

The high cost of living is the cost of high living. Just ask yourself what your ideas are to-day with regard to table service compared with ten or twenty

HIGH LIVING

years ago, and that apart from the cost of food requirements. There was a time when a porterhouse steak was something to consider on a bill of fare, and when fricassee chicken denoted an event of importance in family life. To-day these things are as common as potatoes and buttermilk in the lives of our fathers. The children of this age are beginning where the father's left off and there is not enough to go around. That is the whole thing in a nutshell. As to extravagance, we can all see it in the other fellow, but we raise our eyebrows when it is suggested that we might live more simply than we do. What with amusements, automobiles, railway gadding and the other besetting extravagances of this age we are in a fair way to putting ourselves on the back street for a fresh start, which is about what happens all around every twenty years or so.

There are plenty of men who give so much time to business or even to church that their children grow up without the needed hand of restraint.

YOUR BOY

You owe to your boy more than a decent home and a good example. The thing he needs more than anything else, no matter how good he may be, is moulding. Not one boy in a thousand is fit to be left to his own bent. He is not intended to develop alone. "Correct thy son and he shall give thee rest." A good deal of the heartache of middle and later life might be avoided if fathers kept this healthy sentiment in sight. Most of us will freely admit we never got all the correction of the right kind that was good for us, and yet we go on withholding it from our own boys who need it from their very circumstances more than we did. It is easy to shape a grape-vine if you start in soon enough, but when it is left for a year or two to caprice or chance fits of pruning it becomes an ugly proposition.

Most men, at least those worthy the name of father, would choose for their sons wisdom rather than wealth. Not

WISE SONS

many would be guilty of the advice said to have been given by one man to his son: "Get money honestly if you can but get it anyway." Fortunately for the race even those who are fond of money and those who have made it by quick turns in the business highway would prefer to see their sons poor and honest rather than wealthy and crooked. A lad with a right heart and level head is a credit to those that gave him to the world. In this age money is becoming so common that those who have it are compelled to do something good with it to attract any kind of attention. But a whole-souled, God-fearing, man-loving human being is as scarce to-day as at any time in the history of the world and gets even more consideration. "Whoso loveth wisdom rejoiceth his father."

## Would You Decide with Mother or “Jimmie”—and Why?

¶ Mrs. Biggs has been a customer at your store for a few months. One day she enters accompanied by her eldest son, aged fourteen, who has just started to attend the Collegiate Institute. She informs you that she wants a pair of shoes “to fit Jimmy.” The latter is beginning to feel that he is a young man. You bring out several styles and find that “Jimmy” wears a five and a half. His mother says that her boy is awfully hard on boots and that she seems to be always buying him footwear. She thinks a box kip blucher, wide toe, plain quarter, with slip sole, Standard screw, is about the thing. Your price is \$2.50.

¶ Jimmy does not like the shoe at all and says, “all the boys in his room are wearing gun metal button. He wants a pair also.” Now, you have nothing in this line except a Goodyear welt, three-quarter foxed, slip sole, with fancy perforated tip, and solid leather throughout. Your figure is \$3.50.

¶ Mother and son have a rather earnest discussion, the former pointing out that the coarser, tougher shoe is “plenty good enough for Jimmy,” and besides, it is a dollar cheaper. Jimmy declares he wants a gun metal button or nothing at all; that he will take good care of the shoes and wear them just for school hours and Sunday; and put on his old ones to play baseball. Thus the argument continues.

¶ **To close this sale, would you favor the mother or son—and why?**

¶ For the best answer the SHOE AND LEATHER JOURNAL will award three prizes of \$3.00, \$2.00 and \$1.50 each, and for all other replies deemed worthy of publication, \$1.00 each will be paid. Everybody is invited to take part. Send in your answers not later than June 5th.

# When, Where, Why and How Do You Advertise

Many Different Kinds of Publicity—What is the Proper Outlay—Some Advertising that Does Not Pay the Retailer—Windows are an Important and Easily Accessible Medium

What should my advertising policy be?"

This is a question which confronts the average shoe retailer and it sometimes gives rise to a certain amount of worry.

There are many different forms and methods of advertising. The chief among these, of course, is by means of daily or weekly press. Shoe dealers who have indulged in all kinds of publicity, declare this as the safest, most beneficial and resultful method. Retailers in the smaller cities and towns, particularly, have found it to be the best form of publicity for them.

But there are other ways which will be found to yield returns for any outlay. One of the chief of these is the direct leaflet or booklet whereby, to a selected list of names of regular customers or prospective purchasers, matter is sent on certain dates each month or two. This method is used by many shoe firms, and has always been found to bring results. Leaflets, booklets, circulars, etc., can be used and by a fair amount of attention being given them, are sure to pay well for the time devoted to them.

The premium system, judging from the opinions expressed by various dealers, is looked on by practically all of them as a very expensive item in the store's advertising campaign, and for the amount spent on them, really eats up too much money, without giving anything like the returns possible to be secured by other forms of advertising.

## "Hold-up" Advertising

Then, there is another method of advertising, or as one retailer puts it, "hold-up" which every merchant has to encounter and overcome. This is the donating of a pair of shoes, slippers, or some such article requested by an organization, lodge, church, or social club getting up a picnic, field-day or outing. A committee waits on the shoeman, and asks him what he is going to give in the way of a prize for the races. A pair of shoes is mentioned. They would prove very acceptable, and would be much appreciated by all concerned. The dealer often feels, "Well, I can't very well turn them down. If I don't donate something, Jones up the street will, and I won't be outdone by him. Anyway, it is all advertising for me."

Accordingly, he donates, say, a pair of shoes which have cost him two or three dollars, and he does not get a cent's worth of benefit, either directly or indirectly from the plan.

Or, on some other concert or picnic program appears a small advertisement for which there is generally a charge of from three to five dollars, a guaranteed distribution of fifteen hundred or so copies being promised. The promise, needless to say, is generally made looking at the prospective attendance from a very optimistic point of view. These methods go a long way toward turning the retailer against advertising altogether.

## Becomes one of the "Victims"

The shoeman who indulges in one of these schemes, just for the sake of "being decent" finds himself in a mighty hot position. By going into it once, he enters the class of "victims" of various canvassers for donations and advertisements for these outings and concerts. They will say to him, "Well, you gave such and such a party an ad. or donation. We don't see why you should favor them and refuse us." They will very often go so far as to try and badger a retailer into giving them something, by threatening to withdraw a certain amount of trade from him, putting it up to him, of course in a very nice, but nevertheless solid way. This dealer cannot argue with them, for having once

broken the ice, he finds he is bound to lose, possibly, a good sized amount of custom and money, before he can regain his former ground.

## Window Advertising Possibilities

Then, there is another important—perhaps the most important of all methods of advertising, which present itself in the store windows. Many dealers look at window advertising from a wrong standpoint. They will spend, perhaps, \$50 for a few newspaper ads., but if they were to spend the same amount on window decorations they would expect them to last a year. Of course all decorations should be used again in different settings, providing they are still good, but it is too much to expect that they will last forever. Especially in the cities does this apply. The ad. itself cost, say \$20. The merchant thought nothing of this. If business was good the day after, he undoubtedly was satisfied; therefore why should the same amount, spent on a window trim be regarded askance, particularly when this expenditure will often suffice for three weeks or more?

To come down to "brass tacks," window trimming is just as much advertising as it is newspaper space. It should be so considered. The newspaper tells the public you are at a certain spot, and that you have certain goods to sell. Now, when the public gets as far as your window the display therein should bring out conspicuously what you have to sell. It is almost useless to advertise unless you have good displays to back up your newspaper talk.

The right kind of window advertising should be used, and a certain amount of expense is necessary to obtain results. The most direct, effective, and quickest returns are secured through the windows, and all expenses necessary to have bright, attractive displays should come out of the advertising appropriations, as it is a legitimate charge. The time that a decorator spends in trimming a window should also be charged up to this fund, according to the experience and judgment of some progressive and alert retailers.

But, to come back to the chief method used, that of reaching the public through the press. If newspaper advertising is chosen, the right kind should always be used. The advertisement should be changed often; neat, suitable cuts used, prices quoted, and some definite instructive information presented.

## Proper Publicity Appropriation

The entire appropriation for all the plans spoken of should be about two per cent. of the store's total turnover for the year, according to the consensus of opinion obtained from representative dealers in all parts of Canada. Some expend three per cent. and a few five, but the majority compute the outlay at two per cent.

This may seem large to some dealers, but the two per cent., as pointed out, should cover everything, including window dressing, time, labor and expense, the circulation of literature of various kinds, newspaper space, etc. Some shoe retailers spend more in advertising, and some less. Each man will have to be his own judge as to how his advertising appropriation for the year should be divided. It will depend a lot on what kind of competition he has, what class of customers he serves, what patrons he desires to reach, what the facilities of store are, and what lines he especially features.

Many readers may not agree with some of the foregoing statements. It is not possible to lay down a strict set of rules. Local conditions and individual circumstances must

(Continued from page 62)

## OVERHEARD ON THE ROAD

### AND HE HAS TO LISTEN AND "LAUGH"

It has been said that the real salesman is one part talk and nine parts judgment. A truer observation was never made.

"Yes," said an old traveler, who had been on the road for a Winnipeg house for thirteen years, "you must know when to keep silent, and when to talk, when to laugh and when to sympathise, when to tell a story and when to listen to the fabrication of the other fellow. I find that a great many men like to talk about themselves and, if they are not in a hurry, they think that you are not either and you must, perforce, listen. Mr. Brown will tell you, when perhaps you are anxious to catch the next train out, how he put it all over such and such a traveler or house or did up a price cutting and underhand opponent and made him bite the dust, and that he is now recognized as the local leader in the trade.

"Or he may get off an alleged funny yarn—perhaps it is ten years old and reeks with the flavor of the past—but you must laugh when the anecdote is finished. Moreover, you must laugh out good and loud as if you thoroughly appreciated its point and finesse and never heard the story before. It is better than a dose of medicine to that retailer and far stronger just then than any selling talk that you can put up on your line of goods.

### A Happy Thrust Well Received

"The personal element counts a great deal and this is how you must make an agreeable fellow of yourself. Here is an instance. I walked into a certain town the other day to sell some rubber shoes. I was asked my price for a woman's croquet and told the dealer it was fifty-eight cents.

"Well, that means sixty to me," he declared, for he is a bit of a crank and fond of argument.

"No, it means fifty-eight cents," I asserted.

"Well," he rejoined, "by the time you take wrapping paper, cartage and other expenses into consideration, it totals sixty cents and to sell that rubber at sixty-five cents per pair means little or no profit. Your price is too high."

"He thought that I would say, you cannot do business on that margin, and I would point out that he would have to get eighty cents for the shoe to make a decent margin, but I took him in another way.
