THICK HEADS who, like the old lady, would like to see the man who could "convict" them. There is the kind of "strong-minded" man who, the more you pile up arguments, the more he is against you and when you get through with him shakes hands with himself and thanks God he is not "led by the nose" like other people. He is not to be caught with chaff or driven with clubs. These people are harder to deal with than seven men that can render a reason. "Stand not in an evil thing." Don't be ashamed to turn back if you have made a wrong start. This fear of being caught in the wrong is a snare of the pit. Fear wrong more than the results of it and the world will honor you. There is a man who will likely be governor of one of the United States who was a convicted desperado. He had courage not only to quit the evil thing but face the situation out with the world.

* * *

You have had a good time. You have done pretty much as you have pleased with your life and have not so far been overtaken by the nemesis you have been told reaches after the evil doer. You have been a wonder to yourself in this respect. You have cheated and have

IT WILL COME not been found out. You have followed and taken the innocent in your snare and up-to-date you have been able to maintain your place in society and even the church. "Because sentence against an evil work is not executed speedily, therefore the heart of the sons of men is fully set in them to do evil." It is over confidence that always gets the criminal behind the bars. It is boldness borne of constant escape that finally undoes the scoundrel. You can't escape the law that says, "Whatsoever a man soweth that shall he also reap." The day of reckoning will come to you as sure as the morning sun follows the shadows of night. You can't do what you have been doing and get away with it scot free.

* * *

A woman was fined the other day for defamation of character. As she left the court she asked the judge if it was any harm to think. "Your thoughts

WHISPER NOT are your own," was the reply. "Then I think so yet," she snapped, as she flounced out. She would have saved ten dollars if

she had kept her "think." Don't keep your opinions, especially of other people, on tap. If we were as ready to give to foreign missions as we are to volunteer estimates of our neighbor's character the millenium would be here in a twelve-month. Those of us who would scorn to descend to small tittle-tattle often say things about those in authority that we ought to keep in our cheeks. "Curse not the king, no not in thy thought, and curse not the rich in thy bedchamber, for a bird of the air shall carry the voice, and that which hath wings shall tell the matter." Many a man puts a nail in his coffin by his backbiting habit. It has become so popular a pastime, this baiting of public men, that it is little wonder that decent men refuse to stand for office and those who do

feather their nests and an occasional shaft for those who often make them what they are. O for the charity that "thinketh no evil."

* * *

A man died and was buried in Paris recently who was at one time a world figure and although he left an immense fortune, and was to some extent still a public man, there was nobody to follow him to the grave but his lawyer and

A DEAD DOG undertaker, and the only reason that took them was to see that the remains were properly put out of sight. His

life had been such that even the person to whom he left the most of his worldly provisions, turned it over in shame to charitable institutions that some seeming amend might be made for a rotten life. "I saw the wicked buried, who had come and gone from the place of the holy and they were forgotten in the city." Even the world of pleasure, passion, and possession has no use for a dead scoundrel. No matter how gay a life he has led, the dead dog causes men to spit out and cross to the other side as they pass. The life of the rogue and libertine is only tolerated when it is covered up with decent clothes. When stripped naked even the pariahs of society turn away their heads and hold their noses.

* * *

You can fool the assessor, you can dodge your creditors, you may escape the penitentiary, but the bony-fingered reaper cannot be turned aside with fox talk or bluff. To see some men live one would think that there was no limit to

NO DISCHARGE the span of life. Give some thought to the fact that life and money are only for a little. The day is coming when you

will face the great issue and as you look back over the way you have come, will you be satisfied with the record as it stands today? What have you done more than gather together a few coppers and in the gathering perhaps soiled your fingers and shivered your soul? "There is no discharge in that war." You can't buy off the black winged messenger when he beckons. Better it is that you should not have been born than that he should find you with the sins on your soul that you are today hugging to your bosom. What about that innocent life you have dragged down to the level of your own evil desires? What about those you have "stung" in your gathering of pelf?

* * *

Strike while the iron is hot. Men fail because they are not ready for or equal to the opportunity when it comes. We are most of us dawdlers who let circumstances lead us instead of seizing them and using them to our immediate

GET IN TOUCH advantage. "Because to every purpose there is time and judgment, therefore the misery of man is great upon him." We don't like to be held down by laws. We are

all inclined more or less to drift and when we land upon some sand bar or go to pieces in the rapids we call heaven to witness our ill luck. Get into the way of pushing fate and don't let fate push you. Don't get out of kilter. Use the laws of nature and society to advance your interests not to hold you down. Link yourself to those laws and no power on earth or below it can stay your course. Set yourself against them and there is nothing but chaos ahead of you.

Gives Valuable Prizes for Highest Number of Votes

How Enterprising St. John Dealer is Donating Automobiles, Pianos, Silverware, China and Cut Glass—Premiums With Sales of Three Dollars and Up—Unique and Forceful Methods of Advertising—Big Turnover in Goods

It has come to be a saying in St. John, that if there's anything new worth while in sales-getting, D. B. Pidgeon is sure to have it. He is a "live-wire" in the business world of that city, and although he is quite a distance removed from the active commercial section, competitors realize that they have in him a "foeman worthy of his steel." Even out of this fact, doing business at the far end of the city, he has made capital. "I'm in the low rent district," he says, "and that's an advantage to me, but it's also a decided advantage to you who buy in my store, for it allows me to sell more cheaply than those who are located right in the very heart of the business centre."

This is a fact which he has striven to drive home to customers, established or prospective, and that he has been successful is amply attested in the progress he has made in the eleven years he has been doing business at the corner of Main and Bridge streets, North St. John.

A "live wire" seems to be an expression thoroughly applicable. He is a shrewd merchant, makes a careful study of not only his own business, but as much as he can from the "outside" of that of others, and by a pleasing personality, obliging disposition, and general characteristics of the gentleman in the true sense of the word causes each year to be more successful than the last in his thriving establishment in North End.

Biggest Sales-Getting Scheme

Just at present Mr. Pidgeon is engaged in what is undoubtedly the biggest sales-getting scheme ever tried in St. John. It is similar but on a more stupendous scale, to others which he has conducted with distinct success. Beginning a few weeks ago he opened a prize contest in which each prize offered was worth while competing for. This is the secret of the success of the endeavor—it is not such a contest as only the poorer classes enter, but on the books relating to it are names prominent in society circles and known to have considerable standing financially. The first prize is a choice between a handsome 1914 model touring car and an equally fine up-to-date runabout. In addition to this three thoroughly reliable and modern make pianos are to be given away to the winners, one on November 1, a second on December 1, of this year, a third on January 1, of next year. Besides these prizes, there are weekly gifts to the contestants registering the greatest number of votes, and thus the interest is sustained throughout the year, and incidentally, or rather primarily business is increased as the contest draws along to its close. The other prizes include really fine pieces of silverware, china, cut glass, and various articles of household use or ornamentation. The contestants run well up in the hundreds. Upon their making a purchase they are given votes to correspond with the amount. Additional votes are given for moneys paid on account, and at different times when special features are selling, extra votes are given as an inducement to increasing the sales.

Co-operative in Its Nature

Last year Mr. Pidgeon tried this scheme first, giving away a \$400 piano, and it worked so satisfactorily that he was able to induce four other dealers, one in drugs, another in groceries, another in dry goods, and the fourth in hardware, to enter with him on the present campaign which represents fully six times the former consideration. It is co-operative in its nature and represents a great amount of work in arranging it, the credit for which again goes to the original brain of Mr. Pidgeon. It will be recalled that last year was one of the closest financially for some time, and it was particularly

so in North St. John where a great majority of the people depend upon the lumbering industry for a livelihood, since the various mills employing about three thousand men or more, were closed for fourteen weeks. Despite this fact, Mr. Pidgeon, by his progressive methods, was able to show remarkable receipts and consistent sales.

In addition to this big scheme he has on display in his store a large show-case offering premiums with sales for amounts of \$3.00 and upwards. Coupons from the splendid big cash register which he has installed, are given to those who wish them in place of the contest votes, and these are returnable for such premiums as silverware, cutlery, leather goods, household utensils, etc. He has been doing this for some time, and finds it works decidedly well.

Regarding advertising, there is probably no dealer in St. John who does more, and who employs such a wide variety of methods than this progressive shoe-dealer. Some few years ago when his father, the late C. B. Pidgeon, left his son, the present proprietor, in charge of his business, the store was known only in a vague, hazy way to most people in the city, outside of the regular customers in the vicinity. It was just an ordinary business, but a paying one. The father himself a clever merchant, had been in business about twenty-five years and had done particularly well, but in the present age of competition and sale-promotion, new blood was necessary for its prosperity.

His son, David B. supplied that new blood. He took hold of the business in masterly fashion, gave it careful study at all phases, and then decided that he could not only double but triple what had formerly been done. He has succeeded. Today, the name of C. B. Pidgeon is still carried with the business, which, besides boots, shoes, and leather goods, includes an up-to-date line of ready-to-wear clothing, custom tailoring, and gents' furnishings, but the name is known through not only St. John, but all parts of New Brunswick.

Painted on Proofs and Rocks

It is painted on the roofs of barns through the rural districts; it is boldly emblazoned in large capital letters upon jutting crags and ledges of rocks, along the beautiful St. John river over a distance of more than one hundred miles; it is distributed in all centres of the province in catalogues, calendars, and novelties; it is seen in prominent type in the leading dailies and weeklies of St. John—in fact, where the name of C. B. Pidgeon has not penetrated in New Brunswick—well, it may be said there's no possibility of a sale.

"Advertise" is one of Mr. Pidgeon's favorite bywords. Wherever the firm name is seen is the slogan "Buy at Pidgeon's where you get the most for your money." He is a firm believer in the power of printer's ink, and display space, and local readers appear in every paper to draw custom to his store. And they draw, too. The advertising ideas of the proprietor of this store are the original 500 horse-power when it comes to drawing, for though as has been said, Mr. Pidgeon is removed a considerable distance from the centre of the city his books show a turn-over each year equal to many, and ahead of several, of the larger stores in the city proper.

How does he do it? Well, in the first place he lives right up to what he advertises. His word is his bond and it can be relied upon. To use a colloquialism, he "delivers the goods." Few people would think of walking from the more remote sections of the city to the foot of North End where he is located and he is aware of this, so he provides them with car fare on sales of more than a nominal amount, when he is

conducting a feature sale. But to those who have watched his business grow through the systematic application of his ideas, it would seem that they would come, anyhow.

During the year he has two special sales, one in mid-Summer, another in mid-Winter. He closes his place of business for a day before the opening to prepare for the rush of the morrow and then increases his advertising to almost a four-fold extent to bring the trade. Full-page displays in the local papers, posters about the streets, and personal letters to house-holders are used by him on such occasions, and in every parcel which leaves his store is enclosed a liberal

D. B. PIDGEON, 'ST. JOHN, N.B.

circular containing news therefrom. In these sales he reduces his prices to a wide extreme and disposes of an enormous amount of stock. The latter, by the way, he manages to turn over three times each year.

No opportunity to make a sale within reason is neglected. An instance of his readiness to appreciate possibilities in this connection may be cited. A short time ago a foreigner was caught by the police a little after midnight forcing an entrance to the store. The man was arrested, and said at the trial that he was trying to get a pair of boots and some clothing for himself. Next day readers appeared in the daily press to the effect that "the foreigner who tried to break into the store of C. B. Pidgeon for boots and clothing should have waited until after the regular opening hours, when he would have gotten them with less trouble at a cost to fit any pocket. The people who buy regularly at Pidgeon's are well aware of this fact, and come right in the front way and buy." This was original advertising and it was a sales-maker also. Other instances not exactly the same, but similar in originality could be given, but space will hardly permit.

Makes Trade Come to Store

The store itself is pleasantly located at the corner of Main and Bridge street. Street cars pass every few moments and not very far away are steamboat landings where traffic on the St. John river, a very important consideration in North End business, is centred. Mr. Pidgeon gets a huge share of this, largely by his keeping after the trade, catering to the demands of the country people, and living up to his promises. He sends personal letters throughout the country districts, as well as through the city, and says that his firm belief is these personal letters were probably his best

medium with regard to selling power. They are done on a multigraph, but are addressed personally both inside and outside.

Out of Style, Not Worth Price

The following extract from "Printer's Ink" will prove particularly interesting to readers, as it discusses a point upon which much has been written and said. The argument took place before a Congressional Committee investigating the "Pure Fabrics' bill.

"Another witness before the committee was Joseph Strasburger, a member of the board of governors of the National Shoe Retailers' Association of the United States, who appeared in behalf of that organization. He said in part: 'The greatest fraud to-day upon the American people is the fact of the fraudulent advertising that is carried on. There is not a newspaper which comes out in which you do not see five-dollar and six-dollar and seven-dollar shoes advertised for \$2.98, \$3.00, and some for \$2.50, and all that, especially by these sample shoe stores. That is all fraudulent. There is not a word of truth in it. There is no man who can sell a seven-dollar shoe for \$3.00 or \$2.50, unless he is losing money—and they are not in business to lose money—and they do that sort of advertising continuously.'

"May not that be done if the shoe is out of style?" asked one of the members of the committee.

"Then it would not be worth seven dollars," replied Mr. Strasburger. 'A shoe that is out of style, no matter how good it is, is not worth the original price.'

Turn Kickers Into Boosters

"Customers' complaints include burnt shoes, patent leather cracking, soles of boys' and misses' shoes wear through sooner than expected, rips, heel taps pulling off, eyelets coming off.

"For burnt shoes give the customer a new pair of soles, although he or she burnt them; patent leather cracking, if it cracked through, satisfy the customer; soles of boys' or misses' shoes, repair them without charge," says A. H. Meadows in the Boot and Shoe Recorder.

"The wise shoe dealer never lets a customer go away dissatisfied. Satisfy them! Turn 'em into boosters. The price of satisfying them is cheap compared to final results.

"Fifty per cent. of complaints are trivial. The other fifty per cent. are mentioned above. I spend \$250 a year satisfying my kickers. They go out of my store—boosters.

"Only in rare cases do I ask the manufacturer to stand the cost of an allowance. I treat him as I would ask him to treat me.

"A genial, cordial man in each store should handle complaints."

Business is a jealous servant; it is sensitive; it demands undivided attention; if neglected, its disfavor is shown in reduced profits; it will boss the inefficient man—play with him—tangle him—finish him. For the constant, consistent, efficient man, for the man who knows all the ills to which business is subject, who governs the big things from knowledge of the little things—for that kind of a man it works overtime. Stretching the earning capacity of every dollar, it grows, expands, earns, knowing only one limitation—the measure of its Boss.—E. St. Elmo Lewis.

Reliable Directions that Will Make Shoes Last Longer

No Wonder Footwear Gives Out So Soon Considering the Trying Usage That It Gets and the Little Attention Bestowed in Lengthening the Life of a Shoe—Remedies that Will Interest Customers

The cost of all grades of leather has steadily advanced. In order to offset this additional cost and still purchase a good grade of shoes, we must give our shoes the care they deserve and so gain from them the utmost service.

It is just as important to keep them clean and in good condition as with any other wearing apparel. Good shoes have been ruined by holes having been cut in them in order to ease corns underneath, when, at a small cost, better results could have been secured, yet the shoe saved, says S. T. Lytle.

Never put wet, muddy shoes away before they are cleaned and dried. Never place shoes in an oven or close to intense heat, because they are liable to scorch. Heat causes leather to become brittle.

The leathers most commonly used for boots and shoes are vici kid, box calf, patent or enameled, Russia tan and chrome elk. The vici kid leathers are the softest, and are ideal for all light weight shoes, the box calf being a heavier leather, although it is made in light weights. Tan leathers are made more into dress shoes than for all round work, but it is generally accepted that they give more wear than black. The so called chrome "elk," which comes in tan, black, olive and light grey, and which is made into shoes and boots for men and boys, gives more wear for general work than any other grade of leather.

Keeping the Water Out

There is no substance that will make boots or shoes absolutely waterproof. That is, for any length of time. As a rule, most water-proofing compounds contain animal fats, mineral oils, rosin, wax and solutions of India rubber. The writer has tried the following two and find they are very satisfactory.

One-half pound of mutton-tallow.

Four ounces of beeswax.

Two ounces of rosin.

Melt all together, and apply hot with a small brush, rubbing it in well with the hands, particularly around soles and seams.

Rubber Solution—Melt together four ounces of neat's-foot oil, four ounces of beeswax and two ounces of India rubber until thoroughly blended. Warm the leather, and apply hot

Shoe trees, made of wood or metal, placed inside of the shoes keep them in shape. The tree comes in handy, especially when shoes are wet, as it prevents them from curling and getting out of shape while drying. Satisfactory ones may be made at home by filling old hose with sand, bran or sawdust. There are to be had in the market, also shoe-stretchers. This article should be in every home in the land. If a shoe hurts or pinches at any particular point, simply place the stretcher inside and stretch it until you get relief, thus doing away with the cutting of shoes. Your shoe dealer will gladly stretch your shoes for you, or you can often get relief by laying a cloth, wrung from hot water over the tight place. Cut the shoe only as a last resort. It would be best to say never cut it.

It Is Best to Buy Polishes

Polishes can be made at home, lamp-black being the base of most black polishes, but there are so many high-grade polishes on the market, and at such a low price, it does not pay for one to attempt to make them for home use. To make boots or shoes soft and pliable, rub warm mutton tallow or neat's foot oil into them thoroughly. These are much better than almost any other oils or fats for

this purpose. Have shoes and boots clean and dry before greasing them. When shoes wear through the first sole have them repaired as soon as possible. Do not wait until they have worn through both soles; and likewise have an awl and some thread on hand, and when a rip shows itself "nip it in the bud." Heel-plates come in many sizes, are cheap, and anyone can nail them on. They will save you a trip to the shoe shop to have the heels built up. Shoe lasts are cheap and will be found very useful.

Linseed Oil for the Squeak

To prevent shoes from squeaking place them in a pan of linseed oil, just deep enough to cover the soles. This will not only prevent this nuisance, but the oil can toughen the soles. Be careful that the oil is not too deep; if it gets on the uppers it will stain them, and the worst thing is it won't come off. If your boots or shoes are inclined to be damp inside place cork insoles (not the real thin ones) in them, and your feet will keep nice and dry.

In conclusion: The broad, low-heeled shoe will give more genuine comfort than will be gotten from the narrow, high-heeled variety.

Service the Great Trade Builder

Service in a shoe store is what counts. You may have the proper location, you may have the stock, you may have the window displays, and your prices may be right. All these will not necessarily build up a trade for you. Service is what captures and retains customers. What is meant by service? Well, it is a combination of things, rather difficult to define. It is like tact, personality, diplomacy, good cheer, wholesome surroundings, a glorious morning, a peaceful evening or some of the other terms which we use in our daily conversation, and yet are not easy to describe.

A leading city retailer told the SHOE AND LEATHER JOURNAL the other day that he attributed his success to the fact that he instructed his staff to give as much or even more attention to rags than to silks, which meant that the poor people should have first consideration. While not neglecting the highest class trade, still no extra special effort should be put forth to pander to it. Of course, we naturally get a certain amount of the latter patronage, but it is generally worth all that you get out of it. Why, if a colored person comes in this store, there is a member of our staff ready to serve him just as quickly as any head of a prosperous family who may leave us hundreds of dollars in the course of a year. In a word, service means familiarity with your stock, obliging disposition, a right appreciation and study of the customers' needs, combined with courtesy, tact and judgment."

Weather Vagaries and Shoe Selling

"No sir, we have been rather quiet all the spring," remarked a leading shoe retailer, "and now that the warm weather has come, people are buying oxfords, pumps, slippers, in fact, all kinds of low cuts. We have not got rid of any of our spring high cuts at all. It has certainly been a strange spring. By not getting seasonable weather, people have really jumped from winter shoes right into summer foot togger, and spring stuff has had a slow sale."

This observation appears to be applicable to nearly all parts of Canada and is accounted for owing to the quiet nature of trade in general and the vagaries of the weather, with which every shoeman has to put up.

SOME ARTISTIC AND INVITING FRONTS IN THE SHOE STORE LINE

Modern Shoe Store Front Pays Large Dividends

It Is One of the Most Constant and Efficient Salesmen—It Stands Out and Tells the Story of the Retailer Behind It to Every Person that Passes—Profitable Investments to the Shoe Merchants

A shoe retailer's money, or a large part of it is invested in two things, his stock and his store. Even though he should not himself own the building, a large expenditure is made each year for rent.

Gradually, year by year, dying a hard death, the old time spirit of any old place at all, and any old way at all, has passed out.

The advantages of a clean, bright, attractive store front, and a wealth of stock properly displayed and properly protected by means of good fixtures are now almost universally appreciated.

Granting the first as true and realizing that in this stock stored within the building, lies the means of livelihood of so many men and also knowing how the need of a modern front and modern methods are appreciated, it is still a source of wonder how so many merchants are indifferent to the needs of their own business. It is acknowledged that one must have a good location, that the stock must be right in every detail, that the salesmen should be of the best and the service good, but why labor under an unnecessary handicap?

Why strive to build up a business when laboring under the disadvantages of a front that is dismal and uninviting, where the windows are small, poorly lighted, and altogether unsuited for the purpose for which they were intended?

Take a Walk at Night

Everyone will admit what an attraction a cheery, bright, well lighted store front has. There is no necessity for one to pass it by. Take a walk down a street at night or by day. Make a note of the number of stores which attract the attention and see what per cent are bright, modern, up-to-date stores in all respects from front to back.

Place yourself in the position of a customer, and if you have been contemplating spending some money on a new front or new fixtures or an alteration of the store's plan, walk past or into your own store and see just what effect the dinginess of the place has upon yourself.

The subject of store fronts is one of wide scope and great importance and one that has been given a good deal of time and thought during the past decade. It is of importance because the modern store front is one of the most efficient salesmen procurable in any retail store—it has the ability to create more sales, more net profits, than any human salesman. And that is not unreasonable either, because the modern store front works 24 hours a day and 365 days a year—it stands out there and tells the story of the merchant behind it to every person that passes the store—it never takes a vacation—it never loafs—it's always on the job selling.

You Pause and Linger

Take some other store in town (perhaps your competitor's) that has modern fittings and take a walk past it; note how instinctively, you pause and linger, how the brightness is reflected in the appearance of the clerks, in the whole character of the store. The amusing part of the whole thing is that many merchants when contemplating any expenditure for equipment, seem to consider it in the light of money to be extracted from their pockets and cast into the depths of the sea.

Instead the logical attitude is that of considering a high class investment, an investment which is bound to pay bigger dividends than any line the store carries. In a well equipped shop a man has an investment which is

working for him day after day, week in and week out. His windows are a constant advertisement, one of the very best. His cases and display fixtures are always on duty, making the best possible presentation of the stock.

Spend Money Judiciously

What folly to spend thousands of dollars in accumulating stock and then depreciating its value and effectiveness about fifty per cent. by a poor presentation of its attractiveness. But there must be a judicious choice in this question. Each year finds the expenditure of millions of dollars for new store fronts and fixtures, and unfortunately a small amount of that is misapplied—misapplied because merchants do not give the subject the consideration and thought that it deserves. Many merchants actually give the subject of a new store front, less thought and less consideration, than they would give to the hiring of a janitor or to the building of shelves in the basement or in the attic.

Too many retailers overlook the fact that the modern store front should be considered a part of the business with which it is associated.

Then, too, there is the great pitfall of many merchants—the lack of consideration of the business they are in. You can go out on the streets of any city or town in the country and you will find a great similarity or "oneness" in store fronts. You will find shoe dealers, jewelers, furniture dealers, clothiers, butchers and grocers doing business in stores with fronts exactly alike. It is unreasonable to expect the same kind of store front to be able to display and sell shoes and pork chops, for example. Furniture, for instance, consists of comparatively large size pieces; for that reason the windows must be large in order to properly display furniture in suites and not in single pieces. Shoes at the other extreme, consist of small articles and to properly display them it is necessary to bring the articles within the normal range of vision. That point is very similar in the display of clothing and men's wear.

Big Help to Merchandizing

It would be hard to find anyone who would dispute the fact that fixtures are a great aid to good merchandizing. Not only in the sales they make by the attractive presentation of goods, but by the money they save in clean and well kept stock.

Many of the sales which footwear stores conduct are carried on in the effort to clear stock which is sticking fully as much as stock which is old. In many cases if proper fixtures had been used, the lines would have moved freely.

One firm in a big city conducting a large store, became so impressed with the value of proper fixtures that they spent a great deal of time investigating the matter from all sides, the customers, the salespeople and the stores. The outcome of these investigations was a revolution in the arrangement of stock and the use of fixtures in this store, a revolution which it is claimed increased the sales in all departments from five to twenty per cent. in a few months. Of course there is reason in all things. A man with a two thousand dollar stock of shoes doesn't feel justified in spending a like amount in interior fixtures. But the point is this. Every merchant should realize that a poor store front or inadequate fixtures are handicapping him tremendously, and any investment in improving these conditions is going to pay him back the biggest interest of any investment he has ever made.

Making Footwear Waterproof

Something entirely new in the shoe line is being offered in the retail store of Lord & Taylor. This is a shoe to which a waterproofing process has been applied, making it really damp-proof, without affecting in any way its appearance or its utility.

For many years tanners have tried to produce waterproof leathers, but efforts in this direction have not proven altogether satisfactory. Leather capable of resisting water has been produced, and it has been used quite extensively for special purposes, but such leathers do not meet general requirements. Among them is the viscolized leather with which the trade is familiar—thick and oily looking and used principally in men's shoes of the heavy and cheaper grades, says the Dry Goods Economist.

According to Thomas W. Meredith, manager of the Lord & Taylor shoe department, Chicago, the new process has been developed outside of the shoe and leather trades. It is, in reality, the application to footwear of a waterproofing idea which has been used extensively in fabrics.

"It was early last fall," said Mr. Meredith, "that the results of this new method were brought to my attention. The proposition looked so good to me that I agreed to give it a thorough and practical test. I arranged with a shoe manufacturer to try the idea in connection with an order for 5,000 pairs of women's shoes.

"These sold with such success that I determined to have all my women's shoes for street wear treated in the same way.

"At the same time I began to make use of the idea as a selling feature. With every pair of these shoes we sold we inclosed a printed notice informing the purchaser that the shoes were so treated as to be damp-proof.

"Mind you, we do not assert that the treatment makes shoes absolutely waterproof under all conditions of wear. We do insist, however, that shoes so treated resist water and dampness to such an extent as to make rubbers unnecessary for ordinary street wear. So great was our confidence in the process, moreover, that we offered to replace the shoes or re-treat them at any time, if they did not bear out our claims, provided the soles were in good condition.

"Up to the present time," continued Mr. Meredith, "we have sold over 50,000 pairs of these damp-proofed shoes without a single complaint having come to my attention."

Mr. Meredith also gave some interesting information as to the principle of the waterproofing process in question. Said he: "Whether the method be applied to fabrics or to leather, the idea is very simple when its theory is made clear.

"In the first place," he continued, "this proofing does not make the material air-proof. In other words, it does not affect its porosity. Nor does it in any way alter its appearance.

"It is hard for most people to understand how a porous material can resist water. It does so because of the natural surface tension of water. When the surface of a small body of water touches a substance treated by the process in question the fluid holds together and does not penetrate, whereas, when water touches an absorbent substance this surface is destroyed and the water penetrates. Even a piece of mosquito netting, properly subjected to the process, can be made to hold a quart of water if the fluid is poured into the material with sufficient care.

"To demonstrate the power of the surface tension of water, take a glass and a small pitcher of water. Fill the glass nearly full and then continue to pour in the water very slowly. You'll find that the water can be poured in until its surface at the middle of the glass is much higher than at the edges. Now wipe your little finger with pure oil and press it gently against the water, in the middle of the glass. If you use due care your finger will merely 'dent' the surface, without breaking it or spilling the water. But put a little flour

or any other very absorbent substance on the finger or on the edge of the glass and the convex surface of the water will be broken immediately, because its surface tension will be destroyed. The tendency of the proofing process referred to is to preserve this surface tension.

"It was found that in order to render leather reasonably water-resisting, without altering its appearance or lessening its porosity, different conditions had to be overcome. After four years' careful experimenting with a new substance, however, the problem was solved."

Mr. Meredith added that the damp-proof shoes his department is now handling so successfully are waterproofed during manufacture—outsole, insole, vamps, uppers and even seams being thoroughly treated. The result is a shoe which differs in no wise in appearance from an ordinary shoe and which does not "draw" the wearer's feet.

As above suggested, the shoe is not absolutely waterproof. Mr. Meredith says, however, that the many tests already given prove that it will stand ordinary street wear on a rainy day without leaking and, therefore, is to all practical purposes damp-proof.

Where Does Tan Leather Come In?

As to the outcome of the colored calf situation, I would say that in my opinion, owing to the present high prices which it is necessary for the tanners to exact when making leather suitable for high-grade shoes, many manufacturers are doing all in their power to discourage the sale of this shoe, hoping thereby to so affect market conditions that leather can be secured at lower prices, says Frank C. Allan in *The Shoeman*.

The true significance of this may be gleaned from the fact that manufacturers of high-grade shoes for men, by that I mean men's shoes that retail from \$6 upwards, are buying colored calf in quantities very nearly if not quite equal to the quantities named one year ago.

Manufacturers of such shoes are strong in their opinion that the high-priced leather will help to make the shoes made therefrom so exclusive that they will appeal to the better dressed part of the population who are always seeking for shoes that are not too closely imitated by those whose pocketbooks forbid them to pay the extreme high prices.

In those factories where medium and cheap shoes are made, colors are selling far less than for a number of years past, and a price reorganization must take place apparently before volume may be expected from these sources.

Regarding the outlook in the women's trade, some peculiar conditions have come to our attention.

There has been apparently a unanimity of action on the part of the manufacturers of women's shoes to discourage the sale of colors.

Just why this action has been taken we have been unable to find out. Isolated instances are known of retailers well posted in the local conditions in their respective sections desiring to buy colored shoes, even going to the length of making out orders and submitting them to the manufacturers, only to be discouraged and advised not to put the shoes into stock.

Past experience has shown that whenever women wear light shades in their gowns, colors have invariably been popular. A tour of inspection through the larger department stores and retailers, caterers for the better class of women's trade, shows that rarely if ever have more shades, and especially in the lighter tones like pale green, blue, yellow and lavender, and light, fluffy fabrics, been shown than this year. Excepting white shoes, which have lost their popularity for every-day street wear, no footwear fits these light colors so well as the colored shoe in shades to blend and harmonize with the gowns.

Thirty-Three Years in the Retail Footwear Business

Enterprising Halifax Dealer Has Three Flourishing Stores—Features Different Departments and Believes in Attractive Fixtures and the Value of Publicity—Pointers from Trade Press

It is just thirty-three years ago this month since W. L. Tuttle, of Halifax, made his first acquaintance with the shoe game. To-day he occupies a commanding position in the Province of Nova Scotia, conducting three successful stores. The main establishment is located at 203 Barrington street and the branches at 181 Lower Water street and 56 Portland street, Dartmouth.

Securing his first position with A. A. Bliss, Gottingen street, Halifax, in 1881, he worked there only a few months, when he was transferred to Granville street store and later was placed in charge of the Dartmouth branch. In 1886, after the death of Mr. Bliss, he bought out the Dartmouth shop. This was his initial venture in the shoe line, just five years after securing his first position. In 1899 Mr. Tuttle branched out still further and bought the business of E. & A. Thompson at 203 Barrington street, which is his present headquarters. Eight years later he opened a branch at 181 Lower Water street.

Last year the Barrington establishment was enlarged and a second flat taken over affording a floor space of over three thousand square feet with a frontage of fifty feet. The front portion of the second flat is occupied as a ladies' and children's department and back of this is the reserve stock. Mr. Tuttle devotes the ground floor of his Barrington street establishment to high-class footwear for men and there is also a basement department consisting of men's heavy boots and footwear for boys and youths.

Mr. Tuttle has found that increased business has justified the expenditure in enlarging his premises, and says that on the Saturday preceding Easter it would have been

impossible to handle the trade in his former cramped quarters. Mr. Tuttle is the agent for Walk-Over shoes and handles several leading Canadian lines. He is a firm believer in "printer's ink" and in the Halifax papers attractive announcements can frequently be seen referring to Tuttle's shoe stores. He also adopts various means of publicity and

THE MEN'S DEPARTMENT IN TUTTLE'S MAIN STORE, HALIFAX

has succeeded in building up a wide trade. It may be mentioned that Mr. Tuttle has been a subscriber and constant reader of the SHOE AND LEATHER JOURNAL since its first edition over twenty-eight years. He has always been an admirer of the fair and active attitude which the Journal has ever taken in the interest of its readers and in its

THE LADIES' DEPARTMENT IN TUTTLE'S SHOE STORE ON BARRINGTON ST., HALIFAX

endeavors to elevate the retail shoe trade and the pleasure and profit of doing business.

Two special sales are conducted each year by Tuttle's Shoe Store, one in February for Winter clearance, and the other in July and August for Summer clearance. The firm make a good deal of their one day \$3.50 boot sale for men in February, and their one day \$3.50 Oxford sale for men late in July, besides the semi-annual affairs Tuttle's have in the ladies' and children's department, Friday specials. In other words, Friday is Ladies' Day and the female members of the staff make it a sort of "At Home" for their sex.

TUTTLE'S SHOE STORE ON BARRINGTON ST. HALIFAX

Any shoes that are not cleared out at the semi-annual sales, or by special offerings are sent to auction rooms.

The store closes at 10.45 on Saturdays and at six o'clock on every other day of the week. On Wednesday afternoons during the Summer the closing hour is at twelve-thirty. Repairs are encouraged by the firm, although they have no repair shop, all work being attended to outside. Occasionally rubber heels are put on in the store while customers wait.

Very little trouble is experienced with approbation as Mr. Tuttle and his staff do not encourage it and present strong arguments in favor of being fitted on the premises. Men's hosiery is handled as well as all lines of findings, to which special attention is devoted and sales in this department are pushed hard.

Profits of Ames-Holden-McCready, Limited, for the fiscal year ended April 30th, probably will not show much margin over fixed charges and the preferred dividend. In fact, officials admit that they will be satisfied if earnings fully cover these charges. The lower earnings are a result of the depression in business which existed throughout the entire period included in the company's fiscal year. Despite the small margin of profit for the past year, the management looks to the future hopefully. Clarence F. Smith, general manager, says that the company was never in better shape than at present. He looks for a record showing of earnings as soon as business becomes active again. During the past year current liabilities have been cut down about \$800,000 and stock on hand reduced by \$700,000. This means that the company's storerooms are comparatively empty, and that when trade picks up, as it must before very long, the

company's factories will be working at full capacity to meet the demand. Retailers are carrying light stocks and have been purchasing in small quantities.

A Progressive Sales Manager

Medard Gauthier, who is sales manager of La Parisienne Shoe Company, Montreal, is still another shoeman who has achieved much by dint of hard work. He was appointed a director of the firm recently, when the company was re-organized as a limited corporation. Mr. Gauthier has had much experience in the shoe game, particularly in the selling end of it. He has been with La Parisienne Shoe Company for over three years, and was formerly on the sales staff of the old Ames-Holden Company, representing them for a period of twelve years. He is well known in shoe circles throughout the whole of Canada, and in Montreal in particular, as he has been covering that territory for some years. He has the advantage of representing a rising young shoe concern, whose business in the past four or five years has been rapidly increasing. La Parisienne Company have at present in Maisonneuve, one of the most spacious shoe establishments in Montreal, and have decided to build an addition this summer to their factory. The new wing will be 45 x 80 feet in size, and of the same height as the present building. It will more than double the capacity of the firm, who specialize in women's footwear. The company have

been paying particular attention to Ontario buyers this season, this being their first in that territory. They state that their travelers have met with a fine reception in that province. The Montreal field, which Mr. Gauthier presides over is their stronghold, however, and the credit for the large business which they do there belongs in a great measure to him. He has a fine suite of offices and sample rooms in the La Patrie Building, St. Catherine street east. He has had many years experience on the road, and feels that he has done his share of out-of-town traveling. As he says himself, "I like to see my friends in the different centres, but it certainly is worth while to be able to remain with my own family month in and month out, and it is for this reason, that I am so pleased with present conditions."

Designating Shoe Stock by Use of Number System

A Comprehensive Scheme Which Not Only Gives Each Line a Number, But Tells at a Glance What Range is in the Carton—First Figure Tells Kind, Second the Leather, Third and Fourth the Cut and Style

How do you designate your stock? Do you have the cartons plastered over with a lot of hand writing, lead pencil marks, ink characters and rubber stamp markings? If you use uniform labels, not to have some uniformity regarding the description of the shoes, does not add much to the attractive appearance of the labels.

A number of shoemen use one system and some another, but possibly one of the most complete and satisfactory for ready reference and artistic appearance, is that which is employed by Alexander Chisholm, shoe retailer, Dundas street, Toronto. It is well known that Mr. Chisholm has one of the most imposing, admirably arranged and commodious footwear establishments in Canada. The single shelf system prevails throughout his store. All cartons are uniform and all labels are exactly the same, so that a pleasing picture is presented to the visitor or customer in identifying the goods in the cartons. Mr. Chisholm uses numbers exclusively and this system may well be termed "numerical shorthand."

In going into this matter in detail, the SHOE AND LEATHER JOURNAL seeks to present the plan in as simple a manner as possible, in order that others, who may care to adopt it, can do so without difficulty.

Only Four Figures Used

There are four figures which are placed at the lower left hand corner of each label. The first figure denotes the class of shoe, the second, the kind of leather, the third, whether high or low cut, and the fourth, whether button or lace. The numbers used in each case, do not run higher than 10, and as stated, the first figure denotes the class of shoe, whether it is men's, women's, boys', girls', etc. Here is the schedule—men's, 1; women's, 2; boys', 3; misses', 4; youths', 5; girls', 6; lads', 7; infants, 8; babies, 9. In placing the stock in the shelves, the up and down system is used, and instead of starting with the smaller sizes at the bottom shelving, going up to the top and then coming down again, Mr. Chisholm reverses this order and starts with the small sizes at the top in each section, and then comes down, and starting at the top again with the second row, follows a similar method.

Second Figure Tells Leather

As already stated, the second figure in each combination, denotes the kind of leather. Figure 1 stands for Patent; 2 for Dongola; 3 for Gun Metal; 4 for Box Calf; 5 for Tan; 6 for Canvas; 7 for Suede; 8 for Split; 9 for Kangaroo; 0 for Red Kid. The next two figures up to 50, which are really the third and fourth in the four figure combination, represent high cuts and over 50, low cuts. All even figures,

both above and below 50 stand for lace shoes, and all odd ones for button. Perhaps this may seem to the ordinary reader, a little complicated, but the figures are of sufficient scope to allow the average shoeman to make use of them, no matter how many lines he may carry. The figures really start at 1100 and could go up to 1200 in patent leathers, and as soon as 1200 is struck, this would mean a man's dongola shoe, it being pointed out previously that one stood for patent; 2 for dongola; 3 for gunmetal; 4 for box calf, etc. There is scarcely any dealer who carries 100 different lines of men's patent leather shoes, so that the method is amply extensive for any ordinary stock. For instance, in men's patent leather shoes, the lines selling at \$2.50 to \$3.00, could be from

ALEX CHISHOLM, TORONTO

1100 to 1109; those selling for \$3.50, from 1110 to 1119; Those at \$4.00, from 1120 to 1129; those at \$5.00, from 1130 to 1139; those at \$6.00, from 1140 to 1149, and so on.

The attached table will furnish an accurate guide to any shoeman who desires to follow this numerical system, and really explains how simple it is. Each shoe thus has a stock number and this stock number, is different from the number in the ordinary store, in that the former conveys to the clerk not only the stock number, but along with it, the kind of leather, whether high cut, low cut, etc. It may be argued that, while identifying all lines by numbers may be easy for a proprietor and the head of the department, still, if a new clerk comes in, it is likely to prove complicated. This is not the case, as the simple table can be learned in

| Class of Shoe | Leather | High or Low Cuts | Lace or Button |
|---------------------------------|----------------|--|--|
| Men's (5½-11).....1 | Patent.....1 | All numbers up to 50 represent high cuts, and all over 50, low cuts. | All even numbers both below and above 50 represent lace, and all odd numbers, buttons. |
| Women's (2½-7).....2 | Dongola.....2 | | |
| Boys' (1-5).....3 | Gunmetal.....3 | | |
| Misses' (11-2).....4 | Box calf.....4 | | |
| Youths' (11-2).....5 | Tan.....5 | | |
| Girls' (8-10½).....6 | Canvas.....6 | | |
| Lads' (8-10½).....7 | Suede.....7 | | |
| Infants' (3-7½), spring heel..8 | Split.....8 | | |
| Babies' (0-4).....9 | Kangaroo.....9 | | |
| No heel. | Red Kid.....0 | | |

a few minutes and owing to the methodical arrangement of the stock on the shelves, no errors can be made.

In order to interpret this table, the SHOE AND LEATHER JOURNAL is giving a few simple solutions.

For instance, 1467 would be a man's box calf button oxford, as 50 represents high cuts and all over 50 low cuts,

THE CHISHOLM LABEL. THE NO. HERE INDICATES A WOMAN'S PATENT BUTTON BOOT

and in each case, the odd figures are button and the even ones lace.

2556 would be a woman's tan lace oxford, pump or slipper, as under the heading of low cuts, come oxfords, pumps, slippers, etc.

3234, a boy's dongola lace boot; 6531 would be a girl's tan button boot; 7658 would be a lad's canvas lace oxford; 2739 would be a woman's suede button boot; 4147 would be

Chisholm's Footwear

\$4.50

Ask for No. 1378

PRICE TICKET DISPLAYED ON SHOES IN WINDOW

a misses' patent button boot; 5816 would be a youth's split lace boot; 6793 would be a girl's suede button oxford or pump. 9028 would be a baby's red kid lace boot; 1917 would be a man's kangaroo button boot.

Thus one can see at a glance, in referring to the table, how simply this notation works out.

A Busy Captain of Industry

One of the younger business men of Berlin who devotes a goodly portion of his energies to the development of the city, as well as to the industry with which he is so prominently connected, is A. J. Kimmel. He is an active member of the Board of Trade. It was as a shipping clerk in the Berlin Felt Boot Co. that he first attracted attention. He was rapidly promoted, and when he severed his 15 years' connection with that estimable concern he had risen to Sales Manager. In 1900 he was prominent in the organization of the Elmira Felt Co., and in 1908 the Canadian Consolidated Felt Co. was formed with a capital of two million dollars with Mr.

Kimmel as Vice-President and General Manager. But that did not end his activities, for, in the meantime, he became associated with large Canadian rubber interests, which later were merged in what is now the gigantic Canadian Consolidated Rubber Co., Limited. To cap the climax to a useful career, he, with T. H. Rieder, another native son of Berlin, engaged in the establishment of a new Rubber Tire Factory, which has recently been completed at a cost of over a half million dollars, and constitutes one of Berlin's finest manufacturing structures. Mr. Kimmel is of a retiring disposition, seeking not honor and glory, but quietly pursuing the even tenor of his way.

How Shoe Repair Prices Range

If you conduct a repair department you will be interested in the schedule of prices received by the high and medium grade stores and local repair men in Boston.

| | High Grade Stores | Medium Grade Stores | Shoe Repairers |
|--|-------------------|---------------------|----------------|
| Men's whole sole and heel..... | \$2.00 | \$1.65 | \$1.50 |
| Men's whole sole and rubber heel... 2.00 | 2.00 | 1.75 | 1.70 |
| Men's half sole and heel..... | ... | 1.40 | 1.25 |
| Men's half sole and rubber heel.... | ... | 1.50 | 1.45 |
| Women's whole sole and heel..... | 1.75 | 1.50 | 1.25 |
| Women's whole sole and rubber heel. 1.75 | 1.75 | 1.65 | 1.45 |
| Women's half sole and heel..... | ... | 1.25 | 1.00 |
| Women's half sole and rubber heel.. | ... | 1.35 | 1.20 |
| Women's leather heels..... | .50 | .30 | .25 |
| Men's leather heels..... | .50 | .40 | .30 |

The Boston Retail Merchants' Association investigated this subject recently, and as a result recommended the following scale of repair prices for the Boston trade:

| | |
|---|--------|
| Men's whole sole and heel..... | \$1.65 |
| Men's whole sole and rubber heel | 1.85 |
| Men's half sole and heel..... | 1.25 |
| Men's half sole and rubber heel..... | 1.50 |
| Women's whole sole and heel..... | 1.50 |
| Women's whole sole and rubber heel..... | 1.65 |
| Women's half sole and heel..... | 1.15 |
| Women's half sole and rubber heel..... | 1.25 |
| Women's heels | .30 |
| Men's heels | .40 |
| Lowering heels on new shoes..... | .25 |

Here are the average prices charged in the average Ontario town or city:—

| | |
|---|------------------|
| Men's sewn whole sole and heels (from toe to heel) .. | \$1.50 |
| Men's sewn soles and heels | 1.25 |
| Men's sewn soles only | .85 |
| Men's heels only..... | .30 |
| Men's nailed soles..... | .65 |
| Ladies' sewn soles and heels | .90 |
| Ladies' sewn soles only..... | .65 |
| Ladies' nailed soles only..... | .50 |
| Ladies' Heels | .25 |
| Boys' sewn soles and heels, 1 to 5½..... | 1.00 |
| Boys' Nailed soles and heels, 1 to 5½..... | .75 |
| Youths' sewn soles and heels, 9 to 13½..... | .80 |
| Youths' nailed soles and heels, 9 to 13½..... | .60 |
| Misses' sewn soles and heels, 11 to 2..... | .80 |
| Misses' nailed soles and heels, 11 to 2..... | .60 |
| Child's nailed soles and heels | .55 |
| Patches and rips | Upwards from .10 |
| Rubber heels, men's | .50 |
| Rubber heels, ladies' | .40 |
| New leather heels | Upwards from .40 |
| Button put on with fastener..... | .10 |
| Tan boots dyed black..... | .25 |
| Shoe stretched | .10 |

AMONG THE SHOE MEN.

J. Fisher, Lougheed, Alta., has opened a shoe repairing shop.

James Aird & Co., shoe manufacturers, Montreal, have registered.

J. & J. Sayer, of Havelock, have opened a branch store in Hastings, Ont.

D. J. McDermott, of the McDermott Shoe Co., Montreal, was in Boston recently.

The assets of Jos. Maranda, shoe dealer of St. Joseph de Beauce, have been sold.

Ralph Locke, of Dufresne & Locke, Montreal, has returned from a holiday trip.

The Edmonton Leather and Shoe Co. recently increased their capital stock to \$150,000.

R. L. Savage, of Jackson & Savage, Montreal, was in Toronto last week on business.

A winding-up order has been applied for in the Eastern Rubber Co., Limited, Montreal.

D. J. Johnston with Geo. G. Lennox, Winnipeg, was in Montreal and Toronto last week.

L. D. Wilson, of the Hudson Bay Co., Vancouver Branch, was in the East recently.

The Aylmer shoe factory in Aylmer, Ont., has entered a team in the town baseball league.

C. B. Sherry, shoe dealer of Frankford, Ont., has made an assignment to M. B. Morrison.

J. T. Lemire, Montreal, has opened an up-to-date shoe store at 380 St. Catherine street east.

J. B. Douglas, shoe dealer, of Calgary, spent a few days in Toronto during the past week.

In a fire which visited Petrolia, the premises of F. Stewart, shoe repairer, were destroyed.

John Orr, of the Yale Shoe Store, Winnipeg, has purchased a new five passenger touring car.

Considerable new machinery has been installed in the shoe factory of Tourigny & Marois, Quebec.

John Macfarlane, of the Macfarlane Shoe Co., Montreal, was in Toronto last week on business.

H. H. Lightford, of the Perth Shoe Co., Perth, Ont., was in Montreal during the last week in May.

Mr. Taylor, of the Hudson Bay Co., Calgary, was on a buying trip to Montreal and Quebec last week.

W. Lawson, of the Carey Shoe Co. store, Chatham, Ont., was in Toronto last week on a buying trip.

C. H. Bailey, an official of the U.S.M. Co., Boston, was a recent visitor to the Montreal office of his firm.

John Fraser, representing A. Herzog, shoe findings, New York, was in Toronto last week on business.

C. J. Fitzgerald, of the Cook-Fitzgerald Co., Limited, London, was in Toronto recently on a business trip.

Frank Power, who represents several Montreal shoe firms in Eastern Ontario, has returned to Montreal.

Wm. Halnan, who for eighteen years conducted a shoe store in Oshawa, sold out last week to Harry Samells.

The partnership existing between Phaneuf & Larose, wholesale shoe dealers, Montreal, has been dissolved.

The National Rubber Co. has been organized with headquarters in Hamilton and a capital of \$500,000. The company will manufacture all types of rubber goods, including

boots, coats and automobile tires. Hamilton capitalists are at the back of the organization.

Harry Thompson, of the Thompson Shoe Co., Montreal, who has been ill with pneumonia, is rapidly recovering.

A shoemaking concern is negotiating with the Board of Trade in Strathroy to establish a factory in that town.

The annual conference of the Miner Rubber Co.'s selling agents will be held at Granby, Que., on June 25 and 26.

J. Barbeau, foreman of McKay room, No. 1 factory, Ames-Holden-McCready, Limited, Montreal, has resigned.

The Retail Merchants' Association of Strathroy, Ont., put on "Dollar Days" in that town on May 29th and 30th.

F. W. Knowlton, of the U.S.M. Co. of Canada, Montreal, has been visiting the trade in the Maritime Provinces.

A. Levy and Sol. Bachrack, Toronto, are on a business trip to Boston, Montreal, Quebec and other eastern shoe centres.

Duchaine & Perkins, Quebec, have had pulling over machines installed in their factory by the U.S.M. Co. of Canada.

F. H. Scott, of the Vancouver warehouse of Gutta Percha & Rubber, Limited, spent a few days in Toronto last week.

Ben Martin, sales manager for the John Ritchie Co., Quebec, was in Toronto and other Ontario cities last week on business.

Charles Tilley, of C. Tilley & Son, Toronto, who has been spending the past few months in California, has returned home.

J. A. Adams, vice-president and general manager of the Murray Shoe Co., London, is visiting Montreal and Boston for a few days.

Albert Baker, Goodyear agent of the U.S.M. Co., Montreal, has gone to Quebec to replace his father, who has gone on a fishing trip.

Chas. Newton, who is manager of the shoe department of Robinson's departmental store, Winnipeg, was in St. Paul recently on a buying trip.

E. J. Phillips, eastern representative of C. Parsons & Son, Toronto, has returned from a business trip to Boston and other eastern centres.

W. V. Matthews, superintendent of Ames-Holden-McCready Limited, Montreal, was a visitor last week in New York, Chicago and Boston.

I. Hartman, of the Hartman Shoe Co., Haverhill, Mass., manufacturers of women's turns and McKays, was in Toronto last week on business.

B. McGowan has opened a shoe repair shop in the Clement Block, Perth. Until recently he was engaged with Roy R. Wilson of that town.

S. H. Packard has been appointed purchasing agent for Ames-Holden-McCready, Limited. He has had considerable experience in American factories.

G. A. Blachford, of the Blachford Shoe Mfg. Co., Toronto, and wife, who have been spending a few holidays in Muskoka have returned home.

The many friends of Ivan M. Dickson, Northern Ontario representative for Walker, Parker & Co., Toronto, will sympathize with him in the loss of his mother who

passed away in Toronto on May 26th. His brother, Peter, manager of A. E. Rea & Co., Ottawa, was drowned on the Empress of Ireland.

Victor Lachambre has been appointed to represent La Parisienne Shoe Co., Montreal, in Quebec Province, outside the cities of Quebec and Montreal.

D. J. DeVine, of Winnipeg, and son, were in Peterboro recently being called east owing to the death of Mrs. M. O'Connell, mother of Mrs. DeVine.

C. S. Pace, late of Saskatoon, where his shoe store was wiped out by fire some time ago, has gone to Edmonton, where he has taken a good position.

J. J. Connor, Western Canada representative for McLaren & Dallas, Toronto, has returned from an extended trip throughout the Prairie Provinces.

Mr. Spurgeon, who recently bought out the shoe business of C. J. Clapp, Picton, has taken up his abode in that town. He is a former resident of Hamilton.

The Lynn Shoe Co., 529 St. Catherine street east, Montreal, have about completed renovations which very much improve the appearance of their establishment.

Frank DeLancey, superintendent of J. & T. Bell factory, Montreal, has returned from a trip to American shoe centres, and reports conditions there as being very quiet.

The A B C distributors of Toronto, of which H. A. Beatty is manager, have opened an office in Winnipeg, which is in charge of Geo. Owens, formerly of Montreal.

A burglar managed to break into the Yale Shoe Store, 321 Portage avenue, Winnipeg, and succeeded in

getting away with twelve shoes (four pairs and four odd ones) and four slippers (one pair and two odd ones). The boots were valued at \$5 and \$6 a pair, and the slippers at \$2 a pair. No cash, save a few coppers, had been left in the till.

The Canada Last Co., Toronto, who are now located at Van Horne street, will erect a new factory. The building will be a two-storey brick one, 36 x 42 feet and will cost about \$9,000.

George Heal, representing Patch & Co., London, G. T. Hawkins, Northampton, and W. C. Terry & Co., London, has been calling upon the trade in Montreal, Toronto and other cities.

Bows are being placed on pumps that just snap on. This is quite a novelty in so far as a leather bow may be snapped on one day, a ribbon bow another day or a leather covered slide the next day.

J. G. McDiarmid, of Toronto, western representative of the Cook-Fitzgerald Co., London, Ont., has returned from an extended Fall selling trip throughout the Prairie Provinces, going as far as Vancouver.

A small fire in the big warehouse of the Ames-Holden-McCready Co., Limited, Winnipeg, did damage to the extent of between \$1,000 and \$2,000. It is supposed to have been caused by spontaneous combustion.

C. R. Gray, of Toronto, who represents A. Porteous & Son's leather factory, Edinburgh, and James Aikman & Sons, boot and shoe jobbers, of the same city, leaves shortly on a business trip to the Old Country.

R. E. Jamieson, general salesmanager of the Canadian Consolidated Rubber Co., Limited, has been on an extended trip throughout Western Canada, visiting all the branches, and is at present in Winnipeg on his return.

The installation of a complete equipment of machinery in Blachford Shoe Company's factory, Toronto, is being made by the U.S.M. Co. of Canada, who expect to have the job completed in a couple of weeks' time.

John S. Rogers, manager of the A. Carruthers Co., Limited, dealers in and exporters of hides, wools, etc., Winnipeg, and wife, have returned from a business and pleasure trip to Japan, Honolulu and California.

The Perth Shoe Co., of Perth, Ont., report that business is coming in very satisfactorily. The plant is running full blast and increasing its output right along. The company have fourteen sets of samples on the road.

There has been an advance of about 15 to 20 per cent. in the price of leather laces, such as the porpoise, single tag, spiral tag, etc. Canadian findings houses have received advices to this effect from several Old Country firms. Raw hide hockey laces, from 45 to 72 inches in length which are

DEATH OF S. P LOGEE

A veteran business man and respected resident was claimed by death last week in the person of Mr. S. P. Logee, of Ingersoll, Ont., who died after a long illness. He

had reached an advanced age and his death was largely due to a general breaking up of the system. The late Mr. Logee had been a resident of Ingersoll for upwards of fifty years. For a number of years he was engaged in the manufacture of pumps, his shop being on the site of St. James' church. He was a pump-maker by trade and established a large business throughout the county. About twenty-five years ago he engaged in the boot and shoe business, which he conducted very successfully up to a few years ago, when he retired.

made in Canada, have also been advanced some 10 per cent. The reason given for the higher prices in each instance is the ascending figure for leather of all kinds.

Thos. Abbott has opened a new shoe shop in Burk's Falls. Mr. Abbott, who has been appointed bandmaster of the Burk's Falls Band, is a former resident of Parry Sound.

Some makers of novelty styles in women's shoes have succeeded in making a full Louis heel of leather. It has a slender neck and a concaved breast, and it is, altogether, a very accurate imitation of a Louis wood heel.

James Newton, 171 Grace street, a shoemaker, seventy years of age, was found dead recently in the rear of his store at 5 Brunswick avenue, Toronto. He had been dead for some time. Death is said to have been caused by heart trouble.

August Kaufman, night watchman, accidentally fell into a vat of boiling liquid in the Breithaupt Leather Co.'s tannery in Berlin. He called for help but before assistance arrived managed to get out himself. He was terribly burned.

The Consolidated Rubber Co. has decided to move its entire footwear plant from Montreal to Granby. This means that the output of the company's factory in that town will be increased threefold and considerable extra help will be required.

The Panther Rubber Co., Sherbrooke, Que., is now in full swing. A number of expert operators have been engaged and are acting as teachers to local help. The products of the company are widely known in the United States and Canada.

According to a report from Regina the Western Tire and Rubber Company intends to erect a \$175,000 tire fac-

tory at St. Boniface, instead of Regina, as originally proposed. It is understood that the new factory is to be erected within the next year.

Norman L. Macdonald, of the Edmonton Leather and Shoe Company, Edmonton, acted as temporary secretary at a meeting recently held in Edmonton, for the purpose of organizing local manufacturers in affiliation with the Canadian Manufacturers' Association.

Robt. Ayling and J. F. Bentley, both of Toronto, have joined the selling staff of F. J. Weston & Sons, and have entered upon their new duties. Mr. Ayling is covering the Niagara Peninsula, while Mr. Bentley is looking after a large portion of Western Ontario.

An early closing by-law has been passed in Brantford, whereby the shoe stores will close at 7 o'clock each night, except on Saturdays and nights preceding public holidays. The by-law was largely signed and is being welcomed with a great deal of interest by the trade.

A sheriff's sale of the effects of Eli Goldin & Son took place this week in Toronto. The firm made boys' shoes and also dealt largely in findings. The stock of factory goods and shoes in process of manufacture, findings, machinery and fixtures, etc., amounted to about \$5,000.

Among those who have returned from extended business trips throughout the Western Provinces are H. E. Wettlaufer, representing Charles A. Ahrens, Limited, Berlin;

HAVE CLOSED SPLENDID YEAR

A. Brandon, of the Brandon Shoe Co., Brantford, leaves in a few days for Boston and other eastern shoe centres to look over the new styles for spring and to get in touch with the leather market with respect to prices, output, etc. Mr. Brandon also visits many of the factories in the New England States to study the latest improvements and keep pace with the trend of events. The Brandon Shoe Company have

just finished stock taking and find they had a very successful year—in fact, the most successful since they have been in business. The factory is now busy on Fall orders.

PRESENTED WITH GOLD WATCH

E. F. Leonard, who has been superintendent for the Slater Shoe Company for the last four years resigned recently and was presented with a gold watch and chain by the foremen of the Slater Shoe Company, Montreal. The presentation was made by Mr. D. Leighton, who also presided at the gathering. Mr. Leonard is going to take a rest for a while, at his summer cottage at

Nantasket Beach, Me. Among those present at the presentation, were H. W. Algeo and A. T. Coleman, of the United Shoe Machinery Company, Mr. H. H. Lightford, general manager of the Perth Shoe Co., of Perth, Ont., and Mr. W. A. Lane, of James Scott Leather Company, of Quebec. Mr. Leonard is the founder of the Superintendents' and Shoe Foremen's Association, which has its headquarters in the Read Building, and previous to coming to Montreal was the United States inspector for the army shoes.

L. M. Stock, of Walker, Parker & Co., Toronto, and W. E. Short, of the Kingsbury Footwear Co., Montreal.

E. J. Williams, one of the sales managers of Ames-Holden-McCreedy, Limited, Montreal, who has been visiting the branches in Winnipeg, Edmonton, Calgary and Vancouver, is spending a few days in Toronto with Charles Bonnick, manager of the Toronto warehouse.

H. G. Middleton, of the H. G. Middleton Co., Limited, one of the leading shoe wholesalers of Winnipeg, spent a few days in Muskoka on a fishing trip, and was highly delighted with the beautiful lakes. He was accompanied by P. M. Goff, inventor of the Dr. Goff's hygienic health shoe.

W. George Hankinson has been appointed agent in Sudbury for the Tally-ho shoe. He began business in Sudbury in 1910, starting a men's furnishing store in a modest way and building up a very large trade. He is chairman of the Board of Health of Sudbury and has held a number of other important positions.

The Shoe and Leather Reporter of Boston has purchased the Shoe and Leather Weekly of Chicago, and the latter publication will be discontinued. A. H. Lockwood, who was owner and editor of the Chicago publication, will remove to Boston and will accept a position in charge of the editorial department of the Reporter, commencing his duties with that company June 1st.

The Goodyear Shoe Repair Co., 625 Pender street, Vancouver, have taken in the shop next to them, which has been fitted up as a waiting room while patrons are having their shoes repaired. Geo. H. Morris founded the Goodyear Shoe Repairing Co. seven years ago and has steadily built it up ever since. All the latest improvements in the way of equipment have been installed.

It is learned on good authority that a Walk-Over Shoe store will in a few months open in Toronto. The location will be at 290 Yonge street, in the building owned by C. F. Tugman, of the Royal Shoe Co. The present structure will be torn down and a handsome new shoe house erected, the depth of which will be 156 feet and the width 31 feet. It is understood that the Walk-Over people have leased the new store for a period of ten years.

J. W. Hewetson, of the J. W. Hewetson Co., shoe manufacturers, Brampton, accompanied by his wife and daughter, has gone on a trip to England and the continent. Mr. Hewetson has lately purchased the residence in Brampton of George L. Williams and has removed from Toronto

to that town. The Hewetson Co. report that the outlook for Fall business is very good and in addition to their other lines have started to manufacture boys' McKays.

A fire, which is supposed to have been of incendiary origin, occurred at Listowel, Ont., recently, causing the destruction of the large frame building formerly known as the Listowel Tannery. The building was erected about thirty years ago, and was one of the town's landmarks. Breithaupt Bros., of Berlin, Ont., were the owners of the building, which was closed for tanning purposes some few years ago, owing to the problem of sewage disposal and the scarcity of bark for tanning. The building was not insured.

Harry Steel, formerly of the cutting room of the Wm. A. Marsh Co., Limited, Quebec, has been appointed superintendent of the Solid Leather Shoe Co., Preston. He learned his trade in London, where his father was a shoe manufacturer for several years. He was brought up with the smell of leather in his nostrils and after coming to America served for considerable time in leading factories in the United States. Mr. Steel is in every way qualified to make good shoes and is meeting with splendid success in his new position.

John F. Tobin, president of the Boot and Shoe Workers' Union, will attend the Congress of the National Union of Shoe Operatives and Leather Workers at Vienna, Austria, August 20th next. The Boot and Shoe Workers' Union is affiliated with the National Union and Mr. Tobin represents the American organization. There will be representatives from shoe workers' organizations at the convention from all over the world. Mr. Tobin will specially address the delegates on the progress of the Boot and Shoe Workers' Union in Canada and United States.

The coroner completed the inquest on the remains of the late Miss Dubois, who was brutally murdered at her

INVITING INTERIOR OF SHOE STORE OF A. M. REID, KINGSTON

home in St. Sauveur, Quebec, on May 3rd, the jury returning a verdict of wilful murder against the young man Dion, who was formerly a clerk in the employ of her father's shoe store. There were four witnesses examined, including Dr. Derome, of Montreal, who examined the coat that Dion is said to have worn on the morning of the murder. The doctor testified that he found human blood scattered over the front of the garment. He was sure it was human blood. The other witnesses gave evidence of the movements of Dion on the fatal day. The prisoner was subsequently taken to the Court of Sessions for preliminary examination.

The W. E. Woelfle Shoe Co., of Berlin, manufacturers of women's fine McKay shoes, have recently added a con-

What does it profit
a dealer to sell shoes
that fail to give satis-
factory wear

?

- ¶ There is no chance of a pair of "Everyday" shoes failing to pass this test. Every pair is made in the same careful manner, with the best of materials and must pass a rigid inspection before leaving our factory.
- ¶ You'll find the "Everyday" shoe will please your customers both as regards looks and wearing quality.
- ¶ The "Everyday" line is one you can handle pleasantly and profitably.

It is made by an organization of style men, merchandising men and craftsmen, whose combined efforts have resulted in a shoe that pleases the wearer by its style, fit and serviceability; that pleases the dealer at the ready way it sells, at the very substantial profit it gives.

You owe it to your business to give them a trial.

Charles A.
AHRENS
limited.
BERLIN, ONT.

siderable equipment to their fitting room. The firm have been very busy with sorting orders during the past few weeks, working ten hours a day, and they are now in splendid shape to handle immediate delivery business. They report that orders for Fall are coming in nicely and the territory throughout the Dominion is being thoroughly covered by the following representatives of the firm: Maritime Provinces and Prince Edward Island, Messrs. Killam and Semple; Ottawa Valley, E. E. Code; Toronto and Eastern Ontario, L. J. Iles; Western Ontario, W. E. Woefle; Manitoba and the West, G. G. Lennox; British Columbia, F. Henderson; Niagara Peninsula, W. S. Wood.

Owing to the warm weather, business in the retail shoe line has greatly improved and the sale of men's Oxfords and women's Colonials is reported as very satisfactory, particularly in the cities. The demand for tennis and sporting shoes has also been quite active. Jobbers report that a very good sorting business is being done, but on the whole, the volume is not up to last year. Stocks with retailers are getting rather low and the majority of dealers throughout the

ONE OF THE LATE OFFERINGS IN MEN'S BALS
IN PARIS, WITH PLAID TOP

country report a falling off in business. This is owing to the general depression and the fact that a large number of people are out of work in many towns and cities, particularly in the West. However, it is confidently expected that conditions will improve this Fall. Some shoe factories are busy, while others are only running a portion of the time. The output of tanneries in general is about 50 per cent. of normal and buying is in small quantities.

The National Boot and Shoe Manufacturers' Association has appointed William H. Duling, of Laird, Schober & Company, of Philadelphia, and Frank J. Bradley, of Hazen B. Goodrich & Company, of Haverhill, Mass., delegates to the First National Foreign Trade Convention, to be held at Washington, D.C., May 27th and 28th. This convention is the first nation wide business men's conference on the subject of American foreign trade, which now amounts to more than \$4,000,000,000 annually. The lack of any definite national foreign trade policy for the retention and extension of this trade caused the American Manufacturers' Export Association, American Asiatic Association and Pan-American Society to organize a general committee, of which Lloyd C. Griscom, formerly minister to Japan and ambassador to Italy, is chairman, and the heads of various industries and organizations interested in the foreign trade are members.

The Boston Shoe Co., in liquidation, and Vincent Lamarre, liquidator, lost in a suit against Philip E. Frank and Henry Frank, members of the company, the case cen-

tering about the proprietorship of a lease extension covering the premises of the company, at the corner of St. Catherine and Mansfield streets, Montreal. The company had entered into a long term lease, but some six years ago a further extension was secured. As this extended lease was a valuable asset, the liquidator asked that it be handed over to be disposed of for the benefit of all the creditors. The defendants pleaded that they had acted in their personal capacity in negotiating for the extension, and that thus the extended lease was their own personal property and in no wise the property of the company. The whole case centred about the interpretation of the provisions of the extended lease, and Mr. Justice Mercier, after reviewing the pleadings at some length, found for defendants.

NEWSY BRIEFS FROM QUEBEC

The shoe factories here are working on their new samples for Fall. Orders are not coming in very rapidly and there is not a very bright prospect for a busy summer. There is a demand for heavy leathers, especially black and in colors. Mahogany tan calf seems to have taken the advance over all other kinds. The new leather is reported to be very popular. Plain toe pumps in patent are in good demand and gunmetal leather is reported to be taking well. The business of the retail trade is not as active for this time of the year as it should be. The cause is attributed to the depression that is general in all lines.

The old Tourigny & Marois building, which was burned some months ago, has been torn down to make way for the new factory of the firm, which will be erected at an outlay of \$100,000, and when completed will be one of the most modern and best equipped in the Ancient Capital.

Flower Day was celebrated last week and there were about 100 motor cars in the parade. All the vehicles were decorated with natural flowers. Among the fine cars decked out in nice style were seen those of A. Duchaine, John Perkins, Ludger Duchaine, A. E. Marois, O. Goulet, all shoe manufacturers, and amongst the tanners, the automobiles of Oscar Clement, Edgar Clement, Albert Racine, Wilfred Cantin and Louis Guay, were noticed.

Among the visitors in the city during the past few days, were Wm. Linklater, of the Boston Blacking Co., Montreal; E. Whitley, of Fred Whitley & Co., Montreal; J. E. Matheson, of the United Awl and Needle Co., West Medway, Mass.; G. E. Dalrymple, of J. A. Dalrymple & Co., Haverhill, Mass.; Chas. E. Briggs, of Laird, Prior & Co., Brockton, Mass.

CANADIAN SECTION AN ASSURED SUCCESS

Plans for the big Shoe and Leather Fair to be held in Boston, July 8th to 15th, are fast getting into shape. The managers of the Fair report that the special section of spaces reserved for British and Canadian exhibits has been almost entirely sold and they are planning to open up another row of spaces across the aisle. This Canadian and British section should be one of the most interesting features of the Fair, and no doubt there will be a large attendance from the Dominion as well as from across the water.

The program for the International Shoe and Leather Week, which is held under the auspices of the New England Shoe and Leather Association during the Fair week is:—
Wednesday, July 8th.—Opening of National Shoe and Leather Market Fair, Mechanics Building.

Thursday, July 9th.—Harbor excursion and dinner at Nantasket, complimentary to visiting members of the trade.
Friday, July 10th.—National Shoe Retailers Association Day, with meetings at Mechanics Building.

Saturday, July 11th.—Shoe Factory and Superintendents' Day. Meeting at Mechanics Building.
 Monday, July 13th.—Special Canadian Day.
 Tuesday, July 14th.—Automobile trip to United Shoe Machinery Company's factories at Beverly.
 Wednesday, July 15th.—New England Trade Organization Day and closing of Fair.

HAVE ADDED A STOCK DEPARTMENT

The Hartt Boot and Shoe Co. have issued an exceptionally attractive and imposing catalogue illustrating many of the lines produced by this enterprising Fredericton firm. The booklet comes in an artist's green duplex cover with embossed gilt letters and announces that, owing to the constant and rapidly increasing volume of repeat orders, the firm are adding a stock department, and all orders are shipped from this new branch on the same day as received. The lines carried in stock are made up on the best selling lasts and patterns. The illustrations on the heavy coated paper in the booklet are clear and true and faithfully represent every detail of the remarkably fine line of shoes. The Hartt Boot and Shoe Co. was incorporated in 1899 and at

first made a general line of shoes, but soon discovered that to be successful it would be necessary to confine their efforts to fewer ranges. The result was that they discontinued making misses' shoes and some time later ceased manufacturing women's footwear. For some years past they have condensed their efforts to making nothing but men's and boys' wels in which splendid progress has been made. For the past three years the business has been managed by President J. D. Palmer and Vice-president J. A. Reid. Besides being the active management of the concern they are practical owners as well. To-day the Hartt Boot and Shoe Co., with its trade marked shoes of Hartt and Gold Bond is known from one end of Canada to the other, and ranks high among the manufacturing institutions of the continent.

**SPHINX
Shoe Cement Paste**

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

SHOE & LEATHER JOURNAL

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

We want to do Business with YOU Mr. Wholesaler

If the initial reception accorded our line early in February is anything of a criterion, we are quite justified in saying that we manufacture a line of women's McKay shoes that is positively unsurpassed anywhere.

They are made
To Retail at \$3.00, \$3.50 and \$4.00

Our styles have already proven themselves to be quick sellers and the assortment covers practically every known want.

It only remains for YOU to see these shoes to be satisfied that your welfare can be promoted to their sale. They are shoes above the ordinary; shoes that are in every respect desirable and dependable.

Made exclusively for the Jobbing Trade

A Question *and* The Answer

A Western dealer writes as follows:

"I have just opened your shipment of 'Virginia' shoes. They look all right and the price suits me, and I might be able to use a fair quantity of these shoes. Before deciding to do so I would like to know if you intend to make these lines at the same price (2.75) for next season, using as good material all through, etc., etc."

The Answer:

Emphatically, Positively—YES

we will continue to make

THE VIRGINIA SHOE

Goodyear Welt

At \$2.75

We will not cheapen the shoe in one single item. Our business is growing tremendously—our workmanship is improving rapidly. **We will show a larger and better line than ever.**

The "Doctors" Brings You the Trade of Particular Men

Every retailer with an eye to future business realizes the absolute necessity of taking care of the particular man's requirements. He knows that his business is well worth having.

The Doctors Antiseptic Shoe is made particularly for men of this type. It is a stylish, sensible shoe—one that can be worn in any kind of weather. Its antiseptic lining and middle sole of thermal asbestos keeps the foot at its natural temperature and does not hold the odors caused by perspiration. It is also perfectly waterproof.

For a bigger and more profitable shoe business, try an assortment.

**NO DIAMOND
TRADE MARK
NO FAST COLOR**

**NO DIAMOND  TRADE MARK
No Fast Color**

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

Build Up Your Children's Shoe Department

Most Shoemen Take Wrong View of Situation—Proper Fitting and How to Go About It—Stocking the Department Properly—Give Good Service, Quality, and Never Cut Prices

"No, the children's department doesn't pay me, but I am forced to carry it in order to retain my regular patrons."

So spoke a shoe retailer to the writer the other day, when questioned on the subject. His views represent exactly those of a large number of dealers in both country towns and large cities. They have been in business for years, and never could make the children's department a paying proposition, so they merely carry it along looking on it as a necessary adjunct of the shoe store. Generally you will find that this type of shoeman has never stopped to figure out why his department does not pay. There is the other type, however, the chap who, when he found his children's department was a liability rather than an asset, set out to investigate. He looked at it in this light—that he had as much ability as the other chap and if only one man out of two or three could make the department go he was going to be in the select class. Then he remedied the big defects in his children's department and made it a paying branch of the business. He found that when he took particular pains in fitting a child the little boy or girl or their parents always returned to the store. He worked up this advantage and dwelt strongly on this feature in his advertising, making it one of his chief talking points—his ability to fit the little ones better than other stores—and it worked.

Why cannot you also make the children's department pay by working along the same lines? Just because your competitor is not making money at it is no reason why you should conclude that it cannot be made a paying branch.

Speaking on the subject, a well known Montreal shoeman, who specializes on children's shoes said:—

"In the small country stores as well as in the exclusive city shops a great proportion of children are allowed to leave with a pair of shoes utterly unsuited to their needs.

"The most successful dealer in children's shoes makes known the merits of the shoes he sells and properly entertains his little customers. He also takes scrupulous care in fitting children's feet.

"Many unsatisfactory shoe sales are not the fault of the shoes alone. Part of the blame rests with the clerk who made the sale. The first consideration in selling a pair of children's shoes is the child's disposition. The clerk must in most instances be the judge of what is best suited to the child's needs. The sturdy, rather rough, wild young Cana-

dian, who cannot resist the temptation to kick every stone, tin can or other obstacle in his path, should not be fitted with the same kind of shoes placed on the boy of a quiet, studious turn of mind. Yet the error is often made.

Use of Diplomacy

In fitting the child with the right kind of shoes the clerk must often combat the opinions of both parent and the little wearer. This, of course, must be tactfully done. Many of

the stores, both large and small, in which children's shoes are sold most successfully, employ a man or girl who makes a specialty of the children's shoe department.

"If this condition does not prevail in your store, select a clerk in disposition suited to the work and tell him to concentrate his efforts along these lines. This does not mean that the clerk will become useless in other respects. Other duties will be more efficiently performed because of the special study and consequent better understanding of human nature—a knowledge so necessary in successful salesmanship.

"In every case where the friendship of a customer toward some other clerk does not interfere with the plan,

customers desiring children's shoes should be turned over to this clerk. Your patrons should be apprised of the fact that you have a specialist on children's shoes, who is most capable of properly taking care of their requirements.

Study Your Little Customers

"The successful salesman of children's shoes studies child life in all its phases. He learns to appreciate the mental attitude of the boy who loves the birds and the woods

and the streams running through it. He learns to know the joy in the heart of the little girl as she mothers her dolls. He studies their games and childish amusements. He reads the stories written for children, and the children's pages of the magazine, and he will come to enjoy most sincerely his study of the young ones. His success is largely due to the fact that he loves children.

"Aside from his study of child nature, he must have a practical knowledge of children's footwear and how to determine whether a shoe is of the right shape and size to give comfort to the youngster who wears it.

"When fitting shoes on grown people, the clerk is guided by the purchaser's own judgment. In fitting children, however, he seldom has that assistance and must depend entirely on his own judgment. Children as a rule are not self-assertive in the presence of older people, and their judgment is not yet developed. They will frequently declare that a shoe does not hurt when in reality it is paining them.

Important Points in Fitting

"A few very simple tests can be applied which will almost insure a proper fit. First, the length of the foot should be definitely determined by means of a measuring stick. Next, the general shape of the foot should be observed. A foot with a low arch requires a shoe with a rather straight last. A foot with a fairly high and natural arch will be most comfortable in a shoe made over a slightly swinging toe last. In fitting such styles, great care must be taken that the toes will not become cramped. Run the fingers carefully over the three smaller toes. If they are curled up or drawn, and previous observation had shown that they are naturally straight and flat, the shoe is not the right kind.

"Very frequently, children must be fitted whose feet and stockings are wet with perspiration. Under such conditions it is extremely hard to get a proper fit. The usual result is that the child is sold a pair of shoes a size too large for comfort, which generally causes a broken-down arch and gives the child a listless, slovenly gait. One dealer who is making a big success with his children's department has overcome this by keeping in his shoe department several different sizes

of children's stockings and a clean, dry piece of towel. When the children with perspiring feet are to be fitted, the advantages of dry feet and stockings are carefully explained to the mother. The wet stocking is removed, the foot is dried and the dry stocking put on until the shoes are fitted.

"This dealer's experience has proven that the parents who accompany the children appreciate highly this special attention, and they go out and talk about it to their friends, and he is securing through this plan the children's trade of many people whom even the exceptional quality of his goods and the excellence of his advertising had not induced to enter his store."

Stock Good Assortment

To be able to fit a child properly, the shoeman must have a sufficiently large assortment of the various lines necessary. A large Canadian manufacturer of children's shoes talking on the subject says, "I have made a study of this question, as it means money to me, and it has always been my experience that a great number of shoemen opening or conducting a children's department understock to such a degree that they can never hope to make their department a profitable investment under their methods of operating it. People will not patronize a dealer of this type, but will go rather to the man who offers them the best selection in town. Too many shoe retailers are anxious to make a success of the department, without putting themselves to any noticeable expense. This is a wrong idea to have. 'You need money to make money,' certainly is the truth, and if a shoeman is determined to build up the children's branch, he must be prepared to make a reasonable investment."

Many shoemen will be puzzled, not knowing just what is the right size stock to carry. The same manufacturer gives the following table as a good initial investment. He believes that not less than \$500 should be spent in installing a fairly full stock.

| | |
|--|--|
| Each line given containing twelve pairs, stock: | |
| Babies —2 lines slippers | |
| 1 line Roman sandals | |
| 4 lines, boots | |
| Investing \$60.00, average cost per pair about 70c or 75c. | |
| Infants —2 lines slippers | |
| 1 line Roman sandals | |
| 7 lines boots | |
| Investing \$100, average cost per pair about 85c. | |
| Childs' —2 lines, slippers | |
| 1 line, sandals | |
| 7 lines, boots | |
| Investing \$125, average cost per pair about \$1.05. | |
| Misses' and Youths' —2 lines, slippers | |
| 1 line, sandals | |
| 7 lines, boots | |
| Investing \$150, average cost per pair about \$1.20 | |
| Boys' —3 lines, boots | |
| Investing \$60, average cost per pair about \$1.70. | |

This table, of course, is a reliable estimate, but it does not mean that every dealer should follow it out to the

(Continued on page 30)

Retail Selling Has Big Possibilities for Man of Brains

Clerks Should Remember That the Boss Can Help them in Many Ways—Success Depends on Many Things, but a Knowledge of Shoes and Feet, Tact and Appearance are Leading Facts—Go After Opportunities

Shoe clerks can be divided into two classes, one of which includes those who work for the store and the other those who work for their salaries. The men in the first class eventually become proprietors; the rest never rise beyond clerking.

The unambitious sort of man, who never expects to be in business for himself, isn't worth bothering about. His work is always slothfully done and he takes care to do only enough to insure his position. Such men get nowhere. They exist in every business, broken down old men, slaving away at some mechanical work and always believing that the world has played them a dirty trick.

But the other type—the clerk who looks forward to a business of his own and independence—generally lands. When he makes the interest of the store of primary importance he is furthering his own interests far more than those of his employer. For he is learning to build up trade, and when his goal is reached and he opens his shop, his experience is worth much to him.

How to Look Upon Store

The retail shoe business is a pretty intricate one. It is a lucrative field of endeavor to the man with brains, who knows the business. A knowledge of all the essentials cannot be learned in a day. Therefore, the clerk should look at the situation something like this, "I am passing through a sort of shoe college, where I can learn to do the things well that are vital to my success." With this thought as a motto he has really started to work for himself, although for a time the boss and he will split the benefits of his initiative and energy.

Of course, the shoe clerk must be first of all a salesman. He must be able to satisfy customers. His success in selling depends on many things but these can be boiled down to knowledge of shoes and feet, tact and appearance.

Consider for a moment the question of the right shoes for the right feet. The orthopedist is a professional man, commanding a large salary, and in a great many cases his work is to correct the harm done by the inefficient shoe clerk. The good shoe clerk really is a sort of orthopedist himself, and if he knows how to create foot comfort he is a valuable member of society. He should study the ailments that the foot is subject to, until he can diagnose individual cases and suggest remedies.

The Real Value of Tact

Tact is an intangible quality. Somebody once said, "When a man has it, you never know it but when he hasn't it you can spot it every time." It is principally a knowledge of human nature that prompts a man to do and say the right things at the right times. This characteristic is especially important in selling to women, for they buy more through intuition than logic.

A clerk may not be endowed with natural tact, but at least he can be careful and courteous. Try to strike the happy medium between timidity and over-aggression. Many sales have been lost because a clerk has been afraid to attempt them and just as many because he has presented his argument with too much emphasis.

In appearance, be neat. But avoid being flashy. Look at the really well-dressed men of your neighborhood. You will find in every case that their clothes are characterized

A STRIKING AND ATTRACTIVE WINDOW DISPLAY MADE BY LUDLOW BROS. OF BRANTFORD, ONT.

by simplicity. It is always the piker that wears the startling combinations and no shoe clerk can afford to do it.

Look on Boss as a Friend

In your relations with the boss look on him as a friend. You will find as a rule that shoe dealers are mighty decent sort of chaps and willing to help you out when you get in trouble. Too many employes take the point of view that the boss is their natural enemy and, therefore, fair game for their criticism. This is all wrong. The boss can help you far more than you will be able to help him and he is generally willing to do it.

The "clock watcher" cheats the boss but does far more damage to himself. He is veritably kicking away his chances for success. And moreover, the man that loafs is invariably unhappy, for work is the greatest little time killer on the market. The man who wastes his time is commercially committing suicide.

So, when trade is dull utilize the opportunity to study the business. You should know your stock so well that you can put your hands on any pair of shoes in the store.

Work with the boss, not away from him. Your interests are identical. The short cuts to success, he can and will show you. His judgment may not always be correct but it is his right to follow it. And if sometimes he seems a trifle unjust remember that there are no perfect men and "to err is human; to forgive divine."

Above everything else don't malign your business. It is a good big field of human utility. It holds wonderful possibilities for the brainy man who understands the public needs. The clerk who knows this will leave his fellow clerks behind and stand out a leader. But to accomplish this requires lots of hard work. The chance is waiting for you. Grab it. Learn everything you can about footwear, feet, advertising, selling and the thousand and one other things that are part of the specialist's equipment.

Canadian vs. American Shoes

I talked last week with a veteran shoeman who is well posted on shoe trade conditions in Canada and the United States, writes "Observer" in *Hide and Leather*. He spends considerable time in Canada and the United States and knows whereof he talks. Said he: "My American friends need not worry in regard to Canadian shoes entering their country. Such shoes as come will be brought over the border on the feet of traveling Canadians. When shoes were placed on the free list in the latest American tariff bill, some Americans at once became alarmed at a possible invasion from Great Britain and Canada. Working conditions in Great Britain, however, are not fully understood in America. The huge factories of America are unknown in Great Britain. Wages are higher in American shoe factories, but cost of production and efficiency in general, are strong points among American shoe manufacturers. An English shoe manufacturer would have to be given considerable time to deliver orders obtained in America. These are days of changing fashions, with necessity of speedy deliveries of shoes purchased, and British manufacturers would work under a disadvantage in cultivating American trade.

"Canadian shoe manufacturers are handicapped by the tariff in Canada on leather and other shoe materials imported from abroad or from the United States. Canadian tanners fix the prices of their leathers just a trifle below the cost of imported leathers, laid down in Canada. Consequently, Canadian shoe manufacturers, in spite of shoes being on the free list in America, are virtually prohibited from exporting to America, as they would have to ask about 10 cents per pair higher than charged by their American competitors.

"Canadians are importing some millions of dollars worth

of shoes from the United States, but they are principally high grades for which full prices can easily be obtained. As regards medium to cheap shoes, the Canadians do not fear American competition in this line. Shoes to be worn in Canada by the general public must be stronger and somewhat more durable than American shoes. Some substitutes for leather that are accepted in shoes in America would be refused in Canada. The climate is more severe than in the United States and all-leather shoes are demanded.

"Canadian shoe manufacturers, although they cannot boast of such immense plants as are found across the border, nevertheless make their profits on their output and probably get more real pleasure and enjoyment out of life by reason of their freedom from the tremendous responsibilities carried by the big and ambitious shoe manufacturers in the United States. American shoe manufacturers seem to be losing their fear of foreign competition. They realize there are many things connected with the importing and exporting business that do not always appear on the surface."

The Stubbornness of Some Landlords

"Yes," remarked a Brantford retailer, "we have been doing business in the one stand for five years. I know that my front is not what it ought to be, but I do not own the building, and I do not feel like changing the premises and adding to the value of another man's property. He might give me a lease for three or five years, but I would not undertake to instal a front such as I desire to put in under a ten years' lease. I wanted my landlord to instal a new front for me, but he would not listen to it. I then offered him 10% on the cost of it, which I consider a remarkably good return, especially as this fellow is only getting 6% on the mortgages, he holds. Strange to say, he would not harken and said that he preferred to let his money out at the lower rate of interest. I told him I would take a ten years' lease. Even then, he did not appear to be interested. Now, I pay \$50.00 a month for this place. Presuming the new front would cost the landlord \$1,000, as the store is only 20 feet wide, it would not likely run into more money than that, and I was willing to give him \$100 more rent annually, or if the cost was \$1,500, \$150 more. He did not seem to think 10% on a ten year lease would pay him, yet you see I would have paid in that period for the whole outlay.

"You may ask why I do not buy the building. Well, the landlord will not sell. He declares he wants to keep the premises for family reasons. Now you observe the position in which many retailers are placed today. They do not feel like going to the expense of installing their own front and making the landlord's premises more valuable unless they can obtain a very long lease, and, on the other hand, you meet many a non-progressive landlord, the same as I have here, who will do nothing. Your stand may be all right so far as location is concerned and your stock may be O.K., and your service right up to the mark, but in this, and every other city, there is a large amount of transient trade, which I never catch at all. It goes right by my door to Jones and Robinson down the street, who have much more imposing fronts and can display their lines to decided advantage. Now I would like to get some of this transient trade. I mean by that, the people who buy here or there, wherever it suits them. They see something in a window that attracts their fancy or arrests their interest and in they go to purchase it. Now with me, I cannot make such a display and consequently consider that I lose a large amount of business each year. There is only one way in this world to have a home or a store exactly as you want it, and that is to own it yourself. This is not always possible, in view of one's financial conditions and the eccentricities of certain property owners who, when they think some body else wants a place will not sell it at a reasonable figure."

The Proper Way To Cut Up a Side of Sole Leather

How to Avoid Waste and Thus Secure Additional Profit—Cutting Six and One-Half Inch Ranges and What Can be Got Out of Them—The Savings That Can be Effected

By GEORGE E. GIRLING

How to cut up a side of leather to the best advantage is a question of moment to every shoe repairer in the country. The price of sole stock is soaring up, up, all the time and it behooves every user of sole leather to look after the profit end of the business. It would be well to remember it is not the profit you make that will swell your bank account, but what you save. The purpose of this article is to endeavor to show how to avoid waste, thus adding additional profit to your day's labor. The writer offers his suggestions after

even pair of soles. If, however, you commence to cut from one end of your range you get one thick sole and one thin sole.

There are many other ways of cutting up leather, but the two aforementioned systems will serve as an illustration.

Cutting Bend in Ranges

Now, suppose we take a bend and proceed to cut $6\frac{1}{2}$ -inch ranges from the neck end, usually about three;

giving this subject careful consideration after many years' practice.

The first thing to consider in cutting up a bend is how to successfully cut the bend and obtain an even substance, and second how to secure an exclusive part for your women's and children's work, also an exclusive part for your men's work and still maintain the surface required for each.

Some Methods Now Employed

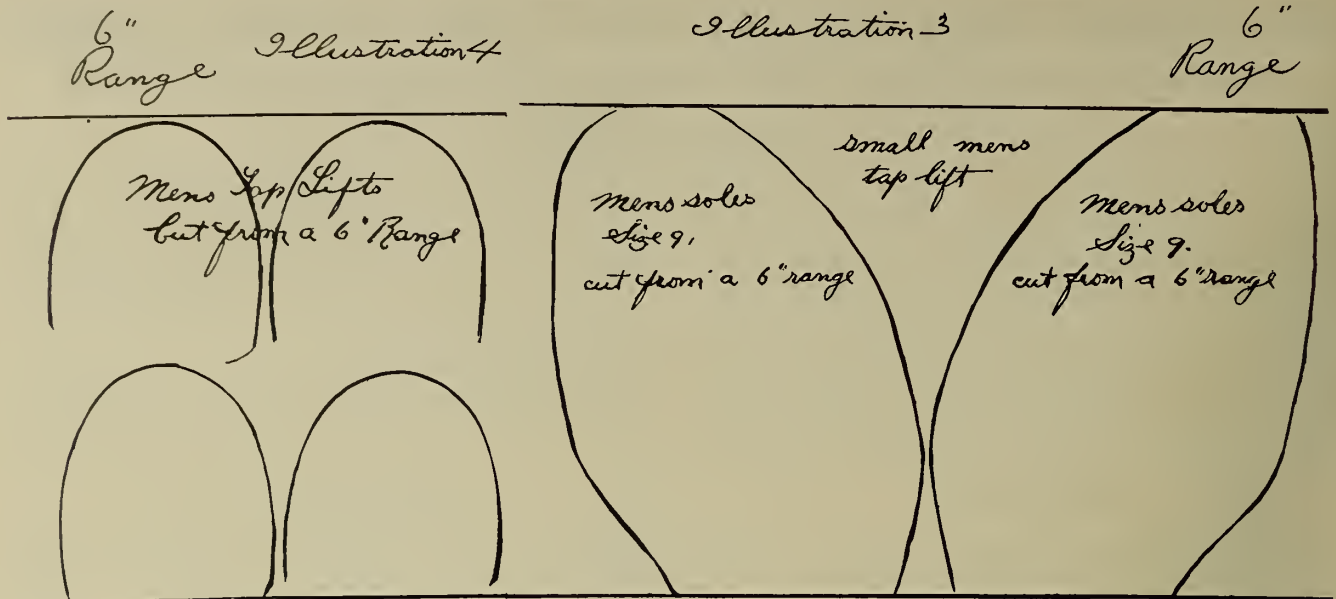

It would be as well to let us first look at the methods usually employed. Many repairers take a bend and cut the soles as they want them, picking a part here and a part there in an endeavor to locate the substance required. Those who use this system would do well to look at the clock and see how long it takes them to cut a pair of soles, after turning the bend over many times. Remember, this is a waste of time and time is money.

Another and more prevalent system in vogue is to cut the bend into ranges, commencing at the neck end. You who use this system, how do you obtain a nice level pair of half-soles for a pair of men's shoes? Not by cutting them from the end of your range. No, you have to cut them from the middle of the range. The result naturally follows that you have two ends left that are impossible to use to advantage because of their unevenness. Neither end will cut an

these will cut women's half-soles (see illustration 1) almost any size. The picture shows a pattern taken from a size 5 shoe. This measurement will give you room to cut almost any size with a minimum of waste either in width or length.

We will now suppose you want to cut children's and boys' soles, the lengths varying from four to four and a half inches (see illustration 2). The picture shows a pair of children's soles $4\frac{1}{2}$ inches deep, thus leaving two inches to spare to cut women's and children's heels.

After cutting three $6\frac{1}{2}$ -inch ranges off the neck end for women's and children's work we will now give our attention to cutting men's soles by cutting 6-inch ranges lengthways this time, taking the first range off from the backbone. Men's soles differ a good deal in size, but a 6-inch range will usually cut soles up to a size 9 (see illustration 3). A good method in cutting ranges for men's work is to cut three 6-inch ranges and one $6\frac{1}{2}$ -inch range to allow for extra large soles. A bend will usually measure across the centre about 26 inches. The picture shows a pair of men's soles size 9. Soles cut as shown will give you one heel (either for men's or women's, according to the size of the soles) with every pair of soles cut. This is your saving. As will be seen this method does not allow a particle of waste. Another advantage is that you get uniform substance by

cutting the bend lengthways. The first range will cut even light soles, the second one a little stouter, the third and fourth a little stouter still and all near about uniform substance.

Then again, your 6-inch ranges will cut your men's heels as shown in illustration 4.

There is only one way to cut leather and that is the way that will bring you the most profit. Try it out the next bend you cut up.

Bronze Has Come Back

One of the most spectacular style comebacks of the season, says an American writer, is the renewed interest in bronze shoes. A few years ago this type of footwear was in great demand and then for some reason it lost popularity and sank into obscurity.

Sometime ago we predicted that bronze was returning and now it seems assured. Attractive bronze ties are common sights on the streets where well dressed women stroll. Next fall should see a big call for this type of shoe. The vogue is spreading to the cheaper grades and this is a sure sign of popularity. It is a welcome relief to stray for a moment from patent. Not that bronze will materially diminish the sale of patent leather, but with bronze in fashion the dealer has more selling scope, for a woman may buy a pair of patents and a pair of bronze shoes where formerly she bought only the patents.

The Clerk Problem

Trying to run a modern shoe store without capable clerks is like trying to run an automobile without a motor.

Radium is one of the few things rarer than good clerks. It is worth a little more, too. However, a good clerk—or salesman—commands high wages at all times and in all climes.

The first thing a merchant must do when he starts in business is to engage a good clerk or two. One of the last things he must do is to hold on to them. But let him take especial care in selecting them. Remember this, Mr. Merchant: the fact that one man "runs" to red neckties and another to purple clothes doesn't have a great deal to do with the pay envelope, except that a neat, plain dresser is to be preferred to a gaudy one.

There is also a premium this season on salesmen who are

Illustration 3

cut from a 6" range

Mens soles
Size 9.
cut from a 6" range

upstanding and open-faced. But this item is of more interest to jewelers.

Get clerks that have had shoe experience, if possible, for they will be worth more to you than other salesmen who have had no experience selling shoes. If possible, get clerks with a wide acquaintance, for they can control their personal following, which will mean business for you.

The clerk should learn the stock and learn it well. He should be polite, painstaking, courteous. He should always be willing to go out of his way to favor a customer, particularly when by so doing he paves the way for selling an extra pair of shoes or two. He should work hard and earn his wages. He should respect his boss, but not quail before him. He should display as much interest and enthusiasm as if the store belonged to him.

And if he follows this advice, he may be invited to become a partner.

A Prodigy of Achievement

Webster's dictionary (of which the New International is the latest, largest, most luminous and exhaustive expression) is a prodigy of scholastic achievement, eclipsing in authority, range and excellence all other lexicons combined, yet retaining the simplicity and intelligibility which render it conveniently available for every class of students and readers.

The multiplicity of modernisms evoked by this electrical age and its multifarious developments, words that would be Greek to our fathers, are given and defined with praiseworthy particularity. And the accretion of new significations to old words, the normal result of usage, is presented with admirable fidelity.

For three-quarters of a century the Webster dictionaries have been in the lead; but the New International is the crowning glory of them all. It is essentially and emphatically a 20th-century product. It makes every earlier dictionary seem crude by comparison.

Webster's New International Dictionary rises to the dignity of an institution, and one in which every speaker of the English tongue has great reason to be proud.

It is a monument to modern scholarship, and yet a towering tribute to the work and wisdom of Noah Webster, who builded better than he knew.—Springfield Republican.

Obliging Relatives of Retailers is Thankless Job

Leading Wholesaler Tells of Nuisance and Annoyance of Honoring Customers' Orders—Leads to Wrong Impressions and Causes Loss of Business—Wishes Dealers Would Stop Sending Out Such Documents—A Few Episodes

“—astonished by the facts—”

“I feel like giving \$500 to any charity that might be named if the retailers would cease sending persons here with orders for shoes. The practice has grown to be an intolerable nuisance,” declared a leading Toronto wholesaler the other day.

“I do not wish,” he continued, “to cast any reflections

or any unjust aspersions upon the retail trade in general, and I must compliment the Retail Merchants' Association on the good work they have done in stopping dealers sending customers here with orders for individual pairs, when they have not the proper size or width in stock. It is not to this phase of the question at all that I refer, but a totally different matter.

“Let me make myself clear. Nearly everybody in this age seems to be hunting for a bargain or trying to get something a little cheaper than his or her neighbor. This, I suppose, is partly due to the quietness in trade, and the fact that money is not too plentiful. Toronto is a big city with half a million population, and practically every retailer in Ontario has an aunt, an uncle, a cousin, a nephew, a grandfather, a sister-in-law or a grandchild, or even a son or daughter residing in Toronto. Such persons, having a relative in the trade, naturally expect to buy their footgear wholesale. The result is that retailers, from every point of Ontario, who happen to be customers of ours, will send in a written order to this effect:—

“Please give Mrs Jenkins, who is my sister-in-law (or Mrs. Thompson, who is a niece, or Mr. Williams, who is a cousin), whatever goods she (or he) desires and charge the same to my account.’

“In certain cases the writer will add that he will pay for the shoes. We have this class of people coming in very frequently, and perhaps an ordinary citizen wants to know why we honor such orders—why we do not turn down the applicants flat. In the first place let me make it clear that no pair of shoes is ever sold in this establishment retail to any person who does not bear a written order from some customer of ours. We never violate the regulation—‘no order, no goods.’

“But someone says: ‘Why do you honor orders at all?’ Well, I will tell you why. Nearly everyone who sends relatives in here (these relatives are either living, boarding or going to school in Toronto) is a good customer. We live by the patronage of the retail merchants and if we refuse to honor such a document, Mr. Green or Mr. Brown, or Mr. Anderson, doing business in such and such a town, would simply cut loose from us and not give our traveler a hearing, neither would he send in any assorting orders. The ground that he takes is this—supposing the case to be that of Mr. Anderson—‘Here I patronize that jobbing house down there to the extent of \$5,000 or \$10,000 every year and if my name and account are not good enough to entitle my niece to a pair of shoes now and then at wholesale price, then I will go where my patronage is esteemed and where a wholesaler will do me a little favor.’

“You can see yourself that if you are a good patron of a store or any merchant, for that matter, and pay him cash, if he does not go out of his way to oblige you or do you a little favor once in a while, then you tell him plump and plain that he is not running the only establishment in the world and you will go elsewhere. It is human nature to expect little courtesies and considerations of this kind. We would not mind a certain amount so far as the men who have orders are concerned, they generally cause very little trouble. In fact, many of them will ask for a certain size and width and will not try the shoe on, but it is with women, especially when they have children to fit, that we suffer most.

Fitting a Brood of Bairns

“Perhaps a woman comes in here with an order from Mr. Mathewson, of G ——. She is his sister, who lives in Toronto and has three or four kids. Well, she sallies in some afternoon, when we are busy, produces the order from Mathewson, who is a good customer of ours and wants to fit out Johnny, aged 14, Lily, aged 11, and Dorothy, aged 6. She looks over the samples and asks us all sorts of questions. As you know, we have no facilities here for fitting and the bulk of our reserve stock is on the third and fourth floors. Now this woman will possibly spend an hour or an hour and a half frittering away time, trying to get suitable shoes for those children. In the meantime half a dozen retailers have come in and seeing her and the brood of little ones here, naturally conclude that we are doing a miniature retail business in opposition to them. Perhaps they do not say anything, but they form their suspicions, nevertheless. They probably go away telling that they saw us fitting out a whole family, but I want to tell you that before that woman receives any attention at all, she has to produce an order from a reputable customer of ours.

“It is possibly the outdoor season and Johnny wants a pair of ‘sneakers.’ He perhaps wants a blue canvas and the mother thinks brown would look very much better. Then they have a discussion and she does not know exactly what size he takes and possibly two or three trips have to be made to the third or fourth floor to give him a pair of rubber soled shoes that will answer his purpose. Then it is Lily’s turn to be fitted out. She wants a growing girl’s shoe, size about 3. She declares that is large enough, but the mother thinks a 3½ would suit her better. She wants a tan button and the mother thinks she should have a dongola tie. They have an argument over the matter and finally wind up by taking a gunmetal button, with matt calf top and low heel. Then it is Dorothy. Her mother forgets whether she takes a 10, 10½ or 11. Various fancy combinations in kids, suede and canvas are inspected and finally, after bringing down all these sizes and keeping the attendants running to the stock room, Dorothy and her mother decide upon a patent ankle strap pump.

Not In Any Way Exaggerated

“Now the whole amount of this sale has not amounted to more than five dollars and I have not given you a fancy or overdrawn picture. Then possibly the children will draw on the shoes, run around with them and soil the bottoms. We can say nothing, because the mother might write the shoe retailer relative who has given them an order and he would mail a curt note telling us that we had been discourteous to some of his blood connections and we could draw on him at

sight for the balance of account and dissolve business negotiations.

"It was only a few months ago that a young fellow, accompanied by another smartly dressed chap and a young lady, who was a striking blonde, of statuesque pose and gowned in most fashionable attire, came in with an order from a good customer of ours in Western Ontario. The youth wanted a pair of tans. I showed him two or three pairs and he wished to know what different shades we had. I told him just the one shade. Then he spoke up in a rather sarcastic manner and said I could not palm that kind of dope off on him, simply because he was going to get his shoes at a wholesale figure.

"This made me angry and I said, 'You cannot buy any shoes here at all.'

"Is that order good?"

"No, not in your case."

"Then his friend also spoke up and asked: 'Why cannot John get a pair of tans here?'

"Are you buying these shoes?" I inquired.

"No," he said.

"Well, then," I retorted, 'you had better keep your mouth shut. This is none of your affair.'

Left in Disgust—A Hot Letter

"Finally the three went out in high dudgeon, and a few days later we got a scorching hot letter from the man who had signed the order, telling of the incivility of one of our clerks (for he did not know it was I who had met the young man) and promising our traveler a pretty lively reception should he ever poke his nose in the door again. It was not long after before our representative was up in that western town and the retailer began to assail him in all manner of language.

"Well," declared our traveler, 'it was not the clerk at all who waited on the young upstart who presented that order from you, but the boss himself.' And he up and told him the whole circumstances. The retailer's wife then chimed in and said: 'Well, I am mighty glad your boss did exactly as he did. It serves the young fellow right for being so impudent and so fresh.' And thus the incident blew over.

"We have people running here who have been in the shoe business in the past, but are out of it to-day; other people who happen to have connections of their wife's or friends in the business; others who handle a small line of shoes in a general stock perhaps—all thinking that because of past associations or present remote connections, they are entitled to obtain their shoes wholesale. We turn down such people as I have told you, promptly, but politely, unless they have an order from a recognized retail customer.

A Thankless Job and a Nuisance

"To be perfectly frank, we do not wish to sell or give out one pair retail here—order or no order. It is a damnable nuisance. We have no facilities for fitting and do not want to have. We earn our living with the support and co-operation of the retail men and can sell two dozen pairs to an ordinary dealer while we are fitting one on mamma's baby boy or a seventeen year old miss. There is no profit in it for us. We get no thanks whatever, and very often, abuse. Retailers are under the suspicion that we are trying to undermine them or that we are doing a little back-door trade in opposition to them, like a saloon selling after hours, or a dealer sneaking back on a Wednesday afternoon holiday, when he has agreed with the other merchants to close his doors. Now I could go on naming instance after instance of where we turn down people without an order and they say: 'Well, I used to buy shoes from you when I was in business.'

"Yes, but you are not in the business any longer and we cannot accommodate you.'

"Oh, very well, if that is the view you take, perhaps I won't always be out of the business. I may start up again and I will know where to get my goods.'

"Oh, perhaps you will, but you will be just the same as anybody else, even if you do start up again. You will buy your stock from the jobber or manufacturer wherever you think you can get the best service and most favorable prices.'

Turned Down Retailer's Wife

"Why it was only the other day that a rather timid elderly woman came in and said she would like a pair of shoes of a certain size. The sample room salesman inquired if she had an order and she said 'No.' She did not volunteer any further information as to where she came from and the salesman, finding that she had no order did not take the trouble to ascertain.

"Mrs. Libby, we do not sell any shoes at all except on order from retailers, and as you have none, we will have to decline your request for a pair of Number 4½, D width, vici kid, cushion sole bal, of which you speak.' She turned on her heel and walked out. This was on a Saturday morning and on the following Wednesday we got a letter from Libby, who does business down in north-eastern Ontario, stating that his wife, who suffered from tender feet, had gone into our establishment for a cushion sole shoe, which she had been denied. He pointed out—in no unmistakable terms—that he had given us orders for many hundreds of dollars worth of footwear during the past few years, and that we had got the last ten cent piece out of him, when his wife could not be accommodated. All this he said and much more. The next week, when our traveler went up there on his regular rounds, Mr. Libby was in a fine fighting mood, but our traveler, after listening to his story, soon pacified him by saying:—

Support Man Who Upholds You

"See here, Libby, your wife would have been accommodated if she had told us that she was the wife of a customer, or if you had given her an order. The sample room salesman does not know the name of every retailer in the country and he has explicit instructions to refuse every one a pair of shoes who does not produce a written document. Now, instead of flaring up and going off at half cock about this thing, you should be proud of a wholesale house that so protects your interests as not to do any business at all retail. You have had a sample of this yourself from the way your wife was turned down and I want to tell you that we turn down dozens of cases every week—persons who have no claim upon the jobbing trade whatever. It shows that we play the game fair and open, stick strictly to the wholesale end of the business and do not try to get away with any retail frills.'

"Libby thought a moment and said: 'By Jove, that is right! My wife was certainly at fault for not telling you the circumstances and I respect you for the stand you have taken. It shows that you live up to your promises.'

"We live by the shoes that we sell to the retailers, and so long as they support us, we intend to support and cooperate with them," concluded the speaker, as he walked away to answer a long distance 'phone call.

"You look disgruntled," said the shoe man.

"Yes," snapped the hatter. "Had a little rush now, and a couple of prospective customers walked out without being waited on."

"They seldom get away from me," declared the shoe man. "I take off their shoes as soon as they come in."—Judge.

Popular Process Used in Tanning Leather

Methods Commonly Employed With Which Every Shoe Salesman Should Be Acquainted—How Hide is Cleaned—Chrome Tanning—Bringing Out the Quality—The Finishing Department

Tanning is the converting of skins or hides into leather by an astringent acid derived either from vegetable sources, such as the bark of the oak, hemlock, willow, chestnut, sumac, etc., or with astringent mineral substances, of which alum may be taken as a characteristic type. In general, any acid which has what would be called a "puckery" effect will act upon a skin to convert it into leather. It toughens the skin, condenses it and coagulates all the albuminous matter so that it is no longer putrescible. That is to say, it preserves it from rotting.

If quality of leather, regardless of cost, be the main consideration, probably nothing has ever surpassed the old-fashioned oak tannage. This is comparatively an expensive process, as some months are required which means the tying up of capital and the extending of plant.

Hide is First Cleaned

As a preliminary process in tanning by either vegetable or mineral acids, the hides (note the purely technical distinction between "hide" and "skin") are cleaned and are then treated with lime or a putrefactive process to remove all extraneous matter, such as the hair and surplus fat. This is a process requiring careful attention, as the hides are hung up in warm rooms and kept there almost to the beginning point of decomposition. As soon as the hair follicles are

sufficiently dissolved by either liming or sweating to permit of the hair being easily pulled or scraped off, the hides are worked through machines or unhaired by hand work.

They are then soaked in solutions to counteract the effect of the lime, and are ready for the beginning of the tanning process proper, which consists of placing them in vats filled with solutions of the tanning agency, either vegetable or mineral. When the hide is thoroughly permeated with the tanning material, it is then "finished" according to the final purpose for which it is intended. A thick hide may be oiled lightly and rolled hard and dried for use as sole leather, or it may be very thoroughly oiled and worked up pliable to be used in leather belting, or harness, or split into thin layers for use as shoe topping, being in that case finished with a black oil polish.

It is only within a comparatively short time that mineral tannages have been in use. German chemists were the beginners, but the finishing development of chrome tannage took place in America, and Robert Foerderer, late of Philadelphia, was well known as the originator of a successful process as applied to kid skins. His chosen trade name, "Vici," has become almost a generic name for all chrome-tanned kid, although the name was simply his own proprietary trade mark. Just as many people think any camera is a "kodak," so a great many people think any chrome-tanned kid is

SPLENDID NEW FRONT OF EASTERN ONTARIO SHOEMAN

One of the handsomest store fronts in Eastern Ontario is that recently installed by G. W. Allan, proprietor of the "Up-to-date Shoe House," Carleton Place. Mr. Allan's store is 28 feet wide by 70 feet deep. The depth of the windows is eight feet. There is prism glass on the inside and the new front cost approximately \$900. The store is very bright in the interior, and the photograph does not do justice

to the inviting and artistic interior of the premises. Mr. Allan has been in business in Carleton Place twelve years and has built up an exceptionally fine trade in high priced shoes. He is a brother of C. C. Allan, shoe retailer, 1422 Queen street west, Toronto, and is well and widely known to the trade in Eastern Ontario, and particularly so in that section where he conducts his business.

"Vici," although the proprietors of both of these trade marks kept insisting that their product only, is entitled to the distinctive name they chose for it.

Chrome tannage involves the use of potassium bichromate with acid. This, it might be said, is a sort of first cousin to plain alum, one difference being that it is a violent poison. The process is very quick in comparison with bark tanning and requires careful inspection in order to prevent burning of the leather by too rapid action of the acid. This effect is to be noted in the dry and papery surface sometimes seen in the chrome-tanned kid or goatskin. Chrome-tanned leathers are usually finished dry, a very light application of emulsified oil being all that is used.

Variation in Finished Product

Of late years considerable experimentation has gone on in chrome tanning of sole leather. This produces a very dense, solid leather, but so far as we are informed has been rather expensive for general use.

It should be noted that long study and experience are required in order to be able to judge competently the quality of leather. There is an infinite variation in the finished product for two reasons: one is that the raw material itself is greatly varied, as no two skins are of exactly the same size, thickness and general quality; in the second place, the process of tanning is a complicated one which involves the closest attention at every stage; there is always the possibility of damaging the skin in every stage of preparing, tanning and finishing.

The retail dealer in the finished product in the shoe trade, being farthest from the original source of the material, is, perhaps, in a general way, less informed as to leather quality than a member of any other branch of the trade, such as the tanner, the leather finisher and the shoe manufacturer. It is important that every dealer in shoes should take pains to inform himself, and to educate his store help in distinguishing the different kinds of leather quality, in order that they may be able to furnish customers with the kind of shoes best suited to the use for which each customer intends it.

Thus in upper leather the oil grain side leathers are strong wearing and water-resisting. The finer grade calfskins wear well and take a higher polish than side leathers. The "Vici" kid is a dry leather which resists water fairly well. It is soft and pliable. Buckskin and suede are pliable but are porous. Patent leather is impervious, but is necessarily of firm texture and is not a leather for tender feet. The list of qualities might be indefinitely extended, but practical familiarity is to be gained only by actual experience.

It is deemed a praiseworthy idea for dealers to secure occasionally samples of entire skins of upper leather, both for use in displays illustrating to their customers the kind of leathers used, and as affording their clerks an opportunity to see different kinds and qualities of this material in the raw.

Repairing Turn Shoes

It is an easy matter for turned workmen to repair turned shoes when they rip, but many of the shoe repairers are not what we may call benchmen; that is to say, full-fledged shoe makers.

Where a full line of shoe repairing machinery is installed the proprietor is often a man of executive ability and hires out men from different parts, but usually they have one man who can use the awl and the thread, in case one should want to repair a broken welt. Such men would be needed to repair turn shoes when they rip, providing they know how to turn a shoe. If the stitches merely break away, the sole is to be

wet through and turned back as far as the heel, and stitches put in the same channel in place of the broken stitches. Never attempt to turn the shoe back unless it is wet as other stitches, would be liable to break. It would be wise to examine the other stitches closely.

After the shoe is turned and the stitches are weakened, put in a few extra stitches, turn the shoe back and put in a last that will fill out the shoe properly; then level the sole and let dry. Now if the upper breaks away, leaving little of the upper inside, in other words, if the stitches cut through the upper, find a last that would fill out the shoe plump, then wet the sole and the upper and turn the shoe back.

Usually the upper can be stretched enough so that a seam can be taken in unless the last fills it full and plump, by taking in the seam and after the shoe is thoroughly dry it will shrink and become smaller.

Sometimes turned shoes will wear through on the bottom at the bottom of the channel. The channel may be cut too deep or the sole may be a little inferior and the wear reaches this weakest part. In such cases a new half sole has to be put on. Cut the old sole off by taking quite a long scarf, and take this sole that is cut off for use as a pattern to cut out a new one by.

If situated in a shoe city where turned shoes are made you can easily get the soles channelled. If not, an ingenious shoemaker should be able to cut a channel by hand. Turn the shoe wrong side out, cut a scarf on the new sole just like the one on the old sole that was cut off. Then get a last of any style and the same measurement as that the shoe was made on; if it is possible get the measurements any way. Fit the scarfs together as accurately as possible and tack the sole on to the last. Then put two or three tacks in to hold it in place while stitching.

After it is turned and levelled force some good cement into the scarf and stick them together.

The writer has seen turned shoes that were worn through at the channel repaired by putting in a very light tap outside nailed with 3-8 inch cut nails and bevelled off at edges so as to give the shoes as light an external appearance as before they were tapped.

Building Up Your Children's Department

(Continued from Page 22)

letter of the word, but it will give him a good idea of what constitutes a proper stock in the children's department.

Don't Cut Prices

One of the chief reasons explaining why so many shoe dealers cannot make the department bring in revenue, is the cutting of prices, an evil which seems to prevail in most parts. When you buy a pair of shoes from the manufacturer, you are allowed a fair profit, but when you make a reduction to the customer of twenty or twenty-five cents, you are handing over the just profit, to which you are entitled. Don't make these reductions, merely to hold the adult trade of a certain family. When the father or mother complains of the higher price of the shoes being bought for little Johnnie, explain to them that the reason they are being charged more is due to the much better quality shoe they are securing. Emphasize the extra quality, and although you may lose a little trade, you will be better off in the end, for, a good customer will always see and appreciate the reason in your argument.

Finally, boost the children's branch morning, noon and night, advertise constantly, give first class service, and use as a strong talking point, your ability to fit properly. Talk to parents along these lines and interest them, have them consider the welfare of the child's foot, rather than the price. A little thought, and added energy is all that is necessary

How Manufacturer Should Assist Retailer To-Day

Knowing the Value of Latter's Goodwill and How Important It Is Not to Disappoint Consumer Circles—The Wise Producer is Willing to Go To Any Reasonable Length to Please Dealer and Advance His Interests.

Some months ago there was a big parade in Chicago. It was a demonstration in a good cause, the newspapers had given it a great deal of publicity and a large crowd gathered along its line of march. But the managers were inefficient. They had worked up no features to make the parade an interesting spectacle or express the idea behind it in a concrete way. Except a single small group of musicians at the head of the procession, there were no bands. The result was that the spectators saw nothing but a great body of civilians in ordinary attire plodding doggedly along. The monotony, the lack of change, the absence of anything striking or novel bored the spectators and long before the rear guard came up the crowd melted away.

This crowd had been gathered by the advance notices of the newspapers. But the parade itself had no characteristics to attract and hold attention.

Too many manufacturers approach retail merchants as this procession approached its spectators. Their propositions are all more or less alike. Dealers are bored by the monotony, the lack of individuality, of distinction in the appeals made to them, few offerings stand out essentially different from the others and the result is that the majority attract little attention and get little response.

If a manufacturer wants to stir lively interest in his proposition, he must get rid of the drab effect. He must offer the dealer something apart from what other producers offer, and he must offer it in a different way. Entirely apart from considerations in regard to the goods themselves (a topic which will be treated a little later) manufacturers have an opportunity to lift their propositions out of the realm of the commonplace to a point where they will have individuality, distinctiveness and strong appeal by offering the dealers valuable but perfectly possible features of service.

Many producers have factories so organized that they can handle rush business without interfering in any way with the progress of regular orders. The point is that, however a concern is situated it should make absolutely certain that all deliveries are made promptly—and that the dealer should know in advance exactly when he can promise delivery. Such a policy creates confidence in the dealer's mind—a decided asset. This is an entirely different matter from the usual indefinite assurance, "We fill all orders as promptly as possible." Such a phrase is meaningless and the concern that uses it is laying itself wide open to a body blow by any rival firm which can offer definite deliveries.

Helping Out With Practical Suggestions

Another service of maximum effectiveness in binding dealers to a house is practical, specific help in running their stores. A manufacturer with several thousands retailers and a corps of intelligent salesmen will find it easy to collect information of great value to any one of his dealers—not merely methods of selling the producer's own merchandise, but systems and policies which will help him generally in the conducting of his store. A number of progressive concerns have printed and distributed among their dealers courses in retail salesmanship, while still others issue monthly house organs—which touch during the course of the year almost every vital phase of the merchant's business.

The producer who sends the dealer plans designed to fill

WHAT THE RETAIL MERCHANT WANTS

In Goods:—Uniform quality, guaranteed sound values, individuality or medium prices. A fair profit.

In Service:—Prompt deliveries. Protection against overstocking. Helps in selling and advertising.

his windows with the manufacturer's goods alone does not make so deep and lasting an impression as does the one who strives to help the retailer in all his work of merchandising and making his store successful and profitable. Some houses have taught their salesmen the principles of correct utilization

of floor, shelf and window space in order that they can give their customers tips on these topics whenever it is possible tactfully to do so. Others, without dwelling on the sale of their own particular lines, send out suggestions for special sales of all kinds. Such service usually accomplishes its purpose. The retail merchant is human, he feels that if someone does him a friendly act he ought to reciprocate. His reciprocation generally takes the form of orders for the manufacturer's goods.

The Two Stages of the Past

In helping the dealer the manufacturer, of course, helps himself. In the first stage of selling (now almost obsolete), the manufacturer made no effort to help the dealer dispose of the goods he sold him. He simply unloaded his merchandise whenever he could and left the task of moving them on to the consumer to the merchant himself. In the second stage, which was common up to the last three or four years, the manufacturer provided a ready-made advertising campaign for use by the dealer in his local displays and ingenious plans for window displays, featuring the manufacturer's goods. In both these cases the manufacturer has consulted, not dealers interest, but his own, and the retailer has perceived the selfishness of this so-called aid. It is little wonder that houses proceeding along these lines have failed to tie dealers close to them and are compelled continually to seek new retail outlets for their lines.

The dealer policy of the most successful producers now is entirely different. They realize that whatever helps the retailer helps them, and that it is better to go to some trouble and expense to promote his welfare and so make him a permanent, enthusiastic, well trained promoter of sales than to be constantly expending money and energy in the effort to secure new dealers and introduce their products to new groups of consumers.

Knowing the value of the dealer's goodwill and knowing how important it is not to disappoint consumer circles and lose their trade by changing dealers, the wise manufacturer is willing to go to any length within reason to please the dealer and advance his interests. Instead of urging the latter to advertise he takes part of the burden of publicity upon himself and advertises in such a way as to advance the dealer's interest as well as his own. He asks the dealer to send him a mailing list of all his possible customers and creates and mails attractive booklets, cards and form letters to the individuals on this list. He sends the advertising in the retailer's name, often using his letterhead and invariably signing his name to all appeals for trade.

Make Permanent Ally of New Man

When such a producer secures a new dealer he does his best to make a permanent ally of him, so that he can count upon him with certainty as he builds up his business. He is like a general who occupies a country district by district, establishing himself firmly wherever he goes and leaving

strong forts behind him so that he can move on to wider and wider conquests, without the fear of having to turn back and do his work all over again—reconquer territory which he has once already made his own. The aim, of course, is eventually to do on a national scope what he is doing in limited territories; and he is far more certain of accomplishing national distribution in this way than if he began to dissipate his selling appropriation in national mediums and thus exhaust his capital before he had a chance to cultivate any of his selling field intensively.

It goes without saying that if a manufacturer has a proved product and sufficient capital, at the very outset, he has every reason for launching a national advertising campaign—for proclaiming to the entire nation that his goods are sold everywhere, as an aid in securing national distribution. But he must be certain at the same time that his organization will be equal to the tremendous task of carrying on intensive cultivation of the kind outlined above in each of the vast number of territories he is proposing to open.

Cultivating the Ground at Home

A great number of manufacturers, in their attempts to secure dealers, are like Russell Conwell's diamond seeker, who sold a Pennsylvania farm to finance a trip of discovery to South Africa. Returning penniless, years afterwards, he learned that the men who bought his land had located a coal mine upon it and were making a fortune out of the "black diamonds" they were taking out. Conwell used the story to point the lesson that many of us overlook opportunities present right at home because we strain our eyes searching the distant future for a land of promise half a world away. In like manner, many producers go far afield seeking exceptional, out-of-the-way methods of attaining distribution and overlooking the obvious facts which, properly regarded, would give them what they desire.

It is beyond question that the dealer makes his living by supplying the people who live near him with articles that are of value to them. Likewise that the dealer cannot live unless he holds the good will of the people in his neighborhood. If, then, he sells them an article that fails to give satisfaction he is certain, unless he has a monopoly, to lose their trade on other articles. Similarly, the manufacturer who fools the dealer and through him fools the consumers is apt to never have another chance to fool either. To secure a dealer's order once makes little or no money for the manufacturer; re-orders are necessary for a profit. People come back for an article only when it has given them satisfaction the first time they bought it.

The retail merchant is no "get-rich-quick" man. He is located permanently at his place of business. He has to sell to same customers over and over again. He is obliged to give them a square deal every time they come to him. He cannot be a party to any plan that does not give them a square deal.

Show Highest Priced Shoes First

"How should I show a shoe to the average customer, whom I do not know?" asked a clerk of his boss, the other day. "Should I ask a man or a woman about what price he or she wants to pay?"

"By no means," said the boss, "you must learn to judge that for yourself. Never make the mistake of bringing out too low a priced shoe and then trying to work the customer up to a higher figure. I have discussed this phase of the question with several in the business. While all do not agree with me, I have found it much better to always start off the highest priced shoe. I will tell you why. If you are too high, you will soon be informed of the fact by the purchaser, who will intimate, after inquiring the figure, about what he or she wants to pay. On the other hand, if you show too

cheap a boot, you make the person upon whom you wait feel as if they were not worthy of the consideration or association of a good shoe, and in this respect, many people are very sensitive.

"Then, by showing the costlier shoe first, you can very often induce callers who intended to pay only a moderate price to come up higher. They see the finish, the style and the distinctiveness of the highest class of goods, and when the cheaper lines are put along side, they at once come to the conclusion that a dollar or two more does not make any particular difference on a pair of shoes, so long as they get that value and that indefinable, indispensable thing which, in shoeology, we call snap. Yes, sir, always begin by showing people who want a shoe for dress purposes about the best that you have in stock. If a man or a woman wants a working shoe, they will generally be explicit, but when they say they want shoes, it usually means fine or dress shoes.

"I will give you just one instance. A plasterer, after leaving the trowel for the day, came into our store the other evening. He was in high dudgeon and this is what he said.

"I went across the way and asked them for a pair of shoes. They showed me a two fifty coarse looking affair. That was not what I was after at all. I intimated that it was a shoe for Sunday and I guess they thought I could not pay for a good pair. I told them I would go some place else to get served."

"You cannot always tell by a man's clothes just what he wants or how many dollars he is prepared to spend to be shod if he does not want heavy goods for every day work."

Retailers' Stand on Returning Goods

"Who is to be the judge as to whether these shoes should go back or not? Is it the manufacturer or myself?" indignantly declared a leading Hamilton retailer the other day. "I have been in business for years and I ordered a couple of cases of men's shoes of various sizes to be on a last E width. When they came we found out by trying them on certain people who could wear C or D width, that they could scarcely get these shoes on. There must have been a mistake of the factory. Instead of getting E width, I am certain these shoes were made on a last of less width. I promptly sent them all back to the factory. I got a curt note from the sales-manager to the effect that it is one of their rules that no goods sent back to them without their consent would be accepted, and that what I should have done was to have forwarded sample of each case together with my specific complaint, so that they could inspect and judge whether I was justified in my "kick." Reading between the lines, it meant that one has to get the consent of this firm to send back any goods, before they will make an allowance for the return of the merchandise. Now this is certainly a peculiar state of affairs. I wrote back to that house, telling them that as long as I was in business, I was to be the judge as to whether shoes should be returned, whether they were up to sample, whether they were made the correct width, and in the way I wanted them, whether there were any faults in workmanship, material, etc. I am a buyer, and as long as I run a shoe store, I am going to have the privilege of saying whether I can cancel an order and not the manufacturer. The fellow who pays the shot generally has the say in most lines of business, and I intend to see that he has it in the shoe trade, so far as I am concerned, at any rate. I may say the two cases mentioned above are the only two that I have sent back in years."

Alfred W. Donovan, of the E. T. Wright Co., of Rockland, Mass., has returned after a visit to the firm's branch factory at St. Thomas, Ont. The Canadian branch has been operating in its factory for over a year and is enjoying a splendid business.

Proper Way to Learn Brush Work in Card Writing

Several Brands of Brushes in the Market—Some Pointers on Taking Care of Them—Care Should Be Given to Selecting and Mixing Show Card Paint—Do Not Neglect the Detail Exercise Work

In beginning brush work it is essential that you go carefully. Read thoroughly the instructions and follow them closely. Don't merely read them and then do the opposite. In a many instances the latter is the case. Not that a learner does it intentionally, but his great desire to advance quickly and put his work in actual cards makes him overlook a lot of detail exercise work that lays the foundation for a good practical cardwriter. Don't look to the present, it is your future you are working for.

The question of the proper kind of brushes for card-writing use, is one that has been threshed out all over the country by experienced cardwriters and almost in every case the kind that has been agreed upon to be best for practical work is the "red sable letterer" with round nickeled or copper ferrule. There are several reliable brands on the market which should be easily obtained through the mails. There are different grades of sable being used in these brushes, thus permitting some firms to cut the prices, but you are well advised if you secure the best quality sable brush. The

FIG. 1

price is a secondary consideration. It is the brush with the life and the lasting qualities that pays in the end.

In selecting a brush dip it in water and draw the hair to a chisel point through the thumb and forefinger. If it is a good one the hair will all be the same length and they will not split. Of course constant use is the only way to find out the value of any brush. You may select two brushes of exactly the same appearance and fill the requirements of the test, but one may last a year longer than the other. It largely depends upon the care the brush is given, how long it will wear.

How to Care for a Brush

Here are a few pointers that will save you many dollars if you comply with them.

Never leave the hair of the brush lying on any surface full of paint for more than a few minutes at a time. If it is left and it dries fast and is pulled, in nine cases out of ten the hair is loosened in the ferrule, and the brush is spoiled. If it ever happens that the brush is neglected in such a manner soak it off with water. If you wish to leave the brush for a while without washing it out, lay it on the edge of the desk so that the hair projects over the edge. The paint can then dry hard and when the brush is required, place back in the paint and it will soon soften again. Fig. No. 1 shows the actual size of the different brushes with their numbers. No. 2 shows a cigar box made into a useful brush holder.

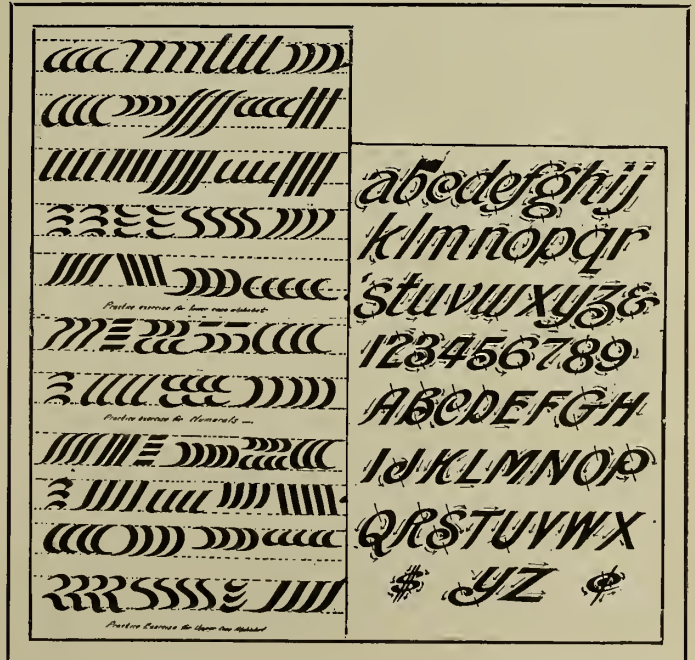

In washing the paint out of a brush use lots of clean water and always be sure to keep it thoroughly clean up in the ferrule. If this is allowed to clog it will cause the hair to split. Don't leave the brush standing in a glass of water any length of time. This will curl the point. When through washing the brush draw hair to a chisel point and leave to dry.

Fig. No. 3 shows an idea, made from a triangular piece of wood on which to rest the brush handle when it is laid down temporarily.

Figs. No. 3 and 4 show the arrangement for card drying racks. One is to attach to the wall, the other to lean against the wall and rest on the desk. Four inch nails and a wood slat is all these require.

Important Points on Colors

In order that the best results may be obtained, great care should be given to the selecting and mixing of show card paint. There are two important points that it always should possess. First it should flow freely. Of course all show card paint when exposed to the air for a length of time will thicken and become hard to work with. By adding water and mixing thoroughly this can be overcome. The

Practice Exercise for the new student

Practice Exercise for the advanced

Practice Exercise for the expert

second point is that it should cover well. If it is a good color and not too thin the white cardboard must not show through in the least.

If it is difficult for you to obtain prepared colors, a good paint can be mixed from distemper colors. These are ob-

tainable at any shop where paint is sold. This must be thinned down with water and a little pure gum arabic added to keep it from rubbing off.

The alphabets and numerals illustrated show a good readable brush stroke type that can be quickly made. The exercises should be thoroughly practiced and mastered before the lettering is attempted. The illustration also shows a few small cards done with this class of letter.

The card for the shoe department is very effective and easily made. The pump shown on the card was cut out of the SHOE AND LEATHER JOURNAL and pasted down. The scroll and lettering was worked up with a brush in an attractive shade of grey.

A Story of Two Rival Shoe Houses

It is nice for brethren to dwell together animated by a spirit of unity, harmony and co-operation, putting aside petty jealousies and spiteful feeling. This is the doctrine that is propounded in all trades and the thought that imbues conventions and associations, but, alas, a large number of members do not live up to it. Only recently a case was brought to the attention of the SHOE AND LEATHER JOURNAL of two shoe dealers in a small town. One has always been very friendly towards the other, but the latter has several times refused to reciprocate. A lady entered the shop of number one the other day and wanted a certain kind of shoe which he did not have. He told her that he thought she could obtain it at his neighbor's up the street. The caller said that she did not care to enter that store, and asked number one if he would not get the footgear for her from number two. The latter dealer declined positively to sell his competitor any shoes whatever. It was not long after this that number two sold out. To show how friendly disposed number one was to the new man, who was a complete stranger in the town, he not only invited him to his house for dinner, but took the trouble to show him around the town, point out the various places of interest and attractive homes. That is the proper spirit and feeling to show toward a newcomer, and sets a good example for the trade.

No one man in any line can corral all the business and he should be magnanimous enough to allow the other fellow to get a share, so long as the opposition is honorable, straightforward and reliable. Another instance was related

to the SHOE AND LEATHER JOURNAL of how in a large Eastern city in Canada a very high-class store was being opened up. There had been for many years in that centre a leading retailer catering to a superior trade. Did the latter resent the launching of the new business which would meet the same class of patrons as he had been serving? Not a bit of it. On the morning of the formal opening he sent over a fine bouquet of roses, to which was attached a card, extending best wishes for the success of the new firm.

There is not much to be gained in being mean, narrow or biased in this life. The merchant who does the right thing at the right time toward either a customer or a competitor rarely suffers. Like begets like in nearly every relation of existence, and the principle of the golden rule is still the most ennobling and all pervading in life's great examples.

Thorn in the Side of Shoe Retailer

A customer came into one of the shoe stores of a western city, and the conversation ran something like this: "I bought this pair of shoes from you about three months ago and they have crippled me so that I can hardly walk?" asked the salesman in a pleasant manner. "The bottoms are all covered with bumps on the inside. I took them to my shoemaker and he said he could do nothing with them. He said the innersoles were of poor leather." "Is that so?" said the salesman, trying to be diplomatic. "Yes," said the customer, "and he (the shoemaker) also said the construction of the shoe was poor."

The shoe in question was very well made. The inner-sole was of white oak, tanned leather, with a cork filler between the inner and outer-sole. At the time of purchase the customer was very particular that the shoe he bought should conform to the bottom of his foot just as this one had done, and he was in doubt as to the construction of the shoe, the shoemaker had, of course, settled this point in his mind.

This is only one of the many cases of this kind that come up every day.

Because some fellow believes he is a handy man at anything he may turn his hand to, he becomes a cobbler, and it is this type of men that make a great deal of dissatisfaction among the customers as well as trouble for the retailer.

He will sit in his little one-horse shop, with three pairs of shoes on the shelves and explain in detail every point in the manufacturing and marketing of shoes, when in fact he can hardly tell a kidskin from an alligator hide.

Conditions of Shoe Trade in the West

A shoe traveler who recently returned from the West says, "Business generally is poor with dealers overstocked, especially on dull calf shoes. Colonials are selling in low cuts to the exclusion of everything else, and 75 per cent. of these are in patent and 25 per cent. of dull kid. The city dealers are demanding longer vamps with narrow toes, while the small dealers insist on shorter vamps and fuller toes. For Fall dealers are not buying so many shoes as formerly, they having decided to run with lower stocks, depending upon manufacturers' stocks as much as possible, and buying as little as possible for future delivery. Cool weather and dull business generally are the causes for the present slow business. Cuban heels are selling 50 per cent. in the Fall orders, kidney heels 25 per cent., leather-Louis 15 per cent. and wood-Louis 10 per cent. In boots patent vamps and cloth quarters are proving the best sellers for Fall.

The Different Types of Shoe Construction Explained

The McKay—A Treatise on the Various Classes of Footwear By a Well Known Expert—Method Used in Manufacturing McKays—Difference Between McKay Imitation and Goodyear Welt

Written Specially for the Shoe and Leather Journal by E. F. LEONARD, Montreal

I have been asked to explain the difference between the appearance of the various methods of shoe construction so that any shoe man may be able to detect the difference between McKay, Goodyear welt, turn and Standard screw. I will start with the McKay shoe.

The McKay was the first shoe to be sewed by machine. The machine was invented by a man named Blake, and for a long time was laughed at by the old time shoe manufacturers, but about the time of the Civil War shoes were needed to supply the American Army in large numbers, must faster than they could be supplied by hand, and a few manufacturers then began to use the McKay machine, now controlled by Mr. McKay, who was at that time manufacturing the outfits. He did not sell them outright, but leased them to manufacturers, who paid a sort of royalty by buying stamps off him, and attaching them to each pair sewed by the McKay process.

Construction of McKay

In the construction of the McKay shoe an iron bottom last is used, and on this last the insole is placed and attached temporarily with three or four tacks driven through the insole into the last through small holes in the iron bottom on the last. These tacks merely hold the insole during the process of lasting and are later removed. On some of the cheaper shoes the insole is held in place by the operator during the process of lasting and the tacks left out.

The insole in a good McKay shoe is a piece of leather shaped out by a pattern, the exact shape of the bottom of the last. As the shoe is cheapened the insole is made of different materials such as leather skivings pasted together, a skiving of leather and a piece of pasteboard. Sometimes a piece of strong heavy duck and a skiving of leather, or the duck and leather board are pasted together, and then in some of the cheaper McKay shoes and slippers the insole is made of leatherboard or common cardboard.

You can readily understand that some of these materials are not conducive to good service or wear, are a little more than trash, and if worn on a good stormy day would probably fall apart, but the McKay shoe with a good solid leather insole or a good canvas re-inforced insole is very serviceable.

The outersole of a McKay shoe is cut by a pattern slightly larger than the insole so as to leave extra material to come outside of the edge of the last and leave an edge to finish the shoe. The outersole is generally channeled on the bottom with a wide channel and a groove so that the thread may lay in the groove on the finished shoe.

The upper or top of the shoe is made the same as every Goodyear welt shoe, only a little larger to allow an extra lap on the bottom for lasting.

The upper is placed on the last and the counter or box toe of whatever material used is placed in position, then the upper is grasped firmly by pinchers, pulled over the last, by hand or machine, and tacked down firmly with short tacks which go through the insole, and clinch down on the iron bottom last. These tacks remain permanently in the shoe and are driven all around the shoe until the upper is

CUT ON THE LEFT SHOWS MCKAY STITCHING WITH THE THREAD GOING THROUGH THE OUTERSOLE, SLIP SOLE UPPER AND INSOLE. CUT ON RIGHT SHOWS METHOD OF CHANNELING AND SEWING MCKAY SHOE WITH THREAD LYING IN GROOVE ON BOTTOM OF OUTERSOLE BEFORE CHANNEL IS COVERED.

pulled down firmly to the shape of the last and held in place by the tacks.

These tacks are one of the discomforts of a McKay shoe. The outersole is next put on after a piece of wood or steel has been attached for a shank. The outersole is first attached by driving a few small headed nails inside the groove in the channel on the bottom of the shoe. The shoe is then allowed to set a short while

so that the counters and boxes may dry out, then the shoe is ready to be McKay sewed.

The last has been removed and the shoe is placed on the revolving horn of the machine, bottom up. The needle of the machine goes in the groove of the channel through the outersole of the shoe, through the portion of the upper that has been lasted in, through the insole of the shoe and into a small hole in the apex of the horn inside the shoe. The hook on the needle grasps the thread that has been coated with hot wax by passing through a wax pot at the base of the horn and pulls the thread through the shoe in a sort of chain stitch that is repeated about three stitches to the inch all around the shoe. Rubber cement is then put in the channel along the bottom of the shoe and when dried the flap of the channel is turned down and the channel closed. The shoe is then levelled so as to give a smooth bottom and finished in the ordinary way.

McKay Imitations to Welts

In making the McKay shoe a number of different schemes are used to imitate a Goodyear welt. Sometimes a double sole or welt is used stitched all around the edge so as to look like a Goodyear shoe. Others a light sole is stitched on by McKay and another sole is stitched by a Goodyear stitching machine. This shoe cannot be told from a Goodyear shoe on the bottom, but the inside of the McKay shoe always tells the story. You see the thread in the McKay shoe through the outersole and the insole and remains on the inside of the shoe. The tacks are also clinched right through the insole and both the thread and tacks in order to give any comfort or to imitate a welt shoe must be covered. In the cheap shoes a covering is made of imitation leather, skivings or painted paper, and when the shoe is meant to sell to the consumer for a welt shoe, the tread and tacks are covered with a grain sole leather skiving that on a superficial examination, would pass for a welt shoe and a smooth insole.

When buying shoes of this kind, and any kind of shoes are represented to you as welted shoes and you have reason to believe otherwise, always look inside the shoe and lift the covering of the insole. In McKay sewed shoes you will see the telltale thread and tacks artfully covered.

The McKay is a good strong serviceable shoe if made of proper materials, but on account of not being smooth inside, it is not as comfortable as a welted shoe, then the wax on the thread sometimes draws tender feet and the large holes made by the needle in sewing on the sole are very apt to let in water after the shoe is worn a short while. The holes go in directly from the insole into the inside of the shoe and have a direct connection with the outside and the water passes in around the stitches.

A Black Art Window for White Shoes

By CHAS. S. EDGAR

The "Black Art" trim illustrated herewith is similar in effect to the stage settings used by some of the world's most famous pantomimists, with the exception that white footwear is used instead of human actors. In this window the shoes seem to be floating in mid-air without support of any kind. This effect is produced by means of black fixtures, backgrounds and special lighting effects.

To build the setting for this window make a box, in size slightly larger than the opening in the lattice and of sufficient depth to allow the shoes to be displayed in such a

manner that the front ones do not come any closer than six inches to the opening. This box is lined with black felt.

The lattice is next built. As this is a common part of the trimmer's work, an explanation of its construction is not necessary. When this has been made, fasten black felt to the back of it, leaving the large centre panel open. The strips, which enclose the opening, should be wired for electric lights as shown in the illustration. These lights are not absolutely necessary, but should be used, if possible, as they serve to increase the intensity of the blackness within the box, and thus heighten the effect of the display. Care should be taken, however, that none of the light is thrown directly into the box.

All the stands to be used in this trim should be covered with the black felt so as to make them invisible when placed inside the box. Some of the shoes may be suspended from black threads, and in this way lessen the number of stands to cover. It is best to use only shoes with covered heels, although the leather heels of the others might be whitened with any of the white cleaners sold by the store.

If the store handles white hosiery a few pairs might be draped over the stands before the shoes are placed, but care should be taken that the hose do not reach to the floor of the window for this would take away the effect of the shoes being unsupported.

Black price tickets lettered white should be used in this window. If small black signs are fastened to the back of the box, the white letters would also appear to float in the air.

The space in front of the lattice, which should be about half of the depth of the window, should be used to display black and colored footwear. The price cards for this part of the display should be white or tinted so as not to reveal the secret of the floating letters used in the other section.

A window carried out along these lines ought to bring results that will well repay the trimmer for his time and

trouble in getting it up. If it is used in a window of sufficient depth to conceal the fixtures in the box, it should make your store the talk of the town, and even if used in a shallow window the passer-by will have to look twice before he discovers the secret.

Where Do the Profits Go ?

This is a question asked by most merchants the first of each fiscal year. In many cases the answer is, failure to turn over capital often enough. And the cause of such failure are:

Unsaleable overbought stock.

Losses on overbought stock.

Too many competing brands.

The exceptions are so few that it may be said that all buyers overbuy. But the plausible salesman and his perennial story that this merchant "bought five dozen" and that one "seven cases" will be your undoing again.

New Manager of Nugget Polish Co.

John Harris, recently appointed Canadian manager of the Nugget Polish Co., Toronto, although comparatively strange, as yet, to the Canadian trade, is well known to English shoemen. He was salesman for over six years in England, during which time he made many friends as the representative of the Nugget Polish Co., whose head office is situated in London.

It will interest many Canadians to hear that Mr. Harris served in the South African campaign and he has several medals which he obtained during the war. He is also considerable of an athlete and was for four years honorary auditor of the London Lather Trades Athletic Association, and is also an associate of the Chartered Institute of Secretaries, a large English organization with a membership of over four thousand. He was present at the annual dinner of the Nugget Polish Co. recently held at Kennington Oval,

and stated that the prospects for the coming year look very bright. Mr. Harris is a good business man as well as a thorough gentleman. He is greatly interested in the possibilities of the trade in Canada and has already made many friends. He succeeds W. F. McNeill, who recently resigned from the company.

STRAY SHOTS FROM "SOLOMON."

What's in the heart comes out in the face. A black-guard can no more help showing the dirt that is under his skin than a good man can keep from radiating benevolence and truth. A fool speaks through his countenance, and a wise

GOOD LOOKS man draws others to him by the sign he hangs out on his forehead. "A man's wisdom maketh his face to shine and the strength of his face shall be changed." We can't all have shining faces, but we can let what little light we have indicate our sympathy with those who carry the torch. We might all be a little better looking if we gave our minds and hearts to those things that belong to true wisdom. The reason many of us look so cross eyed is that we have always one eye on our neighbor's faults and the other on our own wrongs. If we could only see the advantage of thinking wise, pure, hopeful, helpful, peaceful thoughts, we would be saner, healthier, and happier. But we go on encouraging the dog that is in us and stirring the snarling, biting disposition in others until the world is full of yelping, snapping and flying fur. A good deal of your unhappiness is your own fault.

* * *

There are men who flounder into ditches and stumble over logs who blame heaven and the town council when it is their stupidity or carelessness that gets them into the mess. Don't whine about Providence

DON'T SOB if neglect and extravagance have landed you up against serious trouble. Don't sit down and proclaim your woes. Up and at it again, dodging the pitfalls and obstacles that threw you on your back. The man who makes the same mistakes twice is something worse than a fool, and when his mistakes cost others money and sorrow and pain he deserves rather more than hard words. "The simple pass on and are punished." Look well to your going. Don't blather excuses or whine complaints when you wander from the right path and get stuck in the mud. Get out and get on. Stumbling blocks and ditches are what make cautious and sturdy legged travelers. The place for the whiner is in the ditch. There is too much work to be done in the world for real men to stand sobbing about their troubles.

* * *

Keep clear of gunpowder and men that go up in the air when touched. The man with a thin skin is brother to the fellow with the thick head. They both go off half cocked.

SHAKE HIM but the fellow who fires every time he is prodded is a more dangerous man than the fool who points his gun at every moving bush. If you hunt with one of these scatter-brained, hair-trigger lunatics you may expect to get a dose of shot in the back or be jailed as an accomplice in a manslaughter case. "Make no friendships with an angry man and with a furious man thou shalt not go." Your own enemies will keep you thinking fast enough without taking up the foolish quarrels of a hot-headed blunderbuss who is as apt to turn on you as on his opponents. Mixing in other people's quarrels is the most senseless and thankless philanthropy known. Better a whole head and a good name than a legion of brawling friends and their good opinions. Give the whole road to the fire eater.

If you took as much pains to keep your word and pay your debts as you do to clean your nails and keep your neck tie straight, you would have a better commercial rating. There are men who are careful about their persons and particular about their surroundings, who let their notes go back and who habitually trump up claims against those who sell them goods. It is a good thing to be clean on the outside when all is wholesome within, but we are warned to beware of him who makes clean the outside of the cup and platter when the inside is full of ravening and wickedness. "A good name is better than precious ointment." Don't expect scent on your handkerchief or wax on your moustache to hide the kinks in your character or stop up the holes in your business reputation. Some of the worst scoundrels unjailed are gentlemen as far as these outward things go. The man who gets his eye on appearances usually lets go the real thing.

* * *

Some men are not fit to be "bosses." They haven't it in them to get the best out of their men and the man who can't do this is better plugging for someone else. "There is a time wherein one man ruleth over another to his own hurt."

RULING OTHERS Don't make it impossible for your employes to be loyal to you. That bad temper or foul mouth costs you a lot of money in a year. That lying, hypocritical example you put before your clerks will tell on you in the long run. There are men reading these words who are putting a premium on dishonesty in their establishments every day by their crookedness with the houses they buy from or the customers they sell to. A man takes a great responsibility at any time when he pays another to do his bidding; but when he puts young men to the strain of seeing the moral law made a joke or his Creator's name blasphemed, he is daring more than a man ought. Don't lord it over your help. Don't set them an example that will get back to you in the next world if not in this.

* * *

Putty men please nobody, not even themselves. The "yes, yes" fellow is of no account in business, on the street or in church. There are men to-day in senile decay who have got there by simply saying "yes"

DOUGH FACES to everything put before them. It is a bad day for a man when he neither has nor gives opposition. Conflict is the very wine of life. The man against whom no wind blows and no force sets itself has a poor chance of becoming more than a puppet. The man that makes a rabbit of himself may expect to be chased by dogs. Let your neighbors put a sawmill on your back and they will soon put the dam there too. They may call you a jolly fellow to your face but they will call you a soft ass behind your back if you let them load their dirty work on you. "The simple believeth every thing" but the man of sense won't let people walk over him. The man who is cheated once is, perhaps, to be pitied. But the man who lets his neighbor put over the same thing twice is about as bad a knave as the man who "does" him.

Well Known Salesmen Branch Out

A new firm which recently started is that of Wood & Baggs, manufacturers' agents, 163½ Church street, Toronto, who supply findings and supplies for shoe factories. It is composed of F. E. Wood, who was for over ten years associated with the Canadian Rubber Co., Limited,

FRED E. WOOD OF WOOD & BAGGS

Montreal, and later the Canadian Consolidated Rubber Co., and Will J. Baggs, for nine years Ontario salesman of the Anglo-Canadian Leather Co., of Toronto. The new company represent numerous well known concerns, among them being Eugene Guay, Montreal, shoe counters; Independent Box Toe Co., Montreal; Wood Bros, St. Catharines, Ont., lace leather and cut belt and hockey laces; Chas. H. Horne,

W. J. BAGGS OF WOOD & BAGGS

Haverhill, outsoles; Gardner, Beardsell & Co., Boston, Good-year insoles, and the Boston Cutting Die Co., of Boston.

Mr. Wood, in addition to being with the Canadian Con-

solidated Co., also covered Eastern Canada at one time as salesman for the old Durham Rubber Co., which was located in Bowmansville, Ont. He has great ability as a salesman, and is confident of the success of the new venture. Mr. Baggs, who also feels that bright prospects are ahead, is well known in Canadian shoe circles, although he is but a young man. He has covered during his career, as well as Ontario, the Maritime Provinces and the Northwest.

A sample stock is carried of all lines that are handled by the firm, and to date, they report business as being very good, although the company has been in operation only since June 1st.

Panther Rubber Co. Opens in Sherbrooke

The Panther Rubber Manufacturing Co., Sherbrooke, Que., have started operations and their plant is well equipped. Chas. A. Joslin is the superintendent and Robert E. Katz is sales manager. The output of Panther Tread rubber heels and rubber soles, soling and mould goods will be marketed to the Canadian trade through jobbers. The company have been selling in the Dominion for some time and expect to greatly increase the demand for their goods by means of their new works. Wm. Bernstein, of Boston, treasurer of the company, paid a recent visit to the Sherbrooke plant. The Panther Rubber Manufacturing Co. have factories at Stoughton, Mass., and Trenton, N.J., and expect in a few months to be turning out fifty gross of Panther Tread rubber heels a day, as well as 1,000 pairs of soles, at Sherbrooke. The manufacturing premises are about 200 feet long by 50 feet wide and are well lighted. Downstairs there are four mills for grinding and also four heavy presses, while upstairs are the packing, trimming and shipping departments. The company are well pleased with the prospects for their Canadian business. The plant is operated by a 200 horse power motor, and new employes who have been trained by experts from Massachusetts, are rapidly getting into shape.

Tourigny & Marois Rebuild

Work has started on the new factory of Tourigny & Marois, Quebec. It is being erected on Arago and St. Valier streets on the site of the former shop, which was destroyed by fire some months ago. The present factory will be very much larger and the floor space will be nearly 100,000 square feet. There will be six flats. The frontage of the building on all sides will be 305 feet long, including the wing, while the width will be 60 feet. It will be of mill construction throughout with windows 6½ x 6½ feet and 30 inch wide pilasters. The offices and two complete suites of sample rooms will be on the first floor on St. Valier street. There will be a sprinkler system, while the premises will be kept clean by means of a blower system. All stairways, elevators, etc., will be located in the tower and the capacity of the factory will be from 4,000 to 5,000 pairs a day. The firm make McKays exclusively in misses', women's and children's, men's boys' and youths' and use only two leathers, dongola and calf. Mr. Marois expects that they will start manufacturing in their well appointed and admirably lighted new home about September 15th. In company with his architect he visited all the leading shoe factories of the United States in search of pointers and has embodied all the latest ideas in the plans for his new structure.

The trade journal, "Shoe Findings," is to be published from Chicago after this month, where their address will be 5 South Fifth avenue. The SHOE AND LEATHER JOURNAL joins in wishing them all success in their new location.

Newsy Briefs From Quebec

Zoe Chateauvert, wife of L. Pinsonneault and mother of Alf. J. Pinsonneault, shoe jobber, and Quebec representative of the Kingsbury Footwear Co., Montreal, died at her residence in Quebec on the 1st of June. The funeral service was held on the 3rd inst. at St. Jean Baptiste Church, where a large number of relatives and friends of the deceased were present.

Shoe prospects in Quebec are looking much better now than they did two or three weeks ago. Orders to be delivered in September and October are being received by many manufacturers. Quebec retailers complain that owing to the bad weather experienced in May and the first few days of June, the volume of business for these two months is very small.

A very pleasant shock was experienced by Jas. Lebric, hide dealer, of this city, recently, when his friends tendered him a presentation of a fine three hundred dollar silver service, the occasion being the twenty-fifth anniversary of

his wedding. A majority of Quebec shoemen and tanners were present and all joined in wishing him long life and hoped to be present at his golden wedding.

At the meeting of the directors of Ames-Holden-Mc-Cready, Limited, held in Montreal, on June 11th, the regular quarterly dividend of $1\frac{3}{4}$ per cent. on the preferred stock, payable July 1st, was declared. More than ordinary interest was taken in the declaration in view of recent weakness of the stock. Mr. D. Lorne McGibbon, president, in discussing the action of the directors, stated that it was chiefly due to the promising outlook for the coming year that it was made. He also stated that the position of the company was much stronger now than ever before in its history. So far this year orders have held up well with last year. The prospects for a good crop are bright and as the next dividend does not fall due until October, by that time the merchants all over the country would be discounting the favorable conditions caused by a bountiful crop in volume, as they were now high and dry of all goods.

"FARTHEST NORTH" SALES BRANCH

The Edmonton branch of the Canadian Consolidated Rubber Co., the staff of which is shown in the accompanying illustration, has become, during the last year or so, one of the most important depots of the company.

This branch is in charge of Mr. Charles H. Himburg, who was born in Bridgeport, near Berlin, Ont. He took a position as salesman with the Kaufman Rubber Co., with whom he remained for a period of over five years, during which time he secured a fund of information on rubber footwear. Immediately after leaving the Kaufman Rubber Co. he started with the Canadian Consolidated Rubber Co. and has occupied various positions with the concern until now he is manager of their "farthest north branch."

J. L. Bond started with the Canadian Rubber Co., Limited, Winnipeg, in 1907, remaining there as accountant till 1910. He joined the Edmonton staff at its opening in 1911, since then he has been going ahead fast.

L. N. Miller, who is well known to the retail trade of Alberta as "Mill," was with the old Canadian Rubber Co., Calgary branch, for some years previous to the opening of the Edmonton warehouse. He was also employed for several years by the Winnipeg Rubber Co., Limited, and is a thorough rubber salesman.

F. W. Henderson is of English birth, hailing from Yorkshire county, whose inhabitants are known as "Tykes." Going to the Yukon in 1901, he worked for some years with the Oak Hall Clothing Co., Bonanza Creek. Arriving in Edmonton in 1905, he spent several years in the employ of Revillon Bros. From 1907 to 1911 he was with Messrs. James McCready Co., traveling in Northern Alberta. He has established a nice trade in this section since joining the sales staff of the Consolidated Co. in 1911.

These gentlemen are all associated with the Edmonton office and are responsible for the fine showing which the company are making in that territory. Much friendly rivalry is evinced, but co-operation seems to be the motto of all.

Miner Rubber Co. to Hold Convention

The second annual convention of sales agents, representatives and branch managers of the Miner Rubber Co. is to be held at Granby, Que., on the 25th, 26th and 27th of

W. H. MINER, GENERAL MANAGER OF THE MINER RUBBER CO.

this month. The convention last year was a huge success, but it is expected that the coming on will be even better attended. A full programme has been mapped out as follows:—

Thursday, June 25th:—9.10 a.m.—Guests will assemble at private car which will be found attached to 9.10 train for Granby at Grand Trunk Station, Montreal; 11.30 a.m.—Arrival at Granby; 1.00 p.m.—Luncheon, Granby Hotel; 2.30 to 6.00 p.m.—This time has been set apart for private interviews between sales agents and branch managers with the management of the company. A time table showing this in detail will be furnished later; 6.30 p.m.—Dinner at respective hotels; 7.30 p.m.—Automobile drive.

Friday, June 26th:—9.30 a.m.—Inspection of factory; 1.00 p.m.—Luncheon at respective hotels; 2.00 p.m.—Business session; 8.30 p.m.—Formal dinner, Windsor Hotel.

Saturday, June 27th.—7.35 a.m.—Return in private car to Montreal, arriving 9.45 a.m.

Had a Successful Year

The United Shoe Machinery Company in the year ended March 31st last made a high record in earnings. The net of \$6,177,114 was, however, insignificantly in excess of 1913, so that the balance for the common stock after preferred dividends showed no appreciable change—\$4.80 per share in each year. Earnings and balance for the common for the past four years compare as follows:

| | Net earnings | Common share out | Net per share aft pf divs |
|------------|--------------|------------------|---------------------------|
| 1914 | \$6,177,114 | \$1,144,402 | \$4.80 |
| 1913 | 6,160,167 | 1,144,402 | 4.80 |
| 1912 | 5,958,720 | 1,143,977 | 4.70 |
| 1911 | 5,780,106 | 1,113,977 | 5.00 |

The United Shoe's balance sheet has a fine showing of cash and receivables. "Accounts payable" are small. On March 1st last quick assets of \$24,587,000 and accounts pay-

able of \$364,000 left net working capital of \$24,200,000. The United Shoe has not paid an extra dividend since the 1911 fiscal year and its working capital has consequently increased nearly \$9,000,000, as shown in the following table: 1914, \$24,200,000; 1913, \$20,500,000; 1912, \$17,200,000; 1911, \$15,600,000.

A significant statement this year is that the balance sheet valuation of \$27,074,000 for "stocks and bonds of other corporations" is "in the opinion of the board of directors, less than their actual value."

President S. W. Winslow says: "The suit instituted by the Department of Justice for dissolution of the company is still pending. While the litigation has been costly to the company and has taken much of the time of its executive officers, the suit has been serviceable in demonstrating the public benefit of the company's policy and in correcting misrepresentations by its critics."

A. R. Clarke & Co., Toronto, secured some excellent advertising in the window of Eaton's store recently when they loaned to the shoe department a mounted Russian pony to direct the attention of the public to Russia colt shoes made from their leather, supplied by the firms of manufacturers who were selling shoes to the Eaton Company. The colt skin, brought to Canada by A. R. Clarke & Co., who annually import many thousands of skins from Russia, was mounted by a taxidermist, and when set in a big display window, amid a showing of colt shoes and suitable cards it commanded a lot of attention. One of the cards in the window stated that six hundred thousand skins were exported in Russia each year; the figure should be more like six million as the industry is a very large one in Russia.

Combination Sailor Tie and Colonial

A new idea in shoe showings which is proving very popular this season is the sailor tie shown in the accompanying illustrations, which, by simply removing the bow and substituting a buckle can be converted into a natty colonial. The pump, which comes in patent leather and brocade backs, is a one-eyed oxford tie through which the bow is arranged. When the colonial is desired, the bow is untied and run through a buckle to fasten it. It carries a long vamp, plain recede toe, and fairly high kidney heel.

Another new idea in connection with this shoe which

gives better value to purchasers, is that it is white lined, so that it can be worn with white stockings, the shades matching. It carries a one-inch ribbon for the bow and retails at \$5.00 per pair. A very large demand is being felt for the pump by J. C. Budreo, shoe retailer, Toronto, through whose courtesy it is shown here.

AMONG THE SHOE MEN.

The Cristo Shoe Co., Montreal, have registered.

A. Binette, shoe retailer, Montreal, has assigned.

Rutherford Bros., Ogden, Alta., have discontinued.

A. Alexander has opened a shoe store in Welland, Ont.

The London Shoe Store, Montreal, has been registered.

G. W. Forbes, Brandon, Man., has sold out to S. Sanford.

H. Greenberg, shoe retailer, Montreal, recently assigned.

A new shoe repairing plant has been opened at 354 Elgin street, Ottawa.

The Canada Last Co. will build a plant on Van Horne street, Toronto.

H. Barringer, Simcoe, Ont., is erecting a new shoe store in that town.

A new front is being installed in the Sutherland Shoe Store, Kingston, Ont.

The Everbest Shoe Co., Montreal, have registered to manufacture footwear.

The Dominion Last Remodeling Company was recently registered at Montreal.

Mr. Budgeo, of Allen, Foster & Willet Co., Lynn, Mass., was in Toronto last week.

R. Aboud & Co., of Cobalt and Haileybury, have assigned to N. L. Martin & Co.

Alterations have been made to the building of the Berlin Felt Boot Co., Berlin, Ont.

The Regina Shoe Company, of Montreal, recently installed more new machinery.

C. F. Hayes, superintendent of the W. B. Hamilton Shoe Co., Toronto, has resigned his position.

J. K. Rose, of Toronto, representing Rice & Hutchins, was in Montreal on business last week.

The Union Shoe Store suffered damage by fire, among other retailers, in Winnipeg recently.

J. Davis has been appointed foreman of the fitting room of the John Ritchie Co., Quebec.

J. B. Belanger, of Marier & Trudel, Quebec, was recently in Sudbury, Ont., on a business trip.

A shoe manufacturing concern has been registered in Montreal called the Everwear Shoe Co.

Chas. Campbell, of the Boston Last Co., Richmond, spent a few days in Montreal last week.

The Quebec Bank have obtained a judgment for \$1,700 against the Rapid Shoe Repair Co., Hamilton.

Paul Galibert, Jr., representing P. Galibert, glazed kid, Montreal, was in Toronto this week on business.

J. T. Tebbutt, of the Tebbutt Shoe and Leather Co., Three Rivers, was in Toronto last week on business.

A. B. Maison, Montreal, shoe retailer, has assigned and a meeting of creditors has been called for June 18th.

E. T. Jacobi, of P. Jacobi & Co., Toronto, recently spent a few days at Lake Simcoe on a fishing expedition.

Joseph Greenwood, shoe retailer, 579 Bloor street west, Toronto, has disposed of his business to M. Wilson.

John Ritchie, of the John Ritchie Co., Quebec, left last week on a trip to Winnipeg and other Western points.

J. G. Trudeau, Canadian representative of the Lionne Varnish and Leather Co., reports an active demand for the

preparation of this company, and during the past few days several orders have been received from the Old Country.

Alfred Leeder, of Leeder & Co., Battleford, Sask., was in Toronto and Montreal last week on a business trip.

Mr. Henry Steel has accepted a position with the Solid Leather Shoe Co., of Preston, Ont., as superintendent.

Fred McFarlane, representing E. T. Wright & Co., St. Thomas, in Western Canada, returned home last week.

A boot and shoe store has been opened in Durham, Ont., by W. L. Saunders and Fred R. Aitchison, of that place.

Nichol & Loggie, Limited, of Regina, have been succeeded in their boot and shoe business by Loggies, Limited.

H. A. Beatty, of the American-British Canadian Distributors, Toronto, was in Montreal last week on business.

F. W. Knowlton, of Montreal, manager of the United Shoe Machinery Co., spent a few days in Toronto last week.

J. L. McPherson, of the John McPherson Co., Hamilton, has been spending some time in England and on the Continent.

J. A. Scott, leather dealer, Quebec, is among the latest to join the ranks of the autoists. He has bought a neat run-about.

Frank W. McKeen, Quebec, shoe manufacturer, has been a recent visitor to Boston. He reports business as being brisker.

It is reported that the Dominion Shoe and Slipper Co. has been absorbed by the Canadian Consolidated Felt Co., Limited.

C. J. Fitzgerald, President of the Cook-Fitzgerald Co., Limited, London, is in Boston and other shoe centres for a few days.

F. J. McKenna, Montreal representative of the Murray Shoe Co., was in Toronto, Hamilton and London last week on business.

G. A. Blachford, of The Blachford Shoe Manufacturing Company, Limited, Toronto, was recently in Detroit on a business visit.

The Smardon Shoe Company, Montreal, have plans under way for an addition which they will build to their present factory.

Nap. Tetrault, of the Tetrault Shoe Manufacturing Co., Montreal, has returned from a business trip to New York and other Eastern centres.

Geo. Rumpel, the widely known felt footwear manufacturer, of Berlin, was in Montreal last week on his way home from a trip East.

L. Lawson & Co. opened a new store recently in Thorold. Besides men's fur'nishings and clothing, they handle a line of boots and shoes.

Alfred Minister, of the Minister-Myles Shoe Co., Toronto, has returned from an extended business trip through the Canadian West.

The Salem Tannery, at Salem, Ont., was damaged by fire on June 14th, but the blaze was extinguished before any serious damage resulted.

Although the majority of shoe factories in Quebec are quiet it is understood that the lasters have presented a requisition to the employers which practically means an increase of twenty per cent., to take effect November 1st. It is not

expected that any trouble will result from this demand, and it is anticipated that a mutual agreement will be reached in the meantime.

Geo. P. Balfre, Montreal representative of the Chicago Tanning Co., visited Toronto and several centres in Ontario during the past week.

H. A. Thompson, of the Thompson Shoe Co., Montreal, who has recovered from his recent illness, was in Boston last week on business.

E. E. Bird, manager of the Boston office of the Davis Leather Co., recently visited the company's tanneries in Newmarket and Kingston.

John Lennox, of John Lennox & Co., wholesale shoes, Hamilton, who has been suffering from an attack of rheumatism is rapidly improving.

The Twin-City Rubber Depot at 77 King street west, Berlin, is the latest house to open its doors under the management of R. W. Lautenschlauger.

C. S. Pace, boot and shoe retailer, of Saskatoon, Sask.,

who was burned out last March, has re-opened a fine new shoe store at 127 Second avenue south. He will handle high-class boots and shoes and will also carry a traveling goods department.

The Canada Last Company, of Toronto, is to erect a new factory that will cost \$8,500. It is to be of brick construction, two storeys high, and 36 by 42 feet.

W. H. Miner, of the Miner Rubber Co., Granby, Que., was in Montreal last week attending the annual meeting of the Canadian Manufacturers' Association.

M. L. Ballard, bottoming room foreman with Ames-Holden-McCready, Limited, has taken a similar position with the Pingree Shoe Co., Detroit, Mich.

Exports of leather for nine months ending March 31st, amounted to \$16,800,000. They amounted for the corresponding nine months in 1913 to \$20,700,000.

E. F. Leonard, Montreal, formerly superintendent of the Slater Shoe Co., left last week to spend the Summer at his country home, Nantasket Beach, Allerton, Mass.

J. A. Adams, vice-president and general manager of the Murray Shoe Co., London, Ont., and I. J. Johnson, director of the company, were in Boston during the past two weeks.

George E. Williams, of D. D. Hawthorne & Co., Toronto, who has been ill for some time past, is rapidly regaining his health and is at present recuperating in the country.

J. A. Steel, foreman of the cutting room of the Wm. A. Marsh Co., Limited, Quebec, has resigned to take charge of the cutting room in the Solid Leather Shoe Co., at Preston, Ont.

Oscar Rumpel, formerly with the Consolidated Felt Companies, as assistant general manager, is to erect a factory and start in the manufacture of felt footwear himself at once.

R. E. Jamieson, sales manager of the Canadian Consolidated Rubber Co., Montreal, has returned after a business trip of several weeks to all the company's warehouses in the Canadian West.

The firm of Gale Bros., of Quebec, have a line of McKay samples for women for Spring and are adding to their regular output of misses' and children's and growing girls' footwear.

The Macfarlane Shoe Co., Montreal, intend erecting this Fall an addition of 100 feet to their factory, which will give them a depth of 250 feet. They are very busy at the present time.

Mr. Allen Simpson, shoe retailer, at 419 Parliament street, Toronto, was operated on last week for appendicitis, but is reported to be improving. He is in the Toronto General Hospital.

P. T. Richardson, proprietor of Richardson's shoe store, Eighth avenue, Calgary, has retired from the shoe business. He has large oil interests, and feels that they require the whole of his time.

August Stanke, superintendent of the Berlin Felt Co., Berlin, Ont., has severed his connection with that firm and was recently purchasing machinery for a new felt factory, to be established in Berlin.

L. E. Chamberlain, shoe retailer, Sherbrooke, Que., has acquired the clothing and men's furnishing business of J. J. Mullins in that city. Mr. Chamberlain will continue to operate the two stores, at least for the time being.

The Boston Last Co., Richmond, who this Spring erected an addition for office and model room purposes, will extend their premises at an early date by a three storey addition which will increase the capacity of the company.

The Blachford Shoe Manufacturing Co., Limited, 92 Sherbourne street, Toronto, who recently started in business, are now getting settled in their new quarters. A complete equipment of shoemaking machinery has arrived and

A THOROUGH SHOEMAN

He is a shoeman in every sense of the word, having been brought up in the business, and his father and brother were both practical shoemen. The photo shown here will no doubt be recognized by many as that of J. A. Taylor, of Petrolia, Ont. He started his shoe career in 1875 as an apprentice at custom shoemaking with Taylor & Son, Aylmer, Ont. The firm was composed of his father and eldest brother. After working on the bench at home about five years, he was struck with the wanderlust and put in the next few years in various cities in Michigan, Wisconsin and Illinois, where he worked in several shoe factories. After this he returned to Canada and engaged once more in cus-

tom work in several Ontario towns. He branched out in business for himself at Dresden, where he remained for over sixteen years, building up a fine trade. About four years ago he sold his business and purchased that of A. McDermid, Petrolia, where he has since remained. Mr. Taylor is a live wire and believes in going after trade instead of waiting for it to come to him. He is very well known in Central and Western Ontario and respected by all his friends. He takes a keen interest in his business, which he operates along modern lines.

is being installed without delay. It is expected by the management that cutting will be started this week.

There recently has been installed in the shoe factory of O. Goulet, of Quebec, a Rex pulling over, a Rex rotary pounding and trimming machine and other equipment to complete a line used for McKay and Standard Screw work.

E. T. Weaver, formerly superintendent of the Relindo Shoe Co., of Toronto, and more recently employed by a shoe concern in Salem, Mass., has accepted a position as superintendent of the Boner-Allen Shoe Co., of Buford, Georgia.

F. M. Morgan, manager of the Edmonton warehouse of Ames-Holden-McCready, Limited, has also been appointed manager of the Calgary Branch. G. W. Hagle, of Calgary, will assist Mr. Morgan in the direction of the latter branch.

W. W. Lindsay, representing E. T. Wright & Co., St. Thomas, in the Maritime Provinces, returned home a few days ago. He reports business conditions in the East as improved and expects mail orders to be plentiful next season.

The Louis Gauthier Co., Quebec, are very busy making the Army shoe for the Militia Department, the contract for which was obtained some time ago by Chas. Slater. It is understood that 10,000 pairs of shoes will be furnished to the Department.

A resolution was submitted and carried unanimously by the Board of Trade of the town of Waterloo, Ont., recommending a loan of \$15,000 and partial exemption from taxes to the Doering Trunk Co., who propose building a factory in that town.

James Robinson, of Montreal, who has been spending several months in New York and other cities, is residing for the summer on his farm at St. Margaret's, Que. He is much improved in health and is able to come down to business occasionally, but prefers life in the open.

Michael M. Pingree, for some time past foreman of the treeing and packing department for the Slater Shoe Co., of Montreal, has resigned his position with that concern and has accepted a position in the same capacity with the Western Shoe Manufacturing Co., Redcliffe, Alta.

During a recent demonstration in Belleville, Ont., one of the leading floats was furnished by B. W. Brown, shoe repairer. Mr. Brown's enterprise in giving a practical demonstration of the excellent work that he does as a repairer afforded him some profitable publicity.

R. B. Johnston & Co., shoe manufacturers, Port Coquitlam, B.C., have declared a stock dividend for the fiscal year ending March 31st of 11½ per cent. John F. Foster, secretary-treasurer, states that the increase in the business in the past three months is almost twenty-five per cent.

The John Ritchie Co., Quebec, have gone exclusively into the manufacture of Goodyear welts, both men's and women's. The firm have discontinued the making of McKays and will henceforth devote their energies to specializing in welts and turning out their branded shoes which are known as the "Ritchie Shoe" and "Ideal Quality."

T. W. Hart, Western representative of the Nugget Polish Co., Toronto, has gone on an extended business trip. He will attend the big Fall fairs in the Prairie Provinces in the interest of his company. H. W. Parsons, Eastern representative, is now on a business trip through Quebec.

The Toronto warehouse of Clarke & Clarke, leather manufacturers, Toronto, has been removed from 52 Bay street to larger quarters at 63 Bay street. They will carry a much more complete line of upper leathers and have recently added a large amount of new equipment to their plant.

The Lang Tanning Co., Berlin, Ont., have offered to the city a large block of land at the corner of King and Francis streets, Berlin, to be used for the erection of a public bath house, and also for park purposes. The offer, which is

much appreciated by citizens, is under consideration by the city council.

The by-law granting a bonus of \$15,000 and exemption from municipal taxes for ten years to the J. H. Hamilton Shoe Co. to establish a factory in Sherbrooke, was carried by the ratepayers by a good majority. The company will erect a factory to cost \$20,000 and will pay out annually \$40,000 in wages for ten years.

Duchaine & Perkins, shoe manufacturers, Quebec, have recently installed a Rex pulling over machine, a C.H.M. lasting machine, a Rotary pounding and trimming machine, a Taper nail tacking machine, a heel compressor, a heel attaching and other machines to increase their output of McKay, Standard Screw and peg work.

The Star Shoe Co., Limited, Montreal, have increased their capital stock from \$20,000 to \$100,000, by the addition of 800 shares at \$100 each. The powers of the company have also been extended to include the purchasing and selling of hides, to prepare the same for the manufacture of footwear, and to conduct a general tanning business.

The L. H. Packard Co., Montreal, are showing to the trade a decided novelty in the shape of glass shoe stands for display purposes. These stands are sanitary, clean, adjustable and afford a pleasing contrast to wood and metal

SOME NEW THINGS IN FINDINGS

An illustration is shown here of a new contrivance in the findings world, known as the Ritz Size Stick. A study of it as it is shown here will explain its advantages. This size stick gives custom and standard sizes, also inches and width sizes, and has an automatic slide and stop. The mak-

ers feel that it is a time saver, and state that with it, a clerk is enabled to secure instantly the length and gauge the width of shoe required. It is being shown in Canada by L. H. Packard & Co., Montreal.

The E. W. Shoe Stretcher, which is illustrated, is another new line being shown by L. H. Packard & Co., to the trade. If wishing to stretch lengthwise, the stretcher is adjusted as in Figure 1, put in the shoe and the handle

FIG. 1

FIG. 2

pressed down as in Figure 2. In stretching or widening the shoe across the box, the stretcher is adjusted to one size smaller than the shoe; a calk, which is supplied with each of the stretchers, is put on, according to the width needed, and the handle pushed down in the usual way.

fixtures. The glass shoe stand is apparently one that is taking well with the trade, for a large number of orders have been filed.

All the shoe manufacturers in Quebec have their Spring samples well under way for inspection by the wholesale trade. It is expected that a large number of jobbers will pay their usual visit to Montreal and Quebec during the first and second week of July. A number will take advantage of the occasion to continue their trips to Boston during the Leather Market Fair.

Work has been started on the new warehouse of Ames-Holden-McCready, Limited, corner Adelaide and McDermott streets, Winnipeg. It is expected that the building will be completed this Fall. It will be of stone and brick construction, seven storeys high, and in dimensions 100 x 130 feet. A. L. Johnson is the energetic manager of the Winnipeg branch. The outlay for the site and edifice will be about a quarter of a million.

William A. Walker, Western Ontario, traveler for the Walker-Parker Co., Toronto, was married on June 4th to Miss Maud Earle Hamer, the ceremony being performed by Rev. Dr. Hincks at Trinity Methodist Church, Toronto. Mr. Walker is a brother of John A. Walker, president of the company, and many friends will extend to him hearty congratulations on his joining the ranks of the benedicts.

R. O. Harris, of Boston, one of the receivers of the Walpole Rubber Co., which is in process of reorganization, was in Granby, Que., recently. Mr. Rosenberg, representing some holders of the common stock, was also in that city. There are quite a number of people in Granby who invested their money in the preferred stock of this company some two years ago.

The United Rubber Manufacturing and Reclaiming Company, of Brantford, has awarded the contract for the alterations and extensions to the Farmers' Binder Twine Company factory, purchased by them for use as their factory, to Bennett and Bowden, contractors, of Brantford. The machinery for the new company is all on order and will be in position by this Fall.

Again, the warm weather has had an effect upon trading. Patent leathers, which have been selling in greater quantities since the present season opened than for some years past, dropped in sales and dull leather once more came to life. The jobbing trade has also felt the effect of the warm spell last week, for immediate orders came to hand in good quantities. While combinations in low footwear are the best sell-

ers, rubber soled shoes for street wear are far from being forgotten. The demand for the latter styles include both low and high cuts in tans, blacks and whites.

C. F. Ouellette, leather goods dealer of Tilbury, Ont., recently suffered damage to the extent of \$1,000 to his store in a fire which caused a loss on various other surrounding buildings placed at \$100,000. At one time it was thought that the business section of the town was doomed but the arrival of outside assistance enabled the firemen to get control of the blaze.

The Smardon Shoe Co., Montreal, have been granted a federal charter with a capital stock of \$200,000. The company, which has been doing business ever since the dissolution of the partnership of Smardon & Percival, under the name of the Smardon Shoe Co., is now an incorporated organization and, under the new charter, is granted wide powers in connection with the manufacture of footwear of all kinds.

R. L. Savage, of Jackson & Savage, Limited, Montreal, is at present on a business tour through the Maritime Provinces. It is understood that he is withdrawing from the firm of Jackson & Savage, shoe jobbers and manufacturers, with which he has been associated for the past four years. Mr. Savage will take the position of sales manager for the Jas. Muir Manufacturing Co., Maisonneuve, entering upon his new duties about August 1st.

The German Shoe and Leather Fair will be held in Leipzig from August 30th until September 2nd, 1914. Shoe and Leather manufacturers and dealers in Germany and all other countries are expected to be present. This fair, which is the second of its kind, is held with the object of assisting in the upbuilding of the leather trade. The exhibition last year not only filled, but surpassed all expectations. The arrangements for the successful direction of the exhibition are under the direction of the town of Leipzig.

Many friends will be interested in a wedding solemnized by the Rev. William Duke this week in the cathedral at St. John, N.B., when he united in marriage James George McDermott and Miss Amy Gertrude Gallant, both of that city. The groom was a popular member of the staff of Ames-Holden-McCready, Limited, St. John branch. From his associates there he received a beautiful oak buffet as a remembrance of their high regard.

Waterbury & Rising, of St. John, N.B., have acquired the Russell Building on Main street, North End, which has been for so many years identified with the shoe business in St. John. Work is to be begun in a few days in the remodelling of the building to make it an up-to-date shoe store and the firm will extend their activity to that end of the city. Their former branch store on Mill street is to be removed to the new location and it is expected that this will take place early next month.

A marked increase in interest for the coming Seventh National Shoe and Leather Market Fair at Mechanics' Building, Boston, July 8th to 15th, has developed from various sources during the past week, establishing beyond any doubt that the July Market Fair will go on record as the greatest gathering of shoe and leather buyers and manufacturers ever held in this country. Mayor James S. Curley, of Boston, has given his support to the Market Fair and will officially open the exposition with a speech in Grand Hall at two o'clock on the afternoon of Wednesday, July 8th.

The United Shoe Machinery Co. will make exhibits at three of the leading Canadian Fall Fairs. In Toronto, during the Canadian National Exhibition, Goodyear welts will be made, the Minister-Myles Shoe Co. supplying the workmen. All the shoes will be of patent leather, which will be furnished by A. R. Clarke & Co. At the Halifax Exhibition the Robert Taylor Co. will supply the workmen and

machines for making Goodyear welts, McKays and Standard Screw goods will be in operation. It is also expected that a demonstration in shoemaking will be given at the St. John Fall Fair, and that J. M. Humphrey & Co. will have charge of operations.

A material which bids fair to be popular for topping in women's shoes during the coming season is Velastra, which is a new elastic shoe fabric. It is durable, neat in appearance and does away with buttoning and lacing because of its great elasticity. Velastra comes in cloth and velvet and is likely to meet with a wide measure of favor. Paul Roy, 248 Lemoine street, Montreal, has been appointed Canadian representative for this material, which comes in 5, 6 and 7-inch widths. It is imported by J. Einstein, Inc., New York, and the cloth has no lining, being both airy and artistic in appearance. This fabric is seen in black, grey and brown. Flat pearl buttons or laces which may be used in connection with it are merely ornamental, the shoe being taken on or off owing to the resilience of this new material.

The George E. Keith Co., Campello, Mass., are presenting to the employes of the company a club house and athletic field. One of the important features of the clubhouse is a hall which will have a seating capacity of 600. The hall will be used for entertainments and moving pictures and is so constructed that in the summer time it will be virtually an

open-air theatre. On the ground floor there will be located bowling alleys, and directly above, there will be quarters for smoking and billiard purposes. The park and athletic field will have many features, including a running track, baseball diamond, tennis court and basket ball grounds. The comfort of the women employes has not been omitted, and portions of the field are to be given over to shrubbery, flower beds and arbors. The club house is to be managed by the employes, and recently the board of directors was chosen.

Frederick Leslie Hunter, a popular member of the St. John staff of the Canadian Consolidated Rubber Co., joined the ranks of the benedicts last week, when he was united in marriage to Miss Ella Marion, daughter of Mr. and Mrs. John H. McRobbie. The ceremony was performed by the Rev. Gordon Dickie. The name of McRobbie is very well known in Canadian shoe circles, the bride's father being the proprietor of the McRobbie Shoe Store, King street, from the staff of which the young couple received a handsome cut glass water pitcher and tumblers. Mr. Hunter was also the recipient of a chest of silver from his associates in the Canadian Consolidated Rubber Company's office, which attested the esteem in which he is held by his fellow workers. After a honeymoon trip through Nova Scotia Mr. and Mrs. Hunter will reside for the Summer at their cottage at Ellesley.

Union Shoes for Union Men

The retailer who meets the demand of every possible buyer in his town handles Union Stamp footwear.

Dealers who do not carry Union Stamp shoes are not soliciting their rightful share of the shoe business of their city.

The Union man will have Union shoes for himself and his family. He demands them and if he cannot obtain them will turn elsewhere.

To you, Mr. Retailer, who advertise Union Stamp shoes the tide of trade is turning.

You cannot afford to neglect the Union trade, and even the man who does not buy Union shoes merely because of Union principles recognizes the high quality of Union Made footwear.

You have nothing to lose and all to gain by carrying these shoes.

Let us send you to-day a list of manufacturers who make shoes bearing the Union Label and add a live selling asset to your business for the coming year.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp

SPHINX

Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

The New Substitute for Leather and Rubber Soles

KENDEX

Has been put to the most severe tests and found to possess
the following qualifications:

- ¶ MORE WATERPROOF THAN LEATHER.
- ¶ Lighter in weight and longer in wear than leather.
- ¶ Will not slip on polished or wet surfaces.
- ¶ Can be channelled and stitched aloft.
- ¶ Sold in the form of cut soles.
- ¶ Furnished in colors to imitate oak, hemlock and in black and white.
- ¶ CHEAPER THAN LEATHER.

Kendex is being sampled and used by many of the leading shoe manufacturers.
Have you sampled this product?

Don't fail to see our exhibit of Kindex and our other felt
products at Booth 53 National Shoe and Leather Fair, Boston.

*Character in Every Line
Perfection in Every Stitch*

that's

THE "CLASSIC" SHOE

Coming from a factory which has a reputation for the consistent high quality and expert workmanship of its products, the "Classic" shoe cannot fail to "make good" with you and your customers.

The name "Classic" is synonymous with all that is perfect in shoe construction. It embodies all those essentials which go to make the ideal shoe. Yet the prices asked are but what your customers are now paying for ordinary shoes.

The "Classic" shoe is made in a wide variety of up-to-date, appealing designs for Ladies, Misses and Children.

Introduce it into your stock. You'll be agreeably surprised with the way it sells, the profit it carries with it, the perfect satisfaction it gives.

Individuality as expressed by the Doctor Shoe

The DOCTORS Shoe is different to the ordinary run of shoes. And it's just this difference, this individuality that has made it a leader among men's shoes.

The DOCTORS Shoe has a sole construction that no other shoe has---a construction that serves a definite and valuable purpose; it has a patented waterproofed upper that you won't find on other shoes; and it has a snug fitting, sensible shape that other shoes have sacrificed for freakish styles.

You'll find individuality a-plenty in the DOCTORS Shoe; selling it simply means meeting a demand.

Davis Vegchrome Leather

Retailers, Attention!

Davis Vegchrome Leather

Mr. Retailer, have you the Vegchrome Shoe on your shelves. If you haven't you ought to have, and if you have we venture to say you will soon require more.

Our Reasons are these:

Vegchrome Leather is particularly adapted to Farms, Mines and Woods use.

It is not effected by Barnyard Ammonia as straight chrome leather. The tannage is very soft, giving an Elk like feel.

Vegchrome is heavily stuffed with the best greases and therefore resists water splendidly

The boot made of this leather remains soft under all conditions.

It is the toughest of leathers and wears like iron.

We make it in colors and black.

Ask your jobber for the Vegchrome shoe or write us for information.

Make Findings a Big Profit Element in Your Store

Learn to Appreciate the Possibilities of Such a Department—How to Keep Shoe and Foot Requisites to the Front—Little Opportunities that Mean Much in the Aggregate—Trade that the Retailer Should Rightly Capture.

Do you realize the possibilities of findings? Most shoe dealers do not. The other day a man wanted an ordinary polish brush costing possibly 25c. He called on five city retailers and found not one of them had such an article. Some had a brush itself—others had a dauber, but not one of them had the article desired—a brush and dauber combined. This fellow finally had to enter a variety store in order to secure what he wanted.

Another party sought to obtain from several suburban establishments a particular brand of Canadian polish, that is known far and wide. He had to call at three stores before securing what he wished.

In a large Ontario city a traveller wanted a pair of silk laces for blind eyelets in a pair of oxfords. He called on six leading stores in order to secure a tubular lace. He found some of the establishments had them, but they were all from 27 to 36 inches in length. He could not secure anything in the way of very short shoe strings.

Many more instances might be given of neglected opportunities. Shoe retailers seem to give the matter of findings inadequate consideration. They look upon this department as a sort of necessary evil or indispensable accompaniment of the trade, never appreciating its big drawing possibilities, nor its revenue-producing facilities. In the first place, no hole in the wall, no cupboard, no back shelf, should be used for displaying findings. They should be right at the front of the store, for the simple reason that when a man drops in for a pair of rubber heels or some foot powder, shoe laces, or a box of polish, he likes to get it quickly, and get out again. He does not want to tramp all the way to the rear of the shop, especially if it is a deep one. There is nothing like a ten-foot silent salesman shoe case at the front of the premises, to make the average visitor think of findings and have his attention drawn to some of the special lines.

The Facilities for Showing

Much has been written on the proper way to show findings. A show case should never be littered or badly muddled up. Then the top of it may also be devoted to good use as various handsome receptacles are frequently given by

findings houses, when a certain number of an article is purchased. All the special facilities that can be placed at your disposal to exhibit findings, should be taken advantage of.

It is scarcely necessary to refer to the profit side of the business, as this has been dwelt upon in the SHOE AND LEATHER JOURNAL in previous issues. The average profit on staple findings is 82% on the cost price. On shoes it is doubtful if the ordinary retailer when special sales and other considerations are taken into account, makes 25% on cost price and dear knows, this is little enough, in the face of advancing rents, high overhead expenses, a greater variety of styles and other difficulties in the way of keeping up with the mercantile march. Every lever that the retailer can bring to bear upon his business should be seized. There are some men in the shoe business who make enough out of their findings alone to pay their light and heating, while others declare that they almost make the rent, for special attention is given to this department and sales pushed to the limit.

Working Along Lines of Suggestion

By this it is not meant that every clerk in the establishment is expected to "butt in" and ask a customer if he does not want this, that or the other thing in connection with the purchase of a pair of shoes, but such as can, by a judicious reference and a skilful suggestion, lead a patron up to the idea that a pair of shoe trees, some foot powder, a particular kind of dressing, a pair of rubber heels, a bunion protector, or something of that character, would prove acceptable. Certain situations suggest certain findings and one's own judgment must be used in this matter. There is always something new appearing in the market—some little heel plate, a new kind of measuring stick, a new type of stretcher, a patent ice creeper, etc., which costs only a few cents and on which a big profit can be made. Only recently a new steel plate was introduced which can be attached with one hand tacks. This prevents shoes being overrun at the heel and the smaller sizes of plates can be used as toe plates. Various people wear off their shoes at different points and this little steel device is one that will serve a ready purpose with many customers. These can be bought at 65c per gross and the retail profit is very large. In special cases they might be attached to the shoe with the compliments of the retailer.

There is no reason why the average person should go to a drug store to seek relief for foot ailments, such as corns,

bunions, chilblains, burning or sweating feet, when the average findings house can supply suitable remedies for the cure of all these ailments. When once a shoe merchant has given something to a patron that affords him or her relief, such a one is sure to become a fast friend of the store and to recommend others to purchase footwear there. The one great advantage of findings is that a representative and complete stock can be laid in at small cost.

Overgaiters and Dainty Slippers

Another profitable line is that of overgaiters and leggings. These goods are nearly always in demand except in the very warm weather. A couple of pairs should be kept in the show case at the front of the store where they will always suggest a sale, which might otherwise be forgotten. Now and then special window exhibits should be made of ladies, gents' and children's overgaiters which would help to concentrate attention on these profit making lines. Don't forget to tell your customers about them in your ads.

Another thing to be remembered is that the selling of boudoir slippers is too often associated with the Christmas season. There is no reason why these should not be disposed of the year round. They always make an acceptable gift for birthdays or other occasions and are not expensive. There is nothing prettier, more pleasing or delightfully attractive than this class of footwear, to which retailers give too little attention. They come in all colors such as red, pink, blue, black, brown, mauve, and grey, as well as suede and glazed, with silk pompons to match, or of different hues, if desired. They are made on right and left lasts and the better class have dongola uppers, with calf bottom. These slippers make a very inviting spectacle and should be always kept where they can be easily seen. The cost is from 85c to \$1.20 a pair, and the retail figure is all the way from \$1.25 to \$2.00—affording a handsome margin. Men's slippers are gotten up in such tempting form, that if a woman who has a husband who stays out at night, will only purchase him a pair, he is sure to remain at home. Why? Just for the sake of shoving his feet in such delightful and artistic receptacles. They come in black and tan, and have quilted satin insoles. The retailer can purchase them from \$1.00 to \$1.30 a pair. They retail at \$1.75 to \$2.25. When wifey comes into a shoe store, looking for something that will make her John happy on his birthday or wedding anniversary, there is nothing more appropriate than this style of slipper. They have an outsole that will wear and will afford every ease and comfort.

Many ingenious schemes might be gotten up by the retailer to push the sale of boudoir slippers the year round, and special window trims should be made.

What About Children's Soft Soles?

Another line that is woefully slighted is children's soft soled shoes, which can be bought all the way from \$2.25 up to \$6.50 a dozen. They come in all colors and combinations of leather. An especially pleasing range of ankle tie, soft soles, at \$4.50 per dozen, opens up a vista of profit for the enterprising dealer. Still another opening is the sale of bows and ornaments of all kinds for pumps and colonials. The selections here are so wide and the materials so varied, that it is scarcely necessary to refer to cut steel, jet, rhinestones, gold, silver, aluminum, celluloid, oxidised metal, ebony, leather filled buckles and other decorations.

Shoe horns or lifts is one more article that is given scant attention. These can be gotten up either for advertising purposes and presented to patrons or sold at a splendid profit. By the gross, in five gross lots, a neat shoe horn can be bought for \$1.75 and better ones at \$3.00 per gross. A combination shoe horn and button hook can be purchased at \$1.85 a dozen. The higher priced lines are really handsome goods, and always make a pleasing present. Fibre horns for advertising purposes can be secured in lots of 250

for about \$4.50, and in lots of 500 at \$8.00 or 1,000 for \$13.50. Any striking advertisement may be printed upon these by sellers and in the summer season, when low shoes are worn almost exclusively, such a little gift with every sale is money well invested.

They Mean 100 Per Cent.

The sale of laces is one which should not be overlooked. Rifle laces can be purchased all the way from 26c up to \$1.75 per gross, and leather ones from \$2.40 to \$3.80 per gross. Oxford laces cost all the way from 20c to \$2.50 per gross, or perhaps in certain cases, 10% should be added to the above figures in connection with the retailer.

Now rifle laces can be secured from 18 to 60 inches in length and oxford laces all the way from 12 to 30 inches. All laces can be sold according to price, from two or three pairs for 5c up to 25 or even 50c a pair in the case of the finest silk weave or highest grade of leather.

Regarding polishes, shoe trees, rubber heels, arch supports, toe rights, insoles, stocking protectors, heel cushions, over gaiters, cricket and golf spikes, etc., it is not necessary to deal in detail. Profits on these goods run all the way from 50 to 100%. Instead of looking far away to make money, the average merchant should engage in a little introspection, think seriously and long on the question of findings and get in touch with a good house.

Thus the story of how a findings department can be boomed and how judicious advertising and timely attention can boom it, might be continued at considerable length, but perhaps enough has already been said to show the potentialities of such a branch of the business.

The traveler will advise any dealer aright if he wishes to retain the future custom of the shoeman. It is to the interest of each that they work along mutually advantageous lines.

Keep the Business Separate

One suggestion that may be added is that in order to make a signal success of the findings department it must be made to look like a separate department and the best show window should be used occasionally to emphasize and reveal its importance and to demonstrate its possibilities as a profit maker. You, perhaps, have enough stock on hand in certain lines to start a findings department in a small way. Do it now. It may be here pointed out that a retail business consists of three important elements—sales, expense and profits. It is well to remember that extra sales make extra profits, and findings are an extra sale. One enterprising merchant suggests a neat price ticket or price button be attached to each article as it saves quite a lot of the clerk's time in answering questions.

How Rubber Heels Came About

When he first started to earn his living by becoming a printer, and was obliged to stand eight or nine hours a day, before his case "sticking type," Humphrey O'Sullivan's feet ached, as he stood, day after day. He decided to make a cushion for his feet. He borrowed the rubber mat at the door, and placed it before his case, and stood upon it, which made a good cushion.

One day some envious person stole the rubber mat, thinking that it was a very good idea, and would use the cushion for his feet. Thereupon Humphrey O'Sullivan says to himself, "They'll never steal my mat again unless they steal the shoes off my feet." So he cut some pieces from his mat, and nailed them on the heels of his shoes.

Then he thought, "What's good for me must be good for other folks," and he began to make rubber heels, and knowing from experience the power of printers' ink, he began to advertise. That is how Humphrey O'Sullivan made a million from a door mat and an idea, thus the origin of the O'Sullivan Rubber Heel.—Ex.

Does Modern Shoe Distort and Deform Human Foot?

Writer Says that Fashion Decrees Strange Shapes and the Populace Willingly Submit, Particularly the Women—Who Can Expect Manufacturers to be Philanthropists or Missionaries in Present Style Loving and Creating Age.

Considering the essential function of the human foot, its strong and delicate construction, its form, its importance to health and to life, can any person of common honesty and intelligence claim that it is suitably clothed by the modern manufactured boot? writes "L.B.D." While in some respects his representation of affairs is overdrawn and many will disagree with his observations and deductions, still his article is racy and entertaining and well worth perusing by both producers and sellers of footgear.

In order to arrive at some common ground of opinion on this matter a dozen manufacturers, and over a score of retailers and fitters of boots were questioned. The result has filled me with dismay. All admit the universal distortion of feet—but blame the owners of the feet. Retailers state that it is rare to find one foot in ten not disfigured with corns or bunions. Enlargements and inflammation

are caused not only by boots too short, but by soles too flat and rigid as well.

Examine the naked natural foot. It curves under the "ball." But does the manufactured boot fit this curve? The lines of the manufactured boot are arbitrary and unnatural. The flexible bones of the foot forced into its unyielding mould must find some space and are pressed and crushed, now back upon the arch, or on their supporting shafts with pitiable consequences. Manufacturers and retailers alike repudiate responsibility for these deformities, and claim that men and women, but chiefly women, insist upon buying boots too small for them. Saleswomen have solemnly assured me that their advice is not desired by their customers who demand the "latest style." regardless of its relation to the shape of their feet.

"If I was to tell a lady she should wear a larger size,

when she really ought to, she'd be awfully mad, and would walk right out without buying," said a bright and pleasant girl in a large department store.

"I myself overheard the following conversation in a retail shop. A young woman was seated:

"What size, madam?" asked the salesman.

"Three and a half A."

"But the shoe you're wearing is a four C, madam."

"If you know my size what did you ask me for? These are too large. Give me a three and a half." Then: "Five dollars? That's too much."

The salesman had been too truthful. She departed.

A Mental Picture of the Foot

Shoedealers declare that women on entering a shoe shop "have a picture in their minds of how their feet are to look, and they fit that mental picture to the detriment of their feet."

Well, how is it possible to do otherwise?

If women have a "mental picture" of boots, and how their feet are to appear clothed, need we seek its source? It is so obvious.

Every pattern journal, every fashion magazine supplies it. Turn back to the old numbers of Godey's Lady Book, even. Was ever a fashion plate seen of either man or woman, without an object sticking out below, pointed, narrow, out of all proportion, small, designed to represent the foot? And the plates of female figures are raised on heels, placed under that wonderful spring I have described in the anatomy of the foot, with instep extended, and the fourteen phalanges of the toes heaven knows where?

When every illustrated boot, shoe and slipper contributes to form the mental image of the woman about to purchase footwear she is destined to fit that image instead of her feet.

Only Amazonian courage could resist it.

The Effect of the Pointed Toe

The first query put to the manufacturers addressed was, "Why, in your opinion, is a long pointed boot considered more elegant than one which follows the natural lines of the foot?"

None replied to it.

But a friend who is not an "expert" has suggested that a pointed toe makes the foot look smaller than a broad one.

But that is on the principle that governs the flat-heads of the savage. The foot is broad, naturally and rightly and necessarily to life and health at the toes. Why, then, force all five into a space sufficient for one and endanger life and health?

Admit this: If everything pictured and in the concrete conspired to form a "mental image" of a natural toed foot, how infinitely absurd the narrow, high-heeled footwear offered us would appear!

Earliest Styles in Footwear

Glance at the fashions of past centuries. The earliest footwear recorded was almost entirely utilitarian. The Greek sandal permitted full action of the foot; so did the Roman "colseus," covering toes and heel only and secured by a thong at the instep. The Anglo-Saxon "slype" and "scco" were designed, as all footwear should be, to protect the foot. Then came the absurdities of the twelfth and following centuries in Europe. Poulaines were shoes abnormally long and pointed, sometimes to the extent of having the toes chained to the knees. Ordericus Vitalis says they were invented by some one with deformed feet. Henry Plantagenet is credited with the invention. He had an excrescence on his foot! Therefore his courtiers were in courtesy bound to follow his example. For if "the king could do no wrong" he certainly could not be known to have a bunion!

Are we, then, to trace all the afflictions wreaked upon the modern human foot to Henry Plantagenet's bunion?

This peaked shoe, called "Ocrea rostrata," excited the wrath of contemporary writers and was forbidden to the clergy. It came very near to being placed on the list of mortal sins, so scandalized was the church. But the entire social world must have been excommunicated for the heresy! The fashion prevailed!

It is written that Robert, Duke of Normandy, refused to adopt it. In consequence he was dubbed "curta ocrea"—short boots.

How many to-day could endure to bear such a nickname!

For three hundred years poulaines, or Polish points, were worn throughout Europe. Then came a change in all clothing; high hose were discarded, knee breeches "came in," garters, felt hats, and heels—for poulaines had the grace of being heelless.

A rage for high heels followed. Mankind can do nothing in moderation. And that fashion has been maintained—in spite of the tortured anatomy of the human foot and knee, and vital organs out of balance, France and Italy were its home, for, curiously, it did not take root in England. There was the impossible Venetian "choppine," designed, it was whispered, to keep the high dames at home, or under espionage, so difficult was locomotion in them—and the heels of all the Louis'. To learn how determinedly these high heels have persisted one has only to turn to plates of the "latest footwear from Paris." Imagine these pumps on the exquisitely moulded feet of the Venus de Medici, Greek canons of art required that the second toe should be the longest of the five. Modern science, however, teaches that the longer the great toe the further we are removed from our Simian ancestors.

We who clamor for the natural foot again must admit that the feet of the bare-foot classes are not always classic in shape and they are frequently splayed and spread, large jointed and far from ideal. The solution appears to be a compromise. But at least no child's feet should be dressed in unyielding leather.

Permitting the Designers to Distort

This is the twentieth century and we boast of our enlightenment. Women struggle for independence. Yet they permit a small number of designers to determine the shape of their feet! Why not limit the province of designers entirely to decorations and material? That is latitude enough.

Edward IV grappled with the dangerous fashion of his period by forbidding "beakers" of shoes to be longer than two inches and fining any cobbler who exceeded that length twenty shillings. But kings no longer rule. The people are supreme.

To begin with stockings. They are modelled on the lines of the factory boot, not on the lines of the foot. Neither love nor money could purchase a pair broad enough for the normal articulation of the five toes. Spinners will tell you it would be folly to make hose to fit human feet. The most space that they and shoe manufacturers allow for is that into which the delicate bones of the toes can be squeezed tightly together and overlaid within the footwear they manufacture.

Do not commend me to the so-called "common-sense" shoe. It is a monstrosity, as the present writer knows by experience—a monstrosity, I say, heavy and unyielding in under and upper, leaden-toed, leaden heeled, ugly, unnatural, unhygienic! Hideous to wear and to behold.

Could Not Find His Ideal

Set out, as I did, three months ago, to find footwear for natural shaped feet, one of them sprained at all the articulations, surgically, hygienically and artistically. I demanded a flexible sole, a roomy upper, absolutely straight on the inner side to follow the line of the foot, rounding on

the outer side, firm in arch, moderate in heel, of lightweight material with some decorative features.

Eight centuries ago an Anglo-Saxon shoemaker could have supplied me—except for the heel. But the twentieth century retailers only shook their heads. Some admitted they had dreamed of such footwear, “but we could not sell it. Were we to stock up with such lasts we’d go out of business. Besides, the shapes are constantly changing.”

No one seemed to know exactly why.

Blames It on the Women

A Toronto manufacturer in an interview said: “It is hopeless to try to get the ladies to wear the same kind of boot, as hopeless as to persuade them to wear the same kind of gown or hat. They want ‘something different.’”

Yet, all manufacturers consulted agreed that new lasts for “new styles” raise the price of footwear. “When one maker buys a new last all must, or lose the custom.”

A great firm in Montreal wrote: “It would be necessary to go further than the shoe manufacturers to change these conditions. The last makers in order to do business must create and sell new lasts and the pattern-makers likewise. If all men’s and women’s shoes were made on natural lasts of a few neat styles the great last-making plants, and the pattern companies would have little to do, and it would throw many people out of work, and out of business.”

Is this commercial need the key to the problem? To keep the wheels of commerce going feet must be deformed, and the price of boots be kept high?

Then, only concerted action could avail?

Are men and women the compliant fools of what is designed and laid before them?

Give What the Public Demands

A well known firm of shoe makers in Galt think the reverse. They contend that “What each manufacturer is trying to make is what the public demands. We are governed entirely in this matter by the demands of the public. We carry shoes made up in the same leathers and same quality on the so-called nature shapes, but the amount of goods purchased on these lasts is a small part of our product.”

Who can expect shoe manufacturers to be philanthropists or missionaries?

A great firm in Rochester echoed this deduction: “All progressive manufacturers with whom we have any acquaintance do produce, and are ready to supply their customers with foot form shoes, but it is merely another case of the old saying that you can lead a horse to water but cannot make him drink. If the ladies will not buy these shoes after they are displayed in the dealers’ windows it is useless for the manufacturers to make more of them.”

A Suggestion for the Makers

But that is the crux of the question. It is a case of minorities. If the great bulk of footwear were made on natural lines, and to possess five, toes came again into fashion—the dream! The dream! all the torture-producing, foot deforming boots would go for \$1.98 on the bargain tables!

Why not make foot-form shoes so attractive (and expensive) that the leaders of the smart-set will adopt them?

At the present, the only solution for the few is the custom shoemaker. “We have always been poor,” a fine old specimen of this class complained to me. But, why? Capitalized and conducted on business-like principles the custom shoemaker should survive equally with the custom tailor and the custom milliner. There must always exist a substantial body of people who, as in the past, prefer to have their footwear fitted to their feet than their feet to footwear.

But in a contest between fashion and good sense we know well which will be the victor:

Canada’s Trade in Leather and Shoes

The importation of leather and leather goods in Canada and the exports are always of interest to the trade. The following official figures, which represent the volume of business in the various lines for the fiscal year, ending March 31st, 1914, will prove instructive and should be kept for further reference. The principal item is the importation of boots and shoes, slippers, etc., from foreign countries, which amounts to \$4,229,563, the greater portion of which came from the United States. The letters N.O.P., after certain items mean, “not otherwise particularized.”

Unmanufactured

Recovery in Shoe Trade Conditions Appears Brighter

Merchants Have Been Buying Carefully and Stocks Are Low—Better Prospects in Western Canada—With Assured Crop and Improved Collections Business Will Regain Its Usual Momentum.

One of the largest shoe manufacturing firms in the New England states, in referring to the present depression in the shoe trade which appears to have been felt for several months past across the line as well as in Canada, declares that it is not easy to assign the cause.

"It results," says the firm in question, who take a sane and conservative view of the situation, "to some extent from depression in other industries, and consequent loss of earnings among people who would naturally buy shoes if they had more money, but outside of this indirect connection, there is apparently no relation between the present depression and any political conditions. There have been no importations of shoes of any consequence, following removal of the duty. Free shoes have not, up to this time, injured the shoe trade in any degree.

Uncertainty as to Style Trend

"The weather has not been favorable to a good spring business, and weather is quite an important factor in determining volume of sales at this time of year. There is quite a marked uncertainty in minds of many dealers as to the trend of style in the immediate future, and dealers are very loth to buy freely or take in a large stock that may not meet popular demand, and which will not, therefore, pay a living profit.

"Again, prices of all kinds of material are very high, and shoes are costing more than for many years, and, of course, ordinary business judgment forbids free purchases of stock at the top of the market. There seems to be no important condition in bad shape. Stocks are not excessively large; business, so far as we can judge, is not unduly extended in any direction, just a natural hesitation, encouraged by high prices and poor trading conditions. If this depression is only temporary, and a good recovery comes in the fall, the trade will probably be better off as a whole for the conservatism of the past few months."

Western Outlook is Brighter

So far as recovery in the Dominion is considered, much will depend on Western Canada. There is no better authority verily on crop and commercial conditions in the prairie provinces than Miss E. Cora Hind, the widely known commercial editor of the Winnipeg Free Press. She takes a hopeful view of the situation and in writing the publishers of the SHOE AND LEATHER JOURNAL gives a most interesting and intelligent resume of present conditions and immediate prospects.

"The consensus of opinion in the wholesale dry goods, clothing and shoe trade seems to be that business is decidedly more healthy and promising than it was three months ago," she adds. "During this period there have not been many actual failures in the retail trade, either in city or country. A considerable number of extensions have been necessary, but these are of a better class than is often the case in a good year. The man who needs an extension in a year when trade is good, nine times out of ten should not have had the credit in the first place, but extensions in a year like the present are generally to men who have plenty of assets which are not immediately available.

The Improvement in Collections

"Collections have, on the whole, been better than was anticipated. This is where the results of mixed farming and something to sell every month in the year are beginning to be realized. Formerly, if collections did not come in by the end of May there was small chance of receiving them

until after the new crop moved in the fall. This year the first two weeks of June have made a very good record, and during that period many thousand dollars' worth of both hogs and cattle have been marketed.

"The hogs marketed in the city of Winnipeg for the second week in June numbered over 18,000, or a value of something over \$250,000, to the farmers who sold, the average price for the week being 7 cents, less freight; and in addition, there were heavy marketings at Saskatoon, Regina, Calgary, Medicine Hat and Edmonton. This means that a large amount of cash moved, and a fair percentage of it went into the hands of local merchants and from them to the wholesale trade. Both country merchants and farmers have, in a great measure, cleaned up their indebtedness to the banks, the major portion of the money from the last crop went to the banks and the machine men, with the result that the wholesale trade stands to get a fair share of any monies moving during the summer and from the new crop when it moves next fall.

Money from Sale of Wool

"There will be quite a bunch of money in the West during the balance of June and July from the sale of wool. The range clip, with the exception of two or three ranges, was contracted for some months ago and is practically all going to Boston, but the sheep industry has developed tremendously in the past three years, and the clip of the small flocks on the farms is now a very important matter, both in Manitoba and Saskatchewan. The Dominion Government has given considerable assistance to the small flock masters in Manitoba in getting their wool in shape for the market, but the Government of Saskatchewan, through its co-operative commissioner, is actually marketing the wool for them. The most careful instructions have been sent out as to shearing and packing. Proper paper fleece twine was procured and sold to them at a fraction above cost by the government, and these small lots are being concentrated at central points, graded by experts and shipped in carlots, thereby insuring the small man an equal chance with the big range owner. The cash for this wool will be in circulation before the end of July. It is figured that by doing in this way and shipping south the farmers will get from 2 to 2½ cents per pound more than would be possible by selling in small lots to local dealers. Much of the wool is of fine quality.

"These are some of the things that are slowly but steadily improving business conditions in the West.

Crop Fully a Week Ahead

"The crop is in fine shape. It went in on a good seed bed, and though it was rather late, it has had no setbacks. Since the middle of May the weather has been warm; during June there have been fairly liberal and very general rains. The wheat has had a good start, has a strong root, is well stooled and from ten to twelve inches high, which is fully a week ahead of last year. More rain is beginning to be needed in a few districts, but taking the country from Winnipeg to the Rockies and from the boundary northward, conditions could hardly be better.

"To return to actual trade; business for fall has been good, better than was expected, and at the same time merchants are buying carefully and with more conservative judgment than has maintained for some years. To sum up, collections are fair, percentage of failures small, sorting trade is fair, fall trade is good, and with the crop once assured, business will be heavy."

Fighting Mail Order Houses With Their Own Weapons

How the Small Retailer Can Extend His Trade—Why Should Not the Local Dealer Cater to the Territory Surrounding—Printed Matter, Special Prices, Service, Leaders and Parcel Post Help Immensely.

A firm in a little western town of 1,000 population built up a very profitable mail order business inside of two years' time. What this firm has done thousands of other firms can do.

This little town is in the centre of a rich farming and stock raising section and only twenty miles from a city of 30,000. Yet the firm in the little town built up a mail order business far in excess of any of the regular businesses done in the city by the more favorably situated firms.

The rural delivery routes, of which there are eleven entering this little town, had a great deal to do with the possibilities of making a success of the mail order business. There were also 1,000 telephones in the district and these had their value.

The first catalog issued was one of thirty-six pages, six by eight inches in size. A large sheet can be used economically when a catalog is found to be too expensive. This small catalog contained a long list of items, each accurately described and priced. Some of the articles were illustrated with cuts furnished by manufacturers.

Twice a year these catalogs are published. They are plain, neatly printed and business from start to finish. Samples are used where possible. Circulars are a favorite means of communication between catalog issues.

For years the retailer who has followed along the more conservative and legitimate channels of trade, has viewed with considerable consternation the inroads made into his business by the great mail order houses and the lesser department stores. He has had many anxious moments as he has watched the business of these concerns grow until it has penetrated into every town, village and farming community in the country.

Many suggestions have been made with a view of combating the evil, but the most sensible seems to be that of adopting the same methods by which the mail order houses have gained success. Why should not the dealer in the smaller cities and towns do a mail order business in the territory immediately contributory to his store? No reason whatever but his own lack of enterprise and a vacillating fear that he cannot carry out his venture.

Anything and everything can be sold by mail, and it will cost no more to make many sales, if a little thought is given to the subject when the advertising is being planned. It will cost no more to say, "Mail Orders Filled," in the newspaper advertisements. It will cost but little more to handle a large number of mail orders after they have been secured.

Large Catalog Is Not Necessary

A big catalog is not a necessary adjunct to a mail order business, but it is a great factor in securing a big business. But the merchants in the smaller places cannot expect to put out anything in the shape of the great price lists that are used by the big mail order houses any more than they can expect to do the same amount of business on their smaller stocks. But this need not interfere with an increase in business through a well planned mail order campaign.

The smaller stores will find a good duplicator will pay for itself in a very short time. With the more modern of these price lists and announcements may be prepared in the store at a small cost and in a time saving manner. The best obtainable is none too good, but when a merchant finds that the best is too expensive he should not hesitate to take the best he can afford.

Circulars prepared on these duplicators could be used to show the advantages of buying from the local dealer. It can be explained that the shipments will cost less for transportation, that the time required to get them is less, that the facilities for exchanging the goods are better if

One of the Pacific Pioneers

Starting out for the wild and woolly West away back in the early eighties and at the age of fourteen years, W. A. Allan, a native of Perth, Ont., struck Winnipeg, when it was almost still on speaking terms with Fort Garry days. He remained there seven years and then hiked on to Emerson. Then he made his way to the Pacific Coast province, where he has ever since resided. He has been identified with the rubber footwear line for nearly twenty-five years,

first starting with the wholesale shoe house of J. Leckie & Co., in Vancouver, with whom he remained eleven years. Then he became associated with the jobbing house of G. L. Allen of Vancouver, and sold Berlin rubbers for four years. Mr. Allan joined the Canadian Rubber staff at Vancouver in 1905, under R. E. Jamieson, who was then district manager of the Vancouver division, but is now general sales manager of the Consolidated Company. Six years later, when Mr. Jamieson was transferred to the East, the worth and work of Mr. Allan was recognized by promotion to manager of the Vancouver division. Genial, sympathetic and straightforward, he is highly esteemed in business circles, and has so long resided in the province of British Columbia that he knows every section of it like a book. He is an enthusiastic Westerner and a gentleman who can count his friends by the score.

INTERIOR OF E. C. HENDERSON'S SHOE STORE, NEW GLASGOW, N.S.

they should not prove what is expected, that the local merchants are at hand to guarantee satisfaction if any article should not turn out as represented. These features should be emphasized and the promises made should be lived up to. All transactions should be made satisfactory to the customer and the merchant should be most liberal in every way. He should remember that it is nothing but good service that will hold a mail order customer, and that it is as easy to address the order to one firm as another. If he does not give satisfaction in his mail order business he cannot succeed, since his profits are in repeat orders. First orders very seldom pay a profit.

Parcel Post Affords a Great Opportunity

Since the Parcel Post has been inaugurated on the "Zone System," the merchants in the immediate vicinity of the customers have an immense advantage over the large mail order houses at a distance. Now is the time for the smaller merchants to open up mail order departments.

The local merchants have found it profitable to mail circulars listing special prices at clearing sale times, to all names on their lists. If an offer is added to deliver these specials by mail, either free, or at cost, doubtless many more sales could be made. It is not always convenient for the farmer to leave his work and go to town. In many cases those who receive these circulars are deprived from taking advantage of the offers for that reason. If the merchant will deliver he can do more business.

There is abundant opportunity for co-operation among merchants of the smaller places. A dozen merchants can issue a combination catalog. Merchants with non-competing lines will find this a splendid means of securing attention. Here the expense of issuing the catalog can be borne proportionately to the space used by each merchant. In this way a much more imposing catalog can be sent out at the same expense to each.

Co-operative Catalog Reduces Expense

Where there is a co-operative catalog issued, arrangements can also be made to ship all goods ordered from the catalog, at the one time, in the same shipment, saving a great deal on delivery expenses. This suggestion is worthy of consideration by the merchants of the smaller towns and cities.

Mail order advertising, outside of the catalogs and circulars sent out describing certain offerings, should be for the main purpose of securing names of persons interested in the articles offered. To get these names leaders are

most always advertised. The burden of the advertisement is very often, "Send for our large catalog." The local advertiser can use leaders but not in the same way. He having no great catalog to pull business must use his leaders for a different purpose. These leaders must be used to secure orders. As before stated, first orders cannot be expected to pay a profit. The leaders offered should be used as bait to secure first orders. The promptness with which the order is filled and the extra value offered in the leader should secure a satisfied customer who will re-order when in need of any other article the firm sells. Therefore, the list of names secured in this way are of great value and they should be carefully and persistently circularized for further business.

Choose a Few Leaders

Leaders should be chosen for their timeliness and when possible in such a way as not to make any difference to the future business in that particular class of goods.

The greatest care must be exercised in filling orders. The customer is likely to be suspicious of the value she is to receive and will scan it pretty closely. If it is not as represented the transaction has been conducted at a loss. If goods ordered are sold out and it seems advisable to substitute, better value should be given. Even then the customer should be notified that the goods may be returned if not satisfactory.

Opportunity For Competent Man

George A. Slater, president of the Montreal Boot and Shoe Section of the Canadian Manufacturers' Association, states that the movement toward forming a Dominion Association of all the shoe manufacturers in the country is progressing favorably. The idea has been received with much appreciation, and matters have reached such a shape that it is desirable to obtain a competent secretary. One with some knowledge of shoes is preferred. Applications may be addressed to Mr. Slater, or the secretary of the Montreal Branch of the Canadian Manufacturers' Association. The object of a Dominion Association of shoe manufacturers is one that should tend to add strength and influence to the trade. Such an organization would not in any sense attempt to regulate price, scale of wages, or anything of that character, but discuss the standardization of cartons, freight rates, measurement of leather, cancellation of orders, importation of shoes from other countries, under valuation and various other problems that crop up from time to time. It is felt that such a body, including all footwear manufacturers in Quebec, Montreal and Ontario, as well as the Lower Provinces, would prove of incalculable benefit to the trade in general. As soon as a secretary is selected it is believed that the work of organization will be rapidly completed.

Some Qualities Which Go to Make Up a Live Salesman

Varied Definitions on What a Salesman Really Is—He Requires Initiative and Originality, a Pleasing Dependable Disposition, Courage, Optimism, and Enthusiasm—The Most Active Being in the Universe.

What is a salesman anyway? How would you answer this question in fifty words if a big silver loving cup were offered as a prize for the best definition?

The real answer to this question has been discovered in California as an outgrowth of the "Greater Los Angeles 1914 Business Show" which was held in Los Angeles. At least the cup has been awarded to Wm. G. Yeo, a dealer in bonds whose definition of a salesman was considered best of all those received. Every visitor to the business show was invited to register and to enter the competition for the cup of honor, offered as the prize for the best description of a salesman.

The Sales Managers' Association, composed of the managers of sales of the leading business houses considered all the definitions received and decided that Mr. Yeo's idea of a salesman was best, although there were many others that indicated a keen knowledge of the art of selling goods. From the standpoint of terseness some would take first place, and if judged by their wit or humor others seem best.

Mr. Yeo, however, went at the matter like a dictionary compiler and evolved this definition:

"One who sells—satisfies both employer and customer. Serving justly the interests of both, using initiative and originality to constantly increase sales without misrepresentation or losing customers by selling something not wanted. A good salesman will study to acquire knowledge concerning the goods and their merits. Also to cultivate pleasing, dependable personality that will inspire and hold confidence."

Judged from every standpoint considered and as the unanimous opinion of the Sales Managers' Association as an organization, this definition of a salesman wins the prize, and it has indeed many marks of merit.

One Who Can Create a Demand

Mr. Yeo's idea that a real salesman should not sell something not wanted for fear of losing a customer is not shared by one of the other contestants, who boldly states that a salesman is "One that sells a man a safe when he comes in to buy a waste basket." Another definition, not quite so radical, says, "A salesman is one who can create a demand, not only fill one," and, briefly put, most business men will agree that this is a good one.

Another excellent short definition offered is "The man who gets the volume of business and can go back and get more 'without strings'." Along this same line is the definition that a salesman is "One who, without cutting prices, sells an article of not more than equal merit in such a manner as to cause his customer to send for him when again ready to order."

The importance of salesmanship was featured in a number of the best definitions. One said: "A salesman is the mainspring of the concern he represents." Another goes further, as follows: "A salesman, as generally known, is one who sells goods, but he is far more than this; he is the giant of commercial activity. It is he that keeps your factories belching forth great clouds of smoke. He is the most active being in the universe."

Another excellent tribute to salesmanship is contained in this brief definition: "Salesmanship is the art and genius

of business, coupled with enthusiasm and driven by the dynamic forces of courage, honesty and good cheer."

Makes a Satisfied Patron

"A salesman is one who anticipates your desires, supplies your wants and makes a satisfied patron for the business he represents," is also good and proves that even fifty words are not required to give a fairly adequate idea of what a salesman is.

Of the longer definitions here are two that are worthy of consideration:

"A salesman is one who, by argument, demonstration, or suggestion, either spoken, acted or written, causes another, called the prospect, to desire the commodity offered by the salesman to the extent of acting upon such desire and purchasing."

"A salesman is a man who can stand in the front line of battle and fight. Whether his ammunition is dynamite or "syrup," it is essential that he should have such qualities as courage, enthusiasm and optimism. One whose capital is "time" and does not contract the habit of 'killing' it. A successful salesman does not have his 'wishbone' where his 'backbone' should be."

This contestant considered "mutual advantage" the keynote of salesmanship, as indicated by his definition. "A salesman is a man who can sell goods to a mutual advantage to the firm and the customer." Another emphasizes the creation of the desire, as follows: "A salesman is one who can demonstrate in a conclusive manner that the prospective customer needs his wares, regardless of their merits."

Some of the definitions were humorous. For instance, "A salesman is a good fellow with a good disposition."

The contest was used to advertise the business show and proved interesting to many people. It was one of several novel methods of attracting attention to the exhibit, and the results to exhibitors were satisfactory.

A Wrong Kind of Selling

In view of the fact that Los Angeles heard so much on the subject of selling and salesmanship, there appears, according to a recent despatch to have been another kind of "salesman" operating in that city. It is not likely, however, that he will get any "repeat orders." This representative collected about \$2,000 selling four-leaf clover seed. He showed some specimens grown from the seed, which had four leaves. The people thought the lucky emblems would be good to sell to tourists when the world's fair began next year. After the swindler had gone, the buyers of seed found that the fourth leaf in the plants shown had been gummed on with green court plaster.

GETS LOTS FROM IT

Kindly find cheque enclosed for one year's subscription to the Shoe and Leather Journal. Business is very good at present. I always look forward to reading your Journal as I get a good lot of information from it.

Wishing you success in your good work.

Yours very respectfully,

J. Hockin.

Woodstock, Ont.

How Shoe Manufacturer is Often "The Victim"

The Producing End of the Footwear Business Has Its Besetments—False Claims Presented, Arbitrary Cancellations and Securing Goods Under Deceptive Colors Are Some Real Grievances—A Few Glaring Instances.

"Yes, we have many grievances, I would like to see you tell your readers of some of them," remarked a leading shoe manufacturer of Montreal. "I see that you devote considerable space in each number of your paper to the ills and trials of the retail branch of the business, but what about the wholesaler or manufacturing line?"

"Why, I believe I could talk all day in this vein, and yet I am no pessimist. We have no western branch, and although we cover this territory by means of travellers, it is surprising the number of complaints we get from retailers, saying that our goods are not up to sample. They, of course, take advantage of the fact that we are located thousands of miles from the destination of the goods and I presume they think if they put up a good bluff, that sooner than have the footwear returned, we will prove easy victims and make a considerable concession.

Trying to Work Bluff Game

"This has been worked by unscrupulous parties in the past, on eastern manufacturers, and I may say right here that those who have tried it, are not generally Canadians, but are of other nationalities which I will not name. They are shrewd enough to have been successful in certain cases, and encouraged by past results, are still trying the game on some eastern houses. There is an idea that we will fall for it all rather than take back the shoes. We soon grow wise to these fellows and naturally watch them closely.

"When we receive a complaint of this character, we have adopted the principle of writing to the complainant, telling him to hold the goods, that our traveler will call on him during the next season and will adjust the complaint. Now, we know that our goods are up to sample, and very few fellows who resort to a grievance have the patience to wait until the traveler's visit, which is generally some months off. They get tired of looking for a rebate or credit note and generally have disposed of the goods.

"In other cases we often write these parties, telling them to point out explicitly wherein the pairs fail in coming up to sample, and to send us back three or four shoes by mail, so that we may judge of the shortcomings. We find that when we do not yield easily, it is better for ourselves and stops the practice of merchants having imaginary troubles. Of course, now and then, there are some real grievances, as there must necessarily be, when thousands of pairs are going through the factory weekly. Perhaps a seam rips, a heel comes off, the finish is bad, the edge setting imperfect, box toe gives way or there has not been sufficient reinforcement at certain vital parts, but on the whole, we imagine that very few defective shoes get by us.

There Are Faults on Both Sides

"Talk about the manufacturer not making goods up to sample—I think he is just as efficient in this respect as is the dealer in his relations with the manufacturer. A number of the latter class, particularly in the west, seem to take delight in seeking to get refunds or sending in cancellations after the order has reached the factory; the leather cut, and the ticket made out; the shoes perhaps are on their way to completion. This means that we either have to lose the stock that has been cut, or finish the goods and dispose of them in the best way we can.

"There are two classes of people we do not like to deal with. One is the man who does not know his own mind, and immediately on giving an order, gets cold feet and cancels. He is on a par with the fellow who overstocks his store and then blames the manufacturer. The other is the chap who is so pernickety that nothing suits him. The goods, according to his warped judgment, are never up to sample, never just as he ordered. The sizes are wrong, the heel too high, the insoles too cheap, the upper stock faulty, or the box toes and counters of materials that will not stand up.

"Another thing—there is a certain class of people who would do us up every day if they could. I am not going to mention what this class is, but they come in and place a very satisfactory order, paying the cash and maybe, start in business. Thus they establish a basis of credit. In a little while they come in for two or three more cases of goods, and perhaps get them, paying cash again. Then they order a few more and promise to settle within thirty days. They may have gone to two or three factories or wholesalers and have done the same thing. If you hesitate about giving them the concession asked, you are requested to 'phone a competitor. Of course, the answer will be:—'Well, that man has done considerable business with us here and has always paid cash, and we think he is good for the amount asked.'"

Peddling the Shoes Out

"Now some of these men take and sell the goods, which they buy from us at wholesale rates, to other merchants in outlying districts, getting from 50 to 75% of the wholesale cost and at the same time pretend to be running a shoe store in a certain centre. They have their shelves filled with cartons, and to all appearance, are carrying a heavy stock. An examination of the boxes, however, will reveal the fact that the stock which is supposed to be handled by them, has been sent out to others and the goods, that have latterly been obtained on thirty or sixty credit, have brought the 'amateur jobber' from 50 to 75%.

"Perhaps I do not make my meaning clear, but what I desire to emphasize is. These tricksters, after paying cash a few times, will often secure scores of pairs on credit and then send them broadcast throughout the country before the manufacturer 'gets wise.' He thus stands to lose hundreds of dollars.

The Cartons Were All Empty

"We had a firm in an adjoining city do us up for \$600 by this method not long ago, and it was only owing to the accidental visit of our traveler, who happened to pop in when the boss was out, that the true state of affairs was disclosed. The clerk was waiting upon a customer and the traveler started to pull out a few of the cartons here and there, only to discover that they were empty. He reported his suspicions to our firm, and next morning we got a telephone message from Mr. J., wanting to know why our Mr. B. had been rooting around his place doing the eavesdropping act and engaging in the duties of a sleuth. We told him that our traveler had simply gone down to find out how conditions existed and naturally was not going to shut

(Continued on page 36)

The Different Types of Shoe Construction Explained

The Turn and the Standard Screw—A Full Explanation Regarding the Construction of Each—A General Summary of the General Uses of the Different Types.

Written Specially for the "Shoe and Leather Journal" by E. F. LEONARD.

The turn shoe, while used many years extensively for house slippers, dancing slippers and theatre or evening wear has lately come into a greater popularity than it ever enjoyed, and is now being used extensively for pumps, slippers and shoes for street wear.

The process of manufacturing this shoe is different from any of the other methods. The patterns used in cutting them are much the same as used in a Goodyear welt for the outside of the shoe, but the lining is made larger in the heel and vamp portion, as this shoe is lasted and sewed inside out. There is no insole used in a turn shoe.

The outer sole must be of good quality and weight, as it is all that comes between the foot of the wearer and the ground, and must be very flexible, as it has to be turned inside out after the shoe is lasted and sewed. The outersole is cut by a pattern, slightly larger than the bottom of the last in the forepart and heel, while in the shank it is about the same width as an insole pattern of a welt shoe. It is made this way so as to have a little surplus leather around the forepart for an edge, and around the heel so as to make a good heel seat; the shank is narrow so as to make a nice close narrow shank as such a one is considered best and neatest on a turn shoe.

Construction of the Turn

The outersole is channelled on the flesh side. After all superfluous flesh or dirt has been removed, it is then run through a moulding machine which turns or moulds the edge of the outersole upward in such a way that the edge of the outer sole will come up around the edge of the last when the sole is laid on the last. After being thoroughly wet and tempered the outer sole is tacked temporarily on the last with the grain side next to the last. The upper is turned lining side out, the counter is thoroughly wet and put in place and the shoe is placed on the last and lasted with temporary tacks which are pulled out after the shoe is sewed. The box toe, which is generally of canvas, as a leather box is quite hard to turn, is put in and covered with box toe gum. Shellac is seldom used on boxes on turn shoes.

Skilled Workmen Necessary

The laster on this kind of a shoe must be a good workman, as he is making a shoe, one might say, blindly. The outside being next to the last, he can see nothing but the lining and he must last his shoes so that when they are turned, the tips will be straight, and the vamp lines, buttons, seams, and back seams must be straight or he will hear about it from his foreman.

After the shoe is lasted they must be taken and sewn immediately, so that they will not have time to dry before being turned. The shoes are sewed either by hand or machine, but generally by machines nowadays. The machine used is a Goodyear turn sewer or welting machine, the same as is used in sewing Goodyear welt shoes only. There being no welt on a turn shoe, no welt guide is used and the machine is adjusted slightly different than if used for sewing welt shoes.

The turn shoe is sewed about three and a half or four stitches to the inch all around the shoe, through the lining and upper, and the channel on the bottom of the outer sole. In some factories the shoe is not sewed around the heel seat, but the latest practice is to sew around heel seat and all.

The laster or second laster now takes the shoe, trims off any extra surplus of lining or upper that remains above the seam, now pulls the last out of the shoe, and turns the whole of it right side out on a sort of dull steel blade set upright on the bench. The shoe is turned by force and strength, and the sole, counter and box toe must be wet and soft or the force required to turn the shoe will strain the seam or crack the grain on the outer sole and spoil everything.

The Finishing Process

The shank piece is laid on the bottom of the last and the last forced into the shoe again, large quantities of French chalk being used to help in the process. The linings are smoothed out by a long, narrow steel blade being forced in, spreading the wrinkles or smoothing the linings. The toes and heel seat are pounded up to the shape of the last with a flat faced hammer and all wrinkles are smoothed out with a hot iron.

The outer sole is now levelled with a small wooden maul or large flat faced hammer and the shoes are ready for heeling.

Heeling the Shoe

Great varieties and shapes of heels are now used; many wooden, leather Louis, kidney and Cuban heels of combination and solid leather are put on. If a leather heel is used the shoes are heeled on the machine and finished up much the same as a welt shoe, the edge being lighter and no welt being used. This shoe can be trimmed very close to the upper and makes a very light and neat appearance. After the lasts are pulled, when the shoes have been through the finishing room, a sock lining covering the whole inside surface of the sole is put in. Underneath the sock lining on a first-class shoe is placed a filling or pad of light cushion felt, and in a cheap shoe a piece of cardboard is used for filling. When the sock lining has been put in this shoe is perfectly smooth inside and very comfortable.

For light, fine wear, where dress style, comfort and class are great considerations, the turn shoe is the best of all footwear, but where any kind of hard, rough wear is necessary the turn shoe has no place.

The Standard Screw Shoe

The uppers of the Standard screw shoe are made with the same lasting allowance as on a McKay and are lasted in the same manner, the lasting tacks used remaining permanently in the shoe.

The insole in this shoe must be of good weight, and should be composed of solid leather to be any good. A cheap combination canvas or leather board is absolutely useless in a Standard screw.

As this shoe is generally made into a strong working boot where heavy rough labor, combined with hard wear is required, the uppers and soles on the Standard screw shoes are generally of heavier, coarser material than used in the welt, Goodyear or McKay, and are made especially for service.

After the shoe is lasted the sole is attached temporarily with a few nails, then the lasts are pulled and the shoes are allowed to dry a short while. When dried sufficiently to hold their shape they are taken to the Standard screw oper-

The Charm of Variety in Making Window Displays

Some Pointers on Which Trimmers Can Never Seem to Agree—Diversity of Showings as Contrasted with Repetition—The Peculiar Advantages which each Possesses in Presenting Different Lines.

To enable those who may be in doubt as to the exact meaning of the terms, as they were used by these gentlemen, I will give a brief description of the two methods which they were discussing. In the former style of trim many different lines of merchandise are displayed;

for example, a store with five or six windows will display neckwear in one window, in another shirts will be shown, in a third hosiery and underwear will be arranged, and so on until all the windows are trimmed with entirely different articles of apparel. On the other hand, repetition in window displays is the trimming of a number of windows with exactly the same articles; as an illustration of the latter method we find a shop with a number of windows displaying neckwear, shirts or sweaters in all of them at the same time; colors or patterns may differ, but the articles shown and the method of displaying them is identical in every trim.

The Charm of Variety

Both of the above methods of trimming are valuable under certain conditions, but for all round work the odds are slightly in favor of the former style of trim, and, for the sake of making a beginning, we will discuss variety in window displays.

Thomas Moore once wrote a few lines which, I think, tells in a few words the true value of variety. He selected Nature around which to weave his poem.

"Ask what prevailing, pleasing power
Allures the sportive, wandering bee
To roam, untried, from flower to flower;
He'll tell you, 'tis variety.
Look Nature round, her features trace,
Her seasons, all her changes see;
And own, upon Creation's face,
The greatest charm's variety."

Nearly everyone will agree that there is a great deal of truth in these lines, and, like the wandering bee, we often find men being attracted to a store front, and, as if possessed by an uncontrollable desire to see what each window contains, he wanders from one to another until all have been carefully examined by him. The chances are that if we should ask one of these men why they do these things they would be unable to explain; it seems to be thought beyond speech; but we have every reason to believe that it is the same power which starts the bee on its seemingly endless journey from flower to flower.

The Passerby Sees What He Needs

The advocates of this particular style of display can lay before you such a dazzling array of facts, which describe the many advantages of this method, that at first glance one would think that this was the only way a window can be trimmed. First, they will tell of the advantages of exhibiting to the public the many different articles which a store carries, and to substantiate this statement, they will cite many instances where sales have been made simply because a passerby saw some article he was in need of displayed in a window. Next, they will point out that where this method is employed a much smaller stock can be carried than in a shop that depends upon the other style of trimming

I happened to walk into the office of a widely known fixture concern a few days ago, and there, in the midst of a heated argument, were two window trimmers with whom I am acquainted, discussing the respective merits of two distinctly different kinds of window trims. One was advocating the use of variety in trims, the other was firm in his belief that a repetition of display was the more effective.

which we are discussing. This is due to the fact that where there is a repetition of displays a larger stock must be carried in order to make all the trims of the one article. Still another reason for adopting variety in window displays is that the trim may remain in for a longer

period than if the other method was used.

A trimmer is sometimes forced against his better judgment to display a variety of articles in his trim owing to the scarcity of display space. While he may feel that a solid window of any one article might greatly increase its sales, still he generally figures that the gain does not sufficiently compensate for the loss of sales on other lines, and consequently this is one of the principal reasons why we find so many show windows being crowded with a large variety of merchandise. And yet it has been said that there is grace in wild variety surpassing rule and order.

It would not be giving the supporters of repetition in window displays a fair deal if we did not carefully consider everything which might be said in their favor, and I must say that the advantages of this way of trimming are quite numerous.

While listening to the argument, I was reminded of a short article that I once read, and which was written by O. W. Holmes. "Use of Repetition," was the title, and among other things he said that a man must be a poor creature that does not often repeat himself. He goes on to say, "Can anyone imagine the author of that excellent piece of advice, 'know thyself,' never alluding to that sentiment again during the course of a protracted existence? Why, the truths a man carries about with him are his tools, and do you think a carpenter is bound to use the same plane but once to smooth a knotty board, or to hang up his hammer after it had driven its first nail? I shall never repeat a conversation, but an idea often. I shall use the same types when I like, but not commonly the same stereotypes."

Hammers Driving the Truth Home

What a startling resemblance there is in the conditions under which writers and window trimmers labor. Here we have a genius advising the use of repetition or I might more correctly say, defending those who use it. He explains that a writer's ideas are like a carpenter's tools, and so it can be said of window trimmers. The ideas employed in his displays are the hammers by which he drives into those who view them the story of the merchandise shown, and if an impression is made by one blow of his hammer, or, in other words, if a man is impressed by seeing one window, how much more deeply will he be impressed by seeing three or four windows identically the same.

Of course, those who are opposed to this method will say that repetitions become monotonous, but in answer to this we might say that every feeling tends to a certain extent to become deeper by repetition.

Window trimmers, for some unknown reason, seem to pass up this style of trimming; this may be due to fear of being accused of lacking ideas. Holmes is credited with having said that he would use the same types when he liked, but not commonly the same stereotypes. Here again we are reminded of window trimming; a trimmer may use the same units in his trims and yet he does not necessarily have to place them in the same position in all of his displays.

Do Not Expect Too Much of Patent Leather Shoes

The Difficulties of Production Are Many and Exacting and No Manufacturer Can Guarantee Results—Physical Fundamental Laws Make Insurance Against Cracks or Breaks Practically an Impossibility—Skins and Their Treatment.

Owing to the widespread popularity of patent leather in all kinds of footwear, and particularly in women's lines, coupled with the fact that the majority of samples for spring will, in all likelihood, reveal a more generous display than ever of shiny leathers, some information on how patent is produced should prove of much timely interest.

"You cannot make a surface giving varnish or from it get a finish that will not check or crack or break under any and all circumstances. The factors influencing patent leather results are in the thousands, and there has never been the mind or the hand that could handle them all so as to assure absolute certainty of perfection in the product," says W. L. Ratcliffe in "The Story of Patent Leather."

"First of all, what is patent leather? It is the skin of an animal varnished. The skin is first tanned into leather, and this leather is coated with a 'daub' to give it an even surface, over which a special varnish is painted.

"Easy to say, but most difficult to do. Did you ever stop to think what is included in the words, 'skin of an animal?' You have no doubt handled the skin of a rabbit—you know how unsuited it is for shoe leather. Keep on eliminating the many other skins of animals equally unsuited.

"Then consider the animals themselves. Some are fat, some lean and some diseased. All of this affects the desirability of the skins for shoe leather and may remain undisclosed in the skin until it is tanned into leather.

Patent Colt Is the Best

"The skins used in the manufacture of patent leather are those of the colt or pony, Kid, Calf, cow. For the best and finest patent leather a thin, firm, smooth skin with a fine grain is needed. In quality, texture, appearance and wearing qualities the colt or pony skin heads the list. Next come kid and calf which are equally beautiful in appearance. For heavier shoes the hide of the horse is used. The grain is coarser, but otherwise a fine horse hide makes as serviceable a shoe as a colt skin.

"'Patent Side Leather' is produced from cow hides and is used in good medium priced patent leather shoes. In nearly all makes of patent leather varnish is put on the hair or 'grain' side of the skins.

"The cheapest patent leather is made of 'side leather' varnished on the inner or flesh side of the hide or skin. When the hide is too thick it is 'split' to the required thickness, and the varnish is put on the split surface. As there is no grain, a heavy 'dope' coat is first applied to produce an even surface; on top of this is varnish.

It is only possible to get so much of anything for ten cents. If you desire genuine colt or kid, good makes, you must pay a price for your shoes to enable the manufacturer to put it on.

"That word 'daub'—so easy to say and so hard to do—don't let it deceive you. 'Daub' holds such problems of formula and handling as to puzzle and baffle the most experienced and expert.

Desirable Qualities in the Leather

"These problems include the treatment of the fibres of the hide in such a way as to produce leather with various contradictory qualities. It must hold together and be strong, not tender, stiff or brittle; it must have elasticity and life without opening up coarse or grainy—and yet it must feel soft and mellow to the touch and be "workable" in the many processes of shoe-making.

"You have seen a painter prepare a coach body for varnish. He fills and rubs to get his surface; he exercises

care in selecting and applying his materials, that its adhesion and "life" may be assured. You have seen, after all His efforts how a few days' exposure to heat or cold brings 'checks' and fine lines in the 'finish,' which a sharp knock makes more pronounced until they become large cracks. The painter has a practically rigid, clean and dry surface and body to work on. The wood does not stretch—and leather does, because it is impossible to take all the stretch out! When it stretches, it may break the grain of the varnish. Wood is not soft, consequently does not wrinkle. Leather is soft and pliable, hence apt to wrinkle or 'pipe' as they term it. Patent leather, the same as painted wood, will peel under certain conditions.

"You know that oilcloth, which has practically no stretch to it, will crack and break when bent.

"Patent leather for shoes is no exception to any other

An Honored Record Closed

Many friends in the shoe trade will regret to learn of the death of Joseph McCully, of Elora, Ont., who passed away recently in the hospital at Fergus, where he had gone for special treatment. Mr. McCully had suffered for the past year from pernicious anaemia. He was forty-two years of age and a native of Paisley, Ont. As a young man he learned the trade of shoemaking in his native place with Jos. Sergison. Later he took a position in a shoe factory in Walkerton and then went to Palmerston, where he was employed for some time with W. A. McKay. Sixteen years ago he bought out the shoe business of John Godfrey & Son in Elora, which he conducted up to the time of his death

Mr. McCully leaves a widow and two children. He was a kind and affectionate husband and father, an honorable and energetic business man and had one of the neatest shoe stores in Western Ontario. He was a useful member of St. John's Anglican Church and served on the Library Board and Town Council and as president and secretary of the Board of Trade. He was a leading member of the Odd Fellows and also of the A. F. & A. M., taking a great interest in both orders. His funeral was largely attended and the tributes of respect were numerous and marked. Mr. McCully's shoe business is now being offered for sale by the estate. The stock consists of about five thousand dollars, and there is an excellent repair department in connection.

substance on which a shiny or varnished surface is put.

The patent leather maker has to apply his 'daub' to a stretchy, grease-coated skin.

"If you would test this problem, paste two fabrics together—two pieces of paper or a piece of paper and a piece of fabric; then pull and bend these products of your handiwork.

"Perhaps you have succeeded in varnishing on a solid, rigid surface, but I am sure you would never attempt it on a limber, pliant fabric, because you would know beforehand the result. The patent leather maker has to do just this thing—and still is expected to produce a smooth, unchecked and elastic product.

He must go farther! After he has done these things he has to 'bake' his leather in ovens three times, and then sun-dry it. If the skin is not selected right, the tanning done exactly right, the 'daub' right and applied right, and the product baked and sun-dried right (and all these processes require a high degree of expertness and long practice), the product promises very uncertain results. But even when these things are done, the fundamental law steps in and says that you cannot combine all the factors of the problem and get perfection and certainty of result from patent leather.

"Diverge from the path marked out by fundamental laws, as you have to do in making patent leather, and you walk toward a certain fall and disappointment in some particular.

"These laws say that you cannot stick two or more layers together and have them hold under any and all circumstances. You cannot make a service-giving varnish and from it get a finish that will not check or crack or break under any and all circumstances. The factors influencing patent leather results are in the thousands, and there never has been the mind or the hand that could handle them all so as to assure absolute certainty of perfection in the product.

All producers know the risk and uncertainties involved in the production of patent leather, and these producers safeguard themselves and their product to the fullness of their power.

"From the best of these producers good shoe manufacturers buy, but not one of them can or will guarantee a result from patent leathers—leathers which every honest man knows to be most uncertain.

"To avoid disappointment from the use of patent leathers, users of them must have in their expectations the element of doubt.

"They must qualify their natural desire for perfection with the knowledge that physical, fundamental laws, which no one can alter, make the producing of a surely serviceable patent leather practically an impossibility. And when results prove the law, they should never blame the producer of the leather or the maker of the shoe. Probably both have done their very best to get the best of its kind for you.

"Men and women these days are mostly honest and fairly reasonable. This article has been prepared in the belief that once these men and women of to-day know the facts as to patent leather, they will cease to expect too much from shoes made from that material, as they have in the past."

Says the Tide Has Turned

A recent despatch from Montreal says Mr. D. Lorne McGibbon took a conservative, but on the whole, a most optimistic view of the industrial position of Canada in an interview here.

"What is your opinion of the conditions obtaining at present and likely in the immediate future in shoe industry of this country?" he was asked.

"I am very glad to say that in my judgment the turn of the tide of depression which surged over this country for

the past six months and more has come. I cannot help but speak optimistically of the whole of Canada in general."

"What about rubber conditions?"

"The business this year, up to the present time, is somewhat ahead of that done up to the corresponding period last year."

How Manufacturer is Often "The Victim"

(Continued from page 32)

his eyes to the facts that we had for some time been suspecting. Then Mr. J. flew off the handle, said he would send us a cheque for \$963.⁷⁵ for what he bought, and that he was not going to get another dollar's worth from our house. We said that we were very sorry that he had taken offence. The cheque was dated two days ahead of time, and when we presented it at the bank, it was returned, 'N.S.F.' I then went down myself to where J.—had been doing business, but found his place closed up. The owner had departed for fresh pastures.

Have Been Caught Often

"This is not the first time that we have been caught in this manner, and I would like to see the Bulk Sales Act or some other equally good measure passed in order to prevent the deception practiced on us. We afterwards learned that J. had been selling the wares he got from us at about 70%, and as he had not paid us for some time, he was really clearing up a nice thing. It seems awfully hard for some men to be honest. Manufacturers are as often victims of a wily dealer, as are retailers of customers who seek to obtain credit on various specious pleas or plausible pretexts and get both the footwear and the credit."

The Different Types of Shoe Construction

(Continued from page 33)

ator who puts them on a horn attached to the machine. This horn goes inside the shoe and at the end has a slight disk wheel or tip, which clinches the screw wire as it is driven through the outer sole, the portion of the upper which has been lasted in, and the inner sole of the shoe.

The wire used on the machine is threaded spirally like a screw, and a mechanism on the machine turns the wire or screw around so that it is driven by the machine much the same as a screw would be put in with a screw driver by hand. These screws are driven around the shoe about three or four to the inch, including the heel seat as well as the forepart.

The shoes are now levelled and heeled the same as the McKay and finished up in the same way.

If the Standard screw shoe is made right and lasting tacks not too long have been used, the insole will be comparatively smooth and comfortable, although much different than a Goodyear welt.

The screws will not work up into the foot in the wear, as a shoe fastened with nails would.

For good hard service and rough wear in wet weather or dry, hard ground, the Standard screw shoe cannot be beaten.

Summary of Shoe Construction

The Goodyear welt for first-class everyday wear is the best shoe made, for comfort and flexibility.

The McKay for cheapness and for serviceable wear is a good shoe.

The Standard screw for hard, rough wear is the best article.

The turn for men's light house and dance slippers and for women's pumps and dress slippers is a very comfortable, light and serviceable piece of footwear.

Several New Directors Elected at Annual Meeting

Clarence F. Smith Retires from General Management of Ames-Holden-McCready Ltd.—Position Abolished and Duties of Office Assumed by D. Lorne McGibbon, Who Predicts Certain Changes

The annual meeting of Ames-Holden-McCready Ltd., held in Montreal Thursday, June 25th, resulted in a number of important changes in the board of directors, chief of which was the retirement of Mr. Clarence F. Smith as the vice-president, a director and the general manager of the company.

Mr. D. Lorne McGibbon was re-elected president, and also assumed a new office as managing director. Mr. Fleetwood H. Ward, well known in Montreal shoe circles, was elected vice-president to succeed Mr. Smith, and he will devote his entire time to the service of the company.

Other changes on the board of directors were the election of Sir Thomas Tait, W. A. Matley, secretary-treasurer of the company, and S. J. Le Hueray, to take the places of Clarence F. Smith, W. R. Allen and Arthur Congdon respectively.

The post of general manager has been abolished, the duties of this office being assumed by Mr. McGibbon, who after the meeting, stated that he would hereafter devote the best portion of his time to the management of the company, and make his headquarters here.

Looks to Prosperous Year

Mr. McGibbon went on to say that some radical changes would be made, which he thought would do much toward the future prosperity of the business. He stated that all the directors were optimistic as to the outlook for the company, and that he believed, with an improvement in the industrial situation, the Ames-Holden-McCready Co. would have a prosperous year.

W. S. Louson will continue in his capacity as sales manager, and W. V. Mathews will also continue to act as general superintendent of the company.

The board of directors for the coming year is now composed as follows:—D. Lorne McGibbon, president and managing director; Messrs. Rufus C. Holden, A. L. Johnson, Herbert B. Ames, M.P., and Fleetwood H. Ward, vice-presidents; J. C. Holden, Hon. Nathaniel Curry, J. H. McKechnie, Victor E. Mitchell, K. C. Fayette Brown, Shirley Ogilvie, W. S. Louson, Sir Thos. Tait, W. A. Matley and S. J. Le Hueray, directors.

Report of the Directors

President D. Lorne McGibbon presented the directors' report as follows:

In submitting the third annual report, your directors desire to congratulate the shareholders upon the fact that, notwithstanding the world wide depression which has existed for more than a year, and which has affected all branches of industry, the company's net earnings for the fiscal year ending April 30th, last, after payment of bank interest, administration and other charges, amounted to the sum of \$307,598.57, which was more than sufficient to meet the payment of bond interest, preferred dividends, and to provide for bad debts. On first of April we paid the second instalment of \$20,000.00 on account of sinking fund.

Your directors have further written off for depreciation on machinery and plant account, organization expenses, etc., the sum of \$106,769.44, of which \$20,000.00 was taken out of profits for the past year and the balance from the amount standing to the credit of profit and loss account at the beginning of the year.

Net sales for the year amounted to \$4,702,976.75 as against \$5,243,887.39 the previous year, a shrinkage approximately of 10% in volume. This reduction in sales was

largely caused by the unseasonable weather last fall, orders for heavy winter goods and rubbers being greatly curtailed. In addition to this fact, credits have been scrutinized with more than usual care, resulting in many orders being cancelled by your company.

At the beginning of last year our stocks of merchandise, both in manufactured goods and raw material, were very heavy, and in order to reduce these to their present amounts, it was necessary during the year to limit manufacturing operations, thus accounting to a considerable extent for the smaller profits.

Expenses during the year have been reduced, and economies put into operation during the last two or three months, will only show results in the coming year. A further

D. LORNE MCGIBBON, PRESIDENT OF THE COMPANY

reduction of expenses will be immediately taken up by your board.

The equipment and general appointments of all your factories and warehouses are in excellent condition.

A convention of all managers and travelers of head office and branches was held last July with most satisfactory results.

You will note by referring to the balance sheet submitted herewith, that the liabilities of the company have been greatly reduced:

Bills payable to the bank from \$1,629,000.00 to \$1,056,000.00, accounts payable from \$149,992.39 to \$93,019.05, bills payable from \$404,496.74 to \$222,961.03, a total reduction of these three items of \$811,509.05.

The greater proportion of the company's sales are usually in spring goods, orders for which have been taken during the previous fall months, but, in the opinion of the board, should we this year have a favorable crop, orders

should be as good, if not better than last year. From the most reliable information we can obtain, it is apparent that stocks of merchandise in the retailers' hands are very low,

FLEETWOOD H. WARD, VICE-PRESIDENT
OF THE COMPANY

showing that liquidation in this respect has already taken place and re-stocking must soon follow.

The financial statement for the fiscal year ended April 30th, 1914, was presented to the stockholders and adopted. It reads as follows:

Statement of Assets and Liabilities as at 30th April, 1914

Assets—

| | |
|--|----------------|
| Real estate, buildings, machinery, goodwill, organization expenses, patent rights and investments..... | \$6,078,938.85 |

Veteran Shoe Dealer Passes

Many friends in the trade will learn with regret of the death of John Hellyar, the veteran shoe retailer of Bowmanville, Ont., at the advanced age of 84 years. He passed away after only a brief illness. Mr. and Mrs. Hellyar celebrated the sixty-second anniversary of their wedding a few weeks ago. The late Mr. Hellyar, who disposed of his business last month to Mr. Fred. Knox, leaves a wife, two sons and two daughters. He was born in England and was married at the Bible Christian Parsonage in Cobourg, Ont., on April 22nd, 1852. The young couple made their first home in that town for two years and afterwards removed to Tyrone, where they lived for twenty-nine years. In 1883 they took up their abode in Bowmanville. Mr. Hellyar learned the shoemaking trade at an early age. Of late years he had not taken a very active part in business, although he went down to the store regularly twice a day.

New Waterproof Felt Sole

A new product, which, it is claimed, has been given practical demonstration, and is shown in some samples by shoe manufacturers, is a waterproof felt sole which possesses qualities of durability and, in tests which have been made, has proved to wear two or three times as long as a sole leather sole, while costing from 25 to 40 per cent. less than good quality oak or union leather.

The material is manufactured in any shade of color desired, thus eliminating the necessity of finishing the bottoms. It can be put through the factory with the same machinery and using the same operations as on a leather sole. It can be channeled, edges and heels trimmed and set, and the same adhesiveness used in laying channels as are now employed.

It is adapted not only for soles, but for heels. One of the chief advantages of its use is found in its light weight, making shoes much lighter than with leather soles. This quality makes it especially desirable for sporting shoes. It is made in any degree of flexibility desired, will not slip on wet or polished surfaces and, in fact, seems to make an ideal substitute for a leather sole with many added advantages over soles cut from leather.

The use of this sole, it is claimed, will reduce the cost of making shoes, as well as increase the wear. It is expected from demonstrations made that it will outwear the ordinary shoe upper.

As it is made in all weights and colors and all degrees of flexibility, many operations now employed in handling sole leather will be eliminated, such, for instance, as skiving and buffing the soles and heels and many of the finishing processes. The fact that it is made in a variety of colors will make it possible to exactly match any shade of upper stock. As felt is a non-conductor of heat and cold, it is claimed that shoes made with these soles will be cool for

summer wear, and dry and warm in winter. Owing to its uniform quality, it is claimed that in the stitching operation the thread will set into the material more uniformly than either leather or rubber. Further particulars regarding this product and where it may be obtained can be secured through the SHOE AND LEATHER JOURNAL.

Will There Be Shoe Machinery War

Now that the United Shoe dissolution suit is temporarily out of the public eye, rumors have been in circulation a shoe machinery war is imminent, says a despatch from Boston. The foundation for the stories is that since the advent of the new tariff the foreign manufacturers of shoe machinery have been planning to invade the American field in competition with the United Co. It is no secret, of course, that the more important European shoe machinery manufacturers have recently been advertising their wares in this country and have also had representatives here drum-

ming up trade. Thus far, however, they are understood not to have made any signal success.

United Shoe machinery officials do not, however, appear greatly disturbed over this "war" talk. It is difficult to see how the foreign manufacturers can make much headway against the United Co., which has already more than held its own abroad in competition with the same concerns who seek to get a foothold here. Moreover, if it came to a showdown, the United Co. could manufacture its machines abroad and land them here as cheaply as any foreigner.

Competition from domestic sources big enough to be on a "war" basis is a matter for the indefinite future when some of the United Co's would-be rivals have developed machines and a service which shall compare with what the United Co. can offer.

J. D. Hawthorne, city traveler for D. D. Hawthorne & Co., Toronto, who was operated upon recently in the General Hospital for appendicitis is making rapid progress thoroughfares. Here is a view of the big shoe department.

FROM PIONEER SHOP TO BIG DEPARTMENT STORE

The Regina Trading Company is one of Regina's pioneer departmental stores. Starting out when the city was but a small fraction of its present size, this progressive

ture has a frontage on Hamilton Street of 125 feet and about 200 feet on South Railway Street, two of Regina's important thoroughfares.

THE SPACIOUS SHOE DEPARTMENT OF REGINA TRADING COMPANY, REGINA, SASK.

store has kept pace with the remarkable development that has taken place. As the business grew, extensions were made from time to time to provide sufficient space and for new departments, to meet the demand. The present struc-

This progressive firm has at its head Mr. J. F. Bole, member of the Saskatchewan Legislative Assembly for Regina city. Mr. Bole is an old timer in Regina, as is also Mr. A. Gibbons, the popular assistant manager.

When Good Fellows Get Together in Jolly Conclave

Second Annual Reunion and Convention of the "Miner" Men at Granby was a Delightful Occasion—Business Sessions and Social Features Both Entered Into Enthusiastically—Inspection of Up-to-date Plant

It was a jolly crowd thoroughly imbued with the get-together spirit that boarded the special Pullman car attached to the 9.10 a.m. train from Montreal to Granby, P.Q., on Thursday, June 25th.

The occasion was the second annual convention of selling agents, representatives and branch managers of the Miner Rubber Co., Ltd., from Brandon on the West to Sydney, C.B., on the East—all gathered together as guests of the company for the ensuing two days. Every man was a good mixer and made to feel at home as they were, by R. R. Macaulay, secretary-treasurer of the company, ably assisted by F. H. Meinzer, the two-hour journey seemed all too short. At Granby W. H. Miner, vice-president, together with other officials of the company, received his guests and soon had

W. H. MINER, VICE-PRESIDENT, MINER RUBBER CO.

everyone comfortably disposed at the two main hotels—both of which are a distinct credit to the town.

At one o'clock the whole party of over fifty met at the Granby Hotel for the luncheon that mine host Page had specially prepared, after which the afternoon was set apart for private interviews between sales agents, branch managers and the management of the company. The rest of the company had an afternoon off, so to speak. After dinner at the hotels, the whole party was treated to a most enjoyable automobile drive round the beautifully shaded and well kept streets of this town of 6,000 inhabitants, and everyone enjoyed it to the fullest extent. Not content with this, seats at the moving picture show had been reserved, and for over an hour the boys enjoyed all the thrills—by proxy—furnished by a stirring chase after the daring refugee from the law. This, coupled with a midnight dance at the Town Hall, not on the program, by the way, closed an unusually eventful day; perhaps one had better say, opened the next day.

Tour Through Modern Plant

The whole of the next morning was spent in a comprehensive tour through the splendidly equipped plant of the company. Starting from the offices, the visitors were first taken through the box and carton department where all the

wood boxes, also the paper cartons for individual pairs of rubbers are manufactured. This is a feature seldom found in such factories. Next, the power plant was visited. Here the visitors were shown the duplicate power machinery. Usually the plant is run by water power communicated to immense dynamos, thence throughout the factory. Should the water become too low, however,—this seldom happens—a powerful steam plant equipped with automatic underfeed stokers is ready to be started at a few minutes' notice. This provides insurance against any tie-up of lost time, which is an important consideration. Successively the tool shop, the cement-mixing room, the varnish and naphtha storage buildings, were inspected, after which the tour of the main building was begun. From the ground floor where the crude rubber is stored, washed and dried, on up to the large storeroom, then down into the calendering room with its huge rolls through which the sheets of rubber, duck, canvas and other materials pass, according to the finished stock desired, the party was taken. In this room was also demonstrated the making of compound rubber—a very interesting process.

Next, the party visited the cutting floor, then the making floor, and here several pairs of rubber footwear of various kinds were made—a demonstration which was of great interest to everyone present. The varnishing and packing rooms on the top floor were finally inspected, after which the party adjourned for luncheon.

Some Worth While Features

While the whole plant is very large, modern and splendidly equipped in every respect, there are two features worthy of special mention. One is the curing apparatus on the ground floor. This is a steel tube about 8 or 9 feet in diameter, and perhaps twice that in length with an inner and outer skin, inside of which the rubber for certain kinds of footwear is placed for curing purposes. This rubber hung on racks is wheeled into the big tube on tracks, then the enormous door is closed and securely bolted. In order to get the necessary heat for the proper curing of the rubber, steam is turned into the space between the two skins, and the rubber is kept therein, subject to a proper temperature as long as judged necessary. A thermometer accurately gives the heat inside the tube, making guess work or mistakes impossible. This is a unique feature, and is just one of those safeguards that goes to make up Miner quality.

The other feature is the splendid shipping facilities of the factory. Both switch and main track run right past the warehouse at floor level, making loading facilities simple and obviating any teaming. Coal is also unloaded from cars into trolleys and run right over to the boiler room, which is on a lower grade at practically roof level, and there placed in hoppers ready for use as required. All of which does away with all cartage charges on outgoing or incoming shipments. Goods can be carried by truck from the shipping room floor right into the car.

The afternoon was taken up by a general business session in which everyone got together as a ways and means committee, with suggestions for the general advancement of the business.

In the evening at 8.30 the party, reinforced by a goodly number of the heads of the various departments at the factory, sat down to a sumptuous banquet. After the inner man was satisfied—better say surfeited—seven toasts were proposed and responded to, upon which a day of great enjoyment came to a close. The party arrived in Montreal on Saturday morning after an enjoyable return journey,

THE CROWD ASSEMBLED AT THE MINER RUBBER CO.'S GATHERING AT GRANBY, QUE.

and there was not one but felt that he had been greatly broadened by the trip, and that the gathering is sure to redound to the good of the company and the sales force in all its branches. All were warm in their praise of the splendid hospitality they had received, and sincere in their belief that Granby is "some town, believe us." The following composed the party:—

Those Who Participated

C. A. Davies, T. H. Rumford, R. G. Boyle, Toronto; S. J. Edmondson, Ottawa; Blachford, Davies & Co., Ltd., Toronto; R. B. Wanless, D. Coates, F. Dewan, F. Smith, London; Coates, Burns & Wanless, London; R. R. Dowling, Brandon; R. B. Griffith, A. M. Haggart, R. B. Griffith & Co., Hamilton, Ont.; A. E. Jackson, W. N. B. Jackson, S. F. Marshall, J. Bilouez, O. Pourier, W. G. Borland, Montreal; H. A. Savage, P. Gauthier, Ottawa; Jackson & Savage, Ltd., Montreal; R. T. Hayes, Wm. H. Humphrey, Geo. R. Crosby, J. M. Humphrey & Co., St. John, N.B.; Chas. R. Brown, J. M. Humphrey & Co., Sydney, C.B.; R. Leullier, C. A. Congdon, Jr., Winnipeg; The Wm. A. Marsh Co., Western Ltd.; F. H. Meinzer, assistant sales manager, Montreal; J. W. Johnston, Montreal; G. C. Yearsley, local manager, Toronto; F. Maranda, local manager, Quebec; J. A. J. St. Laurent, P. A. Poulin, Quebec; W. G. Simpson, Toronto; W. H. Miner, vice-president, R. R. Macaulay, secretary-treasurer, J. Stapleton, superintendent, The Miner Rubber Co., Ltd.; F. H. Devenish, Toronto, Footwear in Canada; H. Neville, Montreal, THE SHOE AND LEATHER JOURNAL.

The Toast List

'The King.'

"Town of Granby," proposed by C. A. Davies; responded to by W. D. Bradford, mayor.

"The Industries of Granby," proposed by F. Maranda; responded to by J. Bruce Payne, president Granby Board of Trade.

"The Miner Rubber Co., Ltd.," proposed by Geo. Legge; responded to by W. H. Miner, general manager.

"The Miner Rubber Co. Ltd., Selling Agencies," proposed by F. H. Meinzer; responded to by R. B. Wanless, R. T. Hayes, R. B. Griffith and R. R. Dowling.

"The Press," proposed by P. Gauthier; responded to by H. Neville.

Afterthoughts

Who would have thought that under that quiet exterior F. Maranda carried around all the makings of an orator? Some speech, that!

Better monkey with a buzz saw than try to christen

J. Bilouez—by the water process, anyway. That five dollar offer still has no takers. No one knew the culprit. It was safer not to—for the culprit.

By the way, Mr. Bilouez is some opera singer. If he entertains the trade up around Nominig and Mont Laurier the way he did the boys at the hotel, no wonder he sells goods.

Realization now only whets anticipation for next year.

R. R. Dowling's sunny smile was much in evidence. He says business in Brandon and the West is now very fair, and getting better all the item.

O. Pourier—after doing justice to the inner man at the banquet—"Please pass the Castoria, gents!"

D. Coates was the life of the party—as usual. What would that Miner yell be without him? By the way, was it he seen talking to and walking with one of Granby's fairest maidens? Surely not. He did it last year, too.

Peter Gauthier was as young as any of the boys and had just as good a time. No wonder, he is a most popular knight of the grip.

A. E. Jackson and F. H. Meinzer ably assisted the management in making everyone comfortable. The visitors certainly appreciated their efforts.

R. T. Hayes was at once recognized as the solid conservative type of citizen that has done much to place the Maritime Provinces in their present enviable position during the prevalent period of depression. He is a constructive yet cautious citizen.

T. H. Rumford was one of the jolliest members of the party. He made a big hit.

Everyone was present except C. A. Congdon, Sr., and R. Coates, unavoidably detained. Wires from these two expressing regret were read at the banquet.

Host Thomas Lynch certainly spread himself for the banquet. Service and cuisine would be hard to beat at Delmonico's.

W. H. Miner and R. R. Macaulay are certainly jolly good fellows,—kindly intentioned and hospitable to the limit, and the convention has materially increased the esteem in which they are held—if this be possible.

Perhaps we had better not tell tales out of school as to what went on at the Granby Hotel after midnight. But it is really almost too good to keep.

Some of the smaller fry in Granby were busy gazing at the "long-gear'd" colored gentleman in charge of the rolling palace that took the party down. Private cars are rather rare in Granby—also porters. The gent in question had a well developed sense of humor.

Boston Fair Will Be the Mecca of Many Canadians

Scores Are Going to the Seventh National Shoe and Leather Market-Fair—Big Preparations for "Canadian Day"
—Some Features About This Year's Show—Railway Rates and Hotel Fares.

Many Canadians are going to Boston next week to attend the annual Shoe and Leather Market Fair. The Fair opens on Wednesday, July 8th, and continues for one week. It is expected that it will be the greatest gathering of representative shoe and leather men ever congregated in one city. There will be about one hundred and seventy-five exhibitors and a large section of the spacious Mechan-

R. C. JACOBSEN, PRESIDENT
JACOBSEN PUB. CO.

ics Building' has been set aside for displays from Canada and Great Britain.

Monday, July 13th, will be Canadian Day, and the number of those likely to be present on that occasion will double the attendance at any previous fair. The SHOE AND LEATHER JOURNAL will, as usual, have an attractive booth, which will be No. 38. This will be the headquarters for the Canadian contingent and a warm welcome awaits all visitors.

Among the Canadian firms to make exhibits will be C. Parsons & Son, 79 Front St. E., Toronto; Beardmore & Co., tanners, and others.

There is no more pleasant way to spend a holiday than by a trip to the ancient and historic city familiarly known as "The Hub." It is rich in traditions of the past, for it has been the scene of many stirring events in the pages of the Republic. Besides all this it is the great centre of the shoe and leather activities of the continent and forms a splendid meeting place for those identified with the trade who wish to buy, sell or study all the latest developments and styles. Go to Boston next week and be present on Canadian Day. It will repay you in many ways.

The Railway Fare and Hotels

The railway fare from Toronto to Boston and return is \$26.40, from Montreal to Boston, \$16.10, and from Quebec to Boston \$19.10.

Some of the leading hotels in Boston and their rates are:—European plan: Adams House, \$1.50 up; American House, \$1.00 up; Brunswick, \$2 up; Castle Square Hotel, \$1.50 to \$3; Clarendon, \$1 to \$3; Clark's Hotel, \$1 up; Copley-Place \$3 up; Copley-Square, \$1.50 up; Crawford House, \$1 up; Bellevue, \$3 up; Essex, \$1.50 up; Langham, \$1 up; Lenox, \$2 up; Plass Hotel, \$1 up; Vendome, \$5;

Touraine, \$3 to \$6; Parker House, \$1.50 to \$4; Quincy House, \$1 up; Thorndike, \$1 to \$3; Young's Hotel, \$1.50 to \$4; United States Hotel, \$1 up; Westminster, \$1.50 up; Oxford, \$1 up; Brewster, \$2 up. American plan:—Brunswick, \$5; Langham, \$2; United States Hotel, \$3 up.

New Ideas the Keynote

The keynote of the Seventh National Shoe and Leather Market Fair next week will be "New Ideas." New methods, new styles, novelties, inventions, in fact the last word in every line of the shoe and leather trade from eyelets or laces to the finished product of the high grade shoe, is the aim of the management.

The Seventh National Market-Fair is a business fair for business men. The directory of exhibitors includes the keenest, liveliest and most up to date business firms in the trade. They represent concerns which are not satisfied to stand still but are seeking new avenues of trade, at home and abroad, recognizing the fact that if they do not get the trade of new areas somebody else will. Consequently many of the exhibiting firms are sending their principal employees to the fair at their own expense as a matter of education, considering such expense a profitable investment.

The new features of the coming Market-Fair are innumerable and run the gamut of the industry from new machinery to make shoes, to tango pumps. More than a dozen new kinds of soles for boots and shoes will be shown, including rubber, felt, combination rubber and felt and combination rubber and leather, waterproof felt and new white chrome for white duck and canvas shoes.

One firm will show machinery which furnishes an entirely new method of making shoes, a company from Ohio

W. D. BENNET, VICE-PRESIDENT
AND NEW ENGLAND MGR.

shows a machine for making lasts which does away with hand shaping and is probably one of the most important and valuable inventions of recent years as it provides a method of making lasts true to the model. The increasing scarcity of wood has made wooden packing cases more expensive, and a new substantial paper packing case to substitute for wood will be shown. A line of camel hair slippers and unique designs in slipper wear comes from Germany, while a

number of Canadian firms are to show some beautiful results from new processes in tanning.

National Retailers to Meet

At a recent meeting the tentative program for the meetings of the National and Massachusetts' Associations was made by the local committees in charge. The National Shoe Retailers' Association will hold its annual conventions on the morning of Retailers' Day, July 10, in Mechanics'

MECHANICS BUILDING, BOSTON, MASS.

Building, president A. S. McGowin of Philadelphia will preside and make the opening address. E. W. Burt of the Ground Gripper Co., of Lynn, chairman of the national committee on membership, will make a report on "Membership." A black board talk will be given by national secretary A. H. Geuting, of Philadelphia on the subject, "(1) Cost of Doing Business; (2) Legitimate Profits; (3) Fallacy of Fixed Prices." John W. Craddock, of Lynchburg, Va., will speak on "National Law to Protect the

Consumers against Fraud, Versus the So-called Pure Food Shoe Law," and F. H. Ellsworth of Fitchburg will speak on "What Mutual Fire Insurance Means to You."

Among the Canadian exhibitors at the Boston Shoe and Leather Fair who will have extensive displays in the Canadian section are: C. Parsons & Son, Limited, Toronto, who will show a full line of English and Scotch shoe leathers. The booth will be in charge of H. L. Daville, W. Pollard and W. G. Parsons. Beardmore & Co., Toronto, will have an exhibit of sole leather, tap soles, harness and strap leather, lace leathers, English upper leathers, sides and bellies. The exhibit will be in charge of Torrance Beardmore, J. A. Matheson and W. Alfred Moore, Toronto. Both firms will be glad to welcome all Canadian visitors.

Bringing the People to Shop

A Western shoeman, on opening a new store, originated a novel idea to show people the way to it. This new store is about half a mile from the business centre, and it was necessary to have something new to get customers to come out to it. It was advertised that with every purchase of \$10.00 or over of footwear made in this store on the day it was opened would entitle customers to six per cent. additional in shoes then, and for every year as long as they lived. These original purchasers might come to the store and receive six per cent. of the amount of the first purchase. This was equal to a yearly dividend of six per cent. on whatever their purchases might have been and the unique idea attracted an immense crowd on opening day. The sales were estimated to run almost \$3,000 and it will be seen that annually about \$500 would have to be paid out. However, it was charged up as an item of very cheap advertising.

THE B. & R. RUBBER COMPANY
 North Brookfield, - Mass.

AMONG THE SHOE MEN.

Labrie & Guay, shoe retailers, of Montreal, have dissolved.

G. S. Hubbell, of Montreal, was in Berlin last week on business.

A. Scott, leather goods, has started business in Hughton, Sask.

S. Barron, dealer in clothing, boots and shoes, Winnipeg, has assigned.

J. E. Paquet, dealer in clothing, shoes, etc., Montreal, has assigned.

The Outremont Shoe Repairing Co., Montreal, have been registered.

C. E. Liscombe, shoe retailer, Beaverton, has assigned to N. L. Martin.

John B. Gerbracht, dealer in leather and harness, Galt, Ont., has assigned.

A. Binette Mason, shoe dealer, of Montreal, recently made an assignment.

Philip, J. C. and S. B. Pocock, of London, Ont., were in Toronto this week.

Fred. R. Hiltz has opened up a cash shoe store in Sealey's block, Kentville, N.S.

C. A. Davies, of Blachford, Davies & Co., Toronto, was in Montreal this week.

R. B. Griffith, of R. B. Griffith & Co., Hamilton, is on a buying trip to Montreal.

C. Knees, tanner, of Cannifton, Ont., for many years, is closing out his business.

Ruelland & Fils, wholesale shoes, Montreal, is a new firm registered recently.

R. T. Hayes, of J. M. Humphrey & Co., St. John, N.B., was in Montreal last week.

J. Sinclair, of the Barrie Tanning Co., Barrie, was in Toronto last week on business.

R. R. Dowling, of Dowling & Creelman, Brandon, is visiting Eastern shoe centres.

H. Ywuoles has opened a shoe repair shop at 186 North Cumberland street, Port Arthur.

F. H. Meinzer, sales manager of the Miner Rubber Co., Granby, was in Toronto recently.

Tom Stedman, of the Stedman Shoe Co., Winnipeg, was in Toronto last week on business.

Several new machines have been placed in the factory of Dufresne & Locke, Maisonneuve.

D. Sanford, Brandon, has purchased the boot and shoe stock of the estate of G. W. Forbes.

F. G. Lockett, of the Lockett Shoe Co., Kingston, was in Toronto during the past fortnight.

G. C. Yearsley, manager of the Miner Rubber Co., Toronto branch, was in Montreal last week.

W. E. Wing, sales manager of the Kaufman Rubber Co., Limited, Berlin, was in Toronto recently.

Harry Jordan, of the Estate of J. Jordan, Port Hope, called recently on several Toronto shoe houses.

Gilbert Bonner, of Bonner Leather Co., Montreal, was in Berlin, London and Toronto last week on business.

John Ritchie, of the John Ritchie Company, Quebec, has been appointed a member of a local committee of the Canadian Manufacturers' Association to meet the Royal

Commission studying trade conditions, which will be held in Quebec on August 20th.

W. F. Martin and W. M. Mitcham, of the Kingsbury Footwear Co., Montreal, are in Toronto for a few days.

P. A. Doig, representing Fisk, Limited, Montreal, is spending a fortnight in the large American shoe centres.

B. F. Morley & Son, wholesale shoes, 60 Colborne street, Toronto, have removed to 27 Wellington street east.

The New York Cut Rate Shoe Stores Co., Limited, Vancouver, have taken over the business of A. S. Vachon & Co.

Arthur Congdon and R. Leuillier, of the W. A. Marsh Co., Western, Limited, are at present in Montreal and Quebec.

M. S. Higgins, of the George E. Keith Co., Brockton, Mass., was among the shoe men attending the great ad. convention.

Frank Bauslaugh, of the John Agnew Co., Limited, Brantford, was in Montreal and Quebec last week on business.

N. E. Pletch, Swift Current, Sask., is closing out his stock of shoes and men's wear and entering into the grocery line.

R. B. Wanless, of Coates, Burns & Wanless, London, Ont., has been spending a few days in Montreal, Granby, and Quebec.

M. Brown, shoe repairer, Barrie, Ont., has recently enlarged his workroom by taking in accommodation at the rear of his shop.

Fred. J. Lashbrook has returned to London after his Western Canada trip in the interest of the Galt Shoe Manufacturing Co.

Ottawa shoe stores have come to an agreement to close on Saturday afternoons, as some other leading lines of business places do.

The Relindo Shoe Co., of Toronto, whose plant is now electrically driven, have resumed operations and are engaged in the fall run.

Ed. Cleland, one of the Montreal road staff of the U. S. M. Co., will visit Boston during the week of the Shoe and Leather Fair.

The corporate name of the Federal Shoe Factories, Limited, Montreal, has been changed to that of La Parisienne Shoe Co., Limited.

E. J. Bliss, general manager, and P. I. Hersey, treasurer of the Regal Shoe Co., Boston, were in Toronto recently on business.

P. J. Hogan, special agent of the U. S. M. Co., Montreal, is spending a few days at the factory of Jno. McPherson Co., Hamilton.

W. C. Meyers, representing the Rideau shoe, Montreal, has returned from an extended selling trip through the Western Provinces.

The Humberstone Shoe Co., of Humberstone, Ont., are running the factory night and day in order to meet the demands for their sandals.

H. G. Greene, son of R. H. Greene, sales manager of the footwear department of the Gutta Percha and Rubber, Limited, Toronto, will in the near future, take up his residence

in Montreal, where he will have charge of the footwear branch, under R. H. Hamilton, the Montreal manager

Charles Newton, manager of the shoe department of Robinson & Co., Winnipeg, was in Toronto this week on his way east on business.

J. A. Paterson, recently employed with E. T. Wright & Co., St. Thomas, has taken a position as mail clerk with headquarters in London.

E. L. Emerson, of the Boston Last Co., Boston, has been spending a few days at the Canadian branch of the Boston Last Co. in Richmond.

Ed. Lynch, Western Canada traveler for the Minister, Myles Shoe Co., Toronto, recently returned after an extended trip as far as Calgary.

T. D. Holmes, of the Electric Shoe Repairing Shop, Wingham, Ont., has sold out the shoe shining department of his establishment to Geo. Moir.

In the new Spring samples for men which are now in progress in several plants, a large number of tweed and fancy cloth tops will be shown.

W. F. Martin, sales manager of the Kingsbury Footwear Co., Montreal, is in Toronto with a fine and complete range of new samples for spring.

A. L. Baldwin, a member of the Goodyear road staff, of the U. S. M. Co. of Canada, Montreal, is at present spending his holidays in New York.

J. C. Moreau, who represents the London Shoe Co., London, throughout the West has returned from an extended trip to the Prairie Provinces.

Frank Mercer, Western Canada representative of the Brandon Shoe Co., Brantford, left last month on a trip to Cuba, where he will spend some weeks.

Mr. Perchard, who covers Eastern and Northern Ontario for the Thompson Shoe Co., Montreal, has returned from a short holiday in the Laurentians.

Alexander Hall, 20 King street, Chatham, has recently installed a Champion shoe repair outfit. He reports business in the repair line as being very good.

Robert Tobin, of London, who represents Coates, Burns & Wanless and the Adams Shoe Co., has returned from an extended selling trip over Western Canada.

Walter Powell, shoe retailer, 1682 Dundas street, has returned after spending a few holidays in Ottawa and in a motor trip throughout Eastern Ontario.

Kenney & Company, men's outfitters, Parry Sound, Ont., have moved into a larger store and have allotted an exclusive department for men's and boys' shoes.

Mr. Schmidt, formerly with the Perth Shoe Co., Perth, Ont., has taken a position with the Slater Shoe Co., Montreal, as foreman of the bottoming department.

J. S. King, of the Relindo Shoe Co., Toronto, was in Boston and other Eastern shoe centres last week on business looking over styles for the coming season.

P. M. Goff, of Toronto, patentee of Dr. Goff's Hygienic Health Shoe, reports that samples of this new brand will be ready for the trade during the coming season.

E. T. Jacobi, 5 Wellington street east, Toronto, is spending a couple of weeks on a fishing expedition at Thorah Island, Lake Simcoe, along with his wife and family.

J. L. Trethewey, Toronto, of the selling staff of the Brandon Shoe Co., Brantford, and his brother, R. J. Trethewey, of London, are spending the summer at Temagami Lake.

Harold W. Rising, of the firm of Waterbury & Rising, St. John, N.B., spent a few days in Toronto attending the annual meeting of the Canadian Credit Men's Association.

Geo. McMillan, formerly in charge of the sole leather and stock fitting departments of Jas. Linton & Co., Montreal, has accepted a similar position with Louis Gauthier Co., Quebec.

PRESENTED WITH A SILVER CUP

The staff of the Ames-Holden-McCready, Limited, Montreal, wishing to express their appreciation and high esteem for Clarence F. Smith, late vice-president and general manager of the company, last Saturday presented him with a magnificent silver cup and a beautifully engrossed address.

The presentation was participated in by a large number of the employes of the company and the address was read by W. A. Matley, secretary-treasurer, on behalf of the staff.

He expressed his personal deep regret and conveyed that of the employes on the occasion of Mr. Smith's severing his connection with the company. He also spoke in the highest terms on behalf of the staff throughout, and of their deep appreciation for the general courtesy and consideration to all that had characterized Mr. Smith's administration during the past three years.

Following is a copy of the address:

"To Clarence F. Smith, Esq.

"Dear Sir,—In severing your connection with Ames-Holden-McCready, Limited, as vice-president and general manager, we desire to express our sincere regret at the sundering of the pleasant business relations that have existed between us during your management of the amalgamated companies, which, we fully realize, has been a period of strenuous anxiety and thought.

"We cannot but express our high appreciation of the uniform kindness, courtesy and thoughtful consideration which you have invariably extended to us all, and wish to emphasize to you this expression of our esteem and regard, accompanied with our warmest and most cordial wishes for your future welfare, knowing there will be nothing but the kindest thoughts and memories of our associations together."

Mr. Smith in reply said that it was with feelings of pleasure and gratitude that he had listened to the address and that he reciprocated fully all the kindly expressions and thoughts it contained. He would treasure and prize both the address and the exceedingly handsome cup as souvenirs of priceless value. Changes, he added, were inevitable in business experiences, and he regretted exceedingly having to say good-bye; but in so doing, he wished to thank each and every one and to express his deep appreciation to the staff generally for their loyalty to him during his three years' administration. He asked them to continue the same devoted service and loyalty to his successors and sincerely wished both the company and its employes all the success and prosperity which he thought they deserved.

Dupont & Frere, Maisonneuve, are arranging to install a complete Goodyear equipment in their factory and intend to start in the manufacture of men's Goodyear welt shoes at once.

The Berlin Felt Boot Co., of Berlin, have re-organized their plant and added considerably to their equipment in the way of C.H.M. lasting machines, Rex pulling over machines and others.

The assets of the Western Jobbers' Clearing House, Limited, 40 Aikins street, Winnipeg, were sold by auction on June 17th. The assets consisted of shoes, dry goods and men's furnishings.

Thomas Scott, superintendent of the U. S. M. Co. of Canada, and party of friends are arranging to take a boat trip from Montreal, Toronto and other points, stopping over also at Rochester.

W. F. McNeill, of Rossland, B.C., has doubled the capacity of his shoe store by taking in the stand next door. He has also put in a new front and now has a large and up-to-date establishment.

The plans and specifications have been prepared for the new factory of the J. H. Hamilton Shoe Co., Sherbrooke, Que. They provide for a well-lighted and well-ventilated building, 30 by 125 feet.

W. H. Galt, of Montreal, sales manager of Gutta Percha and Rubber, Limited, will henceforth make his headquarters in Toronto and devote special attention to the rubber tire business of the company.

L. F. Jackson, who has been Western Canada representative for several years with the Relindo Shoe Co., Toronto, has taken a position with the Brandon Shoe Co., of Brantford, and will cover the East.

George Williams, of D. D. Hawthorne & Co., Toronto, who has been ill for the last three months, is able to resume his duties. He has been spending the past four weeks recuperating in Lobo township.

W. G. Damer, who is Western Canada representative for F. J. Weston & Sons, Toronto, has returned from his Western selling expedition and is spending the summer with his family at Oshawa-on-the-Lake.

Downing & McVicar, who have conducted a shoe business in Goderich for the past eleven years, have dissolved partnership, Mr. Downing retiring. Mr. McVicar is now the sole proprietor of the business.

Underwoods, Limited, have re-organized their shoe factory in Aurora, Ont., and installed motors throughout the building. The plant is now driven electrically and the capacity has been considerably increased.

G. Barrett, late of the Thos. Ryan Co., has joined the H. G. Middleton Co., wholesale shoes, Winnipeg. It is understood that A. N. Douglas, who has been with the latter company for some time, has withdrawn.

A. L. Johnson, manager of the Winnipeg warehouse of Ames-Holden-McCready, Limited, was in Montreal last week attending the annual meeting of the company, of which he is one of the vice-presidents.

Captain W. A. Moore, of Beardmore & Co., Toronto, and Lieut. K. D. Marlatt, of Marlatt & Armstrong, Limited, Oakville, spent a couple of weeks in camp recently with the 9th Mississauga Hourse, at Niagara-on-the-Lake.

The John McPherson Co., Hamilton, have recently installed a Goodyear jointing machine, which makes the joint at the breast of the heel after trimming. The McPherson Co. have also put in an Economy insole re-inforcing outfit.

The Canadian Consolidated Rubber Co., of Montreal, have declared their regular quarterly dividends of one and three-quarters per cent. on the preferred shares, and one per cent. on the common shares of the capital stock of the company. The Canadian Consolidated Felt Co., Limited,

have also declared a quarterly dividend of one and three-quarters per cent. on the capital stock of the company.

Harvey E. Graham, accompanied by his wife and family, is spending a few weeks at Fredericton, N. B. He will not return to Toronto until his Fall samples are completed, which will be during the latter part of August.

The Manufacturers' Shoe Syndicate, 239 St. Lawrence Boulevard, Montreal, have purchased the stock of shoes salvaged from the O. B. Shoe Co.'s factory fire in Drummondville, Que., sometime ago. A special sale is now being conducted of the effects.

Chas. Campbell, Canadian manager of the Boston Last Co., Richmond, Que., has returned from a trip on which he called on most of the large Canadian shoe manufacturers. He states that conditions appear to be a little better during the past couple of weeks.

F. A. Taschereau has succeeded Herbert Taylor as manager of the shoe department of the Stanley Mills Company, Hamilton. He was formerly traveler for the O. B. Shoe Co. and also had charge of one of their retail stores. Mr. Taylor has taken a position with the Hudson's Bay Co. at Edmonton, Alta.

In the Spring samples, which several manufacturers have now under way, a new eyelet will make its appearance. It is known as "the Midget" and closely resembles the blind eyelet. The circle is very small and has a beaded edge. Several manufacturers are preparing samples carrying this eyelet.

Lightning struck Lomineck Gross, jr., an Italian boy, as he was drinking a glass of water during a storm in Watertown, N.Y., picked him up by his feet and tossed him across the room against the wall. The lightning was attracted by the nails in his shoes and burned the soles of his feet. He was otherwise unhurt.

Getty & Scott, Limited, Galt, have installed a U. S. M. Co. Goodyear upper stapling machine, which puts the staples through the shoulder and upper leather before pulling any tacks. This machine has recently been installed in a number of factories, among them, the Minister Myles Shoe Co., Limited, Toronto.

C. C. Keane, well-known making room foreman, who about a year ago was with the Thatcher Shoe Co., of Richmond, Va., has now accepted a position as foreman of the making and finishing room with the Richmond Shoe Co., of Richmond, Va. Mr. Keane was formerly with the Relindo Shoe Co., of Toronto.

G. A. Blachford, of the Blachford Shoe Manufacturing Co., was in Boston, Lynn, Haverhill, and other New England shoe centres last week on business. C. A. Blachford and Harold Hayward, superintendent of the company, have returned from a business trip to Buffalo and other New York cities in search of style pointers.

A Goodyear shoe repairing outfit is being installed by the U. S. M. Co. in the establishment recently opened in Medicine Hat, Alta., by Edwards & Pingree. The latter was formerly foreman of finishing and treeing departments of the Slater Shoe Co., Montreal, and more recently, the Alberta Shoe Manufacturing Co., Redcliff, Alta.

The annual meeting of the Hartt Boot and Shoe Co., Fredericton, was held on June 17th. A dividend of six per cent. on the capital stock for the past year was declared and very satisfactory reports presented. The old board of directors were re-elected. John D. Palmer, John Kilburn, Edward Moore, John A. Reid and J. W. McCready.

The warm weather has resulted in a vigorous demand for white canvas pumps, oxfords and button shoes. Dealers in this line report that orders so far have been very heavy. Sporting shoes of all kinds have also been in active requisition. Retailers throughout the provinces report that business

generally has picked up considerably during the past few weeks.

The J. H. Hamilton Shoe Company has been incorporated with a capital stock of \$100,000 and headquarters in Sherbrooke, Que. Jas. Hollingrake Hamilton, shoe manufacturers of Levis, and others are the incorporators. The company is erecting a new factory in Sherbrooke, and has power to purchase and acquire the business of J. B. Blouin, Limited, of Levis.

The O. B. Shoe Co., whose factory at Drummondville, Que., was burned down in February last, has been re-organized. The capital stock is \$100,000 and it is expected that the plant will be in splendid shape to begin manufacturing in August next. The town of Drummondville is giving a bonus of \$25,000 to the industry. The reorganization has been carried out by J. P. Belanger.

The Boot and Shoe Workers' Union, of Fredericton, N.B., recently held a conference with the management of the Hartt Boot and Shoe Co. to discuss the demand made by the Union for a nine hour working day at the same rate of wages as in the past. The men have been working fifty-nine hours a week and it is understood that a compromise, whereby fifty-seven hours was the basis was effected.

It is expected that the new Walk-Over Shoe Store which will be erected at 290 Yonge street, Toronto, will be ready for occupation by October next. The store will be 156 feet deep and 31 feet wide and will represent the last word in a footwear home. F. A. Guinivan, proprietor of the Walk-Over Shoe Store, Montreal, will take full charge of the handsome new shop and will remove to Toronto.

A "black art" window which was illustrated in the last edition of the SHOE AND LEATHER JOURNAL as proving an effective and novel means of displaying summer shoes, proved to be of much interest to several retailers. J. McCullough, 866 College street, Toronto, was one of those who installed such a window. The black fixtures, backgrounds and special lighting effects imparted to the white footwear the appearance of floating in the air without any support.

T. A. Wilson, who was for many years in the shoe business in Perth, has bought out Joseph Greenwood, 579 Bloor street west, who has retired owing to ill-health. Mr. Wilson has been residing in Toronto for about three years and has been joined by his son, Roy R. Wilson, who conducted a shoe and clothing store in Perth until recently. Messrs. Wilson & Son are widely known in the footwear line and many friends will wish them success in Toronto.

Geo. E. Keith Co., recently sent out invitations to the trade in connection with the dedication exercises of the Walk-over Club to be held in conjunction with the fortieth anniversary celebration of the founding of the business by George E. Keith. The date of the event is July 1st and the exercises will be held on the grounds of the Club, 100 Perkins avenue, Campello, Mass. A fine program of athletic sports, baseball, fireworks and dancing will be presented.

Daoust, Lalonde & Co., shoe manufacturers, Victoria Square, Montreal, have opened a branch on St. Paul street, under the name of the Metropolitan Shoe Company, which will henceforth largely handle their Western trade, as well as keep in touch with their rural customers in Quebec, who visit the market and often find it rather awkward to get up to Victoria Square frequently. It will be remembered that Daoust, Lalonde & Co. were at one time located on St. Paul street.

The toeless shoe for afternoon and evening wear and to be worn with or without stockings is the latest novelty for women to appear in the London shops. The new design is of sandal form, with high French heels, and exposes glimpses of the sides of the foot and toes. They are also made in a wide range of colors, with a view to matching the gowns.

So far, the new shoe has not yet made its appearance in the streets or the fashionable tea-rooms of London. It is called the "toeless" shoe.

George J. Cowling, for the past five years with the Relindo Shoe Co., but now with the Blachford Shoe Manufacturing Co., Toronto, has joined the ranks of the benedicts. He was married this week to Miss Minnie Bates at 66 Brookfield street, the ceremony being performed by Rev. Mr. Oke, pastor of Chalmers Presbyterian Church. Mr. Cowling and bride will take up their residence at 905 Ossington avenue, Toronto. Many friends will extend their congratulations.

H. W. Roberts, one of the Western travelers of the W. B. Hamilton Shoe Co., Toronto, passed away at the hospital in Regina on June 19th. While on a selling trip he was taken ill with pneumonia at Fillmore, Sask., and was later removed to Regina. He was twenty-one years of age and has been with the firm two years, covering part of Saskatchewan and Alberta. The remains were interred in Hamilton. Mr. Roberts was a nephew of L. S. McKindsey, one of the Western representatives of the W. B. Hamilton Co., and was a young man highly esteemed for his many good qualities.

The many friends of George Gilbert Hodges, who for several years has been one of the most popular salesmen for George A. Slater, Limited, Montreal, will congratulate him on his marriage to Miss Carrie Forman, daughter of Mr. and Mrs. Forman, which took place recently. The event was celebrated at the residence of the bride's parents, 826 Dorchester street, Montreal. Rev. R. W. Dickie, pastor of Crescent Street Presbyterian Church, officiated. After spending a honeymoon trip, Mr. and Mrs. Hodges have returned to Montreal to take up their residence.

A mass meeting and concert under the auspices of Joint Council number 17, of the Boot and Shoe Workers' International Union, Montreal, comprising locals 249, 266, 428, and 472 will be held for the purpose of inaugurating their work in the new premises, the Corbeil Hall, at the corner of St. Catherine and Parthenais streets. Many representative men from other unions are expected to be present to give addresses on the occasion. Mr. McKercher, acting

CONDENSED ADVERTISEMENTS

Two cents a word. Minimum charge for an advertisement 50 cents.
Cash must accompany all orders.

POSITION WANTED by an experienced shoe buyer and manager of a shoe department, with long experience and responsible position, and making a change at the present time. Prefer Departmental store. Address Box 82, SHOE AND LEATHER JOURNAL, Toronto.

PICKLED SPLITS WANTED

Cash prices paid for pickled splits and heads in all weights and qualities. Write us your offering. Wright & Wright, Inc., 109 Lincoln St., Boston, Mass.

business agent of the council, reports that conditions are brighter in the boot and shoe trades now than they have been for months.

The liabilities of C. B. Pratt, who ran a shoe store on Wellington street, Ottawa, and another one on Sparks street, under the name of the Tally-Ho Shoe Company, before he was taken ill, are about \$45,000, against which are assets totalling \$28,000. The assets were sold by public auction on June 26th. It is understood that Chas. E. Slater was a creditor to the amount of \$12,000; the Pratt family claims \$15,000 and the balance of the \$45,000 liabilities is distributed over a number of the creditors. Those who were appointed to take charge of the assets were John I. McCracken, G. D. Kelly and A. W. Ault.

In the "Invictus" Easter window dressing competition the results were recently announced by George A. Slater, Limited, Montreal. The winners in the contest were Thom & Webb, Edmonton; W. M. Leslie, with A. W. Vermilyea & Son, Belleville, Ont.; H. F. Ready, with J. Ready, St. Marys, Ont.; Chas. S. Trick, Winnipeg, H. L. Cunningham, with John Wilson Springhill, N.S., and R. Diamond, with Alley & Co., Charlottetown. All were good and so far as the awards in Ontario were concerned, there was a tie between H. F. Ready, of St. Marys, and W. M. Leslie, of Belleville, and a pair of shoes was awarded each of these talented window trimmers.

Cecil Chamberlain, the nine-year-old son of W. Chamberlain, of the firm of Getty & Scott, shoe manufacturers, Galt, was recently, at the entrance to Dickson Park, knocked off his bicycle by a baby buggy, and run over by an automobile owned by Hall Bros., Galt. The driver evidently did not know he had run over the lad, because he backed the machine over the injured boy a second time. The boy was picked up and hurried to a doctor's office in the car. Although the auto passed over his abdomen, and there were four persons in the machine, no bones were broken, and as far as could be seen the boy was only badly shaken up.

H. K. Hayward, of the firm of Hayward & Canning, shoe repairers, 1558 Dundas street, Toronto, has been appointed superintendent of the new factory of the Blachford Shoe Mfg. Co., Toronto, and has entered upon his duties. Formerly he had charge of the bottoming room in Getty & Scott's plant at Galt, and previous to that was with the United Shoe Machinery Co., as Goodyear man for two years. He is in every way qualified for this new position. The business at 1558 Dundas St. will be continued by C. A. Canning, under the same name. Mr. Canning was for many years in charge of the turn department of Getty & Scott, Limited, Galt.

The one thousand dollar prize donated by "Advertising and Selling" magazine for the best essay on some phase of advertising and selling was awarded to James P. Beck, advertising manager of Universal Portland Cement Co., Chicago. There were a great many contestants and finally some forty contributions were selected as being possible winners. Four other men in addition to the winner were accorded the distinction of "honorable mention," and among them were two Canadians. R. W. Ashcroft, advertising manager of the Canadian Consolidated Rubber Co., Montreal, was among those honored and his many friends will tender congratulations.

The annual outing and picnic of the boot and shoe workers of Toronto was held on June 27th, to Victoria Park, Niagara Falls. There was a good attendance and an interesting programme of sports and games was run off. Several valuable prizes were offered by the factory proprietors and others. The big event was in charge of an energetic committee, of which Albert Headley, 101 Essex avenue, was president and John Fazackerley, 1 Hiawatha road, secretary.

The other members of the committee were: J. Elvin, W. Painter, P. Waterfield, G. Cordell, C. F. Holl, S. Rice, S. Sparkes, A. Taylor, F. C. Gribben, W. Lennon, A. Mason, J. Sargent, W. Saddington, R. Leach, C. Kent, W. Headley and N. Brown.

The Brandon Shoe Co., of Brantford, have installed an Economy insole re-inforcing outfit, supplied by the U.S.M. Company. This consists of a channeler, stitcher and a re-inforcing machine, which tucks the canvas, and trims it flush with the shoulder of the insole. The advantage of the Economy over the Gem is that it gives a double lip, which when turned up affords a double shoulder. The double shoulders stand up straight, making the insole ideal for lasting purposes, and for the inseaming machine. The canvas extends only to the top of the shoulder. Many manufacturers claim that they can use a 32nd narrow welting and that, with the Goodyear universal inseam trimming machine, the inseam on this insole can be trimmed very close.

That an overwhelming percentage of the insolvent estates that have come into the hands of the Canadian Credit Men's Association through a failure of merchants to meet their liabilities are those of western debtors who are incapable of handling their business, was the statement of Henry Detchon, general manager of the Canadian Credit Men's Association, made at the annual meeting in Toronto. The speaker was of the opinion that the wholesale business men of the East had been too liberal in the credit which they have granted in the past to Western merchants. The Association approved a debtors' fund of \$100,000 for prosecution of wilful crime on the part of traders.

Lt.-Col. Fred Whitley, of the wholesale shoe findings firm of Fred Whitley & Co., Montreal, passed away on Friday, June 19th, aged 64 years. His death will be learned with wide regret by the trade and it is understood that the business will be continued by his two sons. Writing the SHOE AND LEATHER JOURNAL, John T. Tebbutt, of the Tebbutt Shoe and Leather Co., Limited, of Three Rivers, Que., speaks most appreciatively of the late Col. Whitley and says: "He was one of the 'old school' of business men, I knew him for many years and I may say I have never known a man who had higher business ideals. It was a great pleasure to do business with him as he was always in good humor, always courteous and polite, and always particular in making statements relative to the merits of the goods he was selling. By his sterling integrity he had by the help of his two sons developed a large and flourishing trade."

"Although the shoe and leather business has been showing some improvement during the last two or three weeks, it lacks snap and is considerably below what it was at this season last year," says a Boston despatch. "A characteristic of the industry throughout is hand to mouth buying. There are, of course, more fall odds coming in from week to week, but up to date, they have fallen 20 per cent. behind 1913, on the average. Duplicate odds from summer goods proved decidedly disappointing. This was due possibly to the fact that retailers carried over considerable stock from last year, which they had to work off. Also to general economy on the part of the public, and the fact that the season was somewhat late. There are a few manufacturers who are having all the work they can handle, but the majority are running very much below capacity. It is believed, however, that the shoe industry is likely to take a decided turn for the better in the near future."

Business in boots and shoes at wholesale in Winnipeg has improved of late for the same reason that the demand for warm weather dry goods has improved. Higher temperature has been followed by a brisker movement at retail of the various lines of light footwear and in the last few days sorting orders have been increasing. Jobbers generally

The
“EVERYDAY” Shoe

are under the impression that the dullest period is passed and that business will continue to improve steadily in the future. Stocks at retail throughout the country are reported comparatively small, and that with business conditions generally growing better there is bound to be a larger volume of orders coming forward from this out. As in the case of

many lines of dry goods, the placing of boot and shoe orders for fall and winter has been rather light, and it is confidently expected to improve very materially on account of the very bright crop outlook. When a good yield of wheat and other farm produce is assured this season, it is expected there will be a big scramble for supplies of all kinds of goods.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

NO DIAMOND  TRADE MARK
No Fast Color

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

Individuality as expressed by the Doctors Shoe

The DOCTORS Shoe is different to the ordinary run of shoes. And it's just this difference, this individuality that has made it a leader among men's shoes.

The DOCTORS Shoe has a sole construction that no other shoe has---a construction that serves a definite and valuable purpose; it has a patented waterproofed upper that you won't find on other shoes; and it has a snug fitting, sensible shape that other shoes have sacrificed for freakish styles.

You'll find individuality a-plenty in the DOCTORS Shoe; selling it simply means meeting a demand.

Union Shoes for Union Men

The retailer who meets the demand of every possible buyer in his town handles Union Stamp footwear.

Dealers who do not carry Union Stamp shoes are not soliciting their rightful share of the shoe business of their city.

The Union man will have Union shoes for himself and his family. He demands them and if he cannot obtain them will turn elsewhere.

To you, Mr. Retailer, who advertise Union Stamp shoes the tide of trade is turning.

You cannot afford to neglect the Union trade, and even the man who does not buy Union shoes merely because of Union principles recognizes the high quality of Union Made footwear.

You have nothing to lose and all to gain by carrying these shoes.

Let us send you to-day a list of manufacturers who make shoes bearing the Union Label and add a live selling asset to your business for the coming year.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp

Profitable Lines for Summer Selling

from

The House That Can Supply
All Your Requirements

The Ames-Holden-McCready Line is so extensive that every retailer can pick from it shoes to suit his trade. In this line, however, we would at present call especial attention to our Women's Welts made to retail at \$3.50, \$4.00 and \$5.00.

Our Men's Welts at \$4.00, \$5.00 and \$6.00 have proven an especially attractive line for all classes of retailers. Our new \$5.00 line of Men's Calf Welts in particular has met with great demand.

In our In-Stock Department you can easily sort up from the majority of these lines at short notice, and our various lines of quick selling staples as well.

It pays you to do business with a house that can supply **all** your needs.

A Short "Talk" on Salesmanship and Shoe Fitting

A Salesman Must Have Confidence in Himself and Make Customers Feel at Home—Failure to Fit the Foot Properly Means Carelessness or Incompetence—Remove Customer's Shoe as Soon as He is Seated and Before Showing Any Goods

Written expressly for the Shoe and Leather Journal by C. ROY TEETZEL, Ottawa, Ont.

I do not like the word clerk, any person can be a clerk, but few can be salesman. Any person intending to follow the retail shoe line and be successful, must be a salesman.

Good Man is Easily Detected

There are salesmen and salesmen, and the moment I enter any shop to make a purchase, I can at once detect the kind of salesman who serves me, and also judge about how much salary he is earning.

It is not how much merchandise a person can sell, but the manner in which it is sold. This idea of securing a person's money, and getting him or her out of the store without giving value and fair treatment is a mistake. It is bad policy to sell a customer a pair of shoes, unless you are absolutely giving the customer a shoe that will meet with his or her requirements. Lots of shoes are sold to people when the salesperson knows that it is not just what that particular caller should have. My idea is to sell an article that will bring the customer back.

Another great feature is in making your customer feel at home. Naturally, one likes to deal at a store where they are made to feel that way. When once the public gain such confidence in a store, its success is assured, and naturally the success of the salesman will follow. To be successful one must be polite, obliging and friendly. The way to make friends of your customers is to be friendly.

Confidence and Diplomacy Play Important Part

A salesman must have confidence in himself, and not be easily overruled by such customers we sometimes meet, who in their own mind know more about shoes than the salesperson.

A certain amount of diplomacy has to be displayed when serving the public. One must be able to read human nature and different tact must be used with each customer. It is the selling to a stranger, or to one who is almost a stranger, that puts the salesman to the test. Therefore, the salesman, in order to understand people, must study types or classes. The salesman who imagines that others are always attracted and interested by exactly the same things that attract and interest him, is sure to go wrong sometimes. The retailing of footwear and the necessity of proper

fitting, makes it most interesting, particularly to the man (proprietor or salesman) who is always open to learn.

My idea is that when a fellow is young, that is the time to get out and combine the experience of different stores. This need not necessarily be of the unsettled kind, but of the ambitious kind.

Ability in Fitting the Foot

Do not ask for your size, ask to be fitted, This is a very good motto for every store to follow.

One of the essential qualities of a good shoe salesman is his ability to fit the foot properly. Failure to do so means carelessness or incompetence, and no one can hope to become a successful business man, who possesses either of these faults.

An ill-fitting shoe is an abomination. Nothing serves to disappoint or provoke a customer more. A patron may return to complain about the wear of a shoe, but if he is poorly fitted, he will generally go elsewhere the next time, and is lost to the house for ever. On the other hand, there is nothing that will win the confidence and friendship of a customer more quickly than a painstaking fit. A customer will return to the same store, and ask for the salesman who was so careful and attentive in fitting him or her.

The measuring stick should always be used, for the salesman can give customers the impression of being more careful in getting a fit by the use of a stick.

Method of Obtaining the Size

The salesman should always remove the customer's shoe, as soon as he or she is seated and before showing him or her anything. This is the first step in making a sale. Look in the customer's old shoe for the size and use the measuring stick at once. The salesman's judgment as to the size the customer should have, should be made as accurately and quickly as possible. A very good impression is made upon the caller, when the first shoe brought out is a correct fit, whether the style entirely suits or not.

Some people are afflicted with false pride about the size of the shoe they wear. If such customers wish to know what size they are being fitted with, I think it right to give the information.

Shoeman's Enterprise in Findings Line

For two weeks of the year the population of the town of Sussex, N.B., is increased to the extent of about 3,000 men. This year in the season in question there was an augmentation of 3,400 men, and there was an especial business stir about the town for, with this vast number to be catered to, it is but natural that there should be unusual activity. It is toward the last of June and the first week of July that the

W. H. PLUMMER, SUSSEX, N.B.

men are encamped at Sussex, the citizen soldiers of New Brunswick, and particular care is taken by the merchants to try to attract their trade during their stay.

To the shoemen of the place there is a splendid possibility of sales increase and promotion, and it is readily taken advantage of. There are not such a great number of shoes sold but the findings are in brisk demand. W. H. Plummer manager of the shoe department of the Sussex Mercantile Co. is one of those alive to the possibilities of adding to the receipts of mid-summer slackness through the medium of the big militia encampment.

Each year he puts in a special camp window. It is unique in the number of suggestions it makes as to wants to be filled, for a wide variety of articles is presented to the passerby, from a pair of two-cent shoe laces, to a pair of water-proof \$10 boots. Shoe-blackening, creams in tan and white, foot-easers, in-soles, boot brushes, polishing outfits, heel cushions, articles for the relief of corns, bunions, etc., and a seemingly endless assortment of other lines in general shoe findings were to be found neatly and attractively arranged on the floor of the window and on the shelves in the rear of it.

Mr. Plummer said that there was always a brisk fortnight during the stay of the more than three thousand soldiers in camp. The number of boots sold was not so greatly increased because when the men came from outside centers to camp, they were generally quite well equipped in this regard, but it could be reasoned out that they would either not bother, or else would forget to bring many smaller articles in the general run of findings. It was on these that a special effort was made to "boost" the records of the department at camp. "It is surprising, too" said Mr. Plummer, "what the small things amount to, and once a man comes in after seeing something in the smaller wares which he wants, in the window, or otherwise in search of it, it may

be possible to suggest something in the boot and shoe stock. An effort can be made to interest him, anyhow."

Veteran Shoe Manufacturer Retires

After a busy, strenuous life of over thirty years in the shoe manufacturing line, W. A. Marsh, president of the Wm. A. Marsh Co., Limited, Quebec, intends retiring from the active management of the Company. It may be said there will not be any change in the name of the firm, nor its capital stock, and the business will be continued on the same progressive and well established lines as heretofore. The only change will be in the list of shareholders and board of directors. E. P. Mullarky, who for several years has been the capable superintendent, becomes managing director. In regard to the W. A. Marsh Co., Western, Limited, Mr. Marsh has disposed of a portion of his holdings to Arthur Congdon, and the business will be conducted under the management of that gentleman, the name of the firm being changed to Congdon & Marsh, Limited. The reason of the retirement of Mr. Marsh from active identification with the shoe trade is that, for many months, his health has not been good, and he needs a rest.

Mr. Marsh is a native of Quebec city, where he has resided for the past sixty-six years and has built up one of the largest shoe businesses in Canada. He has always been a man, broader and bigger than his immediate industrial interests, for there is no one in the Ancient Capital who has taken a deeper personal interest in the welfare of its citizens and of the community. He has been president of the Quebec Board of Trade, president of the Quebec branch of the Canadian Manufacturers' Association, one of the life governors of the Jeffery Hale Hospital, director of the Quebec Bank and various other enterprises. Three years ago he was Moderator of the Eastern Association of Baptist Churches in Quebec, and a vice president of the Quebec branch of the Lord's Day Alliance. He has also taken a large interest in Y. M. C. A. work, and has supported every worthy cause in charitable and religious endeavors. He, however, leaves the manufacturing end of the big shoe factory in competent

WM. A. MARSH, QUEBEC

hands, for Mr. Mullarky has, by his executive ability and thorough insight into fine shoemaking, commanded wide attention throughout the Dominion, and under his direction, there is no doubt that the Company will maintain the same prestige and strength as in the past.

H. P. and C. E. Blachford, of the Blachford Shoe Store, Yonge street, Toronto, are spending a few weeks at Mazengah Island, Lake Rosseau, Muskoka.

You Are If You Are

IF your name is not in the directory at the entrance of the building, not printed on the stationery of the firm, and at the same time your brain and courage are directing the affairs of the Company, you are in reality its Manager and Director.

No decision of a committee, no painted sign, no gold lettering on the door can ever give or deny you anything that is really yours. What difference does it really make whose name appears on the stationery. The only thing that matters is the future—the opportunity to develop personal power, dignity and character, that neither man, nor type, nor ink, nor time can destroy.

If you are perturbed and vexed over your standing and position, over the size of type in which your name appears—remember some fine day when the wind is East, when you are quibbling and wrangling over things that do not really matter, and never can—someone, somewhere, who is at work—improving his mind, taking inventory of his moral and mental stock—will soon pass you along the trail.

You can never be Manager of anything or anybody by simply saying so—or by being appointed so. You can never be Manager of a department or a business by being elected Manager—you must be it. You are if you are, and if you are not, if you do not measure up to your job, no Directors' Meeting, no change in the Company's letter-head can change or alter the fact that you have failed.

Oh, I know Fame and Wealth are magic words, but you look back through the history you have read—down the list of names of noted men and women you have known—and, unless there was something substantial back of their dreams and ideals, what they really found after they had closed their hands over the rainbow of their fancy was an empty nothing—filled with unfounded hopes.

You cannot acquire position, fame, character and happiness by pursuing these things in themselves, but if you apply yourself to accomplish a certain thing because it is your life's work to accomplish it, your work will be followed by the success it deserves.

A boy with neither education nor experience—working for a salary of \$8.00 a week can set up your name in 36 point type, but only a few men in a generation set up the physical, moral and mental monument that makes the MAN.

Putting in Suitable and Striking Midsummer Window

Here are Two Sketches for the Proper Presentation of the Lines You Desire to Clear Out—Each May Be Installed at Small Cost—The Backgrounds are Effective and the Central Idea of "Saving" is Featured Strongly

Have you started your mid-summer sale? This is about the time of the year when retailers in many centres conduct a clearance of summer lines in order to make room for new fall goods. Some dealers begin about the middle of July while others hold off until August. The state of the weather, the condition of a man's stock, the kind of trade he has been doing, etc., must govern him in his decision. It is true that some footwear merchants never have a mid-summer sale. They say they do not believe in the practice and have other methods of getting rid of odds and ends.

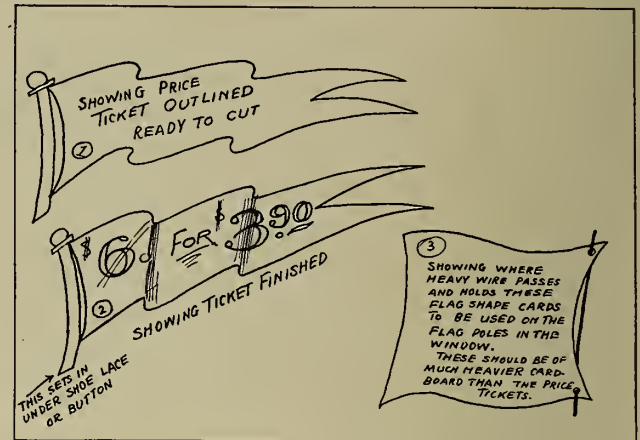

Whether the warm weather sale—call it by whatever name you like—is necessary or advisable—it is not the object of this article to discuss. The sale is an institution in many centres and evidently has come to stay.

The SHOE AND LEATHER JOURNAL in this issue presents some simple, practical suggestions for suitable windows of the mid-summer event. One is adapted for the city retailer and the other for the man doing business in a smaller centre. Try your hand in installing a window background of the character outlined here. Make your sale a "hummer" if you inaugurate one. A striking window display will materially contribute to that end.

For the City Dealer—The Cost, \$5.00

Three poles should be purchased with knobs on top. If the same costs too much, use square poles. A stiff wire should be bent and fastened from the top, and bottom. Before fastening, the flag shape cards (Fig. 3) already lettered should be put through. You will find that these will hold on

the wire on account of having to be bent. The poles should be at each end of the window, at the front against the glass.

The centre base, and step effect is cut out of three inch lumber and covered in felt or white crepe paper.

One of the poles as will be seen in the sketch, is fastened through this vase and the card with the word "sale" should be also put through the wire before the same is fastened. Another card of the same shape and almost as large as the "sale" card, should be nailed on the centre pole as in the

sketch, and could have wording or prices as the trimmer wishes.

Shoe should be shown either in pairs, with the window well filled, or on stands and pairs as the trimmer likes. A strip at the top with some kind of wording about a summer sale should be used against the glass.

This sale idea is exceptionally simple. Figures 1 and 2 in the small sketch show how to proceed to make the price tickets, a good opportunity for boys with small experience to do something as there is nothing difficult about it.

The cost would be about as follows if done by the employee.

Cost of cardboard:

| | |
|-----------------------------------|--------------|
| 2 20 x 40 sheets at 15 cents..... | \$.30 |
| 2 20 x 40 sheets at 15 cents..... | .30 |
| 1 20 x 40 sheets at 15 cents..... | .15 |
| Lettering paint..... | .25 |
| Poles, about 50 cents each..... | 1.50 |
| Felt, 3 yards at 75 cents..... | 2.25 |
| Wire..... | .25 |
| | <hr/> \$5.00 |

If crepe paper is used instead of felt, it would be about \$2.00 less.

If cards and tickets have to be made outside, I believe the whole bunch of cards and tickets could be contracted for about \$6.00 or \$7.00, bringing the whole cost, if crepe paper is used, about \$7.50.

Idea for the Country Store—Cost, \$1.00

Nothing more simple could be imagined and carried out than this idea for the small merchant, as it requires no skill or talent and the cost is nothing to speak of.

To make the \$ sign if possible, the trimmer should try to buy as large a sheet of cardboard as he can, or if he is in

lettered by a card writer, the cost should not be over 25 cents each. Counting the paint, the shoe idea shouldn't entail more than \$1.00. Only a little time is required and inexperienced trimmers should not hesitate. A child could carry out this idea with a saw, hammer, and pencil.

A New Version of Familiar Letter

Montreal, July 9, 1914

Dear Sir:—

Knowing that you are interested always, and open for an investment in Good Live Business Propositions, I take the liberty of presenting to you what seems to me to be the most wonderful business, and in which, no doubt, you will take a lively interest, and perhaps write me by return mail the amount of stock that you wish to subscribe for toward the formation of this Company.

The object of this Company is to operate a large Cat Ranch in Northern Ontario, where land can be purchased cheap for the purpose.

To start with, we will collect about one hundred thousand (100,000) cats, each cat will average twelve kittens a year. The skins run from ten cents (10c) each for the white ones, to seventy-five cents (75c) for the pure blacks. This will give us twelve million (12,000,000) skins a year, to sell at the average of 30c a piece, making our revenue about Ten Thousand Dollars (\$10,000) a day Gross.

A man can skin fifty (50) cats per day, at Two Dollars (\$2.00).

It will take 100 men to operate the Ranch, therefore, the net profit will be about Nine Thousand, Eight Hundred Dollars (\$9,800) per day after paying the expenses.

We will start a Rat Ranch next door and feed the Cats on the Rats.

The Rats multiply four times as fast as the cats. If we start with one Million rats, we will have, therefore, four rats per day for each cat.

And then we will feed the rats on the carcasses of the cats, from which the skins have been taken, giving each rat a fourth of a cat.

It will thus be seen that the business will be self-acting, and automatic all the way through, the cats will eat the rats, and the rats will eat the cats, and we will get the skins.

Eventually we will cross the cats with Snakes, and they will then skin themselves once a year, and thus save the cost of the men's wages for skinning them.

Awaiting your prompt reply, and trusting that you will appreciate this opportunity to get rich quickly, I remain,

Yours very truly,
(Sgd.) J. G. CATTARATT.

Some Leading Parisian Styles

The silk top shoe will supplant the popular cloth top for fall says a Paris correspondent. M. Rodier reports large orders placed by well known Parisian shoe houses for the heavy tete de negre and navy blue moire poplins, and tan and cafe au lait Ottoman silks. These fabrics, having been tested, are said to withstand the strain and are admirably suited for the elegant styles in footwear.

The high boots and pumps of navy blue leather are very fashionable at the moment for wear with tailored suits. With dressy costumes the tango slippers, with black satin vamp and black velvet upper are much in vogue.

The shops display, for summer, styles in linen and pique footwear; a novelty made up in the latter material is a slipper with a strap across ankle, decorated on one side with a small, colored, celluloid buckle.

The short vamp, round tread shoe or slipper continues to be popular with French women, and many American stores in Paris and Berlin have modified the long vamp shoes to conform to native taste.

a very small place, when he can't buy such, take a cover of a shoe case and draw out on it this dollar sign, and with the aid of a little key hole saw, cut out where outlined. The different pieces should be held together at the back with small strips, and if cardboard is used, small strips should be glued on the back, to hold the same in shape. If wood is used paint white, giving it two coats. The stands on each side, require very little explanation. Make them out of pieces of shoe cases and paint them white. Pairs of shoes should be suspended as shown in the sketch with clasp hooks, or if impossible to get same, use small wire.

Two paper strips, one at the top and one at the bottom against the glass on the inside, with wording regarding the "saving of dollars," should be made. If the same have to be

What is the Goodwill of Your Business Really Worth?

Goodwill Is the Reasonable Expectation of Future Patronage Based on Past Satisfactory Dealings—Its Value as an Asset and How It Can Be Built Up—Monopoly Does Not Compel Trade

"George," said his mother to her small boy, "here's a penny. Run down to the grocery and get me a cake of yeast." After the digressions and diversions characteristic of small boys and just within the limit of tolerance, George returns with the yeast. "Where have you been?" says his mother with the accent on the have. "You've been gone twice as long as you should have." "I went to that new, shiny grocery on Main street," says the boy. "What possessed you to go there? Don't you ever do such a thing again. You know we always trade at Johnson's."

Mr. Johnson's continuance in business depends on George's mother, and others like her who "always trade" with him. This collective friendliness is good will.

Most people approach good will from the wrong end. It is commonly thought of as a thing to put into appraisals and bills of sale as an excuse for an issue of watered stock—a catch-all to pad a schedule of assets. As a matter of fact, however, it is a thing which concerns almost everyone. We are, all of us, as individuals, constituents which go to make up the good will of those with whom we trade. If we are manufacturing or jobbing or shopkeeping for ourselves, we have an opportunity of building a good will of our own. If we are employees we are instruments in the creation of good will for our employers.

It Is an Elusive Element

As with all intangible things, good will is hard to place mentally. Like reputation, popularity and friendliness, it is so elusive that there is little wonder its value and its very existence are so frequently ignored. Like character and reputation in an individual—the things which enable anyone to associate with his fellows—good will, is what perpetuates a business.

Good will is that which makes to-morrow's business

more than an incident. It is the reasonable expectation of future patronage based on past satisfactory dealings. Promiscuous and casual customers or clients do not pay the profits. Those who come regularly do. These persons have found the dealer trustworthy, his goods of high quality, his skill and knowledge commendable. They have been satisfied with the treatment they have received in the past and loath, in the absence of some reliable recommendation or special circumstance, to risk transferring their custom to another. It is this hope and probability that keeps a business going and gives it a selling value above that of its leasehold, equipment and stock.

"The only proper significance of the word," says Professor Parsons, "must be that benefit or advantage which rests only on the good will or kind and friendly feelings of others. It is, after all, nothing more than a hope grounded upon a probability."

But to lump into the one item of good will all the trade expectations of a business where people must of necessity buy, is inaccurate. The railway lunch counter, the exclusive cab or baggage line, the gas, electric or telephone company and the street car company expect continued patronage, but this anticipation arises chiefly out of the public's necessity not from their choice. It is scarcely an advantage obtained through long continued business or good service. The enforced absence of competition is, of course, a valuable thing, and is frequently called and appraised as good will; but it is not good will properly speaking. It is not a voluntary preference of one trade over another. The public has no alternative.

Even Monopolies Value Good Will

But monopoly may not compel trade. In the case of a railway dining car the passenger to whom the conductor

SOME ATTRACTIVE LABELS OF ENTERPRISING CANADIAN SHOE RETAILERS

has been uncivil may choose to go hungry rather than risk repetition.

Even the concern with trade expectations that depends on monopoly is, however, coming to recognize the value of true good will. Its public, if untactfully treated, will go without, will accept a makeshift, will make selling more difficult, franchises precarious, regulation oppressive. To cultivate a genuine good will asset, to demand respect for all the observances which build up true friendliness—has a place, therefore, in the enlightened policy even of a business that excludes competition.

This division suggests also a method of clearing up some of the confusion that exists in the appraisal of good will and trade names. To split away and separately value the monopoly factors of trade expectancy is perhaps the first step in estimating the worth of true good will. To eliminate from the computation first the continued expectancy of business of those who return because they must and leave as the basis of real good will the probability the continued patronage of those who return because they choose. On actual friendliness—the hope and probability of future trade due to past satisfaction, it is then possible to estimate (1) the prospective rate of profit, (2) the probable endurance of this friendliness, and hence, (3) its capital value. Necessarily, however, even with the closest study of the history of a business to be bought or sold, the good will item is uncertain because of the questions that arise regarding its transference and because good will is so sensitive to the effects of every house policy and every attack upon it from without.

Built by Friendliness and Tact

Many concerns have built up assets of good will in a remarkably short time by definite methods of friendliness and tact, just as some salesmen have made themselves solidly popular in a short time by a card follow-up which enabled them to fit in with their prospects' hobbies and to avoid controversial subjects. It is suggestive, if nothing more, for the heads of a business to consider (1) the classes whose good will of one sort or another is important; (2) the chief points of contact with each of these groups. Under the first heading, instances are readily at hand where firms prospered or lost through the good will of the body of consumers to whom the product is sold, the general public which in a social way expresses its friendliness to or distrust of every business and perhaps of others from whom capital, support, supplies or transportation must be sought.

The Main Points of Contact

Among the good will points of contact—the experiences from which those who view a concern externally draw their ideas of a business, the most important probably are:

1. Advertising.
2. Personal contact.
3. Service and deliveries.
4. The product in use.

When an ordinary person decides to make a purchase or a dealer plans to lay in stock, in almost every instance he must make a choice between several articles, individuals or establishments. Usually he has some past experience as a background. Of two haberdashers with whom he has traded before, a man returns to the store of which he has the pleasantest recollections. He is not inclined to experiment with a third without reason. He recalls, perhaps that at one store, when he asked for a "union suit at about a dollar and a half," the salesman intimated by his manner that people of respectability never pay less than three dollars for such a garment. That or some like experience has left an unpleasant impression, so he goes to the other store. Here he is greeted by name and shown exactly what he asks for, which involves the implied compliment that he knows what he wants.

It may be the height of salesmanship to sell a man who wants a dollar and a half union suit, one costing him

three dollars. If in so doing, however, the customer is made uncomfortable, he gets even in the only way open to him—he does not come again. The store has lost his good will. Palpable effort to make a customer spend more money than he intended is dangerous to good will.

A big suit store has recently faced the same danger. The store was a plain, unpretentious looking place, where a man with only fifteen dollars to spend for a suit, felt as good as the firm. He was a patron—not a petitioner. He bought—and what is more, he came again. Consequently the store built upon a large twelve-to-fifteen dollar suit trade. The profits from this great middle class and its good will finally enabled the proprietor to put up a new building. He built in the immediate neighborhood but of granite, with plate glass and gilt chandeliers, carpeted floors and mahogany fixtures. But the twelve-to-fifteen dollar trade has not followed to the new store. The man with twelve dollars to invest in a new suit does not feel at home in such a place. From the looks of it, he judges that he will be expected to spend more. The sales record of the new shop was not long in showing the absence of one great sustaining class of its trade. The new store has unwittingly made itself unpleasant for the twelve-dollar man and lost his good will.

Another seasoned merchant saw this danger to good will in time. When he got ready to put up a new building, his architect suggested something with marble columns and elaborate fittings. "No," said the merchant, "I have made my money selling plain things to plain people—I do not want to scare them away." The new store he erected was plain, practical, convenient; and it retained the good will of its trade.

Index of a Valuable Asset

The expression occasionally heard, "they are nice people to do business with," is more than an empty compliment. It is the index of a valuable asset, and just as such an expression spreads good will, ill will also multiplies through unfriendly word of mouth. Smoking car gossip sends many a guest to a particular hotel and keeps many away from their intended patronage.

To remember names and call people by their own is as subtle a compliment as one can pay another. People who are not fugitives from justice like to go where they are known and recognized. They like to have their tastes and peculiarities remembered by those with whom they come in contact. This point of contact, wherever it may occur, is where good or ill will is chiefly made. It may be in correspondence—many a customer has been lost by a complaint letter which in attempting to be firm was only unreasonable, or in attempting to be vigorous was merely offensive.

Good will is business health. In an individual anything that lowers resistance invites disease. In a business an impaired good will encourages the attack of competition.

A shop which burned recently, announced before the fire was out that a new stock had been ordered, a salesroom conveniently near leased, and arrangements made to care for trade on the following morning. Probably the shop keeper felt it was unwise to have an interruption of his business, as of course it was, but the danger lay in forcing his customers, even for a few days, to trade at other stores with the possibility of acquiring a permanent habit on the part of some of them of continuing with the other shopkeepers—of having their good will transferred—their affections alienated.

How the Public Judges

The public is unlikely to distinguish between the professional and the personal acts of a proprietor, and is almost sure to judge all parts of a business by the one service or blunder which they first became acquainted with a house.

(Continued on page 26)

Waterproofing Shoe Bottoms

"There is no better scheme, my boy, to make a waterproof bottom shoe, than by the insertion of a bladder between the soles," said an old custom shoemaker to the writer. This may have been all right once and perhaps it is now, but modern shoe findings firms have substituted many artificial materials for the natural ones that answer the purpose fully as well and in many cases are much better, besides being much more convenient, as a rule.

There is on the market to-day a thin sheeting of skin-like fibre which is absolutely waterproof and which can be inserted between the soles, covering the bottom and protruding at the edges. It is so thin that it does not interfere with the setting of the edge, but can be discerned at close inspection and is, therefore, a big talking point for waterproof shoes. Nails will not interfere with the wearing qualities of this material, as rust will not eat in as it does into leather.

A rubber sheeting will not answer this purpose, as rubber will cause perspiration, many people believe, no matter how far distant it may be placed from the feet. We live in an age of rubber soled shoes, and these are the best for waterproofing and cushioning the buttons.

Repairers should bear in mind that the cushion shoe bottom is very popular and will be demanded, even in the repair shop. Remember the story of the man who foresaw the coming demand for kid shoes and made a fortune before the other fellows woke up. The best cushion is made from small pieces of woolens; it means a bottom that will wear, yield, and spring.

Put Whole Soles on Shoes

In the caricatures which we see frequently in the newspapers, representing the man from the country or some prominent man in the role of country "Rube," have you noticed that the shoes are invariably heavy, coarse, hob-nailed affairs, that have been half-soled at least once? says the Shoe Repairer and Dealer.

Extravagance in clothes is characteristic of the present generation. The up-to-date person must have new shoes or shoes that when repaired look like new shoes. The old method of half-soleing will not do to-day any more than the fashionable squeak of the new shoes of former days which the wearer was so proud of would be tolerated to-day.

There is less money for the repairer in half-soleing and less satisfaction to the wearer, so why the half-soles, Mr. Repairer?

The following if made up in the form of a sign and hung in the repairer's shop might furnish food for thought:

**Don't Do Things by Halves. Even when
you kick, put your whole sole Into It.**

Encourage the customer to get a complete and satisfactory job at a better price. Show him that he is not getting a patched looking old shoe repaired at a cheap price, but for a little extra money, is getting a new pair of shoes for the price of a good repair job.

It is in little ways that big fortunes are made. The difference in half-soleing and whole-soleing will mean a good deal in a year's time. So put on all the whole soles you can.

Abolish the Word "Niggerhead"

The friends of J. W. Matzeliger, inventor of the consolidated hand method lasting machine make the request that the word "Niggerhead laster" be dispensed with in designating this machine.

Entirely aside from the fact that this wonderful machine deserves a more dignified appellation, the name is, it is said

by his friends, a misnomer inasmuch as Mr. Matzeliger was not a negro but a native of Dutch Guiana.

The name "Niggerhead" was first applied in derision of the idea that it was possible to produce a machine to do the work of hand lasters and the fact that Matzeliger, in spite of poverty and the sneers and ridicule of his fellows, was able to demonstrate to practical machinery builders and capitalists that his device had merit, is a compliment to his ability that deserves a better reward in history than a derisive title which has its origin in the belief of the impracticability and ultimate failure of his idea.

All those connected with the shoe industry, and especially practical shoemakers, no matter what their attitude is toward the machine, should assist in removing the stigma of failure and ridicule from his memory by applying the more dignified name of Hand Method Lasting Machine to his invention and forever drop the name of ignominy and ridicule. Mr. Matzeliger was a man of excellent character and habits.—American Shoemaking.

Stitching On Rubber Soles

If you can do that as it should be done, you are wiser than many shoe manufacturers who are striving to do so like a fly trying to get off sticky paper.

The needle and the awl of the outsole stitcher stick at every stitch, which means very slow speed and very poor workmanship. The stitches are not tight as a tight stitch cuts through the sole, and loose stitches carry a lack of uniformity which is much despised at outsole stitching. The stitches must be three or four to the inch and so summing up, we find that shoe manufacturers, as a general rule, do not care to bother with rubber soles, and many people who could afford to pay the price, refuse to buy rubber-soled shoes that are half stitched on, especially in the shank.

So far nothing really interesting has been said, as we are already aware of all the objections herein mentioned, but the writer was not aware until a few days ago that all troubles were a thing of the past with a particular rubber sole.

This sole is mostly pure rubber combined with leather fibre at the time of the moulding. The process enables the outsole stitching machine operator to put on as many as ten stitches to the inch. The soles are yielding, non-slipping and wear longer than pure rubber soles. The writer has seen the soles on one person's shoes nearly half worn down and was surprised to note that every stitch held as solidly as when first set in. The seam was tight and no part of the sole was cut in by the thread, in fact, the seam was so tight that the centre of the bottom was bulged out a bit over the plane of the outsole seam.

What is the Goodwill of Your Business Really Worth?

(Continued from page 25)

Good will conservation through correct and diplomatic house policies is a problem as big as the business itself, but it can be definitely approached by listing the classes whose good will is important to you and then examining your policy at every point of contact with any of these classes.

The cultivation and conservation of good will as an asset requires the adoption and use of means by which it may be fixed in the mind of the public. This means once established must be protected from policies originating within by which its virtue as an identification and a symbol of good will may be impaired, and from assaults from without by which its value is sought to be unfairly appropriated by others.—Edward S. Rogers, in "System."

HOW "MARBLE DAY" DREW A GREAT CONCOURSE OF JUVENILES IN FRONT OF YARMOUTH SHOE STORE

"Marble Day" Blocked the Streets With Youngsters

Novel Publicity Scheme of Yarmouth Shoe House Which Proved Highly Successful—How the Event Was Advertised in the Schools—Five Hundred Bags Were Given Away—A Live Firm in the Maritime Provinces

Marble Day! Look at the great crowd of youngsters gathered in front of the shoe store. Did you ever see such a swarm of juvenile humanity? See how the street is blocked with the shouting throng of urchins, washed and unwashed! What is it all about? What has proved the magnet to draw the kiddies from far and wide? Just Marble Day!

This proved to be a decided novelty in the way of advertising, which was inaugurated by Porter and Robbins, Yarmouth, N.S. The firm consider the event was a decided

miles in the country. A few failed to secure a bag of marbles' as the event turned out to be a much more attractive one than the firm had estimated. For a week after, all the youngsters in Yarmouth and vicinity were playing Porter and Robbins marbles and their seniors laughed heartily at the rush made to get them.

The total cost of this novel publicity plan did not exceed \$30. "We think it was money well spent," said a member of the firm, "and would go well for another year or two. Business with us is fine, although money is a little tight at present."

Porter and Robbins have been in business in Yarmouth for the past nine years, having a fine store in the Studio Block. The members of the firm are Leslie T. Porter and J. J. C. Robbins, who have had many years of experience in the footwear game. They have worked up a solid, substantial, family trade and are among the brightest and most alert shoemen in the Maritime provinces. They certainly make a strong team, and pull well together, having been personal friends for a long time before going into partnership. Each clerked for several years for S. A. Crowell in the shoe department.

AN INTERIOR VIEW OF THE STORE

success, first, because it was novel, and second, because it made a hit, with both old and young.

The plan was advertised in the local papers and on the morning of the day in question dodgers were circulated in all the town schools. Fully an hour before the time of distribution, the main thoroughfare of Yarmouth, was literally blocked. Porter and Robbins opened their doors to the boys at 4 p.m. sharp and at 4.15 they had given the last of 500 bags of marbles away. There may have had 600 children in the group, as some came from the schools several

Have You a Good Mailing List?

As has been said before, the value of a good mailing list can hardly be over-emphasized. It must, however, be kept fresh and up to the minute. Even though you should mail circulars under one-cent postage, send some matter occasionally with a two-cent stamp in order to verify the accuracy of your names and address.

Many shoe merchants keep names of every person who buys shoes, and this record includes also the date of sale and the size and style of the shoe purchased. This gives the shoe merchant information that is invaluable—a mailing list which, when it attains a respectable size, he would not part with for any sum.

Every shoeman should have a complete series of form letters to be sent out to his mailing list:—one form following up dissatisfied customers; another following up persons who have not made purchases for some little time; still another following up these letters.

New Position for Mr. Hayward

H. K. Hayward, who has been appointed superintendent of the Blachford Shoe Manufacturing Co., Toronto, makers of women's welts, has had a thorough and extended experience in the manufacturing line. Born in Peterboro, Ont., he secured his first job with Utz & Dunn Co., Rochester, with

UNITED SHOE MACHINERY CO. GROUP

when he spent seven years on Goodyear welts and turns. He was then with Friedman Brothers, St. Louis, Mo., for some time, after which he took a position in the American Lady factory of the Hamilton, Brown Shoe Co., St. Louis, which has a capacity of 4,500 pairs a day. Mr. Hayward was foreman of the ladies' turns and McKays. He then joined the United Shoe Machinery Co.'s staff with whom he remained ten years, starting in St. Louis and being transferred to Boston and Lynn. Later he was in the Montreal office for two years and in the Toronto office for six years, in the Goodyear department. After leaving the United Shoe Machinery Co., he spent a year in charge of the ladies' welts, turns and McKays with Getty & Scott, Galt. He has many friends in the trade, who will wish him every success in his new position, on which he brings to bear intelligence, application and a splendid knowledge of good shoemaking. Mr. Hayward is seen in the rear of the picture on the left. Others in the group are:—Standing—Ed. Palmer, U. S. M. Co., Amherst, N.S.; Art Coleman, U.S.M. Co., Montreal; William King, U.S.M. Co., Montreal. Seated, from left to right are—Theo. Hawley, formerly U.S.M. Co., Montreal; Tom Scott, superintendent U.S.M. factory, Montreal; A. Berube, U.S.M. Co., Montreal, and H. W. Algeo, U.S.M. Co., Montreal.

Become a Specialist in Shoes

"The reason I am where I am to-day," declared the sales manager of a leading shoe manufacturing concern, "is that I have studied footgear all my life. I do not say this vauntingly, but a good many fellows wonder how I have got on so well. I read practically every trade journal that I can get hold of. I keep closely in touch with market conditions, style tendencies, new processes, labor saving devices and, in fact, everything that has any connection, either immediate or remote, with the production of a shoe. I have been called a — fool for devoting so much of my time and attention to shoes, but I get so I love them. I know each one, even down to its finest details. In fact, I have thought out all about materials, patterns, lasts and models long before any of them have taken definite shape. All this has not

been brought about without a good deal of study and self denial. I may say that I know nothing about Longfellow, Dickens, Shakespeare, Shelley or Milton. If you take me out of the range of my own business, I am lamentably ignorant, but in the realm of shoes, noting their fine points, their distinctive lines, their useful curves, their attractive characteristics, etc., I do not think I can be surpassed by many.

"The trouble with most people in the shoe business is that they have a merely superficial knowledge, and only a moderate acquaintance with values. They do not 'get down and get under,' as the old song has it, and the young man who does this is the one who is going to make a signal success in the trade to-day. You cannot possess too much knowledge about the line which you handle.

The really competent man—the one who possesses something in the way of insight, experience or inherent appreciation that the other fellow has not—is the one who forges ahead in the selling game to-day."

A Choice Range for Spring

The spring samples of Clark Brothers, the new shoe manufacturing firm of St. Stephen, N.B., are right up to the minute in fit, finish, style and workmanship. The firm have seven new lasts, most of them being of the conservative type, while one or two have recede toes and carry short vamps. Clark Brothers make imitation Goodyear welts and in the high cuts is seen a representative selection in patent, gun metal and kid, many having cloth tops and others fancy brocade quarters. Cuban and spool heels of 15/8 height are seen. In the shoes the best oak sole leather is used, also oak inner soles and oak counters, while for topping full grain matt calf is employed by this progressive firm, who maintain that their shoes possess all the comfort, wear, style and workmanship of Goodyear welts. A fine line of colonials and pumps was also displayed in all colors of suede, patent, gun metal

JAS. T. CLARK, ST. STEPHEN, N.B.

and a few tans. James T. Clark, sales manager of the company, was in Toronto last week showing the line and is now in the West visiting the jobbing trade in Winnipeg and other cities. He reports business as being very good and the trade enthusiastic over his up-to-date samples.

What Opportunity Has the Shoe Clerk to Advance?

If He Takes an Interest in the Business Other than Merely Waiting On Customers, Studies the Boss's Methods of Running Things and Managing Help, and Learns to Analyze the Reason for What is Done and What is Not Done He Has Every Chance for the Future

THE THREEFOLD CHANCES

First, in the store he is in, whether a big or little shop, where advancement is always possible with intelligence and perseverance;

Second, in the fast-widening field of department store shoe selling, where varied selling experience of the specialty-store type is required;

Third, as manager or buyer for shoe stores and shoe departments where a well-grounded knowledge of the shoe business is the first requisite.

"I'm going to quit! Going to get out of here and look for a better job!" This came in explosive English from the clerk whose station was nearest the street entrance—next to the head clerk's station of the most exclusive shoe store in town.

The remarks were directed to the world in general, but the head clerk was the only part of the world within earshot. He was a sensible, clean-cut looking young man—as, indeed, was the complaining one, so far as that goes.

"If a man sticks around a place like this very long, he'll never get anywhere. That's the way I've got it doped out."

Then a customer came in, and the soliloquy stopped for the time being. The customer was a pleasant young person, chic appearing, well-bred and soft-voiced. She was soon fitted and took her departure with a pleasant "Good morning!"

Interesting Work After All

"Well, I would like to wait on about fifty like her every day. She buys good shoes and knows what she wants. She's a regular customer of mine, too." This to the head clerk.

The head clerk smiled understandingly. "I thought you didn't like the shoe business. You just said you were going to get out and go where you could get somewhere."

"Well, I am, but that isn't any reason why I should not appreciate a good customer, is it? It is the lack of opportunity that bothers me. Where is a man going to land selling shoes in a burg like this at seventeen dollars a week? Tell me that."

The head clerk changed his smile of amusement to a serious expression. He straightened his collar and looked directly at his discontented confrere.

The Head Clerk's Homily

"Al right! I'll tell you. It's about lunch time. We'll go down to Barney's cafe together. And I'll tell you—and glad of the chance."

So they went to lunch together, the clerk who liked good customers and the head clerk.

Barney's was a cool, quiet place and the food was good. There were secluded tables for two. The two shoe clerks sat down.

"You want to know where you are going to get finally, eh, if you stick to selling shoes for the boss?"

"That's just it. Where? I'd love to know, Mr. Head Clerk." This last was muffled somewhat by a goodly spoonful of Barney's delicious cream of celery soup. "I'd love to know just where I am going to land."

The head clerk leaned forward. "You can land at the head of a big shoe department somewhere, or as the manager of a big city shoe store. That's where. But it depends on you."

The clerk laughed in mild derision. "Ha, ha! That's what the boss told me three years ago. But I'm still a shoe clerk and still getting seventeen every Saturday."

"Do you know anything about the shoe business?" said the head salesman.

The Actual Conditions

"Anything about the shoe business!" exclaimed the clerk. "Why, what do you mean? I—"

"Oh, don't misunderstand me. I know you understand selling shoes. But do you know enough about shoe merchandising to manage a store or a shoe department? Could you honestly assume the responsibility of buying and supervising all the essential details necessary to make shoe selling profitable?"

"Well I don't know about that. I have never had a chance to try it."

"Then I am going to tell you something about your opportunity. Listen!"

The clerk listened while he ate his lunch. The head clerk ate and talked.

"It isn't likely that you will ever get a chance to try it until you are capable of doing it. It's up to you to acquire the knowledge."

"It is true that you get only seventeen dollars a week, and there may not be a great chance to advance there; but you couldn't have a better opportunity to prepare yourself for that better job somewhere else when that better job comes. This is a small city, you must remember—only twelve thousand. But the people here have money and they have good taste. They are discriminating customers, the kind that develop good clerks."

More Than a Salary

"The boss likes you, and he likes your work. Seventeen dollars isn't his limit for you, either, if you stick. And, anyway, that isn't so bad for a town like this. And you are getting something besides money, too. Don't forget that!"

"What is it I'm getting?" queried the clerk.

"You're getting shoe experience you could not get anywhere else. We are in a good store, where good goods are sold. We have a shrewd business man as a proprietor. He knows shoes. He knows shoe selling. He knows shoe buying. He is a fine trainer to work under."

"Yes, I know all that. But—"

"Just wait a moment! Do you know that more and more stores—department stores and dry goods stores—are putting in shoe departments? Do you know that good buyers and managers are hard to get? The kind that know stock from A to Z, and that can buy, sell and manage; the kind that have had the all-around training you and I are getting? And do you know that as fast as a buyer makes good in one store he goes to a bigger one?"

"No, I did not know that."

"Well, it's true anyway; more true in the shoe business than in any other line—positively. And that is the reason why you should take a broader view of your job. Take an interest in this business other than merely waiting on cus-

tomers. Study the boss's methods of running the business and managing help. Learn to analyze the reason for what is done and what is not done.

Do You Know the Business ?

"It is a well-known fact," continued the head clerk, "that many department stores are willing to put in shoe departments on a commission basis, feeling that they do not know enough about the line to make it go themselves. There, you see, is a good sign that shoe men who know the shoe business are in demand."

"That would please me fine to put a shoe department in a big department store on commission. I'd like that."

"Yes, I know you would like it. But wouldn't you like it better if you could be the well paid and responsible buyer of shoes for a big store? You would not only get a salary, but you could earn a big yearly bonus by making the department pay."

"That sounds all right, too. Where can I get a position like that?"

"That I don't know. If I did I'd take it myself. I know I could hold it," said the head clerk.

"And I could take your job, I suppose?"

"Yes, that would be advancement wouldn't it?"

"Yes."

What Makes for Experience

"Then the next department buyer job that loomed up you could take. But neither of us could buy for a big store until we can buy for a little one—the kind we are in. It is waiting on customers like the one you fitted before lunch that makes experienced shoe men of us."

"Yes, sir, you're right," said the clerk. "It looks like a good field. What time you got?"

"It's one-thirty. We must be moving back toward the store."

Paul, the waiter, smiled at the tip he found on the side of the table where \$17-a-week clerk had sat. It was a generous one. The kind that only a contented, ambitious clerk would give a good waiter like Paul.

The shoe clerk who loves his work and knows shoes has a big opportunity ahead of him. All he needs to do is to fill his present job so full that he overflows it.—The Dry Goods Economist.

John T. Clark, of Clark Brothers, shoe manufacturers, St. Stephen, N.B., was in Boston last week attending the Shoe and Leather Market Fair, for several days.

Some Artistic Spring Styles

The Perth Shoe Co., Limited, have turned out an exceptionally fine line of samples for the spring trade. The range is by far the most representative and snappiest ever produced by the company, who specialize on women's welts exclusively. Four new lasts have been installed, one being a stage last and another has the moderate recede toe, with medium vamp. In low cuts, the showing is exceptionally strong, Cleopatras, Colonials, and pumps being seen in patent, gunmetal, kid, suede, etc. Brocade and cloth quarters are also in evidence. A variety of ornaments is shown in oxidized buckles, rhinestones, cut steel, silver, celluloid, leather filled and silk bows. Heels on the low cuts are inclined to be a trifle higher, from 14-8 to 16-8. Spool and Cuban are shown, and something decidedly new is seen, and is catching on remarkably well. It is known by the firm as Konkave Kuban or "K.K." heel. In high cuts, there are receding toes and medium vamps, together with a short stub toe. Patents are, of course, leading, with gunmetal a close favorite. Toppings are of cravenette, cloth and fancy brocades, as well as matt calf and matt kid. The whole quarter effect in fabrics is still displayed and is taking fairly well.

A decidedly snappy shoe is shown on a new last for growing girls, which has a fairly wide round toe, and very graceful lines. Soles are light and edges close trimmed. Plain toes appear to be meeting with a large measure of appreciation. For elderly women, the company are putting out a new shoe, known as the Cushion Comfort, which has a wide full toe, with cushion insole and is very flexible. It comes in kid and other leathers. The line was shown in Toronto and other western Ontario cities last week by G. H. Ansley, salesman of the firm.

Read Your Trade Paper

The man who is so burdened with work that he is unable to read his trade paper is in a rut. The chances are that man keeps his subordinates busy watching him demonstrate how to do all the work. The business man of to-day, the man who is forging ahead in the race for commercial success, is the man who keeps up to the minute—the man who studies the latest and most advanced ideas and applies them to his own business.

Once in a while we meet the man who says, "My desk is so littered with magazines and papers I can hardly pull down the curtain." That man is not the dictator of his own conscience. He knows that somewhere in that pile of literature there is at least one or two mediums worthy of his attention and the SHOE AND LEATHER JOURNAL is one.

Some examples of Parisian styles showing man's oxford with fancy foxing and cloth top and a woman's patent leather slipper with five strap effect, fancy perforation and cloth inset giving a collar effect.

Advantage of One-Price Selling

Someone contending for better business methods says in "Everybody's" that a federal law allowing all manufacturers to stipulate that their produce shall be sold at retail at a given price, no more, no less, would do much to improve things alike for buyer and seller. He says that a one-price article like a dollar watch, for example, known all over the country for what it is, is a stable product. It would be bad policy for any maker who has succeeded in establishing a one-price article to try to cut prices in competition with others. He reckons what it costs to make and market his watch, or breakfast food, and then he charges the consumer a just amount. When this price is cut by a dealer the dealer makes it up by overcharging for something else in his shop. Cutting prices is only worth while to the tradesman when he succeeds thereby in selling other things to the buyer who comes for his bargain sales. Now he must make up on the other things what he loses on the cut-price article. This means that people who buy the other things and not the bargain are helping pile up the shoeman's profits at their own cost.

Honesty means that a thing is sold for what it is worth, so much, and no more. What it is worth may depend in a sense on what the buyer is willing to pay, but not what he is forced to pay. In an open market, where there is free competition, the buyer may take the good article at a high price or the poor article at a low price. To put a high price on a cheap article is a sort of dishonesty which in the end betrays itself. People discover that the thing is not good. The name of the maker on any product may stand for substantial value and in time the buyer comes to know that he is getting what he pays for. If the middleman puts up the price of the established product because it is sure to sell he exposes the manufacturer to eventual loss when some other maker begins to make as good things at a less price. From every point of view, one-price articles are best, alike for manufacturer and consumer, and they will be found to be so for the middleman when one price gets firmly established.

It may be argued that dealers near the manufacturers profit more than those who sell his putout at a distance. This difference may rightly be divided between maker and middleman. The manufacturer gets his larger profits by the sales nearer home and the dealer gets his from other products that he buys nearer home. Meantime all these products by this system would be sold to the consumer at the same price all over the country.

Memorial to Sir Henry Trickett

There was a great demonstration of public enthusiasm recently at Waterfoot, near Bacup, on the occasion of the unveiling by Hon. Lewis Harcourt, M.P., of the memorial which has been raised to the memory of the late Sir Henry W. Trickett, J.P., the founder and head of the great slipper firm of Sir H. W. Trickett, Gaghills, Waterfoot. The directors of the firm and the workpeople of the three mills, numbering about 1,300 to 1,400, belonging to Gaghills, Globe, and British Quilting Co., Waterfoot, subscribed to the memorial, which is in the form of a public clock, a bronze bust of the late Sir Henry Trickett, and a commemoration tablet, the whole being erected into the front of the building over the entrance to the Trickett-arcade at Waterfoot, the entire memorial occupying about 14ft. of space. Messrs. Joyce, of Whitechurch, supplied the clock, and Mr. Brocklehurst, of Waterfoot, was the architect for the memorial. It will be remembered that Sir Henry Trickett, who was popularly known as "The Slipper King," was for five consecutive years Mayor of Rawtenstall, and was a freeman of the borough of Rawtenstall, of which Waterfoot forms a part. He died in August, 1913.

The memorial, designed by Mr. A. Brocklehurst, architect, consists of an imposing orial bay, built out of the main

wall of the Arcade. It is of selected Stancliffe stone, and has three recessed panels with carved enrichments at the top, and is carried at the base by rich ornamented corbels forming shields, surrounded by laurel leaves. In the center, below the clock, is placed the bronze tablet with the medallion of Sir Henry Trickett surrounded by a wreath of laurel leaves, and bearing the following inscription:—

This memorial clock erected as a token of esteem to Sir Henry Whittaker Trickett, Kt., J.P., a native of Waterfoot, five times Mayor of Rawtenstall, and a freeman of the borough. Unveiled by the Rt. Hon. L. Harcourt, M.P., on June 13, 1914

The gift of his workpeople.

The clock is placed in the centre panel, and is of special design, with two dials, so as to be seen from various points.

THE LATE SIR HENRY TRICKETT

The case and supporting brackets are of solid copper and gunmetal, and the whole of the workmanship is the best that could be obtained.

As the workpeople left Gaghill Mill, the mill of the Newchurch Boot Co. and the British Quilting Co., they were each presented with a memorial card, as a souvenir, containing a photo of Sir Henry, the text of the inscription on the bronze tablet, and the following: "Rest in peace. In memoriam. Unveiling of memorial to the late Sir Henry Trickett, J. P., C.C., on Saturday, June 13, 1914. The late Sir H. Trickett, born July 23, 1857, died August 3, 1913."

The proceedings were ably presided over by Mr. Oliver Eatough, managing director, Sir H. W. Trickett, Limited.

When You See It, Pick It Up

Whenever you talk with an interesting person with ideas and worth while principles you are bound to be stimulated both by that personality and by the mind beyond that personality. There is something in every one of you, so therefore, if that something crops out—

Pick it up.

Every book that you read, if it is of any value at all, has something in it distinctly and especially for you. Let its pages stimulate you and create for you new ideas to be moulded into some useful shape—and used. Every worthy author throws into his books the best that he has. Your cue is to continue in your acts and work his central suggestion. But first—

Pick it up.

All through the various strata of business are priceless treasures awaiting the sharp, ready eye of the alert, and the growing man or woman is the one who not only faces these things, but who picks them up. Get these three little words firmly fixed in your mind in connection with everything useful and valuable to you in this world. Remember in their connection, just as soon as you see anything that you can use—

Pick it up.

Some Resolutions for the Shoeman

1. I will not be a price cutter.
2. To this end I will study diligently to know what it costs me to sell my goods.
3. I will treat my creditor, my customer, my competitor, my employe, and myself with absolute fairness.
4. I will seek to know my competitors better, and will try to get them all into a local association, for regular social meetings.
5. I will endeavor to systematize my business, and secure the co-operation of my salesmen, so as to increase my volume of business to the maximum and reduce my cost of doing business to the lowest notch.
6. I will neglect no opportunity to improve my own business knowledge and condition, and to do what I can

FINDS IT STEADILY IMPROVING.

Enclosed find money order for the sum of \$1.00 for renewal of my subscription to the "Shoe and Leather Journal." I have been a subscriber to the Journal for a number of years and congratulate you on the many improvements.

Yours very truly,

A. McDERMAND.

Ingersoll, Ont.

THE JOURNAL IN ENGLAND

Enclosed we have pleasure in forwarding you a British postal order for 8/6 in payment of our subscription to January, 1915, for the "Shoe and Leather Journal." We find the publication a very good and useful one and hope to receive it regularly.

Yours very faithfully,

East London, Eng.

W. SMALE & SON.

to uplift the condition of the trade; to this end lending my influence and support to all movements for that purpose.

7. I will actively support my association, attend its meetings, serve on its committees, if requested to do so; answer promptly all communications from its officers, and in all other ways endeavor to promote its purposes.

8. I will carefully read my trade papers and see that my subscription is not allowed to expire; and I will freely write to the editor whenever I am moved either to command or criticise; realizing that it is my paper, and its value depends largely upon my attitude toward it.

9. I will thoroughly and systematically advertise my business, realizing that if I have something to sell I cannot expect the people to guess it unless I at least give them a hint.

10. I will be loyal to the jobber and manufacturer who are loyal to me, and I will be loyal to the other merchants of my home town, as I have a right to expect them to be loyal to me; realizing that if I am inconsistent in these respects I have no right to complain because other people patronize the catalog house.

Early Records in Rubber Selling

T. H. Rieder, general manager of the Canadian Consolidated Rubber Co., Montreal, while visiting the basement of the general offices the other day, ferreted out some interesting matter in relation to the establishment of the Canadian Rubber Co. This consisted of day books and ledgers dealing with the company from its inception in 1854. Some of the names of the first buyers were interesting, and among the very first were J. & T. Bell and William Dangerfield, of Montreal, the latter of whom was the first subscriber to the SHOE AND LEATHER JOURNAL, when it was established in 1888, while J. & T. Bell were the first advertisers from Montreal in the pages of this paper. This is an interesting co-incidence. The Canadian Rubber Co. made only a few lines of rubbers on straight lasts in those days—men's rubbers being billed at 5 shillings currency and women's at 3 shillings and 9 pence. The company appeared at that time to do quite a little trade in England and all their Canadian business was practically done by boat. Many other unique items were discovered in connection with the ancient documents.

Give Customer His Money's Worth

The story is told of a salesman who happened to call on a buyer, the proprietor of a large store. The buyer had the reputation of being very "grouchy." It was a constant source of irritation to him to have sales men younger than himself make suggestions of any kind to him. A young, clean-cut traveler called one day with a new leather case. It was probably the meekness of his make-up that irritated the old man. After he had kept him on his feet for about twenty-five minutes he finally deigned to recognize his presence. Peering from under his broad rimmed hat he demanded what was wanted. The salesman tendered his card. After a hasty scrutiny the old man tore it up and threw it in the waste paper basket, with the remark, "I want nothing in your line," and turned toward his desk. The salesman did not walk out at such treatment, but took a chair, stating that his cards cost his firm money and that he was going to make it a point to get remuneration for the one torn up. "Give this boy five cents for a card I just tore up," said the old man addressing his cashier. On getting the money the salesman placidly took another card from his leather card-case, and laying it on the buyer's desk, remarked, "my cards cost the firm at the rate of two for five cents, and my firm insists on giving everyone his money's worth."

Live Business Methods of a Western Shoe Repairer

Waiting Room for the Convenience of the Public—Different Color Tags Used for Each Store's Work—Record Preserved of Every Job—Prompt Delivery and Sending Customer Away Satisfied

"Ability, style, neatness and quickness" are the guarantee of the Goodyear Shoe Repairing Company, 625 Pender street west, of which George H. Morris is proprietor. Mr. Morris, who has been in business in the Pacific Coast city for about eight and one-half years, recently took in the shop next to him, which has been fitted up as a waiting room while patrons are having their shoes repaired.

Mr. Morris has certainly made a success of repair work and uses first-class quality stock in all jobs. He attends strictly to business himself and sees that every order is turned out on time; not only the shop's own work, but that done for the stores as well. The Goodyear Shoe Repair Company attends to the repairing for six of the largest retail stores in Vancouver. A boy makes the regular collections, and Mr. Morris supplies the tags. Each store has a different colored tag, which guards against confusion or delay. Considerable work is also secured from the different camps in the province. All orders that come in by post are attended to immediately and mailed back on the same day. In addition to all this business, Mr. Morris says that a large number of people drop in to have their footwear defects remedied, waiting until the job is completed. Sometimes as many as forty or fifty callers daily have their wants ministered to on the spot.

Jobs Ready When Promised

Before coming to the West, Mr. Morris was in business in Massachusetts. He learned the shoe trade in England. Some of the reasons given for his success are that he does first-class work, uses good material, and has all jobs ready

when promised. He has three men working for him at this time of the year and in winter employs two or three extra

In the accompanying picture Mr. Morris is seen standing at the left in the front row. The tall man behind him is the finisher, who does nothing else but that part of the work, and the other man at the back does all the fitting for the stitcher. He is a piece worker and gets paid by the pair. The man on Mr. Morris's left does nail and turn soles, while the proprietor runs the stitcher, which is a "Champion."

Keeping a Handy Record

A record is kept of every pair of shoes that comes into the shop. In case the customer returns with "a kick," the proprietor finds out when the customer left the shoes, and his name. He then looks up his record and by so doing he can tell when the complainant left the shoes and when he took them out. If it is found that the patron has a genuine grievance Mr. Morris says: "We fix up the shoes again, even to half soles, if it is the soles that have gone wrong."

He believes in satisfying the customer in every instance. In this well arranged book on the left hand page the first entry is the number of the tag. Then there are four parallel rules, in which marks are made, indicating the character of the job. The first column is devoted to soles, the second to heels, the third to rubber heels and the fourth, patches, while there is a fifth for any other entry desired. Next appear the prices charged for the work. On the opposite page customers' names are given and the date on which the shoes were taken out or delivered. This system has proved a very complete one and avoids confusion and misunderstanding.

THE LARGE SHOE REPAIRING ESTABLISHMENT OF GEORGE H. MORRIS IN VANCOUVER, B.C.

He Branches Out For Himself

A new shoe store has been opened up in Ottawa at 206 Sparks Street, in the stand recently occupied by C. B. Pratt. J. Howard Carkner & Co., are the proprietors of the enterprise, having purchased the stock at a most favorable rate on the dollar. Starting to learn the shoe business when twelve years of age Mr. Carkner has been associated with the trade in Ottawa

for the past fourteen years, being connected during that time with the stores of Robert Masson, C. B. Pratt, and the shoe department of the Two Macs, Limited. For the past four years he was manager and buyer of the latter business. He has mastered all the details of the trade, is a shrewd buyer and close student of styles. In addition, he is a good stock-keeper, a firm believer in advertising and has always managed to turn over the stock several times. His many friends will wish him every success in his new venture.

A Fine Showing in Cleopatras

With a range of 275 samples, the Kingsbury Footwear Company, Montreal, are this season presenting many interesting and attractive things to the trade. They have five new lasts, which are decidedly fetching. One is a medium recede toe, with fairly short vamp. Another is a medium, modified, round toe, with short vamp, which is rather full fitting. Then there is a growing girl's last with a comparatively wide, round toe of fair height. A new Mary Jane pump last and a last for elderly ladies, somewhat narrow, but calculated to fit a large ankle, is shown also. In low cuts the offerings are very striking in their graceful lines and particularly pleasing in workmanship and ornamentation. A full line is shown of Cleopatra and Gaby Colonials, as well as pumps. In the Cleopatra, as is well known to the trade, the material of which the quarters are formed generally extends around the front of the shoe in the shape of a collar. The Cleopatra has also a loose tongue which is sewn inside of the throat of the shoe and is calculated to stand out prominently from the instep, and on the collar at the side is attached a small ornament. This year these consist of cut steel, brilliants, oxidized, jet, rhinestones, metal and other materials. The firm are looking for an exceptionally strong demand in both the Cleopatra and Gaby pump, in the latter the ornaments being placed on the fore part of the shoe. The materials used are patent, gun metal, etc., with brocade or cloth quarters in combination effects too numerous to detail. Heels are, perhaps, slightly higher than last year, and the Cuban, the Ritz, the Carlton and the Spanish are seen, being of different heights, ranging from 10/8 to 16/8. They are all of leather and certainly lend an air of distinction to the low cut family in the footwear line. "Gabys" are the Colonial type of slipper, made in all leathers, with patent, dull and fabric quarters and trimmed with a range of bows and buckles in metal, leather, silk, satin, celluloid, etc., in a wide variety of designs. The short recede toe is most largely in evidence. A fancy two-bar effect Cleopatra, with inset of patent leather, a steel ornament at the side, carrying a Spanish heel, is a decided novelty. Pumps are seen in patent, nubuck, grey and white, and other materials, as well as in chocolate, nut brown and mahogany tan shades.

In the line of turn slippers, the representation is exceptionally strong and everything is seen from the baby doll or one strap effect to the five strap fancy lines. There are various styles of ribbon, beads, bows, metal and other ornamental effects. Some really artistic conceptions are furnished. One, two and three hole Tango slippers are also

presented. Commonsense, military, Cuban, spool and other heels are seen on the high cuts. There is a tendency to revert to the stage last, and to abbreviate the vamps. Most of the models carry shorter foreparts with moderate recede toes, many plain and others with tips. The bunty effect seems to be meeting with a large measure of favor. A number of high cuts are shown with fancy brocade and cloth quarters, while others have tops of the same material. This year, for the first time, the company are making a number of turns in high cuts, along with the usual full complement of McKays. Top facings are especially choice, being in black and blue satin, as well as in black, wine, grey and gilded sheep leathers, embossed in gold, silver, blue and other colors. One particularly attractive shoe is a button boot, with Cleopatra effect, brocade quarters, patent forepart, matt calf foxing extending to the throat of the shoe, with oxidized side ornament and Carlton heel. Another outstanding shoe is one with fancy scalloped vamp and heel foxing, patent button, with matt calf top. Buttons are, this year, just as strongly represented as ever, being cut about the same height as last season, the range running from eleven to fourteen buttons. The line was shown in Toronto last week by W. F. Martin, sales manager of the Kingsbury Footwear Co., who reports having done a splendid business.

"Oh, I Can Do Better Elsewhere"

The salesman should, above all, be diplomatic. He cannot afford to let his feelings run riot with him. When the shoe traveler is told by the retailer that the latter can get such and such a shoe, made of the same material, and on just as attractive a last, from such and such a firm, and for so many cents less a pair, the temptation is strong to assert so-called independence and ask him why in blazes he does not buy from that party. Of course, that retort would do the salesman no good, even though he may think the dealer is lying. It would not be wise or tactful. The same truth may be applied in connection with the retailer who is selling goods to a woman customer. Perhaps the lady says that she can get a shoe of exactly the same style and build down the street for such and such a price. The clerk or retailer is perhaps inclined to tell her, if she is at all nasty in her insinuations, that that is the place for her to go, and if she can do so well in the next block, why in thunder did she travel so far past the spot.

This "cheaper elsewhere" attitude is often a ruse on the part of the customer and each situation has to be dealt with according to the circumstances. It is well to remember the old saying that while "You can lead a horse to water you cannot make him drink." By a series of adroit questions, a good working knowledge, and timely comparisons, one might possibly get such a customer to finally admit he or she is wrong, still in the end it would not necessarily make the caller purchase. It is here where the gift of adaptability, skill and efficiency can be developed and the one who makes a sale, in the face of such discouraging circumstances is, indeed, to be complimented.

It is well to remember that there are drawbacks in every trade and so long as the world lasts, there will be certain cranks who can always "get the goods less down the line." It frequently affords them a great deal of gratification to give utterance to such self satisfied remarks, but in the end, if they are tactfully and rightly handled, there is no reason why a sale cannot be made in the vast majority of instances.

C. S. Corson, of the Regal Shoe Co., Toronto, has returned from an extended business trip throughout the West going as far as the Coast.

Eleven Reasons Why Shoe Retailers Fail in Business

Over Buying, Too Small Gross Profit, Too Heavy Expenses, Not Sufficient Turning of Stock and Others Carefully Analyzed
—Small Rent With Growing Chance Better Than Big Rent and Sure Failure—Success Depends on Right Selling

"I feel particularly honored to be asked to speak to the Hartford retailers, because before today I knew only one retailer in your city, but tonight I can shake the hand of every man in this hall and call him a brother retailer. That is what organization has done for the shoe man," said E. W. Burt of Boston, President of the Massachusetts Retail Merchants Association before the Shoe Retailers' Association of Hartford, Conn., when he delivered a stirring address recently on "Why Retailers Fail in Business."

"When I addressed the Pittsburgh retailers they desired me to tell them how to run a retail shoe store, but my time was taken up with organizations, pure shoe bills and fraudulent advertising; but now, with your permission, I will discuss the subject as printed on the program, and if I can give you one point which you can apply to your business, I am amply repaid for your attention. The Harvard Business School spent two years finding out how retailers ran their stores. I wrote an article on the same subject which they endorsed as verifying their figures taken from 600 shoe stores of the country, but in all their work they did not tell us one reason why shoe retailers failed, and that is what we want to know. My studies of the retail shoe stores throughout the country have shown me that there are eleven reasons why retailers fail, and I have classified them according to their importance, and I will present them to you:

1. Over buying of merchandise.
2. Too small merchandise profit.
3. Expenses too large.
4. Lack of capital—ban—turning of stock.
5. Shrinkage of surplus and stock.
6. Inefficient executive ability.
7. Old-time methods.
8. Lack of store service.
9. Advertising.
10. Too long credits.
11. Failure to take stock monthly.

Taking No. 1: Did you ever hear of a shoe retailer failing because he did not have enough shoes? Nine out of ten fail because they have too many shoes. The shoe manufacturers are to blame for half of the retail failures because they sell the retailer every kind of a last, pattern and leather on the face of the earth. Buy shoes on staple lasts and leathers, and keep away from the fancy footwear that goes by in a year. Buy shoes not affected by mark-down sales and shoes stocked by the manufacturers. Don't buy more than one pair in large and small sizes.

No Profit in Cheap Shoes

Reason No. 2: The gross profit on your merchandise should be not less than 28 per cent. if you expect to make money in the retail business. You can't make money selling \$3.50 shoes; those days have gone by; cheap grades of shoes never show a large profit; the wear is poor and the allowances to customers too great, and it eats up your profits. Postpone your mark-down sales until August 1 and February 1. Customers wait for mark-down sales, and you sell goods at a loss when you could make money. The mark-down sales are the curse of the shoe business, and overbuying wrong merchandise is responsible. Give your men charge of different departments. You can't run your entire business yourself. Make it their duty to decrease the stock and increase the sales each six months.

Sell rubbers at a profit. What's the use buying rubbers and giving them away? Hundreds of retailers in this country

don't make a cent of profit on rubbers. You can't stay in the shoe business and do it. Get a profit or don't sell them.

Educate Public to Come

Reason No. 3: The question of expenses is a vital one; rent, salaries and advertising are the three most important. A small rent with a growing chance is better than big rent and sure failure. You don't have to own the best store in town to do business. Educate the public to come to you on a side street because you have shoes they want. A small rent wins. Pay your clerks good salaries. A man at \$18 a week is worth two at \$9 a week, because ignorant clerks misfit shoes, dissatisfy customers and ruin your business, and your success depends upon your selling force. Advertising I will consider under No. 9.

Reason No. 4 is an important one. Buying shoes is an easy matter, but to sell them is a hard problem. When the bills come due the manufacturer jumps on you for payment and they must be paid from shoes sold. This is true of all your expenses, rent and salary. Do not go to the bank for \$5,000 or \$10,000 to pay your bills. It is like the mining company who borrows money to pay dividends. It means your capital is gone. Nail this over your desk: "\$1,000 in the bank is worth \$2,000 in shoes, every day in the week and twice on Sunday." Turn your stock at least four times a year. You can do it if your merchandise is the right kind. You will turn it once if it is the wrong kind.

Says Pm. Habit is Bad

Reason 5 is answered in mark-down sales which reduce your surplus and capital one-third each season, and cut out your sale shoes and increase your surplus. A pm. on shows is another bad habit of the shoe business. Clerks will misfit shoes and make dissatisfied customers and injure your business, and you are paying for your bad judgment in buying. Pay your clerks a good salary and stop the pm. habit. Unreasonable allowances given to customers reduce your surplus. Why don't you charge for wear on shoes? There is a lot of talk about the retailer defrauding the public, but I think a lot of the public are abusing the retailers. They can't buy a new hat or suit and get free wear—then why shoes? Simply because you have always done it; but do business on a principle, not habit.

Reason No. 6: Many men fail because there is no system. It costs money, but it pays. Your buying, selling, office department, correspondence and everything must be systematized, and live up to it.

Reason No. 7: The opening part of my talk told you that to succeed it is necessary for you to belong to organizations. I am an optimist at all times. Old-time methods have passed away. The shoe business is different today than it was five years ago, and it will change five years from now. Increased population, broader ideas, competition demands it. You learn all this in your association work.

First Requisite is Courteous Service

Reason No. 8: Lack of store service means failure; customers demand service, and you must meet the issue. Educate your clerks to be courteous, which is the first and most important requirement of all salesmen. Quick attention, ability to serve, patient and correct fitting should be pasted in the hat of all salesmen. What has the individual shoe store got to offer the public in competition to the department store in selling shoes? They have the advantages of closer buying, greater advertising, better locations and thousands of shoppers. All he can offer is efficient service

and specialized shoes. Remember this, as it is important to your success.

Reason No. 9: When I was in Cleveland, Ohio, last, I made an address before the Cleveland Advertising Club on "Fraudulent Advertising," but in a few words I will give you the formula for successful advertising. The basic principles upon which you should build are:

1. Attract the eye—by color or drawings.
2. Hold the attention—by clear statements.
3. Interest the reader—honest facts.
4. Convince the buyer—proving your statements.

Advertising Facts—Not Theories

Small ads run often are better than large ads run occasionally. Use selected papers of smaller circulation in preference to large circulation, because your ad is lost with others and the effect is wasted. I get the best results in one city from a paper of 80,000 circulation with rates at 9½c a line than from one with 400,000 circulation with a 25c a line rate. These are facts and not theories.

Reason No. 10: Credits are a big trade builder and money maker, but long credits are disastrous. In my opinion, shoes charged out are better than shoes on the shelves. The credit system is bad during sales, as customers load up with shoes at cut prices and they often return them later, after the sale is over, because they "don't need them."

The 11th and last reason needs your attention. If a retailer pays his clerks and his rent and draws his salary, he is satisfied, but it is a bad way to do business. Let him find out monthly where he stands. If there are any leakages he ought to know it. See if the stock agrees with the correct number of pairs and compare increase of sales on stock from month to month by years. Keep a chart of sales, and it will surprise you."

The Big Fair at Leipzig

The surest way to attain success is to take advantage of the special opportunities which the shrewd tradesman notes, with keen observation, and utilizes in the furtherance of his business. These opportunities, the great value of which alone often account for the success of many a smooth-running business, frequently present themselves during a retailer's career. But the majority of tradesmen recognize their worth only when they are past, and when the chance of deriving benefit from them is no longer available. In this way, many an intelligent person in former years considered it of no profit or advantage to go to Leipzig in order to visit the German Shoe and Leather Fair. It may be he believed the Fair could offer him nothing new, or perhaps he was influenced against taking advantage of the opportunity by those opposed to the Fair, who did not consider it of sufficient educational value. In either case, he allowed an opportunity to slip which would assuredly have been of value to him in his business, for the Exhibition has met each year with unexpected success. However, all know that one seldom makes the same mistake twice, and it is expected that the number of visitors at the Exhibition, from August 30 to September 2 next, will undoubtedly be far in advance of that in former years.

The Movement For Shorter Hours

The early closing movement seems to be in the air and is gradually gaining ground in the various cities and towns of Canada. Ottawa shoe men recently came to an agreement to close on Saturday afternoons and the shoe merchants of Preston, Ont., have agreed to close their stores every evening at 6.30 o'clock, excepting Wednesdays and Saturdays during the summer months. Wednesday afternoon is also being observed as a half-holiday by the shoe merchants of

Stratford and among those who have consented to lock their doors are Knechtel & Co., Fletcher Johnston, J. D. McCrimmon, John Way, Shore & Paff, Market Shoe Store and John Agnew, Limited. The shoe stores of Parkdale in Toronto have also united to close on Wednesday afternoon at one o'clock during the summer months. Those attaching their names to the agreement are A. B. Chinn, A. J. Chapple, C. C. Allan, W. Bishop, J. J. Harton, J. C. Budreo and Weaver Shoe Co. In Brantford the shoe dealers have sent a petition asking the city council to pass an early closing by-law. All the shoe merchants except three signed. As matters now stand in regard to early closing, each class of merchants must petition the municipal council separately and the signatures must be witnessed in legal form. If the petition is sufficiently signed a by-law can then be passed, but such a measure is surrounded with all kinds of legal requirements in order to avoid technicalities, which might be raised. This is done so as to insure the measure being carried into effect. In some cases after a by-law has been passed, there is an attempt to break its provisions, on the part of a "kicker" or person who has refused to sign and is prosecuted for its violation. Such a one often tries, out of revenge, to upset the by-law, hence the legal safeguards to make it hold. Safety first.

Boot Fastens Like a Glove

A new type of boot has been invented by Walter Brindle, 227 Union Street, St. John, N.B. The accompanying cut shows it on the right foot and gives a view of the inner side

of the foot. The boot fastens with a dome fastener, the same as is used on gloves. There are three studs to fit the different sizes of ankle. The shoe is put on and taken off in a second by just the one movement and is close fitting to the ankle. It is also water tight as there is a bellows tongue or gusset on each side, just giving room to get the foot in neatly, so as not to be in any way clumsy. Though the cut is of a whole front design, the new fastening device can be just as easily put on a button or lace boot, with tip on the toe, if desired. Mr. Brindle says that this fastening can, at a very small cost, be fitted to any boot.

J. W. Bridgett, formerly of the Slater Shoe Store, Hamilton, and Joseph Deslandes, who was for fourteen years with the Slater Shoe Store on Yonge street, Toronto, have opened a new establishment at 737 Broadview avenue, just south of Danforth avenue, Toronto, known as the Sample Shoe Store.

SHOE NEWS IN PARAGRAPH

M. Ferkauff, shoe dealer, of Lachine, Que., has assigned. R. B. Griffith, of Hamilton, was in the East on a buying trip.

The shoe stock of A. Binette Mason, Montreal, has been sold.

The Calgary Shoe Co. has commenced business in Calgary.

R. E. White, dealer in shoes, Kamloops, B.C., has assigned.

H. Mehen intends starting in the shoe business in Sandy Lake, Man.

Geo. E. Boulter, Toronto, was in Montreal for a few days last week.

R. R. McIntosh, shoe dealer, of Chilliwack, B.C., recently made an assignment.

L. G. Lockett, of the Midland Shoe Co., Kingston, Ont., was in Montreal recently.

Rowland Hill, shoe dealer, of London, Ont., spent a few days in Montreal recently.

Bert Packard, of L. H. Packard & Co., Montreal, is spending a few days in Boston.

R. D. Taylor, of Robt. Taylor & Co., Halifax, was in Quebec and Montreal last week.

The Rena Footwear Co., Montreal, have recently installed several new pieces of machinery.

A. M. Haggart, of R. B. Griffith & Co., Hamilton, was in Toronto last week on business.

Ed. Hill, of the Kaufman Rubber Co., Berlin, has been spending his holidays in Barrie and Penetang.

Harry Thompson, of the Thompson Shoe Co., Montreal, was in Toronto last week on business.

R. B. Wanless and F. Dewan, of Coates, Burns & Wanless, London, was in Toronto last week on business.

H. H. Lightford, manager, of the Perth Shoe Company, Perth, was in Toronto last week on business.

J. Scheurer, leather goods, New York, has been calling on the trade in the larger Eastern cities.

C. R. Teetzel, manager of the retail shoe store of Geo. G. Gales & Co., Ottawa, was in Montreal last week.

Robert Neill, shoe retailer, of Peterboro, and family, are spending the summer at their cottage, Stony Lake.

S. C. Cronk, 126 Wellington street west, Toronto, has been spending a few days in Montreal on business.

W. A. Hamilton of the W. B. Hamilton Shoe Co., Toronto, has returned from a trip to Quebec and Boston.

In a fire at Carbon, Alta., the store of C. R. Nash, dealer in dry goods and boots and shoes, was burned.

M. J. Burns, of Coates, Burns & Wanless, London, has returned after spending several days in Eastern shoe centres.

E. O. Weston, of F. J. Weston & Sons, Toronto, was a caller at Montreal and Quebec shoe factories during the past week.

C. C. Begg & Bro., of Collingwood and Owen Sound, have returned from a business trip to Montreal and other places.

W. T. Francis, superintendent of the John Ritchie Co., Quebec, was in Boston and other New England shoe centres recently.

G. Quesnel, who for the past few months, has acted as window designer for the Lyon Shoe Store, Montreal, has resigned.

The Canadian Consolidated Rubber Co., Montreal, have issued a sporting shoe, "Fleetwood," display card which presents a very natty appearance, and are having a large call

for it. They will be pleased to send it to any retailer upon request.

Hugh White, of Garside & White, Toronto, has been visiting Montreal, Quebec and other shoe centres on a business trip.

Miss Nina Reynolds, daughter of George E. Reynolds, shoe retailer, Stirling, Ont., has gone on an extended trip to the West.

S. G. Amero, manager of the London branch of the Kaufman Rubber Company, is spending his holidays in Gloucester, Mass.

A. J. Hand, of the Ames-Holden-McCready staff, Toronto, has returned after spending his holidays in Buffalo and other cities.

R. E. Holmes, manager for John Lennox & Co., Hamilton, was in Toronto last week on business accompanied by J. H. Wettlaufer.

J. A. McLaren, of McLaren & Dallas, Toronto, is spending a few days on a business trip to Montreal, Toronto, Boston and other cities.

A. W. Ault, of the A. W. Ault Co., Ottawa, was a visitor to Montreal last week, calling on the shoe factories in that city and also in Quebec.

R. R. Macaulay, secretary-treasurer, and F. H. Meinzer, assistant sales manager of the Miner Rubber Co., Montreal, were in Toronto last week on business.

Chas. E. Sterling, of Sterling Bros., Limited, London, was in Montreal and other shoe centres calling upon the trade during the past fortnight.

Alex. Chisholm, shoe retailer, West Toronto, has returned from an automobile trip to Rochester and several other points in New York State.

The capital stock of Winnett & Wellinger, Limited, manufacturers of fancy leather goods, Toronto, has been increased from \$40,000 to \$98,000.

George Warriner, shoe retailer, 1243 Bloor street west, Toronto, has returned from a successful fishing expedition to Healey's Falls, near Campbellford.

G. C. Yearsley, manager of the Toronto warehouse of the Miner Rubber Co., who has been ill with appendicitis, is making good progress toward recovery.

Charles Bonnick and George Lloyd, of the Ames-Holden-McCready, Limited, Toronto, took part this week in the big bowling tournament at Burlington, Ont.

John Abernethy, of D. D. Hawthorne & Co., Toronto, has returned after spending a couple of weeks on a business trip to Montreal, Quebec, Boston and other cities.

H. B. Pollock and family, Toronto, who have been spending a few weeks at Lake Avery, near Orillia, have returned, having exceptionally good luck in fishing.

Daniel J. Doherty, shoe traveler and treasurer of the St. John Council of the Knights of Columbus, St. John, N.B., died recently. He leaves a wife and three sisters.

Daniel Toomey, formerly with the Hartt Boot and Shoe Co., Fredericton, N.B., has accepted a position as fitting room foreman with the N. B. Thayer Co., East Rochester, N.H.

John D. Hawthorne, city traveler for D. D. Hawthorne & Co., Toronto, who was operated upon some time ago for appendicitis, is making rapid progress toward recovery.

J. C. Budreo, shoe retailer, 1344 Queen street west, Toronto, spent a few days recently on a fishing expedition to the Holland river and landed some fine bass and 'lunge.

The Korrek Shoe Store, Richmond street east, Toronto, intends opening another store at 352 Yonge street in the premises formerly occupied by J. Bonner, men's furnisher.

The Amherst Boot and Shoe Co. are preparing to open a new warehouse and salesroom in Halifax, almost opposite the site of the one they are now occupying on Grenville street. The new quarters will be about twice the size of

the old ones and will be fitted up in thoroughly modern style. The business of the company has shown a very large increase in recent years, necessitating more spacious quarters for the firm.

John Lennox, of John Lennox & Co., Hamilton, who has been confined to his house for nine weeks with rheumatism in his right leg, is now able to come down to the warehouse.

The Granby Rubber Co., of Granby, Que., are presenting to their customers throughout the country, a handsome drawing of the works of the company, in an attractive mission frame.

The Meyers Shoe Co., 636 Craig street east, Montreal, have made an assignment to A Desmarteau. The company manufacture misses, children's, little gents' and infants' turns and McKays.

The Hamilton Boot and Shoe Repairers have decided to organize a local union of the Boot and Shoe Workers' International Union, and will use the union stamp on the footwear they repair.

Arthur Schmidt, formerly lasting room foreman of the Slater Shoe Co., of Montreal, is now with the Perth Shoe Co., Perth, Ont., and will have charge of the bottoming department in that factory.

D. A. Leonard, manager of the Slater Shoe Co., Yonge street, Toronto, has returned from a visit to Brockton, N.Y., bringing with him Mrs. Leonard and family, who have taken up their residence in Toronto.

Among the visitors in Toronto recently, calling upon the trade, were John Little, of Allandale, James E. Eager, Waterdown, D. J. Hartle, of Minden, Mr. Logan, of Logan & Young, Beaverton, and others.

A. Brandon, of the Brandon Shoe Co., Brantford, recently spent a few days in Boston, Brockton and other shoe centres, after which, accompanied by his wife, he took a pleasure trip down the St. Lawrence river.

The National Rubber Co. will shortly begin the manufacture of tires in Hamilton. C. S. Kilgour, Frank F. Walker and Dr. George Wenig are the president, vice-president and secretary, respectively, of the company.

Messrs. S. M. Paterson and R. W. Jennings of the W. H. McElwain Company, Boston, have sailed for Europe for the purpose of investigating methods and conditions of shoe manufacturing in England and on the Continent.

Fred. Wagner, who has had an extended experience in the shoe factories of Rochester and other leading American cities, was recently appointed foreman of the turn department of the Kingsbury Footwear Company, Montreal.

M. A. Johnson, of Rockland, Me., has a pair of rubber boots which he bought in 1883. The boots were worn on a farm at intervals for six years, and have since been worn on many hunting and fishing trips. They are still sound and dry.

Gregory Hoey, who has been making room foreman for the H. B. Reed Co., Manchester, N.H., has resigned and has accepted a position with the Regal Shoe Co., Toronto, as superintendent of their factory. He has entered upon his new duties.

Fire destroyed the shoe store of Edward Leveque, Market street, Deseronto, Ont., this week. The flames broke out in the repair shop. The premises were completely gutted and the entire stock wiped out. The loss is partly covered by insurance.

The shoe stocks of C. B. Pratt, of Ottawa, have been sold and the sales indicate that the dividend to creditors will be in the neighborhood of fifty cents on the dollar. The stock at Sparks St., valued at \$17,000, was bought by J. Howard Carkner & Co. at 68¾ cents on the dollar. The Wellington street stock valued at \$12,000 was bought at 43¼ cents on

the dollar by S. Miller. The real estate belonging to Mr. Pratt on Powell avenue has not yet been sold. The liabilities of C. B. Pratt are in the neighborhood of \$45,000, and among the creditors are his father, Abraham Pratt, \$12,350, and Horace Pratt, a brother, \$2,808.

The St. Leger Shoe Company, who formerly conducted a shoe store at the corner of Walton and Yonge streets, Toronto, have opened another store at the corner of Edward and Yonge streets. This makes six establishments that the company conduct in Toronto.

The Boston News Bureau says a large shoe manufacturer and close student of business conditions who recently returned from the Middle West, estimates that the shoe business of the United States is from 20 to 25 per cent. below the average of the last three years.

The directors of the United States Rubber Co. are not considering any additional financing for this year. With crude rubber selling at 60 to 70 cents a pound, compared with \$2 a pound two years ago, the money required to carry this company's stock of crude rubber is greatly reduced.

Arthur Wellwood, who was formerly in the retail shoe business on Bloor street west, Toronto, and sold out several months ago to the McCall Shoe Co., is again starting up, having taken a store on Danforth avenue east of Woodbine avenue, where he has put in a well selected stock.

E. F. Spalsbury, factory superintendent of the Brown Shoe Co., St. Louis, who was well known to many Canadian shoemen, died recently, his death being due to heart trouble. The late Mr. Spalsbury was the founder and first president of the St. Louis Association of Superintendents and Foremen.

A. F. Voight, the vice-president of the Arabol Manufacturing Co., New York, City, returned on the steamer "Imperator" from an extended trip to Europe on July 15th. C. Seitz, the secretary and treasurer of the company, who has been on the other side for some time, is also expected back about August 1st.

A writ has been issued by the Thompson Shoe Co., of Montreal, who are seeking to recover from Ye Craftsman Shoppe, Limited, and the Boot and Shoe Specialties, Limited, Toronto, the sum of \$1,048.68, the amount alleged to be due on bills of exchange drawn by the first named defendants and endorsed by the latter.

J. J. Kilgour, of the Kilgour, Rimer Co., Winnipeg, reports that business in the West, which has been rather quiet for some time, is likely to improve. Collections have been rather slow, but with the bright prospects for a large crop, a decided change is looked for. There has been a noticeable improvement during the past few weeks.

E. W. McMartin, Montreal, who is sole Canadian agent for Brough, Nicholson & Hall, the widely known Old Country shoelace firm, was in Toronto, Berlin, London and other cities last week, calling upon the leading shoe manufacturers and wholesalers. H. E. Boulton, 20 Wellington street west, Toronto, is Ontario representative for Mr. McMartin.

Ames-Holden-McCready, Limited, of Montreal, have offered a prize of one hundred dollars to be competed for by the employes in various branches of the firm, as a reward for the best suggestion for a slogan and for a new trade mark for the company. A large number have taken part in the competition, which closes the week, and it is expected the result will be known shortly.

F. W. Hall, who is a prominent barrister of Perth, Ont., was recently elected a member for the Ontario Legislature for South Lanark. He has resided in Perth for many years, and was mayor of the town for four years. Mr. Hall is a Conservative in politics and holds the seat which was represented for so long a time by the late Colonel Matheson, Provincial Treasurer. Mr. Hall secured a very large major-

ity. He has always taken an active interest in the development and expansion of the town, and is the president of the Perth Shoe Manufacturing Co., in which he is a large shareholder.

"The Fleetfoot Fish and Game Club" has been formed with a camp at Lac Babette, in Northern Quebec. The officers of the club, who are all associated with The Canadian Consolidated Rubber Co., Montreal, are—President, R. E. Jamieson; vice-presidents, F. E. Partridge, J. M. S. Carroll and F. L. Summerhayes; secretary and manager, A. J. Healey.

No trace has yet been found of M. P. Johnson, shoe merchant, of St. Thomas, Ont., who has been missing since April 14th last. The search is still being kept up, but so far nothing definite has been learned. Mr. Johnson, according to the opinion of physicians who were attending him just previous to his mysterious departure, is suffering from loss of memory.

It is understood that James A. McPherson, of the John MacPherson Co., shoe manufacturers, Hamilton, has resigned from that concern, with which he has been connected for over thirty years. It is also stated the stock of the company is now held by W. S. Duffield, treasurer, who has been identified with the industry for a long time, and W. D. Long, president of the company.

The International Shoe and Leather Fair will be held in the Royal Agricultural Hall, London N., England, on October 5th to 10th. This fair is organized by the Shoe and Leather Record and has proved to be a splendid success. A large amount of space has already been taken by leading exhibitors. It is probable that a number of Canadians will make it a point to be present at this great gathering of the trade.

Robert E. Katz, sales manager of the Panther Rubber Co., Sherbrooke, Que., accompanied by his brother, spent several days in Toronto last week, calling upon the trade, and making known the merits of Panther Tread rubber heels. The new factory of the Company is now in full operation and it is expected that fifty gross of rubber heels, as well as 1,000 pairs of rubber soles, will be turned out each day in the near future.

The work of the arbitration board in the dispute between the management of the Hartt Boot and Shoe Company, Fredericton, N.B., and the Boot and Shoe Workers' Union will probably be commenced next week. John A. Reid, vice-president of the company, has been named as arbitrator for the management, while Percy A. Guthrie, M.L.A., has been selected as the representative of the Union. They are to select the third arbitrator, but up to the present time have not met for that purpose. The Union wants a nine-hour day in the factory, which is at present running on a fifty-nine-hour basis.

Recent extensions have greatly improved the building of H. W. Upham, dealer in hides and leather in Sussex, N.B., and successor to his father, Charles W. J. Upham, who died a few months ago. The late Mr. Upham had been in business in Sussex since 1887 and had built up a splendid trade. In 1905 he established himself in new quarters, erecting a building 100 by 50 feet, two storeys in height and conducting from there his business in hides, calf and sheepskins, leather, tallow, etc. Mr. Upham was greatly esteemed in the leather world, and his son, H. William, who is now in charge of the business, is proving himself a most worthy successor.

Justice Archibald has awarded the sum of \$10,512 to Daoust, Lalonde & Co., shoe manufacturers, Montreal, in an action against the City of Montreal and the Canadian Pacific Railway. Plaintiff originally claimed \$39,000. Plaintiffs owned a factory at the intersection of Iberville

street and the C.P.R. tracks, and they claimed that it had depreciated to the extent of fifty per cent. in value as a direct result of the building of the subway. Access to the factory had been impeded, the levels had been changed, shipping and receiving facilities had been interfered with, and they had been obliged to make additions to the plant. Experts were named, and sat for fifty-nine days.

Bachrack Brothers have moved into their handsome and admirably equipped new store at 234 Yonge street, Toronto, where three flats and a basement are occupied. The layout of the premises is very convenient and there is a big basement department with scores of bargain tables, which is reached by a handsome stairway at the front of the shop. The main floor is devoted to men's and women's departments and is capable of seating nearly one hundred persons, opera chairs being used. The first floor will be used as a misses' and children's department, while the top flat is devoted exclusively to reserve stock. The store has an inviting entrance and is finished in natural oak throughout the main portions.

The Amherst Boot and Shoe Company, Amherst, N.S., which was established in 1867, the year of Confederation,

CLERK—"Yes, sir, that looks perfect; you can see for yourself."

and will, in 1917, celebrate its fiftieth anniversary, has never had a strike or threatened strike in the factory. Among the employes there are those who have worked ten, twenty and thirty years, and a fair majority who have grown up with the industry. Some 250 hands are engaged in the factory, of which J. E. Pipes is superintendent. Mr. Pipes is an example of how from the beginning an employe has stuck by an employer. He is one of three connected with the firm and has been in the service over thirty years. John P. Pipes, his father before him, has been on the job forty-four years, and is not quitting yet, while Roy, a son, has been in the trade several years.

Among those who are using the Gritzner Hand Soling Sewing Machine and have found it thoroughly satisfactory, are a number of representative shoemakers and retailers in various parts of Canada. Those who have sent testimonials to C. Parsons & Son, Toronto, the agents for Canada, are: William Baldwin, 1169 Dundas street, Toronto; J. Blum, Owen Sound, Ont.; Edward Bell, 1212 Dufferin street, Toronto; T. Mason, 640 Pape avenue, Toronto; George Parrott, 1647 Dundas street, Toronto; Henry Wood, 618 Barton street, Hamilton; J. Pelling, 643½ Barton street, Hamil-

ton; W. H. Davis, 134 Dundas street, Toronto; Brodie Bros., 229 Dundas street, Toronto; A. Mason, 104 Geary avenue, Toronto; The Irvine Shoe Co., West Toronto; J. H. Thompson, 45 Hallam street, Toronto, and others.

The sorting business on certain lines of goods has been very fair during the past few weeks, although the general tone of shoe trade, except on very seasonable ranges of footwear, has been rather quiet. There is a report of a shortage in patent colonials with steel buckles and women's patent pumps with low heels. Children's and infants' bare-foot sandals, white canvas pumps and colonials and certain lines of sporting shoes are reported to be difficult to obtain. In women's dongola slippers, two-strap and Newports, selling at medium price, there is also a scarcity. Jobbers state that they thought they had a sufficient supply of these goods, based on their estimates for the season, but the demand for them has been abnormal and it has been found utterly impossible to secure a supply from the manufacturers until too late.

It is understood that Hanan & Son, manufacturers of men's and women's fine welts, Brooklyn, N.Y., intend establishing a Canadian factory. C. de Forest Smith, representative of the firm, has been spending some time in Canada, visiting Montreal, Toronto and other cities. It is learned that the Canadian business of the firm has increased about ten per cent. during the last two months, while their western American trade has been falling off. This is one of the factors influencing the company to start a factory in the Dominion. Hanan & Son have an output of about 4,000 pairs a day and deal exclusively in high-grade footwear. They have branches in Germany, France, London and South America, and last year did a business of about seven million dollars. According to the latest advice it is probable that the factory will be located in Montreal, catering to both the Canadian and export trade.

A shoe traveler who recently returned from the West says: "Business generally is poor with dealers overstocked, especially on dull calf shoes. Colonials are selling in low cuts to the exclusion of everything else, and 75 per cent. of these are in patent and 25 per cent. of dull kid. The city dealers are now demanding longer vamps with narrow toes, while the small dealers insist on shorter vamps and fuller toes. For Fall dealers are not buying so many shoes as formerly, they having decided to run with lower stocks,

depending on manufacturers' stocks as much as possible, and buying as little as possible for future delivery. Cool weather and dull business generally are the causes for the present slow business. Cuban heels are selling 50 per cent. in the Fall orders, kidney heels 25 per cent., leather-Louis 15 per cent. and wood-Louis 10 per cent. In boots patent vamps and cloth quarters are proving the best sellers for Fall.

George McVicar has recently acquired the interests of Mr. Downing in the well-known shoe firm of Downing & McVicar, Goderich, Ont., and will continue with full control of that progressive business. Mr. McVicar was born in Goderich and started in the shoe business as an errand boy for Mr. Downing, remaining about a year and a half, after which he secured a situation with the Harvey Van Norman Co., Toronto. He was with them for twelve years, working in every branch of the warehouse, and was city traveler for four years, representing them in the territory between Toronto and North Bay for three years. After this firm retired he went with James Robinson, Montreal, and sold goods for him in Western Ontario for some time. Returning to Goderich, he entered into partnership with Mr. Downing in September, 1903. This partnership having now been dissolved, Mr. McVicar will continue the business, and will handle the makes of leading Canadian and American manufacturers.

NEWSY NOTES FROM QUEBEC

A. Noel, shoe dealer, has sold his stock to his sister, Mrs. G. Noel.

L. E. Gauthier, of M. C. Galarneau & Co., is spending a few weeks vacation on the Gaspé coast.

A. Sylvain, shoe repairer, has recently installed a new outfit and now has one of the best shops in the city.

Mr. McCredon, formerly with the John Ritchie Co., has taken charge of the F. W. McKeen factory and entered upon his new duties.

Oscar Clement, tanner, is spending the summer at Charlesbourg. Albert Racine, tanner, has also taken up his abode there for the warm weather months.

Legace & Lepiney have opened a shoe factory on St. Valier street in the premises formerly occupied by the Poirier Shoe Co. Another firm is about to start business in the shoe-making line under the name of Nadeau, Gardner & Co.

Louis Guay, of Joseph Guay & Fils, patent leather manufacturers, was among those who attended the Shoe and Leather Market Fair in Boston, where the firm exhibited some of their product. A. E. Marois was also a visitor to the Boston fair. August Pion, dealer in hides, has returned from an extended automobile trip to various cities across the border.

All the manufacturers catering to the jobbing trade have their spring and summer samples completed and many visitors have been in the city during the past few days. Some have placed very fair sized orders. The samples of the Wm. A. Marsh Co. and the John Ritchie Co. show many new things. Tourigny and Marois have also added a number of new lines and have installed considerable new equipment.

Among the visitors in Quebec during the past few days were Henri Levie, representing Pages & Co., leather manufacturers, Amsterdam, Holland; Alex. M. McPherson, Canadian representative of Lindsay, Thompson & Co., Belfast, Ireland; D. Roscoe, of Dr. Hodges Asbestos Sock Co., London, Eng.; L. E. Gauthier, of M. C. Galarneau & Co., Montreal; E. A. Jones, of E. A. Jones Co., Brockton, Mass.; L. S. Odell, of Fisk, Limited, Montreal; E. L. Milzener, of Cotton Threads, Limited, Montreal, and a large number of jobbers from various parts of Canada.

MORE VALUABLE EVERY YEAR

Enclosed you will find \$1.00 to cover our subscription to the "Shoe and Leather Journal" for the coming year. The book is very instructive and is getting more valuable each year.

Yours truly,

THE UNITED SHOE DEALERS.

Sudbury, Ont.

LIKES THE SELLING TALKS

You certainly get out a good paper. "The Shoe and Leather Journal" has several splendid selling talks as well as many practical pointers. I have placed several orders through ads in your paper.

Yours, etc.,

Sackville, N.B.

HOW RETAILERS MAY WORK TOGETHER

"In spite of fashion's decree that tans are dead and buried as far as women are concerned there are a good many ladies now wearing tan shoes and some stores making money out of this type of footwear. And in this condition there lies considerable of a moral," says Footwear Fashions.

"Progressive dealers in certain cities found themselves this spring with an excess of women's tan shoes. Apparently there existed no demand. Did these men bow to what they might well have considered the inevitable? Not so that you would notice it. As no demand existed they proceeded to create one. How it was done is not news, but history. Tan weeks were held, and with considerable success. Lately, in Boston, some of the exclusive shops have been featuring tans. Now whatever demand exists at present is small, but there would be none at all had there not been concerted action on the part of the shoe dealers. Many shoe merchants do not realize the influence that they can bring to bear on the buying public. Especially in small cities it is within the power of the shoe stores to popularize styles provided always that the retailers work together. People cannot help being impressed if they see the same type of shoes featured in all the stores of a community. They immediately jump to the conclusion that the shoes are fashionable, for as women often say, "We see them everywhere."

LENGTHENING A WORN SHOE

A pair of shoes must be worn a while before it is possible to declare that it is a fit. For what will seem to be a very comfortable piece of footwear, will, after a few days' use, permit the foot to slip forward just enough to offer a slight pressure against the toe. This frequently is the cause of considerable pain and is also exceedingly hard on the stockings, for the constant pressure wears the fabric away in a short time.

As a relief to those who find themselves thus afflicted, a shoemaker inventor has designed and patented a device to add a little to the length of a shoe, which is discovered, too late, to be a trifle too short. The new implement consists of two main parts, one fitting in the toe and the other shaped to the backstay. The two parts are joined by a threaded rod with a nut attached and a means for operating the same. When the apparatus is placed in a shoe and extended by means of the lever provided a pressure is exerted on the toe and heel with the result that the length of the shoe is quite perceptibly increased.

Some 1914 styles in men's shoes have heels fastened on with pegs, instead of with "slugs," as heel nails are commonly called. These wood pegs won't scratch polished floors. They make heels light in weight too. Some men always get the cobbler to peg their heels, when they have shoes repaired, but the idea of pegging heels in factories is new.—Shoe Repairer and Dealer.

HOW OLD BOOTS DO NEW DUTY

Probably when you throw your old boots in the dustbin, or give them to a passing tramp, you believe their lives are practically over. The tramp may wear them for a bit, or it is conceivable that part of the leather is used again for the manufacture of cheap slippers or boots. But that is as far as your imagination carries you.

Don't be startled, however, if you are told that your old boots are now doing duty as wallpaper! Extraordinary as it may seem, it is nevertheless a fact that manufacturers of wallpaper buy up quantities of old boots.

These are thoroughly cleaned from every scrap of dirt,

and then taken apart. All the nails and threads are removed and the leather that is left is ground into a fine pulp.

Those stamped leather wallpapers which have attracted your fancy are only ordinary thick papers which have been covered over with a layer of leather pulp—old boots, in fact.

Embossed leather paper is very fashionable for papering libraries and dining rooms. The better the class of leather the better will it take the gold color with which it is so often decorated.

MIND YOUR OBLIGATIONS

Too many warnings about the necessity for paying close attention to drafts and other bank paper cannot be issued to some merchants. With the introduction of more mechanical devices for assistance in bookkeeping and other clerical work, it might be expected that commercial paper would be closely watched by all business men. But the idea of mechanical bookkeeping is regarded in certain quarters as an excuse for carelessness. It should be remembered that

A BRIGHT SUGGESTION FOR A SHOW CARD TO BE PLACED IN THE FALL WINDOW, OR A GRAPHOPHONE HORN AND RECORD MIGHT BE BORROWED AND ATTACHED TO ONE OF THE LATEST STYLES, WITH THE WORDING "A SHOE THAT SPEAKS FOR ITSELF."

brains are required, and that they must be used. They can be used in the right way only by a human being. Machines lack the gray matter which makes a success of modern business.

Few people in the retail trade make mistakes about the dates of football and baseball matches, horse races and similar amusements. But they can be absent-minded on the subject of bank drafts. Their negligence has the effect of disturbing the whole financial system, and the pity of it is that the delinquent debtors do not realize the seriousness of their position. The point is that the man who is engaged in business should always give the preference to commercial obligations. Everything has its place, and if everyone realized that fact, the course of business would run much more smoothly.

All Records Broken at Boston

The Big Market Fair a Pronounced Success—Canadian Day Drew Visitors From All Parts of Dominion—A Comprehensive Exhibit in All Lines of the Trade—Notes of the Assembly.

The big Shoe and Leather Market Fair is just over. It was a great success and was attended by scores of people from Canada and Great Britain, while thousands were present from the various shoe centres in the United States. Boston extended a hearty welcome to the visitors and the Fair was the most comprehensive and aggressive exhibition of its kind ever seen under one roof. The attendance was very gratifying, while the various displays were most artistically arranged and from the standpoint of education and profit, surpassed anything ever attempted.

To attempt to give a detailed report of the various activities in this issue is beyond the space and time limits of the *SHOE AND LEATHER JOURNAL*, and it is just possible to present a short reference to some of the more salient

MECHANICS' BUILDING—WHERE BIG SHOE FAIR WAS HELD

features of the Fair. The exhibition, which was held in the spacious Mechanics' Hall, was informally opened on Wednesday afternoon, July 8th, by R. C. Jacobsen, of the Jacobsen Publishing Co., for the management who deserve full credit for the triumph scored, and J. A. Sullivan, Corporation Council of Boston, officially represented James M. Curley, Mayor of Boston, who was unable to be present. Amid music and mutual congratulations, the buzz of machinery and finishing touches to exhibits, the great exposition was soon under way. Practically every booth in the commodious building was occupied by shoe machinery men—tanners, leather men, shoe manufacturers, findings firms and others.

The exhibit of the United Shoe Machinery Co. was the most extensive and enterprising ever attempted by that firm. One of the smaller halls upstairs was used for moving picture entertainment, illustrating the interesting process of making shoes, and presenting views of the footwear of many nations.

The Maple Leaf in Evidence

Canadian Day was a splendid success and it is safe to say many more visitors were present from the Dominion than at any previous Fair. They came from Montreal, Quebec, St. Hyacinthe, Three Rivers, Fredericton, Halifax, St. John, Amherst, Toronto, Berlin, London, St. Thomas, in fact every conceivable point. The booth of the *SHOE AND LEATHER JOURNAL* was a centre of live interest and during the day many called and registered and were presented with a neat souvenir, in the shape of a maple leaf, the national emblem of Canada, in green and gold. The mementos were very highly appreciated.

The representative exhibits made by Beardmore & Co., of Toronto; Charles Parsons & Son, Toronto; Davis Leather Co., Newmarket, and others, were highly praised and served to put the Dominion on the leather map of the Continent.

The trip to the United Shoe Machinery Co.'s plant at Beverly was one of the events of the great gathering and proved to be a decided treat. A special meeting of the

National Shoe Retailers' Association was also interesting to all visiting dealers in footwear.

In short, the Shoe and Leather Market week in Boston was one studded with significant and outstanding events and in the next issue of the *SHOE AND LEATHER JOURNAL* some interesting pictures will be presented of the main features of the exposition, together with a much more detailed report of each day's proceedings. It has been necessary for the *Journal* to go to press when the Fair was in progress.

Seen and Heard at the Fair

The Ives Marine Band and Orchester, 60 pieces in all, provided splendid music during the Fair.

Co-operating heartily with the Fair management were some twenty of the most important allied branches of the shoe and leather industries, having membership associations, a number of which held meetings during the week of the Fair. The eastern associations acted as hosts to the army of visitors, and numerous outings and excursions were held for their entertainment. The capacity of the several hotels near the Mechanics' Building was taxed to the limit and in practically every hotel in the city were found quartered the Fair week visitors.

Mechanics' Hall never was more elaborately or artistically decorated and fitted up for an exhibition, in its twenty-five years of exposition history. Under the direction of W. W. Batts the work of arranging the exhibition booths had been going on for many days. The opening hour found every detail carefully and fully attended to. Mission furniture, desks, tables and rails, the latter hung with maroon curtains in one hall and green in the other, gave uniformity and attractiveness to the booths. Overhead, Machinery Hall was decorated in light green and white muslin, while Manufacturers' Hall was cool and lovely in Nile green and pink, flags of various nations being stacked in corners and on standards about the two halls.

German Slippers Were Shown

One of the most popular exhibitors of the many at the Fair was Fraulein Kati Hey, who came way from Frankfurt-on-the-Main, Germany, to represent Goldschmidt & Lowenick, slipper manufacturers in that country. This dark haired fraulein displayed several cases of slippers of camels' hair in varied colors and designs, some of which look like Scotch plaids. The cloth from which the slippers are made was also on display. Fraulein Kati convinced her firm that they should compete with American manufacturers in the production of slippers, and as a result she is now daily using her best English to persuade the American trade that her specialties are desirable for the American public.

In order to show the trade the great progress in shoe-making, the U. S. M. Co. had a rare collection of ancient footgear that was the cynosure of all eyes. There were the heavy riding boots worn by an Austrian postillion in the eighteenth century, the stilted clog from the Pyrenees, the Jap sandals used in temples, fish skin sandals from Annam and those worn by coolies in the Flowery Kingdom, the lacquered clog of the young Japanese girl, the primitive shepherd sandal from Greece, ancient Abyssinian, Sahara Desert and "Kahaib" sandals from Timbuctoo. There is a brocade mass shoe, worn by Pope Pius VI. in 1785; red heeled shoes which women of the seventeenth and eighteenth centuries affected in the French and Italian courts, some with the uppers elaborately embroidered or embossed, old wedding shoes from the Tyrol, and "duck bill" shoes from Switzerland in the time of the reformation, as well as scores of other curious, ancient and mediaeval footwear.

Members of the National Shoe Retailers' Association

and the Massachusetts Retail Shoe Merchants' Association had Friday set apart for their own uses. A large number of leading shoe retailers and managers of shoe departments in big stores were in attendance at the meetings, which were held in Mechanics' Building. President Andrew McGowin, of the National Association, presided at the big meeting, and President E. W. Burt, of the Massachusetts Association, had charge of the state meeting. A banquet was held Friday evening at which Governor Walsh and Mayor Curley welcomed the visitors, and Elbert Hubbard, of East Aurora, N.Y., was the principal speaker, the latter talking on "The Efficiency of Organization." The addresses at the business meetings of the two retail associations were pertinent and brought out much new and interesting information for the tradesmen.

Thursday, the second day of the Fair, the visitors were entertained by the New England Shoe and Leather Association at a harbor outing to Boston Light and later with a dinner at Paragon Park, Nantasket Beach.

The Southern Shoe Wholesalers' Association held an important business meeting Wednesday night, and Saturday was given over to the Shoe Factory Superintendents and Foremen, who started plans for the formation of an international association.

On Friday special meetings were held of the executive committee of the National Boot and Shoe Manufacturers' Association of the United States and of the National Shoe Wholesalers' Association of the United States.

Monday was British and Canadian Day and National Leather and Shoe Finders' Day. Tuesday the United Shoe Machinery Company took the visitors on an automobile trip to the company's model plant at Beverly, twenty miles up the North Shore. Wednesday, closing day of the Fair, was given over to the New England trade organizations.

The Boston daily newspapers gave marked attention and almost unlimited space to the Shoe and Leather Fair, and the importance of the benefits to be derived from it.

MEDIUM TOE LAST THE MOST POPULAR

A Brandon managing director of the Brandon Shoe Co., Limited, Brantford, and president of the Ontario Boot and Shoe Manufacturers' Association, recently returned from a business trip to the Eastern States, looking over the styles and investigating general trade conditions in the leading shoe centres. Discussing the outlook and fashion tendencies, Mr. Brandon stated to the *SHOE AND LEATHER JOURNAL* that in his opinion, the leading lasts for Spring would be the medium toe.

"The English toe," he added, "is not as popular to-day as it was a year ago. The factories are introducing the medium toe last, but the merchants are loaded with the English shoes, and it will take some time before their stores are cleaned out. Colored leathers, mahogany and brown, will be heavy, and patent leather exceptionally heavy. The old stand-by, gun metal, will be still in the lead. Fabric tops are selling heavily and also white nubuck shoes with rubber soles and heels for street wear for ladies' and men's shoes.

"I found conditions very slow across the border. Improvement is not looked for until another crop is taken off, but this crop will only temporarily relieve the situation. We evidently have another year of dull times ahead. The leading lasts for the coming season will be the English and the medium. The English last is not taking hold except in the large centres, and will still hold there for two seasons more. The Canadian merchants are slower in seizing on anything new than they are on the other side. The wise merchants are leaving the English last alone if possible,

and only buy what will do for immediate business. The medium toe will last, and will be the leading shoe for the next few years.

"Prospects for the coming season in Canada look promising, and we trust when the travelers go out with their Spring samples, that business will be good for the coming season," concluded Mr. Brandon.

HAS MANY FOOTWEAR TROPHIES

Among the trophies of a tour which Will C. Rising, of Waterbury & Rising, St. John, N.B., brought home with him after three months on the other side of the Atlantic, was one of the most interesting collections of ladies' and gentlemen's footwear that has been seen in Canada, says the Maritime Merchant. Mr. Rising went for pleasure, but he visited various centres of production of the line of manufactured goods in which he is most interested, and brought samples home, not for the wholesale trade but to give the people of St. John an idea of the styles of footwear that are most popular in Europe at the present time. It is safe to say that most of the lines have not been shown in Canada before.

Mr. Rising visited the chief cities of Germany, Austria, France, and Britain, and as he was three months on the other side he was able to get the views of the leading shoe merchants of the various centres visited. He found, moreover, that they were most courteous and obliging, answering all his questions. The "Merchant" man, as he talked with Mr. Rising, was able to gaze upon a very striking and beautiful display of ladies' footwear, which included English, Austrian, French and German.

The English goods included patents, and slippers in silk, satin, corded silk, brocade, ruffle slippers, which are the latest London style. Tango brocade, tan suede, blue suede, and a bronze kid that is very popular. These goods showed the Louis heel, the modified Louis heel and the military heel.

The Austrian goods included brocade, satin, high Tango, Bulgarian patterns in many colors, with the Louis heel in different heights; fancy velvet, figured silk, Mule slippers, and also the typical Austrian last in gold kid. The variety of colors, as well as styles in these goods was very striking.

The French goods included brocade, fancy Mule, fancy Brocade, high Tango, Bronze, colonial style in fancy brocade with moderate Louis heels; black silk in colonial styles,

suedes in grey, purple, tan and black, gold kid pumps, patent pumps with gold kid trimming and buckle to match, a new style of slipper with side buckle, white canvass Tanguos and slippers, white strap slippers with side buckles, white suede, three button Oxfords, patent Oxfords, with black suede top with gold kid binding and gilt buttons.

There was also a fine display of men's high class footwear in all leathers. The lot included a special boot for wading and fishing, with calf skin foot, leather sole, rubber from ankle to hip, lined with special calf skin. This is a very expensive boot, costing about \$30 per pair, delivered in Canada. With regard to the ladies' slippers, it was observed that they were all moderately high priced.

Mr. Rising said that owing to the difference in lasts and the uncertainty of delivery the old country boot and shoe houses cannot hope to do much business with Canada. In nearly all the cities visited he saw American shoes advertised such as the Sorosis, the Dorothy Dodd and other lines familiar on this side. In the higher priced lines of footwear the lasts are now becoming more like ours, but in the cheaper grades each country clings to its own style.

While in Paris Mr. Rising enjoyed a trip in an airship starting from the flying grounds outside of Paris and going around the Eiffel Tower at a height of 800 feet, and looking down on Paris. It was a wonderful sight, and very inter-

esting. He says the airships make two trips regularly every day, and seem to be well patronized.

STUDY ALL FOOT TROUBLES

Study feet and foot troubles. They are part of your stock in trade. Do not pose as a surgeon, but as a clerk who can offer intelligent advice and suggestions to customers who need both. Learn the causes of broken-down arch, flat foot, corns, bunions and callouses. Try to aid your customer in avoiding them or in correcting them.

"I have never known a man to rise rapidly, or even to get beyond mediocrity, whose pay envelope was his goal, who could not see infinitely more in his work than what he found in the envelope on Saturday night. That is a mere incident, a necessity; but the larger part of the real pay of a real man's work is outside of the pay envelope.

"The quality which you put into your work will determine the quality of your life. The habit of insisting upon the best of which you are capable, of always demanding of yourself the highest, never accepting the lowest or second best, no matter how small your remuneration, will make all the difference to you between failure and success."—O. S. Marden.

Cable "HIDES," Leicester.

SPHINX Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment :

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work :

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Numerous Novelty Patterns in Women's Spring Styles

Color Combinations, Shorter Vamps, the Stage Last, Plain Toes and Smaller Ornaments are to the Front—Shiny Leathers Will Still Lead—Colonials Likely to Have Big Call—Medium Full Toe in Men's—Popularity of Bals Continue

The rapidity with which the seasons pass may be gauged by the frequency with which shoe selling periods come around. No sooner does it appear that travelers have covered their respective territories than, within a very few weeks, they have to start out again with a complete new range for the coming season.

The question now uppermost in the minds of manufacturers, wholesalers and retailers is, what about styles for the

appreciation of the needs of his trade, he can steer clear of many mistakes in advance purchases.

Style Becoming Biggest Factor

In the retailing of footwear, particularly in the larger centres, the style question is becoming more and more an acute and important factor and requires as minute and careful attention as the financing of a business, the service of the store or the annual inventory of stock. Much advice has been given in the past on buying and possibly no two men adopt exactly the same methods. There is, however, often too much concentration given to the selling end of shoes, and too little application to the buying. It is an old

WOMAN'S PATENT CLEOPATRA, CLOTH QUARTERS, SPOOL HEEL, SMALL STEEL AND RHINESTONE ORNAMENT—BY PERTH SHOE CO.

spring and summer of 1915? The majority of Canadian factories have their spring samples completed or well in hand and before the close of the present month representatives will be touring the West with the most up-to-date ranges of men's and women's footwear that have ever been presented to the trade.

What changes are to be made? What is new in the way of lasts, toes, heels, patterns and materials. The query is one of much moment to everyone connected with the trade. In accordance with its usual custom, the SHOE AND LEATHER JOURNAL endeavors to supply some pointers on styles and style development for those who are studying the trend of footwear fashions for the coming season. The fundamental alterations are now apparent in many of the samples shown and if proper consideration be given to current presentations and the buyer has a good knowledge and intelligent

WOMAN'S BUTTON, PATENT FOREPART, DULL CALF FOXING, BROCADE TOP, SPOOL HEEL, SMALL STEEL ORNAMENT—BY KINGSBURY FOOTWEAR CO.

saying that "goods well bought are half sold," and the truth of this is never more apparent than at the present time.

The buyer should have confidence in his judgment based on past experience and an intimate acquaintance with the

lines on his shelves as well the requirements of his patrons. He should not let his own likes and dislikes run riot with him. Neither should he listen entirely to the persuasive pleadings or so called authoritative utterances of a salesman. In every

CASTLE PUMP, PATENT FOREPART, CLOTH QUARTERS, SPOOL HEEL, WIDE INSTEP STRAP—SHOWN BY BLACHFORD, DAVIES & CO.

case the buyer is a master of his fate and should he get loaded up with a lot of dead stock or unsaleable stuff he has, in the great majority of instances, only himself to blame. Perhaps he has not ordered his goods in time and given the factories a chance to make prompt delivery, or he has dilly-dallied along until the last moment waiting to send in the sizes and widths or to see what styles would prevail. It may be then he has come to a hasty conclusion and received the goods too late, thereby disappointing customers or missing sales.

Of course, the greatest changes in styles this season, as in previous ones, will be in feminine footgear, which affords the makers more scope for fancy materials and combinations and expression for ornamental and even far-fetched effects. It is exceedingly difficult to present a comprehensive review of all that leading Canadian manufacturers will offer, but there are certain unmistakable signs that afford a basis for style study and should assist the buyer in judging and choosing intelligently and discriminately. In the first place, it may be stated that there is no definite or eminent style authority in footwear. If any manufacturer, wholesaler, or retailer could speak with unerring accuracy and reliable prophesy regarding what fickle fancy would adopt, his fortune would be made indeed. He could retire tomorrow with a competence sufficient to end his days, free of any of the worries or perplexities incidental to the shoe or any other trade.

Tendency to Shorter Vamps

It will be remembered that last season vamps were never so long and drawn out, in fact the elongated, pointed recede

GUNMETAL OXFORD, MEDIUM ROUND TOP, BLIND EYELETS—BY E. T. WRIGHT & CO.

toe seemed to have reached its climax. Now reports from various parts of the Dominion indicate that the extremely long vamp button boots has not taken well with the trade, except in a very few centres. This year the tendency is in the direction of shorter vamps and three or four new lasts

are being strongly featured. A short vamp with a slight receding toe, a new round toe last with the modification of the stage last, the stage last and a short, rather square effect French last. It is expected that the new round toe last, which is medium high and carries a short vamp, will be a strong seller. Many foreparts are shown without tips. Short vamps give the foot a smaller appearance and heighten the instep effect.

Of course, the button boot will still be in the lead. In fact, ninety per cent. of the samples of leading makers of women's shoes disclose about the same number of buttons and the same height of leg as last season. The popular leather will be patent as usual, with gunmetal a close favorite. One leading firm anticipates an increased demand in kid shoes. The button boot with the full cloth quarter has taken very well during the past season and is likely to prove a good seller for spring. So far as tans are concerned no attempt is being made to push them, and whatever showing there is will be of a mahogany or nut brown shade. It is expected that fancy brocades will still meet with a generous measure of appreciation, while suedes of various kinds and kids will also be used for toppings.

Colors of Softer Tone

It is predicted that colors this year that will be the most saleable will be of the softer tones such as fawns, brown, champagne, taupe, etc. There will, of course, be many vari-

NUT BROWN TAN BAL, RECEDING TOE, BLIND EYELETS, FLANGE HEEL, STRAIGHT TIP

ations in patterns. There are noticed the whole quarter overlay and also the underlay panelled effect, as well as the shoe with the Cleopatra front, etc.

In heels there is not likely to be much change. They will be high on all up-to-date shoes. The full and half Louis, Cuban-Louis, the Spanish, the spool and the Cuban heel, together with variations and modifications, will still be featured. Several manufacturers have got out new types of pedestals which they have give a special name. Some of these are of wood and others of leather. Twelve to fourteen and fifteen buttons seem to be a popular number this season. All manufacturers are making an attempt to give the high cuts a light, airy and dainty appearance. In fact, Canadian shoemaking has evidenced rapid strides during the last three or four years in imparting to women's shoes that touch of grace and snap which characterizes the product of leading producers in the great shoe centres of the world.

Turns will be strongly in demand. In fact the popularity of the turn shoe is increasing season by season and more manufacturers are devoting their attention to this class of bootwear.

With respect to low cuts the Colonial will still be a prime favorite, while the new Cleopatra pump is being shown by many Canadian manufacturers. In these the short, pointed toe, the new round toe and the medium long recede toe are being displayed.

One noticeable feature this year is that low cuts gener-

Do You Know Cost of Doing a Shoe Business To-day?

Retailer Should Mark All His Goods at Least Ten Per Cent. Higher Than Cost—Real Cost of a Shoe is the Price Charged by the Manufacturer Plus Expense of Merchandizing the Shoe—The Fallacy of Fixed Prices.

"In discussing the important subjects of the cost of doing business, the question of legitimate profits, and the fallacy of fixed prices, I desire to say, as a general proposition that at least 75 per cent. of all shoe retailers are doing business and tackling the proposition of the distribution of shoes without having their eyes wide open and without knowing exactly the results of their work. They are doing business to a large extent on a traditional basis, on lines laid down by customs that have been outgrown," said A. H. Geuting, of Philadelphia, secretary of the National Shoe Retailers' Association, at the recent special meeting of the Association held in Boston during the big Shoe and Leather Market Fair.

"Our forefathers in retailing shoes were really wiser than we are to-day because they knew exactly what it cost to do business and they established selling prices that yielded a fair profit. We, as descendants, have the old established retail prices as the basis of our profits, in spite of the fact that the cost of retailing has since been increased. We are to-day in the same position that a manufacturer would be who ten years ago made a shoe for \$2.25 and was attempting to reproduce the same shoe to-day for the same price. We can all understand where he would get off at.

One Retailer's Big Mistake

"A short time ago, in conversation with a retailer, I asked him what it cost him to do business. He replied that he was able to retail shoes on a basis of 20 per cent. It struck me that that was very low. I began to quiz him a bit and I asked him how much his rent cost. He replied that he owned his property. Then, I said, 'What does your money cost you?' He answered, 'I have more money than I know what to do with.' He said he would rather use it in his business than have it draw 3 per cent in the savings bank.

"This man failed to appreciate that he could rent to someone else the building that he owned, that he could loan his money on good security for 5, 6, or even 7 per cent, and that that was a distinct cost of doing business, yet he failed to take any account of it. When the facts were learned of what it really cost him, I found that the actual cost of his business amounted to 27 per cent. instead of 20 per cent.

Expenses that Must Be Figured in the Cost

"I have written on the blackboard 14 items of expense that must be figured in the cost of doing business, and if you have been conducting your business without figuring these expenses, you are figuring without knowing what it costs you to do business. There are, of course, certain expenses that may not exist in certain concerns. For instance, some dealers do not advertise. As a matter of fact, every dealer does advertise to some extent, but because one does not advertise in a general way he may charge to 'expense' the little literature that is sent out. There may be some other items also, such as delivery charges, that may not be an expense to your business.

"However that may be, I want to give you a concrete example of the actual cost of doing business for a store that represents a large class. In a general way, I might divide the retail shoe stores of the United States into three classes. There are stores that do their business on a basis of from 15 to 20 per cent. These are third or fourth class stores, in small communities, where store service, rent, and every other consideration given to customers is at a minimum. The next class are merchants who do business in the neighborhood of 25 per cent. or less. These are merchants of which there are very few in large metropolitan districts. If they are located in these districts they are found in sections where the high cost of present day retailing has not overtaken them and where they can avoid such charges as 'delivery,'

ENTERPRISING WESTERN SHOEMAN HOLDS A "DOLLAR DAY"

"Dollar Day" is often held by the merchants in many towns at certain seasons of the year, when business men unite and widely advertise the event. Believing what is good for the masses is also good for the individual, James Maynard, shoe dealer of Victoria, B.C., who conducts two live stores on Yates and Douglas Streets, got up a "Dollar Day" a few weeks ago.

Was it a success. Just look at the crowds of people on the outside of the two establishments as seen in the accompanying picture. Throngs were waiting at the entrance to get inside, and the interiors presented a much busier scene than even the exteriors. The crush was so great that patrons had to be let in, in contingents. The front doors

were locked and the back doors were used as exits. Mr. Maynard reports that they sold hundreds of pairs of shoes on that day at one dollar per pair, and many persons got real bargains. The proprietor made it a rule, which was distinctly stated in his advertisements and other announcements, that no footwear sold at that figure would be exchanged. The congestion was so intense that no attempt was made to fit the shoes on customers. A record business was done and at the opening hour in the morning the groups were even denser than shown in the photograph. Mr. Maynard is well pleased with the result of his first "Dollar Day" and reports that he got rid of a lot of odds and ends and shelf warmers. The sale lasted just one day.

'advertising,' and other expenses that the first-class merchant is bound to engage in.

Why Costs Vary Among Different Stores

"The last class is the big metropolitan merchant, whose store is located in the heart of the big, throbbing centres—whose intelligence and business ability have to be of the first order. Here we find the expenses to run up to 30 per cent., sometimes over and sometimes a little under.

"Now I have chosen to illustrate the store that does business on a basis of 25 per cent., and I shall give you the various costs for the year and explain how they are made up. As you run down the various items of expense there may be some which differ in degree; in some stores they may exceed the figures I have shown here; in some cases they may be less. Some merchants are able to save on one item and are compelled to spend more on another, but in the main it costs them 25 per cent. to do business.

"Here I want to show you the importance of knowing what a man means when he says he does business on the basis of 25 per cent., and how easily it is to get fooled on this proposition. It is an old saying that figures can't lie, but that liars figure. Here is a case in point:

Concrete Example of Figuring Cost

"If a man does \$100,000 business and it costs him 25 per cent. to do that business, it means that it costs him \$25,000 per year to conduct his store. Deducting \$25,000 from \$100,000 shows that he received \$75,000. Now, if his merchandise cost him \$75,000 and he received \$75,000 for selling it, he has not made a dollar (excepting his salary and the interest on the money employed in his business), provided he has figured correctly. He has purchased merchandise at 75 cents and sold it for \$1.00, thinking that he made 33 1-3 per cent. and that as his cost, as shown above, figured 25 per cent., he was making money.

"The proposition is very simple and yet it fools thousands of merchants. As a matter of fact, you who know understand thoroughly that 33 1-3 per cent. of the cost of merchandise is exactly the same as 25 per cent. on the selling price.

Right Way to Figure Costs

"It seems to me that the best way to figure this proposition would be: If you bought a shoe for \$3.00 and it cost 25 per cent. to do business (which means 33 1-3 per cent. on the cost), you should add this cost to the shoe. This would make your \$3.00 shoe really cost you \$4.00. To get your profit you must add to this whatever you desire to make. In other words, the real cost of a shoe is the price charged by the manufacturer, plus the cost of merchandising the shoe wherever you happen to be located. A dealer will never make any profit until he recognizes this fact, knows it, and marks his merchandise on that basis.

"This leads up to a second question, 'What are legitimate profits?' This is a matter that must be left entirely to the discretion of every dealer. I might say, personally, that if I was sure of a net 5 per cent. profit on my business every year for the next twenty years I would be perfectly satisfied, yet if I were doing business in Nevada or Alaska I would think it entirely inadequate. This is a matter every dealer must settle for himself.

Figure to Get at Least 10 Per Cent. Profit

"I am going to make a proposition that we consider this question of legitimate profits on a basis of 10 per cent. Most people think that a specialized business ought to return a profit of 10 per cent., and I am going to advance the proposition that you ought to mark your goods at least 10 per cent. higher than your cost; and I wish to assure you at the same time, that in nine cases out of ten, that ten per cent. will shrink to five, or to 7 at least, for there are so many

things that come into business other than what you have figured on at the beginning of the year, that you will never be safe unless you allow for such incidentals. I make this statement in order to be fair to the public, fair to yourself and fair to the trade in general, that when it costs you 25 per cent. to do business you are entitled to mark your goods on a basis of 35 per cent., or a net profit of 10 per cent.

Where is this going to land you? It will land you at the end of the year with a safe margin in your cash box, or a balance on the right side in the bank. You will be able to hold your head up as a successful merchant. You will be touched with an enthusiasm that only comes to those who have tasted success in business. You will be in the position of the man who has been playing a game of whist, or a game of any kind and who has proven his ability to win. Confidence, enthusiasm and legitimate pride are born from no other source than a successful turn of your profits. Without it there is gloom, depression, worry and all the other negative qualities that produce failure, disability, loss of health, etc.

"Fallacy of Fixed Prices"

"The third point of my discussion is the fallacy of fixed prices. On page 10, of the Conference Report which has recently been issued by the N. S. R. A., there is a heading, 'The Science of Retailing vs. Fixed Prices.' I wish everyone here would read that chapter and have it as a subject of debate in your local association. It is the foundation upon which the success of your business depends. It is a wrong principle of business to overcharge a customer, and it is a wrong principle of business to not make a profit. The science of business lies in charging a correct price for your merchandise. It will obviate failure, it will secure legitimate service and will square itself with market conditions and the demands of the trade at every turn.

What is Meant by "Fixed Prices"

"Let us see what we mean by fixed prices. To-day every shoe, in every leather, no matter what the circumstances might be in favor of one or the other, are usually sold at one price. In other words, a man figures that he must have all kinds of shoes at \$3.00, at \$4.00, at \$5.00, etc., and that he cannot have any shoes at \$2.75, or at \$3.25. Now this rigid rule interferes with scientific manufacturing and scientific retailing, for often 5 cents will make or break a shoe and it must be thrown aside because it will not come under the fixed price rule.

"I have known retailers to throw out first-class lines because a legitimate 5 or 10 cent advance was asked for the shoes in the belief that they could not get any more than a certain fixed price for these same shoes, and I have known good manufacturers to ruin their product to meet these conditions. Think of the humiliation it is for a great trade—the great industry of shoes—to not be able to get an honest advance of 5 or 10 cents when the market conditions warrant it! Is there not something wrong with the mind that controls a business when shoes are deliberately gutted of their worth, or tried and true lines of shoes are thrown out because of the increasing cost of leather? Why, the small grocery dealer knows better than that. He seldom quotes eggs at the same price for two successive days.

Absurd System that Should Be Forgotten

"In my own business I have had my clerks rising almost en masse protesting against the advance of a shoe on which they had built up trade at a certain price. Just stop and consider how absurd this system of retailing is, how absurd we have built it. Does the butcher ever consider that meat must be sold at the same price week in and week out, day in and day out? Is this true in any other trade but shoes?

"Let us see how much more scientific is the system that I propose to-day; and I wish to say in recommendation of this system that I am practicing it in the face of compe-

tion of the keenest sort and I have no trouble whatever. I started my business new, five years ago, and I made up my mind that I should not be bound by any rules that interfered with the successful retailing of shoes; that when five cents counted in the shoe that it must be put there, and I made my retail price bend entirely to the best manufacturing results. This is the way I do it:

"We will go back to my original illustration of a 25 per cent store. Twenty-five per cent plus 10 per cent equals 35 per cent. Thirty-five per cent on merchandise sold at \$1.00 yields 35 cents, leaving 65 cents to be paid for the merchandise. When you sell merchandise that costs 65 cents for \$1.00 you are making 35 per cent., which equals 54 per cent on the cost. Therefore, you must make 54 per cent on the cost of your merchandise.

Modern Way of Fixing Prices

"Now, let us take an article of merchandise that costs \$2.75. Fifty-four per cent of the cost yields \$1.48½, which added to the cost of the shoe makes the shoe figure \$4.23. Now I do not advocate splitting nickels, but that shoe should be sold for \$4.25. Suppose that a tan shoe costs 10 cents more, or \$2.85. On this basis, this shoe would figure \$4.39. Is there any reason why that shoe should not retail at \$4.40?

"I might go on multiplying examples of the cost of other kinds of footwear. For instance, take a slipper that costs you \$1.00. The right cost on that slipper is \$1.55. Is there any reason why you should not get \$1.55 for that slipper? Suppose the same slipper with a strap costs 5 cents extra. Is there any reason why you should not get \$1.65, instead of forcing these shoes down from a clerk's standpoint and make a strong line at \$1.50 so as to clean up the market, as the old saying goes. All that is required to put this principle into practice is courage, and conviction that it is right merchandising. Mark your shoes accordingly to the system I have explained and as sure as this year rolls 'round you will have made a profit.

"Doing business on the other plan, giving away 5, 10 or 15 cents here and there in order to establish uniform prices is where ruin comes in. It is where you fail to get your profit, and it is where you fail to be able to give an honest product to your store because of an advance in prices. You will be surprised how easy it is, after all, to establish the system, provided you make up your mind to do it.

"Let us see just how you would feel about this proposition when you put it in force. I have known shoemen to lose a night's rest because they had broken the rule of selling a \$2.25 shoe for more than \$3.00. But suppose he looks at the cost of his shoe from the standpoint illustrated, namely, that a \$3.00 shoe really costs him \$4.00, do you think he can feel in any way conscience stricken by getting a little above that, say \$4.40? Certainly not, and no customer who comes to his establishment expects him to do less, whether he gets it or not.

Get a Net Profit of 10 Per Cent.

"With this system in force you can repeat Longfellow's words in 'The Village Blacksmith:' 'He looks the whole world in the face for he owes not any man.' When you are paying your bills and conducting your business on first-class lines, giving your trade efficiency and high-class service, which can only be rendered after long years of experience, then you should insist upon making a net profit of 7 per cent. Is there any man in your community who would dare deny you this profit? How few business men are there in this world to-day who do not feel that you are making a great deal more? Are you not cheating the community in which you live when you are not making this return on your business?

"All I ask of you to-day is to consider these matters and when you return to your respective homes to figure it

out for yourself, I hope I have left just one little thought in your mind that may give you a new point of view on the question of a proper system of figuring costs, legitimate profits, and the fallacy of fixed prices.

New Method in Merchandizing

"Twenty-five cents each or three for one dollar." So read an announcement in the last issue of the SHOE AND LEATHER JOURNAL in reference to shoe cuts, which caused some merriment among our readers. Of course, the first named figure was a typographical error and should have read thirty-five cents each. The slip, however, afforded a number of subscribers a chance to get back, and among the breeziest communications received was one from an old friend, A. T. Marshall, manager of the shoe department of Stewart's Limited, of Renfrew, Ont.

Humorously, he remarks, "Your special offer of one cut for twenty-five cents or three for one dollar reminds me of an eccentric Western Ontario hardware man who thought the profit on nails was very small. On being asked by a certain customer the price per one hundred pound keg the merchant named a certain figure. Then the customer asked him for a price per ten kegs and the dealer quoted a little higher figure per keg. Naturally the customer was astonished. On inquiring the reason the hardware man told him that he did not mind carrying one keg of nails up from the cellar for nothing, but he'd be darned if he would carry up ten."

Mr. Marshall adds, "I read your JOURNAL from cover to cover and there are several good points brought out in every issue. I like your idea of publishing twice a month as I get all the news of the trade from one end of Canada to the other. I certainly wish you increasing prosperity."

An Old Time Warehouse Staff

Here is an old time portrait of the warehouse staff in Toronto of Ames, Holden, McCready Limited. It was taken over fifteen years ago. Four of the nine persons shown are still in the service of the company in Toronto, Messrs. Hutchison, Hand, Pearson, & Armstrong. The

group was photographed in front of the old warehouse at 60 Front St. W., which was wiped out in the big Toronto fire ten years ago when so many wholesale firms suffered.

In the front row, left to right, are seen Jas. Hutchison, Alf. Hand, A. Vaisey, M. Cairns and A. M. Haggart (now with R. B. Griffith & Co., Hamilton).

Back row—T. H. Bigwood, president of the Ontario Shoe Retailers' Association, Harold Pearson, Chas. Armstrong, and Geo. Henry, the latter now residing in Edmonton.

The Value of Store Service in Building Up a Business

It Means More than Supplying Satisfactory Goods at Fair Prices—Service of the Right Kind Will Make Your Establishment So Attractive That It Is a Pleasure to Trade There.

The merchant is not merely selling merchandise that makes good, he is selling a service, and just as truly as the conscientious and honored statesman is a servant of the people, just as truly is the conscientious and honored merchant a servant, who performs a most valuable service to his fellow-men.

More and more is the merchant realizing the great part he plays in every community, having ready at all times the products of the world's best factories awaiting the need and desire of his patrons. And more and more are his patrons realizing the great service which the retailer and his store render his fellow citizens, buying in bulk, storing for future and selling in single. They regard his emporium as the common store house from which each can draw when ready.

To perfect this service is the merchant's highest aim, and in doing so he must automatically make it a profitable venture, else the community loses that service.

Numerous Little Courtesies

Store service means more than supplying satisfactory merchandise at fair rates, it means making the store so pleasant a place that it becomes a genuine pleasure to pay it a visit.

It means that a hundred and one little courtesies of store arrangement keep the store cool in summer and warm in winter; that a rest room be set apart for the women patrons; that a playground be provided for the little people; that an information bureau be installed where the shopper can be given directions as to where any item carried can be located and where all questions regarding the city can be answered; that the merchandise be so classified, that the information bureau be hardly necessary, that more be done to make for the comfort and convenience of the male patrons—these are but a few of the more practical points that prove a merchant's desire to sell service as well as good merchandise.

Beyond these features modern fixtures that allow for the most advantageous display of merchandise count mightily for fully half of the trials of the retailer result from the fact that his present fixtures do not allow him to display enough of the high grade merchandise and the novelties of the season which he carries in stock.

The merchant, of course, knows full well the various desirable points concerning all of the merchandise in stock, but he is handicapped by the fact that many times lack of space or lack of the right fixtures do not allow the public to know even the bare fact that he himself carries some very important articles, which would enjoy a large sale if they could only receive their manufacturing right, the right for a chance to be known and to make good.

Make the Public Acquainted

Realizing these things, real store service demands that in so far as it is possible the public shall become acquainted with all desirable merchandise, that this acquaintance shall be second only to that of the merchant and his men themselves.

So then, regard every inch of display space as almost sacred and insist that every desirable article be so placed that the patrons shall see each good profit-bringing line whenever the store is entered.

Some of the styles which are certain to be called for must be kept in the background and the specialties of the season must be brought well forward. This is service that is worth while.

Ye Craftsman's Shoppe, Limited, 310 Yonge street, has made an assignment to J. F. Thompson, Toronto. A meeting of the creditors will be held on July 30th for the purpose of receiving a statement of the insolvent's affairs, appointing inspectors for the giving of directions with reference to the disposal of the estate, etc.

THE SPACIOUS FRONT OF THE PARROTT SHOE STORE IN SASKATOON, SASK.

THE ARTISTIC AND INVITING INTERIOR OF THE PARROTT SHOE STORE, MOOSE JAW, SASK.

How Live Western Firm Keeps Stocks on the Move

Three Flourishing Stores Directed Under Splendid System—Two Special Sales Conducted Annually—Buying and Sorting All Done from Headquarters—Rapid Progress Made in Trio of Leading Cities.

“Direct from the factory to the foot.” This is the slogan of the Parrott Shoe Co., with head quarters in Regina, Sask., and branch stores in Saskatoon and Moose Jaw.

It is only a little over a year and a half ago that the members of the Parrott family left Chatham, Ont., to locate in the West. They have made rapid progress and to-day have as neat and progressive shoe stores as can be found in any urban centre. The firm consists of four partners, E. E. Parrott, who is the father of the three boys, but is not actively interested in the operations of the business, Victor H. Parrott, of Regina, Harry B. Parrott, of Moose Jaw, and Percy H. Parrott, of Saskatoon. The firm were in business in Chatham for about three years before. They bought out Somerville & Son in the Maple City, and on leaving there, disposed of their stock to Turell & Dell.

Opening Up Trio of Stores

The stores in Regina and Saskatoon were opened first, and about six months later, a third one was launched in Moose Jaw. On their departure from Chatham, the Parrott boys retained the services of their staff, consisting of two young men, who started in the shoe business with them. One of these young men, William Kendall, is now the sales-manager in Moose Jaw, and Roy Wilson, the other, occupies a similar position in the Saskatoon store. Parrott Bros. have a splendid system, clean stocks, progressive ideas and up-to-date methods. The Regina store is their head office, where the larger stock is carried. Victor H. Parrott looks after the buying at the Regina end for all three establishments. Moose Jaw and Saskatoon take off the sizes in their different lines every Monday morning, and send them in to Regina and thus keep their stock in good condition. This plan enables the firm to have very complete and yet

comparatively small stocks in both Saskatoon and Moose Jaw establishments.

Getting Rid of Odds and Ends

The books of the Parrott Shoe Co. are in the Regina store, and all drafts are paid there. The books of each shop are kept separately, so it can be easily ascertained twice a year how each of the enterprises is progressing. The firm run a big clearing sale twice a year, between seasons, in order to clean out odds and ends. When a line becomes broken in all three stores, it is assembled in one store, where the members think it can be handled to the best advantage. This keeps the various stocks in good shape, so far as odd sizes are concerned.

The Parrott Shoe Co. are much pleased with their venture in the West, in spite of the fact that business concerns generally have just passed through the worst year that portion of Canada has ever experienced or is likely to experience for some time. They have done a very nice trade, in spite of the depression, and are looking forward confidently to a decided improvement during the fall months, as a result of the bountiful harvest, and the better feeling that exists in mercantile circles throughout the Prairie Provinces.

Norman L. McDonald was elected president of the Edmonton Leather and Shoe Company at the annual meeting held recently. The other officers are: Vice-president, A. C. Todd; secretary-treasurer, F. M. C. Crosskill; directors, Francois Adams, L. L. Pearce, W. G. Congdon, N.G. Pearce, W. H. Sheppard and D. R. Hotson. The reports show that the plant at Manchester, south of the Edmonton city limits, was flourishing and that there were fine prospects.

Some Terse Talk on the Buying and Selling of Shoes

Put More Thought and Effort into the Purchasing End—Emphasize the Style Characteristics of a Boot When Making a Sale—How to Meet the Unreasonable Demands of Querulous and Inquisitive Customers—Notes by the Way.

"I maintain," remarked a well known Canadian manufacturer recently, "that there is altogether too much attention given by the ordinary retail shoeman in the selling end of the business and not enough in the buying. It seems to me that ninety per cent of the effort and energy of the footwear dealer to-day is crowded into the selling terminal, and there is where he makes a mistake. There is an old saying that "goods well bought are half sold," and the truth of this assertion is never more patent than at the present time. This is seen on every side, and no doubt causes a large aggregation of odds and ends, shelf warmers, stickers and general junk, which is too often found in accumulating quantities in many a rural and city shoe shop. The trouble with the average dealer is that he is all bent and bound on selling. He will not give the necessary time to buying properly, and the result is that he never gets very far in the matter of frequency of stock turnover. He will hustle down to a sample room and ten to one when he is there, his mind is on his store, wondering how many shoes are being sold during his absence or if the clerks are adhering strictly to business. The result is that his attention is distracted and he lacks concentration. Any large retailer or head of a live shoe section will tell you that more than half the success in merchandising to-day lies in sound and careful buying. There is no guide or chart to go by, but by close study, application, and intimate knowledge of the wants of customers losses can be largely eliminated and dead stock made practically impossible, providing the price is right and the goods right. My advice to retailers is to devote a little more time, talent, and energy to the buying problem, then a man knows exactly where he is at. He has on his shelves only the ranges that will sell, and when a shoeman keeps his stock moving he is making money, but it must be moving in all departments and not in three or four leading lines. Take the case of any big man in the business to-day and you will find that he has achieved his present position largely through being an expert buyer, possessing sound sense and good judgment. Many fellows who are clever in the selling end, but the one who knows how, when and where to buy is also a decided business factor and a valuable asset in any business."

Never Give a Guarantee

"Do you guarantee these shoes?" Many people often ask this of a footwear merchant, especially if they are paying four or five dollars for a pair. "Yes," remarked a Toronto shoeman, "I have this question flung at me frequently, and my invariable answer is 'no.' The natural query from the customer, then is 'Why don't you?' We reply that we sell at too close prices to guarantee these shoes. If there is a disposition on the part of the interrogator, to continue the discussion, we ask him if he gets a guarantee with his shirt, his hat, or his overcoat to the effect that it will wear for so many months or years. No, of course, he gets no such warranty, yet there are certain persons who buy shoes and think they should last forever. They forget that of all articles of apparel, shoes are subject to the greatest strain and stress. They are used upon the hard pavements, over rough roads in all sorts of weather, upon perspiring feet, and in every other way have to undergo the toughest kind of usage. How could we guarantee footwear under such conditions? Of course, it is our object to dispose of good shoes that will last as long as possible, and if anything is radically wrong in the way of stitching, lasting, heeling, soleing, eyeleting, etc., it will generally manifest

itself in the first two or three days that the boot is worn, and we gladly fix up the defect."

"But say, it is a big mistake for a shoeman to talk wear. No other tradesman does it. He talks style, fashion and fit finish and dressiness and these are the points which the footwear merchants should emphasize. He cannot guarantee leathers, shoemaking, etc. All that he can do is to give the best value and style possible for the money."

How Long Should They Wear?

"It is strange the conceptions some people have of the word 'wear.' One man or woman is satisfied if he or she gets six weeks usage out of a shoe and others think that they should get six months and a few imagine boots must last forever," declared a Montreal retailer. "Oh, we encounter all kinds of conditions and customers. Some are sarcastic, some dictatorial, some repugnant, some saucy or surly, and a few of the bull-doing nature. Once in a while a customer will come in and say, 'I paid four dollars for these shoes and the sole is worn through already. They ought to last longer than a month. You know four dollars is quite a bit to pay for a pair and I don't think that I have got sufficient wear out of them.' I generally point out to such a complainant that when everything is taken into consideration shoes are the cheapest article that the average person buys. Four dollars for a pair that is two dollars a shoe, which after all is not much. Why you can take a pair to a repairer and he will charge one dollar or one dollar and a quarter for putting on a half sole. This is not regarded as too high a figure by the average man, and as a general rule repairers are not overburdened with this world's goods. They work hard for their money and are able to merely secure a living and raise a family. You do not kick at a dollar or more for the work, and considering the cost of manufacture and scores of operations through which a shoe is put, the outlay for material entering therein, together with all the findings, selling and overhead expenses—why there is no other article of wear made at such a great expenditure of expert workmanship, time, material, etc., and sold at so moderate a price; yet people come trooping along every day expecting their shoes to last forever. All this emphasizes the fact that retailers should talk style, more than wear, considering the risk and responsibility which the average man in the business assumes.

They Saw the Shoes and Came In

"Yes, sir, that window has paid me in many ways. It cost me \$400 to install, but it is yielding interest on the outlay many times over every month that I do business." So spoke a suburban retailer of Hamilton, the other day, in conversation with the *SHOE AND LEATHER JOURNAL*. "Why, on Saturday night last, I know of four men who came in here, each buying a five dollar pair of shoes which they had seen displayed in the window, while another visitor called and got a pair of six dollar shoes. I can trace these results directly to my window display, because all of the five callers intimated that if they had not seen just what caught their eye in passing, they would not have bought the footwear at all. So you see that an imposing shoe store exterior, with goods properly exhibited, and neat price tickets placed on the shoes, has the result of attracting business."

The Goodyear Welt Process in Shoe Manufacture

Entire Process Fully Explained in Simple and Concise Fashion—Difference Between Goodyear Welt and Other Makes—Real Meaning of Welt—An Instructive Article for the Retailer

By E. F. LEONARD

In a recent issue I described the McKay shoe, and how it differed from a welt shoe. I will now take up the Goodyear welt shoe.

The Goodyear machine for sewing welts was invented by Charles Goodyear and first came into prominence about 1875. The method of making this welt shoe is patterned after the hand sewn process of shoemaking and in very few in-

SOLID LEATHER INNERSOLE

stances can a man tell the difference between the good grade of Goodyear welt shoe and the hand sewn shoe, either in appearance, wear or comfort.

The upper of the shoe is about the same construction as in the McKay shoe only slightly smaller in the vamp, because in the welt shoe we do not need so much material to lap under the insole for lasting as in a McKay shoe.

The last used in the Goodyear shoe does not have an iron bottom, except a small iron plate on the bottom at the heel as large as the heel seat of the shoes, as in the Goodyear

After the innersole is channelled, the channel lip is turned up at right angles with the bottom of the insole, on the outside edge, and then the insole when dried is ready for the shoe.

In channelling insoles three measurements are generally used, according to the shape of the shoe desired. If the shoe to be made is an ordinary shoe with regular round shank, the insole will be channelled, starting at the inside shank, about $5/16$ or $6/16$ at the breast of heel, to $4/16$ around toe to end of toe cap, so as to give a neat close inside of shoe and around the toe and to allow the space for the toe cap and the leather box, then the channelling goes out to $3/16$ at the outside ball so as to allow a slight extension on the outside ball of shoe, then back to $5/16$ or $6/16$ at the breast of heel again. The channel is run in this way at the breast of heel, so as to make a good joint where the shank of shoe comes up to the breast of heel, and so that the edge trimmer will not trim out the Goodyear stitches in the shank close to the front of the heel and then spoil the shoe.

The insole is now attached on the bottom of the last by temporary tacks so as to remain in position during the lasting and welting.

The counters are now placed in position in the shoe, and the box toes are placed in, if they have not been stitched in, in the stitching room as is generally done. Then the shoes are pulled over by hand or machine and held in position with a number of four ounce tacks driven part way in so that the points go a short way into the wood. The shoe is then either side lasted by hand or machine and tacks are driven in part

STRIP OF WELTING SHOWING GROOVE FOR WELT STITCHING NEEDLE

shoe the only nails that remain in the finished shoe are the heel seat nail and the heel nails which are clinched on the iron heel plate on the last. These are covered either with a piece of leather or pad of felt in the finished shoe.

The innersole of a Goodyear welt is made generally of solid leather, and in some cases where the leather is soft or light, a reinforce of heavy canvas is cemented to the bottom of the innersole. This is called a gem innersole, and as the canvas is heavy and firm it prevents the innersole from getting out of shape in the wear, in fact a good gem insole is much better for use than a poor, solid leather insole, and if all insoles were gemmed or re-inforced with canvas, the shoe would hold its shape much longer than many shoes do that have a poor, solid leather insole in them.

Insole Process

The insole of the Goodyear welt shoe is channelled on the bottom with an outside and an inside knife. The points of these knives are separated by about $5/32$ to $3/16$ of an inch and the leather between the point of the channel knives is called the "between substance." Care has to be exercised here, for, if the "between substance" is too heavy, it will cause the machine to skip stitches in sewing on the welt, not being strong enough to hold the strain of sewing a tight welt or in seam, as this process of welting a shoe is sometimes called.

way to hold the upper in place as the different parts are drawn down to the wood of the last.

The shoe next goes to the number 5 machine, where the toe is wiped in and held in place by temporary tacks at corner of tip holding a wire around the toe. In order to make a good seam, the toe must be well wiped into the shoulder

A GEM INNERSOLE

of the insole. The heel of the shoe is wiped in, and held in place by short tacks which are driven through the part of the upper wiped in and the bottom edge of the counter and the insole are clinched on the iron seat of the last. These tacks remain permanently on the shoe.

The shoe is now allowed to dry over night so that the boxes, counters and uppers may dry and hold the shape of

the last before removing the tacks and wire. A few replacing tacks of soft material are now put in or a small staple wire is driven through the upper and the lip on the bottom of the channel to hold the upper in place, then all the tacks previously put in are removed. The surplus portion of the upper is trimmed up so that the welter can see to do his work properly and the shoe is ready to be welted.

What the "Welt" Is

The welt is a small strip of sole leather of good material about 9/16 or 5/8 inch wide by 1/8 thick. This is bevelled on one edge, and on the other side near the same edge, a small groove is made so that the stitches may lay flat on the seam in order that the welt may lay close to the upper where the bevel is made on the welt.

The welt passes through the "welt guide" on the machine, and is held in place by an attachment on the machine. The operator places the shoe bottom up to his machine and the machine with a curved needle and a curved awl feed traveling in the same circle stitches the welt to the shoe, in the groove in the welt, through the welt, through the portion of the upper and, lasted in, and through the channel on the bottom of the insole. By this method all sewing is outside of the shoe and no thread appears inside the shoe whatever. The replacing tacks which hold the shoe in place for the welting and the tacks which hold the insole in place are now removed and all surplus upper material and other material are trimmed off the bottom of the insole.

Putting in Shank Pieces

The welt which laid up against the side of the upper of the shoe is now beat out at right angles to the upper of the shoe. The cavity or space between the seam in the bottom of the shoe caused by the elevation of the channel and the insole is now filled in with ground cork or felt, and a shank piece of steel, covered with leather board is put in, the steel to give a good stiff shank and the leatherboard to fill up with space so as to make a good bottom when the shoe is finished.

The outersole has been wet and is partially allowed to dry out in good temper to work. It is coated on the inside with a good quality of rubber cement, the same cement as put on the bottom of the filled bottom of the shoe and the bottom of the welt. The shoe is placed on the sole laying machine, and held in place by the cement. The shoe now goes to the rough rounder who shapes the sole, trims off all surplus sole leather, and if the shoes are to be channel soles, he makes the channel, if the shoes are to be made stitch aloft with the stitching showing on the bottom of the shoe, he cuts a slight groove on the bottom of the sole. One operation of the machine does all the different operations.

What the Stitcher Does

The shoe is now ready for the Goodyear stitcher, who takes it and stitches around the edge of the sole through the welt which has been beaten out flat and through the outsole, the thread running through hot wax as it goes through the machine. These two threads cross each other and lock in the centre of the outersole. You see no thread goes anywhere inside of the shoe in this operation.

After a few minor operations the shoes are put through an automatic leveling machine which levels and smooths the bottom and puts the welt back in place. If it has been strained in any stitching or other operation, the heels are now put on, with all the nails driven in one operation of the machine.

The other operations are now done in the ordinary manner and the lasts are left in until the bottom of the

shoes are finished. The lasts are generally in the shoes from six to eight days, giving the shoes time to dry out thoroughly and shape themselves to the conformity of the last. This is why a good shoe will hold its shape much longer than a cheap Goodyear shoe or a McKay shoe.

Making Heel Seat Comfortable

A heel piece of leather or pad of felt is now put in to cover the clinched nails in the heel of the shoe. These nails are the only ones that have remained in the shoe, all others having been only temporary nails and have been removed, and as the Goodyear welting or the Goodyear stitching of the shoe do not in any way come inside the shoe, you have a perfectly smooth insole, which makes it much more comfortable and flexible than any other machine shoe can be, and fully as comfortable as most hand-made shoes are ever made.

Knows All About Lasts and Designs

P. Y. Smiley is the kind of a gentleman that his name implies, he is cheerful and light hearted under all circumstances. More familiarly known by the sobriquet of "Pearl," he first saw the light of day on November 13, 1878 at the lakeside town of Port Dalhousie. At an early age he began to learn all about rubber footwear, and has been at it ever since. His first connection with the trade was in the factory of the Maple Leaf Rubber Co. in his native village. Then he came to Toronto and after being employed there for a while, he was placed in charge of the cutting department, patterns, etc., of the Berlin Rubber Mfg. Co., at Berlin,

a new industry which had just started. Eleven years ago, when the Merchants Rubber Co. was launched in Berlin, Mr. Smiley was given the post of chief designer. Four years later he was made superintendent of the mill and a few months ago was elevated to assistant manager. He is an expert designer of models, lasts and patterns. There being little about the human foot, its construction, shape, and various parts that he does not know intimately. Popular with the employees of the company, he has two hobbies, one is his home and the other is his chicken pens. He is a lover of poultry and believes that he has as industrious and efficient birds as can be found in any coop throughout the Dominion.

New Features Installed in Handsome New Shoe House

An Exclusive Bargain Basement and a Special Juvenile Department—Air Cushion Opera Chairs and Recessed Full Length Mirrors on Main Floor—Other Conveniences on Mezzanine Floor of New Toronto Footwear Establishment

A bargain basement reached by a winding marble and brass stairway from the front of the store, an exclusive misses', children's, and infants' department, with repair shop in the balcony at the rear on the second floor; the main floor finished in natural oak with shelving and ledge, and equipped with ninety opera chairs, show cases, fitting stools and all other accessories to harmonize; full length recessed British plate mirrors, extending from the floor to the ceiling, topped with artistic dome lights.

These are a few of the distinctive features of the handsome new shoe store, which was recently opened up at 234 Yonge Street, Toronto, by Bachrack Brothers, who have been in the business some fifteen or sixteen years. The store is 110 feet deep by 28 wide. Over \$18,000 was spent in alterations to the front and interior of the building.

The front is of Etonia pressed brick, with glazed terracotta trimmings, richly ornamented, with balcony grills to the windows. The entrance is tiled and leads to double swinging oak doors, set with bevelled plate glass possessing brass kick plates. The height of the show case windows is about seven feet, and they are surmounted with ornate bevel glass of geometrical design. There are beautiful mirrors at the side and rear of the windows, while overhead the panellings of natural oak are decidedly attractive. Artificially, each window is lighted with eleven, hundred candle-power Tungsten lamps. The vestibule entrance is about eight feet wide and twelve feet deep, being of a receding character with tiled floor and sage green border,

while the plate glass front is set in copper, with Verdi antique finish.

A Spacious Bargain Basement

At the immediate left of the entrance, a wide circular staircase leads down to the basement. This stairway is exceptionally attractive, possessing Verdi antique balustrades, with heavy brass rails, marble tread, and elaborate electric fixtures on the newel posts. The basement extends the whole area of the interior, as well as out under the sidewalk in front, being well lighted by means of the overhead Luxfer prisms. In the winter time the space below the pavement will be used for the sale of rubbers. In the basement are some forty bargain tables, shoes being sold from fifty cents to \$3.00. Upstairs on the main floor, the men's and women's general department is located, and here values range from \$3.00 to \$12.00. The decorative and fixture schemes throughout are exceptionally fine, all the woodwork being in natural finish oak. Ninety hardwood opera chairs, placed back to back and extending down the centre of the premises have air cushions of leather and are very comfortable. In front are long stretches of dark green velvet carpet. The floors are of oak throughout. On the right is the well equipped hosiery counter and directly in front of the entrance are handsome showcases for the display of findings and other lines. The recessed British bevel plate glass mirrors which extend from the floor to the ceiling, afford visitors an opportunity of seeing exactly

COMMODIOUS INTERIOR OF A NEW YONGE STREET SHOE HOUSE IN TORONTO, SHOWING MARBLE AND BRASS STAIRWAY ON THE LEFT.

how a shoe appears when it is on the foot. The artistic dome lights over the mirrors lend an air of distinctiveness to the store, which is illuminated artificially by fourteen new nitrogen lamps on each floor, with properly spaced outlets for attaching electric fans.

Conveniences on Mezzanine Floor

At the rear are two cash registers, as well as the parcel and wrapping counter. This has an oval front of Circassian

in front to prevent the tiny toddlers from falling. This is a popular feature in many of the leading shoe stores in the United States. On the next floor above is the reserve stock. The firm have a sales force of thirty-five persons in the various departments.

At the formal opening recently, an orchestra was stationed on the mezzanine floor and souvenirs and flowers were presented to all callers, who were shown through the different departments. Sol and Harry Bachrack, who constitute the members of the firm, believe that they have several accessories in their handsome new business home, which will be appreciated, and they will be pleased to welcome any members of the trade.

Early Closing in the East

The movement for shorter hours and the saving of daylight is rapidly spreading through New Brunswick. Many daylight saving proposals have been given consideration of late, but in St. John more than any other city in the province they have been given more hearty reception. Some years ago, even the wholesale houses did not enjoy the Saturday half-holiday, and that retail stores should some day have this privilege seemed preposterous. Now, however, both the wholesale warehouses and offices, and some of the retail stores in the central part of the city rejoice in closing their doors at one o'clock on Saturday noon. The wholesale places have, of course, had the weekly half-holiday for the last few years. The latest trend towards early closing, and the saving of daylight is noticed in the movement now general for the closing of the wholesale houses at 5 p.m. daily, instead of 6, as has been the custom. This will continue during the summer months, the offices opening from a half to an hour earlier in the mornings.

In the northern section of the city the shoe stores do not have the half-holiday on Saturday, but there is a movement for a mid-week half-holiday, and also for the closing of the places of business at either 6 or 7 o'clock in the evening. There is much favor found for the proposals, but whether they will become generally effective or not, cannot yet be said. In Fredericton the movement for the saving of daylight is also taking hold. The merchants and the members of the Clerks' Association are again arranging for the mid-week half-holiday which proved quite a success last season.

More Turn Shoes in the Future

Could the sale of welt and McKay shoes be made to compete? The writer believes that the cheapening of the welt shoe will give an opportunity to the McKay manufacturer to offer shoes that will give great competition to the welt shoes. The greatest mistake is made when welt shoes are made so cheap that a McKay of the same price will give added value to the purchaser. While many welt shoe manufacturers are trying to introduce a cheap grade of welt shoes, other manufacturers making McKays are exerting their efforts towards making a flexible McKay shoe and some have succeeded to a marvellous degree in that direction. Some large turn shoe manufacturers are now entering into the scheme of making heavy sole turn shoes, and here again the welt shoe will get a tough proposition to meet, especially in women's makes. Some welt shoe manufacturers are now considering the heavy sole turn shoe idea. The turning machine that can turn the heaviest sole, as heavy as is put on any women's welt shoe without straining the vamp or the sole seam, or the lining, is now in operation and fully protected by patents. Both the heel and forepart are trimmed at one setting and practically by one stroke of the treadle. The writer believes that more turn shoes will be made in the future than in the past.—Shoe Topics.

THE MODERN FRONT OF THE NEW BACHRACK SHOE STORE

walnut set with brass drilles, the woodwork being inlaid with bronze, making a particularly pleasing background for the store. To the rear is the shipping room.

On the mezzanine floor, leading to the misses', children's and infants' department on the second flat, are telephone, writing and rest rooms. The mezzanine floor and stairway woodwork is of white enamel. There are neat private offices at the rear where travellers' samples and other lines of goods may be shown to advantage.

In the misses', children's and infants' department the woodwork is also of white enamel, and the front entirely of glass, while two sky lights permit a flood of daylight from above. The ceiling is eleven feet in height and the seating chairs are of mission style. Here will be fitted up an exclusive infants' department, with little tots' chairs placed on a circular table divided into sections, with brass chains

Does So-Called Clearance Sale Really Pay After All?

Why Wait for Accumulation of Dead Stuff in Order to Have a Sale—Best System of Keeping Footwear Stock Clean Is to Have Regular Selling Location for Slow Moving Goods—Some Practical Pointers.

What about shoe clearance sales! Do you hold them at regular intervals? And are you able to put a real merchandising reason back of them?

The season for midsummer semi-annual clearance of stocks is here. Let us go a step further therefore, and ask: Is semi-annual clearance good business practice? Or has it become a sort of necessary evil?

A serious problem and a live topic among shoe retailers! One of those subjects regarding which an honest difference of opinion exists—according to the point of view. For some retailers believe in sales; others do not, says the Dry Goods Economist in its Shoe Section.

Profitless Cut Prices

The original purpose of clearance sales was to dispose of undesirable stock, and, perhaps, incidentally, stimulate trade during naturally dull periods of the year.

Originally, the clearance sale meant what its name signifies—a clearing out, a reducing of stocks, a leveling of values, with a view to giving the new stock of a coming season full leeway. That is, the clearance was a legitimate part of the merchandising mechanism, accelerating the movement of stocks in which the style value was low, building up real interest in the shoe store or department as a whole, and creating a certain amount of prestige. That was the shoe clearance which found its origin in the merchandise condition in the store.

And it was not held unless this condition made it advisable.

The Semi-Annual Habit

But now the semi-annual shoe sale has become almost an institution, and one with no basis otherwise than habit.

To get a proper view of the whole matter, it is necessary to consider the effect of clearance sales on the store's trade.

A bona fide sale, offering unusual values, will undoubtedly stimulate trade temporarily. This, because a sale, in its very nature emphasizes value. And it is value that appeals to the customer who considers what he gets for his money. The term "sale," of course, implies a reduction of price or a notable increase in value for the money.

No merchant, however, has a monopoly on cut prices. A cut price at the corner of Front and Tenth streets is no more a cut price than it is at the corner of Sixth and Market. The drawing power of the cut price is heightened or lowered by the standing of the store with customers, and by nothing else.

If one shoe retailer holds a cut price sale and all of his competitors follow suit, there is no selling advantage, because the success of the sale idea is dependent largely upon attracting customers to the store who do not regularly trade there.

If regular customers are the chief support of sales, it naturally follows that a merchant is loading up his outlet with merchandise, at little or no profit to himself, and thus putting a drag on his regular business and profits.

Customers Get the Habit

It is undoubtedly a fact that many consumers have discovered this weak spot in shoe merchandising, and deliberately plan to secure their supply of footwear regularly at sale times. This, of course, applies in some measure to people who are not keen for style value. But there are many such customers, and their trade is of great importance to a store.

And, while many shoe retailers may not realize it, it is just this idea of getting shoes at reduced value that lowers

the sense of discrimination in customers. It is just this sense of discrimination that is most valuable in making a big customer of a little one and a regular customer of an irregular one.

The Problem of Style

But what is the merchant to do when he is confronted with the reality of frequently changing styles and the consequent danger of loss through carrying styles over from one season to another?

The necessity for cut price sales arises from the impossibility of gauging just how many shoes will be needed and what kind of clientele will want them during the coming season. But while it cannot be gauged accurately, the attempt to come somewhere near doing so lies within the problem of stocking accurately for a season's business. Skill in this forecasting is developed only by long and careful experience and systematic study of the store's merchandising efficiency.

Of the two evils, loss of profit in clearance sales and loss from carrying styles over from one season to another, the latter is the more to be feared. When the stock begins to clog with old styles there is only one thing to do—Get rid of them.

But the real answer to the problem lies farther back. The merchant who wants to avoid sales must become a better buyer and a better seller.

He must learn to pick good styles and not overbuy. Then he must learn how to sell the styles he buys.

Yes, this is easier said than done. But it can be done. Some buyers are doing it.

Influence of Competition

There are many merchants who never have a cut-price sale. There are others who seldom need to have one, but make a bluff at it to offset the effect of a competitor's sale. And competing with a competitor just for competition's sake is most demoralizing to standards of business practice.

How can a merchant avoid mistakes in buying and the accumulation of bad stocks or odd sizes?

There is no rule of three, nor is there any secret about it. It is a matter of good judgment and close attention to details.

There are some important general policies that most successful shoe buyers observe.

Pick a Few and Make 'Em Go!

One of them is to confine your volume of purchases to a few good lasts.

Decide on three or four styles, the less the better, to make leaders and volume sellers each season. Then do something to make these styles sell. Feature them in the advertising, in the windows and in the inside displays. Train the clerks on these styles and teach them how to emphasize their style value to every customer. Leave nothing undone that will put your footwear in a favorable light with every customer who comes into the store.

This amounts to creating popular approval and interest in the styles that you buy and want to sell, instead of waiting to see whether the public will take to them or not.

It is a matter of managing the styles, instead of allowing them to manage you.

Continual Watchfulness Helps

It is quite possible that a mistake in judgment will be made occasionally by the man who follows this plan. He will buy a style now and then that will move very slowly,

no matter how skilfully he pushes it. But the slower it moves the quicker he finds it out; and he can then plan to push the style out right away, instead of holding it until the end of the season—when it will stick to the shelves harder than ever.

The livest shoe stocks are those that are most closely watched and weeded and cleaned out constantly—monthly, weekly, or even daily.

Don't Let Em Get Dead!

Why wait for an accumulation of dead ones in order to have a sale? It is easier to move a few slow pairs than to wait until there are more of the slow pairs than there are of any other kind. The bigger the funeral, the greater the grief. When shoe stock is dead, it is dead. But when it first shows symptoms of losing its vitality there is some chance of getting rid of it without material loss.

The best system of keeping a shoe stock clean is to have a regular selling location for slow-moving goods and odds and ends. This can take the form of a bargain basement, a bargain counter, a special value department. Or it can be just a space.

Such a department will not need a name so much as it will need attention. It will serve two very simple, but important purposes. It offers an opportunity to separate the goats from the sheep, before the goats commence to reflect their goatliness on all the sheep, by providing for the goats a place where they will not be overlooked and allowed to breed too fast.

Next, a definite effort should be made to dispose of these goods to customers, who could be interested in them.

Put Them in the Ranks

When it comes to slow moving styles, in the better grades some buyers have a good system for getting them sold by changing their location in the stock to that of the next lower grade. In reality this gives the customer better goods for the money without much grand stand play.

A style bought to sell at four dollars that does not move well at that price will often readily sell at three dollars and a half. It is better to dispose of the line at that figure than to keep it all the season and then sell it for less in the end.

Odd sizes are often closed out without much sacrifice by changing their stock number and putting them with similar styles of a lower grade. This adds value to the lower grade and gives stimulus to the higher though odd size grade. It gets action, and action prevents decay—of value and profit.

Rules of a Modern Shoe Store

Rule 1—Clerks will be fined for soiling their hands, or for keeping the show cases or shoe boxes free from dust.

Rule 2—If the boss comes late to work two mornings in succession, it is to be inferred that it is his wish that every one do the same, and anyone coming on time will be subjected to a heavy fine.

Rule 3—Selling a pair of shoes to a person weighing 200 pounds or over shall be construed as a big sale.

Rule 4—If a clerk happens to have a customer when his lunch hour arrives, he shall be expected to go out for his coffee and sinkers. In case said customer suggests it, it shall be obligatory upon said clerk to invite said customer to lunch. But in no case shall house be charged with more than twice the actual expenses incurred.

Rule 5—If a shoe clerk happens to shoot a few games of pool and finds that he has overstayed his lunch hour, he is entitled to vacation on full pay the rest of the day.

Rule 6—Every clerk will be compelled to own at least one pair of shoes.

Rule 7—No clerk must put himself to any extra trouble—such as showing more than two pairs of shoes to the same

customer, or lacing up her old boots when she is ready to leave the store.

Rule 8—It is compulsory that no customer be sold less than a single pair of shoes.

The Man Who Delivers the Goods

There's a man in the world who is never turned down,
Wherever he chances to stray;
He gets the glad hand in the populous town,
Or out where the farmers make hay;
He's greeted with pleasure on deserts of sand,
And deep in the aisles of the woods;
Wherever he goes there's the welcoming hand—
He's The Man Who Delivers the Goods.

The failures of life sit around and complain;
The gods haven't treated them white;
They've lost their umbrellas whenever there's rain,
And they haven't their lanterns at night;
Men tire of the failures who fill with their sighs
The air of their own neighborhoods;
There's a man who is treated with love-lighted eyes—
He's the Man Who Delivers the Goods.

One man is afraid that he'll labor too hard—
The world isn't yearning for such;
And one is alert, on his guard,
Lest he put in a minute too much;
And one has a grouch or a temper that's bad,
And one is a creature of moods;
So it's hey for the joyous and rollicking lad—
For The One Who Delivers the Goods.

—Walt. Mason.

Don't Get Stale on the Job

"Yes, sir, I am going to take a holiday," said a London retailer the other day. "I don't care whether business keeps up or not. I am off for other scenes and newer associations. I think every dealer should take a vacation. He is apt to grow irritable, gloomy or dyspeptic. He gets what printers call, "out of sorts," or what others would say, "stale on the job." But perhaps he does not know what is really wrong with him and thinks it is his liver, his stomach or the poor state of trade. His mental outlook narrows—his conception of business contracts, and he begins to think that nothing is worth while, particularly if trade is a little dull. Let him take a holiday. I always feel better and brighter on coming back to town after having had a look around and I find that my shop, the people with whom I do business, and the street on which I reside, measure up, after all, favorably with similar surroundings in other cities. I know of a certain retailer who gives his clerks holidays and never takes one himself. This is arrant folly. What benefits the clerks must equally benefit the boss, and if he has to be chained to his premises like a galley slave, he is apt to move around in a circle and simply mark time, whereas he should be developing with his town and enlarging his sphere of activity, outlook, and service."

An Easily Acquired Habit

Courtesy! Never fail to practise it. Study the spirit and meaning of courtesy. Remember the words that are allied to it; polite, civil, mannerly, cordial, gracious, affable, neighborly, good-humored—every one indicative of a path-smoother, a business lubricant, a habit of mind and of manner that tends to make the selling machinery run without friction. Such a habit is easily acquired, and is a most valuable adjunct to personality.

The Big Market Fair in Boston Was a Distinct Success

A Record Breaking Attendance from Canada—Many New Features This Year of Educational Value—How the Canadian Shoemen Enjoyed Themselves—Expansion of the Shoe Trade

The seventh National Shoe and Leather Market Fair held in Boston will go on record as the biggest, best attended, and in every way most successful ever held.

The exhibition was held in the Mechanics' Building, and from every standpoint, and particularly from a Canadian one, it was a real record breaker. Visitors from all parts of the Dominion, from one coast to the other, were present, and all were exceedingly pleased at the brave showing made by British and Canadian shoemen.

Every department of the huge enterprise was well managed, and showings were made embracing everything used in the making of up-to-date shoes, as well as the machinery and different methods employed.

Almost every sort of machine, contrivance and material used in tanning hides, samples of skins in various stages of process, boots and slippers, both in the making and the finished product, office devices for the promotion of efficiency methods, and the displays of the different trade journals and the associations connected with the shoe and leather trade—all were part of the exhibits at the Fair.

The Social Side of the Fair

The social end was well looked after, and during the week mostly all the visitors were afforded opportunities of seeing the far-famed sights of Boston and vicinity, dozens of parties being made up for trips to the surrounding centres of interest. A trip made by a large number of shoemen was to Salem, the scene of the disastrous fire in the latter part of June, which did damage to the extent of many millions of dollars, a large portion of the town having been wiped out altogether.

An outing given to the visiting shoe and leather men to the North Shore and Nantasket on Thursday, July 9th, was one of the social events of the week. A parade of 600 shoe and leather men, headed by the band, started from the headquarters of the New England Shoe and Leather Association, Essex and Lincoln streets, at 8.30, and with banners waving and the marchers carrying pennanted canes, repaired to the steamboat for Nantasket. On the arrival at the Beach, a very enjoyable day of sports was held, along with a dinner. The success of the outing was due to the efforts of A. L. Greenwood, president of the Boston Shoe Travelers' Association, "Billy Noll," the popular secretary-treasurer, and Thomas F. Anderson, secretary of the New England Shoe and Leather Association, and their faithful and hard-working assistants.

The Fair week proved to be a big, get-together occasion. It drew visitors and exhibitors from all parts of Canada, the United States, England, Scotland, Germany and many other lands. The gathering together under one roof of so many footwear features was marvelous and served to demonstrate to a small extent the magnitude of the shoe and leather field, and the high stage of perfection it has attained. The market situation, style tendencies and the trend of the trade were accurately gauged by the observant visitor, and after passing through the entire exhibit, one must confess, no matter how experienced he might be, that he had seen and learned a whole lot.

There was a large attendance at the opening, and the exhibits were nearly all in readiness for inspection. The two main exhibition halls were splendidly decorated, the one where the shoe manufactures and findings were housed be-

THE NUMBER OF CANADIANS REGISTERING AT THE "SHOE AND LEATHER JOURNAL" BOOTH ON CANADIAN DAY AT THE SHOE AND LEATHER MARKET-FAIR WAS SO LARGE THAT IT WAS FOUND IMPOSSIBLE TO PHOTOGRAPH THEM IN THE BOOTH AS IN FORMER YEARS. THIS GROUP PORTRAIT WAS TAKEN ON THE STEPS OF THE MECHANICS' BUILDING, BOSTON. MANY WELL KNOWN MEMBERS OF THE TRADE WILL BE NOTICED IN THE JOLLY GATHERING.

THE COSY AND INVITING BOOTH OF THE SHOE AND LEATHER JOURNAL WHICH WAS HEADQUARTERS FOR THE CANADIANS AT THE BIG FAIR.

ing beautifully draped in pink and green while the exhibition hall for the leather and machinery exhibits was very attractive in a color scheme of green and white.

The entire place proved a splendid meeting spot, a cheerful rendezvous for buyers and sellers. There were in all, over two hundred exhibitors in the large structure, and all the booths were decorated in a tasty manner, one vying with the other in attractiveness. Potted plants, flowers, bunting, flags and various other decorations all presented a very beautiful picture to the eye, particularly in the evenings when the whole building was well lighted throughout. The music during the entire week was rendered by the Ives Marine Band and orchestra.

During the daytime the attendance was confined almost entirely to members of the shoe trade, but at night the general public gathered in great numbers.

Canadian Day Observance

Canadian Day, which after all was of most interest to all Canadians, might be said to be the big day of the Fair. Special appropriate music was furnished on this occasion, Canadian day this year being on Monday, July 13th, and it was "Canuck" day in every sense.

The main van of the Canadian contingent arrived from Montreal and Toronto early Monday morning and the scene around No. 38, the headquarters of the Canadians and the SHOE AND LEATHER JOURNAL, was a regular old boys' reunion, much handshaking and chatting being indulged in. The Canadian shoemen were down in Boston to have a good time, and several parties of different kinds were planned. Great interest was shown by the visiting members in the different novelties on view at the Fair. Parties who had had not seen each other since the Shoe and Leather Market Fair of 1912 renewed old friendships. During the afternoon, amid much joking and good natured joshing, always at the expense of some of the boys, a photo was secured, and is shown herewith. Many familiar faces will be noticed in it.

In the evening the crowd assumed mammoth proportions and a steady stream flowed through the aisles from early till late. The music during the evening session was of

a Canadian nature, composed mainly of popular Canadian airs.

Altogether, through the courtesy of the management, the day proved to be a great success. This was due to their efforts to make it as Canadian and British as possible on this occasion. Two large flags at the entrance attracted much attention, and the strains of "God Save the King," rendered by the orchestra, were cheered to the echo by the visiting Canadians.

Note and Hits

England was very well represented, having several shoe and leather firms exhibiting, all in charge of competent managers.

Honestly, some of those Canadian exhibitors were so busy taking orders they hardly had time to come out and get photographed. Particularly the leather men, who took a fine lot of orders.

Geo. G. Gales, Montreal, came down to view things from a retailer's standpoint and said he was tickled with all he saw.

Quebec was very well represented this year, several shoe and leather men from the Ancient Capital calling at the SHOE AND LEATHER JOURNAL booth.

Charlie Slater, whose headquarters are in Boston, used the occasion to renew old friendships, and must have had a sore arm after Canadian day.

Western Ontario shoe and leather men were plentiful. Several of them continued on down to New York after the Fair closed.

Brunet, Slater and Robinson—a pretty good representation from the Eagle Shoe Co., Montreal, wasn't it?

Somebody was heard to say on Canadian day, "Where's Bill Matthews?" He surely was missed.

J. R. Payan and L. F. Payan came down from St. Hyacinthe to see what they could see, and thought this year's Fair the best ever.

E. F. Leonard was there with his same happy smile and genial manner. Mr. Leonard is summering at Nantasket.

(Continued on page 38)

Novelty Patterns, Women's Spring Styles

(Continued from page 20)

ally look more inviting and attractive than in previous seasons by reason of the fact that ornaments are for the most part smaller. The less conspicuous but dainty effects in decorations are revealed in cut steel, crystal and bronze beads, rhinestones, brilliants, silver, metal thread and oxydised effects. Cleopatras, Gabys, Colonials and Castle pumps, the latter being shown in Canada for the first time, with brocade and cloth quarters and inset effects will be featured. The Castle pump has an instep strap of leather or of the same material as the quarters and fastens with a dome fastener on one side of the shoe. It is low cut in front like the regulation pump and beneath the instep strap is a wide elastic band which is not visible, but holds the slipper firmly and snugly to the foot. Inlays of suedes, fancy fabrics, colored satins, bronze kid, figured silk and other materials in both the forepart of the shoe and the quarters, with wood heels covered with the same materials disclose some of the new effects in low cuts.

A Summary of Style Alterations

When it comes to slipper creations the range of diversified effects are much in evidence. Various models are seen from the one to the five strap offering. In fact sandal and fancy strap patterns are leading features in many Canadian lines, while for ornaments, ribbons, beads, metal, bows and other accessories are seen. Some makers are showing one, two and three hole tango slippers. Fancy foxings are also noticed on a number of low cuts. There are many other developments in materials, patterns and trimmings, as will be seen from the illustrations presented in this issue of the SHOE AND LEATHER JOURNAL. The heels on low cuts will be very much the same as on all high cuts and will vary in heights from 10-8 to 16-8. Many manufacturers anticipate a very strong demand for "Cleos," while others think that the

WOMAN'S PATENT BUTTON, SHORT RECEDING TOE, SCALLOPED FOXING, SPOOL HEEL, DULL CALF TOP—BY KINGSBURY FOOTWEAR COMPANY.

"Castle" pump may sell very well in the larger centres. Colonials are certain to have a big call.

Summing up it may be said that shorter vamps will be popular, with medium recede toe, and the new round toe of moderate height coming to the front as a claimant for appreciation. Cloth tops and whole quarters of cloth, brocades, etc., will be popular, while the Louis-Cuban, Louis, and Spanish heels will likely be very strong in evidence this season the same as last. In low cuts the whole quarter overlays and the underlay effects will be seen, while there will be many new combinations of color and material. How these

will take remains to be seen. Cleopatras and Colonials are likely to prove strong bidders for popularity and ornaments for the most part will be smaller and daintier. Patent and dull calf will be the leathers that show up the strongest.

The Showing in Men's Lines

In men's footwear there are never as many changes as in women's lines, yet some of the new models reflect something of the tendency and color effects in women's. The bal with receding toe, wide shank, flat tread and low blocky

WOMAN'S OVERLAY EFFECT BUTTON BOOT, PATENT VAMP AND CIRCULAR HEEL FOXING, TURN, WITH TAUPE TOP AND CUBAN-LOUIS HEEL—BY WALKER-PARKER COMPANY.

heel is going to be the gentlemen's shoe for the coming season, as during the past. The leathers will be patent, dull calf and dark tan, while many offerings have cloth or suede tops in various quiet colors that accord well with the different leathers. For the exclusive and top grade trade the long receding toe on English lines is likely to prove popular. For the medium trade, however, manufacturers are showing a moderate round toe with variations. This toe is one that appeals to those of conservative tastes and quiet ideals and during the past season created the volume selling business. In fact a survey of the whole market shows that the English toe is not taking as it was expected a year ago. Corded and straight tips will again be witnessed on many of the models and a number of button boots will be presented for the consideration of the "noble lords of creation."

One of the latest things in men's footwear is a low cut Colonial effect, a two or three eyelet pump pattern with a high tongue. It is adopted for both street wear and dancing. A number of manufacturers are showing rubber soled shoes in both high and low cuts. Some have solid rubber, inch-high heels. Invisible eyelets, some of a very small pattern, including the new Midget, will still rule in men's shoes. Owing to the general quiet state of trade, manufacturers of men's footwear have not laid in as many lasts for the coming season as during the past. The all patent leather oxford and patent button boot with various materials for topping will still be offerings that are likely to appeal to the trade. Heels on sloping toe lasts from seven-eights to one inch, several with flange effects are seen.

The best seller, as already pointed out, is likely to be the medium high toe, especially in the smaller centres of population, while in the very high-class clientele the English model with the medium narrow, low toe, embracing all the fine points of custom shoemaking will still sell.

What Firms are Showing

The Smardon Shoe Co., Limited, Montreal, are showing for the spring and summer trade an unusually complete line

of high grade shoes, and among them are to be seen several natty new lasts. Their samples include an extensive line of Colonials, which are now having such a very large demand, and in accordance with the present vogue in leathers, patents will form a strong feature. In high shoes, fabric tops are still selling well, and accordingly the Smardon Shoe Co. have a large range of these materials, browns and greys predominating in the colored tops. The styles also include concave leather heels and Louis leather and wood heels. The company also anticipate an increased demand for kid shoes, and

NOVEL BUTTON EFFECT, PATENT, WITH SUEDE QUARTERS, CUBAN-LOUIS HEEL, SMALL STEEL ORNAMENT ON VAMP.

on their Colonials are showing a fancy line of buckles, many of them of new design. The same selling staff will continue to represent the firms during the coming season.

The Murray Shoe Co., of London, have installed several new lasts for spring in both their men's and women's lines and intend specializing strongly on women's. Their men's have not been forgotten, and that line, they say, will be better than ever. Personally they think that the modified high toe will have the lead, more particularly in the northern country, and outside the large centres. In the bigger cities the company believe that the recede toe with low heel will be

largely called for. As to leathers, they pin their faith strongly to patent and gun metal for the coming seasons, and express the opinion that the demand for buttoned shoes will be as strong as ever.

Gourlay & Fogelberg, Limited, of Berlin, have added several new up-to-date lasts for pumps as well as boots. Several lines are being made in pumps and Colonials of about the same patterns as last year, the only difference being in the blending of the different patterns in the making of the shoe, such as patent leather, kid and various cloths in black and colors. The firm report that so far as they can learn from going over the market that freaks are likely to be short lived. This has reference to heels as well as lasts. A member of the company recently returned from Chicago, and in canvassing the leading retail stores found that pumps and colonials of all shades, kinds and prices were having a preference. There have been, particularly so this season, more attractive showings in pumps and more Colonials have been brought out than during the past few months.

J. W. Hewetson Co., Limited, in their new factory at Brampton have recently added to their line a range of boys' button bluchers and oxford McKays, from one to five in size. They have also installed several new lasts for children's, misses' and boys' and are turning out a popular range of natty ankle strap pumps which are meeting with success. These are made largely in patent, gun metal and chocolate kid.

The Tebbutt Shoe and Leather Co., Three Rivers, Que., are of the opinion that tan calf will be one of the most popular selling leathers, as they claim that no leather wears like it, and that in men's shoes this is one of the first considerations. They say that Russia calf leathers in a rather dark shade and also nut brown will be very popular and that the mahogany shade is already on the wane. Gun metal and velours they anticipate, will be selling in usual quantities, as velour is coming back fast. They are also making a lot of fine vici kids on the "Professor" lines. The Tebbutt Co. state that it looks as though kid would move very well in men's welts, especially in those selling at a popular price. The blucher still holds first place with this firm, because of its fitting qualities and the fact that it is comfortable and easy on the foot. The low wide heel is passing and the popular

height will be one and a quarter inches of a nice square shape. They have added several attractive medium toe lasts that are good fitters and report that the factory is running to capacity.

The Parker Shoe Co., of Preston, Ont., are showing a fine range of women's McKays for spring. Three new lasts have been added, one a medium recede toe, another a neat, nobby toe and the third a medium, full high toe for growing girls. Patent is the leading leather, with gun metal a close favorite. Many of the samples have brocade and cloth tops, as well as dull calf and are decidedly attractive, evidencing neat shoemaking. Cuban and spool heels predominate. In low cuts there are many smart colonials and pumps as well as strap slippers, including the new Castle pump, with brocade quarters and patent inlays. This shoe is secured at the instep with a new flat invisible button, which the firm claim is a decided improvement over the elastic band or other fastening. There are also one, two and three strap slippers, including Mary Janes. A nice display is made in the misses' line in patent and gun metal high cuts with cloth and calf tops. The firm, of which S. H. Parker is manager, now specialize on women's and misses' McKays exclusively and report business as good for the coming season.

J. A. & M. Cote, of St. Hyacinthe, Que., are adding a few staples this season in men's McKays and Good-years on a medium toe last which they believe will be the best seller. They are keeping their pegged and standard screw work up to the standard in quality and finish.

J. M. Humphrey & Co., St. John, N.B., have just commenced to make men's welts in their factory. Their line of Humphrey's Solids in heavy nail shoes has met with favor from the trade, and they hope to make as good an impression for Humphrey's Goodyears.

Veteran Shoe Manufacturer Expires

The shoe trade in Canada have learned with deep regret of the death of William A. Marsh, one of the most prominent and influential footwear manufacturers in the Dominion. Mr. Marsh passed away at his home on Grand Allee, Que., on July 23rd., in the sixty-seventh year of his age. In the last issue of the SHOE AND LEATHER JOURNAL it was announced that Mr. Marsh was retiring from the William A. Marsh Co., at the head of which he had been for over thirty years, transferring his interest to E. P. Mullarky, for the past eight years superintendent of the plant. It was announced that he had sold a portion of his holdings in the W. A. Marsh Co. Western, Limited, Winnipeg, to Arthur Congdon, and that the name of the firm would be changed to Congdon and Marsh, Limited. Little was it then thought, although

Mr. Marsh's health has not been good for a long time, that he would live for so short a while to enjoy relaxation from business cares. It had been hoped that he would completely recover and regain his strength. All promised well until a few weeks ago, when Mr. Marsh was taken very ill and gradually became weaker, until the evening of July 23rd, when he passed quietly away surrounded by the members of his family. By his force of character, his energetic disposition and his inherent ability Mr. Marsh had worked his way up to a commanding position in the industrial and residential life of Quebec. He was a useful, active and public spirited citizen and held many leading positions, among them being past president of the Board of Trade, past vice-president of the Quebec branch of Canadian Manufacturers' Association, director of the Quebec Bank, a governor of the Jeffery Hale Hospital and deacon of the Baptist Church.

Mr. Marsh was born in the Ancient Capital on the 16th of April, 1848, the son of Rev. David Marsh and Marion Exchells. He was educated at the Quebec High School and from modest beginnings in the commercial world he worked his way up until he became a partner in the retail shoe trade with the late Wm. Jacques. After following the retail business for some years he decided to graduate to the wholesale and manufacturing end of the business and entered partnership with Mr. Polly, the firm's name being Marsh & Polly.

Shortly afterwards, however, Mr. Marsh branched out for himself and established the firm which is now known as the Wm. A. Marsh Co., Limited, and which is one of the best known and most reliable shoe firms, not only in Quebec, but in the entire Dominion, and the products of which are sold on every market from the Atlantic to the Pacific.

The deceased married Miss Annie Glass, daughter of John Glass, of Quebec, who survives him, together with five sons and four daughters.

The sons are Messrs. Fred W., David, Jack, Willie and Ernest Marsh, while the daughters are Misses Jean, Dorothy, Ruth and Freda.

Mr. Marsh is also survived by four sisters: Mrs. E. C. Fry and Mrs. C. H. Shaw, of Quebec; Mrs. H. A. Calvin, of Kingston and Miss K. H., of India.

To the bereaved family the sincere sympathy of many friends in the shoe trade from all parts of Canada will be extended, many of whom sent messages of condolence and floral tributes. The funeral on July 25th was very largely attended.

Charles and Fred. Ahrens, of C. A. Ahrens, Limited, Berlin, are spending a few holidays at their summer home, located at Grand Bend, Ont.

Boston Market Fair a Success

(Continued from page 34)

and certainly obtained a fine coat of tan which was much envied.

The Breithaupt family certainly was well represented, four members of it being in the building on different occasions, and all from Berlin.

"A run on the bank" was felt for those pins which the SHOE AND LEATHER JOURNAL distributed. They proved very popular.

The Ames-Holden-McCready visitors were out for a good time. For fear of putting our foot in it—"nuff said."

It was unanimously voted that a finer looking lot of men never sat for a photo than the crowd shown in the accompanying picture, and every one of 'em sober. Much surprise was expressed at this unheard of state of affairs by the sitters themselves.

Canadians Who Visited the Fair

Among those who registered at the SHOE AND LEATHER JOURNAL, booth 38, which was the headquarters of all Canadian visitors, were the following: W. A. Moore, A. O. T. Beardmore and J. A. Matheson, of Beardmore & Co., Toronto; S. G. Amero, Kaufman Rubber Co., branch, London, Ont.; A. O. Russ, C. S. Hyman Co., London; H. L. Daville and W. Pollard, C. Parsons & Son, Limited, Toronto; H. W. Algeo, United Shoe Machinery Co., Montreal; E. F. Leonard, Montreal; W. George, Montreal; J. Weizel, St. John, N.B.; Albert Tetrault and A. N. Cusson, Tetrault Shoe Manufacturing Co., Montreal; Clarence F. Smith, Montreal; George G. Gales, Montreal; E. T. Jacobi, Toronto; Theo. King, King Bros., Whitby; E. C. Greb, Berlin Shoe Manufacturing Co., Berlin; J. A. Scott, Quebec; W. A. Lane, Montreal; A. Lefavre, Ames-Holden-McCready, Limited, Montreal; F. J. McCann, Goodwin's Limited, Montreal; J. H. Porter, Robert Simpson Co., Toronto; William Chamberlain, Getty & Scott, Galt; A. L. Dupont, Dupont & Frere, Montreal; H. D'Artois, Fisk Limited, Montreal; Alfred Minister, Minister, Myles Shoe Co., Toronto; Freeman G. Smith, Lunenburg, N.S.; J. Abernethy, D. D. Hawthorne & Co., Toronto; James Smith, Sackville, N.B.; Lloyd M. Ault, A. W. Ault & Co., Ottawa; R. H. Greene and S. P. Langdon, Gutta Percha and Rubber, Limited, Toronto; W. V. Eccleston, T. Eaton Co., Toronto; H. Sauve, Sauve & Perras, Montreal; W. S. Edwards, Edwards & Edwards, Toronto; A. J. LaBerge, Ames-Holden-McCready, Limited, Montreal; Frank W. Slater, Oscar Brunet and Tom Robinson, of the Eagle Shoe Co., Limited, Montreal; L. J. Breithaupt and L. V. Breithaupt, Breithaupt Leather Co., Berlin; J. R. Payan and L. F. Payan, Duclos & Payan, St. Hyacinthe, Que.; Charles K. Palmer and W. H. Christie, Fredericton, N.B.; W. E. Gerish, Canadian traveler P. J. Harney Shoe Co., Lynn, Mass.; A. McQueen, Plewman, McQueen Co., Lei-

ONE OF THE FINEST SOCIAL FEATURES OF THE BIG FAIR

Here is seen the great gathering in front of the Club House at Beverly, Mass., after an enjoyable automobile ride as guests of the United Shoe Machinery Company. The outing is always one of the most pleasant associations of the Shoe and Leather Market Fair at Boston.

This year there were thirty-five motor cars containing one hundred and seventy-five guests in the procession. The inspection of the U. S. M. Company's big plant at Beverly, covering twenty-one acres of floor space, was both interesting and instructive.

chester, Eng.; R. B. Harvey and H. Harvey, R. B. Harvey & Sons, Limited, Bury, Eng.; A. G. Moxley, Leicester, Eng.; Karl Sohre, F. G. Sohre, Dresden, Germany; Sam Millar, F. A. Patton and A. C. Miller, Millers, Limited, Glasgow; H. W. Davis and Elmer Davis, A. Davis & Son, Kingston; A. J. Davis, Davis Leather Co., Limited, Newmarket; R. C. Landon and E. C. Weston, Weston Shoe Co., Campbellford; S. Morley Wickett, Wickett & Craig, Limited, Toronto; F. Kay, Montreal, Canadian representative I Levinstein & Co.; Louis J. Guay, L. David Julien, J. Guay & Fils, Quebec.

Canadian Exhibits at Boston

Here is what "Hide and Leather" has to say of Canadian Day and Canadian exhibits at the recent Shoe and Leather Market Fair in Boston:

"Monday, July 13th, was set aside as a special day for the British and Canadian visitors at the Shoe and Leather Fair, Boston. The attendance was larger than ever before. At the 1911 Fair there was a large and enthusiastic attendance from Canada. A still larger delegation came down in 1912, while this year visitors from Canada and Great Britain met in Boston in larger numbers than at any previous time. British and Canadian flags decorated the building and British and Canadian airs were played by the orchestra.

"Among the Canadian exhibitors at the Fair were Beardmore & Co., Toronto, tanners of Canadian sole leather. This firm has a New England representative located in Boston, J. A. Matheson, who has developed good business here.

"From their Toronto office came W. Alfred Moore and Torrance Beardmore, each prominent in the Canadian trade.

"C. Parsons & Sons, Limited, upper leather merchants, of Toronto, showed some good lines of leathers at their stall in charge of H. L. Daville and W. Pollard.

"C. S. Hyman Co., of London, Ont., were in stall No. 235 with their leathers, in charge of A. O. Russ, who will be remembered by many American friends through his Chicago connections. Mr. Russ was at one time with Herman Loescher, of Chicago. The Hyman leathers attracted much attention at the Fair.

"The well-known calf leathers of the Davis Leather Co., Newmarket, and A. Davis & Sons, of Kingston, Ont., were a feature of interest in the Canadian section at the Fair. Everett E. Bird, of Boston, was one of the best boosters, not only of the Fair, but of the Davis leathers. Mr. Bird reports taking many good orders at the Fair, and was one of the most enthusiastic exhibitors of the big exposition. He was busy from the opening at 10 a.m. until the closing at 10 p.m. and his good business results at the Fair are no doubt greatly due to his interest and activity. Mr. Bird is an energetic worker and has made good progress as a representative of leading tanners whose products he handles in the New England trade. H. W. Davis, Elmer Davis and A. J. Davis were at their stall to welcome visitors."

An Enjoyable Trip to U.S.M. Co.'s Plant

One of the most enjoyable features of the Fair was the trip to the immense plant of the United Shoe Machinery Company, at Beverly, on Tuesday, July 14th, when thirty-five automobiles, all gaily decorated for the occasion, conveyed the Fair visitors through Lynn, Salem and on to the U.S.M. Company's plant in Beverly. After spinning through Boston, the cars wended their way along, passing Revere Beach, and following the shore all the way, thereby adding much to the enjoyment of the guests. At Lynn a short stop was made, a delegation of the leading citizens and prominent shoemen being on hand to welcome the party, each member of which was presented with a souvenir in the form of a

very attractive badge, composed of a miniature hide, a small pattern of the new lamps recently installed in the streets of Lynn, and a small insole. Many favorable comments were made on the neatness and novelty of these badges. On entering Lynn, a large banner was noticed stretched across the street bearing the words, "Welcome to Lynn, the shoe city of the world." Work in the different factories along the route taken through the city was suspended, and a hearty cheer was given the visitors by the employes of the different gaily decorated factories.

After leaving Lynn the procession journeyed on to Salem, passing many seashore resorts on the way. The visitors were treated to a thorough inspection tour through the burnt section of Salem, the automobiles wending their way through the principal streets in which the fire played most havoc. Much surprise was evinced at the large damage sustained, most of the sight-seers having, previous to the visit, no idea of the real loss, over a quarter of the town being consumed by the flames. After viewing the burnt section, the journey was resumed, the cars passing through the historical section of Salem, and on to Beverly, where the guests were greeted by officials of the United Shoe Machinery Company at the beautiful club house of the company's employes. Lunch was served on the lawn, after which a group photo was taken of the visitors, this being the second photo of the day, one having been taken outside the Mechanics' Building in the morning, just before starting on the trip.

Before embarking on an inspection tour of the U.S.M. Co.'s plant, R. C. Jacobsen, of Chicago, President of the Market Fair, proposed three cheers in honor of the United Shoe Machinery Company, and was heartily responded to. Cheers were also given for Chas. T. Cahill, manager of the publicity department of the U.S.M. Co., through whose tact and thoughtfulness everything passed off so pleasantly.

The one hundred and seventy-five guests were then conducted through the immense works of the United Shoe Machinery Company, which has been well termed an "industrial city." Here the marvellously intricate mechanical inventions for the making of the footwear of the world are put together, and machines are turned out by the thousands every year.

One of the Largest Plants in the World

There are sixteen buildings, constructed of reinforced concrete, with seventy-five per cent. of the wall space devoted to windows. There are twenty-one acres of floor space in the structures, and five thousand people are employed all year around, and all perform their work under the best and most sanitary conditions. Over three hundred different kinds of machines are produced.

It is a six mile walk through the plant. Over nineteen million parts of machines and twenty-five thousand finished machines are turned out annually. In the stock room nearly a hundred thousand cataloged parts are kept. Every department is clean, well ventilated and admirably managed. The dining room, rest room, recreation rooms, hospital and offices, as well as the power house, and, of course, the different manufacturing departments, were visited, and every one of the many features was a topic for favorable comment, and all presented an interesting and instructive study.

After the inspection the visitors started off on the return trip to Boston, the occupants of each car selecting whatever route they desired.

A welcome visitor from Canada was James A. Scott, of the Anglo-Canadian Leather Co., Quebec, Canada, known throughout the leather trade of the United States, Canada and on the other side of the water as "Jimmy Scott." We were glad to see him.—Hide and Leather.

Rubber Men Hold Fine Convention

The annual convention and re-union of the officers and salesmen of the Canadian Consolidated Rubber Co., Montreal, was held from July 21st to 25th and was a decided success. The social features were very entertaining, while the

R. E. JAMIESON, GENERAL SALES MANAGER, WHO PRESIDED AT THE CONVENTION

business sessions were marked by earnestness and enthusiasm. Reports received from the various branches of the company indicated that the past year was a good one, particularly in the rubber footwear line. T. H. Rieder, vice-president and general manager of the company, R. E. Jamieson, general sales manager of the company, A. D. Thornton, R. W. Ashcroft and others extended a warm welcome to the delegates.

Three days were spent in session in Montreal, when a number of edifying addresses were delivered by rubber experts. On Wednesday evening, July 22nd, the guests were honored at a banquet at the Country Club, St. Lambert. The function was a highly enjoyable one and the toast list and other features will long be remembered.

By special cars the conventionites were taken to Berlin on Thursday night, where the splendid plant of the Dominion Nobby Tread Tire Co. was inspected as well as the factories of the Merchants Rubber Co., the Kimmel Felt Co., and the Berlin Felt Boot Co. On Friday evening there was a banquet and entertainment at Schweitzer's Hotel, Conestogo, at which A. J. Kimmel was host.

The convention was certainly the most successful and representative ever held by the company and cannot fail to be of much practical interest and benefit to all.

Those in attendance were T. H. Rieder, vice-president and general manager; R. E. Jamieson, general sales manager; W. Binmore, treasurer; A. Dwyer, assistant treasurer; J. H. McKechnie, vice-president; A. D. Thornton, vice-president; F. E. Partridge; R. W. Ashcroft, advertising manager, Montreal; Charles Holden, Western sales manager, Winnipeg; A. E. Massie, division manager, St. John; J. K. Lindsay, division manager, Toronto; J. M. S. Carroll, division manager, Montreal; W. A. Allen, division manager, Vancouver; Hugo Wellein, division manager, Winnipeg; G. H. Forbes, branch manager, Halifax; A. C. McGiverin, branch manager, Calgary; C. H. Himburg, branch manager, Edmonton; J. H. Jamieson, branch manager, North Bay; E. M. Zavitz, branch manager, Ottawa; J. A. McKenzie, branch manager, Victoria; E. Y. Jones, branch manager, Regina; L. T. McGiverin, branch manager, Saskatoon; J. A. Connor, branch manager, London; A. J. Healey, branch manager, Quebec; J. H. Pearce, jr., assistant manager Granby Rubber Co., Granby, Que.; W. R. Stewart and H. R. Nixon, St. John; C. F. Veitch, W. G. Martin, H. V. Johnstone, To-

ronto; J. M. Rice, M. B. Clint, F. J. Roschman, Winnipeg; E. W. James, Fort William; J. M. Doyle, Vancouver; Joe Harper, Ottawa; F. L. Summerhayes, A. D. Weber, J. A. Wade, W. A. Eden, H. J. Hummell, O. H. Hymmen, J. L. Grant, C. K. Hutchinson, F. Jamieson, H. A. Wells, M. F. Spiegel, J. J. Keiswetter, W. A. Youngblud, F. A. Todd, George Bergeron, J. L. Quesnel, Montreal, and others.

Cut Out the Guess Work

It isn't enough for the retailer to merely "guess" that a given line of effort pays. He must know that it pays, and how much, else he may be losing money by not pushing some other line of effort.

Thousands of retailers to-day are failing to make the success they are capable of, just because they think this thing or that thing needs attention most, when, as a matter of fact, some other thing may be a hundred times more important. Unless they know when their efforts are most effective, they can't know which thing to do first, and they keep so busy doing the wrong things that they never have time to do the profitable things—to work out plans that mean more business and less expense.

Scientific management, in the retail business and everywhere else, means knowing all the time exactly what each plan produces—it depends not upon ability half so much as upon analytical reports which enable the manager to do the right thing at the right time.

New Position for Mr. Savage

R. L. Savage, who on August 1st will enter upon his new duties of sales manager for the James Muir Co., Limited, shoe manufacturers, of Maisonneuve, is widely known to the footwear trade in Canada. He started with the Ames-Holden Co. when twenty-one years of age and remained with them seven years. His next position was with the Hartt

Boot and Shoe Co., with whom he was for three years. Then for several years he was one of the energetic salesmen for Geo. A. Slater, Limited, and four years ago formed a partnership with A. E. Jackson, under the title of Jackson & Savage, Limited, Montreal, wholesalers and shoe manufacturers, from which firm he recently withdrew to enter upon his new duties. Mr. Savage is a brother of M. L. Savage, who for several years has been the Western Canada representative of the Tetrault Shoe Manufacturing Co., and other concerns.

THE DELEGATES TO THE CANADIAN CONSOLIDATED LEATHER CO'S CONVENTION "SNAPPED" IN FRONT OF THE COUNTRY CLUB AT ST. LAMBERT, QUE. WHERE A JOLLY BANQUET WAS TENDERED THE VISITORS

Splendid Picnic Held by Shoemen

The annual picnic of the shoe section of the Montreal Retail Merchants' Association was successfully held on July 9th at Maple Grove. In order that the outing might be made more pleasant, the shoemen and dry goods merchants joined hands and by so doing were enabled to have a much better time than they would otherwise have had.

The day turned out fine, and a very large crowd was on board when the train steamed out of the station at 9 a.m., and as the distance to Maple Grove was not very great, in

J. O. BOULERICE, PRESIDENT

a short time the excursionists were at the picnic grounds, and had divided up into parties, all intent upon enjoying themselves to the utmost.

The morning was spent in various ways, and after everybody had partaken of lunch, the programme of games was started, every event proving of great interest, the culminating event being the tug-of-war between the shoe travelers and the dry goods travelers, honors being carried off by the shoe travelers after an exciting and arduous tussle.

Congratulations are due to the organizers and officers of the two associations who worked hard and earnestly in order that the day should prove successful. Foremost among these are Messrs J. O. Boulerice, president of the

Retail Shoe Merchants' Association; A. Lasalle, vice-president, and Raoul Vinet, treasurer, along with Messrs. Thos. P. Oakes, president of the dry goods men, J. A. Chartrand, vice-president, L. P. Dion and J. Cardin.

Below is given the full programme of sports and the winners in each event:—

50 yard dash, open to girls under 16 years—1st, Miss A. Lalonde; 2nd, Miss Beatrice Boulrice; 3rd, Miss Gilberte Oakes; 4th, Miss Evangeline Picard.

75 yard dash, open to boys under 16 years—1st, Philip Chartrand; 2nd, Leo Gareau; 3rd, R. Desjardins; 4th, H. Giroux.

75 yard dash, open to girls over 16 years—1st, Miss M. Oakes; 2nd, Miss Aline Gareau; 3rd, Miss A. Oakes; 4th, Miss H. Cardin.

75 yard dash, open to wives of shoe merchants—1st, Mrs. E. Demers; 2nd, Mrs. A. Raby; 3rd, Mrs. A. Larue; 4th, Mrs. T. Joly; 5th, Mrs. J. O. Boulrice.

75 yard dash, open to wives of dry goods merchants—1st, Mrs. A. Pion; 2nd, Mrs. J. P. Gervais; 3rd, Mrs. E. Grenier; 4th, Mrs. P. F. Cormier; 5th, Mrs. J. C. Laverdure.

100 yard dash, open to boys over sixteen years—1st, J. H. Gareau; 2nd, A. Legendre; 3rd, L. Mailloux; 4th, G. Dion; 5th, A. Oakes.

75 yard dash, open to members of shoe section of the association—1st, S. Demers; 2nd, R. Vinet; 3rd, O. C. Cardinal; 4th, E. Sansfacon; 5th, J. O. Boulrice.

75 yard dash, open to members of dry goods section of association—1st, J. B. Payette; 2nd, J. O. Gareau; 3rd, J. A. Chartrand; 4th, J. P. Gervais; 5th, T. P. Oakes.

50 yard apple race, open to ladies and girls—1st, Miss M. Oakes; 2nd, Mrs. A. Gareau; 3rd, Miss G. Oakes; 4th, Mrs. A. Pilon; 5th, Mrs. A. Raby.

Tug-of-war—shoe travelers vs. dry goods travelers—won by shoe travelers composed of Messrs. O. Gagnon, P. Moise, J. G. Cote, Z. Moise, O. Barriere, E. Sansfacon, O. Cardinal, P. A. Lapointe, R. Lemire, J. A. Viau, S. Demers and J. O. Boulrice.

100 yard dash, open to everybody—1st, L. Gelinas; 2nd, E. Gareau; 3rd, A. Duhamel; 4th, L. Noel; 5th, Omer Barriere.

"Cache Cache" competition—Won by G. Dion; Messrs. J. H. Gareau and O. Cardinal won the other two prizes.

Special race for commercial travelers—1st, O. Cardinal; 2nd, P. Lecours; 3rd, M. Gascon; 4th, L. H. Juneau.

100 yard dash, open to all the ladies—Won by Mrs. Eddie Daoust.

ALBERT LASALLE, 1ST VICE-PRESIDENT

JOS. MORRIER, 2ND VICE-PRESIDENT

RAOUL VINET, TREASURER

SHOE NEWS IN PARAGRAPH

Charles Bonnicks, manager of the Toronto Branch of Ames-Holden-McCreedy, Limited, spent a few days recently in Montreal on business.

The shoe merchants of Brantford, Ont., have had an early closing by-law passed by the city council. It has just gone into effect. All shoe stores close at seven o'clock every night except Saturday.

Alteen & Co., of Cobalt, shoe dealers, made an assign-

ment recently. The assets are about six thousand dollars and the liabilities the same.

George Chambers, of the Regal Shoe Store, Yonge street, Toronto, has been spending his holidays on a fishing expedition at Bass Lake, Ont.

A. Chadwick, Danforth avenue, Toronto, is erecting a new shoe store on that street in the next block west, which he expects to occupy in the fall.

Mr. Locke, buyer for the footwear department of the T. Eaton Co., Winnipeg, was in Toronto and other cities this week on a purchasing trip.

C. A. Davies, of Blachford, Davies & Co., Toronto, has returned from a business trip to the shoe factories of Montreal, Quebec and other cities.

Oscar Rumpel, felt footwear manufacturer, Berlin, was in Toronto last week calling upon the wholesale trade and showing a fine range of samples.

C. L. Owens, manager of the Royal Shoe Co., Toronto, has returned after spending his holidays at Burleigh Falls, Ont., where he had good luck fishing.

H. G. Greene, assistant manager of the footwear department of the Gutta Percha and Rubber, Limited, Toronto, is spending his holidays at Kawartha Lakes.

W. E. Armstrong, of the traveling staff of McLaren & Dallas, Toronto, accompanied by his son, is spending his holidays at Wiarton and other lake points.

Clayton Hurlbut, of the Hurlbut Co., Limited, Preston, is recovering after a rather serious attack of appendicitis, which laid him up for the past three weeks.

H. W. Lasher, representing the F. A. Sherwood Co., of Rochester, N.Y., dealers in upper leather, was in Toronto, Berlin and other cities this week on business.

W. F. Martin, sales manager of the Kingsbury Footwear Co., Montreal, and family, have gone on an automobile trip through Vermont and other New England States.

James Dorman, shoe retailer, 225 Broadview avenue, Toronto, will represent the Blachford Shoe Manufacturing Co. in Eastern Ontario during the coming season.

The Canadian Consolidated Rubber Co., Montreal, have issued a sporting shoe, "Fleet Foot," display card which presents a very natty appearance, and are having a large call for it.

Walter Powell is making extensive alterations to the Sample Shoe Store, West Toronto, and enlarging the upstairs portion. He intends putting in a fine stock of traveling goods.

Fred Hull, representing the La Parisienne Shoe Co., of Montreal, has opened sample rooms at 209 Mail and Empire Building, Toronto, where he has a fine range of spring samples.

There has been a sharp advance of late in men's heavy splits and tan chrome splits, some of the Eastern manufacturers having raised their prices by about ten and fifteen per cent.

J. S. Ashworth, Toronto, Canadian manager for Sir H. W. Trickett, Limited, Waterfoot, England, has returned after spending several weeks in the Old Country with his wife and family.

The United Shoe Machinery Co. state that orders for Goodyear shoe repair outfits are still coming in fast. A complete equipment was installed by them last week in the city of Sherbrooke.

Several Pluma skiving machines, Model "D", have recently been placed in Montreal factories by the U.S.M. Co. The new knife truing device used on this machine is an important feature.

The shoe store of I. Zumar, corner of Bridge and Wellington street, Hull, Que., was broken into recently. The till was forced but the robbers received no money, as the receipts for the day had been taken away by the proprietor. The

thieves then selected several pairs of fancy footwear and made their escape.

The annual picnic of the employes of the Gutta Percha and Rubber, Limited, Toronto, was held on July 24th to Niagara Falls. The event was a great success, being attended by several hundred people.

Harold Bonnick, of the Ames-Holden-McCreedy traveling staff, Toronto, is making an automobile tour to Rochester and other cities in New York State and will also visit Montreal and the East.

A neat and bright monthly publication has been started by the United Shoe Machinery Athletic Association of Beverly, Mass. It is entitled "The Three Partners," which stand for capital, labor and the public.

N. J. Bordeau, Toronto, in addition to representing the Boy Scout Shoe Co. in Western Ontario as usual, will handle infants', children's and misses' welts made by the A. A. Durkee Co., Truro, N.S.

E. S. Many, an agent of the U.S.M. Co., Montreal, is at present in the factory of J. M. Humphrey & Co., St. John, N.B., setting up and starting a full equipment for the manufacture of men's Goodyear welts.

S. H. Parker, of the Parker Shoe Co., Preston, Ont., has returned from a successful selling trip to Amherst, St. John, Quebec, Montreal and Toronto with a fine range of spring samples in women's McKays.

L. M. Stock, Western representative of Walker, Parker

NOW TRAVELS IN MARRIED MAN'S SHOES

George J. Cowling, who will this season cover Western Ontario for the Blachford Shoe Manufacturing Co., is a Toronto boy well known to the shoe trade. Recently he entered the ranks of the benedicts and is receiving the congratulations of his friends. Previous to becoming identified with the footwear trade he was engaged in another

line of business in Toronto. Selling out, he entered the employ of the Relindo Shoe Co., Toronto, with whom he remained five years, starting in the shipping room, later becoming city traveler and doing parts of the province of Ontario. He also made a couple of successful trips to Western Canada. A few weeks ago he joined his present firm. He likes the selling game and has established a good connection with the retail trade.

& Co., Toronto, and W. E. Short, who looks after the Prairie Provinces for the Kingsbury Footwear Co., Montreal, leave next week on their spring selling tours.

Excavation has started for the handsome new shoe house which will be erected at 290 Yonge street, Toronto, and occupied, when completed, as a Walk-over shoe store, which will be opened by F. A. Guinivan, of Montreal.

B. F. Morley & Son, 27 Wellington street east, Toronto, have been appointed selling agents for Toronto and Western Ontario for the Eagle Shoe Co., Montreal, which ground was formerly looked after by Frank W. Slater.

O. H. Vogt, managing director of the Great West Felt Co., Elmira, Ont., was in Winnipeg recently on a business trip. The capacity of the Great West plant has recently been increased and business with the firm is good.

Fred Knox, who recently bought out the Hellyar Shoe Store, in Bowmanville, has made several changes to the premises. A new hardwood floor has been laid, the counters removed and other interior improvements carried out.

Wm. L. Saunders and Fred, R. Aitchison of Durham, Ont., have opened a new boot and shoe store and grocery in W. Black's old stand in that town. The new firm of Saunders & Aitchison will conduct a first-class repair shop.

Clarence S. Acton has taken a position on the selling staff of the Relindo Shoe Co., Toronto, and will cover several leading centres in Ontario. Roscoe Burlingham, of Toronto, has also joined the traveling force of the Relindo Shoe Co.

C. B. Dayfoot & Co., shoe manufacturers, Georgetown, have recently installed several sole tacking machines. The Berlin Felt Co. and the Kimmel Felt Co., Berlin, have added several Model C clicking machines, supplied by the U.S.M. Company.

The Arnprior Felt Co., Limited, has been incorporated with a capital stock of \$50,000, head office in Arnprior. The company is empowered to construct, build and operate felt mills, and to engage in the manufacture and sale of felt and woollen goods.

J. J. Harton, shoe dealer, 1376 Queen street west, Toronto, has installed a nice, attractive double front with tiled floor. The entrance is of a receding nature and the windows are paneled in white, while the plate glass is held in position by copper clamps.

Hanan & Son, of Brooklyn, N.Y., who, it was reported, would start a shoe factory in Canada, located either in Montreal or Toronto, say that there is no foundation for the report whatever, and they are at a loss to understand how it became so general.

E. P. Mullarky, who has secured a controlling interest in the Wm. A. Marsh Co., Quebec, has managed the business for the last eight years. The name and capital stock of the company will remain the same, while the general policy will continue as in the past.

Oscar Rumpel, manufacturer of felt footwear, has begun manufacturing in his new premises in the W. G. & R. Building on Queen street, Berlin. The latest equipment for the manufacture of fine felts has been installed by the United Shoe Machinery Co.

J. A. Perron is representing the Rena Footwear Co., Montreal, in the province of Quebec, while Omer Lord is the city salesman for Montreal. M. E. Demers is selling agent for the Maritime Provinces, while P. M. Goff will cover Ontario and the West for the firm.

E. M. Trowern, Dominion Secretary of the Retail Merchants' Association, Toronto, attended the annual picnic of the Boot and Shoe Section of the Retail Merchants' Association, Montreal, which was held at Maple Grove on July 9th. The event was a distinct success.

Julius Kuechler, who is widely known in the shoe trade, has been appointed representative of Getty & Scott, Limited,

Galt, for Manitoba and Saskatchewan, succeeding H. Gibbons, who has resigned. Mr. Keuchler has made several trips to the West and is a thoroughly capable representative. The firm believe they have in him the right man for the right place.

G. C. Yearsley, manager of the Toronto branch of the Miner Rubber Co., who recently recovered from an attack of appendicitis, is spending a few weeks at Strawberry Island, accompanied by his wife and family. E. A. Chalk, of Toronto, Northern Ontario representative of the Kaufman Rubber Co., is also holidaying at Strawberry Island with his family.

An interesting booklet has been issued by Daniel S. Knowlton, 205 Lincoln street, Boston, entitled "A Primer of Boots and Shoes." It contains in alphabetical form a fund of information relating to the shoe and leather trade. The work is neatly gotten up and is filled with numerous appropriate quotations.

T. P. Conley, formerly superintendent of the Todd Shoe Co., Rochester, N.Y., has resigned his position with that concern and has accepted a position as superintendent of the John McPherson Co., Hamilton, Ont. Mr. Conley is well-known in the shoe trade in both Massachusetts and New York State.

If the European war lasts long, shoes will take an upward bound, according to J. Harry Selz, president of the Selz-Schwab Shoe Co., Chicago. There is no immediate danger, but the fact that there is no leather surplus and the demand for millions of pairs of shoes after war begins will affect the prices, Selz declares. "Leather follows the price of wheat in war times," he said. "There will be hundreds of thousands of men involved in the struggle, and that means shoes. Sole leather will rise first and top leather will come next."

The petition, which has been circulated by the Boot and Shoe Section of the Retail Merchants' Association, asking that the cash payment for rubber footwear be extended from November 10th to January 10th, has been largely signed in Ontario and other provinces. A petition is now being circulated among the shoemen in the West under the auspices

of the various provincial boards of the Retail Merchants' Association. It is not likely that the largely signed document will be presented to the rubber footwear manufacturers for some weeks yet.

The Cobourg Felt Co. have been incorporated with a capital of \$200,000 divided into two thousand shares of one hundred dollars each, of which one thousand are preference shares. The head office of the company is Cobourg, and the incorporators are George W. Charles, Henry Fullerton, John Dick, William Morgan Hilliard, and Alfred J. Armstrong, all of Cobourg. Under their charter the company are empowered to manufacture and deal in yarns, cloth, blankets, felt and other textile fabrics, and also to make and market boots and shoes and other footwear made from felt, rubber, leather and other materials.

The subject of the supplying of rubber boots to city employes was brought up for discussion in Fort William recently. Commissioner Brennen stated that the city had already supplied five hundred pairs of boots in a short period, which represented a money value of \$1,750. He cited instances where he had seen workmen wearing the boots when they had absolutely no need for so doing. City Engineer Knight pointed out that the supplying of boots free had been stopped about a week ago and since then boots could only be secured by paying for them.

Forest Elliott, son of Chas. W. Elliott, shoe retailer, 320 Danforth avenue, Toronto, is only sixteen years old, but is a wireless telegraph expert. The boy has learned the art of receiving and sending wireless messages, not from anyone else, but purely from books. He has also constructed his own complete wireless outfit and has received messages from places 2,500 miles away. Forest is able, after some months of practice, to despatch some thirty words a minute and can receive about twelve a minute, the latter being much more difficult. Every evening he talks to his friends of the wireless.

A gun duel, in which nearly half a dozen revolver shots were said to have been exchanged between a Bank street store proprietor, Emile Joseph, and three unknown men, believed to be burglars, was staged in Ottawa recently. The

SHOE TRAVELER WHO RAISES GRAPE FRUIT

Frank Mercer, western Canada representative of the Brandon Shoe Co., of Brantford, Ont., recently returned from an extended visit to Cuba. He is seen mounted on the pony in the picture and standing beside him is his brother-in-law, G. B. Buxton. They are the owners of a thousand acres on the island known as the Los Manges plantation at Palmerito, Cuba, from which nine thousand cases of grape fruit were shipped last year, and it is expected that twenty thousand cases will be exported this season, as the crop is a very heavy one. Messrs. Mercer and Buxton form what is known as the Cauto Produce Co. In the other picture the former is also seen on the right. He was snapped

in Vancouver just after his last selling trip throughout the Prairie Provinces. Standing at the rear is W. G. Fallen, one of the Western representatives of Getty & Scott, Limited, of Galt, Ont. The other two gentlemen

on the left are John Simpson and Michael Fitzpatrick, both of Vancouver. Messrs. Mercer and Fallen expect to start for the West in a few days, each having a fine range of spring samples.

marauders got clean away and so far as is known, no valuables were taken. The scene of the affray was the Fleming Shoe Repairing Company, 815 Blank street, of which Mr. Joseph is proprietor.

The early closing by-law which the city council of Vancouver has had under consideration for the past several weeks was finally passed on July 14th, and became operative on July 25th. The classes of retail stores affected by the regulation are men's furnishing and clothing, boot and shoe, grocery, hardware, dry goods and butchers' stores. These must close at six o'clock on week days and eleven o'clock on Saturdays. The proposal to establish a compulsory weekly half-holiday has been shelved for the time being in view of the representations of retail store proprietors.

Gutta Percha and Rubber, Limited, Toronto, have recently purchased three lots at the corner of Richards & Nelson streets, Vancouver. The property has a frontage of 75 feet and the company will later on erect a fine warehouse in that city. Gutta Percha and Rubber, Limited, intend building a new four-storey fireproof warehouse on their property, Eleventh avenue, Calgary, and it is fully expected that building operations will begin very soon. It is also

the intention of the company to erect a building in Regina, where they have a plot on Broad street of 100 feet frontage.

The Nugget Polish Co., of Toronto, will make exhibits at several of the leading Fall Fairs in Canada. T. W. Hart is now in the West, and has charge of the booth at Calgary exhibition. He will also look after the firm's interests at the Saskatoon and Edmonton Fall Fairs. L. R. Howard, of Toronto, will supervise the "Nugget" display at the Eastern Townships Fair in Sherbrooke, Que., while H. W. Parsons, Eastern representative of the firm will be in control at the Quebec, St. John and Halifax exhibitions. The Nugget Polish Co. will also have space at the Ottawa Exposition and the Western Fair at London. T. W. Hart and L. R. Howard will be in charge at the Capital, while F. B. Bollard will look after London. The firm will have its usual attractive booth

in the Process Building at the Canadian National Exposition, Toronto, which will be in charge of John Harris, Canadian manager of the company.

The members of the Shoe-Workers' Union of Fredericton, N.B., are seeking the nine-hour day. Alderman John A. Reid, vice-president of the Hartt Boot and Shoe Co., has been named as arbitrator of the company, and P. A. Guthrie, M.L.A., arbitrator for the union. A third arbitrator to be appointed will meet with them to discuss the question of whether the union will have a nine-hour day or a fifty-nine hour week. The members of the union recently conferred with the management and talked upon the proposal, asking that the new schedule become effective on January 1st next, with no reduction of pay. No definite decision has yet been reached. The company feel, with general business conditions as they are at present, that they cannot grant the request.

The annual picnic of McLaren & Dallas, wholesale shoes, Toronto, was held to Centre Island on July 25th and was largely attended by the employes of the firm, their families and friends. An interesting program of sports was run off, the most exciting being the baseball game between married and single men, the former winning in a five innings struggle by 11 to 9. For the benedicts the battery was F. G. McLean and F. Witheridge, and for the single men B. B. Holland and Donald McLennan. J. A. McLaren held down first bag for the married chaps and did some brilliant work. In the races the judges were Wallace Waller and F. G. McLean. Miss McNab carried off the majority of prizes in the women's events, including the special one of a sunshade presented by the firm in the 100 yards dash. John Fu... the most awards in the men's events and bore off t... special

The "EVERYDAY" Shoe

While **finish** and **style** are not overlooked in the making of the "Everyday" Shoe, it owes its immense popularity chiefly to the exceptionally good service it gives.

The "Everyday" Shoe is made on comfortable, easy-fitting lasts, and expert workmanship and good quality materials are used throughout.

It's a good seller the year 'round.

award of a handsome grip given by the house. E. J. Kew also captured first in a couple of contests. All the events were warmly contested and the picnic was the most successful ever held.

The spring samples of the Rena Footwear Co., Montreal, are the most attractive and representative ever turned out by that company, who make men's, boy's and youths' and women's McKays. Several nobby women's lasts are shown in colonials, pumps and tangos, and also the sixteen button boot with vestings, cravenette and dull calf top. All the low cuts have the latest heels both in wood and leather, with a variety of neat ornaments. The display in men's McKays is a complete one and among the offerings are seen a whole foxed bal, on an English last, with blind eyelets and low, broad heel. In buttons there is a very fine range having a variety of welt goods with medium high toe, black

cravenette and dull calf quarters. There is also a nice showing in boys' and youths'. The range is being handled in Ontario and the West this season by P. M. Goff, Toronto.

Samuel Nelson, formerly in the lace leather business in Chicago, is now superintendent of the tannery of the B.C. Tanning Co., Vancouver, B.C. Mr. Nelson is an experienced tanner and the plant will specialize on raw hide lace leather in both cut and sides and also leather shoe laces. The tannery is now running about 500 sides per month.

The Owl Shoe Store, 123 Yonge street, Toronto, of which Ed. Cook is the proprietor, has transferred its department of ladies' shoes from the ground floor to the first floor, affording considerably more room for this branch of the business. The color scheme in fixtures and furnishings is an attractive green. The shelving is of the one carton system with uniform labels, surmounted by a lattice effect.

There are several individual seaweed chairs of green of a most comfortable build, while the fitting stools and display tables are of the same material and harmonize nicely with the inviting interior. There are electric lights, all of the inverted type and at the front is a large silent salesman for exhibiting of findings and fancy footwear. The new department is bright and well arranged in every detail.

NEWS BRIEFS FROM QUEBEC

W. A. Crawford, of Haverhill, Mass., was in this city this week.

C. E. McKeen, of the C. E. McKeen Shoe Stores Co., Vancouver, is spending some time in the city.

Jos. Metivier, manager for Elie Jobin, Limited, is spending his vacation on his farm at Cacouna.

J. B. Paquet, formerly a shoe manufacturer, passed away early this week. His funeral was largely attended.

A small fire visited the shop of Medard Tremblay, Parent street. The damage was about \$600, covered by insurance.

Jos. Plamondon, shoe retailer, of St. Joseph street, has installed a handsome new front which greatly improves his store.

Joseph Chevalier, of Des Fasse street, has installed in his repair shop a Progressive Shoe Machinery complete repair outfit.

Adj. Martin, formerly of J. & A. Martin, Quebec, has opened a new shoe factory. He will make a specialty of McKays and standard screw in men's, boys', youths', ladies' and misses'. N. Robitaille, formerly manager for J. H. Laroche & Fils, has taken charge of the shop.

NO DIAMOND  TRADE MARK
No Fast Color

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

Union Shoes for Union Men

The retailer who meets the demand of every possible buyer in his town handles Union Stamp footwear.

Dealers who do not carry Union Stamp shoes are not soliciting their rightful share of the shoe business of their city.

The Union man will have Union shoes for himself and his family. He demands them and if he cannot obtain them will turn elsewhere.

To you, Mr. Retailer, who advertise Union Stamp shoes the tide of trade is turning.

You cannot afford to neglect the Union trade, and even the man who does not buy Union shoes merely because of Union principles recognizes the high quality of Union Made footwear.

You have nothing to lose and all to gain by carrying these shoes.

Let us send you to-day a list of manufacturers who make shoes bearing the Union Label and add a live selling asset to your business for the coming year.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp

BETTER THAN EVER !

This about expresses the idea of all our travelers concerning the range of samples for Spring, 1915, that they will soon be showing Canadian retailers. As well as the pick of last season's popular models, several new lasts will be shown that will prove fully equal to anything ever turned out in Canada---to put it modestly.

And not only in our high-grade lines for Men and Women, but also in the heavier lines will the same A1 quality and genuine worth that have always been a feature of their manufacture in the past, be again apparent.

Therefore, it will prove to your advantage to buy from a house that can supply practically all your needs in every department. Watch for our traveler.

DON'T FORGET OUR IN-STOCK DEPARTMENT

You can sort up quickly and satisfactorily on broken lines by taking advantage of the excellent service this department can give you. Use it to the fullest extent, and save delay.

SORT UP FOR FALL

In a month or so the wet weather season will be upon us.

Is your stock of rubbers capable of standing the demands which will be made upon it?

It will pay you well to carefully go over your stock; you may find out that you are a trifle low on certain styles, shapes or sizes. You'll need to remedy this, and by sorting up now with "KANT KRACK," "DAINTY MODE," "ROYAL" and "BULL DOG" rubbers, you will be able to supply the demand which will surely come your way.

Any of the following agents will supply you with Independent Brands. Order from your nearest agent.

AMHERST

is the word for footwear of the comfortable and satisfactory kind.

Sales for 1913, \$1,017,390.00

This sum represents one dollar and a quarter for every eighth inhabitant of the Dominion paid our Company for shoes during last year.

DID THEY GET THEIR MONEY'S WORTH?

5,000 satisfied and loyal customers say they did.

How about you, Mr. Retailer? Have you them in stock? If not, why not?

Everywhere the wearer of heavy footwear now says "AMHERST." You make a permanent customer and a reasonable profit if you can supply him.

Representatives of our Company are now on their rounds for Fall and sorting trade.

“Altera” Embossing Machine

built by the

MOENUS MACHINE COMPANY, Frankfurt a.M., Germany

Another testimonial that
speaks volumes.

Newark, N.J., July 21st, 1913

MOENUS MACHINE COMPANY,
Frankfurt, a.M., Germany

Gentlemen,—

I am in receipt of your recent communication in reference to my large and small Altera Embossing Machines, and in reply wish to say, that the work they are turning out is exceeding my expectations, and I do not believe there is another machine in the market that can compete with them, and I can cheerfully recommend them to any one intending to do fine work.

Yours very truly,

(Signed) CHAS. NIEDER,

225-233 Emmett Street, Newark, N.J.

Classic Shoes for 1915

IN children's shoes some very striking models will be shown. Prices will be the same as last season.

Classic shoes for women for 1915 are of the highest grade, made on lasts which are shown in all the large shoe centres. 105 new low cuts will be shown in Turns, Welts and McKays.

The prices will range from \$2.00 to \$2.25 in McKays; \$2.50 to \$2.75 in Welts; \$2.50 to \$2.65 in High Cut McKays. The Price in High Cut Welts will be the same as last season. These Welts will be a strong feature in 1915.

Make sure of seeing this high grade line. Our representatives will soon call on you.

Cleo

Cleo

THE "CLEO" shoe for women is made in a choice number of catchy styles for Spring 1915.

Our designers have caught the trend of women's popular footwear fashions and in the "Cleo" are embodied all those desirable qualities that the dressy woman has learned to appreciate.

Do not confound "Cleo" shoes of the past with Cleo's of to-day—A radical change has been made in our methods of making women's shoes. An inspection will convince you we are right in claiming they are something entirely new and equal in every way to anything produced in the best American factories.

A sight of our women's lines will show you we know what we are talking about.

Inspect our salesman's samples.

Our travelers will show them to you.

Spring Season Opens Well Despite Warring Europe

Trade Realizing That Business Must Go On as Long as People Wear Shoes—Salient Characteristics of Spring Lines—What Leathers Will Sell—A General Summary of Men's and Women's Styles

Like all other industries the shoe trade was distressed to learn that the mighty nations of the world were to engage in conflict, and for a few days there was the same indecision displayed by large and small houses, owing to uncertainty as to the future. But mature consideration showed that war or no war people had to live and wear shoes, and gradually a return to normal conditions is being shown in the attitude of the trade. Certainly everyone will have to be a better business man than ordinarily. There must be careful buying, careful spending, careful salesmanship on all sides and strict attention to those small details of business that are sometimes overlooked.

Manufacturers are showing a wide range of new shoes for the Spring season, on the first selling trips of which travelers are already getting out with samples. Retailers should display as much interest as in the past in the new

have been careful in selecting what new lasts they have installed, and the retailer who listens to the counsel of reliable salesmen and who exercise their own sagacity in buying will have no difficulty in purchasing wisely, and, consequently, profitably.

While granting that the situation in the business world is unusual, and serious in some of its aspects, there is no

GUN METAL BAL, SQUARE MEDIUM RECEDE TOE, ONE INCH HEEL—BY CORBEIL, LIMITED

lasts shown, and should buy carefully to cover their requirements, having a keener eye to the necessities of their trade than heretofore. Freak shoes will not have the sale they might in ordinary seasons, but bread and butter lasts, and those staple lasts which have been improved or modified to meet new conditions, will have the sale. Manufacturers

WOMAN'S PATENT BUTTON, MEDIUM RECEDE TOE, TAUPE CLOTH QUARTERS, SPOOL HEEL—BY MCDERMOTT SHOE CO.

sense in maintaining a panicky feeling. The primary uneasiness in the business world was caused by the sudden jolt received by the financial system around which business revolves. Readers of the papers know that the financial system has been strengthened to stand the strain of the present crisis. Therefore the shoe trade will do well to follow its example and to continue the normal course of its existence, as far as possible.

There are several changes in lasts for Spring 1915 season, that go towards making the offerings of Canadian manufacturers the best, neatest, and in every way, the finest range ever put before the retailer.

Buttons will still be the leaders in women's footwear,

and indeed, in the men's lines also, it is certain that more than ever, will be sold during the Spring season.

In low cuts, some very natty new lasts are seen, pumps with buckle ornaments of various kinds predominating. It is stated also that the one button Colonial will sell very

WOMAN'S CASTLE PUMP, PATENT FOREPART, RECEDING POINTED TOE, BROCADE QUARTERS AND INSTEP STRAP, CUBAN-LOUIS HEEL.

strongly. The same height of heel, and in some cases a little higher heel, will be carried on low cuts. Buckles this season are smaller and of neater design than formerly. Several novelties in these buckles will be seen. Quite a number of manufacturers are showing a one button Colonial with a sliding buckle, a shoe of this type being shown in the accompanying illustrations.

A large American manufacturer stated recently: "There is no question that the stage last is the last of the moment. The demand for this type of last is spreading very rapidly, particularly in the Western portion of the country. Its influence will also be felt in the Eastern market. The favorite in this sort of last seems to be a medium wide forepart and vamp effect carrying heels 16-8 and running largely to plain toes with either $2\frac{3}{8}$ or $2\frac{3}{4}$ vamps. The tendency is to light effects in sole treatment, with close edges and light trim. Even in the recede toe effects the short forepart and vamps is much in demand. The high grade manufacturers, of course, will stick pretty close to the long vamps, but there is detected some influence of the short vamp even in the better grades. There will, of course, always be some demand for the long vamp shoe.

"The stage last shows an arch in the shank and a fairly flat forepart.

"Colonials will be sold on a medium, short, narrow recede toe carrying a 15-8 or 16-8 heel."

What's Doing in Leathers

In leathers, gunmetal, of course, will continue to have the call. It is a strong favorite, as it is pretty hard to equal gunmetal, as it is neat and dressy, and will make a decent appearance much longer than most other leathers. The hard leathers will also be generally in evidence in the higher class lines. Of course, the lighter Summer lines will be strong again next year, and will if anything, have a larger call than even in this past season. Nubucks and canvas lines lower, seem to run more under the category of sporting shoes, and the style changes do not affect them to any serious extent, as they are generally very flexible and made so as to adapt themselves to the shape of the foot. Kids will sell well again this year.

Fabrics More Popular

Fabrics are indeed coming into their own this season, and more of them will be worn, it is prophesied, under present conditions, than ever before. There is a reason for this. Not only does a cloth upper on a man's shoe or a fabric quarter on a woman's Colonial present a fine appearance, but it also means the saving of just so much leather, and consequently, a better product for the price. This has been one of the principal reasons accounting for the increasing popularity of cloth uppers. But, on account of the

war, leather will now be scarcer than ever, and it will be a case of "necessity" just as much as "fashion," as a great quantity of the leather used in Canadian and American factories comes from those European countries now in the throes of warfare. While speaking of cloth uppers, it might be said here, that in the opinion of many manufacturers, the principal call will be for plain effects more or less, rather than for the louder or less tasty offerings.

What Will Sell in Men's Shoes

As neat a lot of samples in men's footwear is being shown for the coming season as one could wish for. For the large city trade, the tendency in men's lasts points decidedly towards the flat recede custom effects carrying about an 8/8 heels. In the smaller cities, and for the cheaper trade, as well as for small town trade, the medium high toe, carrying a 10/8 heel is certain to be the strongest seller. The high broad toe promises well in certain sections, and for the high class trade the long narrow toe will have the call. This, in the opinion of many style experts, however, to a more limited degree than last year, as it is felt by many that the long, narrow, receding toe shoe has many disadvantages both in fit and appearance, and it is certain that very few freakish samples of this type will be shown. As regards heels on men's shoes, no great changes are evinced in the new season's showings. If anything, they will be only a trifle higher than at present, as the heels which are the mode to-day, especially in the men's lines are, in every way, the acme of comfort, and could not very well be improved upon. Present styles, and those indicated for the immediate future, are the most sensible we have had in years.

Tans, it is stated, will have about the same popularity next season as they have had this Summer. This means,

WOMAN'S PATENT LEATHER, DULL CALF TOP, SHORT RECEDE TOE, CUBAN HEEL—BY PERTH SHOE CO.

of course, the darker or mahogany colored tan, which has been having a very fair amount of success this season. There are some makers who believe that tans are due to have an increased demand, but, although this may be true, it is very likely that the return of the tan will be very gradual during the next two or three Summer seasons. Men's oxfords continue to have a fairly good, although limited call, and some natty samples are being shown. That patent leather will continue to lead in popular favor there is not the slightest room for doubt. The growing importance of patent leather has continued unabated since its re-

(Continued on page 38)

BE CALM!

A world crisis must affect every country.

While this continent is not the theatre of war, Canada, being an integral part of the Empire body, feels the jerk of the strong arm that wields the sword.

Our loyalty being practical, it is logical that we should rally to the support of the flag even before we are asked to join the colors. It is reasonable that we should display intense enthusiasm for the cause, that we should forget selfish interests; that we should drop everything in that first period of trying uncertainty which precedes the grim business of war.

But now, when we are assured that the Empire is engaged in conflict let us reflect calmly. What is our part in the war? How can we best serve the Empire—and our part of it—Canada?

We have placed ourselves and our country at the disposal of our King.

What should be our policy now?

It should be the policy that has been Canada's during the past century—a policy of progress, of development, of internal expansion, commercially and morally.

Not knowing how we may be called upon by Britain to render further aid can we not more surely assist when the time comes by being in good condition—"Sound as a dollar" in every way? Then let us be calm and serious, and not swayed by the sensational. Let us be wisely cautious, but not foolishly frightened. Let us be prepared for any eventuality, but not borrow trouble. In short, let us live our normal lives exercising just a little more care and foresight than usual.

Times need not be hard unless we make them so. Just the other day a \$3,000,000 order was placed with our flour mills by our Government. That money will circulate in Canada.

Canada's biggest customers and her largest sources of supply are Great Britain and United States. Her total trade, import and export, with these two countries for eleven months in 1914, amounted to \$885,323,025 against \$134,352,029 with all the rest of the world. And \$550,000,000 of the first figure was business with our next door neighbor. Over twelve millions in imports came from Germany last year. Much of this business will go to Canadian firms now. Our crops will be good. Our farmers will have money because of a ready market and good prices. We have immense natural resources, unlimited food supplies and a peaceful neighbor. Canada is in good shape. Keep her sound.

Talk business, not war, and we will be displaying the truest patriotism.

How to Make a Success of the Suburban Shoe Store

Some of the Problems the Suburban Dealer is Up Against—The Advantages He Has Over City Stores—"Price" Should be Featured by Him—Some Good Advice That Should Enable Him to Cope Successfully With the City Establishments

The town or country shoe merchant has a steady class of patrons, and certain well defined problems to face; his contemporary in the large city has customers who differ in every way from his own, and whose problems are distinctly different from those which he himself faces.

But the shoe dealer in a suburban city has to contend with the problems of both city and country retailer, and, having village and city patrons, has both country and urban questions to adjust.

Lure of City Shops

The first and foremost problem which faces the suburban dealer is the lure of the city stores. In all such localities, the bulk of the population is made up of commuters. A certain percentage of men residing in the big city suburbs do not commute. They and their families generally patronize home industries, but even in the cases of this kind, the housewives like to go to town to do their important shopping.

Take for instance some little place about twenty-five or thirty miles out from the cities of Toronto or Montreal. In such a place the retailer generally has some direct competition right at home. Moreover, he is continually competing with every one of the large city retailers and departmental stores. For, the city shops may be reached by a short train or trolley trip, and they will always serve suburban towns through the mail. This is especially so since the advent of the parcel post system. Thus, this indirect competition is one of his greatest problems, and its solution his big difficulty.

Take, for instance, the case of Mr. and Mrs. Blank, who live in, say, Homeville, twenty miles from the largest city in the Province. Now, Mr. Blank, whose business is in the city, journeys there daily. His wife also goes to the city say about twice a week, and once in a while she takes the children along.

Get After Patronage of the Mother

The shoe dealer in Homeville should put forth his greatest efforts to draw the trade of Mrs. Blank and the children. The head of the family will be much harder to get as he must go to the city every day, and it is only natural for him to buy his clothing and footwear there. So, it is wise for the suburban shoe retailer to follow the line of least resistance, and get after the patronage of the mother.

Why does Mrs. Blank go into the city to purchase footwear? She goes for various reasons, two in particular. The first is, that the call of the city attracts her, for she is a suburbanite, and the shopping instinct is strong within her. In the second place, she knows that in the large city shops she is enabled to find the latest styles. These are the two main reasons that account largely for her desire to purchase her footwear in the large centre.

To combat these handicaps the suburban dealer has one very powerful means of protecting himself, and that is—price. His rent and other overhead expenses are low, and he can buy stock nearly as cheaply as his bigger rival in the city. Looking at it from this viewpoint, there seems to be no good reason at all why he should not be able to undersell the metropolitan merchant. This, therefore, should be his ammunition when advertising, and his slogan all along the line, whether in out a window display or making a sale.

More than anything else, a woman loves a bargain. It is an inherent in her. In fact, every one has it to a

certain degree, whether man or woman. To a woman, a bargain is more than the saving of a little money. It is an achievement. She will tell her friends about it with pride, and take pains to explain it to them thoroughly.

Does it not stand to reason that if the home dealer can furnish new styles and good service cheaper than the city store, and Mrs. Blank finds it out, that she will buy her footwear in her own town. But, until she does "find it out" the city store gets her trade, and the suburban dealer is losing it. This should not be. Instead of waiting for Mrs. Blank and her friends to find out of their own account that they can save some money by purchasing at home, the suburban dealer should go to her or them and explain the matter by various publicity plans. He should be insistent on the "price" end of the question.

However, this does not mean that you purchase stock at as cheap prices as you can secure and then sell it to the Mrs. Blanks of your neighborhood, only to have them find that they have bought a shoe which is years out of date.

First of all, study the style question with great care. You have to. For, you must have the latest fashions, else the city competition will swallow you. When you are satisfied that you have a representative stock then advertising it you have everything in your favor. Work the home town pride appeal. Combine it with price, and tell in detail, the reason for low prices at your store. They are sound reasons and your patrons will appreciate them. Make them feel that they are getting all the advantages available to the city resident at a much lower price.

Advertising the Suburban Store

There are two or three mediums open to you. The two principal ones are the local newspaper and the circular. Both should be used. Watch the advertisements of the big retailers in the city. See just what attractions are being offered to catch the woman's trade. Then let them community know that these big fellows have nothing on you, that right here in their own home town are the latest styles and lowest prices.

Another point to feature in your advertising, is that of convenience. Touch on the bother of going all the way to the city when just as good, and even better results can be obtained at home. Explain the extra trouble and expense of a trip to the city. The right sort of advertising will bring Mrs. Blank, her friends, and in many cases, the men of the family, who are not slow to see the advantages offered them by the shoe retailer in their own home town.

Back up all this advertising and talk by first class service and you are sure to win. If your claims are substantiated by good service and stock, she will tell her friends, and a big trade can be built up. It may take a little to do this, but continual plugging will accomplish wonders.

Make it easy for home-loving patrons. Don't make them dig you up, but rather go to them and keep right after them until they are convinced.

J. Goodwin and H. D. Ray, boots and shoes, were among other retail merchants of Vancouver, formed into a committee to get plans under way for the holding of a carnival of bargains during exhibition week, August 28-September 7. It is intended to offer each day of the fair, some special feature for sale in all their stores.

INVITING INTERIOR OF GEORGE A. MELONEY'S NEW SHOE STORE IN NORTH SYDNEY, C.B.

Believes in Giving Good Service and Good Values

Handsome and Well Appointed New Store of Eastern Shoeman—Though Meeting with Serious Losses He Always Looks on the Bright Side—Served Twenty Years with One Firm—A Liberal Advertiser.

A new store in North Sydney, C.B., which G. A. Meloney has occupied a few months now, is one of the most attractive in the East. It will be remembered that in the spring of 1913, the premises of Mr. Meloney were destroyed by fire which was his second baptism by flame in six years.

After the blow he humorously remarked "he was getting somewhat used to it," for each visitation meant a heavy personal loss and at the time of the last conflagration, several buildings were destroyed.

Mr. Meloney's new establishment is exceptionally inviting and possesses all modern facilities, being large and well lighted, with a neat front. The double carton system of shelves prevails throughout, while at the front is an attractive silent salesman showcase, in which are displayed fancy

footwear and the latest notions in findings. The wrapping counter and parcel desk are at the rear.

The proprietor has a neat label in red, in which the lettering is white. These labels are attached to all goods sent out. Mr. Meloney gained his first experience in the footwear line with the firm of Vooght Bros., Sydney, with whom he remained twenty years. He has been in business for himself seven years. He is a close student of styles, knows values, and is a good buyer.

Possessed of a cheerful disposition, and always looking upon the bright side of things, Mr. Meloney has many friends in the trade, and his customers always take pleasure in referring to the good service and exceptional values which he gives them for their money. He is a liberal user of printer's ink and one of the progressive citizens of North Sydney.

Some Leather Substitutes

One result of the steadily advancing prices of leather is seen in the larger attention given by inventors to developing satisfactory substitutes for leather. The increased use of rubber and fibre soles and of felt for box toe materials, and even for outsoles, has already displaced the use of a considerable amount of leather.

The satisfactory service which these and other materials are giving, would indicate that they will come into more general use if leather prices are maintained; nor is their use, as a rule, to be deplored, for in many instances they are as desirable, from a standpoint of comfort and service, as high-grade leather, and superior to much of the inferior leather which now finds a place in much of the footwear product.

The increased use of leather substitutes, however, does not mean that there will not be a demand for all of the leather which tanners are able to produce.

STRAY SHOTS FROM "SOLOMON."

Don't be satisfied to run a lone hand. It is well enough to know how to paddle your own canoe, but you may some day need an extra paddle, so don't be too "cocky." Some

GET FRIENDS

people think their own company is so good that they don't need anything better, and when they get into a hole or come to the end of their tether they wonder why people pass by on the other side or watch their efforts to get loose with amused curiosity. A man without friends in the world will sooner or later be in sore need of a "leg up" or someone to lean upon. "A threefold cord is not quickly broken." Get money, get business success, but above all get friends. It means true worth when a man draws others to himself. Money and position may bring certain kinds of friends but it takes more than these to draw the genuine love and sympathy of those that are worth while.

This restless chase after money is one of the craziest things that afflicts mankind. Men will tell you it is not money they are after but the business game that fascinates;

CHASING MONEY

but like all games of chance the money seems to supply the real zest, and when you get down to "brass tacks" it is that most of these business gamblers are after. Of course money is a good thing to have and covers a multitude of deficiencies in this world, but when you see millionaires like John D. Rockefeller who doesn't know the taste of cherry pie, or Andrew Carnegie, who says it is a shame for a man to die rich, what is the good of all this striving. It has come to pass that people these days think of very little else than how to make money and make it fast, and they work themselves into early graves to get that which gives them little pleasure after they have gotten it.

There is satisfaction in work itself and the man who does not enjoy putting in good hard licks at something worth while does not amount to much. But there is a lot

WHAT PROFIT

of work that might almost as well be counted out. The Wise Man says "What profit hath he that worketh in that wherein he laboreth?" in the sense that after all work for work's sake and especially work for gain is vain. There are men who work and slave to make money or build up a business and who scout the idea of holidays or recreation and who either drop off and leave their money to others or get so that they can't enjoy what they have made. What good is a man's work and its results if he can't say it has done somebody or even himself good? The man who works fifty-two weeks in the year and only has cash or stocks to show for it is the poorest kind of success the world knows.

Give your tongue a rest and your ears a chance. Get rid of the notion that other people are as much interested in the sound of your voice as you are. "Be more ready to

SHUT UP

hear than to give the sacrifice of fools." You can't go to any gathering, from a town council meeting to a Church Synod, without being met by this plague of "blatherskites." The people you want to hear talk have usually to be pried off their seats, while every minute some jack-in-the-box jumps up and thrusts his half-baked ideas on the long-suffering listeners. Don't talk unless you have something more than words behind your teeth. These fellows who can get up, set their mouths going and run off

and leave them may be a marvel to themselves and some of their admirers, but they make angels weep and decent men long for a stuffed club. If we could all talk less and listen more this world would be a lot better to live in and we would all be richer in pocket as well as in mind.

There is a railway running out of one of our large cities that was built when subsidies went by the mile and railroad finance was as sinuous as a dog's hind leg. A ride over it

LONG WAY AROUND

is like an adventure on a "switch-back." Its roadbed is an indication of its history. There are men like that. They will never get rid of their moral bends as long as they live. They began life on the bias and have run on the slant until they are too old to get the kinks taken out. They have chosen the "long way round" until they can't see straight. They have developed a moral squint that makes crooked straight and the straight crooked. "The way of him that is laden with guilt is exceedingly crooked." It keeps him so busy dodging that he zig-zags as naturally as a land crab. If some people took as much trouble to live a decent helpful life as they take to keep up the bluff they are trying to put up on their fellows, they would get ten times as much out of it at much less cost.

Greed is a poor paymaster. You may throw time, talents and your immortal soul at his feet and get in the end a brick. There are men getting three very ordinary meals

THE GREEDY MAW

a day and sleepless nights who think a fat balance in the bank will make up for a wrecked body and a shrivelled soul. "All the labor of a man is for his mouth and yet the appetite is not filled." The more you eat the more you will want. The more you get the greedier you will become. The more you squeeze the harder your fist will get. Master your appetites and passions or they will master you. Give the bad man that is in you an inch and he will take a mile. You may think you would not do some of the rascally things you have seen your neighbors do but just give yourself a fair chance and you will do worse. There are some things you have done lately that the very thought of, four or five years ago, would have made you shudder. You are doing things regularly now that you would not like your wife or your associates to know, and it is only a matter of time when you will not care.

You can't know too much, but it is sometimes inconvenient to be wise. "What you don't know can't do you any harm," may not be good philosophy but it is occasionally

TOO WISE

good sense. There are people who would be better off if they didn't know so much. Their knowledge seems always to be getting them into trouble. "Too much wisdom is much grief and he that increaseth knowledge increaseth sorrow." There are some men so wise that their knowledge keeps them from enjoying some of the things that make life bright for their fellows. There are others who know so much about their neighbors and friends that it spoils the possibility of friendliness or even business intercourse. There are some men whom wisdom makes sore and knowledge cynical. Know all you can of what you ought to know and let the rest go. Especially avoid that wisdom which caused the Pharisee to say, "God, I thank thee that I am not as other men are."

How to put in a Special School Shoe Window

Here is something adaptable for the small or large dealer, as good for one as for the other. It is simple and inexpensive and if properly put in, a display of this kind should bring a lot of school shoe business.

First of all buy twelve slates, good size, and if the window hasn't a cross-piece about half way up at the back, one should be nailed across, so as to be able to nail four of these slates as shown in the sketch. In the centre on the cross-piece cut out a round frame out of a smooth shoe case. To do this take several smooth shoe case boards and lay them flat side by side on the floor and if they will join still better, take a large compass and make the outside circle. If you haven't a large compass and wish to make a large circle, one of the easiest things to do is take a good string, make a large knot and drive a pin through this knot of the string in the centre board or where about the centre of the circle shall be. Then take a pencil and tie the string to it at a distance from the centre to give the proper sized circle. This you will find easy. When the outside circle is marked, tie your pencil closer to the centre to give you the inner mark for the circle. The width of the circle frame should be about six inches. When the circle frame is outlined, the same should be cut out with a small keyhole saw and the several

pieces held together with small strips of wood and then covered with white felt or crepe paper.

A bunch of books tied on a strap should be suspended in this circle. The books and strap can be borrowed from a book seller and shouldn't cost the retailer anything. At each end, or if you can use only one end of the window, one or two large blackboards should be made. To make them proceed as follows: Make the frame of wood about one inch thick and, if you haven't the same and do not want to spend money on lumber, use wood from shoe cases. When your frame is made, nail on the back two thicknesses of white muslin stretched tightly in the frame. The same should be wet so that when drying the muslin will tighten and be smooth. When this is done give the muslin two coats of dull black paint, or cheaper still, use lampblack mixed with turpentine. The frame of the large slate should be left natural color and care should be taken that no paint or lampblack does not get on the frame. The easiest way would be to lay the slate flat on the floor, and when this is done your window is ready to put in. The other slates should be arranged as shown in the sketch, and two or more should be arranged to be high. This can be done by using two small strips of wood nailed on a flat board on the bottom for pedes-

BACKGROUND FOR SCHOOL CHILDREN'S SHOE WINDOW

tals. To fasten on the slate, nail a small strip the width of the slate on top and nail slate to this from each side. A few books can be borrowed from the dealer and placed standing in the window with shoes on top. Lots of school books will add to the display.

Use white crepe paper on the bottom of the window or white felt.

The cost will be if felt is used—

| | |
|--------------------------------------|--------|
| Felt for bottom, 2 yards at 75c..... | \$1.50 |
| 12 slates at 10c..... | 1.20 |
| 2 pencils at 1c..... | .02 |
| 2 sponges at 5c..... | .10 |
| Muslin, 4 yards at 10c..... | .40 |
| Lampblack and turpentine | .15 |

Total \$3.37

If crepe paper is used—

| | |
|---------------------------------|--------|
| 12 slates at 10c..... | \$1.20 |
| 4 rolls crepe paper at 10c..... | .40 |
| 4 yards muslin at 10c..... | .40 |
| Lampblack and Turpentine..... | .15 |
| 2 pencils at 1c..... | .02 |
| 2 sponges at 5c..... | .10 |

Total \$2.27

Proper Care of Shoes

It goes without saying that shoes given good care, will last much longer than if neglected.

In the first place, heat is the worst enemy of leather. It takes all the life from it so that it very soon cracks. Especially is this true of patent leather. Consequently, shoes should never be placed near a stove to dry. Incidentally, rubber overshoes should never be kept on longer than is necessary, because this, too, destroys the strength of leather. When shoes are damp they should be laid on their sides to dry, preferably in a draught.

Should they have been dried by a fire, and so become stiff the softness may be restored by rubbing in a good oil as castor.

To aid the wear of shoes pour boiled linseed oil into a pan and let the soles stand in it until they are thoroughly saturated. Take care the oil does not touch the uppers. Use neatsfoot oil for this. It will feed the leather and keep it pliable. Linseed oil dries very rapidly and has a tendency to harden leather, hence the reasons why it is good for soles but not for uppers. If the soles are given an occasional coat of hard, white copal varnish this will keep out damp and also add to the life of the shoes. Milk freshens leather, so it is a good plan to wash the shoes with milk say once a week.

Patent leather can be kept in good condition by sponging off all soil with warm water, afterwards applying sweet or olive oil with a cloth and rubbing in with the hands. Never use paste or liquid blacking on patent leather.

Kid, if rubbed with oil once a week, will neither crack nor harden. Should kid roughen and show purple the color can be restored by applying with a soft sponge a mixture of ink and the white of an egg.

The white kid uppers of shoes can be cleaned by rubbing with gasoline or benzine, using a little good white soap if thought necessary.

Leather can be made waterproof by coating it with many of the various fats. One of the best agents for the purpose is a mixture of equal parts of beeswax and mutton tallow. These should be melted and then be beaten into a soft paste with neatsfoot or castor oil. It should be applied while warm.

Rules in Fitting Shoes

Fit a foot at least two sizes longer than the foot measure shows the foot draws. Sometimes, for a lean, thin foot a half size more may be added, but never fit a foot shorter than two sizes longer than the foot draws when at ease.

If a foot shows a high arch, fit with a shoe having a high shank, and necessarily a high heel to give the proper arch.

If the arch of the foot does not show much curve, fit with a lower heel and arch.

If the toes of the foot are square, full, round and spread, fit with a wide toe shoe. The toes should be given a full house to live in. It is not always best to fit this kind of foot with a wide width, but the best results are had from fitting with a wide toe and ball.

If the toes are long and run out to a point, a narrower shoe is best. This kind of a foot can be fitted to a straight last very well.

See that the ball of the foot comes across the tread of the shoe. This is one of the best indications of the best size (length) to give.

The shoe should fit snugly to the inside of the foot at the shank. This is sometimes hard to secure, but is necessary to a comfortable fit.

The instep must be fitted so that there is not room enough for the foot to slip forward in the shoe. This is one of the faults with cheap shoes. It is almost impossible to get them with a narrow enough instep. If the foot is fitted snugly from the waist of the shoe back, allowing the toes plenty of room there is always sure to be a comfortable fit.

Originated Button Shoes

Button shoes are so common to-day that one may almost believe that shoes always were made with button fastenings. But the truth is that buttons are comparatively new. Latches were used for fastening both footwear and clothing for centuries. Buckles became common in England and in France four centuries or so ago. Shoes worn by early American colonists were commonly fastened with buckles. Early shoemakers of Lynn did not know about button shoes.

It appears that about a century ago, custom shoemakers began to make fine shoes, and to sew buttons on them. Some enterprising retailer gave to John B. Johnson, of Lynn, an order for a few cases of button shoes. That was a daring new style for a manufacturer to try. But Johnson made them, and they were a success, and since that time Lynn manufacturers have been making shoes with button fastenings.

Some of the older shoemen can remember when the button shoes were simply made. The button fly was reinforced with canvas, glued to the leather. The backing was supposed to make the fly so strong that the buttons would not tear it. A number of years passed before manufacturers learned to reinforce button holes by stitching around them.

At one time manufacturers sent out button shoes without any buttons. The retailers bought buttons by the gross, and sold them to customers, at so much a dozen. Customers took home the shoes and sewed on the buttons themselves.—Ex.

Louis J. Breithaupt, L. A. Breithaupt and J. E. Breithaupt, of the Breithaupt Leather Co., Berlin, Ont., were visitors at the Fair, with their Boston agent, Mr. Hungerford. All of them attended the convention of leather and findings dealers in New York, accompanying the large party which came on to visit the Fair at the close of the meetings.—Hide and Leather.

Can You Do Card Work Quickly and With Good Effect

Speed and Effect is the Cardwriter's Object Rather than Compass and Rule Accuracy—Shaded Letters Offer a Pleasing Variation to the Ordinary Black and White Cards—Should Be Used Sparingly, However.

By R. T. D. EDWARDS, with Robert Simpson Co., Limited, Toronto

The plates shown by many leading schools where show cardwriting is taught, give one the impression that work should be executed with the compass and square. The work seems so set and exact, if a cardwriter were to follow this method he would stand a poor chance of even making an ordinary man's wage. When a person starts in this line of work it is to ultimately secure higher wages than he already makes, so it is up to that individual to learn in the right direction.

The successful cardwriters of to-day are those who put the speed behind their work.

They work for effect, not that painstaking accuracy that is required by some methods. If it requires one hour

the free and easy show card style. It is done with one stroke of the brush and should always be applied to left and lower side of the letter. To shade on the other side of the letter is awkward and not practical. Keep the shadow about one eighth of an inch away from the letter.

It is advisable to keep a lot of different colors suitable for shading all ready mixed, so that no time will be lost in mixing them when they are required.

Some Explanations Given

Fig. 1 shows an upper and lower case alphabet which comes out strong when shaded. This form of letters can be used for larger or smaller cards, but cannot be made

for the execution of a half sheet by the slow method that would sell for about forty cents you might as well leave cardwriting alone. But the modern cardwriter who can put the same job through in ten or fifteen minutes is the man who can draw down good pay. The latter's card might not be just as accurate, but the effect will be as good and in most cases much better.

The lesson this month is the illustration of free hand shading. Work that can be done quickly with good effect.

Every cardwriter should know how to shade lettering. It often helps make a fancy card out of a plain black and white one with but a few minutes' extra work.

The Advantage of Shading

The shade is used to brighten a card up or bring a word or words out that need emphasizing. It should be used sparingly about the store so as not to have it become common. Shade should never be used on sale price cards, but can be used to good effect on banners, large cards, etc., announcing a sale. The shading on the alphabet shows

as rapidly as other alphabets recently shown in SHOE AND LEATHER. The numerals in Fig. 2 go well with the alphabet. The shadow should be used on cards not advertising goods at reduced prices.

Fig. 3 shows the shading on letters illustrated in this journal since the first of the year.

Fig. 4 shows four examples of fancy shading. Letters such as these can be used with good effect for illustrating caps.

All these letter formations go well with the alphabet illustrated.

The "R" is outlined with a pen in black and shows the use of thrippl shading. Three distinct shades of greys, browns or greens can be used with good effect in this manner. The "T" is made with a black outline with grey centre and two color shade outline.

The "D" is a solid grey letter with black outline with the use of two color shadow.

Many color combinations can be used on letters like this such as red, blue, or green center, black outline with

shade of a pastel nature, that will blend harmoniously with the body of the letter.

The "E" shows the heavy single shadow on an outline letter. Note the shade comes tight against the letter, while in most cases a narrow space of the card is left. The latter method is the most popular and more easily to execute.

Fig. 5 gives a fair example of that set method often taught. This is shown so you can avoid it.

Card "A" shows the use of the alphabet and the shade on a fancy air brush card. It must be remembered that all words on a card should not be shaded. Small lettering is better without it.

Card "B" shows the alphabet shaded. These were made with two sizes of round writing pen, a No. 2 and 5. The lettering was done like Roman lettering with the broad pen first and the spurs were put on afterwards with the smaller pen.

The silhouette was cut from a newspaper advertisement and pasted on a light grey paper.

Try Out Some of These Stunts

If you have been in business for a few years, few of the little trade winners that follow will be new to you, but recalling them may lead you to practise some of them again. And why shouldn't you? They are inexpensive, sure to succeed, and probably new to the people whose custom a dealer should always strive to secure—the rising generation.

Have you ever on Arbor Day given away little trees to children accompanied by their elders? Some dealers last spring distributed 5,000 in this way. As the tree grows up the children grow along with it, and recall the day you gave it them to help beautify the town.

What About Kiddies' Birthdays

Another way to make friends with the children is to get to know their birthdays and send them picture post cards with your greeting on them on that day, as well as on other festal days of the year.

You have a door in your store. Place on each and every door a small sign reading: "Have you forgotten anything?" Then take your stand near the door and watch the people read it and go back to make a purchase they have forgotten.

More Little Trade Getters

An illuminated window sign that is all the rage just now takes the form of a gramophone mouthpiece with a ground glass front, behind which is flashing an incandescent lamp connected with the electric light circuit. On the ground glass is painted in black some inscription, visible by day when the light is out, and sparkling in all the colors of the rainbow when lit in the evening.

Is your telephone service unlimited? Then place a table and chair in the telephone booth and invite your patrons to use the 'phone as often as they wish with your best wishes. They will use it, and you will profit by its being used.

If your store is near a car-stopping place, put a notice on your door inviting people to step inside from the heat and dust or from the wet. If you have room to provide a rest chair or two, travelers will vote you an even more obliging person and one whom they ought to deal with.

Whist parties are popular in some towns. Where such is the case, certain storekeepers have found it a good idea to give away cards with their advertisement on them. You bring your name in this way before a class of the community you might not otherwise reach.

Chalking on the Pavement

A form of advertising that can sometimes be made to produce results is chalking on the pavement itself. The

English suffragettes have exploited this publicity method to the limit, and perhaps it annoys as many people as it attracts. If you try this method, see that the lettering is effaced before people tire of looking at it.

Further advertising can be done on the sidewalk when the store is circulating any kind of printed matter, by putting a boy out there with a fancy cap and jacket with brass buttons on it, to hand the circulars to passers-by. The value of such work is increased about a hundred per cent. by having the uniform on the boy.

Bicycle racks with signs at the top are not uncommon outside advertisements, as are free bicycle pumps or pipes giving free air for bicycles.

Anything that will make the public stop and take notice while being told something about the store or its stock will be good advertising.

The Power of the Trade Press

By ELBERT HUBBARD

Business to-day is a struggle for existence. You can't hope to succeed unless you are right in line with the best that the world is doing and thinking. Any man who says, "This is good enough, let 'er go, who cares?" is putting the skids under his prospects.

The trade paper is pumping power into the business of every subscriber.

Just here I think a little expressed gratitude on the part of the subscriber towards the editor of the trade paper is not out of order.

If you find a good thing in your trade paper, just write to the old man and tell him so.

When your trade paper comes, open it before you do any other publication; it is more vital to you; it means more.

Take the wrapper off at once and read it from cover to cover, advertisements and all, for in the advertisements of trade papers you will also find a deal of concentrated wisdom.

The whole business is built up on brotherhood, and when you write the editor of your trade paper just remember this: that you are practically writing to yourself, for the man who reads your letter has your interests at heart, and he is going to protect you and benefit you in every way possible; otherwise, he could not possibly exist at all.

Not only do I advise a man to read his trade paper, but I suggest that he pay for it enthusiastically and promptly. The very fact that one has thus paid his subscription will help him to appreciate the publication.

So, all you subscribers to trade papers, just cultivate a little of that beautiful thing called gratitude, and while gratitude may be a lively sense of satisfaction on account of favors about to be received, yet the genuine article is a sense of gratitude for favors already rendered.

Out of every issue of your trade paper you should get at least one big idea. And this you should make note of. Write it out briefly and put it in a pigeon hole where you can put your hands on it. The very act of writing it will help fix it in your memory.

So it's all together all the time.

Co-operation is the keynote of success, and when you read and absorb your trade paper you co-operate with the ideas which help your business.

A good advertiser is never either a philophraster or a theologaster—he is a pragmatist. He seeks the good for himself, for his customers, and for the whole human race.

The science of advertising is the science of psychology. And psychology is the science of the human heart.

The advertiser works to supply a human want; and often he has to arouse the desire for his goods. He educates the trade or public to what it needs, and what it wants, and shows how and where to get it.

Establishing a Plant in Canada

The new Canadian Branch of the Panther Rubber Manufacturing Co., which is located in Sherbrooke, Que., is now in full operation. The output is being marketed through jobbers only from one end of Canada to the other, and is meeting with ready favor from the trade. For many years the Panther Rubber Mfg. Co. have sold their goods

CHAS. A. JOSLIN, SUPERINTENDENT PANTHER RUBBER CO.

in the Dominion, but so general has become the demand and so widely recognized the worth and wear of Panther trade rubber heels that the company, like many other large and progressive American concerns, decided it would be advisable to establish a Canadian plant, this has now been run-

ROBT. E. KATZ, SALESMANAGER PANTHER RUBBER CO.

ning for several weeks. The product of the company consists of Panther trade rubber heels and rubber soles, soling and mould goods.

The superintendent of the plant is Charles A. Joslin, who has been with the company for a number of years and

has an excellent record both from an executive and manufacturing standpoint. The sales manager is Robert E. Katz, who has of late been calling upon the Canadian wholesale shoe trade and meeting with a splendid welcome. Mr. Katz formerly represented the American company from Chicago to San Francisco, and is now on another trip throughout Canada, touching at all important points right out to Vancouver. Mr. Frank Bernstein is president and Mr. Wm. Bernstein, treasurer, of the parent company which has factories at Stoughton, Mass., and Trenton, N.J. Six salesmen are at present doing additional missionary work in Canada, adding to the present demand for their goods.

The Canadian factory of the Panther Rubber Co. is 200 feet long by 50 feet wide and is well lighted, the equip-

ment being driven by a 200 h.p. electric motor. There are four mills for grinding and also four heavy presses, while the packing, trimming and shipping department are complete in every respect. The firm believe that their output within a few weeks will be 50 gross of Panther trade rubber heels as well as 1,000 pairs of rubber soles. Panther rubber heels, which are made in all colors, represent the highest standard of quality and workmanship. Each year they have shown a gratifying increase in sales until now the lines are known not only in every centre across the border but in all the cities and towns of the Dominion. By establishing a well equipped factory at Sherbrooke the company is in a better position than ever to meet the requirements of the better position than ever to meet the requirements of the trade.

Will Not Increase Prices

In an interview this week, T. H. Rieder, vice-president and general manager of the Canadian Consolidated Rubber Company, Limited, in reply to a question as to the probable trend of prices in the immediate future for manufactured rubber goods, stated:

"While the price of crude rubber has practically doubled during the last few days, we have not yet advanced the price of anything we manufacture, and we hope that events will shape themselves so that we may stick as closely as possible to our present figures. Many of the articles we produce are absolute necessities. Take rubber footwear, for instance. All classes of our citizens are compelled to use this form of foot protection during the winter months in Canada, and it would be a hardship on many poor people if the price were arbitrarily doubled or advanced by us because of conditions that may only be temporary. You may rest assured that we are not seeking, and will not seek to lessen the buying power of the Canadian dollar. We believe in 'Service First.' Like honesty, it is the best policy, but we believe in it because it is also the safest policy in the long run, the safest for us and for our customers."

Do Not Allow Your Conceit to Cause Loss of Sales

No One Salesman Knows It All or Can Handle Every Customer—It is no Discredit to Turn a Difficult Patron Over to Another Clerk and Often Shows Mighty Good Judgment on Your Part—Some Live Wire Pointers

The rigid faced woman came into the shoe store looking for trouble, and started to find it at once. The salesman approached in a gentlemanly manner and asked if she desired any shoes. "What do you think I came in here for? A hat or a dress or perhaps carpets? It might be that you thought I came in to kill time with a twelve-dollar-a-week clerk."

"No," replied the self-poised salesman, "I did not think that. You know we always ask the customer if she wants shoes. You know she might be looking for a friend or just dropped in for some shoe repairing or something like that."

"Well, you clerks are long winded all right, but I want to see something in shoes."

So the salesman seated the customer and after some hard work got a shoe off. Now this is considered half the sale by clever salesmen, and the clerk was pleased with his efforts. But the sale was not anywhere near made and the salesman kept showing shoes and offering suggestions. Instead of accomplishing something he was getting the customer undecided. She had seen too many shoes and could not make up her mind. She was little short of ugly and the clerk had all he could do to manage her.

The proprietor was looking over the floor as was his habit. He noticed that the salesman was in difficulty and stopped him when he was going after another line of shoes.

"Hadn't you better turn her, Fred?" he asked.

But Fred was sure he could close the sale and hung on. Now Fred was a good average salesman and was fighting his way to the top.

The owner was not entirely satisfied that Fred could close, and he finally called him aside and told him to let another salesman try to please the lady.

So the proprietor walked over to the lady and said:

"I see that the young man serving you cannot locate the style you desire. If you will wait just a minute or two I shall have the best salesman in my employ fit you."

This seemed to please the customer and she willingly waited.

The second clerk approached with a rush, saying: "How do you do, madam."

He measured her foot, at the same time throwing aside all the former shoes shown. He asked briefly what style the customer desired. He then placed it on her foot in a business like manner. The shoe fit perfectly and the sale was made.

The proprietor then called Fred, the first salesman, to the rear and gave him a straight from the shoulder talk.

"Now look here," he remarked, "you have the wrong idea about selling shoes. You are a mighty good salesman, and we are going to make even a better man out of you. In this house we sell with team work. You sell a customer if you can. If you are having a hard time landing her, turn her over to another man at once. It's no discredit to you, and shows that you have mighty good judgment. We want to sell our shoes, and you do not need work for a record amount of sales. Take customers as they come in and wait on them conscientiously. Do not take any chances on losing them, but turn them over as soon as you find the sale is not coming along easily. If you follow this policy you will be a better salesman and make more money for yourself and the firm."

Fred saw the point, and he is now one of the top-notch men with the house.

* * *

WHY GEORGE'S TRADE WERE SLOW BUYERS

George was at a loss to understand why other clerks could sell the trade quickly and he had to show a dozen shoes, and then had a hard time selling his customer. At

HOW SOME SHOE WEARERS ARE STILL BEING VICTIMIZED

first he thought that the other boys were picking easy trade and he was having just an ordinary run of hard luck. But after three months he was running in just as hard luck and he concluded that he was not cut out for a shoe salesman. Not having any other position in sight he was forced to hold on to his present job. George was not a quitter, and "dug in" and worked as hard as ever.

The owner, of course, noticed that things were not coming George's way, but he liked the way he tried and decided to let him fight it out. The busy season was coming to a close and George knew that the firm could do without him, and he was thinking about how he could make himself solid. He had given up the idea about being a good salesman and instead, kept up his stock better than the other boys. But he realized that stock-keeping was not what he was being paid for, and that he was expected to sell a certain amount of footwear each day. So he thought out a plan that possibly might make a better salesman of him.

He closely watched the best clerk on the floor and asked him for pointers whenever he had the chance. Then he compared the methods of this top-notch salesman with his own. He noted the difference and decided to overcome the fault. It was no easy matter, but in the end he accomplished it. Now the other clerks have to measure up to him, and when he is asked to advise on what is the principal fault with young salesmen, he gives the one that he overcame—"don't talk too much."

* * *

SUGGESTIONS IN RETAIL FIELD

In no other part of the business game should the power of suggestion be more valuable than in the retail field. It is something that an ordinary clerk can study and become efficient in, and it will boost sales far above the line of ordinary effort. As a matter of fact, many customers whom you wait upon at your store are just unconsciously waiting for some suggestion which they can agree with, and if one knew how to properly give such a suggestion, there would be absolutely no question about the receptiveness of the customer's mind to your ideas. You surely would have made an impression on them.

Just think over your day's sales and recollect how many customers came to you who were undecided as to which shoe they would take. If you had sent out a suggestion properly framed, don't you believe that it would have helped a great deal? Take a little every day incident, for an example. How many salespersons remark: "Is that all today?" Certainly there is little suggestion in this remark. Would it not be better to say, "Have you plenty of shoe laces, polish, etc., for your vacation trip?" or "Could you use a pair of splendid low shoes for house wear if they were low priced?"

In either of these questions you have put a definite line of thought into action. Possibly the customer had entirely forgotten about being away from the stores and shoe-shining parlors at vacation time, and a bottle of shoe polish and a half dozen pairs of laces could easily have been sold right then. In the house shoe inquiry, your lady customer undoubtedly needed something of this sort, but had kept putting it off merely because there did not seem to be a favorable opportunity presenting itself to get them. Your suggestion paved the way to a further consideration of the matter just at that moment when she had the time, and when you had the shoes at the right price. Your suggestions on rubber shoes, gaiters, lamb's wool soles or any one of the hundred other seasonable novelties in your store would be as well received.

There is some sort of a suggestion that will be welcomed by each customer you wait upon, and the only difficult part of it all is to know just what that suggestion is that will appeal. This can be learned only by study of case after case. If you fail in your first effort, try another quickly before you have lost your vantage point. Now, aside from the

business side of this proposition, it is real genuine fun to know that you can influence a customer to purchase what you desire. How many persons have you heard say, "I don't know what made me buy that, because I have enough of them already." 'Twas the suggestion sure enough.

The great growth of the findings department has been due largely, if not almost entirely, to suggestion. Heretofore, one was content to wear cotton laces in his shoes simply because no one dared to suggest silk. People rarely used shoe trees, whereas now most persons have at least one pair of them. Buckles, foot powder, rubber heels, insoles and the like have had enormous sales purely through the power of suggestion. Now if it is possible to do this much, why not more right in your own store. Perhaps the greatest power of all, however, is that of auto-suggestion. By this we mean the power to influence one's self so that you will become convinced of your ability to handle all sales.

* * *

"STEALING" YOUR COMPETITOR'S CLERK

Not long ago a merchant complained bitterly because a competitor in the same town had stolen his best clerk. He did not do it openly, but made secret advance to the clerk and secured him at an advance of salary."

One cannot know all the particulars, but one imagines the first retailer did not lose much. If one man can steal that clerk another can. After a while he won't be worth "stealing."

One is inclined to think that there is not much justification in the charge that a certain dealer stole another man's clerk.

Assume that the clerk was a good one, a desirable one, else he would not have been stolen. On the surface this appears to be just a question of a clerk exercising his right to better his condition and his position. Undoubtedly he would not have left his first employer unless there had had held out to him a better post, presumably with more pay. If the clerk was a good one and worth retaining, one does not see that it was anybody's fault but that of the first merchant that he did not keep him by advancing his wages to equal or exceed those offered by the other man. If he did not appreciate the clerk to his full value he deserved to lose him. If he could not afford to pay the employe more than he was paying him at the time, he certainly cannot blame the fellow for leaving him for a more remunerative position. Shrewd business men do not look upon an employe as a mere chattel, the property of whatever individual, firm or corporation happens to be engaging him. If employers expect to keep competent help, to retain good, faithful employes in any capacity, they must expect to and generally do pay what the service of a salesman is actually worth.

Spring Season Opens Well

(Continued from page 25)

turn a couple of seasons ago; and for dress wear it has displaced all other leathers. In boots, patents are most conspicuous in vamps with whole cloth or brocaded quarters. The call for bals in men's will still continue, though of course, only in the higher grade lines.

What a Summary Shows

A general summary shows that as was stated earlier in this article, no startling changes will be noticed, but the changes are rather of a minor nature. The tendency in women's footwear for the past season or two, has been for a shorter vamp, and again the coming season, the short vamp will reign. Toes also have become more sensible, and the demand for Summer 1915 is pretty likely to be for a rather round toe, with a good call for the long, narrow

A tan calf is also seen with a medium high toe and 11/8 heel. Another men's shoe which will sell well is a dongola with a heavy slip sole, medium toe and 11/8 heel. Another strong shoe which will appeal to a certain class of trade is the men's dongola, whole fox bal London toe, 9/8 heel with dull calf top.

As regards general style tendencies, Mr. Thompson says he thinks the modified high toe shoe with medium high heel will be the strong seller again this season. Speaking of women's oxfords he said the firm had never in any previous season sold as many shoes of this type as were shipped this season and he looked for just as good or better business next year. Black cravanette tops for women, he went on, would go well and are growing in popularity every day. Heels for 1914 samples will be about the same as last season. White canvas goods, in both men's and women's lines, are well looked after in the firm's list of samples and a bumper business will be done next Summer in these lines. Women's

LONG RECEDING TOE, COLONIAL, WITH FANCY INSETS OF CLOTH IN QUARTERS & TONGUE, STEEL BUCKLE.

toe. Heels are a trifle higher and shanks about the same. This can be called a reliable general summary of the women's samples. In the men's lines, the medium toe, fairly wide shank and flat heel, characterizes the showings being made. Otherwise, changes are of a minor nature.

However, it can easily be seen that a marked improvement is shown, even over last season's samples. Finer examples of good shoemaking cannot be found in any country, and the finish, skill, grace and craftsmanship which are revealed in the offerings should satisfy the most fastidious.

Here are a few observations, and others will be presented in later editions, of the different manufacturers, giving their views and a summary of their new lines.

The Thompson Shoe Co., Montreal, have a very natty line of shoes for the Spring season. They are offering to their customers six new lasts, all women's. One of these is a one button Colonial with a sliding buckle which covers the button. It has a medium high toe, a 15/8 Cuban Louis heel, patent vamp and satin quarter. In the opinion of the Thompson Shoe Co., this will be a strong seller this season. Another smart shoe being shown by them has a medium recede toe with a 14/8 heel. This is made in buttons, and is sent out in cloth tops and all leathers. An oxford is also shown carrying a medium toe. One of the new samples is a velours calf lace, modified recede toe with a 7/8 flange heel. For the class of trade to which it will cater it is a winner.

shoes are being made on fuller and more comfortable lines than before.

Daoust, Lalonde & Co., Montreal, are offering to their customers a line which they state, is the finest they have ever turned out. They have added several new lasts in their men's Goodyear welt lines, one a recede toe on an English last, and the other a medium high toe shoe. Mr. Jos. Daoust says he believes that no startling changes will be seen during the coming season, and thinks that the Spring styles are as sensible as it is possible to make shoes.

Dupont & Frere, Maisonneuve, are of the opinion that no radical changes will be seen this coming season, and have a line very much similar to that which they showed last year, although several new lasts have been added. The medium toe shoe, will be the big seller in the Dupont line, but the recede toe will not sell very strongly. The company have a line of samples, which they feel, will be very pleasing to customers, and have particular confidence in their growing girls' last, on which they have received many compliments recently. They are also showing in their samples a number of lasts which are rather wide with round toes. Speaking further, a prominent member of the firm said to the writer. "We are at the present time installing new machinery for the manufacture of Goodyear welt shoes for men, and it is our intention this season to make a line of shoes to be sold at popular prices. Patent leather seems to be in great de-

NOVEL PUMP WITH DULL CALF FOREPART, BEADED VAMP AND CLOTH QUARTERS.

BUTTON BOOT, PATENT FOREPART, AND FOXING OVERLAY CRAVENETTE QUARTERS, CUBAN HEEL.

PATENT COLONIAL WITH BROCADE QUARTERS, AND FANCY THREE STRAP EFFECT ON FOREPART.

mand, and we also are getting an increased call for the different shades of tans."

The Eagle Shoe Company, Limited's new Spring 1915 line is very attractive and is sure to catch the eye of the trade at once. Their two brands of "Eagle" and Frank W. Slater "Strider" shoes are considerably augmented by three new recede toe lasts, and one modified high toe. Moreover, a new medium freak is also being shown. Some of these lasts show flange heels; in fact all heels range from one to one and a half inches, one to one and a quarter predominating. Blind eyelets are also prominent.

For women an entirely new line of women's turns are being placed on the market. This line includes buttons and bals with fancy tops of various fabrics. A strong line of mock welt edges are also being shown. Pumps, Colonials, Gabys, La Valiere and Cleopatra styles are well represented in the samples, which show both leather and wooden heels, the spool type in leather being quite prominent.

In women's welts a new full-fitting last of neat appearance is being shown, along with four other new lasts that are possessed of very neat lines. These come in both leathers and fabrics.

In the samples of the Cook-Fitzgerald Co., Limited, London, are seen some very neat combinations of leather and fabrics, along with oxfords, that are said to be entirely new to the Canadian trade. Several rubber soled shoes are shown, embracing samples of flexible leather-soled tan out-

ing footwear for men and boys, canvas, nubucks, and a real golf shoe which is expected to sell well.

Kid shoes for men will have a good call and several samples are shown along these lines, in both blacks and colors. Kangaroo is shown too, with a strong array of gunmetals and velours. Patents are fairly strong, and several shades in tans are seen amongst the samples, presenting an exceedingly neat appearance. Imported leather linings have made some of the oxford samples unusually attractive; one with white ivory soles, white welting and heels, being especially noticeable.

The medium high toe prevails in the company's showings. There is also a new moderate recede model, that is a good fitter and which has all the qualities demanded by the trade. Other lasts seen are a new roll toe which the company expect will prove a winner, and the "London" last that has the proper lines to make it a most popular line for those who can find comfort only in shoes that are straight.

The Cook-Fitzgerald Co. specialize in men's high grade welts, and state that in order to secure an attractive showing, one of their style experts made a special trip in June last to the leading American shoe centres, in order to gather ideas which have been incorporated in the new season's lines.

The McDermott Shoe Co. are showing five new lasts for Spring selling: two welts, one turn and two McKays. They are putting out a new welt for women with a cushion insole that is bound to be an excellent full-fitting last. This

PATENT LEATHER PUMP, MEDIUM RECEDE TOE, CUBAN-LOUIS HEEL—MCDERMOTT SHOE CO.

GUN METAL BAL, ROUND FULL TOE, LOW HEEL—BY CORBEIL, LIMITED

will be much superior to the already well known cushion turn they have been manufacturing previously.

The two new McKay lasts include colonials and pumps in bronze kid and patent, with satin or green cloth quarters, also in black ooze. These fabrics and leathers also are shown in their high-cut lines on these new McKay lasts. Heels come in the new spool style now so popular and des-

PATENT COLONIAL, KIDNEY HEEL, MEDIUM HIGH TOE
AND NEW SLIDING BUCKLE COVERING BUTTON,
BY THOMPSON SHOE CO., MONTREAL

igned to be the rage this season; also in the half-Louis style and the Cuban. In turns, the new last is very stylish and made in patent ooze, white and mahogany nubuck. The fast-selling colonial and pump lasts so popular last season will be continued in the various leathers. If it be possible to single out any line for most favorable comparison it would be the range of colonials, in which this firm has always specialized, and which has brought them much business and most favorable comments.

The Spring samples of the W. B. Hamilton Shoe Co., Toronto, are decidedly attractive and several new lasts are shown. In men's, there is a modified recede toe and an English receding toe last, as well as a new moderately high toe last. A number of bals, as well as bluchers, some having cloth tops are seen. Gunmetal and patents are the principal leathers, although there are a number of models in the darker shades of tan. The company are showing a sporting shoe, with chrome sole and electric elk upper, which is quite a novelty. Blind eyelets and low square heels are observed on several of the offerings. In the women's line are several new lasts, including one English toe and one modified high, plain toe. Some nice offerings are witnessed in Castle pumps and Colonials, made in patent leather, gunmetal, suede, etc. A very neat shoe is a button, with chocolate kid foxing, tan cloth top, and spool heel. A chocolate kid oxford, with tan calf collar is a novelty. The great majority, however, of the women's line, are on conservative

WOMEN'S PATENT LEATHER PUMP, CUBAN HEEL, MEDIUM HIGH TOE, BY THOMPSON SHOE CO., MONTREAL

lasts, with patent predominating in leathers. There are some cloth tops with Cuban heels and spool heels, and altogether the range is a very complete one.

La Parisienne Shoe Co., Limited, Montreal, have a line of women's shoes for the Spring and Summer of 1915 that

they feel will please every one of their customers, offering they say, the very latest in style, neatness and high class, with still more variety to their already large assortment. They have put in six new lasts, all of which should be good sellers during the coming season. One of these is an all-patent Colonial tie with turn sole, French Cuban 15/8 wood heel, a long vamp and narrow pointed, medium high toe. It should be a strong seller, as it presents as natty an appearance as one could wish for and the La Parisienne Co. are hoping for big things from it. Another new last which they are showing is a high cut, a patent, three-quarter fox woman's button with dull calf top. This shoe carries a 15/8 Cuban heel, a long vamp and narrow pointed toe. It is a Goodyear, and should lead in the sale of high cuts. Speaking on style tendencies, an official of the company stated that in his opinion, fancy brocades will sell strongly this season. A large call has been felt for the high French wood heel, even a little higher than last year. Tans, he said, were dead again this year in the women's lines. Continued popularity of pumps and Colonials is evidenced by the number of orders that have already come in for them. The selling staff of the company this season will be: Fred Hull, west of Toronto; Frank Power, in Eastern Ontario; W. C. Myers, in the West; Medard Gauthier, in Montreal and surrounding territory, and V. Lachambre in Quebec.

A Tanner's Circular

One of the large Canadian tanners issued a circular letter to the trade under date of August 8th, dealing with the situation brought about by the war. Among other things the circular stated that as the skins, from which high grade calf leathers were made, came from France, Austria, Germany and Russia, and these countries were now severed commercially from this continent, dependence must be placed on present stocks in Canada, which in most cases are less than normal. A reference was also made to the impossibility of doing business satisfactorily by letter of credit, which has been the system employed in business transactions between Canadian tanners and English and continental houses. Domestic skins in quantities are not to be expected before next April. This house withdrew all prices August 1.

Newsy Briefs From Quebec

The retail shoe business has been very quiet in Quebec, although cobblers have been exceptionally busy.

There are about two hundred men (employed with the different shoe manufacturers in Quebec), who are assuming military duties.

V. Coulombs, of Quebec, has installed a new motor power for cleaning shoes. The invention is of one of his own and is meeting with great success.

It is expected that the new building of Tourigny & Marois, Quebec, will be finished by the first of October. The first two flats are almost completed. One hundred men are working on the building all the time.

Prices in leather of all kinds are advancing from one to two cents a foot, owing to the tanners being unable to secure raw material. Many orders have been filled and are on their way, but steamers are temporarily blocked.

The annual picnic of John Ritchie & Co., Quebec, was held at St. Catherines on the 1st of August. There was a large attendance and many prizes were given by the following leather merchants: J. A. Scott, Dupere & Garant, E. A. Shea, Richard & Frere, Lucienne Borne and others.

SHOE NEWS IN PARAGRAPH

George Peoples has opened a shoe shop in Woodstock, N.B.

A. Woolf, shoe merchant, Calgary, suffered loss by fire recently.

The Ontario Bargain Shoe Store has been registered in Montreal.

M. Lipkin, shoemaker, of Winnipeg, has discontinued his business.

L. G. Lockett, of the Midland Shoe Co., Kingston, was in Montreal last week.

F. J. McKenna, shoe manufacturer, has recently been registered in Montreal.

L. P. Pelletier, shoe retailer, of Montreal, recently assigned to V. Lamarre.

H. D. Rae, shoe retailer, Vancouver, was in Toronto last week calling upon the trade.

Chas. Campbell, of the Boston Last Co., Richmond, Que., was in Montreal this week.

N. K. Cunningham, shoe dealer, of Liverpool, N.S., recently assigned to D. D. Chisholm.

C. A. Davies, of Blachford, Davies & Co., Toronto, was in Montreal on a business trip recently.

Harry Teplinsky, boots and shoes, Saskatoon, has assigned to Imperial Canadian Trust Company.

A new company recently registered in Montreal is that of Gardner & Nadeau, manufacturers of shoes.

Mr. Angus, of Ames-Holden-McCreedy, Limited, Montreal, spent a couple of days in Ottawa last week.

Bert Packard, of L. H. Packard & Co., Limited, Montreal, has returned from a business trip to Boston.

Harry Thompson of the Thompson Shoe Co., Montreal, is spending a few days in Toronto calling on the trade.

J. C. Moreau and family, who have been spending a holiday at Lake Rosseau, Muskoka, have returned to Toronto.

F. W. Knowlton, of the U.S.M. Co. of Canada, Montreal, was in Toronto and other Ontario centres last week.

J. A. Little, boot and shoe merchant, of Saskatoon, is considering the advisability of admitting a partner into his business.

E. L. Emerson, of the Boston Last Co., Boston, was a visitor last week to the Canadian factory of his firm at Richmond, Que.

George W. Cowan, Chatham, Ont., an enterprising shoe merchant, is conducting a "Shoe-Fly Sale" which is meeting with great success.

C. A. Brouillard, superintendent of No. 1 factory of Ames-Holden-McCreedy, Limited, Montreal, has resigned from his position with the company.

Dupont & Frere, Maisonneuve, are installing an entire new and full equipment of machinery for the manufacture of men's Goodyear welt shoes in their factory.

John Harris, A.C.I.S., Canadian manager of the "Nugget" Polish Co., Limited, has been elected a member of the Board of Trade for the city of Toronto.

G. J. Scott, Western Canada representative for P. Jacobi, shoe store supplies, Toronto, has returned after spending a pleasant holiday among the Muskoka Lakes.

Fire recently broke out in the boiler house of J. M. Humphrey & Company's shoe factory, St. John, N.B. The blaze was extinguished and practically no damage was done.

Gordon W. Scott, of P. S. Ross & Sons, Montreal, has been appointed curator to handle the affairs of the Meyers Shoe Co., Montreal. Up to the present there have been no new developments, but a meeting of creditors has been called

for the third week in August, when it is certain that some definite course of action will be decided upon.

Geo. Wymer has been appointed foreman of the making room of Ames-Holden-McCreedy, Limited, No. 2 factory, Montreal. He was formerly employed in an American factory.

Many friends of Mr. and Mrs. M. McPherson, of Brantford, will sympathize with them in the loss of their little son, who was only a few months old, and passed away recently.

The North British Rubber Co., Limited, of Toronto, has taken out a supplementary provincial license to conduct business in Ontario, and is authorized to invest a sum not exceeding \$100,000.

J. D. Palmer, President of the Hartt Boot and Shoe Co., Fredericton, N.B., and wife, have returned home after an extended visit to Winnipeg, Calgary, Vancouver and other Western cities.

H. Gibbins, formerly one of the Western Canada representatives of Getty & Scott, Limited, Galt, has been appointed manager of the footwear department of the John Murphy Co., Limited, Montreal, and has entered upon his new duties.

Oliver Eatough, managing director of Sir H. W. Trickett, Limited, of Waterfoot, England, who was to sail from

Mr. Burnham Takes New Position

Chester C. Burnham is a well known figure to both Canadian and American shoemen, owing to the prominent executive part he has always taken in connection with the various Shoe and Leather Fairs held in Boston during the past few years under the management of the Jacobsen Publishing Co., with whom he has been long connected. It has usually been accepted as a truism that whenever any boothholder at the Fair had any complaint, he could go to either

Mr. Burnham or his side-partner, Mr. W. D. Bennett, at whose hands the complainant would receive prompt and courteous attention. Mr. Burnham is also widely known in the shoe trade journal field in the United States because of his eleven years' journal work and his twelve years of earlier retail shoe store training. These qualifications will be very valuable to him in his new position, that of advertising manager of the large B. and R. Rubber Company at North Brookfield, Mass., and his many friends on both sides of the line will join in wishing him every success in his new work.

Liverpool on the Laconia on August 15th, has cancelled his trip on account of the war.

H. J. Cote, who left the employ of Ames-Holden-McCready, Limited, Montreal, some time ago, has been re-appointed to his old position as foreman of the lasting department in No. 2 factory.

The Provincial Exhibition which was to have been held at Halifax, has been called off. Among firms who held space were the United Shoe Machinery Co. of Canada, and Robt. Taylor & Co., of Halifax.

C. B. R. De Hart, who up to the present has been foreman of the Goodyear lasting department of No. 2 factory, Ames-Holden-McCready, Limited, Montreal, resigned from his position with the company last week.

Geo. Auger, shoe retailer, of Sherbrooke, Que., has installed a complete Goodyear shoe repair outfit in his establishment. He states that business has been away ahead of expectations since the new equipment has been in.

Geo. P. Lowe, of Ames-Holden-McCready, Limited, has resigned from the company. Mr. Lowe occupied a position in No. 1 factory of the company, and acted in several capacities, among them being that of cost book-keeper.

J. M. Peterman, of Montreal, formerly with the Thompson Shoe Co., and the Slater Shoe Co., has taken a position on the traveling staff of the W. B. Hamilton Shoe Co., Toronto, and will cover Manitoba, and part of Saskatchewan.

Mr. George Agnew, of the Agnew Shoe Stores, Brantford, is now somewhere on the continent, either in Belgium

or Germany. Some weeks ago, it was his intention to join a party of Canadians in England when they expected to tour the continent.

The annual picnic of the employes of the United Shoe Machinery Co., Montreal, was held Saturday, August 8th, at Otterburn Park, where a very enjoyable day was spent. An interesting programme of games was run off, and every event was keenly contested.

E. S. Many, agent of the United Shoe Machinery Co., has returned to Montreal from the Maritime Provinces, where he has been engaged installing a complete equipment of machinery for the manufacture of men's Goodyear welts in the factory of J. M. Humphrey & Co., of St. John, N.B.

In the last issue of the SHOE AND LEATHER JOURNAL in the inscription under the group portrait which appeared on page 41, the Canadian Consolidated Rubber Company's name appeared as The Canadian Consolidated Leather Company. The typographical error was, however, detected before many of the papers had been run and was corrected.

Two of the large Montreal shoe factories received orders this week from the Canadian Government for army shoes to be used by the militia during the war. The two firms filling out the orders are Ames-Holden-McCready, Limited, and the Tetrault Shoe Co., the former having received an order for over 40,000 pairs and the latter company for over 20,000 pairs.

E. F. Leonard, formerly superintendent of the Slater Shoe Co., Montreal, has accepted a position as superintendent of the Newfoundland Boot and Shoe Co., of St. Johns, Nfld. Mr. Leonard is very well impressed with shoe conditions in Newfoundland. Many readers of the SHOE AND LEATHER JOURNAL will remember him best as the writer of a recent series of articles in this paper on the different methods of shoe construction.

W. J. Lindsay, shoe merchant, 164 Dundas street, Toronto, has shown his interest in the present war happenings by placing among the boots and shoes in his window, colored prints of the most prominent English war lords. Among the three dozen of these which adorn the windows may be seen the pictures of Field Marshal Lord Roberts, Field Marshal Sir Donald Martin Stewart, Major Gen. Lord Kitchener, Lieut.-Gen. Sir H. E. Colirle, and Col. Robert S. S. Baden-Powell.

At the Canadian National Exhibition, Toronto, there will be an interesting exhibition of shoemaking in the Process Building, where the United Shoe Machinery Company will demonstrate the Goodyear welt process. The Minister, Myles Shoe Co., of Toronto, will supply the operators and all shoes will be made of A. R. Clarke's patent leather, the output being for the T. Eaton Co. The shoemaking operations have always proved a source of instruction and enlightenment to numerous visitors.

A. Davis & Son, Limited, tanners, Kingston, Ont., suffered a serious loss by fire recently. At the present time it is difficult to state just how great the loss is, probably between seventy-five and one hundred thousand dollars. The frame tannery known as "The Carrington Tannery" was entirely destroyed, together with the boiler room and Leach house. The new concrete buildings of fire proof construction, erected in 1909, stood the fire test admirably, leaving the company in a position to carry on business in those buildings in which their power connections are re-established and leather shipments are now being made. Steps are being taken to rebuild the boiler room and Leach house.

London will have an automobile tire factory employing a large number of men if the plans of E. Favary, of New York, and Dr. D. H. Arnott, of this city, and other well-known Londoners can be carried out successfully. Mr. Favary, of the Favary Tire Company, of New York, is in

SHOE TRAVELERS ON THE LAKE

Here is a jolly bunch of Western Canada shoe travelers on board the steamer Keewatin, bound from Fort William home. They met on the boat on their return trip and were snapped by E. J. Sullivan, manager of the Orpheum Theatre, Winnipeg. Standing at the rear, from left to right are—Robert Russell, representing Garside & White, Toronto, and

J. C. Moreau, of Toronto, Western Canada representative of the London Shoe Company. In front row, from left to right, are Robert Tobin, representing the Adams Shoe Co., Toronto, and Coates, Burns & Wanless, London; Reg. Wilson, representing Sterling Bros., London; Richard Foristal, of the London Shoe Co., and Fred. J. Lashbrook, of London, representing the Galt Shoe Manufacturing Co., of Galt.

London and several vacant factory buildings are being considered for temporary premises. The Favary Tire Company recently erected a factory in New York and has large orders to complete which render early increase in equipment advisable. A considerable sum of money will be subscribed locally for the Canadian company.

J. Harry Selz, president of Selz-Schwab Shoe Co., Chicago, says, "If the war lasts long the price of shoes will take an upward bound. There is no immediate danger but the fact that there is no leather surplus and the demand for millions of pairs of shoes after war begins will effect prices. Leather follows the price of wheat in war times. There will be hundreds of thousands of men involved in the struggle, and that means shoes. Sole leather will rise first and top leather will come next.

Frank W. Slater, who has for many years been connected with the Eagle Shoe Co., Montreal, as a member of the firm, recently severed his connection with the firm, and has accepted a position with Aird & Son, Montreal. His place with the Eagle Shoe Co. has been filled by the engagement of B. F. Morley, and J. A. Valary, formerly with the Thompson Shoe Co., Montreal. Mr. Morley will cover the territory in Ontario east of Toronto, while Mr. Valary will cover that district west of Toronto.

Frank W. McKeen, shoe manufacturer, Quebec, made a judicious assignment on August 3rd. Liabilities amount to over \$65,000, the chief creditors being the Bank of Nova Scotia, Quebec, \$33,500; and J. A. Scott, Quebec, \$14,000. The three leading leather houses are creditors for total of over \$10,000. Balance of the creditors are mostly supply houses and their accounts are for small amounts. Assets amount to something in the neighborhood of \$60,000, exclusive of the rights of the firm in their factory property. Larue and Trudel are provisional guardians in that a curator will be appointed on August 19th.

A two-storey frame building at the rear of 300 Yonge street, Toronto, occupied by the Adams Leather Goods Company, was totally destroyed by fire last week. The damage is estimated at \$10,000. The damage to the building will be \$2,000 and to the contents \$8,000. The loss in both cases is covered by insurance. The cause of the fire is unknown. The building, which is leased by the leather goods company from the William East Company, was used as a planing and saw mill and a leather findings sorting room. A large amount of wood used in the construction of trunks was in the building when the fire occurred.

"Why is your stock of Fleet Foot shoes like an expert acrobat?" asks the Canadian Consolidated Rubber Co., in their ad in this issue of the SHOE AND LEATHER JOURNAL. The company announce that any retailer or shoe clerk sending in the correct answer before September 1st will be entitled to a pair of women's new tango pumps, which will be presented, with the company's compliments, to any lady that the winner names. All replies must be addressed to the editor of Foot Prints, Post Office Box 330, Montreal. The correct answer and names of the successful competitors will appear in September 15th edition of the SHOE AND LEATHER JOURNAL.

The early closing by-law has gone into effect in Brantford, starting on August 1st, by the provisions of which all shoe merchants are required to close their doors at seven o'clock on each night of the week, ten o'clock on Saturday nights and nights previous to public holidays. It is also stipulated that footwear merchants can keep open ten days before Christmas. Among those who were instrumental in securing this progressive measure were M. McPherson, C. P. Coles, Frank Bauslaugh, of John Agnew, Limited, and Charles Ludlow. The maximum penalty for the violation of the by-law is a fine of \$50. All the shoe dealers are observ-

ing the new regulation and it is expected that everything will work out satisfactorily.

John Taylor has retired from the firm of Wm. Taylor & Co., Halifax, and the business has been turned into a joint stock company, with G. A. Taylor as president and R. N. Eckersley as secretary. The Taylor shoe store was established in 1879 and for many years has enjoyed a very large business; it is one of the most reliable shoe stores in the city and holds its customers against the hardest competition. The retirement of Mr. John Taylor, who is going in for apple orcharding, will involve no change in the store policy of the firm. George Taylor will continue to do the buying and have charge of the selling. Mr. Eckersley will succeed John Taylor in charge of the office.

John McCrudden has been appointed superintendent of the Perth Shoe Co., Perth, Ont., and has entered upon his new duties. Mr. McCrudden was formerly superintendent for the John Ritchie Co., Quebec, and was lately with the McKeen shoe factory in that city. He is a capable man and has had a thorough experience in the art. G. H. Ansley will look after the management of the office as well as the selling and business generally. He is widely known to the shoe trade, having been in the selling arena for many years. H. H. Lightford, for the past two years manager of the Perth Shoe Co., recently resigned. The company report that they are busy, working overtime on some days of the week.

Geo. Fortin, of the Scout Shoe factory, Montreal, has been appointed superintendent of the O. B. Shoe Co., of Drummondville, Que. Mr. Fortin has been for a long time connected with Jackson & Savage, owners of the Scout Shoe factory. The O. B. Shoe Co., which will be controlled

FORGING TO THE FRONT IN HIS LINE

Lewis W. Kiteley is a window dresser, a card and ticket writer in a popular shoe store in New Westminster, B.C. He has just returned to that city after spending some time in Toronto, Montreal, New York, Philadelphia and Baltimore, where he took in all that was of interest in his particular

line. Every year Mr. Kiteley visits the leading cities and picks up all pointers and suggestions that it is possible to do. Previous to coming east this season, he also visited Seattle, Spokane, Moose Jaw and Winnipeg. He was for a number of years on the staff of the Yale Shoe Store, Winnipeg.

by the same interests as formerly, have re-built a fine new factory on the site of the old one which was burnt down some time ago, and within a very short time will be in full operation, as the installation of machinery in the new factory has been completed and all is now in readiness for a busy season. The new building will have practically the same capacity as the former plant. Mr. Fortin has been replaced in the Scout Shoe Co. by Mr. G. Hatch, formerly with Robt. Taylor & Co., Halifax.

In reference to the enquiry received from the British War Office regarding the possibility of Canada supplying the army with boots, D. Lorne McGibbon, President of Ames-Holden-McCready, Limited, Montreal, replied by cable that the capacity of their factories was 15,000 pairs of shoes per day and that the company would have no difficulty in supplying large quantities of footwear for any purpose on short notice. Asked if there was any likelihood of business arising out of the operation of troops in Canada, Mr. McGibbon replied that it all depended upon the development in connection with the movement of troops. It was entirely a question of how many were called out. Boots and shoes would be used up very rapidly by men on the march, and the supply for Canadian troops would undoubtedly come from Canadian factories.

BETTER WEARING LIGHTERWEIGHT RUBBER SOLES

Sooner or later we must find a substitute for sole leather. This fact has been evident for some time and is being more strongly impressed on our minds by the frequent publication of government statistics which show conclusively that the

supply is not keeping pace with the consumption of leather in any reasonable degree. Ten years ago we became alarmed over the shortage of hides and the decrease in cattle kill. Prices went up, but many believed this was a temporary matter and that sooner or later prices would revert to their normal basis. But prices did not come back and leather, more especially sole leather, has been steadily advancing in price. Retailers are no longer certain that shoes bought to-day at a given price may be secured the following season at the same figure. In fact, they more often expect that the price will either be higher or the grade lower on the next season's shipment.

The fundamental reason for all of these increased prices is shortage in leather, and again we repeat, we must find a satisfactory substitute for leather. So far as the shoe business is concerned, rubber has proven quite the most adaptable as a substitute for the leather soles of shoes. It has had its drawbacks and the early history of the rubber sole industry is full of heart-rending failures and enormous losses. With all these troubles and in spite of the fact that the first productions were very crude affairs, the rubber soled shoe became an accepted article of shoe wearing apparel. In the face of numerous drawbacks, it has continued to increase in popularity ever since its introduction. Rubber is certainly waterproof and this is a most essential feature of shoe soling. It is flexible, it works well in the factory and properly compounded, it has many excellent qualities and not only equals leather but in many ways becomes its superior.

There is a rubber sole now on the market which is exceptionally light, in fact so light that it will almost float in water. The writer did not fully appreciate how light this sole was until he took a pair of them in one hand and a pair of ordinary rubber soles of average quality in the other. By actual weight it was later proved that the heavier pair weighed seventeen ounces while the lighter pair of the same size, iron, and style weighed ten and one-fifth ounces. Ordinarily lightness in shoe soling indicates limited wear, but in this particular sole it is guaranteed to wear as long as any other rubber sole made. It is also guaranteed to be lighter than leather and the above figures will show that it is from twenty-five to fifty per cent. lighter than the ordinary rubber sole.

There is little doubt, but that in time such a rubber sole as this will find a permanent use on every day foot-wear. Retailers will be very glad to secure a guaranteed rubber sole, having definite wearing qualities, possessing lightness and being guaranteed against breaking out at the stitching or stubbing out at the toe. It is understood that the manufacturers of this sole offer a very strong guarantee to the manufacturer who is in turn instructed to guarantee the sole to the retailer.

These soles work exceptionally well in the factory as they are very flexible and conform very easily to the sole laying process. They stand the stitching well and they are proof against a number of the ordinary manufacturing evils which are generally attributed to rubber soles. The manufacturers, who have had trouble with the rubber sole output during the past season will do well to look into this proposition and the SHOE AND LEATHER JOURNAL will be very glad to supply further details upon request.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Our Travelers Are On Their Way to You With
 the Best Line of

“EAGLE” and Frank W. Slater “STRIDER” Shoes

We Have Ever Placed Before the Trade

For Men— Besides our usual range of strong sellers, we are showing for Spring a new medium freak toe with 1 to 1½ in. heels; also a new full-fitting last with decided character. The men’s shoe illustrated speaks for itself. Also two other new Recede Toe lines and one new modified high toe.

For Women— We are placing on the market this season a brand new line of Women’s TURNS *that are unbeatable.* Need we say more than that these Turns will be the equal *in every way* of our Men’s lines?

The line includes Mock Welt and thin edges, button boots with fancy tops, Pumps, Colonials, Gabys, La Valiere and Cleopatra styles, with both leather and wooden heels.

In *Women’s Welts* we are showing a new full-fitting last and four other new lasts that are sure to be very strong sellers, as they are up-to date *in every particular.*

TORONTO **MONTREAL**

**NO DIAMOND
TRADE MARK
NO FAST COLOR**

**NO DIAMOND  TRADE MARK
No Fast Color**

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

Getty & Scott, Limited

*Manufacturers of
Misses' and Children's Shoes*

Galt, Ont. August 19th, 1914

To the Shoe Trade of Canada:

Gentlemen:

Our samples for Spring 1915 are now complete and will be in the hands of our traveling representatives in a few days. We feel that we can submit them with greater confidence than ever before as they show in workmanship, style and quality and in that indefinable something we call character and class, a greater step forward than we have ever before been able to accomplish in a single season.

But while from this standpoint we look forward to the future with confidence there is another aspect of the trade situation that is not so satisfactory. At this season of the year it is the custom of shoe manufacturers to place contracts for their leather and supplies to cover the requirements of the spring run. Owing to the outbreak of war in Europe, which came with such suddenness, tanners maintain that it is impossible for them to make contracts covering such a long period. Their claim is that the future is too uncertain. Large quantities of hides, skins and tanning materials are imported and if the present abnormal condition continues, much higher prices will undoubtedly prevail. It has always been the policy of this firm to supply our customers with goods at the lowest possible cost. In the present situation we have been fortunate. We have a considerable stock of sole and upper leather on hand. We also closed some contracts. While our stock lasts our prices will be the same as last season, but later it may be necessary to withdraw same and send out a new list. We trust that this will not be necessary and that an end may speedily come to the unfortunate condition existing at the present time.

This is the situation, as we see it, that confronts the shoe trade today. The immediate future is unsettled and uncertain, but to the more distant future we look with every confidence as from the present struggle the British Empire will emerge with an even greater prestige and influence for good among the Nations than she has hitherto enjoyed and Canada will go on with her work of nation building more resolute, and confident of the future than ever before.

We are,

Yours truly,

GETTY & SCOTT, LIMITED.

Why You Should Order “Leader” Brand Shoes for Spring Selling—

Because our samples for Spring contain not only a number of lasts and styles which have **proven** splendid sellers in the past but also **fifteen** new lasts which are everyone “top-notchers.” In this range there are receding toes, medium toes, modified high toes, London toes and all the other popular toe lasts.

The best of leathers and other raw materials **plus** expert workmanship, **plus** the most careful supervision, has gone into these shoes and you won’t find a “shelf-warmer” in the lot.

Ask our traveller to show you the complete range — You’ll find everything you need therein.

LEATHER FINDINGS
79 Front St. E., TORONTO

LIGHT WEIGHT RUBBER SOLES

“ARMORTRED” RUBBER SOLES are better wearing and 25% to 50% lighter than other rubber soles.

Retailers, manufacturers and consumers have objected to ordinary rubber soles because they were excessively heavy.

There have been other objections made but this question of weight has been chief.

“ARMORTRED” RUBBER SOLES are light weight, wear and are both flexible and resilient. They do not crack or harden with age.

Sooner or later we must find a substitute for sole leather. We are not producing enough now to supply the demand.

are a desirable substitute and are not only equal to but much superior in many ways. They are waterproof and form an admirable soling for all sorts of shoes.

Ask the Salesmen about “Armortred”
Rubber Soles

RUBBER CO. IS AGAINST WAR PRICES

T. H. Nieder, vice-president and gen-
eral manager of the Canadian Conso-
lidated Rubber Co., Limited, in reply to
a question as to the probable trend of
prices in the immediate future, for
manufactured rubber goods, stated:

"While the price of crude rubber has
practically doubled during the last few
days, we have not yet advanced the
price of anything we manufacture, and
we hope that events will shape them-
selves so that we may stick as closely
as possible to our present figures.

"Of course, while the Canadian Con-
solidated Rubber Co. is in business to
make as much money as it legitimately
can, we also feel that we are in exist-
ence to serve the Canadian public to
the best of our ability.

"Generally speaking, we are not in
sympathy with a trading policy where-
by a merchant or manufacturer takes
advantage of an international calamity
in order to line his own pockets. Such
conduct is not only grossly selfish, but
decidedly unpatriotic.

"Many of the articles we produce are
absolute necessities. Take rubber foot-
wear, for instance. All classes of our
citizens are compelled to use this form
of foot protection during the winter
months in Canada, and it would be a
hardship on many poor people if the
price were arbitrarily doubled or ad-
vanced by us because of conditions
that may only be temporary.

"You may rest assured that we are
not seeking and will not seek to lessen
the buying power of the Canadian dol-
lar. We believe in 'service first.' Like
honesty, it is the best policy, but we
believe in it because it is also the
safest policy in the long run—the
safest for us and our customers.

The Tale of the Wise Woodman

ONCE a woodman was lost in the centre of a great forest. (Yes, it may have been the Black Forest). He was an old woodman who had been through the forest many times, so his experience was large, and the head on his shoulders was a good one that served him often before, and as well as the feet at the other extremity of his robust body.

He found that he was badly lost. Never had he been so much at sea on solid earth. At first he was scared. He was much distressed. But as he grew calmer he realized that he could not forever stand still in the centre of a forest.

Two things he could do. He could sit down, calmly consider the situation and lay out a plan of action that would likely bring him out of the forest. Then, his energy would enable him to progress in the execution of his plan, and his experience would light his way. Or he could lose his head. That is, he could run around in a circle, or sit around and wait for something to happen, or until someone else became lost and showed him what to do. Being a wise woodman, as aforesaid, he used his head; he planned; he acted; he used his experience. He got out of the woods.

What kind of a forester are you who read these lines? Are you a shoe retailer, a manufacturer or a tanner, standing still in the centre of a dark forest of uncertainty? Or are you thinking, planning, acting? Who would blame you if, at first, we were staggered by the situation which confronted us? No one. Truly, we were lost, badly lost. Maybe we were scared. But have we not had time to sit down and calmly consider the situation?

Two things we can do. We can wait for something to happen, or we can think and plan and act. When one waits for something to happen, the something is never satisfactory. When one plans and executes, results are invariably more pleasing.

Let us be wise woodmen. Confronted by an unusual condition like the present war, let us find a way out. We all realize the impossibilities of the situation. But men of resource and confidence and experience can do more than make the best of the possibilities. They are credited with these qualities because they have displayed them in times past. The exercise of them now will lead us all out of the woods in due time.

Making Shoes Waterproof

To make shoes waterproof is a subject which has engaged the attention of many men during the past hundred years, or probably as long as shoes have been worn. Should some process or some product be discovered which would effectively do this, it would not only be a great boon to humanity, but it would no doubt make the discoverer wealthy. An authority writing on this subject, says that there is no substance that will make boots or shoes absolutely waterproof. That is, for any length of time. As a rule, most waterproofing compounds contain animal fats, mineral oils, rosin, wax and solutions of India rubber. The writer has tried the following two and find they are very satisfactory.

One-half pound of mutton tallow.

Four ounces of beeswax.

Two ounces of rosin.

Melt all together, and apply hot with a small brush, rubbing it in well with the hands, particularly around soles and seams.

Rubber Solution.—Melt together four ounces of neat's-foot oil, four ounces of beeswax and two ounces of India

rubber until thoroughly blended. Warm the leather, and apply hot.

Live Firm Still Branching Out

Coming from "Old Scotia" some four years ago J. & G. Clark commenced a boot and shoemakers' business at 240 North Water street, Galt. From the very beginning they made it a part and portion of their business to execute only the finest of workmanship on the footwear of the Galt public. Fellow townsmen were early to appreciate this and as a natural result the firm was forced to open another branch at 4 Concession street. Success follows success, and as a result of continued and well merited patronage it soon became manifestly evident that a third branch would have to be opened to cope with the ever-increasing trade, and a third branch will be opened under the title of "The New Royal" shoe store at 184 Main street. Here Messrs. Clark will carry a complete stock of trunks, valises and high class boots and shoes. Mr. Clark, senior partner of the firm, boasts the proud record of having made boots for the British army and navy for ten years.

The Dealer's Dilemma

(With apologies to Hamlet)

To buy or not to buy; there's the perplexing problem;
Whether 'tis fatter for the pocket to endure
The freaks and fads of most outrageous styles,
And, by opposing, end them. To stock no more,
And, by this doubtful step, to say we stop

The headache and the many natural shocks
The foot is heir to; 'tis a commercial consummation
Devoutly to be wished. To know just what will sell,
To order, perchance to overbuy—ay, there's the rub;
For, in the midst of a heavy stock, what drafts may come
When we have still many of last season's styles upon our
shelves!

European War Creates Advance in Prices of Leathers

All Foreign Skins and Hides Shut Off—Tanning Chemicals and Extracts have Jumped Enormously in Quotations—Shoes Will Increase in Price to Meet Unforeseen Conditions—How Leading Tanners View the Outlook.

That the price of shoes will be increased from five to fifteen per cent. on account of the great scarcity of raw materials and higher leather prices brought about, to a large extent by the war condition of Europe, is the universal opinion of Canadian manufacturers and tanners.

It is felt that only by this means can the present tightness of the leather market be relieved, not alone in Canada, but in the United States as well.

There is no doubt but that manufacturers and tanners are facing a crisis of more or less importance, and, although some are inclined to be panicky, the general tone in the leather market, during the last few days has become a little more optimistic. Having survived their first shock, the leather men are now figuring out ways and means of supplying customers with as little interruption as possible.

However, much uncertainty is evidenced as to what the future will bring. Canadian tanners dependent on South American and European hides and skins, will, of course, have to be guided by conditions, and at present some claim they have enough stock on hand to keep running for some time. By the time this is exhausted, it is hoped that shipments may be resumed. All agree in the fact that no one knows what to expect, and the course of the war with its influences on imports and exports will be a large determining factor.

Salesmen Starting Out Late

Salesmen are starting out with spring samples much later than usual this year, and although a few of them are on the road now, the great majority will not go out before September 15th and many will hold off till October 1st. The reason for this is the uncertain feeling prevailing, and they are holding back, awaiting developments.

Shoe manufacturers have been more inclined to buy leather in anticipation of future advances, which tanners consider inevitable. Tanners, however, are not disposed to enter into contracts very far in advance of their output, not knowing what price they may have to pay for raw materials later on. Some firms, after carefully going over their available supplies of hides and tanning materials, have figured out they can continue with present supplies for a certain time and are willing to sell their output up to that period, but not beyond. In so doing they stipulate, however, that buyers must take the stock off their hands and take all they contract for at the price agreed upon—that is, the tanner does not want to carry the stock for them as in the past.

How Prices Have Soared

Naturally, prices in nearly all lines have soared. Some leathers can hardly be bought at any figure. One line which manufacturers are finding particular difficulty in securing is calf. Sole leather started out with an increase of 1 cent a pound, and some tanners jumped it up another cent a few days ago. Side leathers have taken a 2 cent per foot rise since the beginning of the war, and all the producers state that further advances all along the line can be looked for. In certain quarters, light domestic calfs can be purchased. It is next to impossible to secure heavy kids, but there is a certain supply of the lighter grades available.

The reason ascribed for the scarcity of leathers is, of course, the war. Although all tanners expected a shortage

this fall, even when they were not counting on the war, none, however, expected that conditions would assume the aspect which has been taken by the leather market the last few weeks.

Lack of Chemicals Handicaps

What is regarded by many as the most serious end of their troubles is the lack of chemicals used in the tanning of leather. Several tanners state that enormous prices are being asked for materials which practically come from the countries at present involved in the conflict. A strong advance of prices has been made in glycerine. England has stopped the export of chrome potash. Aniline dyes are almost impossible to procure, as is red arsenic, the whole supply of which comes from Austria. Chrome alum, which comes from Germany and Switzerland cannot be bought. Orders for these materials, which had been placed by Canadians were cancelled by the manufacturers, and the tanner is now, speaking figuratively, "up a tree." Leather buyers who are not close students of the domestic or foreign markets cannot, or will not believe that prices are as strong as they are. Tanners are victims of circumstances, as it were, and are compelled to pay about what is asked for raw materials, no matter how carefully they pick and choose.

The Worries of the Trade

A well known Montreal tanner, commenting on the situation said, "The leather market is certainly in a serious condition, and we hardly know where we are at these days. Our head buying man has just returned from the Boston market, where he reports prices are very firm. As far as we are concerned, we cannot see where it is all going to end, but are in hopes that a quick settlement of affairs will be effected in Europe. Our chief worry is in securing materials which we employ in tanning, that is glycerine, dyestuffs, etc., a very limited supply of which is held in this country and across the line. I must say, that if things do not improve soon, we shall have to close our tannery, or go back to the old fashion bark tanning methods, which are not at all satisfactory."

Another tanner remarked, "Many manufacturers consider the opinions and statements of the tanner the last few days as grossly exaggerating conditions, but there certainly is a serious state of affairs existing in the tanning world brought about largely by the war. Soles and sides have gone up 2 and 3 cents per pound or foot, and I believe that they will continue to advance. Raw materials, I find impossible to get without paying fabulous prices, and even if one is willing to pay the piper, there is a very limited supply of tanners' chemicals in the country. When these are gone, what are we going to do. This is the most serious end of the question which many leather buyers have not taken into consideration at all. The insurance risks have also gone up 10% or 15% on all the goods being imported. There is bound to be an increase in shoe prices in the very near future, as neither the tanner nor manufacturer can stand all the extra cost of making shoes under present conditions.

Buying for Present Needs Only

A canvas of the different Canadian shoe manufacturers, shows that most of them, while buying leather, are not going in for it very heavily, and are looking after present needs only, although some factories with an eye for the future, are loading up strongly.

Several leather shipments for Canadian firms have been seized by the French government for their own use among

them being an order of 30,000 skins bought and paid for by C. Galibert & Son, Montreal, and \$35,000 worth of skins belonging to the Collis Leather Co. of Aurora, Ont.

The Tetrault Shoe Manufacturing Co. of Montreal, have sent out the following letter to the trade:—"We are sending out samples at prices quoted, but will not be able to accept orders at these prices owing to the war. All kinds of leather have advanced in price, calf skins particularly. As calf skins come from France, Russia, Germany and Austria, whose ports are closed for the present, it would not be surprising to hear that there are none to be had at any price. C. Galibert & Son has 30,000 skins bought and paid for in France, and they received word that the French government has seized them for their own use. In addition to the advance in skins of all kinds, prices of everything pertaining to a shoe such as linings, thread, sheep skins and findings have taken a jump upwards. We are awaiting answers from the tanneries, and will be better able to write you regarding prices in a few days."

Only While Stocks Hold Out

Getty & Scott, Ltd., of Galt, in a letter to the shoe trade, say, in part:—"At this season of the year it is the custom of shoe manufacturers to place contracts for their leather and supplies, to cover the requirements of the spring run. Owing to the outbreak in Europe, which came with such suddenness, tanners maintain that it is impossible for them to make contracts covering such a long period. Their claim is that the future is too uncertain. Large quantities of hides, skins and tanning materials are imported and if the present abnormal conditions continue, much higher prices will undoubtedly prevail. It has always been the policy of this firm to supply their customers with goods at the lowest possible cost. In the present situation we have been fortunate. We have a considerable stock of sole and upper leather on hand. We also closed some contracts. While our stocks last our prices will be the same as last season, but later, it may be necessary to withdraw some and send out a new list. We trust that this will not be necessary and that the end may speedily come to the unfortunate conditions existing at the present time.

"This is the situation as we see it, which confronts the shoe trade to-day. The immediate future is unsettled and uncertain, but to the more distant future, we look with every confidence as from the present struggle, the British Empire will emerge with an even greater prestige and influence for good among the nations than she has hitherto enjoyed."

One Maker Says Dollar a Pair

Another letter that has caused much comment, and shows that the American shoe trade, as well as the Canadian, is feeling the strain, is that of Henry B. Endicott, president of the Endicott-Johnson Co., one of the largest shoe manufacturers in New England, addressed to the company's road salesmen, numbering more than 100. He outlines the policy to be adopted in the cancellation of orders and acceptance of new business, making the prediction that when the first effects of the European war have passed away the South will enter upon the greatest era of expansion it has ever known. Mr. Endicott also says that the increasing scarcity of hides will inevitably cause an advance in boot and shoe prices—possibly as much as a dollar per pair. This letter shows that the future of the shoe trade not alone in the south, but everywhere, should soon see better days.

We extract from his letter the following:

"I am in receipt of letters and telegrams from all over the country asking me what effect this tremendous upheaval will have upon the shoe and leather industry.

"Endicott, Johnson & Co. have been taxed to the utmost to supply the demands for shoes for the last three

years, but the shoe business of this country during that period has not been even normal. Notwithstanding this, there haven't been hides enough to supply the demand, therefore, hides have steadily and slowly increased in price.

Shipments of Foreign Hides Stopped

"This country takes hides from every market in the world. Probably the largest receipts of calfskins and fine kip skins are from Russia, Austria and the Balkan countries. Sixty per cent. of all the raw material used by the shoe and leather business comes from the countries where shipments will be stopped on account of the war. Consider what the effect will be upon an article of which there hasn't been enough to supply the demand from which more than half the supply is now arbitrarily taken away. No man can tell at what high price raw material will go to. We can get South American hides direct, but as we have already been having the big majority of the South American hides through London, and as the herds in South America are very badly depleted, this won't help to any extent. It is argued that a good many enterprises in this country will suffer and there will be more unemployed. I am willing to grant that some enterprises will suffer and for the time being possibly there will be more unemployed, but while some enterprises will suffer, others will demand more labor.

Big Cotton Demand Coming

"Some of our southern correspondents ask us to hold up on their orders on account of the condition of cotton. Foreign demand for cotton is non-existent at present, but in my judgment in a short time it will be in bigger demand than any other staple. The navies of England and France will open the sea to merchant vessels. It is foolish to say that we haven't transportation facilities. When did the opportunity ever offer for business that the American people didn't finally find a way to do it? What are all the idle merchant vessels of England going to do? They are going to sail to America just as soon as it is evident that the German fleet is to be kept near home, where it undoubtedly will be kept. The very men in the south who are to-day feeling so early the effects of the war will have a bigger expansion inside a few months than the South has ever seen.

Will Gladly Cancel Orders

"This is the gospel to preach to our customers. 'Endicott, Johnson & Co. not only do not wish to add to your burdens, but they want to be of service to you. Any man that says to you he is sorry that he has ordered goods, that it looks as though business would be dull, etc., and he would like to have us hold up on his orders for the present, say to him, 'We won't hold up on your order, but we will cancel your order, and when these conditions change, as they surely will, we will be glad to furnish you our shoes at the lowest market prices, values considered.'"

"We don't want a man to take a dollar's worth of our shoes if he doesn't wish to.

"If there is any man in the North, South or West that feels at all nervous or apprehensive, we gladly offer to cancel his orders, but under no conditions do we allow him to hold up his orders and await developments. On the other hand, while we are cancelling orders, we have many customers who are trying to take advantage of the fact that shoes are bound to be higher and place larger orders with us than ever before. Any signs of speculations which we see are immediately discouraged and stopped. We only accept future orders by leaving the prices open, prices to be determined at the time of shipment.

One Result: Higher Prices

"There can be only one result in the shoe business, and that is higher prices, and this doesn't mean five or ten

(Continued on page 37)

New Features of a High Class Western Shoe House

High Grade Footwear Dealt in Exclusively—Lettergrams and Express Used for Sorting—Splendid Stock Keeping and Sales Record—Several Hundred Dollars Spent Yearly for Electric Illuminations

The Ed. Stark Shoe Company, Limited, is one of the live shoe firms in Vancouver, and has installed several systems that should prove of great help in the management of any business. The company's store is located at 623 Hastings street west, and the accompanying illustration affords some idea of its attractiveness and splendid equipment. Edward Stark, superintendent and managing director of the company, started business for himself in 1900 in Sault Ste. Marie, Ont., featuring Twentieth Century Clothing, the Slater shoe and high grade men's furnishings. He did a successful trade there for four years and in 1904, opened an exclusive shoe emporium in Vancouver, where he has now been for ten years, in the footwear business. His store is 25 feet wide by 132 deep. The women's shoes are on the one side and men's on the other, and the children's and boys' department at the rear. The chairs run back to back, starting 12 feet from the door and extending about 85 feet down the centre. The company deals exclusively in high grade footwear—prices ranging from \$5.00 to \$16.00 for men's and women's, nearly all the leading Canadian and American manufacturers being represented on the shelves.

Two clearing sales of ten days' duration are held twice a year on February 15th and August 15th. The prices are cut on short and undesirable lines only. The store finds

that by not running sales continuously people respond liberally and a lot of regular ranges is disposed of at regular prices.

In buying the firm does not place heavily, but sorts often, making good use of lettergrams and express. The house possesses a good stock system, which readily shows where it is at as to lines and sizes. The store never breaks a price and is seldom asked to do so. The company does practically a cash business, conducting a repair department. It is found to be a great convenience, and practically pays its own way.

A record of the sales in different departments, and also a record of each salesman's sales is kept. These records show that the staff wait upon more women than men, but the volume of sales is about equal, as very few men's shoes are sold as low as \$5.00.

The Edward Stark Shoe Company turns over its stock on an average three and a third times yearly. Six thousand a year rent is paid for the store, which is situated in the very heart of the Pacific Coast City. The Edward Stark Shoe Co. also spends about \$700 a year in electrical illumination, believing that it is a good investment. The store has its own delivery for general parcels and a messenger service when unusually quick deliveries are needed.

INTERIOR VIEW OF EDWARD STARK SHOE COMPANY'S STORE, HASTINGS STREET WEST, VANCOUVER, B.C.

How Shoemen Can Make Effective Use of the Mail

An Introductory Letter to the Trade and Another to Inactive Customers—Value of Good Mailing List and Regular Follow-up System—Many Direct Returns Traced to Live Literature—Some Timely Suggestions.

Do you make use of the mails to extend your business, to secure new customers and to advertise new styles that you have on your shelves. If you do not tell the people something about your store, your goods, and your service, how do you expect these facts to become known.

All progressive retailers believe in some form of publicity. Certain shoemen regard newspaper advertising as productive of the best results. Others pin their faith to the premium plan or distribution of souvenirs, while others place confidence in leaflets and booklets, nicely worded and suitably illustrated. Some dealers rely exclusively on window displays of a superior character, and an inviting and imposing front, and other merchants declare that they give the value in the goods and do not require any other form of advertising, remarking that a satisfied customer is the most profitable form of publicity. All these methods and means are, no doubt, beneficial, but no one system should or can be adopted to the exclusion of all others.

Sending Missives by Post

There is still another way of keeping closely in touch with customers, both present and prospective, and that is by the way of personally addressed letters, either typewritten or printed, sent out direct to a well selected mailing list. Much has been said in the *SHOE AND LEATHER JOURNAL* on the advantage of having an up-to-date mailing list, how it can be secured and the manner in which it should be revised frequently. There is no avail in having a string of names antiquated or inaccurate. Initials must be correct, the spelling right and the street addresses reliable in every instance. Such a list may be secured by keeping the name and street address of each caller, by reference to the telephone book, city directory, or assessment rolls. All such names should be classified and revised at least every three months.

Make Test of Your List

In a recent article on the value of a good mailing list, an exchange advises retailers to send out matter occasionally with a two cent stamp, in order to verify the accuracy of their mailing list. Numerous dealers keep the name of every person who buys shoes, which record also includes the date of sale, the size and kind of shoe purchased, price, etc. This tabulation may be conveniently kept by means of a card index system, which can be installed at very small cost. True, it takes a little time to have this worth while data, but anything that serves as a convenience or an asset generally entails on the part of the possessor some expenditure of time, talent and money.

A mailing list that is exact and of respectable proportions is worth a great deal to any alert shoeman. Some merchants have form letters which they send out at certain periods of the year to all the persons on their mailing list. One form letter goes to prospects, another follows up dissatisfied customers, a third is despatched to people who have not made purchases for some little time, etc. Besides this there is a general follow up epistle which drives home certain truths, regarding the stock and service of the dealer.

A Sample Set of Letters

Subjoined are samples of some of these letters, which may be varied according to the taste or requirement of each shoecist, but they will serve as a guide to any business man who seeks to make effective use of the postal facilities to widen his trade and to create a busy centre of his store.

We are indebted to the J. & K. Shoe News of Cincinnati for the majority of the following form letters:—

To Prospects, Men or Women

Busytown, Aug. 20th, 1914.

Dear Madam:—

This fall we expect you to make your first purchase at our store.

We expect you to because it will be to your distinct advantage to do so. Your money will go a little farther here than elsewhere, and besides you will find our personal service absolutely unequalled.

We take an interest in your feet and are never satisfied until you are fully satisfied.

As to stock, in selecting the styles we would carry for the benefit of our trade here in Busytown and vicinity, we have had the choice of many factories in this country, and the styles we finally selected are, you may be sure, the smartest to be found. Everything that is new is here; everything that is here is new.

Drop in for an early look—we are expecting you.

Yours very truly,

PROGRESS & Co.

To the Possibly Dissatisfied

Busytown, Aug. 23rd, 1914.

Dear Madam:—

We have not had the pleasure of seeing you in our store for some time, and take the liberty of inquiring if the last pair of shoes that you bought here did not give satisfaction. Perhaps they did not fit properly or were not easy and comfortable; or they may have been faulty in regard to the service or manner of delivery.

If you have been neglected in any way will you be kind enough to inform us and afford us an opportunity to clear up or satisfactorily explain any misunderstanding or unintentional oversight on our part.

We assure you that we have always appreciated your trade and would like to know the real reason of your absence for so long a time. We gladly welcome frank criticism of our store and goods, and hope to merit a continuance of your esteemed custom.

We have just received our new fall lines and they are neater and smarter than ever. We have some special values which we would like to show you. We feel sure that you will be pleased with the styles, never so snappy and attractive as this season.

Permit us to thank you for the past patronage and to express the hope that we may be favored with a visit from you in the near future.

Very sincerely yours,

PROGRESS & Co.

To Inactive Customers

Busytown, Aug. 25, 1914.

Dear Madam:—

While it is some time since you gave us the pleasure of serving you, we feel sure you will be interested in knowing that our lines of fall boots have just arrived.

This year witnessed the inauguration of an improved personal service on our part. We want every woman who comes to our store to feel that the

entire establishment is equipped and intended for her individual satisfaction.

Our styles have been selected from hundreds of samples submitted, and this includes several lasts which we believe are just the thing for you.

Won't you come in and see these new styles? Try on a pair of the "Stellar" boots and note the difference "in comfort, style and fit." How soon may we have the pleasure of a call?

Yours very truly,
PROGRESS & Co.

A Follow-Up Epistle

Busytown, Sept. 1st, 1914.

Dear Sir,—

How about a pair of shoes that will wear—good, strong, sturdy shoes—shoes that are made of materials

that guarantee you plenty of service and satisfaction?

That's the kind of shoes we have—the greatest values in men's work boots that we have ever seen. The prices are \$2.50, \$3.00 and \$3.25 per pair. Lots of men in Busytown are wearing Progress' good stalwart work boots six days a week, and they will tell you that the values surpass any they have ever known.

You cannot do better than follow their example and if you wish to get one hundred cents' worth of value out of every dollar you spend for shoes, you can at least drop in for a look. You will not be urged to buy.

Yours very truly,
PROGRESS & Co.

How to Keep a Stock Entry Book. It's Value to You

Written Specially for the "Shoe and Leather Journal" by A. L. WRIGHT, Smith's Falls, Ont.

In preparing the following article the writer has for his object, not so much the laying down of certain rules as a guide to the putting in of the original stock, but the grouping and explanation of those which will be of the greatest importance in the proper sorting of the stock from week to week. The rules will readily and easily keep the dealer posted regarding what lines are proving ready sellers, as well as those that are sticking and require immediate attention to insure their moving.

As every progressive retailer has found through experience, it is on the smallest stock that he can reasonably get along with and supply his trade without losing sales that the most money is made, that the "bills payable" are lightest, that the worries are least, and the stock is kept freshest!

To the man about to start in the shoe business and contemplating the purchase of a stock I have this bit of advice to offer. Find some man who has an established shoe business and a complete stock "for sale." There are lots of such opportunities offered to-day, sometimes because the present owner has done well enough and is getting old, or a son out west desires the father to come out to him. Such a proposition has many points of value over the purchase of a stock direct from the wholesalers and the chances for success are more than doubled because of the already established trade and good will which has taken years to build up; also the invariably better quality of footwear found in

such a stock, in most cases bought from the factories, lines which experience has taught the present owners are what the people in his town or vicinity demand and you can look your customer squarely in the face when selling. This is something an honest man cannot do when handling some of the shoddy stuff offered by certain wholesalers to-day.

So, all things considered, especially when a stock of good honest shoes, together with an already established trade, can be purchased, usually at a rate on the dollar of original cost, it goes without saying the man with small capital would be far better off to invest his money in a shoe stock as above.

The next step in getting a stock in proper running shape is to open a Stock Entry Book, something that few shoe dealers ever bother with. They are, consequently, as a rule, at sea regarding the standing or condition of any certain line when called on to know off hand if they are out of or require, say, a women's pebble blucher to sell at \$1.75, or a boys' box kip to sell at \$2.00.

The "Stock Entry" book is a compass from which a business can be guided along the path to success, and yet does not need to be either elaborate or complicated. It should be opened with the original purchase of stock not entered as a lump sum, but the name of each line of shoes heading a separate page with an index at back for ready reference similar to the following:—

(1) Messrs. Lau Cref. Bluch. S.S. Stock no (545)

| Date | Cost | Sell | Part | Aug. | Sold | Pairs |
|--------------------------|------|------|--|------|--|-------|
| Aug 1 st 1914 | 2.80 | 4.00 | from Messrs. Blank & Co. | 20 | 7 th 1/7 1/8 1/8 ^c | 3 |
| | | | St. Valerian. Que. | | 8 1/5 ^c | 1 |
| | | | 7/5 ^c 7/6 7/6 2/7 2/7 1/8 1/8 ^c 4/9 4/9 ^c | | 11 th 1/6 1/8 | 2 |
| | | | | | 13 1/6 ^c 1/6 ^c 1/9 | 3 |
| | | | | | 14 th 1/8 ^c | 1 |
| | | | | | 15 th 1/10 | 1 |
| | | | | 20 | | |
| | | | | 11 | Weekly-Balance | 11 |
| " 15 th | 2.75 | 4.00 | from Messrs. John Ritchie Co. | 9 | | |
| | | | Quebec Que. | 15 | | |
| | | | 1/5 2/6 2/6 2/7 3/8 2/8 1/9 1/10 1/10 | 24 | | |

The dealer can understand that when counter check books are used the sales slip is filled in as follows, 545 Men's Tan Bluch. 1/7, \$4.00. The duplicate sales slips are kept on file and at the close of each day's business or next morning the entries are made in the stock book. This book if kept running according to the above outline will at all times show the dealer at a glance the standing of any line in the stock, and is of greatest value when placing orders. Simplicity should be the keynote of the arrangement of the stock.

What a Little System Will Do

It is wonderful to note how the application of a little system in the stock arrangement simplifies the whole appearance of it, makes possible quick handling and saves having to hunt and search the whole section over every time a pair of shoes is called for. The most simple and effective arrangement of stock the writer has come in touch with is that which classifies the different leathers and patterns (lace or button) beginning with the tans first, button lines always preceding lace, bals always before bluchers, beginning with the best \$6.00 tan calf button, then the \$5.00 tan button, then the \$4.00 tan button, and following that, the tan calf bal at \$5.00, and then the \$4.00 tan calf bal, followed by the \$6.00 tan calf blucher, the \$5.00 tan blucher, the \$4.00 tan blucher and right on down to the lowest price tan in the stock

Next follows the "patent" range, button, bal, and blucher, and like rotation from the best to the cheapest, followed by the gun metal range laid out in same arrangement, then the box calf, box kip, Dongolas, grains and splits.

Make a solemn resolution never to buy at haphazard because of friendship for a certain traveler. Break away from the customary placing of large orders ahead.

Remember, sorting your stock continually will keep it in splendid shape, will bring you in far smaller drafts, will give you far less if any surplus, or dead to stock to worry over and sell at a loss. Never go to a sample room without your "business compass," the Stock Entry Book. It is your sure guide. Never say three pairs of eights, when two will suffice, and now comes one of the chief values of the Stock Entry Book. It "prevents duplicating."

First Stop and Consider

How many dealers when in a sample room see a line at an attractive price and feel that it would make a "winner" for them to sell at a certain figure. So it would, and perhaps has a lot more snap and style than the line you have already in stock, but do you really need it? Most dealers would say yes, particularly as the line in stock is about two-thirds gone. Very well, look it up in the Stock Entry Book. Surprised eh, to find that of 20 pairs bought on April 15th, there are 16 pairs still in stock. So there is where your "business guide and compass" protects you and guards you from putting in duplicate lines.

Keep an Eye on "the Stickers"

Another important feature and one that will pay long dividends is the careful watching of the stock for "stickers," or, in other words, those lines which for some reason, perhaps too high price, badly bought, or not suited to your location, are not selling.

The time to cut these or adopt some plan to specially push them is at the first, while still in season. Keep hunting them out, getting them forward with special price tickets on them. It will surprise you to find how they will almost move themselves.

Do not be afraid to show lots of goods outside the store, particularly if catering to a country trade. Goods thus displayed will sell three times as quickly as hidden away in cartons on the shelf. Get familiar with the great value of a record like the stock entry book, and remember that system means simplicity and labor saved.

Team Work Tells in Shoe Store

"Selling shoes, to my mind," said a shoe merchant recently, "is altogether a matter of fitting. If I could always be sure of having a full assortment of widths I would have little trouble in selling shoes. Every clerk probably runs up against this same difficulty. Under these conditions, it's necessary to do some juggling and to give the customer the best fitting possible under the circumstances. This makes it hard sometimes to effect a sale. I make it a rule, however, never to tell the customer the size or the width I am putting on him or her unless I'm obliged to do so. Where ignorance is bliss, it's folly, in my opinion, to put them wise. It's up to the clerk to size up his customer and exercise his judgment as to the methods necessary in making a sale. Patience and perseverance are a big asset for any shoe clerk.

"Team work is necessary in a retail shoe store. If I, for instance, find I can't make the sale to a certain customer I turn him over to another clerk or to a member of the firm, rather than let him go out of the store. I know my limitations in that line and I don't hesitate to quit when I've gone to my limit.

"One evening recently I made three changes in this way, and in each instance the other clerks made the sale. They were jollyng me on this when one of the proprietors heard them. He gave them quite a call down, saying that the credit of these sales really belonged to me because I'd kept the customers in the store instead of letting them go elsewhere.

"One day I turned a very fussy lady over to the proprietor. He sold her a pair of shoes in a few minutes. He told me afterward that I could have made the sale as well as he. I replied perhaps I could and perhaps I couldn't. What was easy for him might be hard for me. My point was to make the sale, whether or not I got the credit for it.

"If clerks would do this generally I think it would be a good thing for the concern by whom they are employed. I don't think a clerk should be pig-headed on such matters. He'd be of more value to his employer by acknowledging his limitations and asking for assistance than by trying to work the sale single handed and thereby take the chance of losing a customer. I don't like to see a person go out of a store without buying. I don't intend that he shall, even if I'm obliged to call on every man in the store to help me make the sale."

Take Time to Fit Properly

A retail shoe salesman says: "Nine times out of ten the first shoe I put on a customer's foot will be the most satisfactory. I may try two or three others before the sale is made, but as a rule it is the first pair the customer takes."

Another shoe dealer made the remark that "any member of his sales force who had to reach for a fourth pair in fitting a customer was well laughed at by the rest of the staff."

In both cases the measuring stick is properly used as a starting point, and it pays to start right in selling shoes. It pays to take time to get exact measurements of size and width of a customer's foot and to get fixed in mind any of its peculiarities before making a dash for the shelves. The patience of the customer as well as his confidence rapidly oozes away when the salesman makes a series of failures in try-ons. The mistaken attempts at fitting take time, which is worth money anywhere in the world, and they muss up the store, clog the ledge (if you have one—some stores do not) and in every way are a handicap to the fast work needed in modern shoe selling.

All Canadian Firms Have Spring Samples Completed

The Subject of Special Interest Just Now is Prices—Retailers Would be Well Advised to Place Orders at Once—Some of the Attractive Offerings of the Trade—Many Improvements in Lines for Juveniles

The one theme of special interest, apart from the question as to what lines will sell, is the price at which footwear will be sold, during the coming road season. The war, coming unexpectedly, as it did, left everyone unprepared, and the manufacturer and retailer, it is felt, will both be forced to raise their prices almost immediately, in order to profitably engage in their line of business. The wholesale price tension is not lessening, but by the war, has been brought to a head, and further advances are both probable and possible within the very near future.

Do not blame the manufacturer. He is now facing a situation which he cannot overcome. He did not create the present state of affairs, but the matter has reached such an acute stage, that in order to protect himself so as he will not be forced to shut down, the producer must consider an increase on his goods. The retailer must make a proportionate advance in his selling price, or his balance will certainly be on the wrong side of the ledger.

In recent issues of the SHOE AND LEATHER JOURNAL we have presented a general outline of the leading style features of Canadian shoe manufacturers for spring and summer.

What's Doing in Children's Lines

However, no great mention was made of the styles in children's footwear. Time was, not very long ago, when

WOMAN'S PATENT COLONIAL, WITH INLAY OF WHITE KID IN QUARTERS AND TONGUE, SPOOL HEEL—BY LA PARISIENNE SHOE CO.

there was really no such a thing as style in juvenile footwear. But go into the sample room to-day, of a manufacturer of children's goods, and you will see as large a variety of samples ranged around as you will in a factory where the adult trade only is catered to.

As is the case with the samples of the grown-ups, no radical style changes are seen this season in children's footwear, but rather finer finish and workmanship than ever, and new lasts or rather a little larger variety than in 1913, are noticeable features of showings.

The nature shaped shoe is coming along strongly, and most Canadian manufacturers of children's footwear are putting in several new lasts along these lines. This model has proved a decided success in the girls' lines, and it is noticeable in the 1915 sample showings, that many lasts for boys, youths, and little gents are built along natural lines, carrying the square toe, some to a more marked degree than others. New lasts are also being shown in boys' shoes, carrying the medium toe such as arc seen in the men's lines. Heels in children's shoes are about the same as during the previous season. Some manufacturers are showing samples in the straight rubber soled and heeled shoe, but it is not

likely that they will prove any more popular during the coming summer season, than they did during the one just passed. A distinguishing feature for 1915 is the large call that manu-

WOMAN'S PATENT COLONIAL, CIRCULAR VAMP, BLACK CLOTH QUARTERS, CONCAVE HEEL—BY AMES-HOLDEN-McCREADY J

facturers expect for patents in children's footgear, and many such samples are being shown by the travelers who are already on the road, particularly in ankle strap, patent pumps, welts and heavy turned soles.

White buck, white kid and canvas will undoubtedly prove big sellers, and a strong demand can be expected for them. Many such samples are seen, containing some very pretty effects. Another feature of more or less interest is the two colored leathers being shown by certain factories, that is to say, a black shoe carrying a tan upper. The colors are not confined only to black and tan, many other hues such as red or chocolate being used to work out the combination. While this type of shoe, some samples of which are shown in men's and women's footwear, is not likely to prove very strong with the adult trade, there is no reason why many of them should not be worn among the children, who can wear this style of boot without it appearing too extreme, as it does when worn by adults. There will be a large call again for the light leathers, and the colored shoe, shown in practically all the better known colors, is, likely to have the same popular demand as ever with black, white, and chocolate dongola the favorites. A considerable demand has been evidenced this last season for cravenette and vesting tops in children's lines. Owing to the neat

GROWING GIRL'S NATURE LAST, WELT, LOW HEEL, MEDIUM TOE, BROCADE CLOTH TOP—BY MACFARLANE SHOE CO.

appearance a shoe of this kind makes, and again to the probable scarcity of leather, more of these than ever are being shown, and with an increase in the prices of this com-

modity, which is most likely, it can be seen that cloth tops are bound to have a liberal call next summer.

Cloth Tops Popular in All Lines

In fact, the cloth upper is certain of having a very large call in all lines during the 1915 season. Manufacturers are doing all in their power to interest the public in this shoe. They are advertising it extensively. Men, women and children can wear it, can get more for their money, and very often know that this shoe looks a whole lot better on them, than an all leather shoe does.

Fabrics will also be extensively worn in women's shoes this season. Not very many samples are seen in whipcords,

WOMAN'S PATENT BUTTON, MATT CALF TOP, MODIFIED FRENCH TOE, CONCAVE HEEL—BY MINISTER MYLES SHOE CO.

which were quite popular a year or so ago. Rather, this cloth has been replaced by brocades, a material that is being used extensively in the new styles. Most of the samples

WOMAN'S PATENT BUTTON, MATT CALF TOP, RECEDING TOE, CUBAN HEEL—BY LA PARISIENNE SHOE CO.

seen are plain effects, but there are also quite a few fancy flowered brocades. Another cloth material which is proving very popular, particularly in the men's lines, is vesting, both plain and fancy. A boot carrying an upper of neat vesting certainly does present a fine appearance, and there is every reason to believe that vesting-topped shoes will receive a large demand during the summer 1915 season.

Fancy Heels in Women's Lines

While the samples of most manufacturers are practically completed, travelers are slow in getting out on the road,

due to a large extent, to the uncertainty felt by the manufacturers as to prices. However, it can be seen that the war has not as yet had any effect on the new styles, as many state that the European situation will mean very plain, severe styles in the near future. Up to date, however, this has not come to pass, and women's styles can still be relied upon to please the feminine eye. More or less fancy heels are seen on many of the new lasts. The French heel is likely to prove popular, and a large number of new spool heels are also being shown. The kidney heel is also given a fair share of attention.

Pumps and Colonials Popular

A much better idea can be got now of samples, both in men's and women's lines, than was possible a month ago, when very few manufacturers had completed their sampling. It is surprising how pumps and colonials have been coming on and it can be safely stated that a larger number will be sold next season than ever before. There is no doubt at all that in a few cities and larger towns, the pump, or the colonial is going to remain the favorite shoe for summer wear. The chief reason of its popularity is that it is light, airy, and neat fitting, and such improvements have been made during the last few seasons, that lasts are now shaped so that this class of footgear does not slip at the heel, or gap at the side as it formerly did.

The toe, which will likely prove most popular with the average shopper, is the medium, or the moderate recede. Tops will be cut about $6\frac{1}{2}$ to $7\frac{1}{2}$ inches in height, and heels

WOMAN'S PATENT PUMP, MEDIUM RECEDE TOE, SPOOL HEEL—BY AIRD & SON.

range from 8-8 or one inch to 14-8, 15-8 and even to 16-8 heights in some cases. Patent leather, of course, will get the big run, although there will be a large demand for the dull calf finish and suedes will be called for in all the popular colors. Tans in women's, it might be said, in both low cuts and high cuts, will be dead, although some manufacturers are showing some neat lasts in women's dark mahogany tans, in pumps and high cut buttons.

Shoe ornaments on women's pumps and colonials this season will be plain and neat, although a greatly increased range will be offered to the feminine shopper, running from the plain bow or pompon effect to the most elaborate rhinestone, cut steel, and gilt designs. In fact, although neater and plainer, one may go as high in the cost as is desired.

Medium Ball Toe in Men's

As was stated before by the SHOE AND LEATHER JOURNAL, the medium high, round, ball toe seems to be the only change that could be called at all radical, and even this new feature does not alter the shape of the toe perceptibly. The general run of samples in men's footwear present, to use a popular expression, a "nifty" appearance, particularly the higher grade lines. A considerable number of bals are being shown carrying recede toes, with low heels, wide shanks,

PATENT LEATHER, MEDIUM HIGH ROUND TOE, SINGLE SOLE, FANCY VESTING TOP—BY RENA FOOTWEAR CO.

MEDIUM ROUND TOE, GUNMETAL BAL, ON "TRIPLE ENTENTE" LAST—BY TETRAULT SHOE MANUFACTURING COMPANY.

PATENT COLT, WHOLE FOXED BAL, MATT CALF TOP, LOW HEEL, ON RAGLAN LAST—BY SLATER SHOE CO.

and flat tread. While the moderate recede is fairly popular with a certain class of trade, there may not be any great number of extreme recedes sold, and the man in average circumstances will wear the medium toe, not too high, and not too low. Of course, in men's shoes, there are always a certain number of standard lasts that have a steady call from one season to the other, for instance, the straight English last, which seems to have a perpetual run. In low cuts for men, some button oxfords, in black and tan, are shown, and toes, heels, and finish generally resemble the high cut lines. Buttons will have a large call again during the coming season, and many manufacturers have anticipated a certain demand for the three or four button low cuts by carrying lines of them in their samples.

What Canadian Firms Are Showing

"La Duchesse" Shoe Co., Montreal, have completed their range of samples for the spring trade, and state that their line for the next season is a wide and varied one. They have a complete range of women's McKays, and have added several new lasts to their samples, embodying all the latest styles. One of these is a women's medium high toe with fairly high heel. This is a very neat shoe, and is on a last that is sure to take with the patrons of the firm. Another last, which they state should be a popular one, is their women's medium last with patent leather vamp, gunmetal top, coming in both button and lace. They also have a last carrying a rather long narrow toe with a medium high heel. An ankle strap pump is shown with a low heel and full toe. Altogether, an official of the company stated, they have a collection of samples, of which they are proud, and are sure that they will be able to more than satisfy their customers.

Dufresne & Locke, Montreal, say they have added several new lasts to their samples for next season, which they believe, will go to make a particularly nice set of samples. In their men's last, they have two models carrying the modified round toe effect, which is so popular. This shoe carries an inch to 9-8 heel. Another strong last for the coming season is a London toe shoe on a straight last with a 7-8 heel. In their women's lasts, they have made provisions for a strong call for the more popular run of lasts, and have several lasts showing long narrow toe and medium high heel. The ranges being made by the company are designed, all with an eye to comfort, without, of course, taking a whit away from the style of the shoe, and the 1915 lines can be called both stylish and comfortable. Several samples are being shown in men's shoes in dark mahogany tans, and a strong showing is also being made by the company in both cloth and cravenette tops. Quite a few bals

are being shown by the company, and the usual requisition is expected for the different leathers.

New Cushion Sole Shoe

The Tetrault Shoe Manufacturing Co., of Montreal, have installed a new cushion sole shoe in their line called "Dr. Carter's Cushion Sole" shoe. It is a custom last, and while built for comfort, still has a very stylish appearance. This shoe is turned out in dongola and kid leathers. The Tetrault Co. also have put in several new lasts, one of which is a medium recede toe shoe, with a medium, narrow toe, carrying a 7-8 heel. This certainly is a very natty boot, and it is regarded by the company as one of the best in their offering. It is sent out in mahogany tan, gunmetal, and patent; and it is confidently expected to be a big seller. Another last put in for the coming season is a medium round toe shoe. This is the type of last which represents the greatest change in 1915 styles. It carries a one inch heel, and is made in all leathers. The sample illustrated on this page of the SHOE AND LEATHER JOURNAL is gunmetal bal, whole fox, dull calf top, and is turned out in both button and lace. A line which should sell well is their straight modified toe, built along English lines with a full flange heel. Another neat last has a wide round toe, and fairly low heel. This shoe is a remarkably good fitter. The Tetrault Shoe Manufacturing Co. will be represented during the coming season in the Maritime Provinces by Frank W. Laskey, in Montreal and part of Eastern Quebec by Wilfrid Lessard, in Ottawa, Toronto and Western Ontario by Jas. Heffering, and from Port Arthur to Vancouver by Messrs. M. L. Savage and H. Foote.

New Lasts for the Boys

Jackson & Savage, Montreal, who specialize on boys' footwear, are the makers of the well known "Boy Scout" shoe. For the 1915 spring and summer season they are showing altogether, over half a dozen new lasts, of which they are particularly proud. One of the new lasts designed for men's high class trade is their "Princeton" last. This is a welt carrying a neat recede toe, fairly low heel, and is turned out in all leathers in button, bal and blucher. For the trade which it serves they feel it is just the thing. Another of their showings is the "Varsity" last, carrying a medium full toe and medium heel. This is a shoe for boys, and is designed for wear as well as for appearances. Another shoe for boys which the company are certain will take next season is their "Student" last. This line sells very strongly in Quebec Province, the Maritime Provinces and in the North West. This shoe carries a rather high toe and

fairly high heel. It is in every way comfortable, and is built along lines that have made Jackson & Savage shoes so popular. A youths' last has been installed with a nature shaped full toe and low heel. The firm have put in a line of oxfords, which type of footwear they believe will be popular next season. Altogether their range is, they feel, a much better one than ever before. A larger range has been installed, including the more medium priced shoes, and additions have been made to the high class offerings. Some lines of American shoes have also been added to the samples being taken out by the travelers. These last changes have been made in the jobbing department, in which it is expected a large business will be done in spring and summer footwear.

Nice Things for the Children

The Macfarlane Shoe Co. Limited, Montreal, report the biggest change they have ever made in any one season in their samples, having added seven new lasts, with patterns for each in all the popular styles now in demand. They have a new common sense last for matrons, on which they are making up cushion sole effects in boots and oxfords, and also in a fine light, flexible Goodyear welt boot and oxford. They also have a new infants' last in sizes from 3 to 7½ in a very square toe, specially designed for very high class trade, showing in turn ankle straps and plain toe boots. Their infants', child's and misses' last in a new round toe effect, is one of the snappiest ever shown to the Canadian trade, on which they are making both turns and Goodyear welts in all leathers. These are sent out in ankle straps and boots. Another last which the Macfarlane Co. say will take very well is a misses' pump last for turns, in which they are showing pumps and colonial ties, both with and without straps. This is a great fitter and is bound to sell strongly, as the misses demand the same styles nowadays as their elders wear. Still another line is their college girls' pump last carrying a low heel on which they are showing pumps and colonials without straps, and also the Mary Jane ankle strap which has been so popular this season. They believe colonials and pumps will again have the call for next season, and they are showing a full range in all leathers right through from infants' to college girls' lines. In boots, they state, the cravenette and vesting tops will be more popular than ever. As regards leathers, they believe patents will again have the lead with black and chocolate dongola a close second, while tan calf has almost completely disappeared. White shoes will again be popular, in both canvas and white

buck. Women's low heels are in such a big demand that they have paid special attention to this line and believe they have a range of lasts, patterns and heels which will be very interesting to their customers. The travelers of the Macfarlane Shoe Co. will all be in their respective territory by September 15th.

Strong Line of Colonials

Aird & Son, Registered, Montreal, have for the coming season five new lasts in their women's lines and one in their boys' and youths'. They have an especially strong line of pumps and colonials with all the latest buckles and ornaments, and they expect to do a very large trade during the spring season in low cuts. One of their new lasts is a woman's patent chrome, whole fox, pump turn with the latest spool heel, and half recede, long narrow toe and 15-8 heel. This is a very dainty appearing shoe. They have an extra large showing in all the cloth, brocade and vesting tops. Aird & Son make a specialty of neatly finished footwear and have brought out particularly nice lines in their heel effects. They believe that heels for the new season will be a little higher, and somewhat more fancy than heretofore. They also state that they are making a strong showing in patent leathers, which material they feel will have by far the largest call in 1915. They state also that they are in a position to turn out exceptionally nice stock, as they have got settled in their new factory and now have a complete equipment of the latest machinery, along with perfect factory facilities.

Large Range in Samples

The Rena Footwear Co. of Montreal, have put in half a dozen new lasts, making a larger change in the samples than they have ever done before. One of the new lasts being shown by this firm is a tan button oxford with a medium high round toe and heel. It is a very pretty last and should take with their trade. Another new one is their men's dongola kid, carrying a 11-8 heel, medium high toe on a wide last. This is turned out in all leathers. Still another of their new models is a man's black oxford with a medium toe, one inch heel and cloth upper. What the company expect will prove one of the strongest offerings, is a medium recede toe shoe on a fairly wide last with a wide shank, and a one-inch heel, shown in lace and button. Mr. E. D. Drolet has been appointed manager of this firm since the last style season, and on assuming his position he decided on several changes in the lasts being carried in the samples of the firm.

PLAZA GAITER BUTTON, PATENT FOREPART, CLOTH TOP, ON RITZ LAST, RECEDING TOE, SPOOL HEEL.

DONGOLA BUTTON, LOW HEEL, COMFORT LAST, WITH FLEXO-CUSHION INSOLE.

PATENT BUTTON, CLOTH TOP, RITZ EFFECT FRONT, DULL CALF FOXING, WITH JET ORNAMENT, ON REGENT LAST, CONCAVE HEEL.

(BY BLACHFORD SHOE MANUFACTURING COMPANY)

These have just been made, and with the offerings that the Rena Co. are now showing, an increase of business should be felt, although they state that they have been fairly busy during the past twelve months.

Some Natty Models for Spring

The Blachford Shoe Manufacturing Co. of Toronto have a very fine line of Spring samples, having installed three new lasts. One is the Ritz with receding toe, another has the stage effect, and there is a comfortable fitting last. Plain toes are strong and besides cloth tops there are a number in grey, taupe and fawn which are very pretty,

WOMAN'S GUNMETAL BUTTON BOOT, RECEDING TOE, BLACK CLOTH TOP—BY AMES-HOLDEN-McCREADY.

the plaza gaiter effect being seen on a number of models. The leading leather is patent and the offerings in both low and high cuts carry the Spanish, spool and modified spool heels. The Ritz effect on the forepart, with neat ornaments at the side on a number of high cuts, is very pleasing and neat. A patent, fourteen button shoe, whole foxed, with bronze kid top and Spanish heel is on the Paris last and decidedly smart. In Castle pumps the showing is right to the forefront with three select designs, all with patent foreparts, one having brocade quarters, another grey kid, and a third bronze cloth. In Ritz pumps there is an equally good showing, one with patent forepart and bronze kid quarters and bronze and brilliant ornament being a leader. An all grey kid button boot is another snappy offering. The firm have put in a comfort last and on it are making a woman's full fitting shoe with exo-cushion insole. The samples of the Blachford Shoe Mfg. Co. evidence style, workmanship and finish of a high degree in every model.

Some Artistic Revelations

The Minister-Myles Shoe Co., of Toronto, are again in evidence with a comprehensive range of men's and women's welts in all the fine revelations of spring styles. An over-gaiter button boot with patent forepart and moire silk quarters is something very dainty, having a plain receding toe and half Louis heel. A whole patent five-strap slipper with receding toe, half Louis heel and cut steel ornaments on each strap is a choice offering. A one-strap effect patent colonial, with suede quarters and half Louis heel is a natty shoe attracting attention. A patent leather button boot with matt calf top, circular foxing, Cuban heel, and the new modified French toe, as well as a fine range in Cleopatras, Castle and Gaby pumps, colonials and others with cloth and brocade quarters, ridge shanks, and a variety of pleasing ornaments are worthy of mention. In men's there is seen a golf shoe in willow calf with saddle strap, as well as several rubber sole models. A patent button boot with moderate toe,

plain and also with tip, and cloth top is decidedly select. There is also witnessed a nut brown bal for men with receding square effect toe. A full, round, plain toe patent button, with cloth top and low heel, including many other pleasing offerings, are commanding attention, all evidencing the acme of style, fit and finish.

A Fine Neat Range

The Relindo Shoe Co., Toronto, are showing for Fall a fine line of McKays and welts. They have put in several new lasts, one being a pointed receding toe. Eighty per cent. of the offerings are in patent leather and cloth toppings are seen on many samples. Plain toes are much in vogue, while the Louis and half-Louis heel as well as other modifications in pedestals are witnessed, along with the ridge shank and other features. The McKay line is exceptionally neat in airiness, grace and finished effect. In Cleopatras and Castle pumps there is a full range with neat ornaments, some leather filled, with silk brocade and cloth quarters. One low cut with patent forepart and tan buck quarters is particularly striking. All very fancy fabrics have been eliminated and the line is marked by plainness and simplicity. A few suedes are seen. One popular last is a short receding toe, while the stage last is to the forefront on a number of the models. Edges are close trim, and all shoes are cut about the same height as last year.

European War Creates Advance in Price

(Continued from page 28)

cents a pair, or any small advance. No man can tell what the advance may be. It is a sure possibility and I think a probability that shoes may be one dollar a pair higher; in fact, as far as I can see, I don't know why we should limit the price to a one dollar advance.

"Take the question of supply. Last week we were offered 7,600 hides. A year ago, the same week, we were probably offered 250,000 hides. We bought the 7,600 hides, are willing to buy all the good hides and calfskins offered us for cash at to-day's price, and still we only have offers for a twenty-fifth part as much as we had a year ago."

What Some Leather Men Say

The C. S. Hyman Co., London, report that they cannot see anything but very much higher prices for leather of all descriptions. Stocks of leather in the tanners' hands were never lighter than they are to-day, and various shipments of both hides and tanning materials have been stopped. The American market on hides is several cents higher, with every prospect of it still soaring. The company note a very much greater demand for leather in the United States, and, taking the situation as a whole, they would not be surprised to see an advance in leather and shoes of 25%.

The Breithaupt Leather Co., Ltd., of Berlin, say that the present war has certainly has a very marked effect on the leather generally, especially on all lines of hemlock, union sole and oak sole. Although prices in the United States were advanced a fortnight ago two cents on hemlock and union, and three cents on oak, the Breithaupt Leather Co. say they have only raised their prices one cent on hemlock and union and two cents on oak sole leather. It will, however, be necessary to add another cent, possibly more, to these prices, very shortly, owing to the inability of tanners to secure their hides from European and South American sources, as before. In many cases, hides cannot be obtained from these sources under any circumstances, and where they can be, there are exclusive rates of war insurance. There is also the uncertainty and high cost of sterling exchange, which makes it nearly impracticable to bring the hides in as before. New sources of supply will, therefore, likely be obtained, which means that tanners will be largely at the

mercy of the large American factories, who have already further advanced their extreme prices. Harness leather, both union and oak, has also jumped one cent, and further advances may be necessary. The prices of cut soles remain the same for the present, but even these may take an advance. The firm report that they will do their utmost to keep prices down to the lowest limit possible, and believe that other Canadian tanners are similarly disposed.

Cannot Obtain Dry Hides

The Anglo-Canadian Leather Co. report that the present war has no doubt stimulated buying of sole leather for consumption not only in Canada, but in United States as well, and prices have been advanced for all grades. They have not noticed any particular inquiry for shipment to England, but anticipate that the demand will come later as soon as affairs have become somewhat more settled as to finances. "It appears to us" say the firm, "that continuation of the war must result in increased demand for sole leather, the better grades in particular. Naturally at the present time business of all kinds is checked owing to the difficulty of settlement and the general financial conditions throughout the world as well as difficulty in forwarding of shipments for export. It is also exceedingly difficult, in fact practically impossible, to obtain supplies of hides in any quantity, most particularly dry hides."

Hoping for Re-opening Conditions

"Yes," remarked a member of Beardmore & Co., Toronto, "hides are scarce and going up to unheard of prices. This has made necessary the raising of prices about a cent all around for bottom stock although tap soles have not yet been increased. As to whether there will be another jump in sole leather we cannot say. Negotiations with South America were, for a time, shut off, owing to the war, and are again being opened up slowly. War insurance is five per cent. Then there has been an increase in freight of about twenty-five per cent. owing to the scarcity of bottoms in which to carry the shipments, and exchange has gone up forty per cent. or more on the sterling basis on which all arrangements are conducted. Prices, too, have ascended for raw hides and stocks in the hands of tanners are not heavy. The matter of war insurance alone is a big item and tanners will certainly have to get more for their leather. There is no disposition to unduly raise prices or take advantage of the situation but merely to protect ourselves in the added cost which we are put to. We do not think that anyone would seek to unwarrantably enhance quotations owing to the war, and the trade is doing its best under the circumstances, the like of which the world has never seen and may never see again."

Another prominent producer of bottom stock said:—"There has been an advance of one cent in sole leather and prices are liable to go higher, in my judgment. Since the war, South American dry hides have considerably advanced in price and wholesale jobbing quotations are now: No. 1 oak side, 35; crop, 40; back, 43; bend, 48; hemlock, No. 1 side, 33; crop, 38; back, 40; bend, 45. Speaking of the cause of the advance, he stated, that it had been largely brought about by the war. It might be asked, what effect hostilities would have upon a shipment of South American hides, but it must be remembered that most of the shipments were carried in European bottoms, which are not now available. Then, since the war, insurance has been practically prohibitive, and it has been impossible to effect a settlement except on a London basis of exchange, and these rates, as you know, have been exceptionally high.

Patent Leather Takes a Jump

All lines of leather have advanced since the outbreak of European hostilities and patent leather is no exception. A. R. Clarke & Co., Toronto, report that side leather has al-

ready advanced two cents. Contracts for patent colt now call for an increase of five cents, and so doubtful is the source of supply and so expensive all tanning materials, that the firm do not guarantee to protect any contractor at these figures in patent colt longer than March 1st next.

Reviewing the situation generally, a member of the firm said:—"Yes, we have obtained all our patent colt skins from Russia. These have generally been shipped from Riga through the Baltic Sea, and transhipped to Liban. This means that the patent colt supply is at present shut off, but we are seeking to have shipments made across Siberia and through the Panama canal. As to the success of this project, we cannot at present say, but we certainly will do our best to obtain supplies. The war has also been the cause of forcing up the prices for light hides, 45 pounds or less from which our side leather is made. We will now have to depend entirely on our domestic and Chicago extremes. We formerly secured a lot of Polish and Courland hides in Russia, and also obtained some extremes from South America. These avenues are now closed owing to the war—at least for the present.

"Another contributing cause to the high prices is that all chemical and tanning materials are practically shut off. Sodium and bichromate of potash, which we obtained from Germany, and all colors, extracts, log wood and dye stuffs, are no longer available from the former sources. We obtained Prussian blue, fat black, nigrescene and other colors abroad, and will have to look elsewhere for our supply. Chemicals and extracts have, in many instances, gone up 100% or more. However, we are not disposed to be unduly excited or worked up regarding the situation, and are doing our best to obtain skins in order to keep our plant going to capacity. We may add that we have declined many American orders at very gratifying prices and will protect our Canadian customers first, safeguarding their interests in every way."

Higher Quotations for Side Leather

In reference to side leather, the King Bros. Co., of Whitby, say that since the war trouble in Europe, hides have advanced, but not nearly so much as tanning materials, which in some instances have gone up 100%. As there will be no importation of hides to Europe for some time, if the war continues, there is no doubt but that hides will also go very much higher. The company have advanced their prices, but not enough to cover the advance in the cost of raw materials and cannot see anything for the near future, but much higher quotations for all kinds of leather.

A Voice from the East

Max Clement & Sons, tanners, Quebec, say that the present war has had the effect of raising the price of hides and raw material in their industry. They were buying almost all their hides in England and some in Courland, Russia. The firm add:—"Our shippers from these countries advise us that they have suspended all export for some time, so receiving no hides, leather will be scarce and prices high. The chemicals used in our factory come from Germany, and the price has been augmented from 25% up."

Calf Skin Stocks Below Normal

A leading calf skin tanner, speaking of "the international crisis" in a recent letter to the Canadian trade, says:—"Almost without warning the civilized nations are facing a crisis deemed by most men impossible. The strongest and best armed of the world's nations are at war. Commercially, there is an unprecedented break-down. The skins from which high grade calf leather is made all come from France, Austria, Germany and Russia. For the time being, these countries are all severed commercially from the American continent. Dependence must be placed on stock on hand, which in most cases, owing to the slow trade for many

months, is much less than normal. All foreign skins are imported under letter of credit, but owing to the tremendous upheaval in financial condition bills, maturing in London, England, recently, were quoted at unheard-of rates of exchange. Domestic skins in quantities at this season of the year are not to be had, nor before April next. We have been compelled to withdraw all prices. Your immediate requirements we will endeavor to fill so far as you entrust them to us at lowest prices possible, in view of existing conditions."

Big Victory for Allies Would Help

The Robson Leather Co., Oshawa, say: "As far as we are able to judge from the standpoint of our own business it has certainly been the cause of rapid rises in both hides, skins and finished leather. The outlook for future supply and demand is very uncertain. Raw material for upper leather purposes will, without doubt, be very scarce and dear until such times as we can again import European raw hides and skins, as it has been estimated that forty per cent. of upper leather raw material comes from foreign sources. From now on leather will sell at advanced prices, as tanners up to the present time have been very liberal in permitting their customers to cover their requirements for a reasonable length of time at old prices. Canadian shoe factories on the whole are carrying very low stocks of upper leather and, while we are not anticipating a very heavy run during the next season, there will, nevertheless, be a fair amount of trading in shoes and leather. If Britain is able to keep the Atlantic course clear so that shipping may again be resumed with the same freedom as previously, then we may see some orders come from across the water for both shoes and leather for army equipment and in that event prices would rule high. But who knows? It is all a 'guess' under existing conditions. A decided victory for the Allies would clear the atmosphere considerably and renew confidence."

Give Preference to Canadian Goods

The Retail Merchants' Association of Canada from the various provincial headquarters have sent out the following notice, which explains itself:

"For years past, millions of dollars worth of goods have been imported into Canada from the countries involved in the war. These importations have now been practically stopped, and may not be resumed for a very considerable period. The consequence is that the price on all imported goods has very materially increased, and will continue to increase in proportion to the excess of the demand upon the supply, and we shall not be surprised to see the supply completely exhausted within a very short time. This fact is creating some concern in the minds of the public, who seem to believe that the merchant is responsible for such an increase.

"We think it would be advisable for you to point out to your customers that in their purchase they should give preference to goods made in Canada, which would avoid paying such high prices, and would help to keep the Canadian factories busy, thereby giving employment to Canadians who, at this particular time, are so much in need of earning as much as possible.

"To encourage home industries is a good policy at all times, but should be acted upon at this trying period for self-preservation, and we strongly suggest that you co-operate with your customers in this matter, thereby doing your share in educating the public to this end, and by so doing, greatly oblige."

In a letter to the press, E. M. Trowern, of Toronto, secretary of the Association, says in part:—

"Under ordinary circumstances, and when peace reigns,

most merchants desire to buy the best goods in the cheapest markets—no matter where they are made—but we are not living to-day in Canada in ordinary circumstances, the circumstances are very extraordinary, for we find ourselves threatened by nations whom we considered our friends, but they have proven to be our enemies. They desire to slay us with the sword. In Canada we have been buying thousands of dollars' worth of German and Austrian goods; we have been handling them over our counters, recommending them to the public, and we find now that those whom we thought our friends 'have bitten the hand that gave them bread.'

"The question now is, 'Why should we feed the enemies who are attempting to slaughter the manhood of Canada?' The time has arrived when those of us who remain home to take care of our commerce must do some fighting, too; and the best way to do this, in my opinion, is to refuse to purchase goods manufactured by our enemies. There are some who may consider that this view of the subject is a very narrow one, and it may possibly be, if it was a question of debate, in which the entire world was one great brotherhood; but we are now dealing with actual conditions, and our enemies should be taught that we must fight for our trade as well as our lives. I am expecting at an early date that the Retail Merchants' Association of Canada will take this subject up vigorously and press it to a final issue, and with this expectation in view you can readily see that your excellent editorial must appeal to every loyal merchant in Canada as it appeals to me."

May Be Called to the Front

Lieut. Oscar Emile Gagnon, of the 80th Regiment of Nicolet, Quebec, is a son of Narcisse Gagnon, proprietor of Aird & Sons Registered, of Montreal. Lieutenant Gagnon is a shoeman himself, as he has been for over a year in the business conducted by his father. He is a thoroughly live young man and has, even in the short period in which he has been engaged in the footwear line, mastered it to a large extent, and is rapidly becoming as well known to

Canadian shoemen, as is his father. He is a strong military man, and takes a great interest in his own regiment. If the war continues, he expects to be called to the front, but in the meantime he is busy getting a fighting knowledge of footwear.

A. E. Marois, of Tourigny & Marois, was in Three Rivers, recently, on a business trip.

SHOE NEWS IN PARAGRAPH

Joseph Boivin, shoemaker, Quebec City, has assigned.
J. M. Scobie, shoemaker, of Roblin, Man., was burned out recently.

Imperial Hide Co. is a new company recently registered in Montreal.

The stock of H. Teplinsky, shoe dealer, Calgary, is being advertised for sale.

Wm. Segel, shoe dealer, 1146 Bloor street west, Toronto, has made an assignment.

A. W. Yager, manufacturer of shoe packs, Midland, Ont., passed away recently.

N. K. Saba has started in the shoe business at 472 Queen street west, Toronto.

Albert Gosselin, shoe dealer, of Black Lake, Que., has assigned to J. P. E. Gagnon.

Robt. Neill, shoe retailer, of Peterboro, Ont., was in Toronto last week on business.

The boot and shoe stock of the estate of Thompson & Elam, Moose Jaw, has been sold.

G. S. Wood & Co., Regina, dealers in shoes and harness, have dissolved partnership.

Adam Kuehner has opened a new shoe repair shop at 110 Wellington street, Berlin, Ont.

A. G. Moxley, British leather dealer of Boston, was in Montreal and Toronto recently.

E. L. Emerson, of the Boston Last Co., Boston, was in Montreal and Richmond recently.

A. Dussault, president of the Rena Footwear Co., Montreal, is in Quebec for a few days.

A. C. Lumsden is now covering British Columbia for the Williams Shoe, Limited, Brampton.

F. J. Hapgood, shoe dealer, of Niagara Falls, Ont., was in Toronto recently calling upon the trade.

G. J. Trudeau, Montreal, has returned from a trip to Boston and other American shoe centres.

The stock and fixtures of John Sailer, boots and shoes, Medicine Hat, have been advertised for sale.

In a serious fire which visited Trenton, Ont., recently, Alex. Russell, shoemaker, was burned out.

J. A. Matheson, Boston, manager of Beardmore & Co., was in Montreal and Toronto recently.

A branch store has been opened by the Brockton Shoe Co. at 54 St. Catherine street east, Montreal.

Mrs. J. Hood, dealer in boots and shoes and dry goods, Summerland, B.C., is reported to have sold out.

M. McPherson, of the Neill Shoe Store, Brantford, was in Toronto last week calling upon the trade.

The stock and fixtures in the boot and shoe store of F. G. Long, Gleichen, Alta., are advertised for sale.

Joseph Boivin, boot and shoe merchant, of Limoilou, P.Q., has assigned to Bedard & Belanger, Quebec.

C. J. Fitzgerald, of the Cook-Fitzgerald Co., London, spent a few days in Toronto last week on business.

The Rena Footwear Co., of Montreal, have added several new machinery parts to their factory equipment.

Thomas Connolly, of the John McPherson Co., Limited, Hamilton, was a recent visitor to the Boston leather market.

P. A. Doig, of Fisk Limited, Montreal, has returned from a trip to Boston, where he says leather prices are very firm.

Arthur Donald, representing A. F. Clapp & Co., Boston, Mass., sheepskin tanners, was in Toronto last week on business.

L. Ballard, late with Ames-Holden-McCready, Limited, Montreal, has taken a position with the Pingree Shoe Co.

of Detroit, having charge of the lasting and making departments.

W. E. Tait & Co., shoe dealers, Kamloops, have removed into a handsome new store, which is very nicely fitted up.

L. F. Jackson, of Toronto, is covering Quebec and the Maritime Provinces, for Brandon Shoe Co. of Brantford, exclusively.

A charter has been granted to the British Columbia Tanning Co., of South Vancouver, B.C. The capital stock is \$30,000.

The assets of the Meyers Shoe Co., Montreal, will be sold by Gordon W. Scott, curator. The stock is valued at \$16,782.80.

The Reject Shoe Company, 130 Wellington street west, Toronto, has started business dealing in samples and floor goods only.

U. Bouliane, vice-president of the Rena Footwear Co., Montreal, is spending a few days on a holiday trip to Baie de Chaleurs.

W. F. Tanner, Pictou, N.S., is representing the Blachford Shoe Manufacturing Company, Toronto, in the Maritime Provinces.

A. Cooper and T. Swartz, shoemakers, of St. Thomas, have dissolved partnership. The business will be continued by Mr. Cooper.

Walter Burnill, 75 Queen street east, Toronto, who has been spending his holidays at Jackson's Point, has returned to Toronto.

Bert Cota has taken a position with Ames-Holden-McCready, Limited, Montreal, as foreman of the welt and turn lasting departments.

C. E. McKeen Shoe Store Company, Limited, of Vancouver, has gone into voluntary liquidation. W. A. Short has been appointed liquidator.

Reg. J. Wilson, western representative for Sterling Bros., Limited, London, has left on an extended business trip to the Prairie Provinces.

K. E. Crosbie, of the H. H. Crosbie Co., shoe manufacturers, Hebron, N.S., was in Toronto last week on business and called upon the trade.

Several Government Inspectors are working overtime in Montreal shoe factories putting their approval stamp on every pair of army shoes turned out.

J. Howard Carkner, of J. Howard Carkner & Co., shoe retailers, 206 Sparks street, Ottawa, was on a purchasing trip in Brantford during the Old Boys' home week.

W. G. Fallen and J. Kuechler, Western Canada representatives of Getty & Scott, Limited, Galt, are now covering their respective territories with Spring samples.

F. C. Young, superintendent of the Alberta Shoe Manufacturing Co., Redcliffe, Alta., was recently on a buying trip to Chicago and other American shoe centres.

F. W. Johnston, of the Evans Detachable Rubber Heel Co., Toronto, is on an extended business trip to the West. He will visit all the important cities as far as the coast.

H. Litchfield, of Boston, who has been office manager for the Regal Shoe Co., Toronto, for some time past, has returned to Boston and has been succeeded by E. Paige.

John Palmer's tannery with a heavy stock of raw and manufactured goods, was totally destroyed by fire recently at Fredericton, N.B. Several other buildings were burned.

Ed. F. Leonard, who is now superintendent of the Newfoundland Boot and Shoe Mfg. Co., Limited, of St. Johns, Nfld., writes that they are making 600 pairs of shoes a day.

A number of eastern shoe manufacturers, who do business exclusively with the jobbers, have sent out notices withdrawing quotations on their various lines of footwear owing to the advancing prices for leather and the inability

to get covered for any definite length of time in the matter of supplies.

The Amherst Boot and Shoe Co., of Amherst, N.B., are supplying a pair of their military boots free to each person who is accepted from Cumberland for active service in this war.

A. E. Matheson, who was in business for some years in Prince Albert, has opened a new shoe store on Yates street, Victoria, which is known as the New American Bootery.

C. A. McKimm, formerly of Smith's Falls, Ont., has been appointed manager of the shoe department of the Two Macs, Limited, Ottawa, and has entered upon his new duties.

A clearing sale is being conducted by Ye Bootery Co., Limited, 310 Yonge street, Toronto, who some time ago made an assignment. The stock was sold at 53 1-2 cents on the dollar.

Percy Harris, who has been for some time a member of the staff of Ames-Holden-McCready, Limited, Toronto, as order clerk, has joined the Tenth Royal Grenadiers and has left for Valcartier.

Major Charles Cahill, publicity manager of the United Shoe Machinery Co., Boston, spent a few days in Toronto recently, and was one of the interested spectators at the big Fair.

The wedding took place in London on August 26th, of Miss Lulu Lillian, second daughter of Hubert Ashplant, shoe retailer of that city, to John D. Grant, of London, Ont. Mr. and Mrs. Grant will reside in Berlin.

James Lawther, one of the Ontario representatives of the Hartt Boot and Shoe Co., Fredericton, N.B., who has been spending some time at the factory in connection with his Spring samples, has returned to Toronto.

James T. Sutherland, of the Cook-Fitzgerald Co., London, has been spending the summer at his cottage on Amherst Island. Mr. Sutherland had rather good luck in fishing, and recently landed a nice eleven-pound pike.

Wm. Chamberlin, of Galt, and Stuart Anderson, of Kingston, representing Getty & Scott, of Galt, are at the King Edward, Toronto, with a full range of spring samples, the finest ever turned out by this enterprising firm.

E. E. McIntyre, who represents the Brandon Shoe Co., of Brantford, Ont., in Eastern Ontario, has returned to Toronto after spending several weeks in New York City. He will start out next week with a fine line of samples.

Daniel Wiley, superintendent of the Toronto warehouse of the Anglo-Canadian Leather Company, who has been spending the past few months at Hollow Lake in Northern Ontario, has regained his health and resumed his duties.

The Great Northern Tannery, Limited, of North Edmonton, has had plans drawn for a factory to be erected for them at a cost of \$20,000. The new building is three storeys high and equipped with every modern convenience.

J. P. McNamara, who formerly covered the larger towns of the Maritime Provinces for Jackson & Savage, Montreal, but who represented them in the West, will return this season to the larger towns in the Maritime Provinces.

The B. and R. Rubber Co., North Brookfield, Mass., has just issued a neat little folder, setting forth the merits of their "Armortred" rubber sole. This brochure is well worth reading and will be sent to any retailer or repair man on request.

Squires & Dickenson have opened a new shoe store at 103 King street east, Hamilton. This enterprising firm have also added a trunk and traveling bag department. Their business has grown very rapidly since they started in the original quarters at James and King William streets. The new shop is under the direction of Mr. Squires, while Mr.

Dickenson will be in charge of the original store on James street.

D. A. Gibson, shoe dealer, of Portage la Prairie, Man., is fitting up a handsome new shoe store, to which he will remove in the near future. Mr. Gibson is conducting a clearing sale, previous to taking up his abode in his new business home.

L. B. Hutchison, manager of the Toronto branch of the Kaufman Rubber Co., has returned after spending his holidays in Penetanguishene. T. J. Mullins, of the Kaufman Rubber Co., Toronto, has been holidaying in Lindsay and other points.

Lieut. R. Gordon Myles, of the Minister, Myles Shoe Co., who has been spending a few days in the eastern cities across the border, has returned to Toronto. Lieut. Myles is attached to the 9th Mississauga Horse and has volunteered for foreign service.

Among the contributors to the Toronto War Relief Fund which amounted to nearly \$900,000, were Beardmore & Co., who gave \$2,000; A. R. Clarke & Co.; Gutta Percha and Rubber Co.; Goodyear Tire and Rubber Co., all of whom donated a thousand dollars each.

D. Lorne McGibbon, president of Ames-Holden-McCready, Limited, Montreal, who is an Honorary Lieutenant-Colonel of the 6th Brigade Canadian Field Artillery, has made an offer to care for the families of all the men of the Brigade who are called to war.

T. W. Hart, of the Nugget Polish Co., Toronto, has returned from an extended business trip in the West. He had charge of the Nugget exhibits at the Calgary, Saskatoon and Edmonton fairs. H. W. Parsons has gone on a trip East and will supervise the Nugget booths at the St. John and Quebec Fairs.

The firm name of Garside & White, wholesale shoe dealers, 48 York street, Toronto, has been changed to the

SHOE FACTORY HAD FINE BOOTH

With the object of bringing their shoes right before the public in their home city and showing what a live local institution can produce, the Brandon Shoe Co., of Brantford, at the recent Made-in-Brantford Exhibition held in the Armouries

of that city, had a splendidly fitted up booth. It attracted a good deal of attention and was tastefully arranged. In the Guessing Contest as to the weight of a glass jar of eyelets, the winner guessed 19 pounds, 60 ounces. The correct weight was 19 pounds 5½ ounces, so it was a pretty close estimate.

White Shoe Co. William Garside retired about two years ago, since when the business has been conducted by Hugh White, who has been associated with the house many years and is widely known to the trade.

At a recent meeting of the Manufacturers' Committee of the Board of Trade, Fredericton, N.B., the offer of O. M. Hartt to invest ten thousand dollars in a shoe factory

READ YOUR TRADE PAPER.

Every shoe dealer, tanner and manufacturer should read his trade paper if he wishes to keep in touch with every branch of the business in which he is engaged. The trade paper serves a useful and specialized purpose in gathering reliable information from all quarters and placing it in concrete form before its readers. Its value in such a crisis as the present cannot be over-estimated, as it will enable every intelligent and progressive man to maintain his profits and keep business moving. The importance, function and service of a live journal are worthy of appreciation at all times, but never more so than during the present occasion when its helpfulness, and co-operative efforts on behalf of the trade render it an indispensable adjunct. There is much timely and beneficial information in every advertisement and article on styles, prices, merchandizing methods and trade tendencies.

was considered. The secretary was instructed to write to Mr. Hartt for particulars of the probable cost of constructing a factory and its earning capacity.

J. A. Johnston & Co., wholesale shoe dealers, of Brockville, Ont., having outgrown the business premises formerly occupied, are now installed in their own block on the corner of Buell and Church streets, which has been remodelled and adapted to the needs of this enterprising firm. The entire building is occupied by the business.

During the Canadian National Exhibition it has been usual for the Boot and Shoe Section of the Retail Merchants' Association of Ontario to hold their annual meeting but, owing to the war and the temporary disturbance to trade conditions, it has been deemed advisable to postpone the event until a later and more convenient date.

Conditions in Montreal shoe factories the last week or so have been rather quiet. In most places the travelers are still waiting to get started on their Spring trips, but are unable to do so on account of the general uncertainty as to what shoe prices are going to be. Those salesmen who have started selling state that retailers are backward about ordering.

St. Catharines ratepayers have carried by a large majority a by-law favoring the establishment of a Canadian branch of the Marathon Rubber Co., of Akron, Ohio. The by-law grants a gift of five acres and a fixed assessment of ten thousand dollars for ten years. The company agree to erect buildings and plant at a cost of \$50,000 and to employ at least one hundred men.

The Brockton Shoe Co., who operate two stores at 119 and 264 Yonge street, Toronto, announce that they are retiring from business and a big clearing sale is now being conducted. The lease of the store at 119 Yonge street expires very soon and the other lease is advertised for sale.

Waterbury & Rising, Limited, have moved from Mill street to their new store in the Russell building, Main street, St. John, N.B., which has been provided with a new front.

Other improvements have been carried out which makes the premises very attractive. Joseph Patchell is the manager of the store, and associated with him is Mr. Isaacs, who was for twenty years with J. D. Russell.

The unexpected death of George Shoebottom took place recently in St. Thomas, Ont. The deceased, who was 22 years of age, was born in Woodstock, but came to St. Thomas a little over a year ago and entered C. E. Raven's shoe store as salesman. He had complained for a about a week of severe headaches and pains, but did not go to bed. Later pneumonia set in and he lived but a short time.

The Williams Shoe, Limited, Brampton, have many new lines for Spring in men's and boys' shoes made on entirely new lasts. The firm have succeeded in combining style and comfort to a greater degree than ever before, the inclination being to conform to the natural tread and shape of the foot. From the workmanship, appearance and finish of the goods the company fully expect that a demand will be created for them which will keep their large factory running to capacity.

A despatch from Fredericton says: "The Board of Arbitration made their award in the Hartt Boot and Shoe Company's dispute with the Boot and Shoe Workers' Union, and copies are being forwarded to the interested parties. The award will be thoroughly discussed at a meeting of the union. It is said to be in the nature of a compromise and upholds the principle of a nine-hour working day, but owing to the war, the present would not be an opportune time for its inauguration.

The American Footwear Co. is the name of a new concern that has been formed in Hamilton by local capitalists. They have rented space at 16 Park street south, and will shortly embark in the manufacture of an exclusive line of women's shoes. About sixty or seventy hands will be employed. The company expect to be in operation in about a month. L. F. Levy, of Hamilton, is one of the those connected with the enterprise.

A fine example of patriotism was given last week by the employes of the Tetrault Shoe Manufacturing Co., of Montreal, when in a single day \$443.50 was collected to be given to the Canadian Patriotic Fund, of which H. R. H. the Duke of Connaught is president. The donation was turned over to "La Presse," the leading French daily, and was sent on to Ottawa by them. The fund was open to every employe of the company and all contributed generously.

La Rue & Trudel have been appointed curators in the case of F. W. McKeen, shoe manufacturer, Quebec, who assigned a few weeks ago. The curators have sent out notices that they were appointed for the court on August 19th, and that J. A. Scott, A. H. M. Hay, Arthur Richard, Edgar Shee, and Nazaire Fortier have been appointed inspectors. All parties having claims against the estate are requested to file the same within thirty days.

With reference to an item which appeared in August 15th issue of this paper, regarding Mr. Frank W. Slater, of Montreal, the SHOE AND LEATHER JOURNAL wishes to state that it was entirely erroneous. Mr. Slater is simply retiring from active participation in the Eagle Shoe Co.'s business, but his brand is still made by them, and will continue to be so. He intends covering his ground as usual with the other lines that he formerly carried.

The first annual picnic of the James Muir Mfg. Co., Maisonneuve, was held on August 15th at Tetraultville Park. The crowd were taken to the picnic grounds in special cars. The first event was a baseball game between the married men and the single men. Joseph Russell was captain of the married men's team and Louis Mercier, foreman of the sole leather and heel department, was captain of the single men. E. W. C. Honen, general superintendent, was umpire. The prize was a box of fifty good cigars. Ten

cigarettes were given the losers—married men. An interesting programme of sports and races followed and the picnic was in every way a success.

At the annual exhibition in St. John, N.B., which will be held from September 5 to 12, one of the most interesting exhibits will be the shoe making plant installed by the United Shoe Machinery Co., Limited. The Goodyear process will be demonstrated by employes from the factory of J. M. Humphrey & Co., who have recently started to make welts. The demonstration in St. John will be from the pulling and lasting to the heeling and slugging of the shoe.

Weiss Bros., shoe retailers, Napanee, Ont., are opening up another store, which will be located in the new Saylor Block, Trenton, Ont., and expect to be doing business in that town about the middle of the month. Charles Weiss, who has been traveling east of Toronto, will be manager of the new branch, Harold Weiss will manage the Napanee store and E. B. Weiss is general manager and buyer. The three brothers are all energetic shoemen and are meeting with success.

F. W. Knowlton, Montreal, Canadian manager of the United Shoe Machinery Co., was in Toronto last week on business. He reports that the new plant of the Company in Maisonneuve, for the making of lasts, is rapidly nearing completion. The factory is equipped with 32 lathes, and will have a large daily output of lasts, followers and fillers. It is expected that it will be in operation in about one month. The power, lighting and heating facilities are of the most modern and complete character.

During the Canadian National Exhibition a large number of shoe dealers from all parts of Ontario come to Toronto on a buying expedition, and the jobbers have displayed many bargain lines which they wish to clear out. The big Fair always brings in a numerous company of purchasers who manage to combine business with pleasure and, while sorting up they see the Exhibition during their leisure time. Most of them report trade as being quiet at present, but they look for a decided improvement during the Fall months.

The industries of Berlin and Waterloo will benefit by the war during the next few weeks. Three Berlin trunk-making factories have received orders from the Militia Department at Ottawa to manufacture 7,000 sets of Oliver equipment, 2,000 rifle buckets and 5,000 rifle slings. Five shoe-making factories will manufacture 20,000 pairs of men's shoes, and a local shirt factory will make up 10,000 service shirts. The entire order must be delivered within the next few weeks. If a second contingent is sent from Canada the order will be duplicated.

H. C. Hatch is this week assuming charge as factory superintendent of the Scout Shoe factory, Montreal, controlled by Jackson & Savage. Mr. Hatch has had a thorough experience in the shoe manufacturing business. He was at one time with the old Ames-Holden Co., and also with G. A. Slater, Limited, of Montreal, and more recently superintendent of John Taylor & Co.'s plant at Halifax. He replaces Geo. A. Fortin in the Scout Shoe factory, the latter having been appointed superintendent of the O. B. Shoe Co., of Drummondville, Que.

A. R. Clarke & Co., Toronto, are completing a large extension to their enamelling plant, which is 20 feet wide by 200 feet long. It is built of galvanized iron, and will increase the output of the company 40 per cent. This makes the fourth addition which A. R. Clarke & Co., have built in the last four years, and the capacity of their plant has now been increased to 4,000 pieces of patent leather a week, making it by far the largest factory of its kind in the British Empire. The addition to the enamelling plant will be ready for operation by September 15th. Last week the company received an order for 17,000 pieces of patent from a large

buyer, making the biggest consignment ever placed with the firm in a leather transaction. They are showing in the Process Building at the Exhibition this year the different stages of patent leather, from the raw state to the finished article.

Writing to the SHOE AND LEATHER JOURNAL on trade conditions, a leading shoe retailer in Hamilton says, "While business has not been as good with us as last year, still we are moving along and the week just closed will be equal to

MAKING SHOES FOR THE VOLUNTEERS

The Canadian Government have awarded a contract of approximately \$110,000 in the furnishing of footwear to the volunteer forces being sent to the war, to the Tetrault Shoe Manufacturing Co., Montreal. The order calls for 20,000 pairs of heavy army shoes to be made of high-grade tan calf, and 20,000 pairs of "rest shoes," that is, an ankle shoe to be worn by troops after long marches or when in camp. The Tetrault Co. state they are turning out 2,100 pairs per day, the factory working at top notch in order to keep up with regular business as well as with the army order. Officials of the company are very much pleased, not only because they received the order, but on account of the confidence shown by the government in awarding such a large and important contract to a French-Canadian firm, and they state that the confidence will not be misplaced. The Tetrault Shoe Co. began shipments on August 19th and have been rushing them ever since.

Ames - Holden - McCready, Limited, Montreal, also received a contract for the same number of shoes, that is, 40,000 pairs. That they should do all in their power to make their output of 40,000 pairs of ankle boots for the use of the Canadian Militia as satisfactory as possible, was the idea impressed upon their men by D. Lorne McGibbon and H. B. Ames, M.P., of Ames-Holden-McCready, Limited. Mr. McGibbon said the firm had been most anxious to get the order, that in its execution they might demonstrate to the

THE CANADIAN "WAR SHOE" MADE OF TAN WINTER CALF

public their fitness for the contract. It depended on each man to do his utmost to make each detail satisfactory, that the work as a whole might be a credit to the firm. Mr. Ames, after a technical demonstration as to how the boots should be manufactured impressed upon the hands the necessity of being most careful in their work. The lives of the soldiers were practically in their hands, as a man who was badly equipped as to footwear, labored under a great handicap. They had been successful in getting the order and it remained with the workers to show how effectively it could be filled. Several shoe firms in Ontario have received smaller orders from the Militia Department.

MAKING GOODYEAR WELTS AT THE FAIR

One of the most interesting and educative exhibits in the Process Building at the Canadian National Exhibition, Toronto, is the demonstration of making shoes by the Goodyear welt process. A complete equipment of about fifty-four machines showing all the evolutions from lasting to treeing, finishing and cartoning, has been installed by the United Shoe Machinery Co. of Canada, under the direction of P. J. Hogan of Montreal. The operators are furnished by the Minister, Myles Shoe Co. of Toronto. Men's and women's high grade shoes are being made for the T. Eaton Co., and samples are shown in fine large show cases. The operation of the thirty employes is under the direction of Alfred Minister and Harry Minister, and about one hundred pairs are turned out daily from Clarke's patent colt, famed for its quality, finish and durability. The firm of A. R. Clarke & Co. have a fine exhibit of their leather which attracts a great deal of attention and shows the leather in all stages of manufacture. They are the largest manufacturers of shiny leather in the British Empire. The shoe making process this year has a finer location than ever. It has always been an interesting adjunct of the Exhibition, last year being the first time in twelve years that the shoe-making department was missing in the Process Building.

NEWSY NOTES FROM QUEBEC

Geo. Long, secretary of the Louis Gauthier Co., was in Boston last week on a business trip.

Many manufacturers have refused orders for shoes for the Militia Department because they could not obtain the heavy stock required for the goods.

Alf Pleau, formerly foreman in the John Ritchie Co.'s stock room, has resigned to take charge of the same department in the Louis Gauthier Co.'s factory.

Among those who will have attractive booths at the Quebec Fair, are: The Canadian Consolidated Rubber Co., the Miner Rubber Co., and the Nugget Shoe Polish Co.

Leonard Bros., shoe dealers, whose building was sold, owing to the widening of the street, have opened up a fine new store, which is one of the nicest on St. John street.

Among the visitors in Quebec within the last few days were H. C. Parker, Parker's Limited, Montreal; E. Whitley, of Fred Whitley, Montreal; L. S. Odell, of Fisk, Limited, Montreal.

Fidel Blouin, with J. A. Scott, leather merchant, who is captain of the 2nd company in the Ninth Regiment, and Alex. Grenier, of the Quebec Glove Leather Mfg. Co., who is captain of the 8th company of the Ninth Regiment, are in service with their men at St. Joseph de Levis.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

SPHINX Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

CLEO

(for women)

**The dealer who carries these
lines is sure of the
best shoe trade**

Many Canadian shoe merchants to-day might be doing far more business, realizing better profits and building up a permanent trade, if they made MURRAY-MADE, DERBY and CLEO SHOES their leaders.

All these brands are well-known for their up-to-the-minute styles, comfortable fitting and excellent wearing qualities.

MURRAY salesmen are now in their respective territories, with a complete range of Spring, 1915, samples. You owe it to yourself and your business to see them.

Union Shoes for Union Men

The retailer who meets the demand of every possible buyer in his town handles Union Stamp footwear.

Dealers who do not carry Union Stamp shoes are not soliciting their rightful share of the shoe business of their city.

The Union man will have Union shoes for himself and his family. He demands them and if he cannot obtain them will turn elsewhere:

To you, Mr. Retailer, who advertise Union Stamp shoes the tide of trade is turning.

You cannot afford to neglect the Union trade, and even the man who does not buy Union shoes merely because of Union principles recognizes the high quality of Union Made footwear.

You have nothing to lose and all to gain by carrying these shoes.

Let us send you to-day a list of manufacturers who make shoes bearing the Union Label and add a live selling asset to your business for the coming year.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp

FIRST AID FOOT RESTUR

A Corrective for Every Foot Ailment

The better the service you can give your customers, the bigger profits will you reap. Your service doesn't end with the mere act of selling shoes; if a customer comes into your store and complains of a bunion, or flat feet, or sore feet, or other kindred foot ailments, he'll naturally look to you for relief.

What will you do?

Will you stretch his boots for him, or resort to some other ineffectual, obsolete method?

Listen! We'll tell you what to do. Ask your jobber to supply you with *Arrowsmith Foot Correctives* and to thoroughly explain to you their uses and great advantages. Be sure to specify A-R-R-O-W-S-M-I-T-H. You'll be absolutely certain then of having at your disposal a thoroughly dependable line of appliances, based on scientific principles, and absolutely guaranteed.

—our “TRIPLE ENTENTE” Last
—a masterpiece of good shoemaking

Our “Triple Entente” Last
Medium Round Toe
—Nothing More Dressy on the Market

The “Triple Entente” is a name to conjure by in world politics. It is the masterpiece of far-seeing statesmen, created to defend the civilized world from oppression. It will be victorious.

Then what better name for a masterpiece of good shoemaking conceived in a time of world stress than “Triple Entente.” The shoe as well as the occasion will be memorable.

As a dressy shoe for street or evening wear there is nothing that can touch it. It is quiet elegance that will appeal to every lover of good shoes. It has medium round toe, medium heel, comes in gun metal bal, whole fox, dull calf top, also in patent and tan, button and lace.

Our Dr. Carter’s Cushion Sole Welt

Is another new departure for this season which undoubtedly will be a very big seller. This shoe is made on a custom last with a very low heel. Nothing more comfortable on the market. Comes in Dongola and Gun Metal Leathers. When you see it you will certainly order.

Watch for our representatives. They will be on their way to you soon with a complete line of samples.

The Question :

Why is your stock of

**FLEET FOOT
SHOES**

like an expert acrobat?

The Answer :

Because it turns over quickly

LAST month we offered to give a pair of our new **Women's Tango Pumps** to any shoe retailer or clerk in a shoe store who sent us the correct answer before September 1st.

As a result, we are working overtime sending out quantities of complimentary pairs of these dainty shoes. Now we ask :

When is Your Birthday?

If you are a proprietor of a shoe store, don't overlook the circular and card enclosed in the September issue of **FOOT PRINTS**. It is interesting. If you do not get **FOOT PRINTS** regularly, send us your name and address, and we will be glad to send it to you every month with our compliments.

Some War Arguments That Hold Water

Manufacturers Opportunity

With Canada dependent upon herself and the United States for practically all her requirements for the next few months or longer, manufacturers are confronted with a unique opportunity to increase their sales. Are they going to go after the business that awaits their serious seeking or will they pull in their oars, take salesmen off the road, cut out advertising and leave the field free for aggressive American firms.

Advertising Breeds Confidence

Following up this thought is it not reasonable to suppose that the attitude of the retail trade will be patterned on that of the manufacturers. If the manufacturers cry hard times, no business and financial stringency, they must expect to hear from the retailers the same kind of cries. On the other hand if they redouble their efforts to get business, show their confidence in Canada, the retail trade and themselves by continuing or increasing their advertising, they will stimulate the same sentiments in the minds of the retailers and will reap a harvest of business that will keep their factories going.

Who Gets the Business

Supposing six manufacturers competing one with the other are advertising and three of them practice the false economy of penny saving by eliminating their advertising, while the other three keep up their advertising and their other efforts to get business—who will get the business.

Protecting One's Credit

The world values you at a discount of a good many per cent. on your own opinion of yourself. If advertisers pull in their horns and so inform the world that they are hard up, that they doubt they ability to pull through, they will find supply houses and bankers having still less confidence in them. As a matter of protecting one's credit standing firms should continue their advertising considering that it costs so little and that it is so important that when they may need money they should enjoy a prestige which will command it.

Publicity Advertising

One answer to the argument that advertising cannot be continued because supplies or raw materials are no longer obtainable from across the ocean, is that the space can be used to excellent advantage to advertise the brand or the line in a publicity way and not for direct returns. Further-

more, the space can be used to take the trade into your confidence telling them just what your situation is and asking them to bear with you that they will be served as well as possible and to the best possible advantage. The space may be used also to protect one's trade against the inroads of competition from Canadian or American firms who may be in a position to supply similar goods and who will become strongly entrenched with your customers through their work during the war if you make no attempt to keep in touch with them through your advertising space.

Trade Papers Carefully Read

If there is one time more than another when a retailer gives special attention to his trade paper it is during dull times and when he may be at a loss where to turn to find an idea that will help him to make more sales, or information that will enable him to buy carefully, and save money. Therefore, advertising in a trade paper at this time is even more beneficial than usual because the trade are keenly interested in every page of the trade papers, because in any advertising or reading column they may find ideas or hints worth many dollars. Advertisers, bear this in mind when writing your advertising.

Replacing Travelers

Some manufacturers who are practicing economy have taken off some or all of their travelers. Many of them will find that their competitors are taking advantage of them by going after their customers hammer and tongs. If the travelers are to be taken off do not fail to use generous space in the trade papers to keep up the connection of firm with customer.

American Competition

Canadian firms who have competition from American manufacturers will have it more than ever now. Our neighbors are putting forth aggressive efforts to win Canadian business. Their export trade is absolutely demoralized as the continental markets are closed to them and they have not the necessary vessels registered under American ownership to develop South American or Oriental markets. In self protection they have got to sell in Canada and you can be absolutely positive that they are going to make greater efforts to do business with Canada than ever before. This conviction of ours is confirmed by correspondence with our American offices. In self preservation Canadian manufacturers must advertise.

May Remove to Larger Offices

The Retail Merchants' Association of Canada, who have their headquarters at 21 Richmond street west, Toronto, are thinking of removing to the top floor of the new Ryrie Block at the corner of Yonge and Shuter streets, Toronto, where they would have fine, well ventilated and admirably lighted quarters. One large room would be devoted to a club and assembly hall, while there may be a large area available for manufacturers all over Canada, who do not have permanent sample rooms in the city, to make displays of their various lines in suitable cases. These exhibits could be changed as often as desired and the space would be leased for so much a year. There would be a man in charge of this permanent show room. The idea has been generally favored by the small manufacturers and many of the large ones, and may be carried out. Secretary, E. M. Trowern, is interviewing various manufacturers in order to secure their views on the subject. The present quarters of the Association have, for a long time, been overcrowded and larger premises are necessary for the expansion of the work of the Association.

Many Exhibits at the Big Fair

The Canadian National Exhibition, Toronto, which is the biggest annual fair on the face of the globe and last year was attended by over a million visitors, was concluded last week and drew average crowds from many parts of Canada and the United States. The exhibits this year in the various buildings surpassed previous efforts made in that direction, being more numerous, more attractively displayed and better arranged. Several firms in the leather, footwear and findings lines annually take advantage of the great exposition to make more widely known the merits and prestige of their goods.

In the Manufacturers' Building the Anglo-Canadian Leather Co. had a fine exhibit of the Maple Leaf Brand of sole leather, showing about five hundred sides, backs and bends, as well as 2,000 dozen tap soles. A distinctly loyal touch was given the exhibit not only by flying the Union Jack and Canadian flags, but also those of France, Belgium and Russia. S. L. Lowther was in charge.

The Cook-Fitzgerald Co., of London, had an excellent exhibit of all new spring styles in shoes which were displayed in glass showcases and also on a banked background with a white puff effect. The booth was in charge of Fred. J. Fitzgerald, of London, and C. B. Price, of St. Thomas.

The Minister-Myles Shoe Co., Toronto, also made a creditable display in the main building of men's and women's snappy spring styles in Goodyear welts, the exhibit being under the direction of C. F. Schuszler, city traveler.

Walkover shoes were displayed to decided advantage in a prominent booth in the Manufacturers' building. It is understood that the Walkover people will be shortly opening a large retail store on Yonge street, Toronto.

The Scholl Manufacturing Co., of Toronto, occupied their usual booth and demonstrated the benefits of the appliances manufactured by them. Several new things were shown this year, including the new "Air-lite" arch support. E. W. Greenwood and Ross Cowan were in charge.

Gutta Percha and Rubber, Limited, had a good display of their mechanical lines and motor tires, including the Maltese Cross and Lion Brand of rubber footwear, tennis shoes, rubber heels, etc. The Dunlop Tire Co. had a pleasing arrangement of rubber goods, including rubber heels.

A. R. Clarke & Co., Toronto, who outfit a man from head to toe with the A. R. C. brand of clothing, had an

enterprising showing of varied lines manufactured by them, the booth being on charge of Theo. Trickey. There were 700 different kinds of gloves as well as bull hide, buckskin and sheep lined moccasins.

Under the supervision of L. R. Creveling, of Niagara Falls, Ont., a representative showing of the various lines of arch supports and props, heel cushions, etc., manufactured by the Canadian Arrowsmith Co., of Niagara Falls was shown. The firm featured their first aid "Foot Restur" and also their feather-weight arch support.

In the Process Building the Nugget Polish Co. had a splendid display and gave demonstrations of the merits of their various polishes in shining shoes free of charge and giving away souvenirs with each purchase, to the kiddies. John Harris, Canadian manager, was in charge, assisted by L. R. Howard, T. W. Hart and F. B. Bollard.

Other firms who occupied space and had nicely decorated booths were: The F. F. Dalley Co., of Hamilton, makers of Two-in-One Shoe Polish; Chas. Tilley & Son, Toronto, shoe dressings, infants' soft soles, boudoir slippers, and boys' and girls' footwear; Peters' Polish Co., Toronto, and Beal Bros., who had their usual place under the grandstand and showed several lines of oil tan larrigans and sporting boots, as well as shoe uppers in various leathers.

Have Several Pairs of Shoes

Continual wear of one pair of shoes, especially in warm weather, is not only detrimental to the wear of the shoes, but means added discomfort for the wearer. There is no healthy person whose feet do not perspire more or less and usually more in warm weather. The perspiration from the feet creates a very strong acid which in a very short time will rot the linings and robs the leather of its vitality. If one can afford extra pairs of shoes and forms to put them into, they will find it much more economical and much more comfortable.

Men of the middle-aged class usually adopt a sensible styled shoe which they wear from year to year; they have shoe forms made to slip into their shoes when they change them, and they have anywhere from one to three pairs of shoes.

This looks a little extravagant, but practice will convince one of the economy involved. The same pair of shoes should not be worn over one week at a time, at the most, and a change every other day is much preferred by the writer. Occasionally when the shoes are changed and forms put in, take the boracic acid which comes in powdered form and mix with equal parts of talcum powder. Sprinkle the inside of the shoes thoroughly with the mixture. The boracic acid will neutralize the acid which is found in so many shoes and the talcum powder will deodorize them from the obnoxious odor that comes from the inside. The talcum will also make the inside of the shoe smoother and more comfortable for the wearer.

Be a salesman as well as a shoemaker and build up your business. This means more profit and more satisfaction all around. In fact, you have got to take up live methods and build up your business or be run out by your competitors, so don't hesitate.—Shoe Repairer and Dealer.

To wear a pair of boots for forty-two years is the unique experience of Philo Thomas, aged eighty-nine, of La Prairie, Wis. The boots are a pair of the old-fashioned ones that come to the knee, and he bought them in Janesville in 1872, and has worn them almost every day since. They have been resoled four times. Gilbert Evenson, the maker of the boots, verified the story, saying that they were made of imported French calf and sold for \$15.

Dressing a Window That Is Out of the Ordinary

A Showing Made by a Montreal Retailer That Amply Repaid Him—Making a Display That Is “Just a Little Better”—A Toronto Dealer’s Idea—What About Your Own Fall Opening Window

Do you always strive to make your window displays above the usual run of showings?

Here is a window put in by a Montreal retailer, T. Dussault, 281 St. Catherine street east, which created much favorable comment. It was installed at the opening of the Fall season, and although it is by no means an expensive display, it has brought in many extra dollars for the proprietor.

The principal feature of the display is the large painting in the background depicting a Fall scene. This is amply backed up by a neat display card announcing the opening of the Fall season and the window is well stocked, but not overcrowded with suitable footwear.

Why cannot you always have your windows dressed so that they will cause the majority of passers-by to stop and admire, for as you no doubt are aware, interest created very often leads to a sale in cases where the purchaser had no intention of buying. To create interest though, you must have ideas, and the accompanying illustration is only one of the many executed by Mr. Dussault.

First and foremost however, you must have an attractive store front and advantageous window display space. With these advantages, it is comparatively easy to dress a window that will attract attention. Mr. Dussault realized this fact and a few months ago, when renovating his entire premises, he installed a first class store front, and states that his extra expense has, since the installation, been repaid many times over through increased sales.

However, to come back to the subject of well dressed windows, why not make up your mind right away that you

will install a “Fall opening display” that will make people open their eyes. Use some idea that will prove of more than ordinary value in attracting attention. Take a look around at what some of the other stores are showing. For instance, can you not reproduce a miniature forest scene in your display space. This makes a fine base for a Fall display of shoes. A Toronto shoe retailer last year worked out this idea to perfection and reaped much benefit. He endeavored to make his display as sylvan as possible and went so far as to visit a taxidermist and secured two squirrels, in order to make the scene more natural. Maple leaves aided him to a large extent and he secured many other bits of foliage by a Sunday walk in the suburbs.

The above is only one suggestion, but there are dozens of others that can be worked out at the present time to advantage. If you are not giving your windows proper attention, get busy now, and see if you cannot increase your sales and stimulate the interest of prospective patrons by a real live Fall window display.

A. Davis & Son, Limited, Kingston, are rebuilding their boiler and leach house, which was destroyed by fire some time ago. The structure is of re-enforced concrete, similar to their other buildings. They have not yet definitely decided whether they will re-build on the site of the old frame tannery before next spring, owing to the lateness of the season. The firm report that their power connections were established four days after the fire, and that since that time they have been busy making and shipping leather.

HANDSOME FALL WINDOW OF T. DUSSAULT, 281 ST. CATHERINE STREET EAST, MONTREAL.

How to Get After the Children's Fall Shoe Business

It Is Important in Building Up Desirable Year-Round Trade—A Practical Idea That Ought to Give Life to the Campaign in School Footwear and Keep Things on the Move—The Effect on Adult Trade.

The Casual Visitor has always liked children; so it gave him a thrill to be ushered into a department given over entirely to supplying the footwear needs of boys and girls. On every side there were evidences that this Juvenile Department was a success. It looked efficient physically. There was ample room for parents and children; there were on every hand indications that a juvenile spirit was fostered by the selling force and that there existed an understanding of the child mind—in regard, at least, to getting a comfortable shoe on the foot that was intended for it, says the Cleveland Trade Bulletin.

A Child's Atmosphere

Above the shoe shelves on three sides of the room were prints, in color, of scenes calculated to be familiar to children of six to twelve years.

The seats and other fitting fixtures were gauged to suit the child's physique.

It was a child's place—undeniably,

The buyer of shoes had led the Casual Visitor thither merely to further impress him with the completeness of the shoe department of the establishment—a large and progressive Western store. He had not intended to go into detail about the Juvenile Section further than to designate it as such.

Fitting Children's Feet

"So, here is where the children get fitted, is it?" said the Casual Visitor.

The buyer smiled appreciatively. He had not expected just that rejoinder.

"That is just exactly the idea this little department is built upon. We used the fitting idea as the central theme in our preliminary advertising four years ago, when we opened this department."

"You had always sold children's shoes, had you?" asked the Visitor.

Featuring Service to Children

"Yes, but not on a large scale, and we had not featured children's footwear in any way—not even in our advertising. We just sold children's shoes because there was a need for children's shoes among our clientele. We did not see a great deal of profit in them on the volume of business done. They sell cheaper per pair than a grown person's shoes do. It takes longer to fit them on and it requires more skill in selling, since the child has less idea than an adult of what fits and what does not. And then, when you sell a child a pair of shoes, you must deal with at least two people—and quite frequently with three—the child, the child's mother and sometimes its father or other doting adult."

"Fitting 'Johnny,' of six years, to a pair of school shoes is really a momentous occasion then!" laughed the Casual Visitor.

"Momentous is right," said the buyer, "and it is just that situation which led me to believe we could do ourselves and our customers a service by featuring the children's footwear in some special way."

"But in reality the children feature you, do they not?" asked the Casual Visitor. "That's the way it impresses me," he added by way of explanation, "as I look at these salesmen, each with a young customer before him, and from three to four waiting to be fitted, with an average, moreover, of one adult to every three children."

"Feature us? I should say they do. That's why we feature them. The children we fit in this department bring us some profit right here. And they bring in a great

deal more out in the adult section. And, more than that, they give us a prestige we could not hope to acquire in any other way."

Prestige is Essential

"And prestige is useful, I take it, in building up shoe trade?"

"Useful! It is absolutely necessary for a shoe department in a progressive store to have undoubted prestige. Competition, both in service and in values, is fierce when you consider the number of excellent shoe stores in a town of this size, to say nothing of the department store departments. You have just naturally got to have business coming in all the time to keep up sales and to make the margin of yearly profit. We think, however, that we have won the prestige due us from the children's point of view, and we know we get the business, both of child and of adult."

"Tell me how you did it or how you do it, if that is better," said the Casual Visitor.

The Central Idea

"I'll tell you both, for it has a past and present phase, one just as important as the other.

"We started out with the idea that the child usually has its own way in the long run when it comes to putting shoes on his feet. We also took cognizance of the fact that the child brings with him into the store one or more interested grown-ups when shoe-buying time comes round.

"We figured that at one or two big seasons of the year the child is the center of interest in the home, and that his needs are paramount.

"One of these seasons is just before school opens in September. Another is when he needs his second pair of school shoes.

"We picked the former season as a proper time to start interest in a distinct shoe service for children, and we have used it ever since to keep up the interest."

"You started out with the idea of having the school child work for you, as I understand it," said the Casual Visitor.

A School Shoe Sale

"Just exactly that. And we did it two ways. One was natural and the other acquired. Naturally, any child works for us whose juvenile needs bring his parents into our shoe department, and, eventually, into other departments of the store. In addition we formulated an advertising plan that actually permitted children to make our interests their interests."

"You mean you inaugurated a special sale of some sort to feature children's shoes before school time?"

Children's Shoe Week

"We did. It was called 'The School-Children's Co-operative Shoe Sale.' We used this sale idea to introduce a Children's Week in which we guaranteed to satisfactorily fit out with school shoes any school-child who came to us. We dwelt upon the completeness of our stocks, our facilities and equipment and the excellence of the selling force in our children's shoe department.

"That, of course, would have been of little use if we had not had the shoes, the facilities and the sales force. But we did have them. We proved it during our first Children's Week four years ago, and we have them yet.

Getting Juvenile Co-Operation

"In addition, as a special advertising idea, we offered prizes to the first fifty school children between the ages of

eight and twelve years who bought shoes of us during the Children's Week. The prizes were something simple, usually a booksack for school use or a desk set of good quality.

"But, besides this, we presented the fifty with School-Children's Co-Operative Shoe Sale badges. These authorized the children to become a part of our selling force. These children were permitted to bring into the children's shoe department any child friend who had not yet purchased school shoes. For this service we presented them, for each child brought in, with a neatly printed certificate of merit and the child who had the greatest number of these at the end of the week got a capital prize. This prize consisted of a complete outfit for school—one school suit, school stockings, hat or cap, books, pencils, etc.

"You would be surprised at the interest this creates among the children, and among their parents, too. Children talk a lot; their interest is genuine; their enthusiasm is sincere; their energy, while limited in volume, is intense while it lasts. We made advocates of the children. We have done this every year for three years. We are going to do it this year."

Generous Act of Rubber Employees

Emulating the example set by the Canadian Pacific Railway, the Canadian Consolidated Rubber Co., Limited, has asked all the employees of the Dominion Rubber System throughout Canada to contribute one day's earnings to the Canadian National Patriotic Fund. As the Dominion Rubber System is comprised of about twenty branches and warehouses from coast to coast, together with factories in Montreal, Granby, and St. Jerome, P.Q., and Port Dalhousie and Berlin, Ont., and employs several thousand Canadians, it is likely that their contribution will be a large one.

None of the factories of the Dominion Rubber System has been shut down owing to the war, nor have the hours of the workmen been reduced. In fact, in some cases, a ten hour day has been substituted for an eight hour day.

Do You Make This Profit ?

The retailing of shoes for women and children in the average store especially has undergone radical changes in the last few years. The sudden and frequent changes in style have made it imperative that the merchant keep his stock low at all times, says a big Western shoe man.

To make a satisfactory profit on shoes under existing conditions, it has been necessary to lengthen 'out the profits and increase the annual turn-over of stock.

Now about the percentage of profits. The profits for

boots should be 33½ per cent. on \$3.00; 36 per cent. on \$4.00; 38 per cent. on \$5.00, and everything above \$5.00 should run from 42 per cent. to 50 per cent. The profits on slippers should run 8 per cent. higher than boots and pumps, and low cuts 5 per cent. higher. The higher profit on slippers and low cuts is made necessary because the cost of clearing up is greater as it is necessary to close them out entirely at the end of each season.

The foregoing figures should give an average of 33½ per cent. above the cost of depreciation and clean up at the end of the season.

Children's shoes cannot be figured as high as women's shoes, but they can be turned oftener, which will make the net profit within a few per cent. of the women's. Children's shoes will stand an average mark up of 33½ per cent. Under existing conditions, it is possible to turn a children's stock three to three and one-half times annually.

The one thing that has been a great advantage to retailers is that most of the representative factories carry their fast selling numbers in stock. The stock department used right is a distinct advantage, but if it is abused, it loses its usefulness. The proper use of the stock department enables you to anticipate 40 to 50 per cent. of your business and serves as a size-up proposition.

Under the conditions found in most retail shoe stores, it is necessary to turn the women's stock two and one-half and the children's three and one-half times to show the profit a merchant is entitled to, who invests his money in the hazardous and nerve-racking shoe business of to-day.

The profits mentioned in this article are figured on the selling price and the turn-over of the stock on the gross amount of business, less the average per cent. of profit.

Derivation of the Word "Shank"

"Shank" is a funny word, and useful, too. It did not come from Mr. Shank, who owned the mare on which people commonly traveled before steam locomotives were built. It came from the old English work "chonke." This means the part of the leg between the knee and the foot. The meaning has been broadened. Now there is a shank of a shoe, a button, an anchor, a flower, a type, a foundry ladle and a few other things. There is also the green-legged shank of the bird family, and the shank painter, which sailors can tell about, and shank beer and shank pliers. Very likely an industrious person could hunt out several other kinds of shanks, but this number suffices to show that shank is a funny word.

A WELL ARRANGED SHOE DISPLAY WINDOW OF ASHWELL'S DEPARTMENT STORE, CHILLIWACK, B.C.

An Example to be Followed

We observe with every satisfaction the action taken by the managing director of Sir H. W. Trickett, Ltd., with regard to those faint-hearted buyers, who in a panic stricken moment are desirous of cancelling their orders, oblivious of the fact that later on they may have to pay more for their goods. If these gentlemen have no confidence in their Old Country, the firm of Sir H. W. Trickett, Ltd., like ourselves, have abundant faith in Old England yet.—*Boot and Shoe Trades Journal.*

The following is a copy of a letter recently sent out by the above firm, designed to put a little patriotic spirit into the hearts of those who, at the first alarm, sought to cancel their contracts:—

Re CANCELLED GOODS

Waterfoot, Aug. 15th, 1914.

Dear Sirs,—

We are sorry that you have taken what WE consider a very unpatriotic step at this crisis of the country's history by asking us to cancel your order.

We intend to stand by OUR engagements, and have not cancelled one shilling's worth of goods, nor do we intend to, as we feel it to be our duty to carry our share of the burden at the present time, our motto being "business as usual."

So we would ask you to consider the matter, and allow us to send in the goods when ready.

By doing this you will be helping to keep the worst enemy—HUNGER—from the door.

Trusting to have a favourable reply,

With kind regards,

Yours truly,

For Sir H. W. Trickett (1914) Ltd.
OLIVER EATOUGH (Managing Director).

Putting in a New Front

The store front that will pay the greatest interest on the investment is one that will produce the greatest amount of business, and in order to produce business, it must fit the conditions around which it is installed—it must fit the business.

By that I simply mean that the man in the shoe business must have a store front so arranged that he can display shoes so that the people will be attracted to and into his store—it must be so built that he can show all his shoes in their respective seasons. The jeweler likewise needs a jewelry store front, the furniture retailer a furniture store front, and the clothier and haberdasher needs a store front that will likewise fit his business and conditions. Clothes are something we all need, but naturally when we buy we are attracted to the store which, we believe, gives us most (both style and quality) for the money we spend. And is there a more logical way to so impress people that yours is a logical store to patronize than by a good representative shoe front?

Someone recently made a statement regarding store fronts that rings true, because it is founded upon good horse sense. He said: "Good store fronts cannot be made up by the mile and then cut into pieces to fit the various openings." If you were to go on a store front inspection trip, you would be surprised to find that a great majority of all store fronts are alike—or at least look alike. You would find shoemen, florists, grocers, butchers, jewelers, hardware dealers, furniture dealers and clothiers all trying to pull the people into their stores through the same kind or style of store front.

It would look as if so many fronts had been "slipped off a string of fronts to fill the various spans."

If you contemplate remodeling your present front, or building a new one, give it your whole heart. Don't content yourself by calling in a local carpenter and say: "Gus, I need a new front, when can you put it in?"

It isn't your civic or personal pride that keeps "nagging" at you to put in a new front—it's your natural business instinct. Your prosperity depends absolutely upon the sales made in your store, and do you know of any element capable of producing as many sales as a modern store front?

Repetition Need Not Stale

Joe Jefferson was once criticised for playing only Rip Van Winkle for so many seasons. He replied: "I would rather play one part in fifty different ways than play fifty different parts all in the same way."

It was said of him that he was able to go to each performance of Rip Van Winkle with a zest and keenness that never allowed his wonderful talent to go stale, because he remembered always that each time he was playing for people who had never seen him before and his reputation and his talent were on trial before those people.

When a business man goes to his work each day with the thought that this day's work is to impress new people and make for general reputation he will then understand why no man can afford to rest on his oars or trust to laurels already won.

News Notes From Winnipeg

John Lauffer, the veteran representative of G. V. Oberholtzer Co., Berlin, Ont., was in the city recently on his way West.

Hugh Murray, of Murray's Limited, Calgary, spent a few days in Winnipeg recently on his way east to Toronto, Montreal, Boston and other shoe centres.

L. Godbolt, western representative J. & T. Bell, of Montreal, who spent a few days in that city recently, has returned.

R. F. Eadie, secretary-treasurer of the Rannard Shoe Co., has returned from spending a holiday in Brampton, where he visited his mother, who is 87 years of age.

W. F. Locke, manager of the shoe department of the T. Eaton Company, has returned from an extended trip to Toronto, Montreal, New York, Boston and other cities.

Among the travelers who have been recently calling upon the trade were Frank Mercer, of the Brandon Shoe Co., Brantford; Robert Tobin, of the Adams Shoe Co., Toronto, and Coates, Burns and Wanless, of London; W. E. Short, of the Kingsbury Footwear Co., Montreal; and L. M. Stock, of the Walker, Parker Co., Toronto.

A. R. Rannard, brother of C. F. Rannard, a member of the Rannard Shoe Co., who has been for some years on the Appraiser's Staff in the Local Customs Office, has resigned, and will devote his entire time to the interests of the Rannard Company. He will assist the president and general manager, C. F. Rannard.

A. N. Douglas, lately with the H. G. Middleton Co., is now with W. A. Marsh Co., Western, Limited, the name of which firm will shortly be changed to Congdon & Marsh, Limited. Mr. Congdon will be president of the re-organized company, and Mr. Douglas secretary-treasurer and general manager.

Mills C. Simpson, of Tom Stedman Shoe Co., western selling agents for the Williams Shoe Co., Brampton, is on an extended trip to various towns in Manitoba and Saskatchewan.

Western Shoeman Believes in Attractive Store Front

Here is a Winnipeg Retailer with One of the Finest Stores in the West—A Few Facts About His Own Establishment—Says a Neat Front and Interior Mean a Largely Increased Revenue.

Western Canada can boast of a large number of shoe stores with Metropolitan appointments, service, and all-round up-to-dateness, and for tasteful decoration, attractive

merchant should have a modern front, no matter what the cost may be, and states that, did the man with the poor front and inadequate window display space know the extra profits he could obtain by installing an attractive one, he would not be long in having one in stalled.

The interior of the store is also attractive, as can be seen by the illustration. Long benches run the length of the store, down the centre of it. A well stocked findings case is set immediately inside the entrance, where it attracts the eyes of every patron entering the establishment. The office is situated at the rear of the shop, and by a mezzanine gallery arrangement, Mr. Devlin is enabled to keep a close watch on things at all times, and at the same time pursue his clerical work in the office. The store is divided, the men's department being on one side, and the women's on the other. Attention is being given in the store to the little things which are the ones that count. Neat display cards at various intervals are arranged to get best results. The rugs running the full length of the place add much to its general attractiveness, as do also the first-class lighting facilities. The ceiling is finished to give a panelled effect.

Altogether, the Ryan-Devlin store is one of the most attractive. It is of the type which it is to be hoped will become more popular in this country, and Mr. Devlin is of the type that is responsible for the high pinnacle which has been reached by the Canadian retail shoe store.

Like the problem of keeping an establishment as free as possible from dust and dirt, the task of cleaning our show windows is always with us. Almost every merchant has his own manner of carrying on this routine work. By the way of lightening the burden, the "Advertising World" advances what it believes to be a good recipe:

"Take of prepared chalk, nine ounces; white bole, one-half ounce; jeweler's rouge, one-half ounce; water, five ounces; alcohol, three ounces; mix thoroughly. Apply this paste with a soft rag, and rub off with another clean soft rag."

W. T. DEVLIN, WINNIPEG

windows and show cases, and general comfort of them none can surpass the establishment of the Ryan-Devlin Shoe Co., Limited, at 494 Main Street, Winnipeg.

This is one of the largest and best retail shoe houses west of Toronto, and carries a stock of high grade footwear equalling in quality and style that to be found on the shelves of any big shoe establishment. The man who is at the helm of the enterprise is W. T. Devlin, who act as president and managing director of the company.

Mr. Devlin started in the footwear business in Winnipeg in the spring of 1883, entering the employ of A. G. Morgan. He left this employer the next fall to go with Thomas Ryan. Three years later he joined the Hudson's Bay Co., and was made buyer in 1895. In 1901 he bought out his former employer, A. G. Morgan, and conducted this business until 1908, at which time he amalgamated with the Geo. Ryan Shoe Co. This latter company had acquired, in the previous year, the shoe business established by that pioneer, Thomas Ryan, in 1874.

The amalgamated companies were rechristened the Ryan-Devlin Shoe Company Limited, and since 1908 have been operating a very successful and constantly enlarging business with the better class of Winnipeg patrons. Mr. Devlin is a firm believer in the policy of frequent change of window displays, and says that he feels many extra dollars have come into the store through this policy. He also believes that every shoe

Origin of Dongola.—A manufacturer of glove leather at Gloversville spoiled a considerable lot of good leather making it unfit for use as far as gloves were concerned. Taking it to Haverhill he found it could be used for shoes. What shall we call it, inquired the shoe manufacturer? It was tanned with Dongola oil, was the reply, so dongola it was called.

* * *

President Cleveland, for political reasons, has outdone the Senate in denouncing the provisions of the Fisheries Treaty with Canada as a “provoking instance upon rights neither mitigated by the amenities of natural intercourse nor modified by the recognition of our liberality and generous consideration.”

* * *

We append a reproduction of the buildings and grounds of the Industrial Exhibition of 1888, now the Canadian National Exhibition.

This will give some idea of the growth of this enterprise, as well as of Canada in the twenty-six years.

Amongst the visitors to the JOURNAL office during Exhibition week were Mr. C. N. Broom, of St. Stephen, N.B.; Mr. Armbrust, of Berlin; W. Miller, Owen Sound; Mr. Taylor, Clinton; Jas. McRae, Paris; I. B. Brook, Cobourg; A. Foster, Pembroke, and Mr. Thompson, of Thompson & Fraser, Pembroke.

Amongst the visitors to Montreal noticed by our

Montreal representative were: J. H. McBrien, Toronto; R. J. Kincade, Toronto; J. T. Brown, Guelph; D. B. Pratt, Hamilton; C. Bickell, Toronto; C. Knees, Toronto, and others.

Should Have Extra Pair

The shoe repairer who is in the business for profit and not for his health or simply to kill time, realizes the importance of salesmanship as an element entering into the business of shoe repairing and is continually looking for means and methods to this end.

Among the various lines of talk to put up to the waiting customer, the Shoe Repairer and Dealer advises that you consider the matter of extra pairs of shoes as a worthy argument. It is never difficult to convince a person that old shoes are more comfortable than new ones—they all know this from experience. But how many shoemakers try to convince their customers of the wisdom of making their old shoes last longer for this reason, thus securing more work for the repair shop?

How Farmer Viewed Advertising

A merchant met a farmer carrying an express package from a Chicago mail order house. “Why didn’t you buy that bill of goods from me?” he asked. “I could have saved you the express charges, and, besides, you would have been patronizing a home store.”

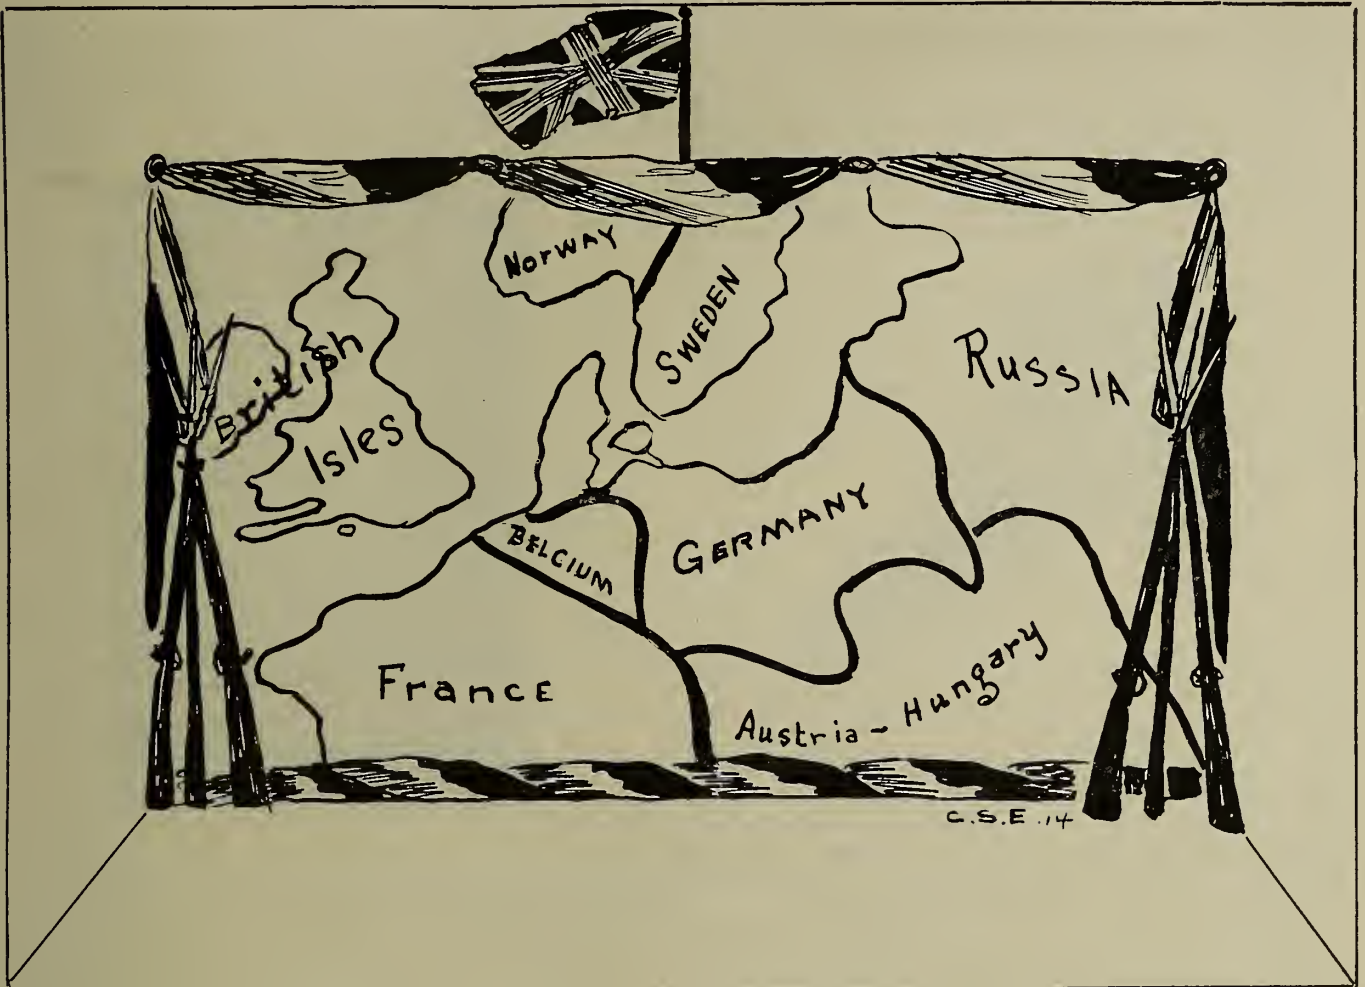

The farmer looked at the merchant for a full minute and then said: “Why don’t you patronize your home paper and advertise? I read them and did not know you had this particular line.”

In lieu of moral, this comment is made: The retailer thinks that the business of his territory belongs to him, and so it does, but the same kind of support you expect the farmer to give you, you should be willing to extend to your local publisher.

HOW THE TORONTO EXHIBITION GROUNDS APPEARED OVER A QUARTER OF A CENTURY AGO.

Increase Your Trade by Having a War Window

In view of the present war in which Britain is engaged, the window outlined below should prove of special interest.

A large "war-map" should be used for the back-ground. This can be made by making an enlargement from one of the maps printed in the newspapers, by means of a pantograph. After the outline is drawn, color the different countries with water-colors. Beaver board is a good material on which to paint the map because of its stiffness.

Red, white and blue bunting should be draped around the edge of the map and a Union Jack should surmount the whole. The flag can be kept in motion, if desired, by means of a concealed electric fan. Army rifles should be stacked in each of the corners at the back of the window.

Price tickets or style-tickets should be cut from grey cardboard, in the shape of a battleship, and the price or style-number should be lettered in white. Special names could be given the different styles for the occasion, such as the names of British Warships.

If your window is one that affords an easy entrance, further attractiveness could be added to the display by using colored pins to represent the different armies and fleets. The position of these would have to be changed frequently so as to conform to the latest reports of the war.

A model warship made from light lumber and cardboard would make an attractive center piece for this display.

Suitable window cards can be made out of grey cardboard with the outline of a battleship drawn in white and lettered in light grey outlined in white.

THE SHOE AND LEATHER JOURNAL has received from I. C. Brook, of I. B. Brook & Son, Melita, Man., several choice samples of show card work. He attained his proficiency in the art by following the course which has run for the past two years in this paper and was concluded last month. Mr. Brook has certainly made fine progress and his work shows talent and fine judgment. The illustrations on each card are appropriate and the lettering effective and attractive. Mr. Brook says, "I was just a beginner when I first read the lessons in your paper and while I do not claim yet to be an expert on the job, I have kept at it and have tried to improve."

The second course of the table d'hote was being served. "What is this leathery stuff?" demanded the corpulent diner. "That, sir, is fillet of sole," replied the waiter. "Take it away," said the corpulent diner, "and see if you can't get me a nice tender piece of the upper with the buttons removed."

Breezy Briefs From St. John

Dealers in St. John, N.B., have not felt any serious effects in shoe sales as a result of the European trouble, but they feel if the war is prolonged to any great length there will be a certain lessening of returns. Of course, by this is meant that there will not be the same readiness on the part of customers to purchase fancy lines, but they believe that the run on the ordinary class of shoes cannot lessen to any great extent. Not for a year, at least, do they anticipate that there will be serious results in business, and this will be caused largely by possible advances in the price of stock, owing to the scarcity of leather.

Personal letters have been sent out by many firms in St. John to customers advising them that while the war is a serious matter, indeed, and one of national import, it is not right to be "panicky" over it. There is bound to be a natural tightening in money circles but all must bear the burden. This in brief has been the tone of the letters issued, which have had encouragement to patrons as their object. At the same time shoe merchants realize that people must have shoes, war or no war, but in their orders to the manufacturing houses they have been careful to book more than the ordinary proportion of average shoe stock, rather than the particularly high-class lines. The opinion is that economy will be the general watchword with people throughout Canada, and there will be a curtailment of purchases of things other than are absolutely needed.

Shoe houses in St. John are offering their quota to the great Canadian contingent going forward for the overseas service in the defence of the Motherland. One of the most prominent in this connection, is Ralph St. C. Hayes, a lieutenant in the 3rd Regiment, Canadian Artillery, now on duty on Partridge Island at the entrance to St. John Harbor, where a battery has been stationed. He has for the last few years been engaged in business with his father, ex-Alderman R. T. Hayes, general manager of J. M. Humphrey Co., Limited, and is regarded as having a bright future in military circles. Mr. Hayes has volunteered for the foreign field and will leave in a few days for Valcartier, Que., whence he will go to Europe, into action with his regiment. He will be greatly missed in the Humphrey boot and shoe offices, but best wishes will follow him through the war.

Another member of a local shoe staff, Harry Adams, left St. John recently in the Canadian Signalling Corps. He has for some time been employed with the Ames-Holden-McCreedy Co., in this city. The members of the staff before his departure for the front presented to him a valuable military wrist-watch. The presentation was made by W. M. Angus, local manager, in behalf of the staff. At the same time there was another presentation to another one of the employes, J. Walter McIntyre, who received a handsome traveling bag. He is leaving the shoe house to enter the Methodist ministry.

Another St. John shoe man who is active in the local militia endeavors is David B. Pidgeon, who is a lieutenant in the Army Service Corps. This unit has volunteered for service in the foreign field and Mr. Pidgeon has volunteered with them, but there is as yet no word of them being taken. Forty volunteers from the corps have already gone forward. A. G. Rainnie, manager of the D. K. McLaren, Limited, belting, hose, and mill leather supplies, and a brother-in-law of Mr. Pidgeon, is also a lieutenant in the Army Service Corps, and like him, has volunteered if the unit be needed for the overseas service.

It is interesting to note that the commander of this unit, while not exactly in the shoe business, is so closely identified with it as to rank as one of the trade, that is to say he is A. E. Massie, local manager of the Canadian Consolidated Rubber Co., holding the title of lieutenant-colonel, richly merited after a lengthy career in the militia. Col. Massie

was one of the first to submit his name to the department for whatever services he was needed, and has been active locally in arranging for the issue of rations, transport, equipment, and other matters connected with the bivouacking, and entraining of the large body of volunteers from St. John.

An Energetic Representative

H. D. Lewis, who is widely known to the shoe trade in the Maritime Provinces, took charge of the wholesale department of L. Higgins & Co. at their manufacturing branch, Yarmouth, N. S., in 1904. He held this position for six years, the plant being destroyed by fire in 1910. Mr. Lewis then joined the wholesale staff of the Amherst Boot and Shoe Co.,

but remained with that firm only a few months, when an opportunity presented itself for him to take a position on the road, and for a year, he covered western Nova Scotia with the lines of a Quebec shoe firm and the Fraserville Shoe Co. W. F. Tanner at that time being special representative for this firm in the Maritime provinces. In 1912, the Fraser-ville Shoe Co. appointed representatives for the Maritime provinces and at that time, gave Nova Scotia and the St. John River to Mr. Lewis, which ground he holds today, and has worked up a steadily increasing business. He likes the road and has made many friends in connection with the trade.

Best Wishes From Girl Friend

"My best wishes for victory over the Germans.—A little French-Canadian girl who interests herself deeply in the Canadian soldiers." This was the patriotic message found by a soldier in the 65th Regiment, Montreal. The words were carefully written on an old slip of paper fixed to one of the new pairs of boots which are given out to all the men. A short time ago an order for regimental boots was given to a Montreal firm, and the greatest enthusiasm and delight was shown by the factory workers when they heard they were to supply Canadian soldiers going to the front. The words were written on a bill head of the firm in a girl's writing, and the man who found them is believing firmly they will bring some special good luck. The message from the unknown little Canadian girl is an indication of the enthusiasm which exists for the soldiers among every class of worker in Montreal.

Breezy Gossip on Leading Shoe Styles For Spring

The spring samples of Getty & Scott, Limited, of Galt, are right up to the mark in style, fit and finish. The gaiter effect is being featured in a number of models, with fabric quarters, Belgian silk and Belgian vesting, as well as brocade effects in a number of pleasing patterns. The medium recede toe is very popular. Five new lasts for women have been installed. Heels are seen in leather spool and celluloid covered Louis and Cuban-Louis. Plain toes are very strong and there is a liberal representation in kid as well as patent leather. The coming season would appear to be a black one and numerous artistic creations are presented. The stage last is also a leader and will likely prove a warm favorite with the trade.

In the McKay line four new lasts have been added and all are good fitters. Patent with black tops and quarters are well represented. In the high cuts are observed many effective combinations, a panel patent shoe with gypsy seam and covered Cuban-Louis heel being very attractive. There is also a woman's dull kid button with spool heel. The panel front is also seen in pumps. A colonial with white buck forepart and tongue and patent quarters, with black and white buckle, and covered Louis-Cuban heel is decidedly snappy. Another offering in low cuts is a patent leather, with Russian cloth quarters, rhinestone ornament, and spool heel. There is also a fine showing in Cleopatras and Colonials, many with fabric quarters and recede toes. For the kiddies a two-strap pump in turns and McKays, made in patent and gun metal, is being featured. Instep strap slippers are also displayed in various leathers. The lasts for the juvenile feet are mostly of the wide order being culture, foot-form shapes. A three-hole tango tie for the children is interesting and neat. A new last for growing girls has a wide, medium round toe and comes in all leathers. Four new lasts have been placed for growing girls. For women a fat ankle, kid button boot, with felt cushion insole and low heel with

self tip is noticed. In women's welts, McKays and turns, growing girls' welts, McKays and turns, misses' welts and McKays, girls' welts and McKays; children's turns and youths' and little gents' button and lace, welts and McKays, the firm are showing over five hundred samples for spring, which is the most comprehensive range ever turned out and reflects credit on their enterprise and progressive spirit.

PATENT BAL, MEDIUM SQUARE EFFECT TOE, STITCHED TIP, SEVEN-EIGHTH HEEL—BY HART BOOT AND SHOE CO.

Getty & Scott report business as brisk and orders for spring coming in rapidly. The firm are presenting to the trade an eight color hanger in oak frame, giving a view of the big factories and working men's homes in the distance, while there are pictures of Mrs. and Miss Classic, and printed in artistic lettering are the words "Home of the Classic Shoe for Women and Children."

Ames-Holden-McCready Limited, Montreal, are showing for the spring trade a line of footwear which they state

LA VALLIERE, PATENT FOREPART, RUSSIAN BROCADE QUARTERS, COVERED LOUIS HEEL, STERLING SILVER BUCKLE.

GUN METAL PUMP, WITH PANEL FRONT, JET ORNAMENTS, SPOOL HEEL.

PATENT COLONIAL, COVERED BUCKLE, SPOOL HEEL, MEDIUM RECEDE TOE.

BY GETTY & SCOTT, LIMITED

has been rendered their best ever by the addition of a number of new lasts in both the men's and women's showings. Amongst their new lasts is a woman's gunmetal button, carrying a fairly long recede toe, medium high heel, and is sent out in cravenette tops as well as all leathers. Taken all around, on their women's lines, they show a much wider range than they have ever done before and have a variety of pumps, some colonials with buckles and tongues, seamless pumps, with colonial trimmings and "foxed" pumps in various combinations, which are decidedly new and very

GUN METAL BAL., FULL ROUND TOE, ON "YALE" LAST—BY BRANDON SHOE CO.

effective. Very few oxfords are shown as this line is being replaced to a great extent by the foxed pump. They also have a seamless pump with a toe cap and a flat leather bow with perforated edges, which should be a winner. A number of button boots in tans and blacks, with leather and fabric tops are shown in their high cut lines. There are some pretty combinations in grey cloth and gunmetal leather. They are also showing an extensive line of misses', children's and infants' goods in the popular leathers, and to this line have added several new lasts which seem to be excellent fitters.

In their men's lines, the company are showing various colors in calfskins. The regular tan and London brown seem to predominate in these lines. They state that quite a demand is expected for mahogany brown in the men's lines and therefore have prepared several neat looking models of this class of leather. They have a number of fine lasts, a medium toe, and a medium wide toe carrying very low heels. Needless to state, they are also showing a full

line of recede toe shoes for men, although they are preparing for the large demand in the medium high toe and heel.

Showing Many New Lasts

Corbeil Limited, Montreal, announce that they are showing altogether 15 new lasts, in their spring samples. They have a fine line of men's footwear and have sampled strongly in receding as well as in modified high toes in mohogany tan, gunmetal, and patent leather, shown in bals, buttons and bluchers. Amongst their new lasts is a London toe bal carrying a seven-eighth heel. This is an extremely neat shoe and is turned out in all leathers. Another style they are showing which they are confident will sell strongly during the spring season is a medium round toe and medium high heel last in all leathers and patterns. But what they state is a particularly fine feature of their full set of men's welts is the large range of shoes on every last and style to retail at \$4.00. In these lines they have specialized, and are also turning out a nice assortment of boys' footwear which invites attention.

Patent and Gunmetal Will Lead

The Murray Shoe Co., Limited, London, are showing for spring three new lasts for men, and four new lasts for women, and believe that gun metal and patent will sell best in men's lines with a fair show of colors. The firm are of the opinion that the modified high toe will have the call in blucher and button with balmorals on the recede toe. In women's low cuts, colonials and pumps will prove the favorites in dull and shiny leathers and fancy fabrics. In high goods, buttons in dull and shiny leathers will certainly be the winners. The firm expect that fabric tops will have a strong demand. The range for spring, which the Murray Shoe Co. are presenting, is right up to the mark in style, fit and finish.

Speaking of business conditions, the firm say that they do not consider any person should be alarmed. While certain industries may have trouble to keep their help employed through the winter, the shoe and leather industry should have a revival, and the company add, "We think the retailers, who can foresee conditions in the leather industry, should lose no time in placing their spring orders. Leather has gone up, and will go higher. A few manufacturers who were far sighted enough to cover, can and are now selling at old prices. How long they can continue doing so, depends on the materials they have on hand, and the amount of orders they receive. After that, the short sighted

buyer will have to consider selling his goods at least a half dollar a pair over his competitor who bought early. We think that now is the time when the retailers should absolutely refuse to consider buying imported shoes. The people of this country require employment, and the shifting over from imported shoes to the domestic article will mean thousands of dollars for Canada."

Button Boots for Boys

The Star Shoe Co., Montreal, are offering to their customers three new lasts for the spring and summer season. One of these new lasts is a "College Girl" model carrying a medium round recede toe and an 8-8 heel. It is shown in a patent bal with a matt calf top, but is sent out in gunmetal calf, kid and mahogany tans. Another new line shown by them is their "Educator" last for misses, children and infants. They also have a woman's shoe that is on a very neat last. It carries a medium toe and heel. It is the opinion of the firm that a great many button shoes will sell in the boys' lines for next spring. Cloth tops will also go strong with the juveniles.

Strong Line of Samples

Jas. Robinson, Montreal, is showing a particularly strong line of samples for the 1915 spring season. He has added several new lasts to his lines, among which is a man's recede toe, full fitting last with low heel. This is a very attractive shoe, and Mr. Robinson states that toes will be a little lower in all lines. Another new last which he has installed is a full recede toe with a low flat heel seen in all leathers, in buttons, bals and bluchers. This is built pretty much along the lines of the other recede toe last, but it is a shade lower. In the women's lines a very wide range is to be seen, although changes are very few. The firm is this year featuring a medium price line of colonials and pumps in patent and gunmetal leathers, and have also added a lot of staple goods in medium price McKays. Pumps, Mr. Robinson declared, would be particularly strong, and a good showing of them is being made in the samples. Oxfords, particularly in the women's lines and to a large extent in the men's also, have died out, although there is still a fairly good call for the four button oxford in a man's shoe. A ladies' pump is shown of patent leather, D width, with a full toe and 14-8 heel and presents a very neat and attractive appearance. Another strong selling line is a man's swing last carrying a full toe with a medium heel. Mr. Robinson states that business for the spring season appears to be increasing and he looks for a fairly good season when things

start to pick up. He believes that the retailer buying early will make no mistake, as many manufacturers are quoting a general increase of ten and fifteen cents on all lines.

An Unusually Full Range

The Slater Shoe have installed several new lasts in their samples, and are showing an unusually full range for the next season. They have a new man's last which is built upon exceedingly neat lines. It is patent colt, whole foxed bal, matt calf top, carrying a low heel on a raglan last. The long narrow toe effect makes it appear very neat, and the Slater Shoe Co. consider it one of the finest offerings they have. Recede toes, medium and extreme, are seen among their samples, and all have the proper lines to make them prove big sellers. Another shoe on which they are relying for the spring trade is a man's medium high round toe with a fairly high heel. This shoe is sent out in all leathers. They also have a straight London toe with a low heel shown in mahogany tan, that is worthy of favorable mention. Another neat last has a wide round toe and fairly low heel. Numerous samples are also shown by them carrying cloth tops in all the favorite shades and fabrics. All the different leathers are being sent out by the company, and there are several samples seen in mahogany tan which seems to be gaining in favor in the opinion of the firm.

Snappy Lasts for Women

The Regina Shoe Co., Montreal, controlled by J. I. Chouinard, are showing a complete range of women's goods

PATENT BUTTON BOOT, BLACK CLOTH TOP, MEDIUM RECEDE TOE—BY BRANDON SHOE CO.

for spring, 1915. They have installed five new lasts. One of these is a woman's extra large last running in sizes from 2½ to 10. They also have a stage last which is of a pattern supposed to be the very latest style in Europe. This shoe

carries a 14-8 heel. Another model seen in the Chouinard samples is a growing girls' shoe with a round medium toe and fairly high heel. They are also sending out some fine

PATENT PANEL BUTTON BOOT, GYPSY SEAM, COVERED CUBAN-LOUIS HEEL, KID LINED. BY GETTY & SCOTT.

samples in men's footwear in a range running from recede to high toes. They have three new lasts, among them being a new recede toe and low heel style, and a medium toe last with a medium size heel. This shoe is seen to very good effect in patent colt with a dull top finish. Another new last is a man's medium recede toe, mahogany tan bal with leather facing and a fawn colored cravenette top. This shoe carries a low heel. It is the opinion of the firm that oxfords will sell fairly well during the spring, as they state that there have been many calls for it during the present sorting season, and a continued demand is looked for next spring. Fancy tops in women's high class shoes are also shown to a considerable extent by the Regina Shoe Co., and it is expected that they will sell well with a certain trade. The principal colors seen are black and gold, black and light blue, and other such combinations. The firm's travelers have all left for their respective territories.

Several Handsome Models

The Wayland Shoe Co. Ltd., of Montreal, who specialize in men's goods, announce they have four new lasts for the

PATENT LEATHER CASTLE PUMP, BROCADE QUARTERS, CUBAN-LOUIS HEEL, MEDIUM RECEDE TOE.

spring and summer season. One of them is a new London straight toe carrying a low heel. It is a very attractive shoe and the company feel it will be a strong seller. Another new line which will undoubtedly have a good call from men

who desire a comfortable shoe is their "Tramp" last. This is a very broad toed shoe with a low heel. Another of their new models is a long extreme recede medium wide toe last with a low heel. This shoe presents a duck bill effect, and it certainly is built upon very neat lines. They are also showing a French last with a square medium high toe, very long quarter, and medium heel. The majority of these lasts, the company believe, will prove good sellers with the city trade. The large demand, it is expected, will be for the medium high toe and heel shoe. This has proved very popular with patrons of the firm this past season, and it is pretty certain that it will continue to have the call next year. A fine showing of cloth tops is being made by the Wayland Shoe Co., who state that the demand for this type of footwear is increasing all the time.

The Aylmer Shoe Company are showing some very attractive samples for spring on medium recede toes, having installed several new lasts. There are a number of offerings in both button and blucher, some with cloth tops, and the line is unusually complete. The firm have put in a number of new lasts and believe that the moderate recede toe will be the best seller for spring. They report that orders are coming in very well.

Faults on Both Sides of the Trade

"I think that faults are on both sides of the shoe trade," remarked a leading business man, the other day, "one shortcoming on the part of the manufacturers is that they do not, in many instances, deliver goods when they promise, and yet a retailer will frequently write in and receive no satisfactory answer from the firm. Then one day, along will come the consignment, with no explanation regarding the delay. Now I think the least a shoe manufacturer can do when he cannot get an order out on time, is to write the retailer before hand, telling him frankly the reasons of the delay, and pointing out specifically when the goods may be expected. Some manufacturers do this, but I hear that too many neglect this important consideration and they seek to rush in belated orders, hoping that by the policy of silence, they will get them accepted.

"On the other hand, there is a great deal of fault to be found with a number of retailers, who will accept a draft and yet not meet it when due. The wholesaler writes to the dealer, asking for an explanation, and none is forthcoming. Perhaps the drafts go back again and are returned unpaid. This is very annoying, and although the manufacturer may write several times, the man at the other end of the line ignores his request for an explanation. How much more pleasant business would be if the retailer, when he cannot meet his paper, would sit down a day or two beforehand and frankly tell the wholesaler the reasons why he is unable to settle and give some information regarding what he can do in such and such a length of time or what amount he can pay. It is very annoying to have drafts returned day after day without any word. Surely some courtesy is due the wholesaler.

"Business is exasperating enough at all times and under all conditions, particularly during the present troublesome period, and anything that will help to smooth the way and make more agreeable the daily intercourse between the wholesale and retail trade should be carried out. Most men in business do not mean to be impolite, inconsiderate or neglectful. The cause of the trouble is thoughtlessness, and dilatoriness. It is only when certain people are "yanked up" by having somebody else treat them in the same manner they are treating others, that they realize the seriousness of their own defects. It then brings the lesson right home to them. Trade journals can do much to encourage a happier relationship between all branches of the trade, and I am certain that they will continue to do good work."

BAKER & COMPANY

WHOLESALE AND RETAIL

BOOTS AND SHOES

OTTAWA, ONT.

The Shoe and Leather Journal,
Toronto, Ont.

Dear Sirs:-

I have thought several times of writing you to ask that you suggest to your advertisers that they use more prices in their ads. If they cannot give the selling price on account of not quoting the same price to all their customers, they could, at any rate, give the price at which the shoe is generally sold. Personally I know it would often make the ads. more interesting to me. For instance, after placing my orders for Spring I find I have not provided for a pump to sell for \$2.50 or a certain line of shoes to sell for \$4.00.

In looking through the Journal I often notice shoes advertised by firms with which I am not familiar and wonder whether it is a priced shoe that would meet my requirements.

Respectfully yours,

(sgd) BAKER & COMPANY

Conditions Point Steadily to Increased Cost of Shoes

Orders for Spring Goods Should Be Placed as Soon as Possible—Many Prices Are Subject to Instant Change—How the Leather Market is Shaping—A Review of the General Situation and Its Tendencies.

A leading Ontario manufacturer sends the following information to the *SHOE AND LEATHER JOURNAL* which he adds is a fair and calm review and summary of present conditions in the shoe and leather line and worthy of careful perusal by the trade.

The shoe industry is so large in its output and widespread in trading area that the report concerning one section may meet contradictions from those located in other manufacturing centers. Moreover, as the specializing of grades has become a feature which is more or less advantageous, that, too, may account for the difference in stated conditions. Reports, therefore, concerning the men's shoe output, even taken in a general way, might not agree with the conditions of some making similar grades, and yet be true. So to-day men's fine and medium fine street footwear orders are keeping the factories busy, although it is allowed that the situation will change soon if additional business is not obtained.

Heavy Shoes Costing More

The heavy side leather working men's shoe is costing more and those concerns which countermanded orders are now paying an advance, in fact there is some doubt now about getting just the supply needed. There are still many buyers who have not yet placed orders for this grade, or for boys' and youths' goods of a similar quality, but manufacturers are working as best they may, letting the future take care of itself.

Regarding ladies' footwear, the factory conditions run from dull to one of satisfactory activity, whatever that may mean. Still the market must be below what it was a year ago, as certain indications well known to the shoe men point that way. There is quite a call for cheap shoes in anticipation of rather dull times ahead. The trade has no surplus of work, but daily receipts may total about the same as last year's business.

Manufacturers of misses' and children's shoes report something doing all the time and that is about all they do say. On the presumption that merchants reflect fairly accurately the state of business at their command, the conclusion is that this branch of the shoe trade is, at least, not dull.

Hide quotations continue their upward course, and the same statement regarding the slow but steady shrinking of the supply makes its regular weekly visit to this market. Shipments from South America were expected to be sufficient to counterbalance any shortage which would cause record prices, but the commercial conditions in those southern hide centers do not promise the immediate relief which the large herds are capable of in both hides and meat, to say nothing of the limited facilities of shipping.

Figures are beyond the expectations of packers, which is evidenced by sales of September, October and a few of November pull offs.

Native steers have been the most active, selling at 21 to 22 cents, while other grades follow along with a comparative strength nearly equal in every way.

With all this bullish atmosphere enveloping the hide situation, it is a notable fact that sales are small, and largely confined to tanners not over and above prominent, for, as far as reports can be relied upon, the big buyers are not contracting, at least, in their usual liberal manner.

Conservatism is Conspicuous

This is one of the singular features which has marked the trading in hides, leather and footwear since the war began to boom prices and influence the mercantile community

to buy in anticipation, and the further a merchant's needs are from raw materials the more conspicuous is conservatism manifested.

While this indifferent attitude is contrary to precedent, it is one which is experienced every day in this market, as sales will attest; therefore, leather dealers are moving along in a quiet way, apparently as pleased to make sales as though replacement were easy and prices of raw stock subordinate instead of arbitrary in the trading.

It should not, however, be lost sight of, that hides and skins are in short supply, and that an early peace would not bring immediate relief. Therefore, materials for shoe stock will rule high for some time and certain importations be scarce at any price.

Aside from a few, the sales of sole leather are not individually large, although the steady run of trading brings the total up to good figures.

Hemlock is selling at 32 cents, and while they claim to have got the top price, it was for small lots.

The largest transactions were effected by dealers in union leather. One purchaser took all he could get at terms not mentioned and paid for the same upon delivery.

Oak backs at 48 cents would not be apt to attract large orders.

The upper leather market is busy where stock in demand is to be obtained, calf skins are fairly well cleared out by some while others still have stocks more or less off grade and small.

Purchasing Close to Needs

There is no great demand for side upper leather, some selling every day, but not at all in accord with what should be needed, or reports arouse. Buyers listen to all that tanners have to say, and then purchase close to their needs.

This season being good for bright stock, the sales of patent calf are probably more than will be promptly filled. Patent sides are moving, excepting the heavy weights, of which there is some accumulation.

Dealers in glazed kid report a much improved condition, the demand moving up into the better grades. From 18 cents down, the market is well sold up. It is gratifying to the trade to see a constantly growing call for the finer skins, and it will be surprising if this stock is not soon again the leader of all light dressy shoe stocks, which position it held up to within 10 years ago.

Have Taken Larger Quarters

The Amherst Boot and Shoe Co., Limited, have purchased two splendid properties on Granville street, Halifax, on the remodelling of which they have spent a great deal of money. These buildings give them one of the best equipped boot and shoe warehouses. They have several fine rooms, covering a floor space of 12,600 square feet. Particular attention has been paid to the office and sample room accommodation, the material used in finishing them being oak and Douglas fir, with hardwood floors throughout. The lighting is so arranged that it is immaterial whether it is day or night, when samples are shown in the sample room. F. O. Mumford is the energetic Halifax manager of the company.

Don't be afraid to begin at the bottom. It is the safest way to climb.

SHOE NEWS IN PARAGRAPH

J. Churchill, shoemaker, of Barrie, Ont., has assigned. Charles Dark, shoemaker, of Lethbridge, has discontinued.

Bert Ringler, shoe dealer, North Battleford, Sask., has assigned.

The Parlour Shoe Store has recently been registered in Montreal.

Arinand Chenuz has commenced a shoemaking business in Cranbrook.

John L. Gibb & Sons, dealers in boots, shoes and harness, of Magrath, have assigned.

Jas. Valentine, of Valentine & Martin, Waterloo, Ont., was in Toronto on business last week.

F. C. Young, of the Alberta Shoe Manufacturing Co., Redcliffe, Alta., was in Montreal last week.

Several new machinery installations have been made recently in the Scout Shoe Factory, Montreal.

A. Woolf, boots and shoes, Calgary, suffered a fire loss last month. He has assigned to E. A. Dagg.

Amos Cooper, shoe repairer, St. Thomas, Ont., has removed into new quarters on Talbot street.

W. G. Parsons, of C. Parsons & Son, Toronto, is on a business trip to Boston and other eastern cities.

Ralph Locke, of Dufresne & Locke, Maisonneuve, spent several days in Toronto last week on business.

The O. B. Shoe Co., Drummondville, Que., are completing the installation of machinery in their factory.

Chas. Campbell, of the Boston Last Co., Richmond, Que., was in Montreal the latter part of last week.

R. R. Macaulay, secretary of the Miner Rubber Co., Montreal, was in Toronto last week on a business trip.

C. L. Owens, of the Royal Shoe Co., Toronto, was in Boston and other eastern cities on a business trip recently.

Chas. Albee, forman of the cutting room of Ames-Holden-McCready, Limited, Montreal, was in Boston last week.

W. J. Detweiler, of Sault Ste. Marie, was in Toronto for a few days last week calling upon the members of the trade.

G. H. Ansley, manager of the Perth Shoe Co., Perth, spent a few days in Toronto last week calling upon the trade.

Fire broke out in the store of H. Leff, Port Arthur, recently and did much damage to the stock of shoes and dry goods.

Geo. P. Balfre, Canadian manager of the Chicago Tanning Co., Montreal, has returned from a trip to Ontario buyers.

Bert Packard, of L. H. Packard & Co., Limited, Montreal, has returned from a business trip to New York and Boston.

Geo. H. Grills, formerly salesman for J. & T. Bell, Montreal, will represent the Star Shoe Co., Montreal, in Eastern Ontario.

The Beaver Tire and Rubber Co., Limited, has been organized in Calgary, Alta., with a share capital stock of \$550,000.

Harry McKellar, of the Berlin Shoe Manufacturing Co., Berlin, Ont., was a visitor to Montreal and Quebec during the past week.

Among the firms which have recently received contracts for making "army shoes" are Valentine & Martin, Waterloo, ten thousand pairs; John McPherson Co., Hamilton, ten thousand pairs; Relindo Shoe Co., Toronto, three thousand

pairs; the Slater Shoe Co., Montreal, and several other factories.

H. Megginson, shoe dealer, of Sault Ste. Marie, was in Toronto recently on a business trip and called upon many old friends.

W. F. Martin, sales manager for the Kingsbury Footwear Co., Montreal, was in Toronto and London last week on business.

A. R. Clarke, of A. R. Clarke & Co., Toronto, has returned from a business trip to the New England shoe and leather centres.

Fire broke out recently in the shoe store of J. W. Gingras, 3351 St. Hubert street, Montreal, and did considerable damage.

Chas. N. Candee, of Gutta Percha and Rubber, Limited, Toronto, has been on a business trip to Regina and other western points.

J. J. Connor, western representative of McLaren & Dallas, Toronto, left last week on an extended business trip to the Prairie Provinces.

J. Gordon has discontinued his boot and shoe and men's furnishing business in Diamond City, Alta., and is moving his stock to Bellevue, Alta.

J. Harris has taken charge of the cutting room of Jackson & Savage, Montreal. He was formerly connected with Jas. Linton & Co., Montreal.

H. C. Keith has taken a position as fitting room foreman of the Hartt Boot and Shoe Co., Fredericton, N.B. He succeeds Daniel Toomey.

J. S. Ashworth, Canadian manager for Sir H. W. Trickett, Limited, has returned to Toronto after a visit to New York and other eastern cities.

S. G. Amero, manager of the London branch of the Kaufman Rubber Co., was among the many visitors to Toronto during the Exhibition.

J. J. Ambrose, formerly window dresser of Geo. G. Gales & Co., Montreal, has taken a similar position with W. H. Scroggie, Limited, Montreal.

Oscar Dufresne, of Dufresne & Locke, Maisonneuve, is at present one of a party of autoists making a short tour of the American cities in the east.

Messrs. R. M. Smith and James Grant, representing the Slater Shoe Co., Limited, of Montreal, in the West, left for their respective territories last week.

Roberts & Van Lane Shoe Co., Limited, of Brantford, who have been in business in that city for several years, have assigned to C. S. Scott, of Hamilton.

Wm. Davidson, formerly of the Owl Shoe Store, and the White Shoe Co., Toronto, has taken a position in the shoe department of C. C. Begg, Collingwood.

T. J. Winn, formerly with the Relindo Shoe Co., has been appointed foreman of the cutting department for the Blachford Shoe Manufacturing Co., Toronto.

Dufresne & Locke, Maisonneuve, have installed several new machinery parts in their factory which they expect will be busy from now on with the new season's run.

John Hutchison, manager of the Penetanguishene tannery of the Breithaupt Leather Co., and wife, have been enjoying a holiday in Toronto, Montreal and Quebec.

J. Degan, who was formerly with James Linton & Co., Montreal, as foreman of the bottoming room, has taken a similar position with Jackson & Savage, Montreal.

Harold Pearson, who covers the district between Toronto and London for Ames-Holden-McCready, Limited, Toronto, is recovering from an attack of typhoid fever.

M. L. Miller, general manager and director of the Chicago Tanning Co., of Chicago, was a visitor at the Canadian office of the firm in Montreal this week. Mr. Miller

stated that, considering the unsettled conditions prevailing throughout the country, business has been fairly good, and he looks for a continuance of the present demand.

Arthur Blackwell has opened an up-to-date shoe repair shop at 383 Woodbine avenue, Toronto, and is already doing a good business. He is carrying a general stock of findings.

G. H. Taylor, Ontario representative of the Kingsbury Footwear Co., Montreal, has removed from Hamilton to Toronto, where he is now residing at 1268 King street west.

F. H. Ward, vice-president of Ames-Holden-McCready, Limited, Montreal, and A. L. Johnson, of Winnipeg, a director of the company, were in Toronto last week on a business trip.

F. E. Greaney, the Maritime Province representative of the Star Shoe Co., Montreal, recently resigned his position with the firm and has been replaced in that territory by F. W. Laskey.

F. H. Guinivan, of the Walk-over Shoe Store, Montreal, which will in November open out a new shop on Yonge street, which is now being built, was in Toronto last week on business.

F. W. Hill, who has been in the repair business in Ottawa during the last two years, has opened a shoe store at 1091 Bank street, Ottawa. He is also retaining his repairing business.

N. Olver, formerly with Eli Goldin, Toronto, has taken a position with the United Shoe Machinery Co., Toronto, and will assist Carl Walters in looking after the shoe repair trade interests.

E. E. Hutchison, secretary of J. Eveleigh & Co., Montreal, and wife, spent a few days in Toronto recently, the guest of his brother, L. B. Hutchison, local manager of the Kaufman Rubber Co.

R. A. Ellison, formerly with the Perth Shoe Co., Perth, Ont., and Brockton factories, has taken a position as foreman of Alberta Shoe Manufacturing Company's fitting department at Redcliffe, Alta.

John Brotherton will shortly remove into his handsome and well appointed shoe house at 578-80 Yonge street, Toronto. The building is a very attractive one of brick, three storeys high with basement.

Victor Vaisey, of Toronto, has taken a position with the Walk-over Shoe Store, Montreal, and had charge of the excellent exhibit of Walk-over shoes at the Canadian National Exhibition, Toronto.

E. W. McTear, eastern representative of P. Jacobi, shoe store supplies, Toronto, has gone on an extended business trip to the lower provinces, while W. D. Fox is now on a tour through north-western Ontario.

The Riverdale Shoe Co., Toronto, who already have a modern shoe repair outfit consisting of a U. S. M. Goodyear equipment, are making a second installation, having recently placed an order for a U. S. M. outfit.

The Cook-Fitzgerald Co., London, have received a nice contract from the government for army shoes and are now busy turning them out. The firm feel that they are in a position to give "the boys" something really worth while.

James Patterson, Montreal, who runs a high-class shoe store on Mansfield street, is adding machinery to the already up-to-date Goodyear repair system which he operates. Mr. Patterson does one of the largest custom shoe trades in Canada.

The Webster-Charles Co., of Montreal, have retired from the wholesale shoe business in that city and merged their interest with the Cobourg Felt Co., Limited, manufacturers of felt footwear, which company they have recently formed.

James Linton & Co., shoe manufacturers, of Montreal, are retiring from business. They will finish up all the

orders they have at present. The principal reason for this widely known firm withdrawing from the trade is the ill health of Albert Linton, president of the company.

Frank Dunlop, who conducts an up-to-date store in Sydney Mines, Cape Breton, has just completed installing a sixteen-foot U. S. M. Goodyear repair outfit, with a full equipment of accessories for the establishing of a first-class shoe repair shop.

Mr. Desborough, who has been in charge of the making room of the Berlin Shoe Manufacturing Co., has taken a position with the J. W. Hewetson Co., Brampton, and will look after the turn department. He has been succeeded in Berlin by Harry Watkins, late of Rochester.

L. G. W. Tallamy, of Vancouver, who is a member of the staff of the Consolidated Rubber Co., was married recently and many friends are extending their congratulations. Mr. Tallamy was presented by the employes of the

GOOD RECORD IN WHOLESALE LINE

From office boy to the head of a large wholesale house employing eight travelers and doing business in all parts of Ontario, sums up, in short form, the career of Hugh White, head of the White Shoe Co., Toronto, successors of the firm of Garside & White. Mr. White comes of a shoe-making family, his father, John White, being for some thirty-four years shoemaker for the Ontario Government in Central Prison, Toronto, retiring only a few years ago. As a boy Hugh White entered the employ of L. J. Beemer & Co., Toronto, which afterwards became the firm of Garside, McKellar & Dallas. The former later withdrew and

Mr. White continued with the house three years as manager. When Mr. Garside again entered the wholesale line, about eighteen years ago, Mr. White joined him and the name of the house was Garside & White. This partnership continued until the fall of 1912, when the former retired, and the business has since been conducted with gratifying results by Mr. White, together with the valued assistance of many members of the staff who have been for years in the service of the establishment. During the past month the name was changed to the White Shoe Co., at the head of which is Mr. White, who has been actively connected with the footwear line for some twenty-eight years and is widely known to the trade.

Vancouver and Victoria branches, with a handsome music cabinet.

Trade conditions in Montreal factories continue to be quiet, although a general increase of interest is noticed this last few days, due probably to the more encouraging news from Europe. The manufacturers seem to have more confidence and a large number of salesmen have left for their territories.

During the progress of the Canadian National Exhibition many members of the shoe trade visited Toronto and the wholesale houses were kept busy. Buying was, on the whole, satisfactory and the general tone of the retail shoe business is picking up. Most of the dealers look for a good fall turnover.

George Nickle, formerly proprietor of the Yale Shoe Store and the Nickle Boot Shop in Winnipeg, has purchased the extensive business of the Foster Shoe Store in Calgary. Mr. Foster has been in business in that city during the last four years and will leave shortly with his wife on an extended trip to California.

Several Montreal factories have received repeat orders for Army shoes from the Canadian Government, among them being Ames-Holden-McCready, Limited, and the Tetrault Shoe Manufacturing Co., who secured orders for approximately 25,000 extra pairs each, and these are now being turned out as fast as possible.

A. A. Durkee, of the A. A. Durkee Co., Limited, shoe manufacturers, Truro, N.S., has been ordered to Quebec, where the Artillery Corps, in which he is a captain, is being mobilized. Word has been received that he will leave for the seat of war at once. Mr. Durkee is an experienced soldier having seen active service in the Boer War.

A recent despatch from New York says: The shoe trade has been given a great impetus because of huge orders for shoes for the armies of Europe. It is estimated that about 15,000,000 pairs of shoes a month will be needed for Europe's armies and civilian population in excess of best possible production abroad, and that orders for millions of pairs of shoes have come or are coming to this country.

G. J. Plante, of Montreal, who represents the Blachford Shoe Manufacturing Co. in Quebec, was meeting his old friends and customers in Sherbrooke during the Eastern Townships Fair. G. D. Desautels, of Montreal, is representing the Blachford Company in that city. The company are carrying several of their popular selling lines in stock and have established an Order-Now department.

R. W. Allen, who is on the traveling staff of C. Parsons & Son, Limited, has returned from a business trip to Port Arthur, Fort William and Winnipeg, where he was demonstrating the merits and efficiency of the Gritzner hand soling sewing machine to the trade, the members of which he found greatly interested in this machine, which is giving splendid satisfaction in many shoe repairing and retail establishments.

The St. John Exhibition which closed last Saturday was, considering the general business conditions, very successful. Among other firms was the United Shoe Machinery Co., of Canada, who put on the largest individual exhibit, showing the process of making Goodyear welt shoes, from fitting of the uppers, through to the finishing operations, and judging from the number of observers it was evidently one of the most interesting features of the Fair.

J. H. Porter, for the past few years manager of the shoe department of the Robert Simpson Co., Toronto, has resigned and the department is at present in charge of H. S. Bond, who has been with the company for nearly a year. He was formerly manager of the Slater Boot Shop, Toronto. D. McTavish, formerly with the T. Eaton Co., Winnipeg,

has taken an important position with the Simpson shoe department.

Among the shoe manufacturers who were in Toronto recently were N. Tetrault, of the Tetrault Shoe Manufacturing Co., Montreal; J. E. Warrington, of the John Ritchie Co., Quebec; John Perkins, of Duchaine & Perkins, Quebec; A. L. Dupont, of Dupont & Frere, Maisonneuve, Que.; E. E. Donovan, of E. T. Wright & Co, St Thomas; Alex. Brandon, of the Brandon Shoe Co., Brantford; F. L. Wagner, of the Aylmer Shoe Co., Aylmer, Ont.; E. A. Medcalf, of the Nursery Shoe Co., St. Thomas, Ont., and others

The last two editions of "The Dominion," which is issued semi-monthly by the Canadian Consolidated Rubber Company, are certainly worthy of special mention. On the cover is an artistically colored map of Canada and the contents of the publication are bright, instructive and entertaining. The illustrations are happy and humorous, particularly those with reference to the recent convention, appearing under the heading "Mainly about Ourselves." On the back appear colored reproductions of the flags of Great Britain and her allies, which impart to the edition of August 15th a patriotic appearance. The September 1st number contains many timely articles of an inspiring and loyal character, and business confidence talks, and gives illustrations of the various factories of the company at Montreal, Berlin, St. Jerome and Port Dalhousie. One catchy phrase is "Do not wait for the boss to crank up—be a self-starter."

T. H. Rumford, for several years on the traveling staff of Blachford, Davies & Co., Toronto, has purchased the business of T. W. Beamish, Georgetown, Ont., and is looking after his new interests in that town. His ground in the Owen Sound-Wiarton district is now being covered by J. M. Pirritte, Toronto, for Blachford, Davies & Co. Several other important changes have also taken place with the latter firm. A. G. Saunders, of St. Thomas, formerly with John Lennox & Co., Hamilton, has joined the staff and is now covering the Niagara peninsula, while S. J. Edmondson, their Ottawa representative, who has sample rooms and offices at 193 Sparks street, will look after Ottawa city trade and nearby towns and will have associated with him M. E. Franklin, late with the A. B. C. Distributors, Toronto. A. E. Hogarth, of Oshawa, who has had several years' retail experience has taken charge of the sample room of Blachford, Davies & Co., and E. M. Maier, formerly with L. D. Ross, a leading jobber in Rochester, N.Y., has entered upon his new duties in the stock room.

RETAILERS SHOULD NOT DELAY ORDERS

"It seems to us that shoe manufacturers need have little concern at this time over cancellation of orders for footwear, inasmuch as any orders already placed cannot be duplicated even at considerably higher prices. Any retailer who cancels an order now will have to come back and pay an advance for the goods later on," says a leading authority who has carefully studied the situation.

"There is scarcely an article going into the manufacture of footwear that has not advanced in price tremendously during the last thirty days. The advance is not confined to the principal materials used, such as leather and cloth, but also to the findings, blackings and adhesives. We believe any shoe manufacturer who has not booked large orders for the coming season is particularly fortunate as he will have the opportunity to solicit them on a price basis more nearly commensurate with the present cost of materials than if such orders had been taken earlier in the season before the sudden inflation in value of materials had taken place."

Back Up Your Ads With Special Window Displays

Double Pulling Power Secured—Rarely Does Reader of Advertisement Go Right Inside the Shop—He Looks First in the Window to See the Display That Is Made—Follow the Ribbon

To a certain extent window dressing and advertising are synonymous; they are both used to get customers into the shop. The one attracts the attention of the passer-by—viz., the person whose business actually brings him, or her, past the shop—the other secures the interest of someone who perhaps in the ordinary way would not pass the shop in the course of a twelvemonth, says a writer in the *Boot and Shoe Trades Journal*.

It is very rare that a person, having been attracted by a newspaper advertisement, goes right inside the shop. The usual mode of procedure is to go and look in the window, expecting—and rightly so—to see the advertised article on view. This is where many advertisers fail. They write good copy, they succeed in interesting the reader, create a desire for further investigation, yet fail to secure a customer for the following reason:—The window is neatly dressed, the lines which are being advertised are there, but they bear no distinguishing mark of any description. A practical bootman would be able to pick the boot out of the assorted display if he had read a description of it, but what about the ordinary individual—the one you are desirous of interesting? He comes along to look for a certain boot; he cannot pick it out because there are so many similar on view.

As these articles are written from an advertising point of view, I do not wish to open any argument respecting the relative value of special displays, etc.; but for those retailers who have never attempted anything out of the ordinary I should like to suggest that they give the following very earnest consideration. What I am advocating is the result of successful experience—it is not purely theoretical.

Make a Special Display

To those who are in the habit of dressing windows, year after year, in the same style—a miscellaneous collection of footwear—let me suggest a special display. In a short time the quiet between-seasons period will be with us, and no power on earth can induce the public to spend money. This is the time of year to set the seed for a rich harvest. A retailer once said to me during a quiet spell, "Oh, it does not matter what you show; it's just the same; the public are not buying footwear." Personally, I do not find favor with this don't matter-what-you-show idea. This is the time the public are looking round; they don't wish to buy—at present—but there is a time coming when they will require, say, a good winter boot. Does it seem at all feasible that a man is going to wait until a snowstorm comes along before he begins to look round? No; when the snow does come, in nine cases out of ten he has already decided where to go to buy his winter footwear.

To those who intend giving my idea a trial the best time for a winter display would be in October. Decide on a good boot—one that you have every confidence in, and, if possible, get one that your competitors do not stock. Make it a specialty, and give it a window all of its own. The most successful season (winter) I ever had whilst managing a shop was due to the following scheme:—I chose a chrome Derby, standard-screwed. I got the maker to send me a pair of uppers, a coil of wire, insoles, and outer-soles. Then I had five large cards printed, white lettering on a black background. No. 1 dealt with "The Ideal Winter Boot"; No. 2, "The Uppers"; No. 3, "The Insoles"; No. 4, "The Standard Screw System"; and No. 5, "The Outer Soles." Each card

gave concise information respecting each section of the boot. My window was draped with black and white muslin; then I had three pairs of the completed boot, so arranged that every angle could be seen.

Focusing Attention on One Boot

The display was most attractive; the attention of the public was focussed on this particular boot. Although I used the Press pretty freely, advertising the display, my trade did not instantly jump up; but I was content, feeling perfectly convinced, through listening to the conversation of the people who daily gathered round, that my effort would be rewarded. I ordered a good supply of this line, and later, when the weather turned wintry, I had a real good time. I had customers six months after, asking for that particular number—I gave the boot a distinctive number. Of course it was on view all the winter—not isolated, but always in a prominent position.

Another way of working, in conjunction with newspaper advertising, and where the window is dressed ordinary, is the ribbon scheme. Get a small poster printed—or, better still, if you can do it—cut the letter yourself (like you see on grocers' windows), and paste a sentence on the window, after this style:—"The Boot we are Advertising"; "Let Your Eye Follow the Ribbon." Paste a piece of ribbon about half an inch wide on the window, and fasten the other end to the shoe to which you wish to draw the attention of the prospective customer. In addition, paste a "pull" of your advertisement on the window.

There are other ways of working the advertising and window display in conjunction with each other. There can be no hard and fast rule, as it is originality that pays; but the most important point to remember is, make sure that what you are advertising is in the window; also that the public can readily find it; otherwise you not only have that particular advertisement discounted but also your future efforts. Where a person has once been disappointed he will in future ignore any appeal you may make.

Travelers Elect New Officers

At the convention of the United Commercial Travelers, Grand Council for Manitoba, Saskatchewan and Alberta, held in Brandon recently, the following officers for the ensuing year were elected: Grand Councillor, T. A. Colquhoun, Brandon; grand junior councillor, S. S. Savage, of Calgary; grand past councillor, R. M. McGowan, Winnipeg; grand secretary, F. C. Smith, Regina; grand treasurer, J. J. Murphy, Winnipeg; grand conductor, W. C. Bell, Regina; grand page, W. S. Clay, Edmonton; grand sentinel, James Gillespie, Moose Jaw. Grand executive committee—F. H. Agnew, Winnipeg; V. W. Libby, Calgary; H. W. Laird, Regina; A. A. Williams, Saskatoon. Representatives to Supreme Council at Columbus, Ohio—F. J. C. Cox, Winnipeg; O. F. Chapin, Calgary; R. M. McGowan, Winnipeg. The next convention will be held at Saskatoon, Sask.

"A successful man," said Elbert Hubbard to the retailers, "is a man who can make two grins grow where there was only a frown before."

"In the shoe business, as in every other business, truth is an asset, a lie is a liability."

Making Life's Daily Walk Pleasant and Comfortable

The name of Dr. W. M. Scholl will always be associated with the treatment and care of the feet. This widely known orthopedic foot specialist has devoted many years of study, research and skill, until to-day he stands at the head of his profession. Thousands who in years gone by have suffered from corns and callouses, bunions and large joints, fallen arch, ingrowing toe nails, perspiring feet and other ailments, to-day sound the praises of Scholl in all quarters of the continent. The Scholl Manufacturing Co., Limited, of Toronto, New York city, Chicago and London, this year made a splendid display in the Process Building at the Canadian National Exhibition. Here, demonstrators were kept busy explaining to many inquirers the benefits and advantages of the foot easers, arch supports or appliances of this enterprising company. Among the new things seen this year is Scholl Toe-flex, a soft, velvety wedge device, worn between the toes to exert correction. Then there are Scholl's Pedico Foot Soap, Scholl's Wenal Lubricant Ointment, Pedico Corn Salves, and Walk-Strate Heel Treads as well as Foot Dok, Fixo Corn Plaster, Foot Powder, Absorbo Pads

and many other appliances and preparations of the company. Scholl's devices and remedies for the foot make walking comfortable, easy and pleasant for those suffering from flat foot, weak arches, tender or tired feet and other ailments. There was a neatly equipped fitting room in the booth, and a large business was done, while over 40,000 booklets of Dr. Scholl on "the care and treatment of the feet" were given out, together with free samples of Foot Dok.

Scholl's Foot-Eazer, Scholl's Tri-Spring Arch Support, as well as the new Air-Lite Arch Support, which is strong, yet very light and airy, were exhibited and highly praised by many persons who have used these well-known devices for many years and are daily recommending them to all suffering from flat foot or fallen arch. The exhibit at the Toronto Exhibition was in charge of G. W. Greenwood and Ross Cowan, of the Toronto branch. They were kept busy demonstrating, fitting and selling, and during the big Fair Dr. Scholl's orthopedic appliances enjoyed a large sale and won a wider measure of appreciation than at any previous exposition. Owing to limited space we are unable to show

a photo of their booth at Ottawa Exhibition, which was in charge of R. L. Kimber, the Canadian manager, and W. J. Mitchell.

A snapshot taken at the Long Branch training camp near Toronto is presented on this page. It shows two Scholl specialists outfitting members of the 48th Highlanders. The firm furnished in all 2,500 pairs of Foot-Eazers to the British and Canadian forces. Owing to additional weight and extra walking, these men are insuring their feet against all possibility of them playing out.

New Tennis Shoe Price Lists

New price lists on tennis and outing shoes for the coming season have been issued and the selling of these goods started this week. The season will continue until the 31st of December next. The prices are about the same as have prevailed during the past summer, with a few cents advance on certain shoes. After January 1st next there will be an increase of five cents on each pair, which will amount on the average to about seven per cent. The past summer was a particularly good one in sporting footwear and factories are looking forward to a large placing order business.

Live Lot of Shoe Merchants

There has recently been issued a neat booklet entitled "Brockville, the City of the Thousand Islands," which gives many reasons why Brockville is a good city in which to reside and manufacture, and at the same time a review is furnished of a number of the leading business concerns of the town. Among the prominent business houses in the wholesale line is that of the J. A. Johnston Co., which has been established for seven years. J. A. Johnston is the proprietor, his experience in the wholesale and retail shoe business extending over thirty-five years. Associated with him is his son, G. Elmer Johnston, who is the office manager. The firm have two warehouses at 20 and 24 Buell Street, and handle a big assortment of Canadian, British and American footwear, rubbers, gloves, mitts, etc.

Among the retail shoe stores to which appreciative reference is made, are those of D. W. Downey, E. J. Kelly, Robert Neill and H. W. Gilhooly. Mr. Downey occupies a double store, fifty by one hundred feet deep and has been in business in Brockville since 1877. He served the people as alderman for fifteen years and was mayor in 1897 and 1898. He was also a member of the Separate School Board as well as the Light and Power Commission, and was the first president of the Brockville Board of Trade upon its organization. E. J. Kelly is another shoeman with public spirit who was elected a member of the town council in January last and is serving on the Board of Works and other committees. The

Neill Shoe store has been established for twenty years in Brockville and is under the capable management of W. J. Clements. Special attention is paid to mail orders, a new feature added to the house recently and all charges of shipping to out-of-town customers are prepaid. The store conducted by H. W. Gilhooly is an old established one and has been carried on by its present proprietor, who had had an experience of twenty years in the shoe line, since 1908. Brockville shoe merchants are certainly to the forefront in the mercantile interests of the town.

London Market Fair Postponed

Owing to conditions in England and Europe on account of the war, Mr. John T. Day, publisher of the London Shoe and Leather Record, and manager of the London Shoe and Leather Fairs, has decided to postpone the Fair scheduled for October 5th to 10th until conditions become settled. Mr. Day's action is in deference to the trade, at sacrifice of personal interests, and should be fully appreciated. The London shoe and leather fairs have been held successfully each year for nearly twenty years under the management of Mr. Day. The date of the next Fair will depend upon conditions abroad and will be announced as soon as decided upon.

Thorough Insight Into the Work

Leonard W. Hanson, manager of the Toronto branch of the United Shoe Machinery Co., has been in the service of the company for some fourteen years, and has also had an extended experience in practical shoemaking, with a number of the factories. Born and educated in Lynn, Mass., he secured his first job in the shop of Dickenson, Fisher and Lane, shortly after the big fire in that city. There he remained for four years and was then appointed foreman of the finishing department of L. S. Johnson & Co., Lynn. He was afterwards superintendent for the

Cushion Sole Shoe Co., Lynn, and also filled a similar position with the Bay State Boot & Shoe Co., Beverly. both firms retiring from business a number of years ago. Entering the service of the United Shoe Machinery Co., Mr. Hanson spent six years in the Boston office in the pulling over department. Eight years ago he was transferred to Cincinnati, where he was connected with the lasting and pulling over departments, and later attached to the office end. In April last, he was promoted to the management of the Toronto office. Mr. Hanson, who is a gentleman of genial disposition, kindly nature, and good executive ability, has already made many friends among the shoe trade in Ontario.

Imposing Display Made by Largest Sole Leather Firm

Most unique and artistic was the booth of the Anglo-Canadian Leather Company in the Manufacturers' Building at the Canadian National Exhibition. The rustic structure contrasted very favorably with the white booths decorated with bunting, which were much in evidence in the building. The roof and supporting pillars were of hemlock bark, and certainly attracted very great interest. The floor was covered with tan bark and the whole surroundings proved to be a source of instruction and profit to the public. An educative exhibit was that shown in glass vessels, whereby the various processes of tanning from the soaked stock to the finished leather were revealed. Various tanning materials and extracts were also on view. The exhibit consisted of some 500 sides, backs and bends of oak and hemlock sole leather, the entire lot being sold to Chas. Tilley & Son,

Toronto. The sides of the booth were fortified with 2,000 dozen tap soles, heels, etc., and a distinctly loyal touch was given the exhibit from the fact that, flying from the top of the pagoda, were the Canadian flag, and the good old Union Jack, and at one side were seen the national flags of the allies—Belgium, France and Russia.

The Anglo-Canadian Leather Co. are the largest tanners of sole leather in the British Empire. Their extensive tanneries at Huntsville and Bracebridge are kept very busy. The firm have warehouses in Toronto, Montreal and Quebec. The Maple Leaf Brand of sole leather is well and widely known to the shoe trade from one end of Canada to the other. The output of sole stock is 4,000 sides a day and the company have been practically working to capacity for some months past. The Anglo-Canadian Leather Company were

warmly complimented on the creditable display made, the exhibit being in charge of S. L. Lawther, while the booth was frequently visited by W. J. Heaven, local manager of the company.

USING ATTRACTIVE NEW CUT

The cut shown herewith is a new one which, from the present time, the Canadian Consolidated Rubber Co., Limited, will use on all their cartons, stationery, etc., although it is not a brand and will not be used on goods manufactured by the concern. In order that the employes may become familiar with it, the company have presented each one of

them with neat little souvenir pins, which are now proudly being displayed by everyone from office boy to President.

THE JOHN PALMER COMPANY BUSY

The paragraph which appeared in the trade news in the last edition of the *SHOE AND LEATHER JOURNAL* stating that John Palmer Co.'s tannery at Fredericton had been destroyed by fire, was incorrect. The John Palmer Co. write stating that there is absolutely no truth in the report and that they are busy making and shipping orders as usual. It may be stated that the item in question appeared in a New Brunswick paper of recent date, a copy of which was forwarded to this office. This accounts for the misleading information. However, the *SHOE AND LEATHER JOURNAL* is glad to make the necessary correction and regrets the publication of the paragraph.

TREAT ALL CALLERS COURTEOUSLY

Never ignore a customer, no matter how unpromising he or she may look. Appearances frequently are misleading, painfully so. Consider that anyone who has taken the trouble to enter your shoe store or shoe department has conferred an honor upon you. Treat him accordingly. If you are busy and cannot attend to a newcomer immediately, speak to him anyway. Ask him to be seated, and then get to him as soon as possible. Hundreds of sales are lost yearly by the ignoring of this important rule.

PAY STRICT HEED TO INSTRUCTIONS

One of the greatest shortcomings on the part of many salesmen, business men, and executive officers to-day is inattention. They listen in a haphazard and perfunctory style and glibly answer "Yes, I understand." When asked to be sure and not forget they reply with equal readiness: "Oh, no, I will be sure to attend to the matter," and never give it another thought. How often such little lapses make or unmake the success of one in any chosen calling.

There is a shoe repairer in a certain Ontario city, who is gradually having his trade taken by the other fellow, simply because of his indifferent methods. There is always something slipshod about his work. Nails have been left sticking up, rips have been left unsewn, jobs have not been done when promised and only the bigger part of the work attended

to. For instance, many customers will ask, in addition to their footwear being half soled and the heels built up, that some new eyelets be put in, hooks inserted, a tip stitched or a patch put on the vamp. The goods are all wrapped up when the caller comes for them, and imagine his feelings on getting home, to find that the job has been only partly done, when he has possibly been charged the full price. He does not bother going back to tell the shoe repairer of his neglect. The result is that he resolves then and there to take his work to some other place. All this is caused by inattention, and not carefully noting on the tag the request of the customer. Most people are as pernickety regarding little things as they are about larger ones, and the shoemaker that understands pleasing patrons will certainly recognize this element of human nature, for, after all, we are constituted on much the same lines.

Another evidence of carelessness in shoe repairing was recently noted by the writer, and he wonders how certain men ever make a go of their business. Dropping into a certain modern shoe repair establishment the other day, he gave instructions to have a back stay sewn, a couple of lifts put on one heel and two eyelets, that had grown brassy, replaced with fast color ones. The shoemaker said "yes, he would attend to it," but never asked the name of the caller, or his street address; nor did not mark down on a tag or enter in an order book what was to be done. Now, a repairer may have an excellent memory, but if he is doing any amount of business, he should have some system whereby he can associate the owner with a certain pair of shoes, know where the customer lives and possess some guide as to what should be given attention in the way of repairs. Such a list of customers, their street addresses, etc., is invaluable to one who wants to build up a permanent trade in the repair line, but if he simply takes in the goods without any further concern, then, as evidenced by the negligent fellow in question, he is slowly but surely wending his way down the road to certain failure.

THE BREECING OF THE TRACE

One horse in a team is willing to pull his share of the load. The other horse, when he is called on for a pull, sets back in the breeching. The team will not be successful as a team, and the good horse after awhile will either become unwilling to pull or will soon be worn out if compelled to pull the whole load. In this way the bad horse will spoil the good one in time. The owner of the team must get rid of the horse that will not pull.

There are some men who find the breeching more comfortable than the trace. They are not willing to pull their share of the load, but are content to be carried along by their associates as long as their associates care to carry them.

Every man of this type is a detriment to the interests of his comrades. In an army the man who will not fight is court-martialed and shot. The honey bees kill the drones in the hive, who eat honey but will not product it. The industrial organization that is carrying along men who find the breeching more comfortable than the trace cannot be as efficient nor as successful as the organization in which only those men are carried on the pay-roll who will pull and work in harmony with the rest for the common success of all.

Many a man who has found the breeching more comfortable than the trace, and who has been discarded because he would not pull, has complained that he never had a chance. The trouble with such men is that they do not know an opportunity when they see it. They cannot realize that the way to fit one's self for large opportunities and large duties is to cultivate the habit of making the most of small chances.

It is a matter for each of us to decide for himself, whether he will strain the breeching or the trace.

SPHINX Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

HOW DO YOU SHOW A SHOE?

A leading Canadian shoe manufacturer who sends out a monthly letter to the agencies and retailers gives the following timely advice on "How to Sell a High-Class Shoe." The letter says:

He was talking about shoes:—"I went into the store and requested the clerk to show me a pair of good shoes. The clerk, after looking at my feet for a moment, walked over to a shelf and very carefully selected a box. He carried the box over to where I was sitting and laid it down very gently nearby. Raising the cover, he lifted the tissue paper, picked out one shoe, caressed it for a few seconds, then raising my foot—very gently, he fitted the shoe.

"Do you know I bought those shoes and paid just a dollar more than I usually do? Figuring out the matter afterwards, it struck me that the reason I bought those shoes was, not that I was convinced of their superiority over the kind I generally wear, but simply because the clerk handled the shoe as if it were a diamond tiara. He impressed me so much by his carefulness that I could not resist buying the shoes without argument."

Every customer is susceptible to the clerk's influence. Handle a \$6.00 shoe like a "work" boot and the "odds are on" your losing the sale. Handle a shoe as if it were a piece of expensive cut glass and the sale is half made.

Just try it boys, during the hot weather; when business

is slack is a good time to try these little stunts in salesmanship. You do not need to be a hypnotist to make your customer buy. Study the prospective buyer, make him feel that you desire to please, even in the smallest detail, and you'll be surprised with the results. But above all, impress him with your consideration of the shoe you're selling.

A POOR SELLING ARGUMENT

"I wear 'em myself." Never say this to a customer. The prospective customer does not care a whoop whether you wear a certain shoe or not. The fact that you wear it might prejudice him against it. If the customer asks you what you think of a shoe from a personal point of view, tell him. But do not offer "I wear 'em myself" to a customer as constructive selling argument.

The Outlook in Canada

TRULY, it is an ill-wind that blows nobody good. One Continent's "down" is another Continent's "up". The industries of Europe are, generally speaking, at a standstill, and matters will be worse before they can be better.

The whole world is looking to the North American Continent—to Canada and the United States—for much of its provisions, machinery, textiles, boots and shoes, beverages, vehicles, cement, brick, earthenware, fancy goods, furs, glass, garments, paper, soap, tobacco, wood products, and much else. Canada must get ready to meet the demand made upon her. We have continued prosperity ahead of us if our manufacturers and merchants rise quickly to take advantage of their opportunity.

It is a time for business hopefulness, not for business gloom.

Courage, Canada

CANADA is favored among the nations. We have peace within our own borders. We have learned the lessons taught by lean times, and so are prepared to face the days ahead. Our farmers are prospering by reason of the present conditions—and when agriculture flourishes, the business outlook is one of good hope and good cheer.

Some Canadian industries and mercantile enterprises must suffer because of the partial suspension of trans-oceanic trade. But more industries will be stimulated to supply our home demand, which **MUST** be satisfied. It is a time of business opportunity in Canada.

Let Courage Possess Us

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

Staple Lines Will Sell Even In War Times

There are thousands of shoe buyers in Canada who always wear staple shoes because these suit both their purses and their occupations best.

But there are additional thousands at this present time who formerly followed the changing styles in fancy footwear, who this year will purchase staple lines only—*through force of circumstances.*

Therefore, no shoe dealer should hesitate to order a complete range of "bread-and-butter" staple lines. People must buy shoes and medium priced staple lines generally will have the call for Spring.

If you stock the old reliable "Yamaska Brand" staples you will have little complaint about poor business. Our Spring samples are fully up to our past reputation—and more than this neither we nor any other manufacturer can say.

"YALE"

That, after all, is the vitally important question which confronts every shoe retailer. On the way he answers it depends his business existence. Those dealers who have handled other lines of men's Goodyear Welts and who are **now** selling

**MONARCH, BRANDON &
DR. BRANDON SHOES**

know that they turn over more quickly and profitably than any other lines. And the reasons are obvious; Brandon-made shoes are like no others on the Canadian market; the designs are original and tasty, without being "faddish," the workmanship is of the very best, and the materials beyond reproach. Coupled with these facts is Brandon Service, our aim being to help the dealer in every possible way to feature and sell BRANDON and MONARCH FOOTWEAR.

"KONOT"

Our 21 Days' Service

is strong evidence of this co-operation. This plan enables us to fill all rush and mail orders in 21 days, and makes delivery sure and certain.

Let's get together and make your store the success it **should** be.

See our new samples for Spring 1915.

MURRAY-MADE, DERBY and CLEO

A Trio of Trade Winners for Spring 1915

MR. DEALER: if you have had any trouble in the past with your men's and women's lines—if you have not been able to turn them over quickly and profitably—then the MURRAY-MADE, DERBY and CLEO Shoes should be included in your Spring stock.

The MURRAY-MADE and the DERBY are so well-known to those men who are particular about the footwear they buy, that there's always a well-defined, ready-made demand for them.

The CLEO is a quality shoe for the woman of taste, and acknowledges no superior anywhere.

If you are catering to a particular trade, you'll find it mighty profitable to place your Spring orders with the MURRAY man when he calls.

Buy
 “Made in Canada”
 Shoes
 To Retail at \$4.00

“Leader”
 Brand
 Shoes
 at
 \$4.00

WHEN you pay \$2.60, \$2.70, \$2.85 and over for American shoes you have to add an extra 30% to the cost—for which duty you receive **no added value**. And you must sell these shoes for \$5 or \$6 to make a profit.

The title “imported” is beginning to lose its glamour with the buying public, who are quick to see that a \$5 or \$6 American Shoe is no better—if as good—as a well made Canadian shoe at less cost.

This is especially true of our “Leader” line retailing at \$4. Every shoe has the style and finish of a \$6 shoe—that is why our sales are jumping every month.

Are We Downhearted? We Are Most Emphat- ically NOT!

- ☞ We are showing for this coming season absolutely the best and most comprehensive line of Kingsbury and America's Beauty shoes we have ever placed before the Canadian trade—and that says a lot.
- ☞ The three illustrations give you a good idea of the excellent style and appearance of the whole range. They are not our best shoes—merely fairly representative.
- ☞ Are you down-hearted?
- ☞ You have every reason for facing the future with confidence. Canada is on the verge of an unprecedented era of prosperity which you will share, if you rise to the occasion.
- ☞ Order a full line of Kingsbury shoes now—and take time—and the occasion—by the forelock. You will need them very soon.

Canada in Excellent Shape—Keep Business Moving

INSPIRING AND THOUGHTFUL ADDRESS BY PRESIDENT R. C. WILKINS BEFORE
EASTERN TOWNSHIPS ASSOCIATED BOARDS OF TRADE, AT GRANBY.

"It is not the privilege of every man to go to the front, but those who have gone and those who will go, expect us who remain at home to keep the business of the country moving along, that hardships may be averted: it is, therefore, our imperative duty to avoid panic, to combat every sign of discouragement or down-heartedness, to ourselves feel and make others feel that we must and will do business as usual in order that all may be employed. I have reports from a number of Boards of Trade forming part of this Associated Board, which show conditions in the Eastern Townships to be excellent. With the exception of hay, which is below the average, all crops are good. Business is reported as good, and in some cases a considerable improvement over last year; in one or two sections only have reports indicated a slowing down of manufacturing and general business. The summer tourist business has been good and will improve as the roads improve. The enormous demand for food stuff, live stock, dairy produce, etc., will make our agricultural classes prosper as never before. The only manufacturing industry now working full time in Germany is the Establishment for the Manufacture of Widows and Orphans of which the German Kaiser is the President and Managing Director. Our manufacturers should be now looking into the question of producing goods such as have been heretofore imported from Germany and Austria. Not only does this apply to our own country, but we should endeavor to supply much of the goods formerly imported from Germany and Austria by Great Britain. In this connection I believe it is highly important that our tariff should be so adjusted that manufacturers will be assured for a number of years of sufficient protection to secure our market for them, that they may be encouraged to make the large necessary outlays on patterns, tools and plant to take care of this prospective new business. Many manufacturing establishments have been obliged to reduce their output during the recent depression, but the shelves of the retail merchants are by no means overstocked, and will need replenishing at a very early date. Government contracts for war supplies have put a considerable number of industries not only on full time but on overtime, and several clothing and shirt factories are working both day and night shifts. The cotton and woollen mills have taken on new life and almost every spindle in Canada is humming a tune of good wages and plenty of work. Saddlery, shoes, medical preparations, explosives and many other lines of industry are also benefitting and the wages thus earned by the employees will surely find their way to the retail merchant who in turn will order more freely from wholesalers and manufacturers. To the three thousand members of this Associated Board and to all other men of the Eastern Townships, I say, "Fear not for the future," but wear a smile of confidence. Courage is contagious. Push business as you never did before; buy goods "Made in Canada" and thus assist in keeping our factories running full time. Have confidence in Canada, and when this war is over I believe that we will see the greatest boom ever known. Not one province in Canada is fully cultivated. We have homes here for many millions of people and none better than in the Eastern Townships. Let us be awake to our opportunities and obtain our share of the prosperity that is bound to come to Canada, once this German Made, Cold Blooded, Diabolical Plot Against Humanity and Civilization has received its quietus at the hands of the Allies. The soil fertilized by British blood spilled on the fields of battle produces the greatest crop of Liberty and Justice Known to Man."

Made Thirty Cents On Sale After Hour and Half Effort

How Far Should a Salesman Go In Attempting To Serve and Satisfy a Customer Who Is Merely "Shopping" and Wants the Very Latest at Practically Cost Price—A Racy Retailing Experience

How far is a shoe clerk justified in seeking to sell a customer? To what lengths should he go? How much time should be expended on her and what stock of patience should he exhaust? The question arises—Is there a limit? When does meekness cease to be a virtue and faithfulness become a weakness rather than a desirable attribute?

Dunning is a salesman in a suburban store in Toronto, of which Kimball is the proprietor. The other afternoon a lady entered. She was middle-aged, well dressed, passably good-looking and well-to-do. She politely informed Dunning that she was looking around and wanted to see some of the very latest and newest Fall styles.

He quietly and bravely started in. He showed that woman several of the season's best offerings in footwear, but found she objected to this shoe and to that one, mostly on the ground of price. She evidently desired five or six dollar value for about three dollars. When certain odd sizes or out of stock lines were presented to her, and she was told that they were regular five and six dollar shoes, but would now be cleared out for three or four dollars, she made it known that she did not like them at all, and would pick up some of the snappiest creations and ask: "Well now, why cannot you give me this five dollar shoe for three dollars?" Dunning vainly endeavoured to explain that it was only on broken lines, and certain brands or lasts which they were clearing out, that reductions were made to practically cost price, but that on regular goods which had been received only a few weeks ago, they must have a fair profit. Still the clerk kept pulling down carton after carton and the lady kept trying on shoes and asking all manner of questions.

Sell Her At Any Cost

Finally, Dunning was in despair—he had spent over an hour with her and going back to the office, asked Kimball, the proprietor, what he should do, briefly explaining the trying circumstances.

Now, Kimball has a certain amount of "fight" in him, he is game to the core, and he hissed between his gasps: "Sell that woman at any price—only sell her."

Dunning went to the front of the shop, and resumed his task with renewed vigor. He was still polite, tactful and attentive. Time wore on, and soon another lady entered who desired to see some children's shoes. The proprietor came out from the rear and began waiting upon the new caller in another part of the shop. Eventually the woman, after all good-nature and self-control had practically been exhausted, told Dunning that she would take a certain pair of shoes at three dollars. The boot was a gun metal button,

with Cuban heel and fairly high toe. It was not exactly the latest creation, and the cost to the proprietor was \$2.70.

Acting on his instructions from Kimball, Dunning had made up his mind to sell, and for the sake of getting rid of his querulous and time-killing customer, he quoted the figure on this shoe at three dollars. Finally the lady said she guessed she would buy it. The clerk heaved a sigh of relief—the long siege was at an end. His indignation had been slowly rising, but having dammed back the torrent of anger, he found infinite satisfaction in the fact that he had made a sale.

"Of course," responded the dilatory and inquisitive purchaser, as Dunning was doing up the parcel, "you will throw in a bottle of polish with the shoes."

This was the last straw, and the proprietor, who had overheard the remark, allowed his wrath to have full vengeance, and he said to the lady: "Kindly remember that we are not running a hospital or free institution here, in order to give away stuff."

Said She Would Call Again

This evidently aroused the ire of the customer, for she said sharply: "Oh well, I have changed my mind then, I do not think I will take the shoes. I will possibly call again."

"Please, Madam, don't, please don't!" observed Kimball. He thought that would be the last he would ever see of this cantankerous customer, but women have strange freaks at times, and their nature does not always run along methodical grooves. Quick as a flash, the female changed her mind and said:

"Oh well, I suppose I may as well take the shoes, I was going to look elsewhere, but perhaps I can do as well here."

The parcel was done up and as the woman was going out of the door, she remarked to Dunning:

"Some people are very testy and short-tempered. I do not like the way that boss of yours spoke to me just now."

The clerk was a little more tactful:

"Oh well, you know, there is a limit to all things, Madam, and we cannot always be as sweet-tempered as an angel."

What Would You Have Done?

Now here was a woman who had been sold a pair of shoes after taking up an hour and a half of the salesman's time, on which the proprietor made the enormous profit of thirty cents. The proprietor has red blood in his veins and will at times, take a dare, and it was simply owing to the challenge which he put up to his clerk to sell this caller at any cost, that a sale was effected. The question arises—how far should a clerk go in waiting upon a woman, who announces that she wants to see some of the newest creations in footwear, and that she is "merely looking around?" The store in question really lost considerable money on this sale, and the only compensating circumstance was that some time in the future, the woman might return, when she was in a more gracious mood and liberal frame of mind.

Is Retailing a Real Picnic?

The foregoing is a true incident and is told without any exaggeration, only that the names given, are not the correct ones, but answer very well for the purposes of the narrative. Still some people to-day think that retailing shoes is a regular picnic, and that waiting upon the public is a privilege greatly to be envied.

IT IS THE BEST EVER

Enclosed please find Express Money Order for one dollar in payment of my subscription to the Shoe and Leather Journal. I wish you continued success in publishing your valuable and very newsy paper. It is the best ever.

Yours ever,

George E. Wegenast.

Port Arthur, Ont.

Historic Shoe House Celebrates Its Golden Jubilee

Senior Members of Blachford Firm, Toronto, Who Began Business in 1864, are Still Working as Hard as Ever—Decided Changes that Time has Brought About in Lasts, Patterns and Selling Methods

Fifty years in the shoe retailing business and still at it—as alert as ever, as buoyant of step and as jovial in spirit. This, in brief, is the record of Horace P. and Chas. E. Blachford, who, away back in October, 1864, started a small shoe shop at 131 King street east. Both these venerable figures in the footwear history of Canada, are to-day celebrating their golden jubilee and receiving the congratulations of many friends.

While there are historic houses in Great Britain, the United States, Canada, and other countries, which have borne a family name for many decades, still it will frequently be found that either a son or grandson is running the business and that the head of the original establishment has long since passed to his reward. This is not the case with the

Blachford Shoe Store. The same men, who began in a small way before Confederation, are to-day at their desks, and are as regular and attentive to duty as any of the thirty or forty employes in the service of the store. A brief history of the firm is interesting. Horace P. and Chas. E. Blachford are brothers, and sons of Anthony Blachford, who was for many years accountant and later partner in the W. B. Hamilton Shoe Co., Toronto, but passed away in 1886. Horace P. Blachford started

his career in the shoe business when in his 'teens, away back in 1860 with S. M. Sanderson, running errands, sweeping the floors, and making himself generally useful. After three years his health gave out and he went to the country to spend some time, his younger brother, Chas. E., taking his place in Sanderson's store. After a year's service, the latter joined his older brother and they opened out in premises at 131 King street east, near the St. Lawrence Market, under the style of A. Blachford, which was the name of their father, although he had nothing to do with the buying or selling of the lines which the young men handled.

The shop had one small window, was about forty feet deep and twelve feet wide. In 1867 the young men bought the stock of Sanderson's Shoe Store and moved up to 107 King street east, which was then in the heart of the flourishing mercantile establishments of Toronto, and here they did a little better class of trade, catering more to the city people. This store had two display windows, was about forty feet deep and twenty-four wide. After remaining there until March, 1877, the next shift was to 87 and 89 King street east, in the Terrapin Block, this being known as one of the finest buildings in the city. Here the brothers had an establishment about one hundred feet deep and twenty-five feet wide.

The store next door was taken in some years later and communication secured by means of an archway. Business kept on increasing from year to year. The firm handled reliable lines of shoes, treated customers courteously, gave good values and greatly widened their connection. In September, 1896, the Blachford Shoe Store was removed to its present stand at 114 Yonge street, which was then becoming the leading business thoroughfare of the Queen City, the larger retail houses gradually shifting from King to Yonge. Their present business home is one hundred and forty feet deep, twenty-four feet wide, and gives them three floors.

A few years ago, the front was entirely modernized and is now one of the most attractive to be found anywhere. In 1912 the style of the business was changed to H. & C.

Blachford, Limited, a limited liability company being formed with a share capital of \$100,000. Horace P. was elected president, Chas. E., vice-president Fred. A. Blachford, secretary, and Howard C. Blachford, treasurer. Fred. A. Blachford is the son of the president of the company, and has been identified with the business for 21 years, being the buyer in the men's and boys' department, and Howard C. Blachford, the son of the vice-president, has been connected with the house for fifteen years, and is the

THE IMPOSING AND INVITING FRONT OF BLACHFORD'S SHOE STORE, TORONTO

buyer in the women's and children's lines.

The slogan of the firm has always been "the store that fits the feet," and Blachfords have to-day several customers who were doing business with them when the scattered provinces were being formed into Confederation.

Among the very first subscribers to the *SHOE AND LEATHER JOURNAL* when it was launched in 1888, were H. & C. Blachford, who have been constant readers of this paper ever since. The firm have an honorable and upright record having always paid one hundred cents on the dollar in the fifty years of their history, and have always kept reliable goods, never dealing in cheap, trashy lines. It is interesting to review the changes that have taken place in shoe styles, service and merchandising methods since the Blachford Shoe Store was established in 1864. Both the senior members can recall many interesting incidents in connection with shoe selling in the early days. "Yes," remarked the president of the firm, "in those days there were no widths, no half sizes, no cartons and practically no season styles. These are all developments of later years. In the former days, the primal considerations of customers were wear and comfort. Now it is style, snap and finish. Why the same line of shoes would do for seven or eight years—

nearly all the lasts being straight. Women's prunella boots were then quite the thing. They had an elastic goring on the side. Another favorite was an enamel cow-hide lace boot, with a prunella top. Such a thing as button boots was unknown. For men calf, kip and cow-hide Wellingtons or

H. P. BLACHFORD, PRESIDENT

long-legged boots were considered to be right up to the mark and we possibly sold as many of them ranging from \$3.00 to \$7.00 as we did of lace or gaiter. Shoes were then laid on open shelves, flat on their sides, one pair being placed above another, or in other words, a section of the shelf contained two rows of shoes, each pair of which was held together by a string. Long boots were suspended from rods or nails at the top of the store and when one wanted to pull down a pair, he got out a pole with a hook attached to it. He caught these shoes by means of the straps at the sides, balancing the whole outfit until it got to the counter.

Just Handed Them Out

"Such a thing as fitting in earlier days was almost unknown—we handed out shoes over the counters, then a prominent feature of every shoe shop—very much the same as a butcher does a pound of meat, or a grocer a package of coffee. People took it for granted that shoes would fit, and as they were built roomy and straight, we never had any complaints, if customers asked for the right size. Then gradually an improvement began to take place. We began to handle a better grade of shoes. First widths came in—there were only two widths at first, the narrow and the wide. Next, lasts began to have a little curve and fancier patterns appeared. Cartons also made their appearance and a strange thing was that the first which came out contained a dozen pairs of shoes, which would be of assorted sizes. Eventually the present cartons arrived. In 1876 I remember going to Paris, and while there, brought home some French shoes. They were the first ever seen in Toronto and created a good deal of interest, particularly among the women. In workmanship, cut and style they were marvels in that day, and I remember we kept sending in repeat orders for these shoes for five or six years. Then American manufacturers began adopting Parisian footwear fashions, and we did not have to send abroad in order to get the latest and most attractive, but we bought from across the line. Later Canadian shoe manufacturers started in to give style and appearance to

their lines and have made wonderful progress until, in the Dominion to-day, there is produced as neat, well-fitting and fashionable footwear as can be desired. Retailing is much more of a science to-day than away back in the "seventies." The fitting of the feet, the style problem, the close study that has to be devoted to the fancies and fads of the public, and the judgment and care that has to be exercised in buying, all make the shoe business a more serious consideration and venturesome undertaking.

In Days of American War

"Yes, on the whole, conditions have greatly improved. For many years we have kept a repair shop. Mr. William Stone, who is the head of that department to-day, is in his eighty-eighth year, and has been in the service of the firm for upwards of thirty years. I remember, during the American War, shoes were made very cheap. Several skeddaddlers from across the border came over to Toronto to get a job and would make welt shoes, hand sewn, for fifty cents a pair. They could do about two pairs in a day. To-day it costs us from \$2.00 to \$3.00 a pair to have these shoes made. We still make a few lines for some of our customers and used to send ordered shoes to New Orleans, California and other cities. Patrons would move away, and knowing we had the lasts and the patterns which fitted their feet, they would write and have us send out boots whenever they required them. We still have a large stock of lasts and patterns, but do not make very many shoes to-day. At one time we had in our employ about fifteen or twenty shoemakers. The cutting was done on our premises and the work sent out to the men around town. I have done a great deal of cutting myself in years gone by, and can do it yet, if required, for the firm still makes a few hand sewn shoes for patrons, but not many. The old days have passed and the new order of things has been ushered in. When the Blachford Shoe Store first started, there were several shops in Toronto that catered exclusively to custom shoemaking, among them being Wilson and Faulkner, for

C. E. BLACHFORD, VICE-PRESIDENT

the women, and Dack and Robertson for the men. The Blachford Company never did so much custom work as they did order work. They would obtain a last that would suit certain patrons who possibly suffered from corns, bunions or other deformities of the feet, and these patrons would

send in year after year to have their shoes made from these lasts.

"Yes," concluded Mr. Blachford, "I could relate many other interesting evolutions of the trade, but perhaps what I have said will give your readers an outline of the progress and development of the retail shoe conditions to-day, as contrasted with those of forty or fifty years ago."

John Catto & Son, dry goods merchants, 59 King street east, are the only retail firm in business in Toronto to-day

FRED A. BLACHFORD, SECRETARY

who were operating when the Blachford Shoe Store was started. Mr. Catto is still at the helm.

The name Blachford is being associated with the shoe trade in an even wider arena at the present time owing to

HOWARD C. BLACHFORD, TREASURER

the younger generation launching out in the manufacturing line. The Blachford Shoe Manufacturing Co., Toronto, was founded a few months ago by George A. Blachford, who is a son of H. P. Blachford, president of H. & C. Blachford, Limited, and was for several years associated with the Murray Shoe Co., London, and his cousin, Charles A. Blach-

ford, who was for a long period city salesman for Blachford, Davies & Co., Toronto. This enterprising firm is meeting with fine success in the making of women's high-grade welts.

Photographs Used For Sample Shoes

"Much money is spent by manufacturers annually making up sample shoes for their salesmen. It has been suggested the writer believes, that some manufacturers, instead of supplying salesmen with samples of only one design on each list, supplement these with full-sized photographs made from artistic pictures of the latest footwear," says Shoe Topics.

"The above method is very advantageous. It not only reduces the cost of samples each season, to a great extent, but in many instances reduces the traveling expense of the salesman, in so far as shipping baggage is concerned. Salesmen can visit a large number of possible customers each day. With actual photographs of the shoes and one sample shoe made over each last, the purchaser can select the goods he wishes just as though shoes of all designs were before him.

"The enormous expense involved in the manufacture of samples to completely show every style and design of shoe manufactured by large concerns selling to the retail trade is a big item, but one which it has seemed impossible to reduce.

"If this plan is followed the photographs must be very clear and made in the actual size of the shoe.

"The blucher shoe may be made up over a certain style of last, and drawings are then made of other designs, such as lace, button, etc., made over this last, and as many photographs are taken as are necessary to supply each salesman with an illustration of each design.

"Another method used is the manufacture of one pair of every style and design of shoe, and then to supply photographic duplicates of these shoes to all salesmen. By the use of the latter method, only one sample on each style of last would be carried by each salesman, and the remaining designs would be shown in the photographs."

Last Company Extends Premises

The Canada Last Co., Limited, Van Horne street, Toronto, have just completed a large addition to their factory. The extension is of solid brick, mill construction, and in dimensions 63 x 63 feet, two storeys high and admirably lighted on every side with wire glass set in steel sash. The floors are hardwood and the ventilation and heating arrangements up to date. The former portion of the plant is now used as a stock room and the facilities of the company have been greatly increased. The lathe capacity has been increased by fifty per cent. In the north portion of the new building are the lathes for turning the maple blocks into lasts, then come the finishing machines and next the scouring outfits. The Iredale family have carried on a last making business in Toronto for fifty-four years. J. C. Iredale is the manager of the Canada Last Co., and his sons, C. M. and J. A. Iredale, are also associated with him, the former being in charge of the sales and the latter, who returned to Toronto only a few months ago after working in a large last factory in Rochester, has supervision of the manufacturing end. The company this season are showing eighteen fine models which are right up to the minute in every respect and have taken well with the Canadian trade.

STRAY SHOTS FROM "SOLOMON."

War Is Hell

Get the veneer of culture and civilization off and you find that man is about the same at the bottom as he was when he made his engines of war out of sticks and stones, and tied his prisoners to stakes and gloated over them. The campaigns of Caesar, two thousand years ago, over the same ground as the present war, had nothing on the Kaiser in the matter of "steam roller" tactics, while the old Roman fighter would have scorned to use some of the things that are to-day considered fair in love and war. When you lift the skin of man you find the beast. It only takes the bayonet to bring out the hyena. Blood lust is as natural to the race with all our peace conventions, as it was when Cain clubbed his brother for getting ahead of him in the favour of the Almighty. It is only a higher power that keeps down the spirit of murder which has broken loose in Europe.

Mouth Fighters

If the war could be settled by talk the campaign would be over in less than a week. It is a great pity the Government does not take advantage of the latent military genius that demonstrates with a lead pencil how the Kaiser's army can be tied up in a knot by two or three simple evolutions. On a train the other day a bumptious individual, who would probably have to be dug out from under the bed if a call came for his services, was demonstrating to a small coterie the mistakes that the British and French made that let the Germans get through Belgium. If mouths were howitzers, and lead pencils bayonets, we might do all our fighting while we put away melons and fried chicken in a down-town restaurant, and peace treaties could be negotiated while we were disposing of our dessert.

Get Ready

The great lesson in this war is on readiness. The Germans may be beaten in the end, but they have given the world a great practical demonstration of the value of efficiency. They ran their invasion of France on a schedule that would have got them into Paris in two weeks, if it had not been that a "cog slipped" in the shape of England and Belgium. In any case they gave a splendid example of the advantage of a definite plan and a vigorous effort to carry it out. The French had talked about getting back at Germany for a generation and ought to have had everything in readiness for the enemy, but they spent so much time spitting on their hands and telling what they intended to do, that their foes got in under their guard and nearly sent them to the count. When you have a good healthy opponent don't give way to talk—get into the game and beat him. Do to the other fellow what you think he is going to do to you, but do it first.

Doing Things

The "silent man" in war is the one who wins. England's "silent man" is in charge of her destiny in this fight. Lord Kitchener has again demonstrated his capacity for keeping his mouth shut and getting his men there. Before

the world realized the war was on he had a British force in France. When men were wondering if India was going to remain loyal, he was transporting a native army across sea and continent and they were in the thick of the fight before the Germans had ceased talking of what they would do to India. While everybody wondered how the disparity between the Germans and the Allies should be made up, one morning a Russian army was found on Belgian soil ready for business. It is doing that counts and the man who carries this principle into daily life will move the world.

Mouth Patriotism

Patriotism that lives on flags, talk and subscriptions is a poor anaemic substitute for that love of country and what it stands for, that leads a man to set aside personal convictions and prejudices and stand in the breach with a loaded gun. There are men who have been thorough Quakers in their principles for a generation, and who have deprecated appeals to force in national and international disputes, who are ready to defend the attitude of Great Britain in the present war with their lives. "We must beat them," is not the arrant talk of jingoism but the expression of a deep-rooted conviction that our cause is not only a just one, but one that represents right as against might, and civilization against barbarism. As Premier Asquith puts it, the resources of the British Empire must be exhausted before this arrant aggression is allowed to succeed.

Bringing God In

It is pitiful to find God dragged into these miserable quarrels of men and nations. If we were to believe the pious mouthings of those who claim that the Almighty is leading their hosts to battle, we might easily get back to the religion of our pagan ancestors who peopled the heavens with blood-thirsty and crafty deities that divided their time between launching thunderbolts at each other and setting human war lords by the ears. God has little to do with the ambitions and jealousies of men who make a shambles of grain fields and a slaughter house of cities. There is no doubt, however, that in this "He will make the wrath of man to praise Him," and out of the horrors of this greatest of human pestilences bring good to the world at large in His own good time.

Mercenary Views

The interest some people take in the war seems to be measured by the effect upon their pocket books. The demoralization of stocks, the high cost of provisions or the increased profits that may be derived from goods that cannot be duplicated on account of the dropping off of imports, enter largely into their estimate of the situation. Thousands may be pitched headlong into unhallowed graves and the fate of empires may hang in the balance, but these money worshippers care for none of these things. In Canada we have been having a carnival of business and social intoxication, and with the bottom out of the boom and war coming up through the hole, it looks as though we were in for rather a trying period. But let us say at least, "let righteousness prevail though the heavens fall."

How a Customer Can Become a Confirmed Nuisance

The Insistent Manner in Which Some People Try to "Work" a Dealer Unjustly for a New Pair—Leading Retailer Relates His Personal Trials With a Domineering Individual Whom He Finally Had to Threaten to Throw Out of the Shop

It is all right to talk glibly of going to any length to please customers, but there is a limit in the matter of patience and condescension on the part of the retailer.

He is not a door mat on which every patron has the privilege, figuratively speaking, of wiping his feet, nor should he make of himself a tie-post to which all the troubles of the community may be attached.

Now and then the dealer runs across a brow beating, overbearing or domineering upstart who thinks, by reason of the right of a single purchase, he can lord it over the proprietor and his staff in an exasperating manner and that they should kow-tow to him in every shape and form.

"Yes," delared a Hamilton retailer, "we have a few of that type. We are willing to adjust any reasonable complaints, but the other night a fellow came into this store who was the limit in the way of nerve and cheek.

"It was rather late and I was at home. He bustled in and, in a supercilious manner snorted that he had bought a pair of patent leather shoes, with cloth tops, for which he paid five dollars. On one of them a couple of stitches of the inseam had broken. This did not show when he was walking, but perhaps on close inspection the skip in the stitches would be noticed. He wanted a new pair of shoes right away, which, of course, my clerk promptly refused to grant. Then he arrogantly demanded to know where the proprietor was and when he found out that I was not in, he stormed and fumed, stating he wanted the shoes fixed at once. The salesman told him that there were no shoe repair establishments open at that time of night, but the fellow

was so utterly unreasonable that he expected all humanity to cater to his need. However, he finally went out in a huff declaring he would see the boss.

Could Not Wait a Minute

"Sure enough, the next afternoon he appeared and once more presented a clamorous demand for a new pair of shoes. I told him the fault of which he complained was a very minor one and that we would be only too pleased to attend to it if he would let us have the shoe. He said that he had no other shoes and could not do without them, that he had to have them fixed right there and then and he couldn't wait a minute. It was naturally impossible to minister to his wants on the spot as we have no repair shop, but send all work out. I finally asked him if he could not let us have the shoe for half a day and once more he impudently told me that he had no other pair to wear. I then remarked that if he was so utterly out of footwear before he bought the goods he must have been barefooted at the time. He said he would not wait for the shoes to be sent to the factory or a repair shop and once more renewed in a peremptory manner his demand for a new pair.

"I told him flatly that it looked as if he were trying to ring a bluff for new shoes and that he could not come that game on me. He grew more impertinent and abusive. Finally I informed him that if he would leave the shoe at the house we would have our messenger service call for the boot, have it repaired and returned the same day. Our friend went to the telephone at noon the next day and said

THE ATTRACTIVE AND INVITING INTERIOR OF WYATT & LITTLE'S SHOE STORE, SASKATOON, SASK.

that no one had been up for the shoe. A couple of hours afterwards he made his appearance at the shop in a towering fit of rage and wearing the shoes. I informed him our messenger service had called, so far as I knew, but that I would certainly look into the matter. He secured the name of the service and went out. That night about twelve o'clock, after I had retired and was sound asleep the telephone rang and the grouchy individual at the other end of the line proceeded to inform me in language, both coarse and lurid, that the messenger service had no such a call on their books.

"I asked him how he knew. He said that he had been around to the messenger service and found out for himself and intimated that I had been lying. I promptly told him that he had his nerve with him and that for pure gall and downright sneakiness he took the palm. The next morning he appeared again and this time brought the shoe down with him.

Evidently Looking for Trouble

"To show how much in earnest he was and to demonstrate the fact that he was more intent on airing his troubles and forcing a new pair out of me than he was in getting this particular boot fixed, I may tell you that he had already made three trips to the shop to give vent to his discontent, yet he could not bring the shoe down, showing that his grievance was not so very real. Well, we sent the shoe out, had it fixed and returned to him all within an hour and a half.

"You can imagine my surprise when I was called to the telephone in the afternoon by this grumpy customer and greeted with the salutation, "That is a h— of a job you did on that shoe." Then I flew off the handle at once and told him that the job was all right, that he did not know when he was well treated and that if he ever came near the shop again bothering me or the clerks we would throw him out bodily. He said he could lick any one of us or the whole staff combined and I told him to come down and try it, that we did not want the custom of such as he and were not going to put up with any more of his abuse or bluffing.

"I have not heard from the fellow since and do not expect to. I have merely narrated this story at some length to show what a confounded nuisance certain blustering and selfish individuals may become in connection with the trade of a store. Perhaps that fellow when he got the shoes home did not like the last on which they were made. He may have ripped those stitches with a knife himself and came around thinking he could work us for a new pair. You know there are certain people who, after making a purchase are never satisfied and will adopt any ruse or underhand tactics to get goods taken back or bamboozle a retailer into giving them a new article. Let me tell you that there are too many soft hearted retailers in business to-day who encourage that sort of thing or else pass the blame onto the factory. What we all want is a little back bone and force of character."

War Hits U.S.M. Co. Hard

A recent despatch from Boston says: "There has not been a time in years that the United Shoe Machinery Company has done such a small volume of business as at present—both here and abroad. On one side of the water the government suit, slack business in the shoe manufacturing, and the war are assigned as the causes; abroad, the war is, of course, the major factor.

"At the Beverly plant there are 2,800 employed, by far a low record for several years and comparing with over 5,000 in the latter part of 1911, just before the government suit was started. As recently as last May the Beverly factory had 3,600 men on the payroll, the decline to the present

number being a good reflection of the slowing down in the shoe business, which United officials estimate to be running fifteen per cent. to eighteen per cent. below normal.

"In the foreign field the United Company has been particularly hard hit. Its German and French factories are practically closed down because of the call of men to colors. The factory in Leicester, Eng., is employing about 2,000 and operating about 70 per cent. of normal. In Russia business is at a standstill, a fair amount is being done in Norway and Sweden, while in Italy and Spain the volume is about 50 per cent. of normal.

"One reason why the British factory is making a better showing than any other plant is that some of the machines which ordinarily are turned out at Beverly are being built at Leicester. Some of the foreign business, notably South America, has previously been handled from Beverly, but with conditions in finance and industry as at present it has been deemed wise to take advantage of the fact that the machines can be built abroad much cheaper than in the United States. To what extent the United Company will transfer business to its European factories at the expense of Beverly remains to be determined, and it was with the greatest reluctance that even this small beginning was made.

"Such an abrupt check to its business as the United Company is now experiencing is—for it—quite unique, but the company has a bulging 'war chest' and can stand adversity better than many industrial corporations. On March 1st last it had net quick assets of more than \$20,000,000."

From Furnace Room to Manager

F. M. Morgan, who is manager of the Edmonton branch of Ames-Holden-McCready, Limited, and some months ago was also given charge of the Calgary warehouse on the resignation of E. A. Dagg, is one of the most widely known shoeman in the Prairie Provinces. His connection with the firm dates as far back as December 1st, 1885 and he has been with them ever since having filled all the positions that they

had to offer from throwing wood into the furnace at Winnipeg to the management of the Edmonton Branch which he assumed eight years ago. Mr. Morgan has worked up a large trade in the West, and, by his kindly disposition and genial nature, linked with fine business ability, has managed to win his way to the forefront in footwear ranks. He is an untiring worker and is very fond of a game of golf.

Put in a Bright "Thanksgiving Day" Window

Thanksgiving Day recalls to the average mind close association with the lordly bird of creation, sometimes known as the turkey. It also brings home to the average retailer the necessity and advisability of drawing attention to his new fall lines, by making a special and appropriate window display. Thanksgiving will be observed on Monday, Oct. 12.

Many practical suggestions have appeared in the *SHOE AND LEATHER JOURNAL* on suitable window trims, and from numerous letters received our efforts along this line have been appreciated. In the August 15th number there appeared a simple and easy layout for a school children's window,

is dingy or gloomy, see that it obtains a fresh coat of paint and if you cannot afford to install thoroughly modern windows, make the very best possible use of those which you have. Do not forget to have a few good shoe display stands. These do not cost very much and come in a variety of styles and materials, about which your findings dealer will, at any time, be glad to give you prices and information.

It Means a Little Effort

Much more might be said on the question of proper window displays, but remember that no window trim that

and in the September 15th edition, the window dressing pages showed how to put in a special War window. The directions given were explicit, and have been followed out by a number of live retailers.

This is the time of the year when the man who wants to improve business does not sit down at the back of the shop and mope or walk up and down and wonder why trade does not come in. He does some thinking on his own behalf and if he is progressive, he will translate some of these thoughts into action. Action creates life, life stimulates trade, and trade means money.

There is just as much business in your locality as there ever was, but you must make up your mind to go after it a little harder. Be a little more diligent and aggressive, a little more alert and a little more circumspect. Devote more attention to your windows, make every inch of display space count. There is no medium quite so cheap and effective, from an advertising standpoint, as your store front. If it

attracts the trade has even been created of its own accord. We admire certain things in this world. We would like to have certain capabilities, certain possessions, certain knowledge, certain powers, etc., and look upon the acquisition of all these, on the part of others, as almost natural. As a matter of fact, back of anything worth while, there is study, work, effort, application and concentration. No window that is intended to be striking and convincing can be undertaken in any haphazard, happy-go-lucky style.

Installing a Nice Back-ground

In this issue the *SHOE AND LEATHER JOURNAL* presents a practical suggestion for a suitable Thanksgiving Window. Thanksgiving Day will be observed on Monday, October 12th, and the live, alert retailer will make some preparation to secure his share of the trade, which generally is associated with any holiday. Most people will want new shoes for the occasion and as Thanksgiving is a great time for home-

going, advantage should be taken of every means at hand to boost trade and boom business.

Suggestive of Bounteous Harvest

The accompanying sketch affords an idea for a typical Thanksgiving window. The uprights on either side are in oats or wheat or grain of any kind. From the cross-bar on each pillar may be seen apples hanging by means of narrow ribbons, while pumpkins, squash, melons and citrons rest on the wide cross arms which can easily be made out of packing box boards. The background at the top is arranged with straw or grain or a painted effect will answer. The scroll is made of a board, covered with white felt, which can be easily procured.

The letters in the word "Thanksgiving" are formed with ears of corn, fastened or sewed to the felt. From the central scroll, streamers hang and the horn of plenty is made of hoops of various sizes covered with cheesecloth, the outside surface being a coating of plaster of Paris, to add to the smooth effect.

From the opening of the horn, grapes, peaches, apples and even potatoes may be used with good effect. In fact, anything suggestive of the harvest season, the garden, the orchard, the woods, or the vineyard, may be used in putting in this window, which will attract a good deal of attention.

A few pairs of snappy fall shoe styles, both in men's and women's should be displayed. The accompanying background is only a suggestion and may be varied to suit the requirements or local conditions or the individual retailer. The main thing for the average man, who feels that trade is not coming the way it should, is to get out of the beaten track. Do something different. There is always a way and the enterprising dealer is the one who will either find it or make it.

One of the most helpful and surest methods of making this way is to pay constant attention to your windows. See that they work for you every hour of every day. Give them the greatest supervision possible and if you have the stock and the service to back up the good impression created by a bright, business-like front, you will have no cause to complain of dull trade or quiet times. Do not expect business to come to you without you going down the road a distance to meet it.

Another thing is to make the best possible use of your newspaper announcement and publicity arrangements. Do not let up because others do, show your faith in your community and future business by keeping your name well to the forefront. Demonstrate that you are doing business as usual and by your course, conduct and concentration feel that the War will be settled in Europe and not in an arm-chair in the back shop or by a gossipy group on some street corner.

Why Early Ordering is Good Business

On the most reliable authority and sound information, it may be stated that shoe dealers in all parts of the Dominion have nothing to gain by delaying orders. It is morally certain that if they put the matter off they will have to pay more for the goods when they want them. Immediate placing will prove of advantage to any retailer, as none of the manufacturers can guarantee prices. Neither they nor the tanners know where they are at. One leading Canadian maker of men's shoes, who is never an alarmist, never panicky or fussy, but takes at all times a calm, conservative view of matters, writes the *SHOE AND LEATHER JOURNAL* in an interesting way. His remarks, which follow, are well worth reading:

"Our travellers have been instructed to advise the mer-

chants that early ordering and early sizing will insure their getting prompt deliveries, and all the shoes they require. Merchants hanging off and not ordering until late in the season run chances of having prices advanced. Should the war continue after the New Year, the manufacturers in Canada and the United States will be short of leather, especially sole leather and calf leathers. Colors will be something almost impossible to get, on account of all the dyes coming from Germany. We have no intention of increasing the price on the merchants ordering in plenty of time, but we have advised that we cannot keep the prices open after certain dates. The conditions look good for this season. The manufacturer who has not covered himself with leather already will find prices advanced and still advancing, and if he doesn't get after it at once, he will be short of leather after February, and will have to increase his prices. Sixty per cent. of our hides are imported from Europe, and should business improve in the United States, the hide market will be short at the end of the year."

How Many Seeds in the Pumpkin

M. H. World has been appointed manager of Young's Economic Shoe Store at 1128 Bloor street west, Toronto. A novelty contest is being conducted. A large sized pumpkin has been placed in one of the windows and passers-by are invited to drop in and guess the number of seeds contained in the pumpkin. A card explains that everybody is free to guess and each contestant is requested to write his or her name and address on one side of a card and the estimated number of seeds on the other. The pasteboards are then dropped into a box and all will be taken out on the night of October 16th, when the seeds in the pumpkin will be counted. The winner will be presented with the best pair of shoes in the store. The contest has aroused considerable interest.

An Attractive Western Store

One of the flourishing shoe stores in the West is that of W. E. Tait, of Kelowna, B.C., and the accompanying cut affords some conception of the inviting character of the premises. W. E. Tait & Co. also operate an exclusive shoe store in Kamloops. The one in Kelowna is known as the City Shoe Store, and was opened in March, 1913. It is

under the able management of W. D. Morgan, who reports business very good, and attributes the satisfactory results to the exclusive lines they carry in high-grade footwear. J. & T. Bell and the Walkover are the leading brands. The firm have their own label on every carton and the repair department is in charge of F. R. Knapton. W. E. Tait, the head of the firm, gained his experience in the shoe trade with George Ryan, of Winnipeg, and in Stark's Shoe Store, Vancouver. He is an alert shoeman and a close student of styles.

Shoe Displaying at Fall Fairs

A noteworthy feature at the Peninsular Exhibition, held by the West Kent Agricultural Society at Chatham, Ont., on September 21, 22 and 23, was the boot and shoe exhibit displayed in the main building by J. L. Campbell, shoe merchant, of Chatham. Not merely was the display very attractively arranged, but it drew additional attention from the fact that it was the only boot and shoe booth upon the grounds. The showing of shoes at the Chatham Fair is, however, no longer a novelty or an experiment. This is the third year that Mr. Campbell has put on a display of this nature, which indicates that he regards it as good advertising. The display was arranged in the east wing of the main building, occupying the major portion of an entire side booth. The liberal use of white cheese cloth provided a clean and attractive background, while the floor of the booth was covered with a couple of lengths of carpet. A frame work of scantling had been put up, railing off the space, and providing support for the signs used to add prominence to the display, the timbers being covered with cheese cloth. A big sign was placed in the background, and another immediately above the booth, the lettering in black and red being especially prominent. The footwear display included a showing of suit cases, trunks and similar lines. Pedestals were put up for the better displaying of the goods. Two obliging and courteous salesmen were in charge, and made good use of every opportunity to show the goods and make a favorable impression upon the people in attendance. A noteworthy feature of the goods shown was that they were selected from among the higher priced lines—shoes running \$6 and \$7, and upwards, and attractive novelties.

Sound policy was at the basis of this selection of goods for display. The outstanding purpose of the exhibit was to attract attention and to advertise the store. People who come to a fall fair are not looking for the commonplace; the principle behind every showing is to exhibit the best of everything. An ordinary display of staple shoe and leather goods would probably not have attracted more than passing notice; but it was certainly the fact that the Campbell display caused a host of people to stop, examine and enquire. It was based strictly upon the competitive principle which is the basis of every genuine fall fair exhibit. "Show the best goods," was undoubtedly the watchword.

Tennis Shoes Will Be Advanced

As announced in the last issue of the SHOE AND LEATHER JOURNAL, the new price lists for tennis shoes have been issued. The figures are practically the same as those which have prevailed during the past few months, with the exception that there has been a raise of a few cents on some of the cheaper brands. To offset this increase, the quality will be considerably improved. In the new list, the present prices are given and also the prices after December 31st next. The latter figures show an increase of 10 cents on some shoes and 5 cents on other lines. The selling season is now on and it is to be hoped that the trade will give their placing orders between now and the end of the year. This enables the factories to go ahead during the long winter months to make up sporting and tennis shoes so as to have them ready for delivery early in the year when required. A leading manufacturer stated this week that retailers in the past, in the matter of sporting footwear, had been in the habit of hanging off until May or June, and then sending in a rush order, expecting that the factory either had all kinds of goods on hand or that they could make them up very quickly. As the increase after December 31st next will be considerable, he hoped that all retail-

ers would place their orders as soon as possible. There was nothing to be gained by waiting.

Opening Up Chain of Stores

The J. H. Porter Shoe Stores are being opened in Toronto and it is the intention to establish five of them. The man behind the enterprise is J. H. Porter, late buyer and manager of the shoe department of the Robert Simpson Co., who has already acquired the stock known as Ye Booterye, 310 Yonge street, and launched another up-to-date store at 1346 Queen street west, near the corner of Brock avenue,

in the splendid block of the Standard Bank. The premises are nicely fitted up with single shelving of mahogany finish, and will be provided with cartons and artistic labels of a uniform character adding much to the interior beauty of the shop. It is the intention of the proprietor to establish other stores in West Toronto, Bloor St. West and over the Don river as soon as arrangements can be made for suitable locations. The branches will be managed by competent and experienced shoe men, W. Iredale, lately in charge of the men's footwear department at Robert Simpson Co., being manager of the new Queen street store, while T. J. Porter is looking after the one on Yonge street. J. H. Porter will be buyer and general manager. High-grade shoes at popular prices will be carried.

Mr. Porter was born in Hillsdale, Ont., but at an early age came to Toronto. He has had a business experience of twenty-two years, the last fifteen of which has been spent in the shoe line. For seven years he was in the footwear department of the T. Eaton Co. and rose in the service until he became buyer of the men's lines. Then he went with the Simpson Co. to take an important position and for the last three years was manager and buyer of the entire department, which he conducted with signal success. When he took charge of this branch it is understood that the turnover was about six hundred thousand dollars annually, which was increased to one million, three hundred thousand during the past year. Mr. Porter has always been a strong believer in effective newspaper advertising and gave this work his personal attention. In connection with his new enterprises he intends to make liberal use of printers' ink, backed up by a representative stocks of leading makes, of which he has always been a ready buyer, and by prompt, courteous and efficient service.

Are You Interested in New Styles?

FOR weeks past the early fall shipments have been pouring in from the foremost shoe Manufacturers of America, and this word of invitation to you to come and see the new season's styles, comes when our stocks are most complete and the variety of styles largest.

A marked variation of style is noticeable, both in men's and women's footwear. Shapes are more graceful and there seems to be a general move toward the more refined shapes.

But come and see them for yourself—and observe our prices, then compare the showing, the quality of shoes and the prices with those you may have seen elsewhere.

- Women's Patent Colt button boots with cloth or gunmetal tops in latest shapes\$3.50 to \$5.00.
- Men's Boots in Patent Colt, Box Calf or Gun Metal with heavy goodyear-velted soles.....\$3.00 to \$6.00

WAR PRICES FOR SHOES

Shoes will certainly advance in price. The tanners not being able to procure sufficient hides, the shoe manufacturer is unable to buy leather, excepting in small lots. Already the advance in materials is equal to about 25 cents on a pair of shoes, and will be much more later on. Rubber also has about doubled in price.

Good News

This season no advance in price on shoes will be made in this store. We have a larger stock than usual, sufficient to carry us well into the Spring. We will continue selling at last season's prices until we have to replenish our stock.

Reliable Makes

Reliable manufacturers will not accept orders at old prices. Some makers are doing so, but quality will be taken out of the shoe. 50 cents can be stolen out of a pair of shoes without altering the appearance—but this reliable store always pays the advance and guarantees the quality.

WE ARE READY.—Our shelves are filled with the choicest of Canadian and American makes for the whole family. The prices are marked in plain figures, and only the marked price accepted. All customers treated alike.

RUBBERS.—This season we will handle the same make of Rubbers as last season, as they are the best to be had, and our price is no higher than other makes.

Try this store for your next pair of shoes.

Some Retail Shoe Advertising—Good and Bad

Better Not Use Any Cut At All Than To Employ a Poor or Mutilated One—Many Advertisers Try To Say Too Much In the Space At Their Disposal—The Effectiveness of Price Quotations and Plain, Frank Statements

"It is poor policy to swap horses when crossing a stream" was one of the aphorisms of Lincoln, the great American liberator. Equally true is the fact that it is short-sighted business to drop advertising during a period of disturbed conditions, or when trade is not as vigorous as usual. All the more reason then why the retailer should go after business more aggressively and persistently than ever.

There are four essential points in successful merchandising, showing, selling, serving and satisfying. Under the first head may be grouped attractive window displays and bright convincing advertising. The newspaper is one of the most effective means of calling attention to the lines that you handle, and as has been pointed out, it is also a wise policy to display in the window the shoes which you are featuring in your advertisement. People naturally expect to see the goods exhibited. There are many kinds of publicity, good, bad and indifferent, and there is no doubt that advertising requires as careful and conscientious consider-

ation and preparation as window trims or proper buying or store service.

In this issue of the SHOE AND LEATHER JOURNAL, several ads of retailers, taken at random from different newspapers, are reproduced in condensed form and the general outline will give the reader some idea of the layout, introduction and context of the announcements. In making any comment and criticism upon the advertisements, some readers may not perhaps agree with the remarks or deductions of the writer, but it must be remembered that the suggestions or references to shortcomings are contributed in a considerate spirit and with no desire to "knock." A carping or captious attitude would avail nothing, but constructive, helpful observation may.

* * * *

The advertisement of the Knox Shoe Store, Bowmanville, occupies four columns in width and much room is taken up with the illustration on the left. It is a stock cut

in black and white and has little or no connection with shoes, except the sign board wording. The reader would judge, from the cut, that the lady driver was a patron of a golf tournament or race meet. Mr. Knox would have made his advertisement more pointed and stimulating if he had used cuts of some leading fall styles and given their chief characteristics more in detail. The heading—"Are you interested in New Styles?"—is not sufficiently catchy, for most everybody is concerned in what is novel or modish. A more engaging caption would have been "The New Styles are Interesting," or "The New Styles are Graceful, Snappy, Artistic," or whatever adjective the writer might deem most appropriate. Another matter is that there are too many styles of type used in this space, there being no less than four in all. Two would have appeared to better advantage. A good feature is in giving prices and indicating the ranges of leather, so that the reader may know what to expect. The block containing the name of the store and calling it the "Store of Quality and Service" stands out very clearly, but would look better if centred. This might be used in very good form on the letter heads of the firm, providing it were printed in light blue or grey. Mr. Knox appears to be using considerable space and evidently finds the newspaper a valuable medium.

* * * *

The ad. of J. D. Climie, the veteran King street retailer, of Hamilton, contains sound arguments and logical reason. The cut is attractive, but there is altogether too much matter congested in the space. It would have been better to say half as much and to have brought out the information in a clearer and more compact form. Mr. Climie has devoted a good deal of attention to the situation, as it affects shoes

and leather at the present time, and has told the public quite frankly the reason why footwear will advance in price. The heading for the ad. is not at all suitable, as the words "War Prices for Shoes" would convey to the average reader the idea that there had been an augmentation in price, whereas, the body of the announcement really conveys the gratifying news that the firm has a larger stock than usual, sufficient to carry them until spring, and that they will continue selling footwear at last season's prices. This feature should have been brought out more convincingly in the introductory paragraph. As has been said, Mr. Climie's ad. is a mine of information to anyone who seriously studies the market conditions. He emphasizes one significant fact not often taken cognizance of by the public, and that is, while some glib makers may be accepting orders at old prices, yet the shoe can be robbed of quality at vital points and fifty cents stolen out of a pair without altering the appearance. This fact should be driven home by the intelligent retailer to all purchasers of footwear who put up the bluff that they can get such and such a pair at Mr. So-and-so's for just the same money. It is a good argument to bring out that appearances are deceptive, particularly in footwear, and if the patron believes that wear and service count, he or she should be willing to pay for guaranteed quality. Mr. Climie also emphasizes the fact that all goods in his store are marked in plain figures, only that price is accepted and that all customers are treated alike. This is a fine standard for any shoemen to uphold.

* * * *

W. J. Greer, of Wingham, Ont., has a timely ad in connection with the Patriotic Fund, which was recently raised in his town. Being a live shoeman, he wanted to participate

| Some extra specials in Chromo Tan stock, French Kip, &c..... | \$3.50 to \$4.50 |

If you want Good Values and a big selection to choose from. Come here for your Shoes

Ask to see our Men's High Grade Lace Prospector Boots in Tan or Black.

J. READY

Shoe Dealer Phone 123

in this fund, and inserted an ad that every seventh cash sale on a certain Saturday would go to the fund. His ad is well displayed, is not too crowded, and the specific purpose for which the announcement was inserted is brought home. The cut at the head of the space is ostensibly a stock one, and does not add to the strength or attractiveness of the general scheme.

* * * *

The small ad. in the centre of Borbridge, Foot Fitter, St. Thomas, requires but little comment. It is merely in the nature of a card or an announcement, and conveys no information, except that Borbridge deals in boots, shoes, trunks, rubbers and suit cases. Any kind of publicity is better than none at all, and even if a retailer inserts only a card, such as the Borbridge proclamation really is, it is bound, in a measure, to keep his name before the public. However, if the space were doubled, and used only half as often, better results might be obtained.

* * * *

Chas E. Raven is a progressive shoe retailer in St. Thomas, Ont. This ad, which extends across three columns, is direct in appeal, uniform in layout and timely in insertion. The heading "Ladies' Shoes of Quality" is a good one and in the body of the ad he tells something about the quality of these shoes, their style characteristics and price. It is a special appeal to women and as such, no doubt, brought good results. Mr. Raven tells, with force and effect, that he handles "Quality Footwear." The cut used is evidently a stock one, but is better than many that find their way into several of the newspapers, conveying at least the idea of style by displaying two shapely shoes.

* * * *

The ad of W. H. Willis & Co., Wingham, Ont., at once arouses attention by the direct announcement of three days of shoe bargains. The firm tells explicitly that they have been going over their stock and picking out odds and ends, and the public may look for something exceptional. The declaration that ten per cent. of the total cash sales will be given to the Patriotic Committee evidences a very worthy action on the part of the firm. This announcement might have been brought out a little more prominently. It is obvious that Willis & Co. closely supervise their advertising and no doubt get splendid results from it.

* * * *

D. W. Downey, the veteran retailer, of Brockville, has an interesting ad, setting forth the merits of one shoe. He makes a direct appeal to the women and the cut illustrates the general lines of the brand, while inset in the circle is shown the heel and the top lift. For this style of announcement the illustration is very good. The white space around the ad serves to bring out the body matter more clearly. If some idea had been conveyed to lady readers of the price at which the shoes mentioned sell, the printed facts might have made a more direct personal appeal.

* * * *

The ad of F. W. Savage, Waterloo, Ont., is a well set up one emphasizing the features of the shoes he handles. The argument used in reference to them is bright and timely. As an announcement of interest and instruction, the subject matter is ably written, while the comprehensive nature of the range in the line spoken of is also well represented. It might well be termed an educational ad rather than a business puller or direct seller.

* * * *

J. Ready conducts a bright shoe business in St. Mary's, Ont. His ad, which makes a clear-cut and far-flung appeal

to the farmers, is right to the point. It is well set up and prices are given along with a brief description of the various lines handled. Mr. Ready drives home the announcement that a farmer likes comfort, as well as wear and that he can secure both of these desirable attributes in footwear at comparatively easy prices. There is plenty of white space, balance and proportion in the set-up, and as a direct appeal to a buying class little fault can be found with this advertisement.

* * * *

The ad of J. D. Bissett, North Sydney, N.S., has altogether too heavy a border. The rules inside could very well have been eliminated and the general heading "Footwear" conveys no meaning likely to arouse instant interest. What the writer evidently intended to bring out was the fact that his several lines of ladies' high-class footwear were to be cleared out. But one has to read through the whole context before this is made patent. A good heading would have been "Closing Out Several Ladies' Lines," or "High-class Footwear at Exceptionally Attractive Prices."

Appreciate the Style Editions

Travelers are now out in full force with spring samples and report that retailers, who are alive to the situation, are placing their orders now, rightly believing that shoes will be increased in price later on. The wise dealer is the one who will not delay this matter, for any dilatoriness is likely to mean a larger outlay for him.

In the last four editions of the SHOE AND LEATHER JOURNAL the "Styles" problem has been gone into very thoroughly, and much information presented on every phase of the situation and on the trend of footwear fashions. A great deal has been printed on what the leading firms have to offer, and what prominent manufacturers think will sell during next season. Numerous high-class illustrations were furnished on all kinds of footwear, over seventy-five appearing in the Journal during the last two months. These cuts were made from original drawings of shoes, executed with much ability and skill by the art department of the SHOE AND LEATHER JOURNAL.

Every effort was made to show all that was new in Canadian styles in the way of lasts, toes, heels, patterns and materials, and that the trade appreciate the advance information by word, pen and picture is shown by letters received from many points. A leading Barrington street dealer, Halifax, writes: "I have read your style numbers with a great deal of interest and certainly appreciate the advance information and pointers received on what are likely to be the best sellers for next season. I have always believed that goods bought right were half sold, and for this reason follow your Journal very closely in the matter of the latest style data."

Another retailer, doing business in Regina, says: "I have taken the SHOE AND LEATHER JOURNAL for the past thirteen years and consider it is getting better all the time. You give much valuable information in each addition and I do not see how you can present such a splendid paper for the subscription fee of \$1.00. Your style illustrations are particularly clear and effective. Allow me to congratulate you upon the interesting manner in which you present the views of the trade, as well as your own on this important matter. Business with us, during the past three weeks, has been very good, and fall lines are moving as well as can be expected. We find that there is a big call for patent leather, with cloth tops, while in men's, the moderate recede toe appears to be the most popular, particularly in bals."

War Cards for Shoe Retailers

Ready for Action

Our stocks for fall are now complete in both men's and women's fine footgear.

Enthusiasm at the Front

It's all about these plain toe brocade top button boots.

A Wireless Announces

Growing Scarcity of Raw Materials is Very Real

Popularity of Fabrics, Some of Which Are Capable of Receiving a Polish and Are as Durable as Leather—Large Quantity of Glazed Kid Being Used—Calf Skin Footwear May Reach a Practically Prohibitive Figure—The Trade Outlook

It is not surprising if the shoe trade is finding it difficult to know its exact status. Dealers, certainly, are becoming doubtful of the future, and are uncertain what to do. Even the manufacturers are advising moderation in movements.

It is thoroughly understood that present conditions, which will be duplicated in the future, show that the growing scarcity of raw materials must increase the cost of leather, and ultimately increase the retail price of shoes. Already values of such goods have been advanced in some cases from 5 cents to 25 cents a pair.

"After us the Deluge" seems to be the situation of the shoe manufacturer, so far as raw materials are concerned, says a leading New England authority, in very close touch with the trade. Some of the essential materials are becoming scarce, and the vanishing point is not far away, after which no price will be able to secure them. Substitutes must be used, and while a large supply of imported fabrics suitable for tops is believed to be held by the shoe manufacturers, there is a limit even to such material. American materials and substitutes for leather now have their opportunity.

Plenty of Shoes Just Now

It is estimated that the supply of shoes of all kinds in this country is ample for a considerable time, and if the goods are not exactly what the public desire the emergency is sufficient to repress fastidiousness. Indeed, any one may best be satisfied and thankful that any suitable shoes are available. Dealers are recognizing this condition, and are not increasing their stocks too fast, and clearance and bargain sales are not considered good business at this time.

More than ever before the necessity of cattle conservation is being impressed on the American people, particularly if they desire to continue to have calf-leather shoes. For all general wear the calf-leather shoe is the most desirable, but if the slaughter of young calves continues the supply of adult cattle will be eliminated. The European war is also reducing the supply of calf-skins, as it is estimated that eighty per cent. of the calf-skins used in this country are imported, and this supply being cut off the premium on calf-skin leather is evident.

The inevitable result, following the increasing value of the leather, is the reduction of calf leather to the 20 per cent. of the supply produced locally, and the value will be prohibitive, except to those of unlimited means; for it is estimated by the trade that an increase of 10 cents a foot in the value of calf leather will mean an increase of 30 cents a pair in men's boots. That the supply of calf leather will continue at the minimum for some time is very probable, hence the increased cost of calf-leather boots and shoes for an indefinite period.

Now is the Time For Fabrics

Shoe manufacturers are adopting various kinds of fabrics for shoe uppers, and giving more attention to the material and design, that it will be a satisfactory substitute for leather, both in durability and appearance. Much originality is being shown in the designs of fabrics adopted, and it is evident that beauty is to be used as a power to influence the purchase of such shoes, on the attempt to popularize this substitute. Some fabrics produced, it is stated, are capable of receiving a polish, and are as durable as leather.

One of the results of the European war which is of advantage to the domestic trade is the diversion of the sale of glazed kid from foreign buyers to America, and as the supply of ordinary leathers is so limited a larger quantity of this glazed kid is being made up into footwear for the domestic market. The value of this material is but little changed, except in a few grades, where prices are perhaps one cent a foot higher. The shoe produced from this glazed kid is considered durable and good appearing, and as it can be sold at a reasonable market price, it should prove popular.

Leather Situation Unchanged

No change is noted in the leather market, and the only change probable for some time will be advances in values. Hemlock sole moves quietly, as high prices prevent many transactions. Union is in constant demand, oak backs are in limited supply.

The call for upper stock is principally for what will substitute for calf, so such selections are commanding good prices, but the movement is limited.

Calf leather is selling for just what dealers ask. Lightweight stock that a few weeks ago was worth 24 cents, now commands 30 cents. Business is moderate.

Patent colt is held at advancing prices, and stocks decrease as values ascend. Patent side and kid is not so strong, but values are firm with a good demand.

Rough leather is in moderate request, and supplies are limited. Values are unchanged.

Glazed kid is in demand and prices are firm. Low grades are selling readily and the better grades are feeling the stimulus.

Canadian Tanner Returns From Abroad

F. G. Clarke, of the firm of Clarke & Clarke, leather manufacturers, Toronto, who is a former chairman of the Tanners' Section of the Toronto Board of Trade, has returned from a three months' business trip to the Old Country. He was there when war was declared and reports that there was no excitement occasioned by the event, but quiet, calm determination on every hand. Speaking of business conditions, Mr. Clarke says they have been disturbed in certain lines much the same as in Canada. The present outbreak of hostilities had resulted in great activity in connection with some industries, while it had adversely affected others, making the general aspect somewhat spotty. On the whole, however, matters appear to be adjusting themselves and the outlook is regarded favorably. All firms are attending to business as usual and although they may not do the same amount, they are going more aggressively after orders. In the sheepskin line pickled pelts have gone up from seventy-five cents to a dollar and a half a dozen, while war insurance, extra charge for carriage and rates of exchange make another advance of about five per cent. The prices for all dyestuffs and chemicals have jumped considerably. Clarke & Clarke, who are the largest sheepskin tanners in the Dominion, report that prices for sheepskins are stiff, but so far have made no general advance. What the future quotations will be it is of course impossible to say. Much will depend upon the supply and war conditions.

Some Very Natty Showings in Spring Styles

The spring samples of the Hartt Boot and Shoe Co., Limited, of Fredericton, N.B., evidence the high-class finish, distinctive characteristics and superb shoemaking which has always individualized the "Hartt Shoe" for men. The firm believe their range of offerings is the most complete they have ever shown, embracing everything that can be desired in lasts and patterns. They have added for spring, four new lasts, and report that travelers are now out with their new samples, and so far, the results have been very satisfactory. If business continues during the balance of the trip as good as it has been up to the present, the results, they say, will be very much larger than they had anticipated.

Five New Lasts for Spring

The spring samples of the Regal Shoe Co., Toronto, are right up to the minute in style, fit and finish. The company have added five new lasts. There is the Gotham, which is a semi-English last, with half round toe and medium slope. Then there is the State Street, which is a medium straight last, with full round toe effect. Nature's Doctor is a broad, full fitting last, with flexible shank and orthopedic heel. The Windsor is a medium full round, rather high toe last and wide across the ball of the foot; while the New Hump is as its name implies, a high toe last. Calfskins in black and mahogany tan, patent, kangaroo and kid are the leading leathers, and the samples reveal a large number of bals, many with blind eyelets, and the majority having heels from 7/8 to 9/8. The showing in low cuts is also exceptionally attractive and some oxfords are seen with plain toes and no box, designed to meet an exclusive clientele. The range of offerings is an exceptionally wide one and whether in bals, buttons or bluchers, any taste can be satisfied. The

GUNMETAL BAL., SEMI-ENGLISH TOE, WITH MEDIUM SLOPE, 9/8 HEEL, ON THE GOTHAM LAST—BY REGAL SHOE CO.

company believe that there will be a big demand for their Nature's Doctor, as well as their State Street and Gotham creations.

Featuring Strap Effects

L. B. Shafer, representing the Moore-Shafer Co., of Brockport, N.Y., has been making a tour through Ontario in the interests of his firm, and the spring samples this year are exceptionally attractive. In low cuts, strap effects are being featured, while panel fronts are also in evidence. Colonial are strong, with smaller tongues and plainer ornaments. A number have fabric quarters in brocade, moire

silk, queen cloth, etc. The spool heel is the reigning favorite, although a number carry the Louis pedestal. Colored linings are also observed. One panel front pump has a rubber goring in the side. The firm report a slight tendency in the very high class trade toward lace oxfords, with blind eyelets. The leading leathers are patent and matt vici, so far as the low cuts are concerned. In high cuts, the long vamp, recede toe, with fabric quarters, are being promin-

VICI KID BLUCHER, MATT TOP, FLEXIBLE SHANK, ORTHOPEDIC HEEL BROAD FULL TOE, ON NATURE'S DOCTOR LAST—BY REGAL SHOE CO.

ently displayed. Satin top facings are much in evidence, and all the better class of shoes are full foxed. The whole line is characterized by plain, quiet effects, light, airy finish and close edges. Matt goat is used extensively for topping. One new production in straight pumps is the strap effect. This strap can be either used in the form of a cross or converted into an ankle strap. A favorite material for quarters is black satin delaine. The square French toe is seen, as well as several other new lasts in welts, turns and McKays. The Moore-Shafer line this year is certainly very pleasing and effective.

Unique Offerings in Slippers

The Unique Shoe Company, Toronto, are showing for spring several attractive two-strap effect slippers, with silver buckles, in patent leather with velvet tops and also in patent with white kid tops. Other models are seen with three and four-strap effects, the Roman sandal boot being particularly smart. A new offering of the company is ladies' felt "snuggly" slippers, with cushion sole and heel. These slippers are cut very high at the back, so that they retain not only their shape, but easily cling to the foot. These goods, which were formerly made in Germany, are now finding a wide market in the Dominion, and come in brown, black, green and red. The fore parts are trimmed with ribbon, pompoms, etc., and some have plush fur tops and the soles are of elk. The Unique Shoe Company are also turning out a fine range of boudoir slippers in fourteen different colors, with pompoms to match, and quilted satin insoles. The lines are very pretty and make most acceptable holiday, birthday and Christmas gifts. The velvet finish on some is particularly attractive.

A novelty in the way of low cut footwear adornment is being shown to the trade by D. D. Hawthorne & Co., Toronto. It consists of a tongue and buckle, which is attached to the fore part of a low cut shoe by means of dome fast-

eners, making an up-to-date colonial. Then the tongue and buckle are easily removed, and a flat bow of corded silk substituted and similarly fastened, in a moment making a regulation pump for evening wear. The idea has certainly taken well with the trade, and Miladi can convert her slippers into either a Colonial or a pump by simply changing the adornment.

The Weston Shoe Company, of Campbellford, have completed their spring samples and installed several new lasts. The line is more comprehensive this season than ever and the medium recede toe appears to be the favorite. A number of models are seen with brocade and cloth tops and spool heels, while plain toes are much in evidence. Patent appears to be the leading leather, with gun metal a close second. In their line of children's, several new combinations of leather are noticed, together with some attractive strap effects.

Large Shoe Stock Disposed Of

The Roberts & Van Lane Shoe Co.'s stock, Brantford, has been sold to Harry C. Borbridge. The assets were offered at auction recently but the highest bid was only nineteen cents. Afterwards the assignee, C. S. Scott, of Hamilton, and the inspectors succeeded in getting a bid of thirty cents from Mr. Borbridge, which was accepted. Mr. Borbridge will move the stock to his premises on Dalhousie street, Brantford, within a few days.

Shoe Interests Hold Conference

A conference of shoe and leather men, including nearly every branch of the shoe industry, was held September 10th, at the Hotel Astor in New York. Over one hundred were present. The object of the conference was to discuss the effects of European war on their business. Representatives of upper and sole leather tanners, glazed kid manufacturers, boot and shoe manufacturers, shoe wholesalers and shoe retailers were present.

President A. S. Kreider, in reading the call to convene, stated that "the remarkable situation necessitated a conference for the arrival at some solution of the problems of the day—so that uncertainty can be stopped."

President Kreider introduced Chairman McGowin, who said that "one of the best reasons why the retail shoe merchants of the country should organize and should become members of the National, is the fact that these representative men have been influenced to meet here at our suggestion, and their being here is a tangible endorsement of our association by the tanner, manufacturer, wholesaler, and back to him, the producer."

The meeting brought out convincingly the fact that tanners have been fully justified in the advances which have been generally asked for leather during the past six weeks. Another leading feature of the meeting established the fact that shoe manufacturers will use what leather they have and are able to get at nearly old prices, and pass it along to their customers without unnecessary profit, pursuing a similar course to that started by tanners.

ANNUAL DINNER WAS A PLEASANT AFFAIR

A very enjoyable evening was spent by the travelling staff and heads of departments of Blachford, Davies & Co., wholesale shoes, at the residence of C. A. Davies, 134 Glen Road, Toronto, on September 15th. It was the annual dinner tendered "the boys" by the president of the company. A delightful time was passed, in song, toast and story. The accompanying picture shows a portion of the group

gathered around the festive board. From left to right are, J. N. Gibson, J. A. Clark, C. A. Davies, S. J. Edmondson, W. R. Cameron, W. G. Coburn, E. M. Maier, A. G. Saunders, R. G. Boyle, H. R. Emery, W. H. Harvey and M. E. Franklyn. There were also present A. E. Echold, J. M. Pirrite and others, whom the photographer did not manage to catch in the flash-light.

SHOE NEWS IN PARAGRAPH

The Waldorf Shoe Co., of Montreal, has assigned. Geo. Grigg has opened a shoe repair shop in Burford, Ont.

P. A. Doig, of Fisk, Limited, Montreal, was in Boston last week.

Richard Hoar, shoe dealer, Whitby, Ont., has assigned to J. F. Paxton.

J. Valliear has opened a shoe repairing shop in Penetanguishene, Ont.

The Dominion Leather Shoe Finding Co., of Montreal, recently registered.

William Francis, of the John Ritchie Co., Quebec, was in Boston last week.

A. Holly has opened a shoe repairing shop at 293 Broadway avenue, Toronto.

N. Macfarlane, the Macfarlane Co., Montreal, spent a few days in Toronto last week.

Wm. Graham, of Webster & Graham, London, was in Toronto last week on business.

John Sinclair, of the Barrie Tanning Co., Barrie, was in Toronto last week on business.

J. A. Little, of Saskatoon, is negotiating a sale of his boot and shoe business to H. S. Massey.

Sig. Saxe, of Marden, Orth & Hastings, Boston, is calling on the trade in Canadian shoe centres.

The boot and shoe stock of the Quebec Shoe Store, Winnipeg, has been sold to M. Finkelstein.

Richard Weston, of the Weston Shoe Co., Campbellford, Ont., was in Toronto last week on business.

T. W. Hart, of the Nugget Polish Co., Toronto, has been spending his holidays in St. Catharines, Ont.

A. McKillop, of Calgary, wholesale shoes, was in Toronto and other points east last week on business.

A. Bress, 7 Bonsecours street, Montreal, has installed a Goodyear shoe repair outfit in his establishment.

C. S. Corson, of the Regal Shoe Co., Toronto, has returned from a business trip to Boston and other cities.

B. G. Killoran is opening a new exclusive shoe store in Haileybury, Ont., and has laid in a representative stock.

The shoe store of D. Dumochel, of Hull, Que., was recently entered and about forty dollars worth of shoes stolen.

R. Burlingham, who represents the Relindo Shoe Co., Toronto, in the prairie provinces, is now covering that ground.

W. C. Meyers, of Montreal, representing the Rideau shoe, is now on an extended trip throughout Western Canada.

J. E. Pare, sales manager of Dufresne & Locke, Mon-

treau, is spending some time in various Ontario cities on business.

Sam Pritchard, representing Smaltz, Goodwin Co., shoe manufacturers, Philadelphia, was in Toronto last week on business.

W. V. Ecclestone, manager of the T. Eaton Company, Toronto, was a recent caller in several Montreal shoe factories.

Frank Bauslaugh and brother, of John Agnew, Limited, Brantford, were recent visitors in Montreal and Quebec factories.

The stock of M. Pearl, dealer in shoes and men's furnishings, Calgary, Alta., has been sold by the official assignee, E. A. Dagg.

Patrick Mulligan, shoemaker, died recently in Charlottetown, P.E.I. He was 70 years of age and leaves a large family.

Abraham Ficks' shoe repairing shop, 67 Barton street, Hamilton, was recently entered and a quantity of sole leather stolen.

John Donohue, representing Helming-McKenzie Shoe Co., Cincinnati, Ohio, was in Toronto last week with a fine range of samples.

H. B. Dorson, late with the John McPherson Co., Hamilton, has taken charge of the fitting room of the Gray Shoe Co., Syracuse, N. Y.

E. S. Willmarth, representing the John Ebbetts Shoe Co., Buffalo, N.Y., was in Toronto and other cities on business a few days ago.

W. Wilson, representing Luc Routier, shoe manufacturer, Quebec, was in Toronto, London and other points on business last week.

Mrs. John Harris has arrived in Toronto from England to join her husband who is the Canadian manager of the Nugget Polish Co.

S. L. Lawther, of the Anglo-Canadian Leather Co., Toronto, left last week on an extended business trip through the Maritime Provinces.

Norman Merrill, representing Bliss & Perry Co., Newburyport, Mass., was in Toronto during the past week, with a fine range of samples.

The Amherst Boot and Shoe Co., of Amherst, N.S., have received an order for two thousand pairs of army boots from the Militia Department.

Alf. Locke, with J. B. Douglas' Shoe Store, Calgary, was in Montreal, Toronto, and other eastern points, last week, on a business trip.

W. G. Damer, of F. J. Weston & Sons, Toronto, has gone on an extended selling trip to the West and will travel as far as the Coast.

It is understood that the Murray Shoe Co., of London, and Snedcor and Hathaway Co., of Tillsonburg, Ont., have received large orders for army boots.

The style of the O. B. Shoe Co., of Drummondville, Que., which factory was destroyed by fire some months ago, but is now rebuilt and re-equipped throughout, has been changed to the Drummond Shoe, Limited, Drummondville, Que.

It may not be generally known that the Territorial Army of Great Britain has the privilege of choosing and buying its shoes from any retail shoe store. The regular soldier, whether infantry, cavalry or artillerymen, must wear the regulation army shoe, but the volunteer force, kept for home defence, is given a money allowance to purchase shoes and other equipment required. The stores have been doing a big trade lately.

Ames-Holden-McCready, Limited, Montreal, deferred the quarterly preferred dividend due October 1st. The

directors will await the result of the fiscal year before making any further disbursements.

Ed. Lynch, western representative of the Minister, Myles Shoe Co., Toronto, has left on an extended business trip throughout the prairie provinces.

R. A. Ellison, formerly with the Perth Shoe Co., Perth, Ont., is now foreman of the fitting room of the Alberta Shoe Manufacturing Co., Redcliff, Alta.

"Sandy" Gloud, representing Leach Shoe Co., Rochester, New York, makers of women's turns and welts, was in Toronto last week showing spring samples.

The Cook-Fitzgerald Co., of London, made a splendid showing of shoes at the Western Fair in London and the London papers speak highly of the display.

A sum of money amounting to over \$200 was donated to the Canadian Patriotic Fund by the employes of the United Shoe Machinery Co.'s Montreal office.

Philip Sullivan, representing Williams & Kneeland Co., South Braintree, Mass., was in Toronto last week showing a fine range of spring samples in men's welts.

J. M. Peterman and L. S. McKindsey, who represent the W. B. Hamilton Shoe Co. of Toronto in Western Canada, have left for their respective territories.

Nearly all the shoe factories have completed their fall runs and are now taking stock and finishing up immediate and other orders, previous to starting on their spring runs.

Arthur L. Evans, president and general manager of the Arthur L. Evans Co., publishers of "The Shoeman," Boston, and Miss Jessie Durgin, were united in marriage September 12th.

W. Roach, who was foreman of the footwear department of the Consolidated Rubber Co., Montreal, died recently after an illness of over six months. He leaves a wife and one child.

H. K. Hayward, superintendent of the Blachford Shoe Manufacturing Co.'s plant, Toronto, who slipped in the factory the other day and fractured a couple of ribs, is able to be around again.

The Canadian Consolidated Rubber Co. have declared their quarterly dividend of $1\frac{3}{4}$ per cent. on the preferred shares of the company and 1 per cent. on the common shares of the capital stock.

H. W. Parsons, Eastern representative of the Nugget Polish Co., Toronto, has been in charge of the fine displays which the firm made at the St. John, Charlottetown and Sydney exhibitions.

The Boot and Shoe Workers' Union, No. 458, Fredericton, N.B., have donated \$100 to the Patriotic Fund. Percy Gough, who is a member of the Union, is among the Canadians who are going to the front.

The many friends of L. B. Hutchison, manager of the Toronto branch of the Kaufmann Rubber Company, who is laid up with an attack of appendicitis, will be glad to learn that he is progressing favorably.

Among the shoemen in Toronto during the past week were G. H. Ansley, of the Perth Shoe Co., Perth; S. H. Parker, of the Parker Shoe Co., Preston; and A. J. Kimmel, of the Kimmel Felt Co., Berlin, Ont.

It is well for the trade to remember that Easter Sunday, next year, will fall on April 4th. Each retailer should jot this down in his note book, so that he can recall the date, when ordering the delivery of spring goods.

The Canadian Consolidated Rubber Co., Limited, of Montreal, state they have had a most successful season for their Fleetfoot line of sporting shoes. Orders for this type of footwear this year have increased enormously.

A shoe concern recently manufactured the smallest and largest pair of shoes. The former, size 0, is one inch long,

and the latter, size 50, is twenty-six inches long, fifteen inches high, nine inches across the sole at the ball of the foot and is five inches at the toe.

Wm. Hockin, shoe retailer, Wallaceburg, Ont., has made extensive interior improvements to his store. He has erected a balcony at the rear, where he has his private office, and will also have space for reserve stock.

Graban & Ridders have opened a new shoe store in Portage La Prairie, Man. They are carrying a full line of footwear manufactured by the leading makers. The firm had a very successful opening day on Saturday, September 19th.

F. J. Weston & Sons, wholesale shoes, who have occupied premises at 10 Front street west, Toronto, for some years, have moved to commodious quarters at 51-53 Wellington street west, in the block formerly occupied by Brown Bros., stationers.

The Cook-Fitzgerald Co., London, are re-arranging the machines in their number 1 factory, which will add to the facilities of the plant. It is understood that the company have received an additional order for army boots from the Canadian government.

The Canadian Electric Shoe Shining Machine Co., Limited, with a capital stock of \$100,000, has been incorporated, with headquarters in Winnipeg. The incorporators are, J. V. Anderson, C. W. Douglas, C. D. Springer, P. W. Ninnes and E. P. Falter.

E. Leroux, of the United Shoe Machinery Company, Montreal road staff, is in Boston at the present time getting pointers on new machines, particularly the new buttonhole making and new buttonhole finishing machines, which his company are about ready to offer to the trade.

Ames-Holden-McCready, Limited, completed their army shoe orders last week and had goods delivered several days ahead of the date specified in their contract. The firm received a letter from the government expressing its appreciation of the good and prompt service rendered.

The business men of Orillia gave ten per cent. of their cash sales on a recent Saturday to the Patriotic Fund. Several shoe dealers in various towns and cities of the Dominion have been contributing a percentage of their sales to the fund, and their generous acts are much appreciated.

The regular seven per cent. dividend on the preferred stock of Dunlop Tire and Rubber Goods Company, Limited, is declared for the three months ending September 30th. The preferred stock was first issued on March 1st, 1899, since when it has continuously paid dividends without interruption.

The SHOE AND LEATHER JOURNAL has received a revised edition of the Shoe and Leather Lexicon, which is published by the Boot and Shoe Recorder Company, of Boston. The booklet is replete with interesting and timely information on shoes and leather, and is a valuable compendium for anyone identified with the trade.

R. G. Boyle, of Blachford, Davies & Co., has taken the ground north of Hamilton and in Wellington, Grey and Bruce counties, formerly covered for the firm by J. A. Clark, who, owing to a recent bereavement in his family, will devote his time exclusively to the shoe business carried on at 250 York street, Hamilton.

"The Shoeman," retail shoe dealers' paper, established in Boston a few years ago by Arthur L. Evans, is planning to establish a Manufacturers' Section in connection with the regular publication. C. E. Bosworth, who has been advertising manager of the Shoe and Leather Reporter for a number of years, will be manager of this new section. Ezra Grover, who resigned as editor of the Shoe and

Leather Reporter in June, where he had been for a number of years, will act as associate editor.

C. G. Marlatt, of the Marlatt & Armstrong Co., tanners, Oakville, has been appointed by the Ontario Government as one of the five men to form a Highway Commission, who will superintend the construction of the Toronto-to-Hamilton trunk road. The amount to be expended is \$600,000. Construction on the road will commence next spring.

An interesting display of army boots was made recently in one of Geo. G. Gales & Co.'s windows on St. Catherine street west, Montreal. These boots reflect credit on Canadian workmanship and product, having been made entirely of Canadian materials by Canadian workmen according to the specifications of the British Army for the expeditionary force leaving Canada for active service abroad.

The Canadian Consolidated Felt Company, Limited, of Montreal, has deferred action on the preferred stock dividend due this week. It is understood that the decision was arrived at some days ago, but the announcement was withheld. The outstanding preferred is \$500,000, on which dividends have been paid heretofore. The company has a \$500,000 bond issue. The common stock amounts to \$1,500,000.

Ex-Ald. James Robinson, Montreal, who has been under the weather for some time, but is now in improved health, has presented to the Militia Department a sixty horse power, chain drive roadster, which is one of the strongest and fastest cars out. Hon. Sam Hughes, Minister of Militia, in accepting the machine for service, thanked Mr. Robinson for his generous gift of the car, which has been shipped direct to England.

W. C. Bartlett, shoe retailer, 1287 Bloor street west, Toronto, has disposed of his lease to Robt. Callum, cigar dealer, on very favorable terms and will remove to Brampton, where he has rented a well located store on Queen street. Mr. Bartlett, previous to embarking in the retail footwear line in Toronto, four years ago, was employed for fifteen years in shoe factories, being in the service of Getty & Scott, Galt, for about ten years.

The Red Cross Shoe Hospital, 105 Garnier street, Montreal, is having a twenty-two foot Goodyear shoe repair outfit installed. It is the intention of Alfred Allard, the proprietor to solicit trade by having two or three automobiles arranged as ambulances, painted white, with the red cross sign. While the idea is new, it is looked upon as being quite practical. Men and boys working in connection with the auto service will be in white uniforms.

The dealers in footwear in Sherbrooke, Que., recently took a whole page in the "Daily Record," under the heading "Shoe Days in Sherbrooke." All the announcements were illustrated by excellent cuts and in nearly every instance prices were given. Among the firms who had interesting advertisements were J. A. Wiggett & Co., M. J. Chouquette, Boucher, Lacroix & Fissette, J. M. Nault, Limited, Nault & Lacroix, S. & W. Fortier.

John McMurchy, proprietor of the woolen mills, Brampton, at a recent meeting of the town council asked that body for permission to use hydro-electric poles in a section of the town where he purposes to establish a tannery and use his own electric power, as he has a power plant at Huttonville, four miles west of Brampton. The council decided that they had no power to grant Mr. McMurchy the liberty of using hydro power, and he must apply to the Hydro Commission.

Rubber footwear manufacturers and retailers believe that the coming season will be a particularly good one for them. Discussing this phase of the question, a leading shoe retailer said, "Yes, I believe that if we have any wet or slushy weather this fall, the sale of rubbers will be large, for the simple reason that if a man has a hole in his shoe

he will be more likely to buy a pair of rubbers to keep his feet dry, than he will to go out and purchase a new pair of shoes, or even have them re-soled."

Joseph Daoust, of Daoust, Lalonde & Company, Montreal, the treasurer of the Wholesale Rubber Boot and Shoe Association, suggests that the money, just over \$1,600, should be distributed among the fifty members. The association has been inactive for about two years, and Mr. Daoust feels that as the object for which the society was formed no longer exists, the balance of the amount in his hands should be divided among the members. The latter are to be consulted as to the future of the association.

It is understood that the British Government are making inquiries in Canada for 65,000 pairs of army shoes at short notice, wanting deliveries by the end of November, for the entire lot. Word has been sent from Ottawa to a number of Canadian shoe factories in regard to their facilities for making and delivering the shoes within the time specified. If it is demonstrated that this can be done, it is understood that the War Office is prepared to place with Canadian factories orders running up to fully half a million pairs.

D. Lorne McGibbon, of Montreal, has just returned from a trip to the Maritime Provinces. He says that outside of Sydney and New Glasgow, trade conditions may be said to be normal in the east. The agencies and warehouses

DEATH OF VETERAN TRAVELER

Very many friends in the shoe trade will learn with regret of the death of Martin J. Burns, of the wholesale shoe house of Coates, Burns & Wanless, of London, Ont., who passed away on September 26th. Mr. Burns was one of the veteran travellers, having been for 37 years on the road, and never missing a trip. He was born in Dundas, Ont., and conducted a retail business there for a few years. Afterwards he started travelling for the wholesale shoe firm of John Garrett & Co., of Hamilton, remaining with that house until it retired from business. About 1885 Mr. Burns en-

gaged with Jas. McCready & Co., of Montreal, to look after the same territory that he had previously covered—Toronto to Windsor. He remained with the McCready firm for 21 years and in 1906 embarked in the wholesale shoe business in London, under the name of Coates, Burns & Wanless. Mr. Burns was a gentleman highly respected and widely esteemed by all branches of the trade. He was one of the very first subscribers of the SHOE AND LEATHER JOURNAL and in his passing, the trade in general loses one of its most faithful and upright representatives.

THE WAR WILL BE SETTLED IN EUROPE AND NOT IN THE BACK OFFICE—ATTEND TO BUSINESS

of the Ames-Holden-McCreedy and Canadian Consolidated Rubber find business much less affected there by the war than in many other parts of the country. The east did not experience a wild boom a few years ago, such as was under way elsewhere in Canada, consequently does not show the same contraction during the present depression.

Shoe jobbers are constantly being advised of advances in prices, many manufacturers making for the trade, withdrawing quotations which are only supplied for certain lines upon request. The heavier grade of shoes has gone up considerably more than the finer ones. Cheap splits have been advanced by fully 25 per cent., and grain, elk, menonite and the better grade of splits by about 10 to 15 per cent. The former advance refers to shoes selling direct to the trade from \$1.00 to \$1.25, and the latter increase affects those from \$1.25 to \$2.00. The sorting business in wholesale circles is fairly active.

Hallam's Weekly Market Report, Toronto, says: Beef-hides: The market is lower. Tanners appear to have plenty of hides for immediate needs, and will doubtless wait for more definite demand before again entering the market to any extent. The large number of hides coming to market during the past month have also contributed to reduce the prices. City Butcher Hides, flat, 14c. per lb. Country Hides, flat, cured, 15¼c. to 15¾c. per lb. Part cured, 14½c. to 15c. per lb. Calfskins—The market is easier, the tanners demanding goods at lower prices. City skins, green, flat, 16c. Country, cured, 17c. to 18½c. Part cured, 16½c., according to condition and take off. Deacons or Bob Calf, 80c. to \$1.20 each. Sheepskins—The demand has been lessening lately resulting in an easier market. City Lambskins, Pelts or Shearlings, 50c. to 90c. each. Country Lambskins or Shearlings, 35c. to 90c. each.

C. Parsons & Son, of Toronto, Ont., have opened an office and store rooms at 95 South street, Boston, for the sale of British leathers. They will represent in Boston some of the leading British tanners making side upper leather, bellies and shoulders. These are all lines which they have handled for many years with good success in Canada. H. L. Daville, of the Toronto office, assisted by Sidney McNaught, will have charge of the Boston branch. Mr. Daville has been calling on the trade in the States for some time and developed a good business there. W. G. Parsons, of Toronto, vice-president of C. Parsons & Son,

has been in Boston during the past two weeks getting matters under way at the new store. C. Parsons & Son are one of the oldest houses in Canada, where they have been carrying on an extensive business for many years, and the honored head of the firm is in the 86th year of his age and still hale and hearty, being at his office every day.

Edwards & Edwards, leather manufacturers, Toronto, who make various lines for different trades, including the shoe trade, handling sheepskins, report that business with them is very good and they have a larger force than at this season last year. They have stock enough on hand at present to last them several months, while their aniline dye supply is heavy. Prices are firm, but so far there has been no advance. The firm receive a large proportion of their pickled pelts from New Zealand, but are a little uneasy about a big shipment which was made some two months ago, and no trace of which they can obtain at present.

NEWSY BRIEFS FROM QUEBEC

A serious fire broke out in Quebec early on the morning of September 22nd, entirely gutting the factory of Marier & Trudel, at the corner of Nelson and Colomb streets. F. Blouin, shoe jobber, located in the same premises, suffered a heavy loss. The two top storeys were completely burned. Marier & Trudel fortunately had one part of the stock in a building that was not touched by the fire. Their total damage was about \$20,000, which is covered by insurance. F. Blouin lost over \$12,000 on the building and stock. Luc Routier, shoe manufacturer, also had a loss of several hundred dollars owing principally to smoke and water. His manufacturing will in no way be interfered with. As soon as the Blouin building is repaired Marier & Trudel will again start making shoes. They have notified the jobbing trade that they expect to be under way again in about three weeks' time.

J. E. Samson, of J. E. Samson, Reg., is on a fishing expedition, accompanied by Lucien Borne.

The L. Gauthier Co. are still busy filling their contract for shoes which they are making for the Militia Department.

Amongst those who demonstrated at the recent fair in Quebec were Canadian Consolidated Rubber Co., the Miner Rubber Co., and the Nugget Polish Co., all of whom were awarded a gold medal for their attractive booths. Dupere

& Garant, shoe findings dealers, Quebec, also made a very creditable showing and were given a silver medal.

O. Bisson, manufacturer of infants' shoes, is erecting a new shop. The building will be 60 by 30 feet and three storeys high.

J. H. Larochelle and Fils have made decided improvements to their office, which is now one of the finest of any jobbers in Quebec city.

Mederic Tremblay is installing machines for turning out McKay work. He has been busy for some time making turn strap slippers.

Among the visitors in town recently were H. Hurtubise, of the Panther Rubber Manufacturing Co., Sherbrooke, P. A. Parsons, Montreal, and W. D. Lighthall, Montreal.

Tourigny & Marois' new shoe factory is going ahead rapidly. Four flats are now completed and it is expected the building will be in good shape by the end of next month.

P. Lagace, of Lagace & Lepinay, has returned from a business trip throughout the west, and reports that the new samples of the firm were much appreciated by the trade. He received several good orders to be delivered in January. This new firm is making very good progress.

FIRE DESTROYS NEW SHOE FACTORY

The fine shoe factory of Clark Bros., Limited, St. Stephen, N.B., was destroyed by fire on September 29th. This enterprising firm began manufacturing only a few months ago and was meeting with encouraging success. The fac-

tory loss in building and stock is placed at about \$50,000, with an insurance of \$43,000. It is believed that the flames broke out in the premises from a heater. The firm employed about sixty hands, and had a large number of orders on hand. The building was 152 feet long by 50 feet wide,

three storeys high, well lighted and well built, with every modern convenience. It was erected by the municipality of St. Stephen and leased to Clark Bros. for a term of years, the firm paying 7 per cent. on the cost of the splendidly equipped structure. Women's high grade McKay shoes were the specialty of the firm, and the product was sold through a large number of jobbers in Canada. John F. Clark, is the president of the company; Jas. F. Clark, treasurer, and W. E. Clark, vice-president. The company hope soon to make suitable arrangements whereby they will again be in a position to cater to the trade. The Messrs. Clark, since returning to Canada from an experience of several years in the leading factories in the United States, have made many friends who will extend their sympathy. The accompanying cut affords some idea of the fine factory in which their operations were carried on. It is announced that the town will rebuild the factory at once, and in the meantime Clark Bros. will start manufacturing in another building.

BEST WAR JOKE OF THE SEASON

A Glasgow firm has received the following letter—which speaks for itself—from a New York leather importer:—

“New York City, August 29th.

“Gentlemen,—Present reports indicate that the German Army is altogether too successful, and is gradually getting nearer England.

“If their success continue, invasion on the British Isles will follow, and would result in ruin and confiscation to you. Leather stocks will then be confiscated. Would it not be better to ship it to me and get something for it?

“I sincerely hope that nothing like this will happen, but, if it does, I will say that I will buy anything in leather, sole, harness, upper, dressed or undressed and rough leather, you may choose to ship me, paying cash for same, at one-half of to-day's market price, three days' sight draft for any quantity, no matter how large. Draft to be endorsed 'Payable in New York or Lynn, Mass.' If it should be unsafe to send the money for it to England, I will deposit the cash to your credit in any bank you specify in the United States. Same could be shipped by any boat to me at Boston, New York

"You will understand, of course, that I have arranged for cash to handle large quantities, but this cash is available only if we can buy cheap enough.

"Of course you know our sympathies are all with the English, but reports here are that Germany is cleaning up everything, and I sincerely hope that no such contingency may arise, but I thought I would write this to you that you may depend on me in case of urgent need.—Yours truly,

"P.S.—Cable advices of shipments." —"

SUDDEN DEATH OF F. H. WARD

One of the most prominent business and shoemen of Montreal, Fleetwood H. Ward, was instantly killed Tuesday of this week by a G.T.R. train while crossing the tracks to catch a C.P.R. train at Strathmore, a summer resort about twenty-five miles from Montreal.

Mr. Ward, who was a vice-president and assistant to general manager of Ames-Holden-McCready, Limited, Montreal, was hurrying across the tracks about 8.20 a.m. to get a train to the city and apparently did not hear the approach of the G.T.R. westbound Ottawa train and was

struck by the engine and hurled a distance of fifty feet, death being instantaneous. His body was badly mangled.

The late Mr. Ward was one of the best known of the younger generation of Montreal business men. He was born in Ohio in 1875, when only a lad his parents removed to Montreal, where he received his education in public and high schools, and later entered upon his successful business career. When D. Lorne McGibbon became president of the Laurentide Paper Co., Mr. Ward was appointed auditor of the company. After serving for some time he resigned from that position to go to New York. He received an appointment there to a position on the construction of the Panama Canal, but before leaving to fill it, was called to the telephone and offered a good post by D. Lorne McGibbon in Montreal. So, instead of going to the Panama Canal, he returned to Montreal in 1906 as comptroller of the Canadian Rubber Co., Limited, of Montreal.

In this company he held the various positions of treasurer, general manager and vice-president, being at the time of his death one of the most valued members of the board of directors of the Canadian Consolidated Rubber Co., as well as a director of all the subsidiary interests of the organization.

He was a director of the Standard Iron Company, vice-president of R. J. Mercur Co., Limited, and the Canada Grip Nut Co., Limited, and was for a time vice-president and general manager of the Montreal Herald, which was later changed to the Daily Herald-Telegraph. At the last annual meeting of the board of directors of Ames-Holden-McCready, Limited, Mr. Ward was appointed to the post he occupied at the time of his death.

Although a very busy gentleman, Mr. Ward found time for outdoor recreations. He was at one time an officer of the 3rd Victoria Rifles, and vice-commodore of the Royal St. Lawrence Yacht Club. He was accustomed to spend his summers at Strathmore with Mrs. Ward, who is a sister of Mrs. D. Lorne McGibbon, whose husband, Mr. McGibbon, is widely known in Montreal shoe and rubber circles. As well as being survived by a wife, Mr. Ward also left two children.

When the news of his death reached the city, the flags on the Canadian Consolidated Rubber Company's office, and also on the Ames-Holden-McCready Limited building were lowered to half mast.

Of the late Mr. Ward his friends speak in most glowing terms. He was keen in business and generous in spirit. He was quick to seize upon the salient points in any proposition, and faithful to his associates at all times. His brilliant career—brief although it was—was a delight to his friends.

GENEROUS GIFTS TO PATRIOTIC FUND

The Canadian Consolidated Rubber Company's dividends, which have been declared, payable on October 1st, call for a total distribution among stockholders of \$62,384. The preferred dividend of 1¾ per cent. for the quarter, means a disbursement of \$34,343. The common stock dividend is for one per cent. and calls for \$28,041. One of the directors states that it is the company's intention to maintain operating at capacity throughout the winter. Several large orders are already on hand and prospects for new business are bright. The directors voted \$2,500 to the Patriotic Fund, which, with the money subscribed by employees, totalled \$6,700. The following was the amount contributed by each of the branches:—

| | |
|-------------------------|----------|
| Vancouver Branch..... | \$90.00 |
| Dominion Rubber Co..... | 76.10 |
| Ottawa Branch..... | 57.00 |
| Edmonton Branch..... | 50.00 |
| Calgary Branch..... | 42.00 |
| Granby Rubber Co..... | 40.65 |
| Saskatoon Branch..... | 31.00 |
| Regina Branch..... | 29.00 |
| London Branch..... | 28.00 |
| North Bay Branch..... | 20.00 |
| Victoria Branch..... | 14.00 |
| Halifax Branch..... | 13.25 |
| Hamilton Branch..... | 12.00 |
| | \$503.00 |

The Consolidated Rubber Co. has also contributed a large quantity of hot water bags and rubber surgical goods to the Red Cross and Soldiers' Hospital at Portsmouth, Eng. A recent issue of "The Dominion" says: "It has been proposed that Berlin wage-earners give a practical demonstration of their loyalty by contributing one day's pay per month to the Patriotic Fund as long as the war lasts. An entire regiment, to go to the front, may also be recruited in Waterloo County."

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

NO DIAMOND  TRADE MARK
No Fast Color

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

It's not only an act of Patriotism

but sound business judgment on your part, when you make your selections from the BRANDON line of branded trade winners.

MONARCH, BRANDON and DR. BRANDON Shoes

are essentially a Canadian product; they are made in a Canadian plant by Canadian workmen for the Canadian public. They excel in style, fit and wearability, and are absolutely second to none, whether imported or Canadian-made. The styles for Spring 1915 are brimful of profit possibilities, and coupled with this is our

21 DAYS' SERVICE

which insures the rapid dispatch and careful handling of all orders.

Union Shoes for Union Men

The retailer who meets the demand of every possible buyer in his town handles Union Stamp footwear.

Dealers who do not carry Union Stamp shoes are not soliciting their rightful share of the shoe business of their city.

The Union man will have Union shoes for himself and his family. He demands them and if he cannot obtain them will turn elsewhere.

To you, Mr. Retailer, who advertise Union Stamp shoes the tide of trade is turning.

You cannot afford to neglect the Union trade, and even the man who does not buy Union shoes merely because of Union principles recognizes the high quality of Union Made footwear.

You have nothing to lose and all to gain by carrying these shoes.

Let us send you to-day a list of manufacturers who make shoes bearing the Union Label and add a live selling asset to your business for the coming year.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp

TEBBUTT SHOES

Canadian
Made

For
Canadian
Trade

THE DOCTORS and the PROFESSOR Shoes are made in a Canadian plant, by skilled Canadian workmen, for the discriminating Canadian gentleman.

They are built of honest materials throughout, and have special features which distinguish them from the ordinary makes.

Aside from the patriotic viewpoint, TEBBUTT SHOES are the most popular and profitable men's lines on the market.

*“Shoes for
Particular
People”*

The Line of Least Resistance

IT'S a self-evident fact, Mr. Shoe Retailer, that the lines which are most in demand are the most profitable to handle. Admitting this, you cannot ignore the claims that the

MURRAY-MADE, DERBY and CLEO SHOES

have upon your patronage.

The MURRAY-MADE and DERBY shoes are Canada's most popular men's lines, while the CLEO is second to none in the women's field.

An inspection of our Spring, 1915, samples will prove this. Be sure to see them.

Foreign Subscription, \$2.00

What Do You Get Out of Life?

“I AM putting to myself the old question concerning the intrinsic value of life, the fundamentally important question; what have I got out of it? what am I likely to get out of it? in a word, what's it worth? If a man can ask himself a question more momentous, radical and critical than these questions, I would like to know what it is.

“The question remains ever new and ever unanswered, and ever of dramatic interest. The singular, the highly singular thing is that so few people put the question to themselves in time, and that so many put it too late, or even die without putting it.

“Existence, rightly considered, is a fair compromise between two instincts—the instinct of hoping one day to live, and the instinct to live here and now. Prepare to live by all means, but for Heaven's sake do not forget to live. You will never have a better chance than you will have at present. You may think you will have, but you are mistaken.

“Surely you are not so naive as to imagine that the road on the other side of that hill there is more beautiful than the piece you are now traversing.

“Hopes are never realized, for in the act of realization they become something else.

“This that you are living now is life itself—it is much more life itself than that which you will be living twenty years hence. Grasp that truth—dwell on it—absorb it. Let it influence your conduct to the end that neither the present nor the future be neglected.

“You search for happiness? Happiness is chiefly a matter of temperament. It is exceedingly improbable that you will by struggling gain more happiness than you already possess. In fine, settle down at once into LIFE.”

Arnold Bennett.

The Best Method of Managing Branch Shoe Stores

How Purchasing, Checking, Assorting, Accounting, Advertising, Stock Records, Selling Plans, etc., Should Be Attended To—Simple Forms That Will Enable the Central Establishment and Branches to Know Exactly Where They Are At

Written Specially for "The Shoe and Leather Journal" by A. E. EDGAR, Windsor, Ont.

In nearly every large city in Canada shoe stores are branching out in all directions in order to keep pace with modern developments and the growth of suburban and residential districts. In Halifax, St. John, Montreal, Quebec, Ottawa, Toronto, Hamilton, London, Brantford, Winnipeg, Calgary, Edmonton, Victoria and Vancouver, there are progressive footwear houses which have flourishing branches. In some of these centres certain firms have one or two branches while in others there is a regular chain of shoe shops.

In view of the expansion of the trade generally in these places, a number of questions often arise, between headquar-

secure the information of the standing and the working of the business at a moment's notice.

The different methods of supplying branch stores will necessitate a different method of treating the records. If the main store supplies the branch from its own stock the methods of accounting will be materially different from the branch which practically does its own buying. And a still different method will have to be pursued if a combination of these methods are used.

Form of Requisition to Use

Unless the main store arbitrarily supplies the branch with what merchandise it sees fit, there will have to be a form of requisition used.

This form may be a very simple order sheet, but it should be made out carefully for every order given. In some branch stores the manager is given practically the management of the business, he not only sells the goods, but he buys them, according to the requirements of his business. He is held responsible for the success of the branch, and if he cannot build up a business he is replaced with a manager who can. In cases of this kind the manager of the branch purchases what he sees fit for the branch he manages. Where there are one or more branches it is customary for them to get together frequently to talk over their different problems. At these conferences it is found that one manager helps out another by his experience along the line involved. At these conferences they buy such staples as they require, or put in requisitions for them, which amounts to the same thing. In this way quantity orders are given and quantity discounts are secured. In the same manner some novelties are purchased, some managers taking smaller quantities than he could buy if he had to buy direct, and at the same time the best prices are secured.

Use of the Different Forms

There is a certain amount of system necessary to the purchasing of stock. This can be made very simple and Forms I and II show the forms necessary to a complete record. They are used as follows:

Where the merchandise is ordered from the main store, Form II is used. These requisitions should be used for everything purchased through the main store. If the goods are bought at a conference and are to be distributed to the branches by the main store the requisition should be used. If the branch is in the same city and a messenger is sent for the goods, which may have been previously ordered over the phone, the requisition should be delivered by the messenger before the goods are given to him. These requisitions and most all forms used must be made out in duplicate.

O.K.-ing Purchases of Branches

It is customary in many branch store arrangements for the manager of the main store to O.K. the purchases of the branch managers, even when the branch store managers order goods direct from wholesalers and manufacturers. Where this is the rule the copy of the order, which is always made out on the firm's own order blanks, Form I, is sent in to the manager of the main store for his approval, and is sent from there to the firm the goods are ordered from on blanks used by the main store for that purpose. The branch order is retained and used as a record or the order from the branch.

In the shoe business it will be found that the styles and qualities suitable for one locality, or branch, will not be suitable for another. This fact must be recognized before a

ters and the branches as to what system of accounting, management, etc., is best to put into practice.

A system that is simple, workable, and easily understood is desired in order to secure the best results from both the head store and the subsidiary ones. Of course, there are systems galore. Many are so complicated and intricate that it takes too much time and effort to put them into effect. What the average retailer desires is something that will not take up too much time or does not involve him or his staff in a maze of statistics, filing cabinets reference books, etc.

Recently the SHOE AND LEATHER JOURNAL received an enquiry from a young man who is an enterprising manager of a branch store in the Eastern provinces, desiring a system of accounting, checking, management, purchasing, etc. It will be remembered that Mr. E. A. Edgar sometime ago contributed to these columns a full system of accounting for a shoe store, and he was therefore asked to prepare for the JOURNAL a workable and practical method for a parent store and its offsprings.

In this issue the SHOE AND LEATHER JOURNAL is pleased to make a feature of this excellent article which will be found well worthy of perusal. The forms which have been prepared after considerable study and care, should be preserved for future reference. Mr. Edgar's article follows.

In all retail accounting it is necessary to eliminate as much detail work as possible, but it is impossible to secure accurate and useful reports unless there is a certain amount of red tape detail work. In giving these systems of shoe store accounting it is desirable that they be as full as possible and that the merchant installing a system based upon them use the portions necessary to fit the particular kind of business he is doing, with such modifications as he sees fit to make.

In the management of branch stores there are many methods. The manner of the management to a great extent dictates the necessary detail of the accounting necessary to

FORM IV., (UPPER SECTION).

FORM V., (LOWER SECTION).

a moment's notice for any branch needing them. If the branches are stocked up it will often be found advantageous for one branch to sell, or transfer, to another branch, many lines and sizes. While it is good policy to distribute from one branch to another that branch's surpluses, this should be cut down as much as possible so as not to saddle the branches with the business of shipping, which should be cared for by the main store. A well assorted stock, kept at a minimum of efficiency in each branch is far the best policy for any system of branch stores to contemplate. Otherwise the business will degenerate into mere departments of the main store, or into an aggregate of independent stores held together by a loose system of accounting.

Store supplies and store fixtures and furniture should be standardized so that purchases can be made at the lowest prices. Where this is done the manager of the main store can keep track of the uses of store supplies, keeping down the expenses to a minimum. Penalties and premiums can be placed on the use of supplies and the care of fixtures and furniture to a good advantage, and a great saving be secured by careful management of these expense items.

Cooperation in Selling and Advertising

Where branch stores are maintained in different sections of a city or in different towns and cities, much benefit can

be secured by cooperation in the advertising and selling departments of the different branches. Just how this may be done can be seen very quickly from the following instruction sheet that was used by a department store:

"Windows. Dyed crepe tunics, 79c., to be shown in front window, with black and white ties C. qual. Use style 9.

"Bottom front. Hosiery on telescope stand, and fancy half hose on legs. Velvet grips to be placed in between.

"Side of front. Show C53, etc.

"Doorway. Show 22 on floor, etc.

"Counter. I shall send you on Tuesday about six dozen fancy half hose, samples, etc.

"You should push those X Greys this week, as there is a fresh range of patterns coming in on July 20. Don't forget to emphasize the double row of stitching, etc.

"Your summary sheet will show you that just \$40 more business than in the corresponding week of last year will bring your year's total increase thus far to \$500. Just see what you can do. You know what is hanging to it.

"Your vacation will start on Aug. 31 for fourteen days. Blandford will go the week after you return.

"All your watches will carry 5 per cent. com. for the next month and if the sales increase, this period might be increased.

We have not reproduced this in full, but have given

enough of it to show how closely the general manager of some chain stores looks after the branches to secure a maximum of benefit from the arrangement.

Perpetual Inventory for Each Branch

The main store must keep tab on the goods on hand in each branch in some manner. This is best done by a system of perpetual inventory for each branch. This involves a great deal of labor but if the business is such as to warrant a number of office clerks, some of whom are of the cheaper kind, it is best to have this work done in the main store. If the expense is going to be more than the business warrants, the branches can be made to keep their own inventories. Reports can then be made weekly or monthly as thought best.

In our next issue we will give the balance of Mr. Edgar's system.

We have stated that it is necessary to keep a perpetual inventory of some kind if a branch store is to be managed in the most satisfactory manner. The advantages of a perpetual inventory are many. The following reasons why there should be one will be proof enough:

It will give a perfect check on the absolute honesty of the reports from the branches.

It will show at a glance the best selling sizes in any branch.

It will likewise show the qualities, styles and lines that sell best.

It will show the range of sizes on hand at any time.

It will show the amount of stock on hand at a moment's notice.

These are surely good enough reasons for having some kind of an inventory to work with. It acts as a perfect check because there should be an audit taken at odd times. This can be done without taking the whole stock. By taking two or three numbers, haphazard, and taking physical stock of these and comparing them with the stock sheet, or inventory, it can be made a very effectual check upon any manager. As he does not know when an audit, or checking may take place, nor on what lines, he is sure to be careful to have all correct.

Know the Best Selling Sizes

It is a very good thing for any buyer to know the best selling sizes of a shoe stock. It is a well known fact that the regular sizing of any factory will not suit every locality—that the requirements vary very much in different places. If a buyer is handling the stock he may remember that he has to many of one size, sometimes, but he will forget sometimes too. But a buyer at a distance must know from figures where he stands.

A perpetual record will show the qualities and styles mostly favored in any branch. This can be covered by reports but it might not be covered as accurately as by a perpetual inventory, where the figures are always before the buyer.

As every branch should be restricted in the amount of stock it should be allowed to carry, some such check is necessary. No store should carry stock above a certain percentage of its annual turnover. The more carefully this matter is followed up the more chances there are for success in managing branch stores.

Charging Up Goods Sold

Every branch should be as carefully charged with the goods that are sold to it as if the purchaser was a perfect stranger. All goods sent to the branches should be carefully checked and charged by the main store. All goods received by the branch should just as carefully be checked by the branch manager to see whether he is getting what he is supposed to receive. As this is a dishonest world—that is, there is enough dishonest people in it to make it necessary to watch everyone—all goods sold and received should be

checked. The main store should see that the shipments sent out are in perfect condition and the branch should see that they are received in that condition. If this is not done there is a chance for the messenger, or the persons engaged in the transportation of the goods, or the person putting up the goods, or the person receiving the goods, one or all of them of stealing—or what is perhaps as bad for some one—of making gross errors and mistakes.

A perpetual record can be kept in two or three ways. The shoes received may be recorded as so many pairs received, and when the report comes from the branch that a certain number of pairs are sold, these are deducted, showing a number of pairs remaining on hand.

Keeping Records of Sizes

Another and a better way, but a more laborious one, is to record the actual sizes received and as they are reported sold to check them from those on hand. If this is done the records will show the sizes on hand. When there are two or more branches in the same city this is almost a necessity. It will very often be necessary for one branch to purchase sizes from another branch, when the main store has run out of the sizes wanted. The size record will show the manager of the main store where he can find the sizes required.

In Form IV is shown a blank that can be used for the latter style of record. We advise loose leaf records rather than a book, because new sheets can be added when necessary and they can be placed just where they ought to be in the files.

When a line of shoes is received it is entered in the manner shown. First the date of their receipt. Then the run of sizes are carefully entered as shown.

It is merely a question of opinion as to whether there is a necessity for giving each line a sample number different to that given it by the wholesaler or manufacturer. There are many reasons that can be given by those who favor both methods. This was discussed in a former article on shoe store accounting by the writer, which appeared in THE SHOE AND LEATHER JOURNAL some months ago.

The sample number used should be placed on the shoe as well as on the stock sheets. This is usually done by scratching it on the sole of one of the shoes. The marking of the shoe should consist of the sample number, the price, a season letter and a mate number. The mate number is, of course, put on both shoes. These numbers will have to be scratched on the soles. The mate numbers should be at the toe of the shoe and the others at the ball.

As the daily, or weekly report comes in showing the sizes of each line sold they are checked off. It will be seen that the receipts are shown by making a downward stroke for each size. When one is sold a cross stroke is made. If it is desirable to show when the sales are made, the date of the sale may be entered as shown for receipts, and the number of pairs sold deducted and a balance brought down. Or there can be a monthly balance taken and the sizes remaining on hand at that date can be brought down to the next line, and the same process gone through as before.

Reports of Branch Managers

The system outlined above is for the purpose of taking care of the merchandise purchased and sold. The expenses of doing business must be carefully cared for. The branch manager should make daily and weekly reports that will cover the whole expense account. A form similar to that shown in Form V can be made to cover the ordinary expenses of any store.

Each week this report goes in and with it a weekly report of the cash receipts. There should also be a daily report of the cash received. This latter might be as Form VI. The branch manager should be required to make daily bank deposits at or near closing time of the bank. The bank will gladly give a duplicate deposit slip showing that a deposit

for the amount has been made. This deposit and the amount to be kept for the purpose of making change should balance the cash receipts.

If there is a credit business done, the manager of the branch should exercise the greatest caution in opening up new accounts. He should be held accountable for the collection of these accounts. But if the charge accounts are O. K'd. by, or ordered by the manager of the main branch, then the main store manager should be made responsible. Circumstances will dictate the best methods to be pursued in this matter.

It will be found a sound policy for each branch manager to really manage his own business. If he is competent, he can do it better than a good sales manager who is at a distance, but if he is not a thoroughly experienced man he should be told minutely what to do, and how to do it. Branches are managed in both ways, from a central sales manager and by the branch store managers, who have all the powers of merchants conducting their own business, except that they have had certain rules laid down for their guidance. In all other respects they are absolutely their own masters.

Have a "Called for" Slip

It will be found useful for the branch manager to have a "Called For" slip to be used for the purpose of keeping a record of lines and styles asked for by his customers. These are useful for his own guidance and as evidence to be presented before the main store manager when necessary. These demands should be tabulated and a careful record kept of them. The same slips can be used for recording "Out of" sizes and lines.

By consulting Form V it will be seen that the main expense items will be taken care of by the report. The incidentals should be itemized at any time they run over a few dollars, or at the request of the head office. There is also a report of the salesmen's sales. This is only necessary in the larger stores.

The manager of the main store will scrutinize this expense account very closely and should analyze it very carefully for over charges in any item of expense. He should know what any item of expense should cost under the average conditions, if there is a high expense on any item it should be explained for the mutual satisfaction of both the manager of the main store and the manager of the branch.

STORIES FROM SHOEDOM

No Spring Samples

A prominent shoe traveler had stepped from the train and was making his way to the nearest hotel when he was accosted by a youth. "I guess you're a traveler," said the latter; "show me where your grips is and I'll carry 'em up to the hotel for yer." The traveler smiled in a quizzical way—"I am a traveler," he said, "but I deal in brains." The youth sniffed suggestively. "Gee! Its the first time I ever seen a traveler as didn't carry no samples," he added.

* * *

Speaks to the Deaf and Dumb

There is no end to the possibilities of the efficient shoe clerk. An enterprising young man in a Toronto store "speaks" fluently with his hands, and although there are not many who would think it worth while, he has made many deaf and dumb friends. The latter make a custom of writing their wants as required, but our friend saves much time in speaking their own "language."

* * *

A Squeaker—So Are You

To say this clerk was impertinent would be putting it mildly. The day previous to the following incident a customer had purchased a pair of shoes. He was anything but

easy to wait upon, as he wanted a pair at a ridiculously low price. The clerk eventually sold him machine stitched shoes, which were returned by a rather irate customer next day. "Look here," said he to the clerk who sold them, "these shoes squeak like the dickens." "So did you," answered the clerk, "when I asked you a reasonable price for a decent pair of shoes."

* * *

A Mighty Talker

A well known knight of the grip stepped into a local shoe store recently with a good range of footwear samples. He immediately impressed the proprietor as an exceedingly clever salesman. His talk was so interesting, his personality so winning, that his hearer took pleasure in keeping him for over an hour, longer in fact than he wished to stay. Finally, when he rose to go, my friend said: "I am sorry that you have to go, because you are a mighty good salesman, and I have enjoyed listening to you. "I am not a good salesman," he replied, "I am only an orator. If I had been a good salesman I would have got your order forty-five minutes ago."

* * *

Tact or Politeness—Which?

Once upon a time there were three clerks in a certain shoe store. It was the occasion of a big sale.

Clerk number one sold a pair of shoes to a lady at a reduced figure, who presently brought them back with the complaint that they were faulty. There was certainly an almost imperceptible flaw in one shoe—a slight abrasion on the toe, or something of the kind; but having availed himself of the golden opportunity of sale time to get rid of a sticker, the clerk did not feel inclined to take the shoes back into stock again. Putting on his very best manners, he informed the lady that unless there was something radically wrong, it was against the rules of the store to change goods bought at sale time. However, he regretted that the patron should, at the moment, feel dissatisfied with her purchase, but could assure her that the defect would not be noticeable. He was so polite that the customer could do no less than take his apologies with apparent good grace, but all the clerk's urbanity did not remove the grievance of that very particular customer, who left the store with the mental resolve never to enter again.

Clerk number two sold a pair of slippers with a small defect in them, which were soon returned, with a similar complaint. No less polite than his fellow clerk, he went a little farther in the matter of conciliation, for he exchanged the slippers for something else. The customer appreciated the consideration shown, but as he thought he had lost a good bargain, he went away feeling sore and was probably lost as a customer.

Clerk number three sold a pair of cloth top boots to a lady, which were returned next day, as the stitching had given way at the back. The clerk was very sorry. In the rush of sale time these little imperfections were apt to be overlooked. The fault should be remedied by resewing. If the lady would leave her address they should be sent on the next day. The lady would not trouble him, she would call. The clerk would not hear of this. They should be stitched and sent. Here a complaint was properly dealt with, a dissatisfied customer placated, and from time to time particulars of new season's goods were posted to the address so tactfully procured, with the result that not only the original purchaser returned from time to time, but also members of her family became good customers. It was this clerk only who had anything to show as the result of his little excursion in tactfulness. To be well-mannered is, in itself, excellent, but to be really tactful there must be thought at the back of one's politeness.

Running an Exclusive Shoe Store for Men and Boys

How Vancouver Firm is Forging to the Front—Strong Believers in Timely and Telling Window Displays—Make a Specialty of Heavy Footwear—The Question of Profit and Turnover Considered.

An exclusive men and boys' shoe store is that located at 56 Hastings Street west, in the heart of Vancouver, which was started on February 1st last, and the venture is meeting with very satisfactory results.

The proprietors are Cornett Bros., the members of the firm being progressive young men with live ideas and high ambition. The brothers, James A., and J. W., are former residents of Dundalk, Ont. The former located recently in Vancouver after living in Saskatchewan for about fifteen years, while J. W. has resided in Vancouver for some eight years. When he first went to that city, he was on the sales staff of Ed. Stark for two years. He then took a position with Jas. Rae, and afterwards had charge of his large

firm do not conduct a repair shop in connection with their business, but hand over the work to a man who specializes in these jobs and get a discount of 15%. They maintain that this pays better than running a repair branch, as if they had one on the premises, they think many odd jobs would have to be done gratis.

No odds and ends are allowed to accumulate by the firm, as they give great attention to this part of the business. The brothers are strong believers in striking window trims, and each window is changed weekly. They are of the opinion that the most effective means of publicity is through the eye.

Regarding profits, the Cornett Bros. consider a 50% profit on the cost price should be obtained, with the excep-

THE ATTRACTIVE SHOE STORE OF CORNETT BROS., 56 HASTINGS ST. W., VANCOUVER, B.C.

retail establishment. His next situation was with Ames-Holden-McCready Limited, as travelling salesman, which enabled him to gain a wide insight into both retail and wholesale lines in the Pacific coast province.

The store of Cornett Bros. has 25 feet frontage and is 125 feet deep. Its shelving is for single cartons. A twelve foot showcase runs across the entrance and the seating consists of single chairs, back to back, down the centre. At the end is a wrapping table, with cash register. The front has two attractive plate glass windows, with nice wide, receding entrance, and tiled floor space. Signs appear at the top of each window to a depth of twelve inches. The lettering is white on a blue background, with red border, making the effect particularly striking, as will be noticed in the accompanying illustration.

Some of the Lines Handled

The firm sell the Hartt, J. & T. Bell, Tetrault, Ames-Holden-McCready, and the Florsheim Co. The McCready shoe is handled under the name of "Cornett Bros., the brand guarantees satisfaction" and the Tetrault, under the name of "Broadway." Cornett Bros. make a specialty of heavy footwear for loggers, miners and prospectors, and frequently devote one of their windows to this line of goods. They also feature prominently the Leckie Shoe, made in British Columbia, in the heavy lines. The

tion of freak lines, on which there should be an additional 25%, as left-overs always have to be sacrificed. They say that a stock should be turned over at least three times a year, and one of the most important problems to study in order to attain this end, is that of right buying. They do not advocate buying in too large quantities, but in a moderate number of pairs, and have the goods come in fresh and frequently.

Overgaiters Are in Big Demand

Overgaiter manufacturers report an exceptional call for overgaiters this fall. Large orders have been placed by representatives of the big stores and everything points to a remarkable sale of these lines during the coming fall and winter. Fawns, light and dark greys, brocaded silk tops are being worn extensively with pumps and oxfords, and while they give the effect of a cloth top shoe, they have the advantage that they can be instantly removed when Milady goes indoors. Retailers report a fine demand from the best class of trade for these cloth tops. They are economical in comparison with the cloth top boots which have increased in price. They have the advantage that they can be taken off without trouble and are easily put on, look neat and are very comfortable.

How to Make Your Findings Department Pay Well

Do You Meet the Rent of the Store with Profits from This Branch?—Why Some Retailers Do Not Make It Pay—Way to Boost Sales in Findings—Stocking a Department Properly and Advertising Are Two Principal Essentials

Are you anxious to increase your weekly receipts?

You may think this a superfluous question, but nevertheless it is quite probable that you are one of the many shoe retailers who do not use all the money making advantages presented to them through various sources, and one in particular, the findings department.

Oh yes! You will say right away that you have a findings department and that you became aware quite a long time ago that it could not be made a paying proposition. But—can you say with as much surety, that you have properly investigated, and found out the reasons you did not

make money? No dealer has ever inquired yet, and found any other ultimate reasons than this—lack of attention.

Boom your findings department. Too few shoemen give proper concern to findings, and thereby overlook a very important element in retail selling. The most progressive and successful shoe merchants unanimously agree that any department in the store, any feature on the premises, any method of service, plan of stock keeping, system of interior display or window dressing that attracts people inside the door, is a powerful lever in creating trade. But this is looking only at one side of the question, that of the indirect benefit obtained by having a findings department. Let us think, rather, in this article of the direct advantages you will enjoy through having a findings department.

Now, Mr. Retailer, what have you done to boost the sale of your findings? Have you increased your turnover in this department during the past year, or are you still keeping your very limited stock in a hole in the wall, on one of the shelves at the rear of your store or some other out-of-the-way corner and allowing your patrons to purchase such supplies as they absolutely need at other establishments, to say nothing of stock that could be sold through suggestion or advertising.

Larger Profits than on Shoes

When you sell findings, you are making much larger profits than you do in selling footwear, running all the way from twenty-five to one hundred and fifty per cent., and

there is perhaps not a shoe store in both large towns and small but what could make enough out of its findings department, if properly stocked, handled, pushed and featured, to pay the rent every month. The possibilities in this line are tremendous. Consider the number of arch supports alone that are disposed of in Canada yearly. Think of the number of people wearing rubber heels on their shoes. How many million pairs of shoelaces are bought annually by the Canadian public, how many shoe trees, tins of polish, cleaners, brushes, ankle supports, insoles, skate straps, overgaiters, leggings, pads, corn cures, ice-creepers, etc. The demand for these articles is tremendous, and who is answering this demand? Why, to a large extent the grocer, hardwareman or druggist, although it must be said that the Canadian shoe retailer is waking up more and more every day to the possibilities of the findings department, and acting accordingly.

Secure Holiday Trade

Now above all others is the time to boost your department to the utmost. The Christmas season is fast approaching, and in another month or so you will be so busy with it that you will be liable to overlook the holiday possibilities of the findings department. Manufacturers and findings houses are now taking and shipping large orders for soft soled boudoir slippers. These have in the past few seasons become very popular holiday gifts, and an enormous trade in them will be done this year. The average price per pair to you is about \$1.00, although the scale runs from seventy-five cents to a dollar and a half. Think, of what you could do in this line alone, if you advertise and feature it during the month of December. Nine persons out of ten, when they start out to shop are miserably uncertain as to what makes a suitable gift and are happily open to suggestions. How many of them think of boudoir slippers. The answer most likely is none, but when your findings department carries a nice line of them, and a showing is made in your Christmas window display, along with a card suggesting what an ideal gift a pair of boudoir slippers make, can't you imagine the result? Now boudoir slippers are only one strong selling line during the holidays and at the winter seasons. There are dozens of others such as gift shoe trees, over-gaiters, leggings, etc. But if you do not boom your findings department, how many extra sales will you make? None; the same old round of trade will come into the shop and go out again. You have lost another grand opportunity to put your findings department on its feet, and to add many new customers for footwear as well, on your list.

Proper Furnishings Essential

To increase sales, you must realize that radical changes are necessary in the department. In the first place, to make the venture a successful one, as much space as possible in a prominent section of your store is necessary. Try to make it a branch, exclusive of the shoe section. Of course, a lot depends on circumstances, and the size of your store and trade, but strive to make your showing as large as you can. If you can afford two silent salesmen show cases, don't crowd your stock into one. Neither should you crowd your goods into a show case in a haphazard, don't-care fashion. Make your display as attractive as your efforts enable you to. In order to do this, secure furnishings as up-to-date as are made. It is comparatively easy to demonstrate findings in a modern all-glass show case, with a

nice marble base, but it is an extremely difficult feat to show them properly in an old-fashioned show-case with wooden shelves. This, however, does not mean that you must send out at once and secure several expensive silent salesman show cases. If you are able to do so, don't waste any time, for it is a first-class investment, but if you do not feel the expense is warranted, you can excel yourself making the old show case attractive, and if you succeed in doing this, you will find in a very short time that your findings trade

does warrant the extra outlay necessary to equip it properly. Set aside ample space, and display in it a showing of pump and slipper buckles that will create interest amongst the lady patrons of your store. Show the latest in these buckles. But be sure to exercise good judgment in buying. Then, let your lady customers know that you have the latest styles, and thereby secure their interest and induce them to purchase.

Devote a whole shelf or more in one of your show cases, for the next few months, to a display of cork, hair, and wool innersoles. Make your showing attractive, and don't make it so meagre that one could gaze over the contents of your show case and not be aware of the fact that these warm,

comfort-giving articles are shown within. Emphasize their value during the cold months. Remember also that shoe laces look much more attractive when neatly done up in a band, than they do hanging on a nail at the rear or on one of the side walls. Moreover, you can dispose of many an extra pair at five cents than you can sell at a cent a pair when you display them loose. There are people who expect to be presented with a couple of pairs extra when purchasing shoes. If your stock of laces is done up in bands and displayed in the show case you can still let your customer have them, but he will be willing to pay for them. At the end of the year, if you figure out your saving on laces alone, you will be greatly surprised. Don't forget, either that you can much enhance the beauty of a findings display, particularly during the next few months, by a stock of vari-colored boudoir slippers.

The Power of Suggestion

A leading shoeman recently remarked that he thought if proper methods were employed by an energetic salesman that it was possible to interest eight customers out of every ten in findings, and while a sale might not be effected on the spot a good impression would be created, which would in all probability result in purchases in the future.

This shoeman was right. The power of suggestion is remarkable. Look at all the big advertising campaigns during the past two or three years that have made large fortunes for the advertisers. And what is advertising, to a very large extent, but suggestion. No matter how attractive your findings department may be, the goods will not all sell of their own accord. You must push findings at every opportunity. Instil into the minds of your staff the necessity of so doing. You need not foist these things onto a customer against his will, but by delicate, deft atten-

tion, point out to a purchaser the wisdom of purchasing a shoe tree on account of the life it adds to a shoe, in aiding it to retain its shape and outline. You can point out that a pair will last a lifetime.

A customer comes into the store and sighs with relief when his shoes are removed. The clerk can see at once that his patron has a broken down arch, but the customer himself may not know what is the cause of his foot troubles. Here is a golden opportunity to dispose of a pair of arch supports. An Ottawa dealer who has a staff of four clerks, when he finds a case of this kind, attends to the party himself. This makes the customer feel that he will be properly looked after and he is only too willing to find someone to whom he can unload his tale of woe.

Advertising the Findings Department

There are many different methods of advertising your department. In many stores, clerks are allowed a certain percentage on all the findings they dispose of. It proves an incentive to them to push these lines, and if proper supervision of the staff can be exercised to see that they do not overdo it, in their efforts to sell, the plan generally proves successful. As frequently as you can afford to, you should devote your advertising space in the daily or weekly paper to a breezy announcement on findings. This will do an untold amount of good. Another good plan is to install a findings window now and then. Make it attractive, and if you can by any chance display some novelty or other it will much increase the value of your display. Your chief methods of advertising, however, will be through your department itself, its general presentability and attractiveness, and through pushing findings yourself at every oppor-

tunity. Make seasonable appeals. At the present time holiday gifts are a little premature, but in a few weeks folks will be thinking of nothing else. Now is the time to show a strong line of fall and winter stock, and you can attain good results in making up a display of cold weather findings.

Think It Over

If in the past, you have been of the opinion that the findings department is a failure, reconsider. Decide in your own mind whether you have given it a fair chance to grow, whether you have worked along the lines suggested

here. If you have not done so, get busy now. Put your heart into it. You are as clever as your competitor, and if he has made a success of his findings department, you should also be able to make money out of it. The right way to do this is to install an up-to-date department and show it to people. Get them interested.

Habit grows, and soon casual callers are converted into customers—regular and reliable. They are the kind to possess, the sort that help you along on the highway to prosperity and expansion.

The Big Part That Style Plays in the Sale of Footwear

Some Manufacturers Feel That the Staple Is Almost Thing of the Past—An Exaggerated View, of Course, but the Developments of Recent Seasons Give Reason for Consideration of Facts on Which Conclusions Are Based.

The type of shoe known as a staple style is almost a thing of the past. The majority of consumers look at footwear from a new viewpoint. They divide it into only two classes—shoes for dress purposes, and shoes to use for special purposes, such as outing or athletic events.

Such is the opinion expressed by a prominent Eastern manufacturer who is a close student of conditions and developments in the shoe trade. While perhaps his statement of the situation should not be taken too literally, his conclusions are based on facts that are worth attention, says the Pacific Coast Merchant.

Style value has been a growing factor in shoe merchandising for several years, and it will undoubtedly continue to assume greater importance.

This is true regarding both men's and women's lines, although the former have not as yet felt this influence so greatly as the latter.

More new novelty effects will be seen in women's footwear during the coming year than ever before.

Style Influence Spreads

The style influence is naturally felt most in the metropolitan centres, but it is spreading rapidly throughout the country, even to the smallest towns.

In view of this, every retailer of shoes will find it worth while to devote more time to a study of the style trend in footwear. He not only needs to safeguard himself against buying unsaleable styles, but he can use a better style knowledge and discriminating judgment to increase sales and profits, because the best profits will be the long profits that it is possible for retailers to get for superior style values.

American styles viewed from the consumer's standpoint originate in New York, because New York is the metropolis, the country's base of social activity, the market place of the ultra fashionable.

New York styles are always distinctive, often extreme in the eyes of the country at large, and they are not always followed literally. But New York sets the pace—it is always a little ahead and the New York styles of to-day have a decided influence on the accepted styles of the country at large to-morrow.

New York styles exert a dominating influence on the style trend of the country except in one particular—the question of lasts. While New York lasts meet with the approval of a limited number of people throughout the country, for some unaccountable reason they seldom prove to be volume sellers.

The recent craze for high toes and short vamps in the West illustrates this tendency. New York has always been strong for long vamps and recede toes, but the attempt of manufacturers to push this style throughout the country during the current year has not been successful, especially in women's lines.

Color Combinations Good

Color combinations and fancy patterns will prevail in women's boots for early spring.

Boots will be almost entirely of the button type, and whole quarter and gaiter effects will be the basis of patterns, the outlines of which will be varied to produce novel effects.

Shiny leather will continue to lead as a vamp leather, but dull calf and kid will also be used to quite an extent. Much cloth, suede and some colored kid will be used for topings.

The long vamp and recede toe will continue in favor, but two new lasts will be featured—a short vamp with a slightly

receding toe and a new round-toed last, that is a modification of the "stage" last.

The big cities will continue to favor Colonial effects for another season, but new developments in patterns, greater use for color and combinations of materials, will add a decidedly new style touch to this type of shoe. The popular materials will be the same as those used for boots.

Small, dainty effects in ornamentation will be utilized, but buckles and other large ornaments are passe.

Sandal and other strap patterns, mostly button fastened, will have a prominent place in the new spring lines.

Heels will be high on all stylish models, the most attractive type being the Cuban-Louis or slight modification of that style.

Men's Footwear Styles

New styles for men have a tendency to novelties in patterns and color effect. Patent, dull calf and dark tan leathers will all be liberally shown in boots. Many styles will have tops of cloth or suede in conservative tones of color that harmonize with the vamps.

Bal lace patterns will be most in evidence, but the tendency towards fancy tops is favorable to a larger demand for the button boots.

Panel effects and perforations will be popular, especially in the new Oxford styles.

The current wholesale market reports also have an interesting tale to tell as to immediate demand, and these show that outing shoes for immediate delivery are especially strong, orders having increased in the offices of manufacturers and wholesalers to such an extent that stocks are pretty well disposed of, with the result that the wholesale interests are particularly well pleased over the probability that they will not carry over an undue proportion.

A good deal of this demand has come in from outlying territory, but the larger cities also have been strong in their requests for outing footwear.

Use of Combination Soles

The use of combination soles is likely to increase, owing to the scarcity of leather. Many of these soles are being sold to the Chinese. The Chinese shoemaker lays a thin piece of leather on his sole, then a piece of paper, another piece of leather, a piece of paper, and so on, alternately until a fairly thick sole is built. The different layers are sewed together and a sole sufficiently thick and strong to serve for ordinary, everyday wear is obtained.

Americans are trying the Chinese idea in a number of ways, but they cannot get the combination of paper and leather in a satisfactory way. If they could, they would smash the sole leather market to smithereens, for paper sells about two cents a pound and sole leather 42 cents a pound.

American manufacturers are succeeding, however, in making soles of rubber and leather, also combinations of canvas and leather. One new kind of a shoe has a canvas sole, McKay sewed to the shoe, and a leather sole, welt sewed to the canvas sole. Another kind of a shoe has a sole that is made up of a layer of thin leather, then a layer of rubber, and then a light leather outersole. The three soles are cemented and sewed together. The leather outside gives them a good wearing surface, the rubber makes them springy and soft to the foot, and the other leather sole serves to prevent the rubber from sweating the feet.

Putting in an Aritistic Fall Footwear Window

The window setting illustrated this month is more elaborate than former ones and will require some care in making. To begin, make a frame for the screen out of light lumber. Then saw a piece of wall board for the top

FIGURE ONE

part of the screen. Do this with a small scroll-saw, which you can obtain from your hardware dealer, and which should form a part of every window-trimmer's kit. After this is in place, cut out the bottom strip and nail to the frame, leaving the space, shown in Figure 1, by the black and white lines, open. After the screen is made cover it with white felt and paint in the fine lines with gold paint. Fasten a

FIGURE TWO

small brass curtain-rod at the back of the screen, just above the opening. On this rod gather a curtain of light tan plush, and let it fall back of the opening. The lower end of the curtain is then drawn through the opening in the bottom strip and draped on the floor of the window.

The back of the window should be covered with cream colored felt, which may be stretched tight or pleated as the

fancy of the trimmer dictates. After setting the screen in place, arrange bowls of bright colored leaves as shown in the drawing in figure 1. Use brass bowls, if it is possible, as the soft reflections in the brass add charm to the setting.

In figure 2 are illustrated further uses for the tan plush. The low flat stool is provided with openings in the top through which to draw the plush. One of these, finished in gold enamel, would harmonize nicely with the tan plush used in this display. The plush is also used to drape pedestals and smaller fixtures, and in fact can be used in any manner which may suggest itself to the trimmer.

Window cards to use with this display could be made on gold mat-board lettered in white or on white board lettered in tan with a border line of gold. A card having a gold mat and a white centre lettered in black would also be suitable for this window.

The Instinct of a True Shoeman

The following true story will speak for itself. It is not an advertisement, although it might appear as such.

Among the employes on a civic job was a boy thirteen years of age, whose father kept a small shoe repair shop. Happening one day to hear the overseer telling a friend of the distress and pain his feet caused him, the lad, who appeared to be not only bright, but also thoughtful, returned to his home that evening with an idea in his head as to how he could relieve his employer. Seated at the supper table at home, he told his father of the conversation he had overheard between the overseer and his companion.

The father did not appear to be much interested, and after a few moments, the lad said: "Father, would you let me take him a pair of arch supports to-morrow? Would you lend him a pair to try? I think they would help him."

The next day a surprised overseer was examining the contents of a little parcel placed in his hands by a lad whom, up to the present, he had scarcely noticed. The merits of the arch supports were eagerly set forth by the boy, who begged the superintendent to try them just for a day. Touched by the kindly act, the latter laughingly complied—more to please the boy than anything else. He wore them that day. It was not till evening came on that the overseer remembered that he had forgotten all about his feet. He had moved around all day in ease and comfort, with never a thought of the usual lay off for a rest. He had been in buoyant spirits and excellent condition during the entire day, without realizing the cause of the improvement. By the time he came to the conclusion that his freedom from pain and his renewed energy for work was due to the arch supports, the boy had left for home.

The next day, however, he did not fail to place the supports in his boots again, and the test was continued with equally satisfactory results. His delight knew no bounds. "Magic," I call it," he declared to a friend nearby, in his relief and satisfaction, as he hurried up to the lad at the close of the second day and placed the cash for two pairs of arch supports in his hand. "Bring me another pair to-morrow, my boy," he said, "I expect to get more later for my friends, and tell your father that if there was only one pair to be had, and I had them, fifty dollars would not buy them from me."

Abolishing Cancellation and Returned Goods Evil

What is Being Done to Overcome this Trouble—Who is to Blame?—Some Unjust Demands Made on Manufacturers—Shoe Dealer Gives Retailer's Side of Question—Better Co-operation the Best Cure

What means would you suggest of doing away with the cancellation evil?

This problem is a very annoying and embarrassing one, and is the source of much bad feeling between many manufacturers and shoe retailers.

A pair of shoes is returned to the factory by the retail dealer with a request for a credit note. It looks to be a very small matter, easily adjusted, but in reality, it is very often the cause of a direct loss of business to both parties concerned, as the retailer probably has a large call for the goods of the manufacturer in question, but rather than give in to the wholesaler, as he feels would be the case, he drops the manufacturer off his list. Perhaps, after his stock has run out, a dozen good customers of the store will insist on purchasing the same brand which they have been accustomed to buy, and will be satisfied with no other make. This means untold harm done to the store, and many dollars loss in profit.

Injustice of Some Demands

Now, what is the remedy to obliterate this trouble. Generally you will find, when one of these quarrels takes place between a manufacturer and retailer, that either one side or the other has been unjustly unreasonable in their demands. While there are some manufacturers who, are no doubt, in the wrong, it must be admitted the blame just as often rests with the retailer, or rather the retailer of a certain type, the man who wants always to take and never to give. Again, however, there is the retailer who honestly believes he is making nothing but a fair demand upon the manufacturer, but who neglects to look at the matter from the maker's standpoint, or even from an outside viewpoint. Happily, however, it can be said that the average Canadian shoe wholesaler, if he knows that the retailer is sincere in his demands, is only too anxious to accept the return of a few pairs, providing the dealer has a just cause of complaint.

Nevertheless, some very unfair demands are made upon him, which he cannot accept and retain his self respect. For instance, it is a common incident for the manufacturer to receive from one of his customers a returned pair of shoes, which have been worn for two or three months, and which have been ruined through too close proximity to a stove when they were wet. Accompanying the pair you will find a short perfunctory note demanding a return of the money paid by the retailer, so that he may in his turn refund to his customer. Moreover, the request is made, not as a favor, but as a right. What would any self respecting manufacturer do? What would you do yourself if you were in his place? Here the dealer expects the manufacturer to stand his loss, when in reality it was an affair to be settled by the dealer and the party who purchased the footwear. The customer of the store was clearly in the wrong, and knew it in his heart. If the retailer had said to him, "Now, Mr. Blank, we are only too anxious to please, but you surely realize that it was through no fault of the leather that they are in this state, etc., etc." don't you think the incident could have been closed amicably, if the customer had any sense of justice at all? If he was trying to "do" the retailer, then his custom was not worth while to the store. Even if you are anxious to keep him on the books, he cannot hold you responsible in his heart, any more than you can the wholesaler, and if he threatens to take his trade elsewhere, let him do it. In a short time he is

pretty sure to return and often glad to get back. Being fearful of losing this customer, many retailers give in to him, and will always find that once he has "done" them, he is back in another week or two with some other "cooked up" yarn. However, even though the dealer does give way to the customer, he should stand the loss himself, not try to saddle it onto the wholesaler as is so often done. No one can blame the manufacturer for being firm in a matter of this kind.

Returning Part of Shipment

Another cause of complaint by manufacturers, is the return of part of a shipment. Jones, the dealer in Blanktown, orders, say forty pairs of a certain style shoe. The shipment is made. He receives and opens it, extracts ten pairs and right back to the maker go the other thirty pairs labeled "not up to samples." It makes you think, "What kind of a fellow is this man Jones, anyhow?" Does he think he is acting squarely in doing such a high handed thing? Once in awhile, there may be an excuse for him, but nine times out of ten, he is deliberately trying to put one over on the manufacturer. Perhaps he orders this style of shoe thinking there will be a large call for it. A few weeks after, he finds he is going to be overstocked, that the demand will not be equal to his supply, so he immediately decides to shoulder the loss onto the wholesale house. Very often, a retailer does this without thinking. He does not consider the fact that these shoes are much more useless to the manufacturer than they are to him. Possibly the maker can dispose of a returned shipment by a stroke of luck, such as receiving an order for the same line the day a shipment is returned to him, but this only happens once in a great while, and as a rule, the returned shoes, if they are accepted back by the maker, have to be thrown out. They are carted off to an auction room and disposed of for next to nothing. This the retailer often fails to realize however. He will say to himself, "Well, I guess I will return these shoes to the manufacturer. He can dispose of them easier than I can, as he is probably having a good call for them, and though he kicks about it, he won't be much put out about it."

Cancelling After Stock is Cut

Another great worry of the manufacturer is his receiving a cancellation after stock is cut on an order. This always means a loss in dollars proportionate with the size of the order. What can a manufacturer do in such a case? He has received no signed order from the customer. The traveler has taken it down at the retailer's dictation. The firm accepts the order in perfectly good faith, and shows its reliance in the dealer's integrity by being willing to fill his order without a written request. Certainly, in the large majority of cases, the manufacturer does not misplace his trust. Shoe retailers in general are a square body of men, and appreciate the wholesalers position, but in the retail shoe ranks there are a number of dishonest dealers, just the same as you will find dishonesty in other professions, and a few retailers will do some very shady things in the most nonchalant manner possible. The manufacturer will accept a cancellation without doubt if the retailer will only confide in him. If you order some goods and wish to cancel, first find out if the stock is cut in preparation to being manufactured into shoes, before you finally do so. The wholesaler is anxious to keep you pleased and is only too

willing to help you out, but when it comes to his sacrificing hundreds of dollars yearly just to save a dealer who has not ordered properly, he cannot be expected to do so. Speaking on the subject, a Montreal manufacturer says, "Now, here is my opinion in a nutshell. We are only too anxious to keep our customers pleased and satisfied. It is to our own best interests to do so. 'You can catch more flies with sugar than you can with vinegar,' is a true saying, and a pleased customer is a profitable one. Therefore, if it is at all possible, our policy is to keep every one of our patrons satisfied. But, if we start into please and appease people who send goods back on all sorts of flimsy pretexts, we might as well close up the factory. So we have in many cases to be firm, even though we know that in acting so, we lose a good customer."

Retailer's Side of Question

Now, there are two sides to every question, and we have often stated in these columns, that the retailer is in some instances right to a large extent in cancelling orders or returning stock. For example, he will often order goods from a sample which is of good quality and of neat, strong appearance. For this shoe, he will pay a good price. When he receives his goods, he may find several pairs which are really not up to sample at all. Or he may find one or two pairs which have defective stitching or which have been torn in some way or other. In such an instance, he is perfectly right in his demand for a refund, but let him make sure that the goods are not up to the mark. Get the opinion of some one who is unbiased.

An Eastern Ontario shoe retailer speaking from the

dealers' standpoint, said: "I sympathize with the manufacturer, and know he gets some very unreasonable requests from retailers, but there is the other side of the question to consider also. I can mention half a dozen occurrences which give the retailer just cause for cancelling orders at certain times. What about a traveler who takes an order to be delivered at a certain date, when he is well aware that by nothing short of a miracle, can the retailer receive his goods on the date specified? Of course, there may be a lack of co-operation between the traveler and the office, and he may not be aware of the lack of facilities or of the existing conditions in the factory. This however, is not the fault of the retailer, and he cannot be blamed for refusing to accept goods when they are weeks late.

"Then, there is the manufacturer who makes draft for the amount of the order two weeks or so before the goods arrive. When the bank messenger presents the draft the retailer has to turn it down. This may go on every day till the goods arrive, and before this happens, the shoeman is thoroughly 'sore.' Does it pay to antagonize him in such small ways as this? The retailer has as much use for the money in the meantime as the manufacturer can possibly have, to say nothing of the fact that he wants to see what he is getting before he pays for it. These are only one or two reasons. I could name several more, that are good ones, and excuse enough for any retailer to cancel."

The only method by which a better understanding can be reached by wholesaler and retailer, is to co-operate more. Let the manufacturer get in close touch with the retailer who has an honest grievance, and it should be easy enough to settle the matter.

The accompanying illustration presents an innovation in footwear. On the left is seen a regulation colonial, and on the right a pump. The change is made by simply transferring the ornaments, which are also shown, and are attached to the forepart of the shoe by means of dome fasteners.

Thus the lady purchaser has a colonial for street wear and a pump for evening wear combined in the one shoe. The idea is a novel one and has certainly taken well with the trade since being presented by D. D. Hawthorne & Co., Toronto.

Shoeman Holds Spring Openings

Why should not spring openings in the shoe line be held by the dealer to display all the new effects and styles the same as such events are held by the millinery and mantle parlors. They should prove quite as interesting and fascinating. One of the enterprising retailers, who holds such a function each spring, is Robert B. Van Dine, of Fredericton, N.B., where he has been in the footwear business for himself about thirteen years. He sends out neat cards of invitations to the customers and friends of the store which is appropriately decorated for the occasion and every facility provided for the display of all the nicest and snappiest offerings in foot toggery. Every visitor is made to feel free and at home. The opening is one that is looked for-

ward to by the ladies of the Capital of New Brunswick with appreciative interest. Mr. Van Dine has an inviting and handsome store on Queen street with an entrance and display windows on York street and, in his business literature, one of his slogans is "remember that our goods are always high class." Born in Fredericton, where he was educated, he entered the shoe store of Nelson Campbell. Afterwards he went with M. L. Savage, the now widely known western shoe traveler, when that gentleman was in the retail line in Fredericton. Mr. Van Dine bought out the business later and has conducted it with gratifying results. He is a live, enterprising merchant and his chief recreation is motoring, having acquired a fine car during the past season. E. D. Van Dine, of Toronto, who for the last fifteen years has represented L. H. Packard & Co., of Montreal, in Ontario, is a brother.

Readjustment in Shoe Prices

Sole leather and upper leather have begun to rise in price as a direct result of the European war. The effect this will have on the shoe business in this country is problematic, says American Shoemaking. The opinions as expressed by leading manufacturers differ widely on this subject. The writer has interviewed a great many of the leading manufacturers on the topic and with one accord they agree that the manufacturers' selling price will be forced higher and will reach a level that should have been reached several years ago, as leather has been advancing in price

steadily for the past ten years without a proportionate increase in the selling price of shoes. To this fact may be laid the increased number of failures in the shoe industry. Competition is the life of any business, but this must be done on a sane and safe basis, which has not been the case for the past ten years regarding the boot business. So this conflict in Europe may result in adjusting shoe prices to a more satisfactory basis.

An Advance in Soft Soles

The inability to secure dyestuffs reflects itself on the soft sole shoe and shoe dressing industries.

At a meeting of the soft sole shoe manufacturers held in Rochester, N.Y., recently, the delegates decided to advance prices on colored shoes, at least 50 cents per dozen on the better lines, and 25 cents per dozen on the cheaper lines, with a possibility of a still further advance unless arrangements can be made for the manufacture of the dyes in the home market in the near future. A committee has been appointed to learn what can be done towards producing dyes by American manufacturers.

Not only has the price of dyestuffs been increased to the shoe polish manufacturers but waxes have advanced, in some instances as much as 200 per cent. Tinware has also advanced, and should these materials hold their present high levels or continue to increase, which is also possible, shoe polish prices must necessarily go up. Most of the shoe polish manufacturers are equipped to take care of their trade for this season, but buyers will only be taking the usual precaution if they would make their contracts and secure their shipments now.

Getting Out After Repair Trade

The Union Shoe Repair Works, who conduct a first-class shop at 892 Dundas St., opposite Howard Park Ave., Toronto, issue a neatly printed card to their patrons, copies of which are distributed every week. On one side is a tried and tested recipe for the housewife which is changed each issue. There is also the announcement that all work is called for and delivered and that the representative of the works will call regularly for repairs and give a new recipe. On the reverse side the prices are given, as follows:

| | |
|--|-------------|
| Rubber boots, soled and heeled..... | \$1.25 |
| Men's sewn whole sole and heels, from toe to heel..... | 1.50 |
| Men's sewn soles and heels..... | 1.15 |
| Men's sewn soles only..... | .85 |
| Men's heels only..... | .30 |
| Men's nailed soles..... | .65 |
| Ladies' sewn soles and heels..... | .90 |
| Ladies' sewn soles only..... | .65 |
| Ladies' nailed soles only..... | .50 |
| Ladies' heels..... | .25 |
| Boys' sewn soles and heels, 1 to 5½..... | 1.00 |
| Boys' nailed soles and heels, 1 to 5½..... | .75 |

| Buttons put on with fastener..... | .10 |
| Tan boots dyed black..... | .25 |
| Shoes stretched..... | .10 |
| Skates sharpened..... | .10 |

Veteran Shoe Merchant Expires

Another old veteran of Strathroy, Ont., has retired from the ranks. Another of the few remaining members of the "Old Guard," who pushed Strathroy along in the bygone days, has gone, after a long and useful life. For fifty years a continuous resident, James Wright, one of the "first" citizens of the town in more than one sense, passed peacefully away recently in his 78th year. Mr. Wright was born in 1837 in the parish of Luppit, Devonshire, England, and attended school in his home parish till the age of twelve. Then for a short time he lived with an uncle in the parish of Uppotery, walking three miles every day to school. Later on he returned to Luppit, attending school at first, then working for his father. At about the age of twenty-two he decided to try his fortune in the New World. With his young bride, nee Miss Chinnick, of the same county, he crossed the Atlantic and came on to Upper Canada. Arriving in London he spent five years in the shoe business, moving in 1865 to Strathroy, where he bought out the Andrews shop. For thirty-seven years he remained and prospered in the very store which he originally opened a few doors west of the Commercial Hotel, and during the balance of his long and remarkable career he occupied a more commodious establishment in the present well-known stand on the north side of Front street. Thus for nearly half a century he successfully tacked and veered with changing times and changing trade conditions, weathering all storms and taking advantage of all opportunities. He had decided to retire at the end of the present year and spend the gloaming of life in quiet and restful pleasure, but the summons came while he was yet in business, endeavoring to fully complete his remarkable record. In his earlier days Mr. Wright was one of the town's conspicuous figures in commercial enterprises. His remarkably successful business career was not alone confined to the shoe line in which he was engaged but to almost a dozen other business concerns as well, including the several "Wright Stores," in which he had at one time a controlling financial interest.

Mr. Gales Speaks on Trade Conditions

In reference to present conditions of trade in the shoe line George G. Gales, of George G. Gales & Co., Montreal, who conduct two large and splendidly equipped stores in that city and one in Ottawa, says:—

"Our business to-day is about as good as it ever was, notwithstanding the fact that we are facing a serious proposition. The public to-day, I am glad to say, is meeting us with a measure of confidence that we reciprocate. I foresee a better future for Canadian-made shoes than at any other time in my own experience. The cutting off of many foreign varieties of fine leather, aggregating with other leather imports seventy per cent. of the raw material used in the United States and Canada, is of course a serious proposition. But what will the result be? A rise of perhaps one dollar and maybe two dollars on the price of certain shoes. We can't help that. The notable feature to-day is that the public is asking more and more for the Canadian article. I can show my turn-over in September at the same time to prove that the demand has been almost normal during that period.

"There can only be one result—an increase in the output of Canadian-made shoes.

"The conditions now are immeasurably better than in the first days after war was declared. The first effect of the war was as if some one had turned the key and locked up all commerce. Gradually the public got over the shock and

so did the dealers, and now there is a confidence which is daily increasing. It is that confidence we are looking for and cultivating as best we can. I never imagined during the week war was declared that conditions would be as good as they are to-day.

"There will be one important change as a result of this war, and that is that Canada herself will have to provide that other seventy per cent. of raw hides, which we formerly imported from the countries which are now at war. We are doing our part quite successfully, and the outlook is really bright when all things are considered. As a matter of business as well as policy we are giving a larger and larger percentage of our orders for future needs to the Canadian manufacturers. There never was a greater demand for the home-made shoe than that we have been experiencing lately."

Generous Gifts to Patriotic Fund

The total contributions to date from the Canadian Consolidated Rubber Company, and their various branches, for the Canadian Patriotic Fund is about \$8,000. This certainly is a very generous response and a full list of the contributions is hereby given—only a partial list being presented in the last issue:

Canadian Consolidated Rubber Co., Limited, Montreal, \$2,500.00; Canadian Rubber Co., Montreal, \$1,198.13; Merchants Rubber Co., Berlin, \$525.00; Maple Leaf Rubber Co., Port Dalhousie, \$404.27; Montreal Branch, \$397.75; Head Office, \$383.37; Dominion Tire Co., Berlin, \$1,350.71; Toronto Branch, \$186.60; Winnipeg Branch, \$163.60; St. John Branch, \$106.00; Quebec Branch, \$100.00; Vancouver Branch, \$90.00; Dominion Rubber Co., \$76.10; Ottawa Branch, \$57.00; Edmonton Branch, \$50.00; Calgary Branch, \$42.00; Granby Rubber Co., \$40.65; Saskatoon Branch, \$31.00; Regina Branch, \$29.00; London Branch, \$28.00; North Bay Branch, \$20.00; Victoria Branch, \$14.00; Halifax Branch, \$13.25; Hamilton Branch, \$12.00.

The town of Berlin has certainly been very liberal toward the Patriotic Fund, the contributions from its citizens and industries in general, being \$90,000 to date, or \$5.00 per inhabitant. The employees of the Canadian Consolidated Rubber Company, in practically every branch, have donated a day's pay to the fund.

GUN METAL BUTTON WITH NEW POINTED RECEDE TOE, SWING EFFECT, ON "BULLET" LAST—BY COOK-FITZGERALD COMPANY.

Patriotic Windows Always Interest

A patriotic window that attracted considerable attention was put in the shoe store at 73 King street east, Hamilton, by Arthur L. Wilson, who is in charge of the men's department. He had two oil paintings of the British lion—one picture representing the royal beast asleep and the other awake. Both these pictures were draped with flags, as well as a portrait of His Majesty the King, which was between. The mottoes in the window were "The lion asleep," "But very much awake just now." Two large Union Jacks in the background, and smaller ones among the shoes, added to the impressiveness and appropriateness of the display. The setting, which was in the men's window only, was greatly admired and brought in increased trade.

Business Improving in the East

"Business as usual" has been adopted as the slogan of St. John, N.B., shoe dealers, despite the pessimistic utterances from certain quarters, says a correspondent of the SHOE AND LEATHER JOURNAL. So far as St. John is concerned trade has been very quiet up to within the last fortnight or more, but confidence is gradually being restored and sales are now much improved. Largely through the endeavors of the merchants themselves a better feeling of optimism is beginning to prevail throughout the city, for in their windows, stores, advertising, letters, and through every other available source, the keynote of their campaign for "business as usual" has been confidence in the city and the encouragement of Canadian industry. "Made-in-Canada" displays have been a feature of the last week or so, and they have been responsible for an improved feeling in business. Local dealers interviewed this week said that they expected business conditions in St. John this year to be well up to the standard and that once the Allies began to show decisive progress in their fighting there could be no doubt that everywhere an improvement would be seen. Buying in some lines has been slow, they admitted, but not so much as might have been expected, and within the last ten days or a fortnight there has been a most pleasing sign of betterment. The wholesale houses were becoming much more strict in their collections and in giving "paper," and slow accounts were being forced to deliver. Collections through the city with the retail houses have been better of late. Several houses have been making popular displays of military boots for outdoor wear among the men and report success from such endeavors with a brisk demand for this kind of stock. They expect that waterproof militia boots will greatly replace much of the rubber goods formerly worn by men in outdoor occupations this winter.

As an indication of their slogan, "business as usual," and its significance, manufacturers of the three Atlantic provinces met last week at Amherst, N.S., and formed themselves into a Maritime Manufacturers' Association, independent of their connection as members of the C. M. A. Fully half a hundred attended the meeting and the manufacturers assembled expressed themselves confident of what could be done to capture former German trade by Canadian houses. It is the purpose of these allied manufacturers to send general commercial travelers abroad, men whose scope is more specialized than the trade commissioners and consuls and these representatives will inquire into the possibilities of closer relations with importers in other countries in the view of "digging up" business for maritime province concerns. With South America they feel that if action were at once taken they could corral the trade formerly held by the belligerents. Some said they intended sending their

own private representatives to get an early "look-in."

George T. Douglas, of Amherst, was elected president of the new body; S. E. Elkin, of St. John, vice-president; C. C. Starr, Halifax, second vice-president; A. G. Robb, Amherst, secretary; W. Hunter, Moncton; Angus McLean, Bathurst; J. T. Cummings and A. McColl, New Glasgow; J. P. McNaughton, Sydney; George McKenzie and George Henderson, Halifax; Bruce Stewart, Charlottetown; C. S. Sutherland and W. L. Baker, Amherst, and H. S. Crowell, Yarmouth; executive.

The Wear Must Be Paid For

A leading shoe manufacturing firm is now enclosing the following slip in all its cartons: "The replacing of worn shoes by dealers without charge is an injustice and source of loss to the dealer as well as the manufacturer. We hereby notify all concerned that we will not give credit for any shoes that have been worn, without being allowed proper credit for such wear as the shoes shall have given. We will refuse to make any allowance (except for fault of construction) on any kind of shoes made from any kind of patent or enamel leather."

Proficient in the Rubber Line

I. W. Kuehner, assistant manager of the Maple Leaf Rubber Factory at Port Dalhousie, is one who has made steady progress in the footwear line. He was born in Waterloo in 1879, where he attended school and afterwards went to business colleges in Galt and Guelph. He first learned the moulding trade with the Waterloo Mfg. Co.,

I. W. KUEHNER, PORT DALHOUSIE, ONT

and later entered the service of the Berlin Rubber Mfg. Co., fourteen years ago, with whom he remained for five years. He was then in business for himself for a while, after which he joined forces with the Merchants' Rubber Co., and was soon given charge of the cutting department, which he conducted with ability and success for four years. Next he entered the employ of the Miner Rubber Company at Granby, but later rejoined the Canadian Consolidated Rubber Co., being appointed assistant superintendent of the Maple Leaf factory at Port Dalhousie, Ont. He was made superintendent, and over a year ago was elevated to the responsible post of assistant manager.

New Wrinkles in the Display Line

The Owl Shoe Store, Yonge street, Toronto, of which Ed. Cook is the proprietor, has effected several noticeable improvements in both artificial lighting and interior display. A system of new nitrogen electric lamps in frosted shades has been installed adding to the brilliancy of the interior. The space between the ledge and the floor has been, by means of tinted beaver board, divided into compartments with glass front. Every alternate compartment, which is triangular in shape, has facilities for showing an individual pair of shoes or something in the findings line, and back of the exhibit is an electric light. On the glass front in the intervening spaces is suitable reading matter calling attention to the leading styles offered, the foot service department of the store and the orthopedic appliances. Dr. John Tilson has recently taken charge of the chiropodic branch and has neatly fitted up parlors on the first floor. The new display and lighting arrangements between the ledge and floor add much to the attractiveness of the Owl Shoe Shop, which is also making use of some very classy show cards of yellow board with appropriate pictures, in colors and otherwise, clipped from magazines, illustrating athletic events, the latest in fashionable apparel, etc. These are pasted on the cards with good effect and then the lettering and borders, which are neatly executed, drive home a selling point in each case. The illustrated cards are changed every week and impart much to the interest and striking character of the window displays.

Many Fresh Uses for Rubber

Improved and cheapened methods of manufacture are likely to bring about an enormously increased demand for rubber. Such a cheapening in the art of manufacturing rubber goods will doubtless ultimately result in everybody possessing a waterproof coat and durable galoshes and it is more than probable that rubber soles will ultimately be turned out to last as long as leather ones and be equally agreeable in use. Furthermore, the rubber sponge, which can be made in every size, shape and degree of hardness, is likely to prove a successful competitor of the ordinary bath sponge, it having one great advantage over the latter, the fact that it can be thoroughly sterilized. A reduction in price is also sure to bring about a greater demand for tennis balls, golf balls and footballs, as under such circumstances our athletes will no longer content themselves with using old balls for practice, as is now generally the case. It will probably also not be long before rubber mosaic floors will be generally used in houses, as they are now on board the latest ships; more especially is the flooring admirably adapted for the requirements of the bathrooms, where it is vastly preferable to the cold cement and wood now generally in use. Furthermore, both the hoofs of our horses and our own ears would be greatly spared if the streets of our great towns were paved with rubber, and there is no reason why we should not also live to see this. The whole question is merely a matter of price and organization.

Sold \$9 Pair of Shoes and Won \$25

A prize of twenty-five dollars to the person who wrote the best story of how the in-stock department of the firm, known as department five, had helped him was recently offered by the Stetson Shoe Co., of South Weymouth, Mass. There were a large number of entries and the award was carried off by Alfred J. Chessum, who is in charge of the men's department of the Regal Shoe Store, Toronto. "Stet," a bright publication issued by the company holding the competition, contains the story of Mr. Chessum, and in announc-

ing the result compliments the winner on the excellence of his effort and says they are particularly pleased to award a prize in the territory of a friendly neighbor, John Bull. Mr. Chessum succeeded in selling to a well dressed man who had never been able to get a pair of shoes to fit him unless they were made to order, a patent button boot retailing at nine dollars, as the caller wanted a particular pair for a special occasion. The chap had a lump as big as a walnut on his joint and a 10C, which was tried on, was too short. Learning the price he said it was too high and "to take them off, as he could get a pair made to order for much less than that." The salesman agreed that he could get a pair made for less money but pointed out to his customer that he would have to sacrifice a good deal in style and then would not be getting what he wanted. "Well," adds Mr. Chessum in relating the instance, "my caller who had tried on the shoe still thought the price too high, but was willing to try on the other shoe. As soon as he stood up I could see trouble ahead, for I could read the signs in his face. "That is too short," he said. "I suggested trying a longer one, and—oh, what is the use, we have all been there before—we were out of the longer size. Now the fat was in the fire. I tried fitting other shoes on him, but there was nothing doing. When he found that I had not his size he wanted that shoe or none. Then I thought of the in-stock department, looked up the list of stock shoes and thought I could still see a vision of nine bills coming my way. I explained the system to my customer and offered to send for a pair that would fit. He was very dubious about the idea at first until I assured him that he need not take them if they were not perfectly satisfactory. So I measured his foot for a 10½B. He wanted the shoes for the next Saturday. I sent in the order and along came the shoes. They arrived on time, fitted him well and he was more than pleased. Yes, I got his nine dollars all right, and another one along with them for a pair of shoe trees. I thus turned a dire pessimist into a confirmed optimist."

Repairer Has More Business

The shoe repair man feels the effect of the war, but to a much smaller degree than the manufacturer, it appears, for which the repair man has cause to rejoice. The repair man is not dependent on foreign customers, he is not bothered by delayed shipments, danger to his shipments or such things that cause the shoe manufacturer to wear a worried expression and let out calamity yells frequently, says the Shoe Repairer and Dealer.

Of course, Mr. Repairer must pay for the expense of the awful war in the higher cost of living, along with the general public, but as most of the value of his output consists in labor, the effect is slow. The price of sole leather has gone up two cents a pound, and upper leather is climbing in proportion, but the repairer does not use hundreds of pounds and tons of leather except in a very long period of time, consequently the extra two cents or so does not amount to a large outlay all at once. The advance in talcum powder, in brushes, chemicals, rubber, rubber cement, shellac and dyestuffs is slight and the quantity used in repairing too small to be noticed at present.

The price of shoes has gone up and with the general advance in the cost of living people have had their shoes repaired instead of buying new ones. This has been noticeable in a general dullness in the shoe trade, but the repairer has had more business than ever before. So why should he worry about the war? If the price of leather should become exorbitant, the repairer can easily charge a slight increase for repair work, but this does not appear necessary at present, nor may it be so for some time.

Newsy Jottings From Quebec

O. Goulet, shoe manufacturer, was in Ottawa last week on business.

Geo. A. Slater, Maisonneuve, was in Quebec recently on a business trip.

Jos. Gagnon has been appointed chief accountant in the factory of Louis Gauthier Co.

Arthur Hamel is taking charge of the sole leather room of E. Tremblay, shoe manufacturer.

A. E. Marois, of Tourigny & Marois, has returned from an extended trip to the New England States.

L. Blondeau, foreman of the cutting room of Lachance & Tanguay, has returned to the city after spending the summer at his cottage at Lorette, Que.

E. A. Jones, of Brockton, Mass., was in Quebec on his annual visit last week. He took several good orders for inks and dressings from the shoe factories.

C. Tremblay, of Montmorency Falls, has installed a Progressive shoe repair outfit, making the third one of this kind which has been put in successful operation in this vicinity.

F. Gauvreau, formerly foreman in the cutting room of the McKeen shoe factory, has been appointed manager of the La Cie des Cuirs et Chaussures de Plessisville, Plessisville, Que.

Many friends of Mr. Blouin, shoe dealer, are congratulating him on his recent marriage. Mr. Blouin and bride, have returned, after a wedding trip to Toronto, Niagara Falls and other points.

The shoe factory of Marier & Trudel, which was partially destroyed by fire three weeks ago, is being repaired. Thirty men are working at the job in order to complete the structure as soon as possible.

Mr. Wilson, salesman for Luc Routier, has returned from an extended trip to western points, and says that business seems to be better. He secured sufficient orders to keep the shop going for some weeks.

The shoe dealers of this city report a very active trade in findings during the time that the Canadian troops were at Valcartier Camp. There was a large demand for polishes, dubbin, laces, brushes, heel treads and various other small articles carried by the dealer.

Among the recent visitors in Montreal, were E. Brosseau, of Montreal, representing the Canadian Arrow-smith Mfg. Co., Niagara Falls; H. Hurtubise, representing the Panther Mfg. Co., of Sherbrooke; Uder Fournier, of Plessisville, Que., and E. Gosselin, of St. Casimir, Que.

Omer Guay, of J. Guay & Fils, tanners, was very much surprised last week when he and his wife were waited upon by about sixty of their friends, who congratulated them on the fifth anniversary of their marriage. The happy couple were presented with an address, accompanied by a handsome mahogany roll top desk.

Business in shoe manufacturing lines in Quebec is improving and the prospects for the future appear very bright. During the past few months three new shoe shops have opened and this city will in a short time, be in a position to manufacture and fill, not only all the orders received from jobbers, but also to meet any demands that may come from the Old Country. The Shoe Manufacturers' Association had a communication from the War Office in London, asking how many shoes they could supply per week, and the answer was that they could make 25,000 outside of the regular demand from Canada. The large call for calf leather has created a shortage in the market. The War Office has substituted side leather for calf and

call it Chrome Oil Tan. Samples have been furnished by the Robson Leather Co., Oshawa; J. Guay & Fils, and several others, who are making a specialty of colored chrome tannage. Several orders given by the War Office have been completed on time, and new ones have been placed lately, stipulating that the shoes have viscolized soles. Much business which, in the past, has been placed in Germany, for felt slippers of a cheap grade, will now go to Canadian plants. It is expected that the War will open up many other avenues for Canadian shoe manufacturing firms.

Drummond Shoe Off to Good Start

The newly organized Drummond Shoe, Limited, is now in operation in Drummondville, Que. After the fire, which practically wrecked the building of the old O. B. Shoe Co. in Drummondville, the prospect for the future manufacture of shoes in that enterprising town looked very black. The citizens, however, realizing the importance of a well-managed and prosperous shoe factory in their midst, took steps toward a reorganization of the old company. The town officials came to the aid of the project with a substantial cash bonus which was further augmented by the entry of private capital. Ovide Brouillard, M.P., who practically owned the O. B. Shoe Co., has given this new venture his entire support and is at the head of the new company.

In the person of Geo. A. Fortin, formerly superintendent of Scout Shoes, Limited, Montreal, the backers of the project secured the services of a capable and experienced manager. Mr. Fortin's first efforts were toward the remodeling of the rebuilt factory. A number of changes were made in the design such as an outside elevator shaft and an outside engine room. These and other numerous changes in inside detail left the factory with entirely free floors on every storey. The arrangement of the machines and the general plan of operations is such that there will be an absolute continuity of operations from the cutting room at the top right down to the shipping room on the ground floor. The very latest labor and time saving appliances have been installed, such as new U.S.M. neverax four-deck trucks, upon which the various parts of the shoe, when cut, are laid in an orderly manner to be thence wheeled into the adjoining stitching room.

This new device needs to be seen to be appreciated as it ensures absolute continuity of operation without any lost motion.

The power for the machinery is supplied by the town gratis, while in the engine room a complete electric light plant is being installed for the lighting of the factory. Mr. Fortin has made all arrangements for the various machines requiring heat to be heated by steam and electricity instead of gas as is usually the case, thus ensuring both additional safety and the lower insurance rate at the same time. By the same means the factory will be splendidly warmed by steam.

One outstanding feature of this factory is its situation right on the banks of the St. Francis river. Better and more healthful surroundings for workers could not be secured anywhere at any price, which fact will, without a doubt, be conducive to an esprit de corps among the staff and employes.

Mr. Fortin is manufacturing men's welts only, with special emphasis on quality rather than price. He is confining his selling efforts entirely to the jobbers and large retail accounts throughout Canada. A complete staff has already been secured and a creditable amount of orders has already been booked.

More Breezy Comment on Retail Shoe Advertising

H. Jennings, King street, Kingston, certainly should never have used that cut in his ad along with the wording, "The Ideal Shoe for Men." The illustration is that of a heavy staple and yet the ad goes on to explain that the ideal shoe for men is something with a light upper that will give splendid wear, and a good stout sole. There is not much airiness or daintiness in the shoe depicted, which is altogether too large for the space taken up by the advertiser. This cut is evidently intended for a dodger or other literature advertising standard screw or pegged goods. The shoe would be all right if the wording was "The Ideal Shoe for the Farmer or the Working Man," and then went on explaining. The present context does not balance with the heading or the heading with the context. The border is rather disjointed, and if more space had been allowed between it and the display type, a decided improvement would have been made in the appearance of the advertisement.

Cresswell's Shoe Store, St. Thomas, announce the last week of their clearing sale, and along with this is the state-

ment that they have just received 1,000 pairs of men's and boys' heavy shoes, and the ordinary observer will wonder whether this last shipment is included in the clearing sale or not. To intimate in one line that everything is being cleared out and to say in another line that 1,000 pairs have just been received might mislead the reader quite easily. It seems like mixing old and new goods. The ad is well set up, admirably displayed, and shows good balance.

The Ideal Boot and Shoe Store, of Waterloo, Que., makes a plain, business-like announcement of a great reduction sale and speaks of everything going "at cost and below cost," for thirty days only. The cuts used are clear and attractive, but are rather too large for such limited space. It would have perhaps been better to have used only one cut, at the head of the announcement.

G. A. Meloney's advertisement about "Cheer up! Cheer up! Do not worry!" is all right for a heart-to-hetrt talk,

The Ideal Shoe For Men

Something with a light upper that will give splendid wear and a good stout sole, plain or with toe cap, a pair **\$3.00**

The Big Shoe Store
J. D. McArthur
Bring Us Your Repairing.

and a bright, breezy announcement. It shows that this North Sydney man is an optimist and evidently wants to make the people feel good. His is rather an unusual type of ad and one scarcely knows what to say. It is almost as good as handing over the day's receipts to the Patriotic Fund, for if more people would talk in war time in this buoyant, encouraging strain, all would feel better, whether they had any money in their pockets or not. As a connecting link, a joyful spirit and a pair of Meloney's shoes are supposed to go hand in hand, or perhaps foot in foot.

* * * *

J. D. McArthur, of Guelph, Ont., speaks of saving shoe money at his annual summer sale, and then emphasizes certain values in his traveling goods department. In the small space at the disposal of Mr. McArthur, the ad would have appeared stronger if he had devoted it specifically to impressing upon the public the saving features rendered available by the shoe sale, or on the other hand by referring exclusively to traveling goods.

The Shoe Industry in St. John

The city of St. John, N.B., has issued a handsomely illustrated and admirably printed book of 150 pages, setting forth the shipping, industrial and commercial growth of the city. Among the splendid half-tone engravings of business, wholesale and manufacturing firms, the shoe interests are well represented. The large five storey warehouse of the Canadian Consolidated Rubber Co., which is under the direction of A. E. Massie; the six storey warehouse of Ames-Holden-McCreedy, Limited, W. M. Angus, manager; the wholesale and retail shoe establishments of Waterbury & Rising, Limited; the shoe store of Wm. Searle, a leading north end retailer; and the shoe making and repairing establishment of W. Brindle, on Union street, are shown. Among the factories are mentioned J. M. Humphrey & Co., shoes, who employ 60 hands; C. H. Peters' Sons, Limited, 80 hands; St. John Hide Co., 20 hands; A. Crowley & Co., trunks and bags; W. Brindle, shoes, and others. Altogether St. John possesses 120 manufacturing industries, employing constantly 5,500 operatives.

SHOE NEWS IN PARAGRAPH

The Wood Shoe Co., of Vancouver, has assigned.

The shoe stock of Alf. Girard, of Montreal, has also been sold.

The assets of Alexander Labell, shoe retailer, Montreal, have been sold.

Moore & Breton have opened a new shoe repair shop in Daysland, Alta.

E. Milligan, St. James, Man., has discontinued his shoemaker's business.

Abraham Woolf, boots, shoes and repairs, Calgary, has assigned to E. A. Dagg.

H. C. Parker, of the Dominion Supply Co., Montreal, was in Toronto recently.

The assets of J. L. Saucier, shoe dealer, were sold by auction in Montreal this week.

Geo. A. Slater, of G. A. Slater Limited, Maisonneuve, Que., was in Ottawa last week.

Theo. Mayer, manufacturer of sandals, Montreal, was in Toronto last week on business.

C. H. Albee, of Ames-Holden-McCready, Limited, Montreal, was in Boston last week.

Charles Robson, of Robson Leather Co., Oshawa, Ont., was in Ottawa this week on business.

Robt. Masson, shoe dealer, of Ottawa, is spending some time on an extended visit to the West.

C. E. Lepine, recently with Tourigny & Marois, Quebec, has returned to his home in Montreal.

Belou Godbout, a well-known shoemaker of Grand Falls, N.B., died a few days ago after a long illness.

W. A. Lane, of Montreal, was in Toronto this week on a business trip calling upon the shoe factories.

Several new machinery parts have been placed in the factory of the Cimon Shoe Co., St. Jerome, Que.

A. R. Kaufmann and W. E. Wing, of the Kaufmann Rubber Co., were in Toronto this week on business.

R. B. Wanless, of Coates, Burns & Wanless, London, was in Montreal and Quebec this week for a few days.

The Hartt Boot and Shoe Co., Fredericton, N.B., are reported to be very busy on army shoe contract orders.

Rutherford Bros., Calgary, dealers in shoes, men's furnishings, etc., recently made an assignment to E. A. Dagg.

Jos. Houck, of the Crown Glove Works, Berlin, Ont., was a visitor to several Montreal leather houses this week.

W. P. Hodges, sales manager of G. A. Slater, Limited, Maisonneuve, is at present calling on the firm's customers in the East.

A. Bress, 7 Bonsecours street, Montreal, is adding the U.S.M. Co.'s latest buffing and finishing machines to his repair outfit.

W. A. Short has been appointed liquidator of the C. E. McKean Shoe Stores, Limited, Vancouver, who are in voluntary liquidation.

J. J. Ambrose, formerly with Geo. G. Gales & Co., Montreal, has accepted a position with the Lyon Shoe Store as window dresser.

E. W. C. Honen, for some time superintendent of the James Muir Co., Maisonneuve, has concluded his services with the company.

P. I. Hersey, vice-president, and L. A. Mooar treasurer, of the Regal Shoe Co., Boston, Mass., were in Toronto last week on business.

R. H. Williams & Sons, Regina, have been awarded the contract for forty pairs of felt boots at \$3.00 a pair, which

are being supplied by the city authorities to the members of the police force.

The United Shoe Machinery Company of Canada, report business as showing a marked improvement over this time a month ago.

An application will be made by the leather workers of Ottawa, to the United Brotherhood of Leather Workers, for a local charter.

W. H. Miner, of Granby, Que., and F. H. Meinzer, of Montreal, paid a visit to the Toronto branch of the Miner Rubber Co. this week.

P. A. Doig, of Fisk Limited, Montreal, has returned from a buying trip to the Boston market. While away Mr. Doig also visited New York.

Geo. Teathorn, of Wingham, who was a shoemaker by trade, going about the country in search of work, was drowned in the Saugeen River at Walkerton.

R. L. Savage, sales manager for the Jas. Muir Co., shoe manufacturers, Maisonneuve, was in Toronto, London, Hamilton and other places on business last week.

The Smardon Shoe Company, of Montreal, which was recently incorporated, will carry on business in future under the name of the Smardon Shoe Co., Limited.

J. Eveleigh & Co., trunk and bag manufacturers, Montreal, have had Ideal Clicking machines installed in their factory. The U.S.M. Co. made the installation.

Wood & Son, boot and shoe merchants, of North Vancouver, B.C., have dissolved partnership. J. F. O'C. Wood is selling his interest in the business to E. Wood.

In a fire which broke out in the Oriental Bazaar at Galt, Ont., smoke and water did considerable damage to the shoe store of F. L. Hamilton & Son, located next door.

Frank Smith, representing the John Ritchie Co., of Quebec, and John J. Lateman Shoe Manufacturing Co., New York, was in Toronto last week calling upon the trade.

Main, Limited, of Moncton, N.B., have disposed of their stock of shoes to the Moncton Footwear Co. Fred. E. Snider is head salesman and W. G. Jones, business manager.

George C. Lock, buyer for the Cut Rate American Shoe Store, Calgary, recently returned from an extended trip for his firm which included many of the largest shoe centres.

E. L. Emerson, of the Boston Last Co., Boston, recently spent a few days in Richmond, Que., the Canadian branch of the firm. Chas. Campbell, Canadian manager, was in Montreal last week.

Robert Masson, shoe retailer, Ottawa, has just installed a new and decidedly attractive front in connection with his fine store on Sparks street which is much admired and is the last word in point of construction and display.

Trade conditions in Montreal shoe factories during the past fortnight have shown considerable improvement over previous weeks. Several manufacturers state they have received some nice orders.

John G. Settle, who represents the Murray Shoe Co., London, was in Toronto last week showing a fine range of samples, the most graceful and up-to-date that has ever been turned out by the firm.

Mr. McNichol, who has been in charge of the shoe department of the Hudson Bay Co. at Vernon, B.C., has resigned and returned to Vancouver, where he will look after his interests in that city.

Rowland Hill, shoe retailer, London, Ont., has had the old front of his store on Dundas street torn out and a thoroughly modern and striking new front installed which adds much to the beauty and attractiveness of his establishment.

Richard Arscott, one of the oldest business men of London, Ont., passed away recently in his ninetieth year after a lingering illness. He had been a resident of London over sixty years and for many years conducted a tannery on

Richmond street north in that city, later disposing of the business to Hon. C. S. Hyman. Mr. Arscott is survived by six sons.

Four hundred and sixty-three pairs of boots have been donated to the Belgian Relief Fund by Daoust, Lalonde and Company, of Montreal. This is one of the largest and most appropriate gifts the Montreal branch of the fund has yet received.

A. R. Angus, of Ames-Holden-McCreedy, Limited, Montreal, was married recently to Miss A. Dupuy, daughter of H. S. Dupuy, manager of the Amherst branch of the Bank of Montreal, at Amherst, N.S. Many friends are extending congratulations.

A widely known traveler, who has been calling upon the trade for several weeks, says that Cleopatras are not taking very well and that Colonials are going to have the big call for spring with a strong demand for the panel effect pumps among the better class of trade.

A. Levy, shoe retailer, Yonge street, Toronto, has given to the Patriotic Fund \$141.60, being five per cent. of his total sales for a certain period during the past month. This is a generous donation and has been gratefully acknowledged by the committee.

Hendren Bros., shoe retailers, of Winnipeg, doing business at the corner of Portage avenue and Sherbrooke street, under the name of the Diamond Shoe Store, recently made an assignment to the Canadian Credit Men's Association. The stock and fixtures are valued at \$5,953.

Donald McIntyre, a retired shoe merchant, died recently in Seaforth from a paralytic stroke. He was in his seventy-eighth year and one of the town's earliest merchants. In religion he was a Presbyterian and in politics a Liberal. He leaves a wife and one daughter residing in Seaforth.

The directors of the Amherst Boot and Shoe Co., of Amherst, N.S., have donated \$1,000 for the different purposes and funds in connection with the present war. The company have also signified their intention of giving \$300 to the Belgian relief fund.

The dependence of the calfskin tanners upon imports from Europe is attested by U. S. Government report of imports for the seven months ended July. Of 50,274,482 pounds, valued at \$12,512,210, imported during the seven months, all but 8,029,177 pounds, valued at \$1,836,393, came from the war zone.

Jas. C. Bryant, who for the past nine years has been city salesman for F. J. Weston & Sons, wholesale shoes, Toronto, is joining the staff of the Kaufman Rubber Co., and will be attached to the Toronto office, looking after the trade in the city and vicinity. Mr. Bryant enters upon his new duties on November 1st.

A new material called "Gros-Grain" binding is being used in factories to take the place of plain binding. It gives a shoe a distinctive appearance and thus increases its value in the eyes of possible customers. It is put on the same as ordinary binding. It is cross grained and with white stripes running through it.

L. B. Hutchinson, manager of the Toronto office of the Kaufman Rubber Co., who has been in St. Michael's Hospital for the past three weeks recovering from an attack of appendicitis, is spending some time at his home in Penetanguishene. Mr. Hutchinson expects to be able to resume his duties about the middle of next month.

The John Ritchie Co., of Quebec, who are now turning out a particularly fine line of men's welts, report that they believe that gunmetals, patents and the mahogany shade of tans will be the best selling lines for spring, and orders so far received are running strong on these leathers. The demand for the recede toe is still active in the cities, but in the smaller towns they are asking the medium recede,

which is still very popular. Orders for spring are being received in fair volume, and somewhat earlier than usual, owing to the fear of advanced prices, which will have to be reckoned with later on.

W. H. Willis, shoe dealer, of Wingham, Ont., writes the *SHOE AND LEATHER JOURNAL*: "Accept my thanks for your criticism re our ad in your issue of October 1st. I notice you have used several of our ads in the past and regarding your remarks relating to them I am pleased to inform you that they have brought results."

Lynn manufacturers are showing favors to gores in shoes. They are putting gores into sides of strap pumps and oxfords, and they are concealing narrow bands of gore beneath ribbons and straps that pass over the ankles. It is claimed that the gores will make the shoes fit more smoothly around the sides and over the ankle.

J. H. Porter, late buyer and manager of the shoe department of the Robert Simpson Co., who is now establishing the J. H. Porter Shoe Stores in Toronto, will open his third new store at 974 Bloor street west, corner of Dovercourt road, on November 1st. During the past month stores have been opened at 310 Yonge street and 1346 Queen street west by Mr. Porter.

A leading city retailer in western Ontario says: "The receding toes appear to be getting more popular. Tans are moving fair in both lace and button. Medium shades are the best, with the very light and the extreme darks (only in winter waterproof weights) very quiet. Gunmetal and velours on the medium and recede toe are the bread and butter winners just now in men's shoes.

Mrs. McCully, of Elora, has disposed of her boot and shoe business to Mitchell Fasken, of Pilkington, who will take possession and open for business about the middle of October. He has leased the shop and the well-known business will continue in the old stand. Mr. Fasken is a young man well liked by everybody and many friends will wish him success in his new enterprise.

J. P. Buchanan, representing the Sardon Shoe Co., Limited, Montreal, was in Toronto last week displaying a very artistic range of spring samples in women's welts and turns. There are several pleasing models with grey suede quarters and high cuts with cloth and brocade tops. The firm are showing a full Louis leather heel with square top piece which is the last word in pedestals.

John S. Groh, former president of the Rochester Association of Traveling Shoe Salesmen, is seriously ill at his home in Rochester and his life is despaired of. Mr. Groh returned two weeks ago from Canada, where he was selling shoes for the Krippendorf-Dittman Co., and he has not left his house since. A counsel of physicians held last week showed a serious affection of the heart.

A despatch from St. Louis, Mo., says: "A large shoe manufacturing company with headquarters here has been asked by the French government to submit bids on shoes patterned after those now used by the French army. The firm has been negotiating with the French government for several days and the prices quoted are conditioned on quick acceptance, because of the unsettled condition of the leather market."

Messrs. Chamberlain and Anderson, representing Getty & Scott, Limited, of Galt, are spending a couple of weeks in Toronto showing a fine range of spring samples, which is the most comprehensive ever turned out by the firm. A new recede stage last with a short vamp and spool heel, carrying a patent or dull forepart and fawn or grey cloth quarters, is among the many new things which are being featured.

One hundred and seventy-eight pairs of larrigans were shipped by MacKenzie, Crowe & Co., of Bridgetown, N.S., for the Belgian Relief Contribution. Sixty pairs of men's

sizes were very generously donated by the firm, ninety-four pairs were purchased from them at greatly reduced prices with the proceeds of the patriotic concert given recently and twenty-four pairs were bought by Bishop & Charlton from one night's receipts at the Primrose Theatre.

An attractive display which was witnessed by many pedestrians in Brockville, Ont., was made in the window of E. J. Kelly's shoe store. A live black squirrel scampering through maple leaves strewn on the floor of the window and hiding behind a stump suggested a scene from the woods. Above this was the word "Thanksgiving" lettered with ears of corn. There was also displayed many new pretty designs in footwear, and several attractive club bags and valises were shown.

F. Blouin, who suffered in a recent fire in Quebec, reports that the manufacturing department of rawhide fibre counters will be restored in a few days on the floor which had been affected only by water. Work has already been resumed. All machinery in the building will be driven with electric motors until the steam plant is again fully equipped. Mr. Blouin has removed his offices temporarily

to another part of the building, and is filling orders which come to hand.

Many retailers are using the products of the field and garden for making effective fall window displays and corn, grain, vegetables, apples, pears and autumn leaves have been employed to good advantage and in a variety of pleasing arrangements. The possibilities of such a window, are many, especially when accompanied by neat and appropriate show cards such as "The Harvest of Good Shoes," "The Fruits of Fall Fashion," "A Generous Yield in Values," "A Fine Crop of Footwear," "Gathering in the Bargain Sheaves."

The retail shoe business throughout the country is fair and would appear to be better in the small centres than in some of the large cities. Cold, damp weather would give a lively impetus to the trade. In the better class of footwear men are buying recede and moderate toes in dull calf and tan mahogany, which is having quite a call. A number of button boots for men are also selling. In women's footwear patent leather is having an almost exclusive call. Grey and fawn tops are very popular in Toronto as well as brocade,

HISTORIC SHOE HOUSE IN NEW ATTIRE

The historic shoe house founded in Kingston, Ont., over sixty years ago by the late Alex. Sutherland, and now conducted by J. H. Sutherland and Bro., has been doing business over forty years in the one stand on Princess street. Recently the establishment has undergone a decided change and an artistic and handsome new front has been installed. The accompanying illustration affords some idea of its attractive appearance and trade pulling character.

The entrance is tiled with hexagon ceramic tile with colored, ornamental border, and the firm name woven therein. The bulkheads of the windows are a light brown Tennessee marble with a base of dark brown Tennessee. The plate glass is held in all metal sash, which provide perfect ventilation and drainage of the show windows. The sash is so arranged that circulation can be shut off from the window during the summer time, enabling Mr. Sutherland to keep all goods on display free from damage due to dust. In the winter time the sash is so arranged that a heavy current of cold, dry air can pass into the interior of

the show windows close to the plate glass, thus eliminating to a small degree the possibility of frosting. The back of the two windows is made up of mahogany frames which have set in them bevel plate mirrors. This backing extends up six feet from the floor and from that to the ceiling is art glass worked up in Queen Ann design. The flooring of the windows is of quarter-cut oak with inlaid parquetry border. The transom is filled with Castile prismatic glass which throws light back into the store with the highest possible efficiency.

The name of the firm is worked in prism with brown art glass upon a field of white cathedral glass. The effect is very pleasing, particularly at night when the lights of the store are on and shine through the letters. The door is of heavy mahogany with suitable massive bronze hardware. The side columns, sill, transom bar, and all jambs are of solid copper finish with attractive dark brown statuary color. The whole exterior is of a most up-to-date and harmonious character, and was designed and installed by the Kawneer Manufacturing Co., of Guelph,

while the new stage effect last and square French toe with shorter vamp are finding favor with some female wearers, and are said to be fine fitters.

A factory for manufacturing mohair and leather laces is likely to be established very shortly in London by a leading English firm of tanners and curriers in an effort to secure a share of the trade which the Dominion formerly gave Germany. Two of the directors of the company will arrive in Canada in a few days. It is said that the new industry will employ about fifty men and one hundred girls. No bonus or special inducement is asked from London. Premises will be engaged this fall and a new factory erected in the spring.

The Cobourg Felt Co., Limited, whose new factory in that town is equipped with up-to-the-minute machinery, and has an experienced staff of felt makers and felt manufacturers, will make all lines of men's, boys' and youths', as well as women's, misses', children's and infants' felt footwear. Their representatives will shortly call upon the trade to show some of the finest ranges of samples ever opened in the Dominion, containing several new lines that have never been offered in Canada, but have made a big hit in the United States.

Inspector Guise, while being shown a crack in the wall of the Maple Leaf factory at Port Dalhousie, Ont., recently slipped from the piling and fell into the swift-moving water of the raceway. After being submerged for fully a minute, his hand was seen by I. W. Kuehner, the superintendent, who seized it and towed the inspector to the side and held his head above water until assistance arrived. The inspector was resuscitated in the office, whereupon the superintendent went into a swoon. Mr. Guise is 225 pounds in weight, Mr. Kuehner is small in stature.

Clark Bros., St. Stephen, N.B., whose factory was recently destroyed by fire, say that the blaze apparently started from a kerosene heater attached to the Goodyear stitcher. It was necessary to have this heater lighted up by the watchman about an hour before the help started to work in the morning, in order to have the machine in proper working condition, and this undoubtedly was the cause of the blaze. The firm's insurance was something like \$28,000, which by no means covers their loss. Clark Bros. are now making arrangements to carry on manufacturing.

One of the interesting features in connection with the war is that the Cook-Fitzgerald Co., London, have selected martial names for their new spring lines, the three receding toe lasts being known as the Bullet, the Torpedo and the Allies, while a medium high toe is known as the Battle, and then there is a new straight last called the Victory. The company have also taken the initiative in stamping on the shank of their shoes "Made in Canada" and report that this feature has met with much appreciation on the part of a number of retailers. Each representative of the company, which recently made a liberal contribution to the Canadian Patriotic Fund, decorates his sample rooms with the Union Jack and has upon the walls pictures of the British Bulldog and other loyal, emblematic illustrations.

The American-British-Canadian Distributors, Toronto, have several men on the road this season who all report good business. Alf. Winn is covering northern and eastern Ontario; H. A. Beatty looks after western Ontario; A. S. Many, Quebec and the Maritime Provinces, and Geo. Owens, Port Arthur to Winnipeg. V. Sokoloff, formerly with the Slater Shoe Company, has been appointed accountant and credit man with the A. B. C. Distributors, who are this season handling the 'Trot-Moc, "Back to Nature" footwear made by the Ashby-Crawford Co., of Marlboro, Mass., women's lines, made by the John Strootman Shoe Co., Buffalo, and range of slippers and pumps made by the

Nathan D. Dodge Shoe Manufacturing Co., Newburyport, Mass., as well as a line of children's shoes manufactured by the Milton Shoe Co., of Milton, New Hampshire.

BIG ORDERS GIVEN FOR ARMY BOOTS

A further order has been given by the Government at Ottawa for 100,000 pairs of ankle boots, to be constructed in the same manner as was stipulated in previous contracts given for the same shoe. The Government will pay approximately the same figure as formerly, which is about \$3.90 per pair. It is reported that the last order has been distributed among the Murray Shoe Co., London; Cook-Fitzgerald Co., London; E. T. Wright & Co., St. Thomas; Aylmer Shoe Co., Aylmer; Regal Shoe Co., Toronto; John McPherson Co., Hamilton; Williams Shoe Co., Brampton; Valentine & Martin, Waterloo, and other Ontario firms. It is also understood that the Department of Militia, Ottawa, has sent several samples recently submitted by Canadian manufacturers, to the War Office in London, and that after a selection is made the British authorities will place orders in Canada for 200,000 pairs. This may be increased eventually to a million pairs if the war keeps up and satisfactory shoes and prompt delivery are made for the Imperial forces. It is expected an official of the British Government will be in Canada shortly to look after the placing of the order. Among the Canadian firms who have already filled orders for the Canadian Government other than those already mentioned are Ames-Holden-McCreedy, Limited, Montreal; Tetrault Shoe Manufacturing Co., Montreal; Slater Shoe Co., Montreal; Hartt Boot and Shoe Co., Fredericton, N.B.; Louis Gauthier Co., Quebec; Amherst Boot and Shoe Co., Amherst, N.S.; Relindo Shoe Co., Toronto, and others.

The large orders on short time contracts that France has placed in England for boots for its soldiers bears out the report that the footwear of the French went to pieces early in the campaign. One order alone has been placed at Northampton for the delivery of 100,000 pairs to France before October 25th, and the first shipment has already been made. The short time limit of these contracts shows how imperative is the need. Altogether the war has caused an artificial manufacturing boom in Birmingham, Sheffield, Leeds and throughout the Kingdom. Where there were formerly hosts of unemployed, factories are running night and day on military supplies.

A despatch from Halifax, N.S., says over one-quarter of the boots shipped to the Halifax Militia Regiment a little over a month ago, have been condemned as absolutely unfit for use, and during the heavy rains, hundreds of local militia men on duty were compelled to walk in footwear without any soles. The boot question is the most serious that has arisen in connection with the mobilization of the Canadian forces. The Halifax Chronicle adds that one particular lot of boots proved nothing less than shoddy. Under the lightest service conditions, they went entirely to pieces, the soles pulling away completely from the uppers. In some cases the soles were cracked in two. This condition has been remedied as fast as possible and supplies of new footwear procured from Nova Scotia manufacturers. So far as tried, the Nova Scotia boots have proved excellent.

 **SPHINX**
Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.
 It is a quick, strong and clean adhesive, ready for use.
 It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.
 It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.
 Best for sock linings, as they never loosen.
 There is nothing made that is just as good.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment :

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work :

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

FULL INFORMATION FURNISHED PROMPTLY ON REQUEST.

“Business As Usual”

—this is our Motto

Our salesmen's reports show that our comprehensive spring line of samples, by their all-round excellence and comprehensive range are stimulating orders to such an extent that this motto is really justified.

There is only one reason why you cannot sell Kingsbury Shoes this coming season—that is being out of stock when they are asked for, as they certainly will be.

And if you show them to discriminating buyers, you will also sell to many women who do not ask specifically for Kingsbury Shoes, but who know a natty shoe when they see it.

Kingsbury Footwear Co.

This Trade-mark is on every one of our shoes. It stands for quality shoemaking and AN ALL-ROUND SQUARE DEAL.

Our Men's Welt Is a *Quality* Shoe

Because our *entire* time and attention is given to the making of this one shoe. Every employe in our factory is a men's welt specialist, with nothing to distract his attention from MEN'S WELTS. This means high-class shoemaking.

Our factory is equipped anew with every modern machine and convenience to make the highest class of men's shoes. Our overhead expenses are *cut to the bone*, therefore, in buying shoes from us, you are paying for the actual quality *in the shoe*, not "paying the piper for mismanagement."

Up to a Standard
not
Down to a Price

is our motto and we intend to turn our attention to *quality shoemaking*, rather than to quantity turnout at a price. Nevertheless, you will find our prices the lowest possible consistent with the materials and workmanship we put into these shoes.

We want every jobber and large retail shoe house to get in touch with us for prices and samples. Excellent service and delivery guaranteed.

Buying "Made-In-Canada" Shoes Is Profitable Patriotism

You not only have the satisfaction of knowing that your money stays in Canada to benefit Canadian industry and workmen, but you buy shoes that are equal and, in most cases, superior to the imported product.

Furthermore, buy from AMES-HOLDEN-McCREADY, because you can secure every kind of footwear you desire from the one house. Three immense specialized factories are at your service. And our In-Stock department carries a full range, ready to ship at a moment's notice.

BUY NOW, because shoes will never be as cheap again as they are at present.

Travelers are now out with the best range of Samples we have ever shown

Leader
 Brand Shoes
 at \$4.00
 Will Make
 You Both
 Money and
 Friends

YOU can do this in two ways—
 first, by selling more shoes
 to a sympathetic public using
 the Made-in-Canada argument—
 second, by selling Corbeil Shoes
 that are reasonable in price and
 that give you an excellent profit.

Where can you duplicate lines
 selling at \$4.00, or even \$5.00,
 for which you pay only \$2.60,
 \$2.70 and \$2.85?

Put the money in your pocket
 that you have hitherto been pay-
 ing to the Customs House.

Let us give you further information.

Corbeil Limited

Manufacturers of Welt and McKay Shoes to

Buy Your Stock When You Want It—Not Before

Thompson Kushion Sole Shoes for Women

Quick Sellers and Profitable

You want something extra that will appeal to a customer and save time and talk on the part of yourself or clerks.

Here it is:

A selling feature which every woman who buys shoes will want the moment you show it.

It means salvation for tender feet and almost every woman has tender feet.

It feels soft and responsive and easy under the foot, takes away the hard stiff feeling of ordinary shoes.

Merchants who have tried them out never fail to repeat their orders, and by mail. It means loss of sales and profits to wait to order from traveler.

Try a sample order and become a regular customer.

Made-in-Canada

“Kingsbury” and “America’s Beauty” Shoes

There is a double satisfaction in buying these shoes. In the first place you are supporting Canadian industry and Canadian workmen which is a patriotic duty that devolves on every one of us in these trying times.

Second—You are buying footwear as stylish and up-to-date as anything you can purchase from imported sources at anywhere near the price. Every cent you pay goes into actual shoe value; not a cent to the Customs House for which you get no return.

Our Spring 1915 range of samples is snappier and more up-to-date than ever and you have a wider line to choose from than ever before. Have you seen these samples yet?

Mr. Retailer, Don't be Profit Shy on the Shoes You Sell

On What Basis Do You Figure Your Margin?—The Right Method and the Wrong—How to Tell What the Selling Price Should Be on Every Line You Handle—Do You Know Your Percentage of Cost to Do Business?

"A bought a pair of boots for 75 cents and sells them for \$1.00, what per cent. does he make on the transaction?" asks a shoe retailer of Sydney Mines, N.S., in a letter to the SHOE AND LEATHER JOURNAL.

The answer to this is very simple.

He makes 25 per cent. on the selling price and 33½ per cent. on the cost price. Most progressive merchants nowadays figure their percentages on the selling price, which, in other words, means all the money taken in, as all expenses have to come out of what goes into the till. In the past a large number of retailers fooled themselves out of profits and some eventually out of business by calculating percentages of profit on the cost price, whereas everything should be figured on the selling price. If one starts to figure on the cost price he is apt to find himself coin shy at the end of the year. The following table may be of interest:—

| | |
|----------------------|------------------------------|
| 20% added to cost is | 16⅓% profit on selling price |
| 25% added to cost is | 20 % profit on selling price |
| 30% added to cost is | 23 % profit on selling price |
| 33% added to cost is | 25 % profit on selling price |

As exemplified in the question asked, the cost price being 75 cents, adding 33½ per cent. means 25 cents, which makes the selling price \$1.00. The 25 cents, which is the difference between the cost price and selling price, in this case, is 25 per cent. on the selling figure. To continue the table:—

| | |
|-----------------------|------------------------------|
| 35 % added to cost is | 26 % profit on selling price |
| 37½% added to cost is | 27¼% profit on selling price |
| 40 % added to cost is | 28½% profit on selling price |
| 45 % added to cost is | 31 % profit on selling price |
| 50 % added to cost is | 33½% profit on selling price |

Where the Difference Lies

It may be pointed out that many dealers to-day are deceiving themselves and being constantly cheated by incorrect figuring of profits. They do not seem to recognize the difference and what it implies between profit on cost price and profit on selling price, and it is the profit on selling price which makes things hum. Certain retailers often speak glibly of making 30, 35 and 50 per cent. Too often this per-

centage refers to the cost price and when figured out on a selling basis it is only 23, 26 and 33½ per cent. profit on the selling price. Out of the selling price profit must be deducted the expenses of doing business, such as rent, light, heat, wages, advertising, insurance, freight, express, telephone, taxes, repairs, delivery charges, etc., which in the majority of shoe businesses will be found to be from 15 to 22 or 23 per cent. on the volume of business done, or in other words, the selling price. The selling price, when it is used in a calculative sense, really means the money taken in from the sale of shoes, or in other words, that which is placed in the till, for all disbursements have to be met out of the cash received.

A merchant must take in a dollar before he can pay the wholesaler, the landlord, his clerks, his advertising, etc., and in receiving that dollar (which is the selling price of a shoe) the outlay for the various items spoken of has to be deducted.

The Profit You Should Get

A leading authority has stated that the ordinary shoe merchant, to be on the safe side, should obtain 33½ per cent. profit on all shoes retailing at \$3.00 or under, 36 per cent. profit on all shoes selling at \$4.00; 38 per cent. on all shoes selling at \$5.00; and everything above \$5.00 should run from 42 to 50 per cent., the profits mentioned herein being figured on the selling price. The profits on slippers should run 8 per cent. higher than on boots; and pumps and low cuts 5 per cent. higher. The higher profit on slippers and low cuts is made necessary because the expenses of clearing them out is greater and it is necessary to get rid of the stock at the end of each season. The foregoing figures should give an average of 33½ per cent. above the cost of depreciation and a clean-up at the end of the season. Children's shoes will stand an average profit of 33½ per cent. on the selling price or 50 per cent. on the cost price. All profit should be estimated on the selling price of shoes.

Net Profits and Expenses

The following address which was delivered a few weeks ago by E. L. Jack, a prominent credit manager of St. John, N.B., before the annual meeting of the Dominion Credit Exchange, in Toronto, explains clearly and succinctly how profits should be figured and he tells the right way and the

wrong way. It is well worth reading and preserving by shoe retailers for future reference.

"I suppose it is well to stand in the shoes of our ancestors. It was just sixty years ago, the 29th of June, 1845, to be exact, that my great grandfather, Dr. Richey, preached the dedicatory sermon at the opening of the Richmond Street Methodist Church, this city, and a month later, that of the Great St. James Methodist Church, Montreal, at that time on St. James street, but now located on St. Catherine street.

It may seem a far cry from sermons to profits, but you will recollect that the Bible has something to say on this question of profit, of good measure running over, and of other things which it might be well for us to follow. If I were permitted to take a text from the same book just mentioned, it would be: "For without controversy great is the mystery of godliness" and substitute the word "profits" for the latter, for without discussion we cannot hope to get very far in this or any other subject. We will deal solely with this question of "Net profits" and its allied one, that of Expense.

"Prof. Huxley once asked his students the following question: What is a lobster? One of them said, a lobster was a red fish which moved backwards. Huxley replied that this was a very good answer but for three things: 1st, that a lobster was not red; 2nd, it wasn't a fish, and 3rd, that it didn't move backwards. Supposing we ask ten men in business this question—What is a profit? Our replies from some of them would be somewhat on this fashion. A profit is what is left over after we have added a certain percentage to the cost of our goods and deducted our overhead expense. We shall see later how near this comes to being analogous to the lobster reply.

The Causes of Failure

"Now, gentlemen, what was the cause of their failure? Simply that they had not been figuring their profits correctly. There is no use deluding ourselves in this matter. The man or firm who is cutting prices to-day is simply committing commercial suicide. What if an answer is received to your quotation that the price is not interesting, or it is too high? Let the other fellow sell him, some day that would-be buyer of yours will find out that the lower price meant one of two things, inferior quality or mismanagement of the business. Henry Drummond tells us that there were three blind men who once asked to touch an elephant. One of them felt his trunk, another his ear, and the third his tail. They each thought they had touched the elephant, whereas it was only a part.

"Is this what we are doing to-day on this question of profits? Are we figuring that when we add 25 per cent. to our cost, we are making 15 per cent., because our cost of doing business is only 10 per cent. If so, we are wrong, my friends, and it is one of the vital nails which we need to hit on the head and drive it home fast. The man who says he is doing business to-day for 10 per cent. either wants help or is telling a lie. That man around the corner from you, who thinks he is doing business on a 10 per cent. basis, is not only going down hill very fast, but he is taking you along with him, as in nine cases out of ten you will meet his price in order to retain some valued customer or for some other reason.

"A firm down in Nova Scotia went to the wall a few years ago. For about five years previous to the crash they were putting from \$3,000 to \$7,000 on the wrong side of the profit account. When the re-organization took place one would suppose they had learned a lesson. What are the facts? Last year their audited statement showed that on a bond issue of \$500,000 and a further capital of \$1,000,000,

they made the large sum of \$12,000, and after deducting 6 per cent. interest on the bonds, they were \$18,000 in the hole. What was the reason? Either they were adding the princely sum of 10 per cent. to cost, or their overhead expenses were much greater than they had figured. I could give other instances, but the time is passing.

All Figured It Wrong

"The following question was given to 1,000 members of a certain trade in Canada and the United States a few years ago. If an article costs \$1.00 and you know your cost of doing business is 22 per cent. and you wish to make 10 per cent., what is the selling price? You will hardly believe me when I tell you that 700 answered the question wrong. The majority gave \$1.32 as the selling price, whereas the correct figure proved to be \$1.47. A great many people reason this way. Well, my article costs a dollar, so I must add (mark the word add) to this my business cost 22 per cent. and the 10 per cent. I wish to make. Gentlemen, the cost price is not a thing to be added to, but is a percentage of the selling price.

"The simplest non-technical way to arrive at the selling price in all cases is to add together all your percentages, deduct them from 100, and divide the remainder into your cost, the quotient being your selling price. I will now give you three illustrations.

WHY

Many fail in business. Because they figure their profits incorrectly.

THE RIGHT WAY

Example:

| | |
|--|--------|
| Expense of doing business is..... | 25% |
| (Figured on gross sales, i.e., selling price.) | |
| It is desired to make a profit of..... | 10% |
| (Must be figured on selling price.) | |
| Cost of an article..... | \$2.00 |
| Find the selling price. | |

Solution:

| | | | |
|--------------------------------------|---------------------|---------------|------------------------------|
| Selling Price | Expense Profit Cost | Rent | Delivery charges |
| | | Light Heat | Telephone |
| Price | Cost | Wages | Interest on Capital invested |
| | | Advertising | Depreciation on stock |
| | | Insurance | Bad debts |
| | | Freight | |
| | | Express | Extraordinary expense |
| 100% equals | | Selling Price | |
| 35% equals | | } Profit 10% | |
| | | } Expense 25% | |
| 65% (of selling price) equals..... | | Cost | |
| \$2.00 will be 65% of selling price. | | | |
| Divide \$2.00 by .65 equals \$3.08. | | | |

Answer:

Selling price should be made \$3.08.

Proof:

| | |
|-----------------------------------|--------|
| Expense 25% of \$3.08 equals..... | .77 |
| Profit 10% of 3.08 equals..... | .31 |
| Cost 65% of 3.08 equals..... | 2.00 |
| | \$3.08 |

THE WRONG WAY

| | |
|-------------------------------------|--------|
| Figuring it as 25% plus 10% or..... | \$2.70 |
| which is less than cost..... | \$2.00 |
| plus expense | .77 |
| | 2.77 |

That's why they fail.

"The following table shows the percentage of cost which must be added to effect a given percentage on profit on the sale:—

| | | | |
|-------|------------------|------|-------------------------|
| 5 % | added to cost is | 4¾% | profit on selling price |
| 7½% | added to cost is | 7 % | profit on selling price |
| 10 % | added to cost is | 9 % | profit on selling price |
| 12½% | added to cost is | 11⅞% | profit on selling price |
| 15 % | added to cost is | 13 % | profit on selling price |
| 16⅔% | added to cost is | 14¼% | profit on selling price |
| 17½% | added to cost is | 15 % | profit on selling price |
| 20 % | added to cost is | 16⅓% | profit on selling price |
| 25 % | added to cost is | 20 % | profit on selling price |
| 30 % | added to cost is | 23 % | profit on selling price |
| 33⅓% | added to cost is | 25 % | profit on selling price |
| 35 % | added to cost is | 26 % | profit on selling price |
| 45 % | added to cost is | 31 % | profit on selling price |
| 50 % | added to cost is | 33⅓% | profit on selling price |
| 55 % | added to cost is | 35½% | profit on selling price |
| 60 % | added to cost is | 37½% | profit on selling price |
| 65 % | added to cost is | 39½% | profit on selling price |
| 66⅔% | added to cost is | 40 % | profit on selling price |
| 70 % | added to cost is | 41 % | profit on selling price |
| 75 % | added to cost is | 42¾% | profit on selling price |
| 80 % | added to cost is | 44½% | profit on selling price |
| 85 % | added to cost is | 46 % | profit on selling price |
| 90 % | added to cost is | 47½% | profit on selling price |
| 100 % | added to cost is | 50 % | profit on selling price |

"The percentage of profit should always be figured on the Selling Price and not on the cost."

"If I Were a Clerk, I Would ——"

"No, I am not a knocker and I am not a pessimist," remarked a leading shoe manufacturer in discussing the efficiency of the average retail clerk. "But I am a student of conditions. My study has taught me that there is a woeful waste in the effort of the average man who is employed to sell shoes. I think it is due to the fact that the average salesman does not realize the possibilities of his job. He is content with too little and does not see the chance he has to make more. If I were a clerk in a retail shop I believe that I could earn double or triple what the average chap does to-day. There are a lot of clerks who are working for ten dollars or fifteen dollars a week and seem con-

tent. For several years I have been studying the situation and I have watched the men sell goods. I have seen them advance and I know why some have gone forward, why some have stood still, why some have left and why others have been fired. I also know that any man, who has certain qualifications, can make good money selling footwear if he will take an interest in his work.

"Interest is the first essential to good salesmanship and it seems to me that the average clerk lacks interest. He does not fix his mind on the essential features of retail success, namely, more and more profitable business to a steadily increasing number of satisfied customers. His main thought, if it can be called thought, is to get the customer's money as quickly as possible and say "Good-day" to him. A clerk to make himself of more value to his boss, should ask himself the questions—What am I here for? What am I trying to do? How can I best do it? And what will be the result? The clerk should keep his eye fixed on the man who is doing better work than he is. He should study his methods and imitate his work.

"Men do not reach advanced positions nowadays because of luck. They reach them because they go to it in the right way. If I were a clerk I would keep a record of my sales. I would compare it as nearly as I could with the records of other salesmen and, if their records were better than mine, I would not rest until I found out why. I would also keep a record of my customers' purchases—when and how they bought and when they should reasonably be expected to buy again. If they did not return at the expected time I would talk it over with the boss and see if some plan could not be evolved to bring them in. I would treat every man that I waited upon with so much consideration that I would prove by my manner a sincere desire to satisfy him, so that when he came in again he would ask for me. Tell this to a good many salesmen and they will reply, 'You are crazy; it cannot be done.' I want to say that it can be done and I know of a number of men who are doing it to-day. They have been doing it for some time and will continue to do it. These are the men who are making good. If, after a careful analysis of the situation and a sincere attempt to put my ideas into practice, I found that I was not making progress, I would change my job. There is so much inefficiency in business that the man who is efficient—the fellow who thinks intelligently and who works industriously—is absolutely bound to win out."

THE SPLENDIDLY FITTED UP AND ADMIRABLY ARRANGED SHOE DEPARTMENT OF THE HUDSON'S BAY COMPANY, CALGARY

How Much Money Do You Spend on Window Displays

Use Every Possible Advantage to Arouse Interest and Show Originality—Why Not Make a Military Display Owing to the War—Good Windows Can Only be Obtained by Thought and Attention.

How much real attention do you give your windows? What proportion of your time do they claim? How much money do you spend in display fixtures? Do you ever try the results of shoes sold from exhibiting such and such line in the window? You know all this data—or should know—when it comes to your stock, your accounts and your turn over, but you let your windows “go hang.” You may decorate them when you or your staff have time, but if you are rushed they get little thought or attention. Speaking to the writer the other day a leading shoeman in Ontario who has one of the finest store fronts in any medium sized city remarked sententiously: “I would as soon think of coming down to work and staying in the store all day with an unshaved face and a soiled collar as I would to neglect changing my window trims—at least once a week. Their importance as a builder and expander of trade cannot be over estimated. If you do not think so leave your blinds down a day or two and note the instant decline in your daily receipts.”

Magnetize your store by installing window dressings that will call forth favorable comment. Get the attention of the public towards your windows and in time your business is bound to increase.

The Sights Along the Streets

Attention begets curiosity and ultimately patronage. Pass along the business section of any city or town. Window after window is to be seen and every one will be different than the other. A few will show signs of at least some effort having been spent in their get-up. Others strike one as having been thrown together in about five minutes. Then we may possibly come to a window attractively arranged and trimmed. Do we stop? Without doubt. Like an oasis in the desert a well-trimmed window is bound to attract the passer-by and cause him to stop and look it over.

There are two kinds of window displays, good and bad. The bad windows are caused either by not enough study and attention having been given to them, or through sheer carelessness and lack of interest. The good windows are only obtained by study and attention.

A leading retailer recently had a novel display. The window was dead black with a black background in the centre of which was a red circle about two feet square, with a single light reflected upon it from behind the background. Placed in the centre of the circle was one of their new fall mahogany tan bals. on a snappy last. In the foreground on one side of the window was a large bell. A large chain ran from this to an old pair of oxfords on the other side of the

window. A small placard in the centre of the display read to the effect that the bell had rung on low-cut summer shoes and that the firm stood ready to supply patrons with the latest in fall foot-gear. These are the kind of windows that help stimulate business for the merchant, and it is to your interest that the same careful attention be given in your establishment to the displaying of footwear.

Why Not Capitalize the War

At the present time the war is first and last in the minds of the public and much time is absorbed by them in discussing and studying up on this subject. Here is an excellent chance therefore for you to keep the attention of the public focussed upon your store by showing photographs, or as some shoe merchants have already done, displaying bulletins relative to the war in your windows. A military display in conjunction with your shoes would also make a good medium with which to attract the attention of hundreds of possible customers towards your store. One successful window display will make you a firm believer in the advantages of the window as a medium for attracting business.

From now on right through the holiday season the merchant has an abundance of material with which to work. The holiday season especially will furnish a fine chance to make up some attractive window displays with very little expense. Study the displays of other merchants in your own town and other cities whenever the opportunity affords, whether in the same line or some other line. In this way many valuable hints may be gathered that will possibly come in handy in the future. If you have not the time to do this personally have one of your clerks do it for you.

See That Lighting is O.K.

A good window trim embraces many things. For one the lighting arrangement is a big point and calls for careful study. If you find you are not able to figure this out satisfactorily yourself, any lighting company will do it for you, providing they are given a chance to install these lights. Most companies of any size have men whose sole business it is to study out lighting problems in order that the merchant will receive the best results from his lamps.

Cleanliness is another big asset in the window make-up. See that the shoes and other decorations are perfectly clean. Do not allow a trim to remain in the window so long that it has a chance to become dusty. Window trims to attract more than the ordinary attention must be changed often. Above all things do not crowd a window. Much rather have too little than too much in the display.

Simplicity is, and should be, the keynote to every window get-up. Loud, stary displays may attract attention but they attract very little business.

At all times it is a good idea to remember that your window is for the purpose of displaying shoes and not a miscellaneous array of anything but shoes. Shoes should be the predominant feature and if any other article of adornment is used it should be shown so as not to overshadow the shoes.

Make your best silent salesman, the show window, do its share of the work in building up your business in the future, and the time and energy expended in doing this will never give you any cause for regret.

FINDS IT GOOD READING

I enclose \$1.00 for another year's subscription for your valuable paper **SHOE AND LEATHER JOURNAL**, which I enjoy reading, as I find so much valuable information in it.

Yours very truly,
E. S. BAILES,
c/o Dillon & Moore.

St. Catharines, Ont.

Can a Young Man Start in Retail Business on \$1,000?

Some Views of Different Manufacturers and Jobbers on the Question—Many Leading Retailers Have Started on Less—Personality Counts for Great Deal With the Wholesaler—Location and Ability are Essential.

Can a young man start in the retail shoe business to-day on a cash capital of \$1,000? This question was asked several manufacturers, jobbers and retailers the other day, after having heard the story of a prosperous shoe merchant who, after starting in the footwear game with the sum of \$475 is to-day worth many thousands of dollars.

Many young shoe clerks ask themselves this same question at some time or other, "Is \$1,000 enough capital to launch in the footwear business in a town or village, or the suburban district of a growing city?"

The consensus of opinion on the subject is that everything depends on the character and business ability of the man wishing to start, and the locality in which he opens. A Montreal jobber said: "At the present time, I would not advise any one to start in the shoe business on such a small capital, but would say rather, 'Wait a few weeks or months until the general business depression has been relieved.' However, to give my opinion as to whether a young man can succeed with a small capital, I would say it all depends on the young man himself. I know several shoe clerks to whom I would extend a more than reasonable amount of credit, should they decide to open a store on \$1,000 cash capital. On the other hand, I am also acquainted with several clerks whom I feel it would be very unsafe to trust."

Do Not Open Too Many Accounts

Another jobber stated that young men starting in business were too prone to open accounts with many jobbing houses instead of selecting one certain firm or two at most, for the first few months they are in business. "They should find a reputable jobbing house carrying a good line and rely on this firm for their stock until they can safely afford to branch out. If this one wholesaler cannot give enough variety, then two at most should be patronized. Then when the first week of the month comes around, if they have, say \$400 or \$450 to distribute between two accounts, they are more likely to get an extension of credit than if they have to distribute this small amount among several accounts. But, when a traveler calls with a line containing something new, many young men cannot resist his line of argument, and place an order where they would be much better off without this or that last, which they are told will be all the rage."

Many wholesale houses make it a rule to demand a payment of fifty per cent. on all goods purchased from them in a new account. The balance of the payment can generally be arranged to the satisfaction of both the buyer and seller. However, this does not mean that any young man with \$600 or \$700 can secure goods from any wholesaler to the extent of \$1,200 or \$1,400. After it has been established that the prospective customer has so much capital to start with, his personality, his experience, the location of his store, the nature and extent of the competition and oftentimes the manner in which he secured the money, are all taken into consideration. By personality is meant his honesty and ability. Experience does not mean only the length of time he has spent in the shoe business working for someone else, but also the matter of whether or not he has a good business education and a general knowledge of the worth and wear of shoes.

Very often the wholesaler is interested in finding out how he got the money he intends to start with. Did he make and save it dollar by dollar, or did he inherit it from some

relative or other? If he has saved it he is looked upon much more favorably than if he came into a legacy, for the man who can put by \$1,000 from his salary is pretty sure to have some good ideas of the business in which he intends to enter. On the other hand, any chap can come into a legacy and still be a poor manager, or not a man of business ability.

Importance of Locality

A Toronto wholesaler commenting upon the subject pointed out the necessity of considering locality. Under ordinary conditions, he said, the man of small capital has very little chance to make good. In the newer western towns and villages many retailers have made good on much less than \$1,000. In older localities where trade is entrenched a

Twenty-Seven Years Making Rubbers

A man of energy, enterprise and initiative is Fred W. Kramer, who directs the product of the Dominion Rubber Co. plant at St. Jerome, Que., where the "Fleet Foot" sporting and outing shoes are made. Mr. Kramer took charge of the factory as superintendent a little over two years ago, and twelve months later, was made assistant

F W KRAMER, ST. JEROME, QUE.

manager. A tireless worker, he possesses executive ability and clear cut ideas. Mr. Kramer is fond of hunting and fishing and generally spends his holidays in these pastimes. A shoemaker and the son of a shoemaker, he has been linked up with the rubber game for twenty-seven years. Born in Colchester, Conn., he started to work at the age of sixteen as a boot maker with a rubber company in that city, in which his father was employed. The business changed hands several times, and Mr. Kramer was with a number of firms. In 1890 he went to Granby and had the honor of making the first ticket of boots turned out in the mill of the Granby Rubber Co., and in May 1912 he became identified with the Dominion Rubber Co. His interests have ever been those of the firm he serves.

small-capital fellow had better stay out. The jobber also said that the extension of credit depended largely upon the experience, efficiency and character of the man, and the opportunity available to him in his locality. In one town in Saskatchewan he had opened an account with a young man who had a cash capital of less than \$300. Another account was recently opened where the purchaser had even less money. Both men were reliable, careful buyers, and each had their store in a location where there was undoubtedly a splendid opportunity for the growth of a healthy shoe business. The jobber knew that both these young men would pay themselves a stated salary and live within it, where many other young fellows on going into business for themselves take undue liberties with both their cash and time. This is one of the chief reasons why so many young chaps would not make a success in the retail shoe line.

Character is Essential Element

"I don't think it is wise to encourage young men to start out with such a small amount of cash behind them, yet I will admit several of our best customers embarked in the shoe business on a capital of less than \$1,000," remarked a Montreal manufacturer. "I believe the reason they succeeded was their unusual ability and the interest they took in their stores. Now here is the reason I am against the average man going into the retail shoe game on such a small capital. To succeed on this sum a man must possess more than average ability. He must be capable to meet and overcome the stumbling blocks that are strewn along the path of the retailer. Starting with a cash capital of only \$1,000 puts a young man under a great handicap. Give an experienced shoe retailer \$1,000, and even he will find it very difficult to make a success of his store. Therefore, a young man who has not had executive experience finds it just that much more difficult. Consider the different problems he has to buck against with his small capital. For instance, it is very difficult for a retailer even in a country town, after he has seen his banker (who is acting cannily these days) and arranged with one or two wholesale houses to secure goods to the amount of say \$1,800, to obtain a wide enough variety in the different lasts and styles to satisfy his prospective customers. These times people expect to be shown a large assortment, and will go only where they can get it, even if they must purchase their shoes in the nearest large town or in the city. The young fellow embarking in business must compete against a rival who has from \$5,000 to \$10,000 worth of goods on his shelf. Clearly, he must have unusual ability to win out. Then to make a success of the shoe game the retailer must carry a good range of styles. While I do not say it is impossible to make a good showing of the various styles on a cash capital of only \$1,000, I do believe that it takes a man of much more than ordinary ability to handle the venture properly. However, there is the old adage, 'Nothing venture, nothing gain,' and as I said, some of our best customers made their beginning on a much smaller capital than \$1,000, so I would not say to a young man of ability 'Don't touch the retail shoe game,' but rather 'Don't go into it unless you have figured out its disadvantages as well as its advantages and still feel confident of making your venture a successful one.'"

Live Up to Your Obligations

"A serious mistake," writes a London wholesaler, "that many a young man makes is not living up to his obligations, or in failing to let his creditors know of his inability to meet drafts. We find that there are too many drafts returned without any explanation whatever and naturally this hurts a retailer's credit to a great extent. But if conditions were explained, it would most likely be found that the dealer's

explanation is a comprehensive one and his credit would no doubt be renewed. Therefore, you can see the first thing for a young retailer to do is to keep his credit sound. A house that will keep a young man within his limits, but still give him proper accommodation, is doing him a real favor.

"When a young man comes into me or through one of my travelers approaches the house with \$1,000 cash in his pockets, I first size up my man. In a good many cases you can tell by his personality just how far to trust him. I have given credit to many young fellows in my day who had hardly a cent of capital, relying on their standing back of their past reputation for honesty and ability to go ahead in anything which they undertook. As \$1,000 goes such a short way in buying a representative line of leather and rubber shoes, after fixtures, etc., are provided for, it is generally a case of personality when a man gets a very good line of credit, if he has little money to pay down."

A Winnipeg jobber expressing his views said that in the past when things were booming a great number of his customers had begun business on next to nothing in the way of capital. If he did not provide them with sufficient credit, there were other houses in the West that were willing to take a chance. He, therefore, adopted this policy himself and states he has lost very little, although he attributes the success of many of his proteges to the scarcity of competition which they had to buck against at the outset. Under proper conditions, he said, a smart young man can make a success of the retail shoe game on \$1,000 capital if he goes about it rightly, is satisfied at first to "keep the pot boiling," and holds his head. The mistake which a great many young retailers are prone to make is to go in for an expensive store front and an interior out of proportion altogether to the amount of capital they have in hand. They feel proud of a smart appearing establishment into which they can invite their friends, and for this reason you will often find that a retailer is kept busy paying a contractor for installations or improvements that will not bring in half as much revenue as would pour in were this extra money devoted toward purchasing additional stock and increasing the store's range of styles and lasts.

Had Better Wait a While

Discussing this topic about starting men in business with a small amount of money, a prominent Quebec shoe manufacturer said he was not so willing just now to take a chance. With the tightness of the money market at the present time he felt no young man should enter the retailers' ranks on such a small capital as \$1,000, if he had nothing additional to fall back upon. This manufacturer said he was carrying along enough accounts of firms who in normal times are good customers, but who are not doing very much at present. After the fall season progresses a little he will be more in a position to advise young men as to whether he thought it would be advisable for them to go into business. However, on general principles he believes long dating works against good merchants and that shorter terms are inevitable. In most old towns there are too many exclusive shoe establishments and general stores handling shoes as a side line. This manufacturer believes that these are not many men with sufficient courage to go through the inevitable worries attendant upon small capital.

From the opinions given in this article it will be seen that the majority of manufacturers and jobbers, although they do not believe in recklessly encouraging young men to enter the shoe business on such small capital as \$1,000, are of the opinion that it is not at all impossible, and in fact know from experience that it is possible for a young fellow with lots of ambition to succeed, provided he is fitted for such a career and is willing to take and give.

How He Put Personality Into His Shoe Department

The Benefit that Jones Derived from a Careful Study of Smith's Success in Retailing Footwear—Instead of Copying the Successful Smith, He Won Exclusive Trade by His Own Methods—An Experience that is Replete with Pointers.

Has your shoe business a distinct personality? Do your customers think of your store as a service institution when shoe needs arise? If they do, yours is a shoe business with much promise in its future.

Jones and Smith both conducted shoe businesses in the same city, says the Dry Goods Economist.

Smith conducted an exclusive shoe store and his trade comprised the best people in the town, people of taste, discrimination and means above the average.

Jones owned a large store, selling men's and women's ready-to-wear and furnishings of all kinds. He maintained a shoe department on the ground floor. This department had a direct street entrance and two small windows, one on either side of the door.

This is the story of Jones' business, the story of his efforts to build it up. Smith's exclusive shoe store is only incidental to the narrative. Smith did something every day that Jones early in the progress of his shoe department was unable to do.

What Jones Could Not Do

Jones did a fair volume of shoe business on shoes retailing at \$3.50 to \$4. But he could not successfully sell either higher or lower grades. That is, he could not enlarge the scope of his trade. He wanted to, and he strove manfully to do it. His store was a popular shopping place for a good class of trade. His general business was growing rapidly. In clothing, furnishings and women's garments the store was a leader. Jones carried standard high-grade lines, some of them nationally advertised brands.

But a great many customers who bought other lines regularly—good established customers—would not buy shoes of Jones. They bought them of Smith, or some other exclusive store, down the street.

Jones chafed under this, not because of any personal antipathy towards Smith, nor because of professional

jealousy. He simply wanted the kind of shoe trade Smith had, and wanted it badly.

He tried several things to change the condition of affairs. He tried departmental co-operation. He gave clerks in other departments good commissions for bringing business to the shoe department.

But even at this he met with only indifferent success. Regular customers still bought \$3.50 and \$4 shoes, but not any more than usual, and there were no signs of any new business that looked as if it came from an exclusive clientele.

Although he did practically everything Smith did, he did not get many customers of the Smith type.

He Did Some Tall Thinking

Jones knit his brow, as many a perplexed shoe manager has done before. He thought and thought and planned; he got advice and suggestions from other thoughtful people whose judgment and experience were valuable. And the only reason that Jones, the shoe manager, could discover for his not getting the trade he so earnestly desired was that certain people seemed to feel that an exclusive shoe store was the best place to buy footwear.

He analyzed the situation carefully, and drew some real conclusions.

In this particular town the bulk of the shoe business was done by exclusive stores. They were more numerous than shoe departments, and always had been so. In the minds of customers, shoes were sold by shoe stores. That is where most of them had bought their shoes since the first pair they were able to select alone. One store, in particular, had built up a reputation for quality and style. This was Smith's.

It was a case of it being considered smart for women to say they got their shoes at Smith's. And Smith got most of the high-grade trade. With the smart dressers and the

AN EXTERIOR VIEW OF THE
RYAN-DEVLIN SHOE STORE,
494 MAIN STREET, WINNIPEG.

discriminating people Smith's stood for correctness in footwear. With people who paid less attention to smartness, but set a high value on quality, Smith's shoe store meant good value for the money.

With people who bought shoes according to the amount of shoe money at their disposal, Jones' was considered the place, Jones' shoe department. While Jones did not conduct a cut price or a bargain shoe business in any sense of the word, he really had a price clientele.

Jones admitted, in his own mind, that Smith deserved the good trade he enjoyed.

He realized that Smith carried the best styles and the best varieties of sizes. So he made a special effort along service lines.

Jones finally came to the conclusion that he could never approximate Smith's quality and value of trade until he could create among his customers, and among all those he hoped would become customers, the same mental attitude towards him and his goods that Smith's clientele held towards Smith and his goods.

It was Smith's good will that was getting, and keeping for him the best trade in town. Good-will in business is collective opinion, the collective opinion as to a merchant and as to what he sells.

How He Went After It

Jones could not hope to divert to himself the good-will of Smith's customers. Not directly, at least. He could not expect to divert a great deal of Smith's trade. He did neither of these things in practice. But he did in theory.

Jones set out to use Smith as a pacemaker. He expected not to put Smith out of the race, but to make Smith help him speed up. Theoretically, Jones started after all the business in town, with the hope of turning it into the Smith kind of trade, but in the Jones shoe department.

He reasoned that if he could give the public everything Smith gave them he would eventually acquire a reputation, at least second to Smith's, if not equal to it.

Jones wanted to accomplish three things. He wanted to equal or surpass Smith in the excellence of styles carried. He wanted to give the best possible service. He wanted to overcome the idea that the best place to buy shoes was in an exclusive shoe store.

Jones had no great difficulty in accomplishing the first two things. It was largely a matter of application—seeing that they were done. And Jones had been concentrating his best efforts on styles and service long before he decided upon using Smith as a pacemaker, although, previously, people had not seemed to place the true value on his efforts along these lines.

How to Get New Customers

But the crux of the matter was really in the third proposition. It was not enough to have desirable merchandise and good service. Those who were already trading with him no doubt appreciated his goods and service, and they would likely remain his customers. But he wanted new customers and of a better class.

These prospective customers did not know about his merchandise and service. They did know about Smith's, or about those of other stores where they were trading. Jones decided it would be necessary to inform them in a way that would attract their attention and be convincing enough to arouse interest.

This point proved puzzling. He could emulate Smith up to this point in his program, but to divert attention from Smith and others he must do something different.

That thought was the keynote to the whole situation. To do something different, to create an individuality for his shoe department.

Jones thought it over carefully.

And the more he thought the more he became conscious of a curious fact—something that had escaped his attention

before. From all external appearances, practically every shoe retailer in town, himself included, was following Smith's methods.

That was really all it amounted to. In the first place, Smith had the lead—a position he had secured in time by good buying, good merchandising methods and efficient store service. Most of his competitors saw only the superficial evidences of his success, such as the physical appearance of his store, his advertising, his window trimming, and so on.

All of Smith's competitors followed him in these things, thereby unconsciously accentuating his leadership and helping him to maintain his position. The whole shoe business of the town reflected Smith's influence. But none of this reflection reduced Smith's lead in the least.

Resolved on Individuality

As the real situation dawned upon him, Jones smiled inwardly at Smith's cleverness, and at the mild stupidity of the others, including himself.

"After this," thought Jones, "I will be myself in the shoe business. I will match my wits against Smith's or anyone else's in the fundamental things that build business, and I will give this department an individuality that will make people notice it, and believe in it."

And Jones did.

He began within. He made his department—physically, at least—a little exclusive shoe store within his main store. We have said that this department had an exclusive entrance. But it was only an entrance. It lacked personality. Jones gave it personality.

He put in a black walnut door with bronze mountings. In the centre of this door—a double door, by the way—in two lines of mounted bronze, Jones set these words: "The Jones department of Standardized Shoes and Shoe Service."

Black walnut tone and polished bronze look good in combination. Have you ever noticed it? Jones' new announcement as to "standardization" caught many a discriminating eye before it and the new door had been there a week—eyes that previously had only seen Smith's store and its goods.

But Jones did not stop at the door. He got into the goods. He reorganized the department and adjusted the stocks. He put in the kind of styles Smith's customers seemed to think they wanted.

Cartons for Exclusive Styles

He had a certain section of the shelving set apart for exclusive styles and had individual cartons made for them. The fronts of these cartons were walnut color, just like the door, and the standardized idea stood out in bronze letters. Little bronze plates were stamped into the soles of each pair. And on the backs of the fitting seats the idea stood out in clearly defined letters. Worked into the floor-mats also, in unobtrusive design, appeared the magic words.

Jones had given his department an individual touch, sure enough, on the inside and in the goods. But he did more than that.

Windows and Ads Exclusive

Jones made his windows exclusive in theme and in execution. He got a window trimmer with a subtle touch to put in windows that said "Quality!" in every appointment. People stopped to look. Smart women paused, looked at the window and then unconsciously looked down at their own daintily shod feet. Jones' idea was taking hold nobly.

Jones also took a new interest in his shoe advertising. He got carefully executed cuts and illustrations. He put real ideas into his copy. He put atmosphere into it. He wrote stimulative introductorys, informative items; he used directive argument. People began to read his ads because they presented a new viewpoint in shoe retailing.

Jones got out booklets to selected lists. Some of the books dealt with shoes, some with shopping ideas, some with human interest editorials, regarding service. The best people in town began to think of Jones when they thought of exclusive footwear.

Smith's business kept right up to the mark. And Jones' business grew in volume and quality. Finally, Jones' store proper was no more notable than Jones' standardized shoe department. And one drew to the other. Then Jones began to grow in earnest.

He is growing yet, because he cannot help it. He gave his shoe department and his shoe service personality. And personality counts. Try it, if you want to find out.

Doing Our Utmost Wins—"Well Done"

Life is too short to be blase about anything one is doing, and it is our bounden duty to do our best that which is set before us.

So, in the high calling of merchantship and salesmanship it devolves upon us to labor to the utmost of our abilities, to increase those abilities as time rolls on—this in order that we may sell a perfect service and that the words "well done" may be written after our names when our earthly duties are ended.

Let each one of us, from the cash clerk upward, so strive that each year shall find an advancement in character, in ability to market a perfect store service, in the world's goods and in the world's high regard as men who know our business, as men who are willing to do it well, possessing a real love for that business and as men who are mighty good people to co-operate with—as broad-minded men and as friends.

This is a big subject, Store Service, and the best thing about it is that no man or group of men can hold it to themselves—it is as free as the air, and the ability to serve is

any merchant's and any salesman's for the mere realization of the great opportunity it offers.

Store service offers the opportunity of overcoming obstacles which otherwise would overwhelm a man, it overcomes lack of large capital when starting and boosting a new business, it overcomes the lack of location in the best business section, lack of window space, lack of interior space and lack of merchandise.

Importance of Trade Paper

Statistics show that advertising in trade papers is fast growing, because manufacturers have come to appreciate the fact that a trade journal or business paper has a select list of readers—men of business who may or may not scan a weekly or monthly general magazine, but who read with deep and vital interest the papers in their line of trade. Advertisers are awakening to the fact that they can advertise in trade journals with a very slight percentage of loss, or, in other words, the business papers come nearer to performing 100 per cent efficiency service than any other kind of advertising. Firms that formerly used magazines with millions of readers find that the efficiency was not 1 per cent. in some cases, while they were paying heavy rates with a waste of 99 per cent.

James Keeley, general manager of the Chicago "Tribune," in a recent address, stated that the steady decline of magazine advertising, especially in the line of nation-wide advertising, is certain for the reason that the magazine does not tell a reader where the article advertised may be found in his home town. He said that this is the principal thing a reader wants to know. The trade papers do not talk to the consuming public, but to the business men who use or resell the article. Trade papers are wielding a wonderful power in business, and the business man who does not pay for and read the best paper at least in his line cannot keep abreast of times.

WHY DO YOU BUCK PROSPERITY?

"It is inconceivable that any merchant or manufacturer should cease—or even curtail—his advertising just when the country is on the threshold of a tremendous double harvest—the *natural* harvest of our own very fair crops, at greatly increased prices, and the *logical* harvest consequent upon the war in Europe.

"It is under such conditions as these that advertising reaches the zenith of its power. The man who listens to the yellow pessimist and sits back to 'wait for things to settle down' is yielding his common sense and enterprise to the baleful influence of idle sentiment and *actually starving the goose that lays the golden egg.*

"We, the very people who will logically profit by the war abroad—and profit immeasurably—are acting, some of us, as if the war were right here among us. We are talking blue things, pinching the pennies, cutting down our advertising and *forcing prosperity to stand back.*

"As a matter of fact this is the very hour when we should rush into print to a greater extent than ever before, because, *unless the earth opens and swallows us up,* there will be greater prosperity in Canada in the near future than ever before in its history. Though this war more or less closely affects every one of us, yet most of us are not actually *in* it. We are not likely to be. The warring world looks to us for its supplies and we cannot keep prosperity down no matter how hard we try. Our advice to Canadian business men to-day, in view of this situation, is conveyed in these words—ADVERTISE NOW AND NEVER LET UP."—Printer's Ink.

News Jottings of Interest

Medicine Hat, Alberta, is looking forward to several new industries. A leading tannery in Eastern Canada has written to Secretary Wilcox of the Board of Trade stating that if they do not get into Alberta territory at present they certainly would later on and that city looked good to them for a location. An American company doing business in the tire and rubber line in the Central West have written that they intend to start a rubber manufacturing plant in Canada and have their eye on Medicine Hat.

A store advertised for a few days in the local papers that on a certain day they would send up a number of hot air balloons in front of the store. To each of these balloons was attached a ticket good for a pair of shoes. To the one who was lucky enough to capture the balloon after it descended, the value mentioned on the ticket was presented on handing the attached ticket in. The publicity attached to the affair was considered very cheap, as, aside from the newspaper advertising, and the cost of the footwear, there was no other expense.

A correspondent for Women's Wear, Paris, says: "Jenny's dresses are very short. On their opening day all of the mannequins wore a new style of shoe which will surely influence the mode with the well dressed woman. This shoe is high, almost like a boot and it fastens at the inner side of the ankle with a lacing which follows a straight line to the top of the boot. These shoes are made of the finest and softest vici kid and fit like gloves. They have the appearance of making the foot look at least two sizes smaller. They are made to measure by a Gulpen bootmaker at 7 rue

St. Roch, for 130 francs. But we expect to see them soon in stock at the Galeries Lafayette for 30 francs.

Seventy-five per cent. of the raw skins that go into leather in Canada and the United States come from abroad, it is estimated. Horse-hides, calf and goat-skins are brought from Russia, and high-grade sheep-skins come from India, through English markets. Already leather prices have been advanced as result of the war. There are sections of this country and South America upon which manufacturers may rely for skins, but supplies from these sources are said to be insufficient. Higher prices for shoes may follow the advances in leather. It is predicted that American packing houses will realize handsome profits because of the scarcity of hides from abroad.

A recent despatch from Vancouver says: "In the local suit of Drinkle vs. Regal Shoe Co. and Messrs. Endacott and Rae, Mr. Justice Macdonald awarded the plaintiff judgment against Mr. Endacott and dismissed it as against all the other defendants. A counterclaim for \$4,000 entered by the Regal Shoe Company against Drinkle was dismissed. The action arose over the sale of the stock of Endacott's shoe store to Mr. Rae. The stock had been originally obtained from the Regal Shoe Company who took a chattel mortgage on the goods and an assignment of book debts as security. The plaintiff attacked the chattel mortgage and the sale. During the progress of the case the attack on the chattel mortgage was abandoned and his lordship found that the sale to Rae was bona fide. He, however, allowed Mr. Drinkle judgment against Endacott for the amount of his claim.

Knowing Where You Stand at the Close of Each Day?

How to Stop Any Leaks in Your Business, and Cut Out the Guess Work—Definite Information as to Backbone of Business Success—Four Basic Principles Upon Which to Work

In one of the small eastern towns there is one of the most progressive retailers in the country. He is so progressive that his sales jumped from \$37,000 to nearly \$100,000 in fourteen months. This was "progressiveness—plus," as every one will admit.

He told me about it one day; told me how he did it. It set me to thinking how other retailers who want to be progressive may profit by his experience. In it are the vital elements of success.

"For eleven years I was a guesser," said he, "I bought by guess, I sold by guess. I guessed at my cost of doing business, at what my price ought to be, at my profits, and guessed where the money that I should have made had disappeared. About each of these things I knew as much, I believe, as the average storekeeper of my class."

His trouble was that his information was neither exact nor specific—the only kind of knowledge on which sound business can be built.

One day he woke up and began to wonder why some stores forged ahead so much more rapidly than others. He asked himself why this store stood still and what he needed to produce results. He adopted a "why" attitude towards every detail of service and every article in his stock.

After a while he decided there were four basic principles upon which to work:

First, to buy nothing he couldn't sell at a profit, either in money or advertising, and to judge every article bought from the customer's viewpoint of values.

Second, to turn his stock just as often as possible.

Third, to give full, exact measure, but no more.

Fourth, to know his costs, what makes them, and to cut them to the lowest point without sacrificing quality or services.

He was up against strong competition, he told me. One store was older and larger and commanded a majority of the generous buyers, while the other was the "new cash store." The latter was the keenest competitor of both. It was skimming the cream of the trade.

Cutting Down the Expenses

An analysis of conditions showed that the only way to keep his customers and gain new ones, was to cut the costs of doing business and pass the economies along to the customer.

It was evident that price, service and values, together with volume of trade, were the factors in his problem. He took each one and studied its effect on all the others.

A question then arose: "What service was absolutely necessary to hold his customers?" which at once suggested another: "What features would they dispense with in exchange for lower prices?"

His customers received everything in the way of service they could ask for. Clerks called every morning to take their orders. Special deliveries of trifling purchases were made many times a day. Charge accounts were the rule—with payments at the customer's convenience. All this service and accommodation cost money and had to be included in his prices. The higher prices encouraged department store trading, although they did not give extra service. Altogether it was a ticklish problem, but he decided to put it to a test.

He first cut out the "extras," but not before he had sent out to all his customers a circular letter telling why and offering reduced prices instead. He had a good argument and it worked well. Nearly all his good customers stayed with him.

After a while he arranged his deliveries so as to have regular trips morning and afternoon. Wagons left the store at the stated hours to cover certain routes, and orders had to be in within prescribed times, else they went over to the next delivery. This caused some inconvenience at first, but when the customers realized the saving resulting from lower prices, they came into line with the new policies of the store.

To effect further savings he put on motor delivery wagons, and prices were again put down on many items. Outsiders saw the advantage of trading with an up-to-date store and came to buy of him.

Certain other economies which he had in mind were also tried out at this time. One was a careful check on stock.

NOTE—Good methods of securing all figures necessary to fill out this report daily are outlined in booklet entitled "Stopping Store Leaks" which may be had free of request. Address: Burroughs Adding Machine Company, Detroit, Michigan.

SIGNED _____

He adopted a simple plan of charging all items received, and made weekly inventories to check the stock on hand against stock received and sold. This was not an infallible check, and a monthly discrepancy was bound to occur. But it increased the efficiency of his clerks by making them more watchful of stock.

"I was groping toward certain vital facts," he explained, "I wanted to know what lines were paying a profit, what that profit was, and what it cost to sell each line. I needed the information about my clerks; how much each man sold; what kind of goods he sold; and how much profit each man made for the store."

This information he dug out of daily reports, sales books and stock inventories. The important thing was to

divide his stock into lines or departments, so that he could compute the selling price and net profit on each. This he did and learned that the most complex problem could be solved if he simply took it to pieces and settled the details one by one.

His daily detailed report was the pulse of the business, and was carefully studied. Any unusual increase or falling off in a department was shown up the day it happened. Usually the change could be traced to some specific cause.

If favorable, this meant the confirmation of some buying or selling or advertising policy or device. It meant the discovery of a new slant in public taste or a new means of interesting buyers.

When a decrease occurred, the information was quite as valuable, since it showed up some inefficiency and called attention to stock which should be moved at once.

For those who wanted credit, he adopted a credit deposit plan. At intervals they would send him a check for an amount convenient to them, and would simply draw against this deposit with each order. In effect, the store was a bank; each order was a check which was honored in goods.

The illustration shows a daily statement by which any retail merchant can know at the end of each day just how his business stands. It embodies a method similar to that of our eastern retailer and several items have been added.

One form is used for each day's business. If properly

Shoe Salesman Goes to Front

George R. Inksater, of Paris, Ont., who is well-known to the shoe trade, has gone to the front. He enlisted at Hamilton in August in the Army Medical Corps, and it is understood his duties are in connection with the field ambulance. Mr. Inksater went to Valcartier and is at present in England at Salisbury Plain. He is a son of J. Inksater, shoe retailer, of Paris, Ont., which business has been estab-

lished in that town for over half a century. Geo. R. Inksater has been associated with his father in the store for ten years, excepting a short period which he spent in the West, in the service of Thos. Ryan & Co., Winnipeg. Last spring he joined the selling staff of the Kaufman Rubber Co. and covered the territory south of Berlin and between Brantford and Windsor. It is expected that Mr. Inksater will acquit himself well at the front.

filled out at the close of each day's business it will give the retailer a record concerning the vital facts about his business and that's what he is looking for. It spreads out on one sheet the important figures of the day's activities and provides the merchant with excellent means of comparison, one day with another. It gives the merchant an opportunity to study and compare one day's business in 1914 with the same day in 1913, with a view to finding out whether his business has increased or decreased.

How the Statement is Divided

This "statement" is divided into eight parts.

The first section is devoted to "Clerks' Sales." The clerks are numbered and the totals of their cash and charge sales for each day are set down, then a grand total of all the clerk's sales is taken.

The second division is used for Department Sales. The great importance of dividing even the small retail store into departments has been proven. From this record the merchant can determine which divisions of merchandise are proving profitable and the sales of which are falling behind. With such information he knows just when to boost a certain class of goods.

The third division of the Daily Statement is used for keeping a record of outstanding accounts. If properly kept the merchant can tell at the end of each day just how much money is owing to him.

The fourth division shows a record of money owed by the merchant. By subtracting the amount paid on invoices from the total amount of invoices received, the retailer has the amount he owes to date.

"Cash Received To-day" is the fifth division in this form. This includes each sale and money received on account.

The sixth division is a space for keeping a complete record of the Bank Account. Every merchant should certainly know how he stands with the bank. It's one of the vital facts of a man's business. A man's stability in business is usually reckoned by his relation with his bank. If this record is kept properly a merchant may know at the end of each day just how much money is available.

The seventh division is given over to a space for figuring the day's net profit.

The eighth space is taken up with a record of some most important facts. For instance, "Special attractions." Suppose a man has been keeping this record for a year or more. He compares the sales on January 2nd, 1911, with those of January 2nd, 1912. He notices that 1912's sales are nearly thirty per cent. more. He looks at the bottom of his record sheet and sees written under "Special Attraction," "Circus in Town." Immediately he knows the reason for the increased sales of 1912 over 1911 for that day.

Some other special information to be kept in this form is a record of window displays, newspaper advertising, special sales, absent or extra employes and the weather.

Suppose Bill Brown, the footwear man, keeps such a record. He notices on September 15th, 1911, his sales are less than those of September 15th, 1912. He looks at the bottom of his sheet made out in 1911 and discovers that it rained all day on September 15th, 1911. He knows immediately the reason for the bad showing that day.

Some merchants seem to prefer to get gray hair by sitting down and worrying about "why they are losing money" instead of digging in like our eastern man did and finding out where the money is going. With a record such as the daily statement constantly before them, there is no need for worry. A merchant can tell at a glance where the leaks in his business are, and put forth some effort to stop them.—E. St. Elmo Lewis, with Burroughs Adding Machine Co.

How Tanners Get Weights and Selections in Hides

An Embargo on Canadian Hides and Skins Would Serve No Good Purpose in Relieving the Situation and Besides It Might Invite Some Rather Awkward Reprisals—Suggestion Not Well Received.

Writing to the *SHOE AND LEATHER JOURNAL*, a shoe manufacturer asked if it would not be possible to overcome the present situation in leather by placing an embargo on all Canadian hides and skins. He suggested that the quantity of hides exported from the Dominion might have a material effect in relieving existing conditions and might conserve a local supply, sufficient in some degree, to meet the present needs of leather manufacturers.

The *SHOE AND LEATHER JOURNAL* has made inquiries from a number of representative leather firms and finds that the suggestion is not one that appeals very strongly to the trade, as they declare an embargo is not necessary and would prove of no material benefit or advantage. One leading concern says at the present time an embargo upon Canadian hides and skins would be of no value to tanners or consumers. Another adds: "We cannot see that there is any necessity in disturbing the present arrangements in reference to raw material. The present conditions appear to be working very satisfactorily and it is a good thing sometimes to 'leave well enough alone.'"

An old-established sole leather firm take an open stand regarding the matter, when they say that conditions change from day to day and that, while they are large exporters of hides, they have no objections to an embargo being placed thereon, providing it is the wish of the Canadian tanners generally. "If England requires a lot of leather from Canada," remarks a member of the firm, "we think that it is going to be hard to secure enough hides to tan to fill the demand. The embargo against American hides, in the States of Michigan and Indiana, is going, to some extent, to make it harder for the Canadian tanners to procure hides and if the hoof and mouth disease spreads, it would be a very serious matter."

How Proposition Would Work Out

An eastern tanner, who makes finished sides, splits and patent leather, writes: "We do not understand why an embargo upon hides should be suggested and think there is no necessity for such a proposal. To be sure, the supply of certain kinds of hides in Canada at certain seasons of the year is rather short of the demand, but we can always go to the United States and get almost anything that we require in the way of weights and selections of the various hides used in the production of upper leather. It seems to us that it would be absurd to place an embargo on hides, and who knows but what the United States might follow suit, and in that event, Canadian tanners would be placed in a very awkward position, owing to the heavy cost of transportation. We cannot afford to bring hides from the extreme ends of Canada, so we, therefore, look for our supplies from the States of Pennsylvania, New York, Ohio, Indiana and Michigan, all of which take a comparatively low freight rate, when compared with such points as Winnipeg, Edmonton, Calgary and Vancouver in the west, and Sherbrooke, St. John and Halifax in the east.

"At the present time we are purchasing in the United States fully seventy-five per cent. of all hides we use. An embargo on hides would certainly be very unfair to the hide dealer, for, in our opinion, fully fifty per cent. of the hides and skins purchased in Canada are consumed by United States tanners.

"Yes, we will go so far as to say that seventy-five per cent. of all hides and seconds produced in the Dominion are

marketed across the border. Now, these hides, which, for many years, have been exported, are available to Canadian tanners, but on account of the variety of hides, it is only natural to suppose that these varieties find their way to the tanners, where they can be used to best advantage. We ourselves, could easily purchase more hides in Canada than we do, providing it were not that we have to specialize in purchasing for the different kinds of leather that we produce. There is no scarcity of hides in Canada in the aggregate, but there is always a shortage of some kinds. When other countries see fit to place an embargo on hides and leather as well, it may then be advisable for the Dominion Government to take this matter into serious consideration."

Leather Situation is Stronger

An old established company having tanneries at several points in Ontario declares: "We beg to say that we do not think an embargo on Canadian hides and skins would help matters very much, especially as most Canadian hides are unsuitable for many lines of leather, as for instance heavy sole leather and heavy harness leather. Nearly all hemlock sole leather (which comprises 75 per cent., or perhaps more, of the Canadian output of sole leather), is produced mostly from dry South American hides. Very few Canadian hides are used in sole leather, oak sole leather being mostly tanned from Chicago packer hides and other similar imported hides. The same applies largely to harness leather. Canadian hides are mostly adapted for upper leather. Possibly an embargo thereon would help the upper leather situation somewhat, but we doubt even this, as at present many large upper leather tanners are also importing their hides, selected of the most satisfactory weights for their special purposes. There is, of course, still much trouble in bringing in hides from abroad, owing to the spasmodic changes and advances in the cost of war risks and the uncertainty of sterling exchange, although the situation in connection with the latter has much improved since August. The demand for leather is steadily increasing, and especially so for export, as also for Canadian army work. The general trade of Canada is also improving and many of the factories are now again quite busy. Altogether the leather situation is much stronger than shoe manufacturers seem to realize."

An Injustice to the Tanner

For the most part Montreal leather men are not at all in favor of an embargo being put on Canadian hides and skins. Reasons aplenty are presented by them to show why they feel that the suggestion is not a wise one.

One of the large Montreal concerns said: "No, we are not at all in favor of an embargo on Canadian leather, and feel that under present conditions, the act would be one of injustice to the Canadian tanner. Business in Canada at the present time is bad enough, and we feel that the tanner is already tied down so much that he is about as badly off as it is possible for him to be and still exist. Practically all the calf, kid and upper side leathers are bought outside of Canada anyway, and the principal varieties which are sold in quantity to the United States are sole and harness leather. During the past few months we have been sitting back doing next to nothing. The Canadian trade is purchasing very little, and the putting of an embargo on the product simply means the cutting off of a large portion of our market."

The head of another wholesale leather house says: "I

am not particularly impressed with the suggestion that an embargo be put on all Canadian hides by the government. In the first place, I don't believe the trade is in a condition to stand the strain that would be the natural result. Supposing the municipal government, if they had the power to do so, were to say to Montreal tanners, 'You must not sell any leather outside the Montreal market,' or even suppose they were to tell us, 'You must confine your sales to the Province of Quebec,' do you think it would be justice to us? Certainly not. I maintain the Canadian tanner is a free agent, and if he cannot market his product in this country, he is at liberty to dispose of it elsewhere. It cannot be said that the tanner is making money out of the war. In fact, the opposite is the case, and with a few exceptions, Canadian tanners are much worse off now than they were before the war started."

New View of the Situation

Another hide dealer opens up a new phase of the question in his comments. "Speaking as a tanner," he states, "I am not in favor of an embargo being put on all the different Canadian hides and skins, but talking from the standpoint of the consumer, I will admit, I feel that in the end, the country in general will benefit by such a measure. Under present conditions there are a large number of skins going out of Canada, the majority of them being purchased by American buyers. This results in a constantly diminishing number of cattle in Canada. Many people do not realize to what an extent this will affect our future supply of home

leather, but I have gone into the subject to some extent, being very much interested in it, and I have come to realize that while conditions in the leather market are bad enough now, they will be very much worse in time to come, unless some remedy is applied. When business picks up in Canada, I believe there will be a tremendous boom, but there is a large danger of our not having leather to supply the demands when that time comes. Speaking from a tanner's viewpoint though, and particularly from the standpoint of the tanner who markets part of his product outside of this country, I would feel sore were the government to go so far as to put an embargo on hides. Granting that the suggestion of doing so is a good one, the tanner is having a hard enough time now to keep afloat without any more obstacles being out in his path. The time was ripe for a move of this kind two or three years ago, but as for choosing the present as the moment for its being put into effect, it is like hitting a man when he is down. The tanner is bearing his share of the hard times we are all feeling, but he cannot be expected to calmly accept such a proposition as the one we are discussing."

Too Much Asked of Tanner

Other Montreal tanners give their views, and almost without exception they taboo the embargo suggestion. While several agree that certain benefits would result inside of a couple of years, all agree that too much would be asked of the tanner, and that it would be a case of trying to lay the whole burden on his shoulders. A Lemoine street leather man, while stating that the trade would be benefited in some ways, went on to say, "While there may be some good reasons why an embargo should be put on Canadian hides and skins, I don't think they are strong enough to cause any immediate action on the subject, and while some people might be convinced in favor of the embargo scheme, these same people are only hearing one side of the question, and the other side brings out some reasons against such a so-called 'protective measure.' For instance, when it comes down to a question of justice, and even when it is argued that the ultimate result would be beneficial, do you think that the question of forcing people to buy 'Made-in-Canada' goods is not just as important and pressing a movement as is the placing of an embargo on Canadian hides and skins? There is no doubt but that were the public to purchase only 'Made-in-Canada' products the country would benefit tremendously. Yet, would it be strict justice to make it prohibitive for the Canadian retailer to sell goods not made in this country? If such a move were made, you would hear an awful holler from all quarters.

"This, of course, is getting away from the subject, but nevertheless, the same arguments apply to a large extent. Canada is in need of as much ready money as she can get at the present time, and when an American buyer makes a purchase in this country, this means that the money he pays for his leather becomes Canadian coin, so to speak."

The general manager of a big sole leather firm remarks: "I can see nothing in the present situation to justify such action. Any class of hides which are produced in Canada to-day are also produced in United States and are obtainable there to-day by Canadian tanners in sufficient quantities to keep their plants in operation to capacity on such class of hides. As hides from all countries enter Canada duty free, there would seem to be no reason why Canadian tanners should not be willing to compete in open market for their supply of hides. Any efforts at the present time to place embargo on Canadian hides would seem to us improper. We would consider that producers of such hides would be quite justified in strongly objecting to any such action being taken."

EVERY ISSUE IS GOOD

Enclosed please find post office order for one like the "Shoe and Leather Journal" very much Every issue is good.

Yours truly,
Dryden, Ont. *CLARK & CO.*

HAS RECEIVED MUCH HELP

Enclosed find one dollar subscription for your valuable paper. We have obtained a great many helps also through the "Shoe and Leather Journal" in carrying on our business.

Yours truly,
Tilbury, Ont. *BEDARD BROS.*

GIVES HIM MANY POINTERS

Enclosed please find one dollar for which continue sending me the "Shoe and Leather Journal." I am very well pleased with your paper and appreciate it very much in my business. It gives me all the new ideas in the trade and is much valued.

Yours truly,
Port Arthur, Ont. *(Sgd.) WM. G. TAPP.*

I am enclosing post office order for one dollar for the "Shoe and Leather Journal," which I am always looking forward to receive. I read and learn the good news and views of the trade. I might say, since taking over the business of Jas. V. Russell, and entering the shoe trade, I have learned a great deal through perusing your paper, and find every number interesting and profitable.

Sincerely yours,
St. John, N.B. *P. M. LEVINE.*

STRAY SHOTS FROM "SOLOMON."

Fool Talk

It takes a fire, a railroad accident or war to bring out the fool that is in most of us. He is a wise bird who can keep his head when the shot is flying, and it takes more horse sense to keep steady a safe distance from the firing line than on it. These days when preachers, editors, and even statesmen get up in the air, it is little wonder that spouters, scribblers and ordinary folk can't keep their feet on the earth. This wanting to kill everything German from the Kaiser to Pilsener Lager, makes us wonder if we are not as much barbarians as some of "Huns" and "Goths" we talk about. There are people who, because of this war, would have us change the names of places like Berlin and Hamburg to Buttontown and Porkton, and who are making it their religious duty to give the cold shoulder to concerns that are unfortunate enough just now to have names with teutonic combinations of vowels and consonants. This kind of thing is enough to make a sawhorse sick. It reminds one of the Irishman who rushed out and hit the first Jew he met, on hearing for the first time that the Jews crucified the Saviour two thousand years ago.

"Barbarians"

The man who would maim or kill another in business is as bad as the "barbarian" who mutilates or tortures a foe on the field of battle. A shoe traveler who has the misfortune to look like a German, but who has not a drop of teuton blood in his veins, was kept busy recently squaring himself with French customers in Quebec, to whom a competitor dropped the hint that he was "Dutch." There are some German citizens of this country who are not only as true to the British crown as any Canadians with English or French names, but who have done quite as much for the upbuilding of this country, who have been made to suffer by cads like the above who have gone about whispering suspicions as to their loyalty. It is up to the decent business men of this country to put this sort of thing down. If a man is guilty of disloyalty lock him up with the reservists and suspects that are being sequestered by the Government, but don't let us forget that the Schwartzenkops, Souvaloffs, and others who have shown themselves good Canadians, should be given the same British fair play as the Smiths and Browns.

"Tolerance"

You can't blame a German-Canadian for a slight leaning at heart towards his native land or that of his father. We would hardly expect an Englishman in a strange country to be enthusiastic against Britain, even when realizing the latter represented a cause he could not altogether endorse. Blood is thicker than water and we are apt to argue even in the face of facts, when the life and death of those of our own family are concerned. Let us not forget this in our desire to hang every German who does not see things as we do. This spirit of fairness and tolerance need not interfere with our determination to fight this war against military despotism to a finish. We do not need to become "barbarians" in order to clear the earth of the pernicious doctrine, that might is right. But as we wield the sword

with all the might of conscious right, let our hearts be full of charity for all who for the time being are led to fly in the face of fate.

No Apologies

When a man keeps calling on the Almighty to witness the justice of his cause and help him through, you may be sure the devil is around the corner rubbing his nose and chuckling. Special pleading is not necessary to bolster up a good cause, and a man who feels he is right does not waste time running around amongst his neighbors to get them to pat him on the back. There are enough people in the world who see straight to give the fellow or nation a fair show when either wants to do the right thing. Britain has no apologies nor explanations to make in this war. "He may run that readeth" if he is anxious at all to satisfy his mind as to the cause of the row. It is one of those times when debate is off and action is on. Britain simply had to "fall in." Had she declined to back her words with action in the case of Belgium, she would never have been able to hold up her head. Had she failed to stand in the way of German aggression she would have followed France and Russia in their undoubted humiliation. It was a matter simply of self-protection.

That Nose

A young Hebrew made up his mind the other day to get rid of the seeming disability under which his German name placed him, and changed it from Rosenthal to Rose-dale, the words meaning exactly the same. His old father, with some disgust asked him, "Why for Jakey you shange dot name?" "Ach Vater!" was the reply "I got sick losing some bizness from dot sheeny name." "But Jakey," said the father, "vot you going to do mit dot nose?" If some men could change their hearts as easily as they change their names, war would cease in business as well as amongst nations. This calling of names and hitting below the belt is what makes business often what war is—hell let loose. There are men reading these words that within the past month have stuck their tongues into their neighbor's reputation, if they haven't put a knife into his back.

No Half Way

A word in season to our German-Canadian friends. We are in this fight as a part of the British Empire, not as a matter of choice but from the very nature of the relationship. We are not helping Great Britain, we are Great Britain in this conflict as much as England, Scotland or Ireland. Citizens of Canada, as citizens of the Empire, are fighting not only for a principle but for the very existence of the Empire. It is no time for personal leanings or sympathies. The man who is not with us is against us, and, if he be honest, should declare himself and allow himself to be locked up with those who are recognized enemies of the state. There can be no temporizing with disloyalty, and the government and people cannot be blamed if they visit promptly and vigorously upon those who give forth an uncertain sound at such a critical time as this, its inevitable punishment. It is a case for the "iron hand."

SHOE NEWS IN PARAGRAPH

P. Lamy, shoe dealer, of Montreal, has made an assignment.

The assets of the Waldorf Shoe Co., Montreal, have been sold.

The Canadian Leather Works, Montreal, have recently registered.

A new shoe store has been opened by Mr. Glass at Craik, Sask.

The assets of Ed. Lemieux, shoe dealer, of Montreal, have been sold.

R. B. Griffith, of Hamilton, was in Montreal the latter part of the past week.

C. H. Frost, of Frost & McDonald, Dundas, Ont., was in Montreal last week.

E. T. Keene has accepted a position as foreman with the James Muir Co., Maisonneuve.

The walls of the new Walk-over shoe store, Yonge street Toronto, are completed.

The Western Shoe Repairing Co. have opened a shoe repairing shop in Weyburn, Sask.

Several machinery parts have been installed in the factory of Theo. Mayer, Montreal.

Boet and Shoe Specialties, Limited, of Toronto, have compromised at 60c. on the dollar.

A. L. Dupont, of Dupont & Frere, Maisonneuve, was recently in Boston and New York.

V. F. Donovan, of E. T. Wright & Co., St. Thomas, Ont., spent a few days in Toronto last week.

J. Adams, of the Adams Shoe Co., London, was in Toronto recently, calling upon the trade.

A shoe repair and harness business has been established in Port Lambton, Ont., by Wm. Reynolds.

The shoe stock of Chas. Knapp, of Grand Valley, has been purchased by John Way, of Stratford.

James Valentine, of Valentine & Martin, Waterloo, Ont., was in Toronto last week on business.

L. Demarest, representing La Duchesse Shoe Co., Montreal, was in Toronto last week on business.

C. Musselman, who has conducted a shoe business in Galt, Ont., for the past six years has sold out.

R. M. Beal, of the R. M. Beal Leather Co., Lindsay, who is mayor of that town, was in Toronto last week.

E. R. McBride, of the J. J. Haines Shoe House, Belleville, was a visitor last week in Montreal factories.

The Regal Shoe Co., Whitman, Mass., have established in each of their fifty stores an expert foot specialist.

The Simpson Folding Case and Trunk Co., of London, was damaged to the extent of \$8,000 by fire recently.

F. H. Rogers, shoe buyer, of Robt. Simpson Co., Limited, Toronto, was in Montreal and Quebec recently.

Frank Miles has secured the boot and shoe repair business in Lethbridge, formerly carried on by E. S. Pulley.

A. Judelson, 661 Barton street east, Hamilton, dealer in shoes and clothing, has assigned to McLeod Tew & Co.

G. M. Neel, of E. P. Reed & Co., shoe manufacturers, Rochester, was in Toronto recently on a business visit.

Geo. Stefanos, 182 Queen street west, Toronto, is installing a model "N" 16-foot Goodyear shoe repair outfit.

The Klassy Boot Shop, Montreal, has dissolved. Harry Hausher is continuing the business under the same name.

E. T. Jacobi, shoe store supplies, Toronto, has returned from spending a week in New York and Boston on business.

P. A. Trudeau, proprietor of the Ideal Boot and Shoe Store, Waterloo, Que., is retiring from the shoe business,

having rented his store. He is now conducting a clearing sale.

The T. Sisman Shoe Co., of Aurora, report business very active, their factory running to capacity with a full staff.

H. D. Deshon, of the A. C. Lawrence Leather Co., Boston, Mass., was in Toronto last week calling upon the trade.

In a fire which broke out recently in Amherst, N.S., Chipman's Cash Shoe Store suffered considerable loss from water.

B. W. S. Martin, sales manager of the John Ritchie Co., Quebec, was in Hamilton, Toronto and London last week on business.

The stock of Book Bros., of Beamsville, which was sold recently in Toronto at 61 cents on the dollar, was purchased by the firm.

C. O. Shaw, of Huntsville, Ont., general manager of the Anglo-Canadian Leather Co., was in Toronto last week on business.

C. E. Lepine, formerly with Tourigny & Marois, Quebec, has accepted a position with Dupont & Frere, Maisonneuve.

Chas. A. Blachford, of the Blachford Shoe Manufacturing Co., Toronto, has returned from a business trip to Montreal and Ottawa.

H. Cochrane has been appointed foreman of the bottom stock department of Ames-Holden-McCready, Limited, No. 1 factory, Montreal.

W. F. Gray & Co., Owen Sound, Ont., have disposed of their goods and ready-to-wear business and will continue the shoe line only.

The U. S. M. Co. have received an order for complete machinery installations in the new factory of Clark Bros., St. Stephen, N.B.

R. L. Savage, representing Jas. Muir Manufacturing Co., Maisonneuve, Que., was in Toronto recently showing a fine range of samples.

H. A. Burke has been appointed to the position of treeing room foreman of No. 1 factory, Ames-Holden-McCready, Limited, Montreal.

Oscar Rumpel, felt shoe manufacturer, Berlin, is running to capacity and has a full staff. He reports that business is very good in his line.

The Craft Fashion Shoe Store is the name of a new establishment opened in Montreal at 130 St. Catherine street west, by D. Bernstein.

L. F. Jackson, Toronto, has returned from an extended business trip throughout the Maritime Provinces in the interests of the Brandon Shoe Co.

Chas. Palmer, of the John Palmer Co., Limited, manufacturers of larrigans, Fredericton, N.B., was in Toronto and other cities last week on business.

L. W. Bishop, of the L. W. Bishop Co., manufacturers of shoe ornaments and supplies, Pawtucket, R.I., was in Montreal and other shoe centres last week.

L. M. Stock, Western Canada representative of the Walker, Parker & Co., Toronto, has returned from an extended business trip to the coast.

George Thacker has opened a fine new shoe store in Renfrew, Ont., which he calls "The Shoe Store of Quality." He has a bright, attractive establishment.

The assets of W. A. Moyer, shoe retailer, of Winnipeg, have been sold by the assignees, Newton & Nicholson. The stock inventoried \$3,066 and the fixtures \$1,228.

The Rubber Club of America, the national organization of rubber manufacturers and crude rubber importers, has voted by a large majority to abandon its sixteenth annual banquet, which was to have been held at the Waldorf-Astoria

New York, and instead to make a contribution for the relief of the suffering due to the war in Europe.

R. G. Long, of R. G. Long & Co., Toronto, and W. H. Gurney, of the Gurney Glove Works, Wingham, Ont., have been recent callers at Montreal leather houses.

A large shoe manufacturing concern of Montreal has been asked by the French Government, to submit bids on shoes, patterned after those used by the French army.

E. Mason has purchased the shoe repairing business of Thos. Thornton, Killarney, Man., and has made several alterations to the shop, making it one of the most up-to-date in the West.

The revised returns show that the contributions to the National Patriotic Fund from the Merchants Rubber Co. amounted to \$2,053.55. This is indeed a very gratifying showing.

Walter Yates, who returned some time ago from an extended trip to the West, has joined the warehouse staff of McLaren & Dallas, Toronto, of which he was a former member.

F. Brouillard, formerly with Ames-Holden-McCready, Limited, Montreal, has accepted a position as foreman of the Goodyear making department of the Jas. Muir Co. factory Maisonneuve.

The United Shoe Machinery Co. has received an order for the installation of a complete plant for the Cobourg Felt Co., Cobourg, and the machines will shortly be placed in position.

Rubber shares are better on expectations that a large supply of boots made partly of rubber would be manufactured for the troops for winter campaigning, says a despatch from London, England.

A new shoe store has been opened in Truro, N.S., in the stand recently occupied by the A. A. Durkee Shoe Co. The company will be known as the Ross Shoe Co., Limited. J. S. Gillespie is the manager.

J. Dawson, recently with Ames-Holden-McCready, Limited, Montreal, has been appointed foreman of the finishing and treeing department in the factory of Jas. Muir Co., Maisonneuve.

George McQuay, of the McQuay Tanning Co., Owen Sound, Ont., was in Toronto calling upon the trade last week. He reports that they are very busy with orders for leather in the harness and collar line.

B. W. Moore, formerly of the B. W. Moore Co., Limited, Petrolia, has taken a position with Blachford, Davies & Co., wholesale shoes, Toronto, and is now covering northern Ontario in the interests of that firm.

Among the prominent shoe manufacturers in Ottawa and Montreal during the past week was C. J. Fitzgerald, president of the Cook-Fitzgerald Co., of London, Ont., who secured some nice Army business for his firm.

C. A. Brouillard has resigned his position as superintendent of Ames-Holden-McCready, Limited, Montreal, No. 1 factory, and takes up a like engagement with the James Muir Co., Maisonneuve.

C. J. Miller, of Orillia, Ont., was in Toronto recently on business and reports that owing to the demand for harness and saddlery leather, due to the recent large contracts awarded by the government, his firm is very busy.

At a recent "Smoker" of the American Club in Montreal, an interesting address was delivered by F. W. Knowlton, general manager of the United Shoe Machinery Co., of Canada, who spoke on "The History of Shoemaking."

A motion was made last week before the Supreme Court at Halifax, N.S., Mr. Justice Graham presiding, for an order for the winding up of the A. A. Durkee Co., Limited, shoe manufacturers of Truro, N.S. The motion was granted. The factory made welts, standard screw

and McKays, and had an output of about 300 pairs daily. A. A. Durkee, buyer and superintendent, some time ago enlisted for the war and is now at the front.

The Grosch Felt Shoe Co., of Milverton, are sending out to their patrons and friends a handsome calendar for 1915. The illustration is a decidedly attractive one, showing two ball teams in a strenuous struggle on the diamond.

Henry Muir, who up to recently has been connected with the James Muir Co., Maisonneuve, has accepted a position with the Alberta Shoe Mfg. Co. He now has charge of the packing, shipping and supply departments.

The Walpole Rubber Company, Granby, Que., are at present running their plant twenty-four hours a day. They are engaged on a Government contract to furnish ten thousand ground sheets or rubber blankets for the British army.

The short dresses have brought out a new shoe in Paris and will no doubt do something of the kind here. It is high, almost like a boot, and fastens at the inner side of the ankle with a lacing which follows a straight line to the top of the boot.

Berlin, which is the greatest shoe and leather centre in Ontario, has contributed \$97,000 to the Canadian Patriotic Fund. To have raised this sum for a patriotic purpose in a city of 19,000 population is no small thing. It is an average of over \$5 per head. The mechanics,

HE IS ALWAYS ON THE JOB

James C. Bryant, who, for the past nine years, has been with F. J. Weston & Sons, Toronto, as city salesman, has joined the staff of the Kaufman Rubber Co., and will be attached to the Toronto office, covering the city and immediate vicinity. Mr. Bryant is widely known to the trade, among whom he has many friends. He was born in Downend, Gloucestershire, a suburb of the city of Bristol, and

joined the staff of Messrs. Lindren & Co., Limited, of Bristol, one of the largest shoe and leather findings houses in Great Britain. He held various positions in their warehouse for nine years and gained a thorough knowledge of the shoe trade generally, but, looking for wider things, he decided to come to Canada, and left their employ in August, 1905. Since then he has been in the service of Messrs. Weston. Mr. Bryant is energetic, thorough and capable, and is always on the job.

clerks and general public contributed \$27,166 showing that the response on the part of the citizens was widespread. Berlin may well congratulate itself on the outcome of its effort.

Mrs. Joseph McCully, who recently sold her shoe business in Elora, Ont., to Mitchell Fasken, has retained the agency of the Crowe Loose Nailer which was handled by her late husband, and has several of these machines in stock.

John Melrose and Giles McKeague have been appointed city travelers for F. J. Weston & Sons, wholesale shoes, Toronto, the former covering the eastern part of the city and the latter the western. Mr. McKeague has been identified with the firm for some time.

W. C. Allan, for several years manager of the Quebec Shoe Store, Winnipeg, has joined the staff of the Yale Shoe Store, 321 Portage avenue. Mr. Allan has been associated with the shoe business in the Prairie Capital for some sixteen years, and has made many friends there.

A. Kent and D. M. Mitchell, the Patriotic Fund collectors for Denison avenue and the section south of the river, in Granby, Que., made their returns, increasing the fund by the substantial sum of \$1,130.40. Of this amount \$164.40 was contributed by the employes of the Miner Rubber Co.

The Owl Shoe Store, Toronto, of which Ed. Cook is proprietor, is a leader in the line of fetchy window cards, which are changed each week. Some of the wording is particularly happy. One card during the past week read "Walk in Please," and next to it was another, "Walk out Pleased."

A very attractive window was recently installed by William Wright, shoe dealer, Newmarket. Three miniature cannon were placed in the window and above these warlike objects floated an aeroplane. The martial setting attracted a good deal of attention, and several neat samples of fall styles were on view.

W. F. Muirhead & Co., of Fernie, have purchased the shoe business of W. E. Tait, in Kelowna. The store in Kelowna was opened by W. E. Tait nearly two years ago, and is known as the City Shoe Store. Messrs. Tait & Co., have for some years operated an exclusive shoe business in Kamloops, B.C.

Lady Beck, of London, has received a magnificent thoroughbred mare from the Grosch Felt Shoe Co., of Milverton, Ont., where there are many Germans, as a gift to the Patriotic and Red Cross funds. London horsemen have arranged to auction off the animal and it is expected a large sum will be secured in this way.

It is figured that more than 1,000,000 pairs of shoes, with soles of rubber, fibre, felt or other substitutes for the familiar sole leather, will be made by Lynn manufacturers for next year's trade. Nearly every manufacturer in Lynn has used substitutes for familiar sole leather in his shoes for this year, and in most cases has found the substitutes satisfactory. One leading manufacturer of Lynn says that

he has had this year returned to him few shoes with substitutes for sole leather. He expects to use more substitutes for leather shoes next year than ever. The substitutes for leather are now used in all the grades of shoes that retail at \$7 and \$8 a pair, down to the popular style shoes that retail at \$2.50 a pair. They were originally introduced for athletic shoes, but have proven quite satisfactory for all kinds. Some of the Lynn manufacturers, who are using substitutes wonder what effect this will have, if any, on the sole leather market.

P. R. Corson, of Toronto, a veteran in the traveling ranks, is now covering Quebec and the Maritime Provinces for the Regal Shoe Co. He is the father of C. S. Corson, who has been selling Regal shoes since 1907 and will continue to look after Ontario and Western Canada. He is now on a selling trip to the Prairie Provinces.

Fred. Marsh, of the Wm. A. Marsh Co., Quebec, was in Toronto, Hamilton and London, last week on a business trip. He is a son of the late W. A. Marsh and is now president of the Wm. A. Marsh Co. His brother, David Marsh, who has been residing in Winnipeg, is removing to Quebec, where he will be associated with the management.

Owing to the temporary shutting down of the Fraser River Tannery, the Canadian plant of the Chicago Tanning Co., of Chicago, the distributing branch of the Chicago Tanning Co., located in the Beardmore Building, Montreal, is being closed. Geo. P. Balfre has been manager of the Canadian office since it was first opened.

E. F. Leonard, formerly superintendent with the Slater Shoe Co., Montreal, has resigned his position as superintendent of the Newfoundland Boot & Shoe Mfg. Co., Limited, St. Johns. Mr. Leonard reports the shoe business very dull in Newfoundland on account of the war. He states that a good many shoe workers have volunteered and gone to the front.

John D. Hawthorne, city traveler for D. D. Hawthorne & Co., who has been laid up for some months, owing to an attack of appendicitis, is able to be around again and is being warmly greeted by his many friends. Mr. David Bain, who has been looking after Mr. Hawthorne's work during his illness, will continue to assist him in attending to the Toronto city trade of the firm.

Montreal shoe manufacturers state that conditions in the trade during the past two weeks have improved wonderfully and the majority of factories are now busier. Orders have been coming in at a fast rate, and where deliveries are usually called for the early part of February, many wholesalers state they have booked large orders to be shipped early in December.

H. G. Greene, son of R. H. Greene, secretary and manager of the footwear department of Gutta Percha and Rubber Limited, Toronto, who has been associated with his father as assistant sales manager for the past two years, has gone to Montreal, where he will take charge of the footwear branch in the company's branch in that city. Many friends in the trade wish him every success in his new position.

The Cook-Fitzgerald Co., of London, have just completed and shipped to one of the largest retailers of men's fine shoes in Italy, forty samples attracted much attention for the week they were on exhibition at the company's plant, corner of Richmond and Bathurst streets, London. Samples of outing shoes have also been sent recently by this firm to the John Wannamaker Co., of New York.

Henry D. Rae's Pioneer Shoe House at 104 Cordova street, Vancouver, is being vacated. Mr. Rae has leased a fine large store, No. 21 Hastings street east, where he will remove as soon as the necessary alterations are completed. He will concentrate all his interests there, and in addition to

PATENT COLONIAL, GREY SUEDE QUARTER, LEATHER LOUIS HEEL, WITH SQUARE TOP PIECE—BY SMARDON SHOE CO.

closing the Cordova street branch, will transfer his business at No. 23 Hastings street, to his new establishment.

The Brandon Shoe Company, of Brantford, report business as being brisk, and orders for spring as coming in very satisfactorily. The factory is now running to capacity, and Mr. Brandon says that "the 21 days' service" which has been inaugurated for some time, whereby retailers can receive any shoes ordered within three weeks, is working out splendidly and is being taken advantage of by many.

W. J. Heaven, liquidator of the Williams Shoe Co., Limited, Brampton, has sent out a statement to the effect that he has secured sufficient of the assets to enable him to pay a first dividend of ten cents on the dollar. The liability of the bank and practically all the preferred claims have been met. It is expected that further dividends will be declared later, when all the present outstanding accounts have been collected.

Ed. and Clifford Weston, sons of Fred. W. Weston, president of the Weston Shoe Co., Campbellford, Ont., have joined C Company, 40th Regiment, and will be among the second contingent leaving Canada. Ed. Weston, who had charge of the leather department in the factory, and is very popular with the employes, was presented with an appreciative address, accompanied by a silver wrist watch and fountain pen, suitably engraved.

Fredericton will ship 630 pairs of boots and shoepacks to the Belgian Relief Fund. The footwear will be purchased from the Hartt Boot and Shoe Manufacturing Co., John Palmer Co., Limited, and the Palmer-McLellan Shoe pack Co., who will receive as nearly an equal share as possible. The goods have to be finished within ten days. All the footwear was purchased at cost price, there being no overhead charges of any kind.

The new shoe store being erected by John Brotherton, 578-580 Yonge street, Toronto, is rapidly nearing completion. The store is 90 feet deep by 26 wide and has all the latest appointments and facilities. Mr. Brotherton has already moved his sporting goods into his new business home and expects to have his stock of footwear transferred from his present stand at 550 Yonge street to his new and enlarged quarters in a couple of weeks.

The "Miner Monitor" is a new monthly publication issued on the fifteenth of each month by the Miner Rubber Co., which is being sent out to all present and prospective customers. The Monitor is printed on coated paper and contains illustrations and descriptive matter on the various lines manufactured by the company. Many other interesting announcements relating to the goods of the firm are also given, the names of the selling agencies of the company, etc.

Fire broke out in the factory of the C.N.W. Shoe Co., London, Ont., on October 29th and did much damage to the building and stock of leather, while the shoes in process of manufacture were injured by water and smoke. The blaze started just under the cutting room and the roof was destroyed. No great harm was done to the machinery. The company have secured new quarters and will remove at once. It is expected that the firm will be manufacturing again in a couple of weeks. They make women's welts.

A. L. Johnson, vice-president and western director of the Ames-Holden-McCready Co., Winnipeg, in a recent interview, said, "The demand for boots and shoes fell off sharply towards the close of last year. One of the causes of this decline is found in the fact that in November and December the weather was very mild, the winter being an open one. In the early months of the present year the tightness in money was keenly felt and sales continued light during the spring and early summer. There was no marked revival until the harvest was assured. At the present time business continues dull in southern Alberta and southwestern

Saskatchewan, owing to the failure of crops there. In other parts of the country there is a good demand with prospects for continuance. In the large cities business has been quiet. There has been a large amount of unemployment, and buyers have been forced to strict economy. In the country the conditions in the retail trade are better. On the whole the position is good in Western Canada and there will naturally be an increased demand as the cold weather comes on."

A number of shoe retailers and others have received from the commission appointed to administer the provisions of the Ontario Workmen's Compensation Act, certain blank forms to be filled in regarding the number of hands employed, wages, etc. As it was distinctly stipulated that the retail merchants are exempt from this Act, any dealer who has received such a form should pay no attention whatever to it, but forward it to the secretary of the Retail Merchants' Association, Toronto.

Miss Belle Greig, who has for a number of years been invoice clerk in the wholesale shoe house of McLaren & Dallas, Toronto, was united in marriage on October 14th, to J. H. Burnett, of Toronto, the ceremony being performed by Rev. J. D. Morrow. The lady members of the staff of McLaren & Dallas tendered Miss Greig "a shower," while the male members presented her with a handsome cut glass water set. Mr. and Mrs. Burnett have taken up their residence at 692 Brock avenue, Toronto.

Ralph W. Ashcroft, advertising manager of the Canadian Consolidated Rubber Company, has been elected presi-

IMPORTANT CHANGES ON STAFF

Owing to the vacancy created in the executive of Ames-Holden-McCready, Limited, Montreal, through the death of Fleetwood H. Ward, W.S. Louson, who up to the present has occupied the post of sales manager for the company has been appointed assistant to the president, D. Lorne McGib-

ALEX R. ANGUS, MONTREAL

bon, Alex R. Angus, who assisted Mr. Louson in the sales department, will have full charge of it from now on. While Mr. Angus is a young man, he has had plenty of experience as he has been some years with Ames-Holden-McCready, Limited, and formerly with the old Ames-Holden Co. He is certain to make a worthy successor to Mr. Louson, who will in the future devote more of his time to executive work.

dent of the Montreal Press and Advertising Club, succeeding H. R. Charlton. It is expected, under the guidance of Mr. Ashcroft, that the membership and usefulness of the organization will greatly increase.

J. Goodman, shoe dealer of Winnipeg, has assigned to C. H. Newton.

Mr. Storey of Storey & Campbell, Vancouver, B.C., was in Toronto recently on business.

E. F. Hutchings, of the Great West Saddlery Co., Winnipeg, was in Ottawa and Toronto recently on business.

Valentine & Martin, shoe manufacturers, Waterloo, Ont., are rushed with orders and their factory is working nights. They have filled a big contract for Army boots.

Wickett & Craig, Limited, leather factory, Toronto, are working each night until nine o'clock and on Saturday afternoons to fill their orders. They are now turning out 2,300 sides a week.

Nicholas Cotter, shoemaker, of Barrie, has given his \$3,000 home to the Children's Aid Society of that town. It is to be named after his daughter and known as the Alice May Cotter Shelter.

A. R. Clarke & Co., Toronto, have received a large order from the War Office, London, Eng., for a supply of sheep-lined coats for the British troops. The company are also busy on patent leather for Canadian firms, turning out 3,500 pieces each week.

The members of McLaren family are soldiers from the ground up. In the second Canadian contingent, Lt.-Col. John I. McLaren of the 91st Regiment, Hamilton, will have command of a regiment, and among the members will be Lieut. Wm. McLaren, Hamilton, and Lieut. John McLaren of the Queen's Own, Toronto. Lt.-Col. McLaren is a brother and the other two officers mentioned are sons of J. A. McLaren, of the wholesale shoe firm of McLaren & Dallas, Toronto.

E. W. O'Dell, general organizer for the Boot and Shoe Workers' Union, leaves next week to attend the American Federation of Labor Convention in Philadelphia. He reports that about thirty thousand pairs of Army shoes are now being made in the factories of Ontario, some plants having been granted permission to work on Sunday in order to have deliveries made within the time specified. Several orders have been placed by the British Government with plants in the United States. It is expected that further orders for shoes will be awarded in Ontario at an early date.

The general condition of the shoe trade has improved somewhat during the past few weeks. There is a much better feeling in all ranks. While business is not as good as last season, still a very fair trade is being done, except in three or four cities of Ontario, where conditions are reported to be decidedly quiet, owing to a number of large industrial plants that have been shut down. Jobbers report that buying is being done on a more conservative basis, dealers proceeding cautiously, but a very good spirit prevails among the trade and all are looking forward, with the advent of cold, damp weather, to a pretty good season's business. Collections are reported as only fair.

The other night a stranger with a new pair of shoes walked into I. L. Smith's livery barn, in Ridgetown, Ont., and asked for a pair of laces, making the excuse that he had lost a pair. Mr. Smith thought it rather strange, but gave the man a pair from a stock he keeps for sewing up buggy curtains. On reaching his store the next morning, C. A. Dunkley, shoe merchant, Ridgetown, discovered that the window at the rear had been forced and four pairs of shoes, two pairs of rubbers and a pair of rubber boots were missing. Hearing this, Mr. Smith remembered the incident, and soon the man who had wanted the laces was arrested. The shoes were identified by Mr. Dunkley and in all five

pairs were recovered. The man was committed for trial.

A man giving the name of Fred Watson thought he could get a pair of shoes on the cheap, but discovered later that he could not, when he was fined twelve dollars or a month in jail, by the police magistrate of St. Catharines, Ont. Watson, in company with another, walked into C. N. Oke's store on James street, in that city, and wanted a pair of shoes. On being shown a new pair he tried one shoe on. Finding that it fitted him he put on the other. He then left on the pretext that he wanted to go out for a minute. Mr. C. N. Oke gave him the permission, but Watson failed to return and pay for the purchase. Later, Mr. Oke noticed him passing the store and assailed him with the request for payment, and received the reply that he had paid for the shoes some time ago. Watson was then handed over to the police authorities.

Many shoe retailers employ the product of the field, the forest, and the garden, to install attractive windows. Among the enterprising merchants who always make splendid use of such products, is Alex. Chisholm, Dundas street west, Toronto. This year he put in a Harvest or Thanksgiving window, which differed somewhat from previous efforts in that line. The floor of each window was covered with spring wheat, with a border of Jamaica grass. Each pedestal was also decorated with small bunches of grain, and at all the angles of the windows were bunches of flax, barley, oats and wheat. Rosy apples were attached to the small sheaves and imparted to the window a brightness and variety. On glass shelves supporting shoes, there were, also seen, sheaves of golden grain. The whole arrangement was particularly neat and inviting and one that had to be seen to be appreciated. Mr. Chisholm received many compliments on the enterprising character of his display and reports that such a window has amply repaid for any time and effort made, by increased sales.

Application was made in the Practice Court, Montreal, and a petition filed in the Insolvency Court for a winding-up order against W. H. Scroggie, Limited, one of the largest department stores in that city, by Stewart & McDonald, Exports, Limited. The immediate claim is for \$354.55 on a promissory note made by defendant concern on September 28th, and not met. The petition sets forth that the defendant company in October made a statement that it was unable to meet its liabilities. The petition asked that John J. Robson, chartered accountant, be appointed provisional liquidator, and that a meeting of creditors be held to wind up the business. The petitioners' manager, in an affidavit, states that his concern is a creditor of Scroggie's, Limited, to the extent of \$18,000. The defendant company waived delays and consented to the petition being returned forthwith. The order was granted by Judge Charbonneau. The total liabilities of the company are said to be \$700,000, although its assets are substantial. The company recently built an enormous store on St. Catherine street which covered a city block.

A Winnipeg wholesaler, who has been doing business sixteen years in that city, said last week that up to date he had done \$25,000 more business than in the same period last year. He declared his collections were better than the same time a year ago and altogether he could see no reason for pessimism. His house does business especially in Manitoba and Saskatchewan and he has put an additional traveler in the field to handle the spring trade. He said business generally was improving and he thought the West had gotten its second wind in fine shape. Still, he confesses to being an optimist, one of the kind who came to the West in 1882, homesteaded near Yorkton, and, when he established his business house, did it on a \$200 capital, all borrowed money. "More scared than hurt," is the way he sizes up the situation in the West.

CLARK BROS. AGAIN TO THE FRONT

Phoenix-like, the enterprising shoe firm of Clark Bros., Limited, at St. Stephen, N.B., are rising from the ashes of the recent fire which destroyed their factory. The new building is now well under way to completion and will be ready for occupancy on December 15th. A complete new equipment is being installed and their most popular selling lasts have been replaced, together with a number of new ones, which has greatly strengthened their line, making it up-to-date and representative in every respect. The company will be in an excellent position to attend to all winter and spring business. Their range of high-grade imitation Goodyear welts for women in all leathers has been well received by the jobbing trade from one end of the Dominion to the other. In fit, finish, style and workmanship the product of this firm sets up a new standard, the best oak sole leather being used, as well as oak inner and oak counters, while for topping, full grain matt calf is used in all their output. The same excellence in material, wear and worth will be continued in their new factory, which will afford the company every facility for prompt delivery and maintaining a splendid service. The progressive spirit of Clark Bros., Limited, is amply demonstrated in the fact that, although their factory was completely wiped out on September 29th, they will be again manufacturing shoes in their new building by the middle of December. This constitutes a record in the matter of rapid and complete recovery from the effects of a fire.

BREEZY BUDGET FROM QUEBEC

The Wm. A. Marsh Co., have completed stock taking and are now running again full time on spring orders.

Bedard & Sampson, tanners, have gone out of business and the building which they occupied is offered for sale.

L. F. Falardeau, shoe dealer, St. Joseph street, has been having a few holidays, in which he enjoyed a well-earned rest.

A. Wood, on the selling staff of Cotton Threads, Limited, Montreal, was in Quebec in the interests of his company last week.

J. Nolin, formerly foreman of the sole leather room of E. Tremblay, has taken charge of the same department at Medard Tremblay's.

Uld Deslauriers, tanner, has recently taken a large order for patent chrome leather, that will keep his establishment busy for some months.

Wilfrid Cantin, tanner, has an interest in a brick manufacturing plant which is very active in filling contracts, one of them being for Tourigny & Marois' new factory.

The many friends of Cleophas Lachance, of Lachance & Tanguay, shoe manufacturers, are sympathising with him on the death of his daughter Cecile, who was only eight years of age.

A. J. Russell, who was for a few years in Paris, as a representative of the United Shoe Machinery Company, has taken charge of the finishing room at Tourigny & Marois' factory.

Among the recent visitors in Quebec on business, were P. E. Boivin, Granby; C. E. Fleming, Ottawa; R. W. Gibson, Montreal; A. Wilson, St. John, N.B.; A. S. Jackson, Windsor, and J. B. Clarke, Halifax.

Huot & Bedard, of Lorette, who make a specialty of turned shoes, have bought the premises in which they are located. They will increase the capacity of their plant and present several new samples to the trade, with the latest wood heels.

J. M. Stobo, shoe manufacturer, has started his spring run and effected several improvements to his premises. Mr.

Stobo has sent to England samples of military shoes and expects to receive some good orders from the War Office very shortly. Eugene Thivierge and other shoe manufacturers have also sent samples of Army boots to the Old Country.

On the occasion of the 25th anniversary of his marriage, a number of friends of V. Noel, foreman of the finishing room of the W. A. Marsh Co., presented him with a silver fruit dish, accompanied by an appreciatively worded illuminated address. The time was passed in music and song, and at the dinner which followed the presentation, Wm. Desbiens presided. Among those who were instrumental in carrying out the arrangements so successfully, were Wm. Desbiens, J. E. Dery, W. W. Laflamme, L. Esmond, J. V. Noel, and others.

CANADIAN TANNERS ARE ALERT

"When the war broke out it was thought that there would be great difficulty in obtaining calfskins of sufficient weight to meet the requirements of the Dominion Government, whose specifications demanded an extra plump skin. Those who obtained contracts for the First Contingent found a small supply of the heavy-weight material, and there was a scramble for enough material to turn out the goods without invading the United States market. Canadian tanners, however, have been quick to grasp the situation and there appears to-day to be quite a considerable supply of heavy calfskins and veals on the market, at much the same price as ruled eight weeks ago. How soon this will be exhausted, and where we are to look for a fresh supply, is a condition that is confronting every manufacturer with Army contracts in prospect. Buyers from the United States have taken considerable Canadian leather for use in filling contracts for foreign governments. American tanners of heavy leather will not guarantee prices for any period. We have had no difficulty in securing material for our requirements, whether it be leather or duck, in our own markets," remarked a leading Canadian shoe manufacturer this week.

CHANGE IN LEADING SHOE FIRM

The firm of Sippel & Hagen, Berlin, who have conducted a successful shoe business in that thriving city for the past eight or nine years, have dissolved partnership. The business will be continued under the style of A. Sippel & Son, the father taking into partnership, his son Walter, who has been associated with him for the last six years.

A. Sippel was born in Berlin, and about thirty years

ADAM SIPPEL

H. A. HAGEN

ago started to learn the shoemaking trade in that centre. He worked at the bench until he started in business for himself, in company with H. A. Hagen, of the Hagen Shirt and Collar Co., Limited, the latter embarking in that line a few months after launching into the shoe business, but retaining his interest in the store. Mr. Sippel is a gentleman who knows nearly everybody in Waterloo County, and has always given the public courteous and efficient service. The firm first started at 7 King street east, but later removed to 19 King street east, where they have one of the

largest and most attractive establishments in western Ontario. It has an imposing front and spacious interior.

Mr. Hagen, who is withdrawing, has been an alderman in Berlin for several years. He is identified with important industrial interests and is a successful business man. He has always taken a lively interest in sport, and is one of the directors of the Canadian League Baseball Club and an enthusiastic lawn bowler. He will devote his whole time to his manufacturing interests.

CHARGED WITH ATTEMPT AT FRAUD

Herbert Capewell, who a few years ago was a candidate for the mayoralty of Toronto, was charged in the Toronto police court, that fraudulently and knowingly by false pretences he did attempt to obtain from R. H. Tremble and J. J. Tierney, one-half of all sums of money received or to be received as commissions from the Aylmer Shoe Co., Aylmer, Ont., the Murray Shoe Co., London, the Cook-Fitzgerald Company, London, Ont., and others, arising out of the procuring of contracts for the supply of goods by the latter to the Government of the Dominion of Canada, with intent to defraud."

After a week's remand the case came up before Police Magistrate Denison, on October 29th, and was sent on to a jury for trial.

LEATHER FIRMS GETTING BUSY

The Breithaupt Leather Co., of Berlin, report that the leather trade generally is improving and a great demand has sprung up recently for various lines of hemlock and oak soles, especially of heavy grade, which is now used most extensively in English and French army boots. It is only within the last month that the British government has started using hemlock for army soles, hence the great demand at the present time. The consequence may be that prices will advance somewhat, as stocks are low and the demand for the home trade is also steadily increasing.

The Acton Tanning Company, Acton, Ont., is running overtime now in turning out leather for army saddles, bridles, belts, etc. Large orders are being received from manufacturers using this line of leather. Orders are coming almost daily, and this department is consequently rushed. One day last week an order came from a saddle manufacturing firm in Calgary for the shipment by express of 9,000 pounds of army leather. The shipment was made next day. The express charges on an order of this size to Calgary amount to over \$500.

MAKING SHOES FREE FOR BELGIANS

The Weston Shoe Co., of Campbellford, Ont., conceived the idea of showing their sympathy in a practical manner with the Belgian sufferers on account of the war. The firm laid before the town council a proposition to make a contribution of shoes for women and children, provided the town would pay for one-half the stock used, the firm to pay the other half. The proposition was favorably received by the council. The employes of the shoe factory, when interviewed, all heartily agreed to give their time in making the footwear free of charge. A number of wholesale leather firms have become interested and are assisting in the worthy cause. The work is now well under way and about 1,000 pairs will be made for the Belgian refugees. The plant is working overtime and on Saturday afternoons so as not to reduce the employes' wages or decrease the regular output of the factory. Such a plan might well be adopted by other shoe manufacturers.

In the case of the Weston Shoe Co. it was enthusiastically entered into by the employes with not a dissenting

voice. It is expected that the goods will be made by November 10th. Several firms helped in the matter by offering material at reduced prices, considering the worthy object in view. The Bonner Leather Co., of Montreal, and Beardmore & Co., Toronto, gave donations of leather for the cause, while such firms as A. R. Clarke & Co., Toronto,

FRED W. WESTON, CAMPBELLFORD, ONT.

Clarke & Clarke, Toronto, C. S. Hyman & Co., London, Colles Leather Co., Aurora, Davis Leather Co., Newmarket, and Fisk, Limited, Montreal, accepted very much less than regular prices for the lines supplied. Frank & Bryce, of Toronto, have contributed all the thread gratis.

The Weston Shoe Co. state that, while they seem to have been getting considerable publicity over this matter

RICHARD WESTON, CAMPBELLFORD, ONT.

of making shoes for the Belgians, such a thought was never in their minds when they went into it. "After all the Belgian people have done and suffered," remarks a member of the firm, "we feel that if the British nation does not make up for it, so far as human power can do, by alleviating distress and

putting things back in as good position as they were, we shall be unworthy of the traditions that have been handed down to us."

STYLE TENDENCIES FOR SPRING

An analysis of the principal style features of men's and women's shoes for next spring is furnished by the "Shoeman" as follows for men:—

Recede or "slope" toes a trifle higher and fuller. Vamps same length as before.

Heels a little higher—7/8 to 9/8 inch.

Circular vamps, many of them foxed and perforated.

Laced style continues popular in the high grades; blucher style leads in medium and low grades.

Outside stitched lace-stays in some high-grade styles.

Women—Modification and improvement of stage last.

Narrow, flat, recede-toe lasts still in vogue in cities.

Increased use of fabrics in both low shoes and boots.

Colonials favored. Smaller tongues and ornaments.

Heels: higher Louis and half-Louis designs; wood-covered heels in demand; leather-covered Louis, "spool" and Cuban designs on welted shoes.

Combination 2-inch arch with 1½-inch heel for metropolitan trade.

Multitude of strap or "bar" designs in colonials.

BUSINESS IS PICKING UP

"We were surprised to find on visiting among Halifax retail shoemen last week that things were running along so satisfactorily with them," says the Maritime Merchant. "The closing down of the car works in the north end of the city had been expected to be very much felt, but one of the largest stores in that district reported both September and October

sales a little better than last year. The proprietor said he had been agreeably disappointed with the way business had been coming along with him and he thought other shoemen were finding it quite as good.

THEY WILL KEEP DRY THIS FALL

Recently "Foot Prints," which is the bright monthly organ of the Canadian Consolidated Rubber Co., Montreal, announced that a "Dominion" raincoat would be presented to shoe retailers whose birthday anniversary proved to be the most popular. It appears that Christmas Day, December 25th, turned out to be the favorite and raincoats have been sent to the following:—A. B. Langenfeld, Lena, Man.; Thomas A. Sullivan, Bonny River, N.B.; John E. Coburn, Harvey Station, N.B.; John G. McKay, Inverness, N.S.;

CONDENSED ADVERTISEMENTS

Box 91, SHOE AND LEATHER JOURNAL.

PICKLED SPLITS WANTED

Cash prices paid for pickled splits and heads in all weights and qualities. Write us your offering. Wright & Wright, Inc., 109 Lincoln St. Boston, Mass.

CANADIAN MADE BY CANADIAN WORKMEN

AT this time, when efforts are being made throughout the Dominion to boost Canadian-made goods, it is perhaps timely on our part to assert that

"YAMASKA" STAPLES

are essentially a Canadian product. But it is not on this basis alone that we desire your consideration of our line. "Yamaska" shoes have achieved their high reputation solely on their merits, and the dealer who stocks them for next Spring will find that the "Yamaska" line is the most profitable and easy-selling line of staples he has ever handled.

THE "YAMASKA" SALESMAN

CHEAP BOOT LACES DETRACT

from the appearance of good footwear. Cultivate trade in **Better** quality Laces that will **improve** and **be in keeping** with your fine shoes.

Your customers do not expect these nice Laces free of charge, as they would ordinary ones. They are quite ready to pay 5 cents per pair for laces that are folded and banded in pairs, and look attractive—made up in one gross fancy carton, suitable for window or counter display.

These three qualities are **Good Laces, Low Priced.** Each can be sold at 5 cents per pair, showing profits from 300 to 400 per cent.

BUY MADE IN CANADA GOODS

**NO DIAMOND
TRADE MARK
NO FAST COLOR**

**NO DIAMOND  TRADE MARK
No Fast Color**

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

SPHINX Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

“Business As Usual” FOR “Kingsbury” and “America’s Beauty” Shoes

¶ This is due partly to the excellent range of spring samples in all lines that our representatives have been showing. ¶ Without doubt it is the best range we have ever placed on the market—*none excepted*. ¶ It has only needed a partial examination by any buyer to show why our representatives are so enthusiastic over these lines. ¶ And every dollar’s worth of orders that has come to us gets a return in *actual shoe value*—which is better than paying 30 per cent. into the Custom House.

SEND IN ANY BELATED ORDERS NOW.

“Made-in-Canada”

Sentiment Grows by Leaps and Bounds

It is not only patriotic, but practical, to buy “Made-in-Canada” shoes. There are many patriotic reasons why you should buy Canadian goods ; there are also *practical* reasons. The public is being educated by means of a vast newspaper campaign to ask for home manufactured products, and to insist on getting them. This fits in so well with present popular sentiment that the dealer who buys Canadian goods will find such action to his very great advantage.

Getting closer home, when you buy from Ames-Holden-McCready, you have three specialized factories and a big IN-STOCK Department at your service. No order is too large, and none too small to receive our prompt and courteous attention.

Travelers are now out with the best range of Samples we have ever shown

Union Shoes for Union Men

The retailer who meets the demand of every possible buyer in his town handles Union Stamp footwear.

Dealers who do not carry Union Stamp shoes are not soliciting their rightful share of the shoe business of their city.

The Union man will have Union shoes for himself and his family. He demands them and if he cannot obtain them will turn elsewhere.

To you, Mr. Retailer, who advertise Union Stamp shoes the tide of trade is turning.

You cannot afford to neglect the Union trade, and even the man who does not buy Union shoes merely because of Union principles recognizes the high quality of Union Made footwear.

You have nothing to lose and all to gain by carrying these shoes.

Let us send you to-day a list of manufacturers who make shoes bearing the Union Label and add a live selling asset to your business for the coming year.

Remember, no matter what any manufacturer may say, no shoes can be considered Union-Made unless they have the Union-Stamp

The "CLASSIC" Shoe

Profit in Cash and Satisfaction

A shoe that costs you so much that it allows you little room for profit, is nearly as bad as a shoe which yields a good profit but doesn't give satisfactory service.

In the first case you can't make any money, and in the second, your customers never come again.

Protect your profit and increase your trade by selling

The "CLASSIC" Shoe for Women

Sold at prices which allow us both the necessary margin of profit, at the same time insuring the satisfaction of the consumer.

You won't find crude workmanship in the "CLASSIC" Shoe. Every shoe produced in the "CLASSIC" factory is neat, attractive, up-to-date and a good server.

You'll find your trade will materially increase by handling this well-known line.

MINER
MEANS
MERIT

As Good as Gold

These days of Uncertain Trade Conditions and Fluctuating Values the business man looks for something he can readily turn into money.

TRICKETT'S

are as good as Cash in the Bank or Government Bonds. They sell when more expensive lines languish on the shelves. It is as natural for people to come in and ask for Trickett's as it is for them to call for a pound of tea or sugar. They are known from one end of the British Empire to the other as the

BEST AND CHEAPEST **SLIPPERS** IN THE WORLD

The dealer does not have to make a market for them, nor spend money pushing them. Every buyer comes back for more. Trickett's sell themselves.

Don't Get Cold Feet

and let hard times and war talk frighten you out of your best chance for turning over a few extra dollars this season. As soon let your insurance run out as let your stock of TRICKETT'S go down. And, let us whisper in your ear the hint that you will save money by ordering as full a supply as possible NOW. A look at the leather market and the rising cost of other materials will convince you of the wisdom of this.

Your Jobber Has All Our New Lines.

How Some Bright Shoe Dealers Capture the Trade

What Representative Retailers Have to Tell the Public—Crisp, Catchy, Telling, Forceful Phrases Found in Their Newspaper Ads—How Style and Service are Presented and Good Fitting Qualities Emphasized

"Wiggett's shoes are the choice of well-dressed people, giving made-to-wear comfort and always displaying the newest modern styles."—J. A. Wiggett & Co., Sherbrooke, Que.

"Parrott has let loose from one end of the province to the other—Saskatoon, Regina, Moose Jaw, Prince Albert and Weyburn—footwear for all occasions. Saskatoon's largest commercial shoe dealers."—The Parrott Shoe Co.

"This store is planning for the greater prosperity which is coming, which is just around the corner. We are planning to give you greater accommodation in our already big store, to give you better service if we can, better shoes if possible; the prices we cannot better, but we will not raise them. Every shoe we sell must be worth your money. The shoes herein described have made the 'Come Back Customer.'"—Alex. Chisholm, 1687 Dundas street, Toronto.

"To become familiar with the quality of a Regal is to know the best-valued shoe. This finely benched shoe—with the possibilities it offers for style, ease, service and individuality—will appeal to the fancy and reveal the judgment of any discriminating man or woman."—Regal Boot Shop, 556 St. Catherine street west, Montreal.

"Our boot and shoe sale is a real success and satisfied customers say it deserves to be. They confess that they received a pleasant surprise when they came into the store. There are two things the Jap Co. stands for—bargains and courtesy. You can be the judge of both."—The Jap Co., Calgary, Alta. (Richardson's old shoe house).

"Your new fall shoes—we're positive they're here, sir; put your feet into a pair of our shoes and you will be pleased with their appearance at once. Our kind of men's shoes are the productions of the best makers of men's shoes. The new fall styles are models of expert shoemaking."—Walter G. Willis, Dependable Shoes, Seaforth Ont.

"Boots and shoes for tender feet—the sort of shoes that make your feet happy—a wonderful assortment to choose from. Personal expert attention given to every customer.

Write us, we can fit you by mail."—Russell's, 292 Yonge street, the home of the famous "Phit-Ezee" footwear.

"My stock of fall shoes has arrived, having bought them early. I will not raise the price on any lines as long as my present supply lasts, but buy early and secure the best." J. W. Thompson, Buckingham, Que.

"When the wet, slushy fall does come, remember that we are headquarters for rubbers of all kinds, and warm, cosy footwear, to suit any member of the family, from Grandpapa to baby."—J. R. Scott, Treherne, Man.

"Our shoes combine style, comfort and durability."—S. J. Osgood & Sons, Cookshire, Que.

"Down town purchasing is largely a matter of habit. Here you have my personal attention which means years of practical experience in fitting the feet stylishly yet comfortably. We make your shoe buying here as comfortable as in your own home. Our stock is large and varied, our prices are the same, or lower, for similar goods in the down town stores. If we haven't it, we'll get it and quickly. Why not call in regarding your next pair."—R. S. Ritchie, 357 Roncesvalles avenue, Toronto.

"We aim to sell the best shoes possible—to show more choice styles in men's shoes than anybody else—to give greater satisfaction at any stated shoe price than can be obtained at any other store. We have shoe satisfaction in store for you if you come here."—J. H. Longmire & Son, Bridgetown, N.S.

"A study of the styles shown and other lines which we sell will help to make contented women. Our shoes assist people in walking, as they were born to walk."—Jas. Sutherland, Westville, N.S.

"We fit all feet. Your health and disposition depend on the fit of your shoes. If your feet feel pinched or burn, do not blame your shoes, but the salesman who sold them to you. In fitting shoes correctly, every peculiarity of the

foot must be taken into consideration. Our salesmen have made a careful study of scientific fitting and will not sell any shoes that will pinch, burn or rub."—The Eastern Supply House, Melfort, Sask.

"Our shoes and hose fit well and wear well. We sell the better kind."—The Wm. Mitchell Co., Limited, Kincardine, Ont.

"Remember our shoes come direct from the factory to you. All goods are marked in plain figures and a child can buy as cheap as a grown person. With our fifty years' experience in the shoe business, we have learned a great deal, and thoroughly understand the wants of the people. We prepay all mail or express charges on shoes or rubbers and refund your money if not satisfied, when goods are returned in right condition, and within a reasonable time."—The J. J. Haines Shoe House, Trenton, Belleville, Napanee and Smith's Falls.

In the corners of the advertisement are the words: "Cash Sales," "Established 1864," "No Credit" and Phone number.

"Rubbers, overshoes, suit cases, bags, mitts, gloves and socks at a grand special price all this month. Do not fail to get in on this big shoe sale, which is to be introductory in character."—D. A. Gibson's New Store, 146 Saskatoon avenue east, Portage la Prairie, Man.

"At the opening of the fall season 'Home of Better Shoes' offers its services to people who are interested in obtaining the best satisfaction. We find our prices in every instance the lowest possible, consistent with high quality."—McRae's Shoe Store, Campbellton, N.B.

"We are showing the latest lasts in men's shoes. Step in and see them."—W. J. Chantler, Moose Jaw, Sask.

"At work or at play, your feet should be perfectly clad. You are not at your best in ill-fitting shoes. Comfort, satisfaction and style are embodied in every pair we handle."—Ely, the Shoeman, Wiarton, Ont. Terms strictly cash.

"We are particularly strong on a good assortment of boots and shoes for men, women, boys and girls. We claim also to give you good value, besides showing you class and style."—J. H. Baggs, Petrie's Crossing, Nfld.

"Listen! This is important! If you have a complaint to make on shoes we sold you—depend upon it—we will make you satisfied. No dissatisfied customer allowed to leave our store. We stand behind every pair we sell. You know what that means."—Johnston's Big Shoe House, Limited, New Westminster, B.C. Sign of the Electric Boot.

"The Honest Shoe Store. Shoe news of new shoes. The new season's productions in footwear are arriving daily. They show class and style. You will have a wide range for selection."—C. F. Wolfe's Shoe Store, Port Colborne, Ont.

"A man who comes here for his shoes will get shoes that are better and different from the kind that the man will get who goes most anywhere for his footwear. The man we serve will get more style, more service and far better value for his money than the man who passes us. Expert service and fitting."—J. W. Scovil Co., Limited, St. Stephen, N.B.

"The qualities that the shoe-buying public is always looking for are always found in the brand bearing the letter

'K' on the pull strap." Wholesale jobbers, Stevenson Bros., 109 Powell street, Vancouver, B.C.; supplied by H. E. Munday, Government street, Victoria, and Cowichan Merchants, Limited, Duncan, B.C.

"This new Paris button boot, made with a full leather Louis heel and black cloth or silk tops, is one of the handsomest styles ever offered by us. The boot has been imitated, but never equalled. The demand for it is tremendous."—Glass Bros. Walk-Over Boot Shop, 222 Eighth avenue west, Calgary, Alta.

"The cold weather will soon be at hand, so come and look over our stock of felts and overshoes. You will save money by buying now. Everything reduced."—The American Shoe Store, Limited, Edmonton, Alta.

"Our shoes include the celebrated 'Doctor' Special, heavy-weight sole walking boots, made by Bell, so much worn last season, made in tan and gunmetal, button and lace. Fall importations of 'Kingsbury' boots. These are the best medium grade you can get in Canada—none better."—Dimock's Shoe Store, Windsor, N.S.

"Smart and shapely shoes, such as particular men and women like to wear—not over heavy and uncouth, like ordinary damp-proof shoes. There is a great difference between 'Duk-Bak' and the ordinary shoe."—W. E. Porter, Kentville, N.S.

"Every purchaser of a pair of shoes between 8 a.m. and 12 noon on Friday and Saturday will have a street car ticket given to them to return home. We do this to help our clerks, as it spreads the business over the day."—The Jap Co., 216a Eighth avenue east, Calgary, Alta.

"A trial solicited. A clear deal assured. Watch our Wednesdays. Our stock of rubbers is complete."—Central Park Shoe Store, R. Seeds & Co., South Vancouver, B.C.

"The 'The Rambler' shoe for men is the most reliable on the market. It is our own make and nothing but solid leather is used in its manufacture. In tan and black. Try a pair."—Parker & Munroe, Limited, The Shoemen, St. Johns, Nfld.

"We have the best school shoes money can buy. Really reliable and in all leathers. We do first-class repairing."—Thos. Cresswell, 391 Talbot street, St. Thomas.

"For long wear and solid comfort, try a pair of cushion soled shoes at \$4.50. Boots satisfactorily repaired."—M. White, Markham, Ont., The Old Reliable Store.

"The home of good shoes for the whole family. You can prove to your own satisfaction that our shoes are all that we claim them to be by wearing a pair."—Estate of S. H. Nichols, Berwick, N.S.

"We are receiving daily all the newest fall styles in men's and women's footwear, children's school shoes especially."—J. W. Ingraham, North Sydney, N.S., The Young Men's Store.

"Specials for men. We offer 200 pairs of box kid lace shoes, leather lined. A real bargain for \$3.00."—John Langan, Sarnia, Ont.

"If you find that our repairing is not better than the repairing you have been getting in the west, we do not

demand pay for it. Yours for business."—Western Shoe Repairing Co., Weyburn, Sask.

"We do your work promptly and quickly. Our motto is good workmanship, best of material and right price."—E. Mason, boot and shoemaker, Killarney, Man.

"Newspaper display week. All lines advertised are made by honorable manufacturers. Guaranteed solid insoles and counters."—Downey's, Brockville, Ont.

"We extend to you a hearty invitation to make our store your headquarters. Fall stock of lined and heavy rubbers and a great display of fall footwear. Come in and let us show you the greatest value in fall shoes and rubbers."—Peel, The Shoe Man, Owen Sound, Ont.

"Patriotism in footwear. At what cost? Are they Canadian-made? Yes. See them and be patriotic. To see is to long for and the result will make us both happy and patriotic."—G. A. Meloney, North Sydney, C.B.

"We also invite you to see our new fall styles in high shoes. Their quality and price will prove interesting."—Knox's Shoe Store, The Store of Quality and Service, Bowmanville, Ont.

A Big One-Price Bargain Day on Thursday. Those familiar with this store know that only on very rare occasions is the term "bargain" used in our announcement. This is an unique event and the term aptly fits the wonderful values planned for Thursday.—John Murphy Co., Limited, Montreal.

A PLEASING DISPLAY OF LADIES' EVENING FOOTWEAR

A very attractive window of evening footwear was recently installed in the store of Knechtel & Co., Stratford, which resulted in a large amount of extra business. The floor was covered with green carpet, and over the carpet was lace work, with a puffing of cheese cloth around the inside of the window. Along the mirrors there was a panel about seven inches wide, puffed with white and illuminated with white frosted electric lights. Air plants and green sprays were grouped over the top. The word "Fall" was in the background, which was made of rustic branches and entwined with grapes. The pedestals were draped with green velvet and green sprays and made a pleasing contrast for the satin slippers. Vases, with beautiful red and white roses on the

pedestals also helped to make the trim decidedly attractive, and to show off the goods to advantage. A beautiful wax figure of a handsome lady artistically dressed in a becoming evening costume, imparted a life-like appearance to the window, which was not crowded, and as a result, many new purchasers were drawn into the store. The Knechtel Company believe that original window trims pay handsomely and they always carry an up-to-date stock of evening footwear in all the best makes. The appropriate and effective setting, an illustration of which is seen on this page, was successfully carried out by Ed. M. Wegenast, window dresser for this enterprising Stratford firm, who carefully plans all the details of his work.

Why Side Lines Are Profitable to the Shoe Store

Some Reasons Why the Shoe Dealer Should Expand—Good Profits Can be Made—What Lines Sell Best—How to Boost a Side Line—Some New Avenues of Trade

What shoe merchant does not sometimes sigh with regret when, in looking over his books, he figures out what a greatly increased margin of profit he would have were it not for the large hole made in the gross earnings of the store by the heavy rent of the establishment, the cost of lighting, and other items of upkeep that go to reduce profits.

"What a pity it is," the dealer will say to himself, "that I am forced to pay such a heavy rent, and that the wages of my help run into such high figures. If it were not for some of these heavy items, shoe retailing would indeed be a profitable game, and one well worth while devoting one's energies to. However, I suppose it can't be helped, and I am no worse off than most other dealers. If I am to hold my patrons and keep increasing the volume of customers, I must be located in a first class location, and I might as well decide to close up at once, as adopt the 'cheap help' policy of employing salesmen."

Perhaps you have repeated these same words to yourself time and again. Anyway, most shoe dealers have. The average retailer is satisfied, however, as we might say, "to drop back into the old rut," and continue to pay out his profits to the wholesaler, landlord, store help, and other people, until the balance left over is barely enough to keep on operating the business.

There are exceptions, however, to the general rule, and you will sometimes find a shoeman who rebels against accepting such a small remuneration for his labors. Suppose we dig up a man of this type, and christen him by the name of Jones.

The Case of Jones

Now, Jones, besides being a deep thinker, is also a man of action, and once he decides on anything, sets out immediately to carry out his plans. He does not claim to be a genius, but nevertheless, has a fairly good opinion of his abilities, and is willing to take a reasonable chance when he sees an opportunity of making money. Therefore, without wasting any time sympathizing with himself on the smallness of his annual profits, he decides that the only thing to be done is to look around for a means whereby he will make more frequent use of the store's cash register. Naturally, he will decide that the easiest and most logical solution of his problem lies in his installing one, or two good money-making sidelines in his establishment. There are, he finds, half a dozen good side issues that he thinks could be made to pay were they handled rightly, such lines as findings, traveling goods, hosiery, etc.

Jones realizes that with the capital he has at hand he cannot go ahead and install half a dozen different departments aside from his shoe line, and make them pay. But he ventures a try at one of the more promising prospects, which is the trunk and bag line. He secures a stock, advertises his department and backs his advertising by having a first class selection of traveling requisites. By every means in his power, he pushes and develops his sideline, until it is bringing him in a comfortable income each year. Thus he solves his problem.

How Drug Stores Are Affected

Every shoe retailer is more or less in the position of this man Jones, at the outset. And like him, they will ask themselves, "Are sidelines worth while?" Perhaps the best answer one can give to this question, is to direct the

attention of the merchant to the retail drug business. The trade of the druggist in recent years has changed so much, that nowadays, you will find many druggists who will tell you that the drug end of their establishment is the least profitable of any of their departments. Perhaps it is the soda fountain and tea room that gets most of the trade, or it may be that a large candy or cigar business is being catered to, but it matters not, for when these departments were added to the drug business folk didn't take to them any more at first and in fact, not as much as they will to any one of the sidelines you install. The time has come, nevertheless, when the drug store without two or three different departments is no longer looked upon as up-to-date, and many of the larger city druggists handle almost everything except wearing apparel, speaking of course in a broad sense.

The possibilities in the shoe business are in one way just as large. Which do you think the proper place to secure a pair of shoe laces or a tin of shoe polish—the grocer's or the shoe dealer's? As conditions are at present, many people are obliged to purchase shoe findings they desire, at the grocery or general store.

Profits Are Good

The question of what profits are to be had in these sidelines is the all important one to the shoeman. Many are of the opinion that it is useless to embark on a new venture unless they can make an overwhelmingly large profit, out of proportion altogether to what can be expected of a sideline that must of necessity receive the lesser part of the dealer's time, attention and interest. The sideline cannot be expected to show profits as large as the volume secured from shoes, nor can it be expected to bring in profits nearly as large, but one or several good side issues will bring in a great many extra dollars, which, when added together will total a nice amount.

Supposing you only make enough on your sideline to pay the rent of the store, don't you think any time you have given to it is time well spent? The operating expenses of the store are just as heavy before the installation of a findings or traveling goods department as they are with it. The only expense entailed is that of keeping up your stock. When you started in business, you undertook to pay outside of the cost of your stock, bills for rent, wages, taxes, lighting and all other items of up-keep in order that you might have a permanent stand from which you could dispose of footwear. Yet, when it comes to adding other departments, many shoemen hesitate or have not the courage to go ahead, merely from thinking of the cost of stocking up in the sideline, even though they are aware that they will be put to no extra up-keep expenses.

What Are Proper Side Lines?

There are, as the writer stated earlier in this article, numerous different lines of goods that can be disposed of in the shoe store. However, we will mention only a few of those lines which no up-to-date shoe store should be without, lines for which the shoe store is the only logical distributing point. Take for example, findings. This class of goods is very much neglected by most shoe merchants. The utter necessities, such as shoe polish, laces and other smaller items are perhaps carried, but no attention is given to those articles for which a demand can be created, articles that might be called foot luxuries, although strictly speak-

ing, they are necessities with many people, when we consider the numerous ills and troubles suffered by most folks through their feet. These articles alluded to are comprised of the different foot-easers, ankle and arch supports, rubber heels, corn cures, and various other items designed to give more foot comfort and relieve pains or aches. Then there are inner soles, boudoir slippers and other such lines that really are luxuries. What live shoe merchant cannot create a demand amongst his patrons for these lines, and thereby secure for himself a regular income from them?

Another strong sideline that every shoe store should have is the traveling goods department. To the credit of the Canadian shoe man, it can be said that he is becoming more aware everyday of the possibilities of this department in the shoe store, and the trunk and bag manufacturers are adding a much increased number of shoe dealers to their list of customers each week. There is still a very large number, however, in the different towns and villages of Canada who have not awakened to the possibilities presented to them. There are three different classes of stores selling traveling goods. These are the saddler, general store, and the shoe merchant. In fact, there are a large number of clothing establishments who handle a limited line also. Which of these four has the most right to sell trunks and bags, speaking from the consumer's standpoint? Is it the saddler, who caters to the needs of horse owners principally, the general store where a pot-pourri of everything is carried, and which can only hope

to carry a very limited stock, the clothing emporium whose logical line is dry goods, or is it the shoe store where leather goods are carried? An impartial judge must surely answer—the shoe store. A traveling goods line fits in with a stock of footwear to perfection, the shoeman is a judge of leathers, he can afford to put in a better selection, and the consumer naturally turns to the shoe store to have his wants satisfied, when he desires to purchase a trunk or bag. There is a good margin of profit in traveling goods sales, and unlike footwear, the dealer can give an order one week and receive it the next, and very often in even less time, as the manufacturer always keeps what to the shoe manufacturer is an in-stock department.

Another line that might be mentioned is hosiery. Very little attention is given to this branch of the business by most Canadian shoe dealers, although in the United States, the field is covered thoroughly by the shoe retailer. There are, however, quite a few dealers in Canada, in the cities principally, who have a regular call for hosiery, and whose trade in this line is increasing all the time. Hosiery will not dispose of itself of its own accord, but when properly pushed, will be found to sell readily, and it is an easy matter to sell to a customer buying a pair of shoes, several pairs of socks or stockings of a hue that goes best with the shoes just sold. It can be seen at once what possibilities are presented to the shoe man in this line, as the shoe store is given over to foot furnishing, and cannot one call hosiery foot furnishing.

Why Some Men Never Get Results From Advertising

Copy is Loosely Prepared and No Attempt is Made to Back Up the Claims Presented—Show the Shoes in the Window That You are Talking About—Consult Your Staff in the Lines That You are Pushing—Some Timely Pointers

"I do not get paying results from my advertising, so far as I can see," declared a London shoeman to the SHOE AND LEATHER JOURNAL the other day, "I put in an ad. three columns wide and four inches deep in our papers here, two or three times a week, and I get few responses. I do not know whether the fault is with me, with the mediums which I select, or with the style of my advertising."

An examination of this man's ads. for some weeks back showed several faults, or what might be termed shortcomings. In the first place, there was employed a number of old style, jagged cuts, which did not adequately fit the description of the shoes. In the second place, the headings to his announcements were not timely or catchy. The body matter of the space lacked snap and decisiveness. Very little information was conveyed in the reading, except that he had a large and well-selected stock of fall goods from the leading makers in Canada and the United States, that styles were never more attractive than at the present time, or values more tempting, etc. Along with this was coupled the advice that shoes were likely to go up in price and the public should buy now, before the raise took place and while selections were good.

Lacks Both Point and Punch

This general sort of advertising is too non-committal—it lacks push, point and "punch." It does not strike home, nor carry conviction. Advertising will not build up a business—the business must be built upon service and satisfactory goods. Advertising may bring patrons to the store, but, unless they go away pleased in the matter of value, style, wear and attention, they are not likely to return. We are told that "Providence helps those who help themselves," and too frequently shoe retailers do not help themselves in the matter of advertising, that is, they do not assist it in any way, but expect their publicity plans to do all the work and effect any change that may be brought about.

Now, on inquiry it was found that this retailer did not display in the window the lines of shoes that he was advertising in the local papers. If he had pasted up a copy of his ad. on the window and had a hand pointing to this announcement, it would have drawn the attention of passers-by and they would naturally look at his display to see if they could find the shoes that were being featured in the announcement.

It was also discovered by the writer that this man did not consult his clerks in the preparation of his advertisements. They were very often unfamiliar with the contents

of them, and customers had noted the rather "quixotic" expression on their faces whenever they were asked about such and such a line.

On the other hand, a leading Toronto retailer gets splendid results from his advertisements, but he follows an entirely different plan from that of the western Ontario dealer. His experience is rather interesting and is best told in his own words.

Know What You Are Doing

"Yes," he remarked, "I put an ad. in the paper which I think will bring me the best results, every Wednesday and Thursday. We generally have a week-end sale, and I use up-to-date cuts—in fact, have some drawn by an artist or photographed, in order that they may exactly depict the leading points of the shoe. We make a sharp, terse, definite statement regarding our chief brands, and give prices in every instance. We do not misrepresent values, and when anything goes on the bargain table to be cleared out at a certain figure, say \$2.49, \$2.85, \$3.15, or whatever the special price may be, people can depend upon getting something a little extra for their money. All these selections are sorted out early in the week, the price cards are prepared, the clerks are made familiar with the lines to be disposed of, and the result is that there is a unity and "esprit du coeur" among the staff, which augurs well for these sales. We dress our windows with the ranges of footwear that are featured, and paste a copy of the ad. on our windows, attracting attention to it by various means. We have found this plan works very satisfactorily, and a number of people who may not see the advertisement, will often stop and read the announcement in the copy on the window."

"Of course advertising pays, but it must be given as careful supervision in connection with shoes, as sorting, sizing, shelving arrangement, and other details, which go to complete a satisfactory service. I am a firm believer that, unless one is carrying out an introductory campaign with a certain line of goods, that first-class illustrations, bright, breezy descriptive matter, and definite prices, should be given in each case.

Emphasize Some Salient Features

"When bargains are not advertised, then the style points of a boot should be presented to the public, along with emphasis on its smartness, snappiness and up-to-date character, coupled with the good value that is being presented at such and such a figure. The trouble with too many retailers is that they will not take the time to devote a few minutes each day, to the consideration of their advertising. They brush it aside as a thing that can be delayed, and then jot down something or gather together some data at the last minute, and their copy is a jumble or hodge podge.

"I maintain that advertising should be as carefully and conscientiously undertaken as buying, window dressing, stock-keeping or any other department of the store. If it receives proper consideration, there is not the slightest doubt but that it pays handsomely, not only in direct returns, but in store prestige, the creation of good-will, the establishment of a reputation and the association of the name of the dealer with reliable, stylish shoes. No man can estimate these latter accessories, if such they can be called, but in most cases they mean a gratifying increase in business each year, and the creation of a permanent, paying patronage in the shape of a family trade.

FINDS IT FULL OF IDEAS.

Kindly find enclosed postal order for another year's subscription to the SHOE AND LEATHER JOURNAL.

We always read each issue and find the retailers' portion of the paper very instructive and interesting.

It brings one in close contact with men and their ideas, that one could not receive otherwise, except through a live trade paper.

Yours truly,

T. H. STEWART & SON.

Owen Sound, Ont.

Handling Dissatisfied Customers in Shoe Repair Line

Certain Things That the Repairer Should Do—Don't Overlook a Bit of Stitching, a Button Missing, the Placing in of An Eyelet or Hook—Small Matters Count a Great Deal in Pleasing Patrons of the Shop

"Look here—what kind of leather do you call this? It is not many minutes since these boots were soled here."

And the irate customer banged down on the repairer's counter a pair of girl's boots, which bore unmistakable evidence of having been recently repaired, though the soles were worn through.

The repairer sighed and took up the boots. "Well, you see, madame," he began, "when you brought these boots to be soled, you were very particular about having a light sole."

"Yes," replied the angry woman, "but I said I wanted a good sole, but a light one."

This is no imaginary conversation, but was actually overheard by the writer, and illustrates a very common problem in a repair shop. The repairer then explained that this particular pair of boots were made with a middle sole, and that this middle sole was more than usually stout. Had he put on a good sole the result would have been a clumsy job. To all of this the customer listened patiently—and was just about as wise at the finish as she was at the commencement of the argument.

Exercise a Little Foresight

Now, here is where the average repairer is lacking in initiative. The customer particularly wanted a light job, but a good sole, and was willing to pay for it. The repairer comes to strip the job and finds the boot possesses a very stout middle sole. The originality of the repairer does not run beyond finding the lightest sole he can to counter-balance the substance of the middle sole. To remove the middle sole does not occur to him, or, if it does, it is only to give him the impression that he is interfering with the build of the boot. The boot has a middle sole, and there the middle sole must remain. But why? The customer does not understand anything about the boot having a middle, or its removal. All she cares about is that she has not got the kind of job she asked for.

The correct thing for the repairer to have done would have been to remove the middle sole and make a single-soled repair. It is well known that juveniles are heavier and rougher on their sole leather than are adults. If a customer insists on a light sole on a pair of girl's boots, it is a certainty that she will still expect the usual duration of wear. The repairer may point out at the time that a light sole will not last as long as a stouter one, and the customer may appear to accept the statement, but only to forget it if the soles do not wear long enough. The thing is, in such a case, to give good substance and a light edge. The middle sole should be taken clean away. The lasting should then be leveled down, and a stout pair of soles selected for the job.

By the removal of the middle, the rolling or beating of the soles, and the use of the welt plough, the edge can be made as light in appearance as is desired, whilst the material selected removes from the mind of the repairer any doubt as to reasonable wear. It may be argued that the cost of such a pair of soles would be prohibitive, but I am supposing a case where the customer is willing to pay for the class of work required. Should only ordinary price be obtained, the middle sole should be replaced by a lighter middle cut from a split shoulder, and a lighter sole may then be used.

Another type of dissatisfied customer is the following:

A pair of lady's boots are taken in for revolving rubbers only. The rubbers are placed on the top of the top-piece, and in nine cases out of ten the boots come back to have the rubbers removed, as the customer cannot walk with comfort. Now, the same repairer taking in a job requiring O'Sullivan's or other stationary rubber heels, would probably reduce the height of the heel according to the substance of the rubber. But in the case of the revolving rubber, which, of course, is not as satisfactory a shape as the stationary heel, the pad goes on top, though its substance is probably equal to a lift and top-piece. The heel for a revolving pad should be reduced by the corresponding thickness of the rubber. This should be pointed out to the customer, and a charge made for the extra trouble. In most cases, after the top-piece and a lift have been removed, all that is required is the driving of a few rivets round the top lift. If it is a composition heel, however, a top-piece will be required, and in that case it means the finishing of the heel. Heeling in such a case may be done at a less charge than ordinary heeling, as the material required is only such as will form a grip for the screw of the rubber.

I have often heard the remark passed at the counter that "You seem to have made my boots smaller when you repaired them." I have also many times been requested by the benchman to give him "a bit of rough stuff to fill up a bottom," and one of the remarks is often the explanation of the other, and in this way. Some benchmen have an idea that when a boot is stripped, it must be hammered and flattened. This is quite wrong. Most wearers have a peculiarity of their own in molding the insole of the boot to suit their comfort. Then the boot goes to be soled. The bottom is hammered and flattened in a needless manner, and a lump of solid filling is banged in. More hammering when the sole is attached, this time with the heavy double-faced hammer, and the result is a "solid" job. But it is a stiff job—an unyielding one to the movement of the foot, and the wearer finds it quite impossible to get back that "comfort of an old shoe" that the boot possessed before repairing.

Don't Disturb Form of Insole

The repairer should strip off the old sole carefully, and if any hammering of a middle sole is required it should be done on the edge only. If the boot is a welted one, it should be left alone after stripping, so far as hammering is concerned. Another thing, if a hole has been worn through the sole, generally under the big toe position, and a trifle of the filling worn away, it is a mistake to bang on a thick piece of felt or offal. Let it go as it is. Packing that particular spot will only result in raising the bottom at that point, which will mean its being worn through all the quicker. In addition to that, the "bed" the wearer has formed for his big toe will be destroyed. The whole idea is to disturb the form of the insole as worn as little as possible, if the customer's complaint as to "not being able to wear the boots since they have been repaired" is not desired.

Attention to such matters as these, in addition to the remarks I have made as to looking out for a bit of stitching, a button missing, or placing in an eyelet or hook, will greatly help the repairer to solve the problem of dissatisfied customers.—*Boot and Shoe Trades Journal, London.*

What Village Offers Business Man That City Does Not

Presents More Profit, More Contentment and More Possibilities—There is Room in Practically Every Small Centre for Live Man to Buy an Undeveloped Business and Build It Up to Something Big

Experience in a city store is good for the man who is to run a village store, but only as an incident. There is no store education that will help quite so much to teach what the village needs and what it will do for a man as that to be secured right in the village store. The city store experience is desirable as a little variation to broaden the mind and show a fellow that the village is not all there is of it, though as a matter of fact, the village people are usually more broad-minded and less provincial than the average inhabitant of the city.

Why Choose a Country Store?

The outsider takes no account of the goods that become dead stock or those that are sold for just about first cost, nor does he take account of the expenses of selling the goods, expenses which are many times higher in the city than in the village. Not only does it cost the proprietor a bigger salary to live in the city, but it costs his clerks more to live and they must have higher wages, and this condition is not improved by the necessity for selling the goods at a similar profit on account of the more strenuous competition.

To buy for 75 cents and sell for \$1.00 looks to the observer like 25-cent profit. To most merchants it looks like running mighty close to the wind, and as a rule it is running altogether too close. Not many small stores can be conducted profitably on a gross profit of only 25 per cent.

There is no such thing as a place where a merchant will have no competition. There is such a thing though as a place where, if he is a man of brains and ingenuity, he can place himself above competition, can study business methods until he knows so much better than the other fellow how a store ought to be run that he has that other fellow continually on the hip.

It is in the village that the young man has a chance to beat all his competitors to a frazzle. It is in the village that only one or two or three are first-class business men, and it is in the city that one finds a hundred or a thousand good business men, and an indefinite number of cut-throat merchants who will resort to any kind of means to gain a temporary advantage, slashing off profits with a reckless disregard for the impossibility of building up in a year what has been so completely torn down by one advertisement.

More Profit in the Village

The man who thinks that it will not pay him to go into business in a village because there is not business enough there, simply is ignorant of the actual conditions. It may be that he could not get enough of that business to make it profitable, but in a village of 2,000 there are 2,000 people right there to buy from him, and there is a surrounding country that will have an available population of from 5,000 to 50,000 whom he can reach by advertising and possibly induce to buy from him. The man who has success written in his head will not lack for people to buy goods from him in the smallest village, and the man without it could not make a success of the only shoe store in Indianapolis or Olds, Alberta; Golden, B.C.; Waterproof, La.; Overall, W. Va.; Oshkosh, Tuscaloosa, or Medicine Hat. The man is the thing. And the average man will find that his mental equipment has a higher proportionate value in the village than in the city.

You are in direct competition with the best in your town or city, however large or small it may be. It should require no exceptional discernment to see that those who have risen to be the best among a hundred thousand must be better than those who have just made first place in a field of one thousand. Which would you rather have as competitors?

He can succeed. He can build up a business just as big as he has the ability to handle. The size of his business will infallibly be the measure of his ability. In the city that is not true. His ability may be handicapped by a thousand influences entirely outside of his control and not at work at all potently in a village.

No Limit to Village Business

There is no limit to the success possible for a village business. There are instances where in villages of some 500 inhabitants, and that's a pretty small village, stores have been started that have reached an annual turn-over in six figures.

I know of a modest drug store in a village of 1,900 that has cash receipts of \$20,000 per annum. That's a good business for a country drug store with the accompanying low operating expense.

The village shoe retailer with \$20,000 gross receipts may net himself an income of from two to four thousand dollars.

The one thing that has opened the way to the village mercantile success is the development of advertising. In the old days when a man could do no more business than he could extract from the people who might pass his door, there was no such thing as a big village success, and mighty few other big successes.

Now the trade of the world is open to any man who has a little capital and something to sell.

Must Advertise More

In a city a man wins by just one method—advertising ability. In the village every talent he has may be brought to his aid. Is he a good mixer? Then he will make friends who will patronize him and send their acquaintances to his store, even if he were the poorest of advertisers, and I can show you to-day cases where men whose advertising was practically worthless have developed a trade that gave them a good living just by using their personality to that end.

Another man may be a musician and interest in him people of like tastes, or he may be popular in some fraternal order and have all his fellow members working for him. And this does not mean that a man can succeed in any line by neglecting his business for outside interests. The one rule that all merchants must follow until the business has got its growth, is that the proprietor's presence in the store is an absolute necessity just as much as he can be there without imperiling his health.

Of course there are villages that have their business opportunities so well developed that there is little chance for any great new success, but such villages are scarce. There is room in practically any small town for a live man to buy one of the undeveloped stores and build it up to something big.

Keeping From Bankruptcy

There is every reason to believe that it is not the most ambitious man who enjoys life the most. To be successful

in one line and to make a comfortable living at it; that is success enough for most men.

The ambitious man for whom such a success is not enough may branch out, either developing a few lines in a way that shall bring him much business from all available territory, or he may add line after line of goods until he covers many needs of few people, rather than few needs of many people.

In the village all forms of advertising are available for the smallest dealer. The local newspapers are generally issued weekly and all the inhabitants are within reach of distribution either by mail or by messenger. In the city the small retailer is badly handicapped in his desires to advertise. The daily papers are beyond his means and they have too much waste circulation anyway. He has no good mailing list of possible patrons and it is difficult to secure a valuable list. Anyway direct by mail advertising in the city does not get much attention unless from one of the biggest stores. Even the lowly dodger is forbidden by the municipal authorities in many cities.

The small but lively and growing village is the place for the merchant who wants a successful and money-making career. There his business is safely and economically conducted and there he has a standing that is something more than that of a mere atom in the huge conglomerate mass of a city population.

If he proves later to be fit for the big success in the big city, his smaller success will be only the logical stepping stone to the greater. In the village a man may sooner become independent and may sooner be a factor in the community life. It is easier to be somebody there. It is better to be a big toad in a little puddle than a tadpole in a pond.—Frank Farrington, in the Business Philosopher.

Enters Upon New Position

H. B. Pollock, who left this week for Montreal, to assume the duties of purchasing agent for the Ames-Holden-McCready Co.'s factories, is a widely known Toronto shoeman, having recently been Canadian manager for the Regal Shoe Co. For many years previous to the sale of the Sovereign Shoe Co. to the Regal Shoe Co., Mr. Pollock was manager of the former concern, and after the transfer, went to the American factories of the Regal Company, to thoroughly familiarize himself with the Regal systems of purchasing, production and operation. The sound character of his work is evidenced by the success that at once attended the Regal Shoe Co.'s entrance into the Canadian field, which was watched very closely by many American manufacturers, who thought that the venture would not be a remunerative one. It is however, a very widely known fact, that the Regal Shoe Co.'s move has proved a decided success from the start, and to Mr. Pollock's business ability and knowledge of the details of the requirements of the Canadian trade, based on an experience of 25 years in London, Aylmer and Toronto, must be ascribed a fair share of the honor. Many friends will wish him every success in his new and responsible connection with Ames-Holden-McCready, Limited, whose purchases of supplies for their three large plants involve, it is understood, an expenditure of several million dollars annually. The total capacity of the firm is 10,000 pairs of shoes a day.

Be More Specific When Ordering

"If shoe retailers in sorting orders do not receive what they want, it is largely their own fault," remarked a representative of a leading rubber firm the other day. "I wish that you could see some of the orders that come into the

warehouse here. You would think that we were mind readers. Here is one for so many pairs of boys' blucher bals, men's blucher bals and girls' white lacrosse shoes, but in the latter case, the dealer does not say whether he wants oxfords or bals. Here is another order for men's rubbers in which the style of toe is given but no mention made of the brand. Now, how are we to know whether this party wants first or second quality. If we ship him first quality he is liable to kick and say he wanted second quality and vice versa. Often we receive letters to ship men's clogs and no sizes are given, only the number of pairs required being mentioned. It is time that the dealers in many parts of the country wakened up and were more specific in stating their wants. They would then have less cause for fault finding and fewer loop holes would be allowed for errors. It would be well for all retailers to use their catalogues more and, when sending in a sorting order, give the stock number and style of toe, state whether they want first or second quality, and stipulate the sizes desired. It is enough to make a shipper tear his hair out to interpret the wants of certain men in the rubber and sporting goods line and if customers would exercise greater care their relations with the warehouse would be infinitely more satisfactory."

Shoeman Retires From Politics

At the last regular meeting of the Maisonneuve City Council, Alderman Oscar Dufresne announced his intention of retiring, owing to the pressure of his other duties. His resignation caused extreme regret to his fellow councillors,

as he has been one of the most active workers in the interests of the prosperous city which adjoins the extreme eastern section of Montreal, and has won the reputation of being controlled by one of the most efficient and go-ahead municipal bodies in Canada.

Aside from his position of Alderman, Mr. Dufresne has served as Chairman of the Finance Committee

Mr. Dufresne is well known to shoemen all over the country, as he is connected with the firm of Dufresne & Locke, Maisonneuve, and has had an interesting and progressive career. Starting as an office boy in Caverhill, Hughes & Co., in 1889, he rose rapidly, and in 1891 went with the firm of Bourgouin & Duchesneau, as cashier. He launched into the shoe manufacturing business, which he has followed for many years, in company with Ralph Locke with great success.

How Much Net Profit Does Each Dollar Taken in Yield

Frequency of Turnover is What Counts in the Shoe Business To-day—One Man Thought Gross Margin of Dollar a Pair Would See Him Through all Right—Having New Goods Shipped in Small Lots is the Plan of Another Retailer.

Ninety cents out of every dollar, if not more, that goes into the cash register or till of a shoe retailer, goes out again. It has to be expended for goods of one kind or another. It has also to be expended in wages, light, taxes, heat, insurance, freight and other incidentals of business. Where many retailers make a mistake, is that they do not know what percentage of their turnover it costs them to do business. Some say 15% and some 20%, and some 23%, etc., but as the volume which a shoeman does each year differs materially, he will find that his percentage of cost in doing business also differs to a considerable degree. For instance, it may cost a man 21% to do a \$10,000 business a year, whereas, if he turned his stock over more frequently, and had modern facilities, he might be able to do a \$15,000 business on 16%.

How Profit is Secured

As a matter of fact, it all depends upon the bulk of his trade as well as frequency of stock turnover. Consequently, many dealers to-day are not making the money they should, for they are loaded up with dead lines, and stock which is not moving, is exactly in the same position as idle capital. A working dollar does more good than half a dozen locked up in a safe and a shoe that works, or in other words, sells, effects more profit in the course of a year, than a whole case full that are stickers.

The trouble with most retailers to-day is that they carry too large a stock or rather, stock that is not of the right kind. There are men in all parts of Canada, carrying ten or twelve thousand dollars in shoe stocks whereas their total income or receipts, is not much more than twelve or fifteen thousand. There appear to be many more who are turning stock over once or once and a half than those who are turning it at least three times, and the men who are doing the latter, are the ones who are making the money.

The old retailer has an advantage over the beginner in this respect, as he should know by years of experience, the class of shoes that his customers want. He is or should be able to meet their requirements to a nicety by careful and judicious buying, whereas the fellow starting business, has to a certain extent, to build up his trade and to find out by experiment and insight, the needs of a community and the tastes of the people.

Tried an Interesting Experiment

Some time ago a bright shoeman conceived the idea that it would be a fine thing to put a flat profit on a shoe, of \$1.00 per pair, and to never vary from this amount, whether the shoe sold at \$3 or whether it retailed at \$6.00. He thought this would cover everything and he estimated that his expenses for doing business were \$5,000 a year, which meant that he would have to sell 5,000 pairs of shoes before making any money. If he sold 6,000 pairs, he would be making \$1,000 clear, and if he disposed of 7,000 pairs having a dollar profit on each pair, he would be making \$2,000, etc. The only trouble with this scheme is that trade varies. The demand of the people either slackens or increases, and there is no fixed volume which a retailer can do from year to year, to enable him to adopt a flat rate of \$1.00 a pair profit, and to know definitely the expenses of doing business.

This might work out very well, if a shoeman could foretell how many pairs he would sell. But, of course, it is impossible for him to estimate correctly.

There is a crop failure, an industry in his town shuts down, a new man starts up across the street, an European

war breaks out or some other cause disturbs local trade conditions and causes a decided slump. The result is that a man's overhead charges, with possibly the single exception of clerk hire, remain the same, but the number of pairs that he can dispose of varies and he discovers that his flat profit of \$1.00 a pair has been knocked all askew.

That is the reason why all progressive merchants figure percentage on the selling price, because on all monies taken in they have a definite profit which, of course, in the aggregate, is proportionate to the business done. Then, again, it is the fairest way to the customer. Why should a man buying a \$3.00 shoe (who possibly has to count every dollar, before undertaking any expenditure), pay a flat profit of \$1.00, whereas the man buying a \$7.00 shoe (who is much better able financially, to hand out that sum), yields only the same margin. In this world it is a generally accepted thing that the higher price an article is, the greater percentage of profit, and if a dealer retailing shoes at a flat margin of \$1.00 can make as much on a cheap line as on a costlier range, why he certainly should confine his efforts to the cheaper grade, for he would not have to invest nearly as much capital; but on the other hand he would lose a lot of customers of the better class, who, in the end, are the most profitable and satisfactory to deal with, for the simple reason that they have money, and buy quality goods. The one dollar flat profit would not work out for several reasons.

The Baker and the Shoe Dealer

In the first place, if a shoe dealer were like the average baker (who knows each day how many thousand loaves his customers will demand, or take) he could get along at a much less profit. The baker is able to make his money by a rapid turnover and although his percentage is very small, still he knows to a definite degree, just how many loaves people will buy each day. Any bread manufacturer will tell you that he can so grade his product that he has very few loaves over, but with a shoe business, it is altogether different. It has certain good selling seasons, while at other times, it is decidedly flat. He has to carry a reserve stock; the baker manufactures each day what he sells. There is no regular systematic, unvarying demand in footwear, therefore, higher profits have to be obtained, and no flat rate of profit can be definitely established.

Here is a suggestion for a man who wants to turn over his stock quickly and to have new goods all the time. A certain retailer told the *SHOE AND LEATHER JOURNAL* that when he ordered 90 pairs of a certain line from such and such a factory for spring, he would have them come in three different shipments of thirty pair lots. Thus he was enabled to have fresh goods all the time—whereas, if he got the whole 90 pairs in at once, he would have to place part of them in his stock room and pay for the whole lot when the draft was presented, although only a few pairs might be sold. Asked if the extra freight did not more than counterbalance any advantage of having the goods shipped in small consignments, he said: "No, because the room taken up in the store, the insurance and the handling would amount to a great deal more than the small sum for extra freight or express, and then," he declared, "we have new goods coming in all the time. Suppose we got in all these 90 pairs at once. In three or four months the clerks would think they were old goods, whereas, when they come in periodically we are able to place them on the shelves at the time, do not have them stored away in the stock room, and there is the enthusiasm and pleasure in selling, which new goods always engender."

Is the Way Being Paved for the Return of Lace Shoes?

A Few of the Best Shops Are Showing Some Extreme High Cuts with Short Vamps for Exclusive Trade—Models Seen With Patent Forepart and White Calf Quarters—Covered Heels to Match—Popularity of Fawn and Grey in Fabrics.

Will the pendulum of fashion slowly swing back to the lace shoe? This is a question now uppermost in the minds of some leading retailers. A few of the best shops in Montreal, Toronto, Winnipeg, and other leading Canadian cities are showing lace boots for women, but they are for exclusive trade and the price ranges from seven to nine dollars a pair and even higher.

Fawn and various shades of grey are the prevailing colors at present and the quarters are all cloth, while the heels which are Cuban-Louis and Louis are built of leather in some instances, but for the most part the pedestals are of wood, covered with the same material as is used in the quarters. The vamps are very short, from one and a half to two inches

$2\frac{1}{4}$ inch vamp, French stage last and $2\frac{1}{2}$ inch full Louis wood, white half covered heel, with white laces. A feature of this boot was a narrow strip of patent leather extending from the vamp to the top on either side of the eyelets, forming a pleasing stay effect.

"These boots are being made and sold in patent with light shades of grey and fawn for the topping."

Speculation Regarding the Future

"The trouble with the lace boot proposition, which is really the very latest fad," remarked a Rochester shoe manufacturer, "is that it is apt to be taken up by the makers of popular-priced boots and put into medium price lines

SOME OF THE LATEST SHOWINGS IN HIGH CLASS LACE SHOES.

on stage lasts and the tops are cut very high, from twelve to eighteen inches, some with hussar effect, others with wave and more slant.

Most of the models displayed have a double lace stay of patent leather extending up the quarter just outside the eyelet row and they also have collars of the same material. Retailers in New York City, Chicago, Boston and other big footwear centres, who cater to the highest class trade, have been showing these shoes for some time and shoe manufacturers are watching the effect with considerable concern. It is said that there is a growing call for lace boots in the Pacific Coast cities. Two or three Canadian manufacturers are showing a few extremely high cuts in their samples for late spring. The button boot has gained tremendous popularity, however, and it will be hard to replace. The only reason for the introduction of the lace shoe is that certain persons want something modish and distinctive before everybody has it.

Some lace styles are being exhibited in black and white which are seen to advantage in walking, as women are wearing shorter skirts. At present the gaiter boot with fawn and grey quarters is exceptionally popular with milady in the larger Canadian cities.

Speaking of the trend of fashion, the Rochester correspondent of the Shoe Retailer says, "I have seen the lace boots in white calf quarter with 17 eyelets, and patent colt

The lace boot to-day is strictly a high grade proposition and I do not believe for one minute that the average dealer should touch them, even for his best trade. Only in very large cities and wintering resorts is this new style of boot being sold, and to people who can pay fancy prices. Of course, it is apt to pave the way for the return of lace boots, but it will be a number of seasons before the button boot is relegated to the rear, if it can be done at all.

"It is not long ago that button shoes were not worn by women at all, yet years ago they were popular and only went out when the lace shoe came back into style. It is argued by some, and doubtless the point is well taken, that button boots have become common, and that the exclusive set want something new. Surely there could be nothing more radical than the departure from medium cut button boots to the high grade, beautiful lace boots of patent and cloth."

The lace shoes illustrated on this page are reproduced from the Shoe Retailer, and are being shown in New York city. The one on the left is a new blucher lace boot, with patent vamp, patent lace stay and collar, tannish brown buck top, with black eyelets and black laces, spanish-Louis black heel.

In the centre is a custom made tan high lace boot, light tan colored box cloth top, tan lace stay and collar, perforated and pinked vamp and heel foxing and tip

which converges to a point and extends well up to the vamp.

On the right is a new patent leather lace model, grey suede top, patent lace stay and collar, slashed vamp and foxing with underlay of grey suede, black enamel Spanish-Louis wood heel, white stitched vamp.

The Popularity of Fabrics

According to another writer in the same journal fabrics are likely to continue in their general acceptance with the trade and a new color has come out in brown shade which is known as "nigger" brown, as it is very dark. One of the interesting developments in connection with the larger use of fabrics in shoe uppers is its influence upon styles. The wide range of color possibilities permit of many beautiful effects, while at the same time economy of manufacture, of prompt delivery, or both, encourages the manufacturer to make a larger use of fabrics. Looking over the advertisements of manufacturers in trade journals to-day, and noting the illustrations of shoes, particularly women's styles, one cannot fail to be impressed with the trend towards fabrics, or note distinctive styles of patterns especially designed for the purpose.

The sales of fabric materials, however, do show a consensus of the whole trade as reflected by the purchases of the shoe manufacturers, which, in turn, reflect their sales to retailers. Viewing the matter on this basis, it is reported that the most popular colors are: Grey in three shades—pearl, mouse and taupe. Fawn is also a popular seller in several shades, running from light to dark. A new very dark brown shade, the brown popularly called "nigger" brown, is also meeting with favor. Then there are the oxford greys and plain blacks. These different colors come in both corkscrew and smooth faced goods, though it is said that the smooth-faced goods have the call. Still corkscrew appears to have won a permanent place.

Newsy Briefs From Quebec

Thomas Voyer, shoe dealer, has assigned. The liabilities are reported to be about fifteen thousand dollars, with assets of the same amount.

Shoe manufacturers report that goat skins have advanced in price and that they are exceptionally hard to secure, especially in the cheaper grades.

The equipment in the premises of F. W. McKeen has been removed by the United Shoe Machinery Co. and shipped back to the factory of the company at Maisonneuve.

The new firm of Legace & Lepinay, which started making boys' and youths' shoes, have branched out into men's lines. They are running to capacity and have orders ahead sufficient to keep them busy for the next two months.

The roof on the fine new factory of Tourigny & Marois, located on St. Valier street, is now finished and the workmen are busy on the interior. The firm expect to occupy their commodious and up to date new premises in a month's time.

A large deputation headed by Herbert Gale, President of the Quebec Shoe Manufacturers' Association, and Messrs. Langlois, Marsh, Warrington, Goulet, Stobo, Lamontagne, Scott, Routier and others, recently waited upon Hon. T. C. Casgrain, Postmaster-General, at Ottawa, in regard to contracts which may be given out for footwear needed by the Canadian contingent and the armies of the allied nations. They asked that they be not overlooked when additional contracts are awarded. The members of the deputation were given a very favorable reception and Mr. Casgrain promised to take the matter up with Sir George E. Foster, the Minister of Trade and Commerce, and see that the Quebec manufacturers received their fair share of future contracts.

The repairs to the building of Marier & Trudel, shoe manufacturers, Quebec, which was visited by a serious fire in September last, are now completed. The cutters have started work again and the other departments of the factory will soon be in operation. The firm are busy on samples.

The military shoe, which was accepted by the French government for army purposes, was a sample from the factory of J. M. Stobo, being drafted and designed by George Belanger, foreman of the cutting room. There were six other samples sent by different firms, and now the order received from the French government amounts to three hundred thousand pairs, totaling in value one million dollars. All the factories will be kept very busy filling the large military order. The shoes will have Hungarian nails in the heel and hob nails on the sole.

A serious fire visited the large factory of Gale Bros. a few days ago, breaking out in the basement. The flames rapidly ate their way up through the office above, and then through the stitching and cutting rooms. The fire broke out in the morning. E. A. Parant, accountant, was the first to give the alarm and soon successive signals brought the entire fighting force of the city department to the scene. Many streams were thrown on the devouring element and tons of water poured into the front portion of the building on St. Valier street. There was great excitement among the employes, particularly among the girls in the stitching room on the third floor, but all were got out safely by the back stairway on St. Helene street, escape by the front stairway being cut off. The making, lasting and treeing departments escaped serious damage, the havoc being confined principally to the office, the cutting and stitching rooms. Gale Bros. soon had a force of men at work making repairs which are now completed. Four of the departments are again in operation and the cutting room began working this week. The fire valuers valued the loss at \$27,000, which Gale Bros. hope will be a sufficient sum to cover their losses.

His Fur Overcoat Led to Arrest

A recent despatch from Chicago, says: Albert T. Wise received an express package yesterday at his rooms at 2156 Alice place. He opened it and found what he wanted. It was his last winter's fur overcoat, which he had written to his home in Toronto to have forwarded to him. Mr. Wise was shaking the moth ball odor from the garment when a man entered the room.

"Is that your coat?" said the man.

"It is," said Wise.

"Here's your man," said the spokesman, stepping aside and permitting two United States deputy marshals to enter the room.

Wise was placed under arrest on a charge of contempt of court in connection with the alleged violation of a San Francisco injunction which enjoined him from selling a certain kind of wire used in machines of the Elliott Machine Company of Grand Rapids, Mich. Detectives started back to San Francisco with him last night.

Trace of Wise was gained through espionage of his home in Toronto. When the winter overcoat was shipped to the Chicago address an operative of the Pinkerton agency accompanied it.

The Elliott Machine Co. supply machines free to shoe manufacturers on condition that their wire is used. It appears Wise was selling wire on his own hook at a price much under that charged by the Elliott Co. in Canada and the United States. L. H. Packard & Co., Montreal, are the Canadian agents of the company.

Open Out in Fine New Store

Richardson's Limited, have opened in fine new premises at 216 Eighth Avenue West, Calgary, and possess one of the brightest and most attractive footwear homes in the West. P. Richardson, who has had several years' experience, has been appointed manager. The location of the Richardson's new shop is central and it contains some 1,560 square feet. The shelving for the stocks is painted white, and the dark mahogany fixtures stand out from this background in pleasing detail. At intervals on the wall on each side of the store large mirrors are placed. They are set in mahogany frames. One of the features of the store is the ladies' rest room in the large balcony at the back. This rest room is at the disposal of the ladies of the city who may meet each other and rest there during their busy shopping hours. The windows of the new establishment deserve more than a passing mention. They are of the new style, double-decked, with large plate glass shelves. This, combined with a tasty background, makes a very pleasing effect. The store is lighted with a pleasing indirect method which gives the shop a cosy appearance. As a finishing touch, a number of fine palms have been placed on the top of the stock shelves.

Dearer Sole Leather and Shoe Laces

Toronto jobbing houses this week advanced the price of sole leather by one cent. Hemlock side leather No. 1, ten sides or more, is now selling at 39 cents, and in less than ten sides 40 cents. No. 2, ten sides or more, is quoted at 38 cents, and in less than ten sides at 39 cents, for jobbing. There is a heavy foreign demand for sole leather, and it is expected that tap soles may be advanced in the near future. The amount of leather entering into military harness, saddles, boots and accoutrements is making a heavy drain on the market supply.

There has also been an advance in full waterproof chrome side leather of about a cent and a half, black being quoted at thirty cents and colored at thirty-two cents.

Most of the leather laces, sold by Canadian findings houses, have been imported from Great Britain, but all dealers have withdrawn quotations and no leather can be exported from the Old Country owing to a recent government decree. Local stocks of leather laces have run very low and prices have advanced from \$2.50 to \$3.50 per gross and will go still higher. Mohair laces will have to be used entirely if the war keeps up. These have been obtained from Belgium but the factories in that country are shut down owing to hostilities. Prices have gone up fully twenty-five per cent. The large shipments of horses to the Old Country from Canada have taken a large quantity of leather for saddles and horse hair for shoe brushes is also much in demand. The price of hair and bristle brushes has in many cases jumped thirty per cent, and the only kind that are selling at the old figure are cheap fibre brushes.

Speaking of the leather market in Great Britain, Fred Dane, Canadian Trade Commissioner, Glasgow, in a recent report says: The scare of two months ago is now a thing of the past, and a steady amount of business is being put through. Prices are higher, but this is not preventing trade. Tanners are naturally in a very strong position. All classes of heavy leather are in exceptional demand owing largely to the military requirements. Makers of boots suitable for military purposes are said to be refusing orders, the pressure is so great. The demand for heavy leather has affected the medium and lighter weights. All descriptions of heavy bends are in active demand, and high prices are being paid. Medium weights, too, are selling freely, as a certain number of heavy soles can be obtained from them. As light averages have been scarce for some time, the prices for them are extremely firm. Bellies are somewhat scarce, and are

in demand at advanced prices. There is a fairly steady demand for dressing and shaved hides, and prices have advanced. Waxed kip butts are higher in price than ever. The supplies are short and it is generally thought they will be even more so before the new lots are ready.

Regarding the suggested embargo on Canadian hides, a leading sole leather firm writes the *SHOE AND LEATHER JOURNAL* as follows:—"We see no reason whatever for placing an embargo on hides and skins leaving Canada, and we think it would be poor policy to do so. The American Government placed an embargo on their hides being moved at all, owing to the foot and mouth disease, which is prevalent in a good many states. They, however, are making arrangements to remove this embargo under certain conditions."

Big Slipper Firm is Busy

In a personal letter to Mr. James Acton, the President of the Acton Publishing Company, Limited, Mr. Oliver Eatough, Managing Director of Sir H. W. Trickett Limited, says: "I was disappointed in not being able to see you all in Canada this season, but you know the circumstances which were the cause of my having to cancel that arrangement. I am glad to say we are keeping very busy, and have been so, all along the line. We are experiencing great difficulty as regards supplies of sole leather; and not only leather, but other materials such as felts and similar fabrics are still advancing. Seeing that our trade is such that we have to have the orders four to six months ahead,

OLIVER EATOUGH, MANAGING DIRECTOR SIR H. W. TRICKETT, LIMITED

especially for Canada, Australia and South Africa, we are naturally in an awkward position, as leather merchants will not sell so far ahead, so that it is impossible to meet our requirements. Any advance we are asking on our goods is only what is required to make up the difference in cost of raw material.

"As to the war, if ever there was a war that was righteous this is one. For to my mind the principles of the 'Sermon on the Mount' are being carried out, even though the method is a very cruel one. But still the principle of the strong helping the weak is at the bottom, and I am proud, as I am sure you are, to be under the protection of the British flag. Our leaders did everything that lay in their power to bring peace, but the revelations that have come out since the war began have only proved that the

'Mad Mullah' of Europe, namely the Kaiser, was bent upon conquering the whole of Europe, and England in the bargain. To my mind there is no question as to the ultimate result of this war, because I believe it is a righteous one, for—

"Right is right since God is God,
And right the day must win;
To doubt would be disloyalty,
To falter would be sin."

How Easterners View Embargo

Will the present embargo on the importation of hides from any point in the United States, because of the foot and mouth disease prevailing among cattle in many States there, curtail the work of Fredericton's three large industries—The Hartt Boot and Shoe Company, The John Palmer Co., and The Palmer-McLellan Shoepack Company? This is a question that is not only worrying the large manufacturers but the leather trade in all parts of Canada, says a Fredericton despatch. As a result of this embargo the price of leather has already advanced 2 or 3 cents per pound in the past few days, and it is difficult to say what the future will bring forth.

Ald. John A. Reid, of the Hartt Boot and Shoe Company, said, something in the nature of an embargo had been expected by the shoe manufacturers and the Hartt Company were well supplied with leather for the immediate requirements. "We have been expecting this embargo for some time and are supplied for a time at least, but prices are going up and it is hard to say what will happen." The John Palmer Company and the Palmer-McLellan Shoepack Company may be hit as a result of the embargo, as they have imported a large portion of their hides from the United States. They don't anticipate, however, that their plants will suffer as the outcome of the embargo so far as can be seen at present.

Equipment For Boys at Front

In the list of contracts for army shoes which have been awarded by the Militia Department for the Canadian Overseas Forces, several shoe manufacturers in Ontario have shared in the contracts. Some of the factories have completed their orders while others have to make delivery early in December. The contracts have not been made public nor has any detailed list been given, but it is known that the following shoe firms in Ontario have been favored with orders for army boots and "rest shoes," the figure for the former being \$4 per pair, and for the latter, made of duck, \$2 per pair: Murray Shoe Co., London; Cook-Fitzgerald Co., London; John McPherson Co., Hamilton; Williams Shoe Co., Brampton; Valentine & Martin, Waterloo; E. T. Wright & Co., St. Thomas; Regal Shoe Co., Toronto; Relindo Shoe Co., Toronto; Brandon Shoe Co., Brantford; W. B. Hamilton Shoe Co., Toronto; Aylmer Shoe Co., Aylmer, and others.

Ottawa advices also give the following firms in connection with other contracts: Rubber sheets, of which 100,000 have been ordered, divided between the Gutta Percha and Rubber, and Dunlop Companies, Toronto; Canadian Rubber Company, Montreal, and Walpole of Granby. Price \$1.60; Overshoes, 100,000 pairs at \$2. Principal contractors—Kaufman Co., Berlin; Canadian Rubber Company, Montreal, and Gutta Percha and Rubber, Toronto.

An order for 300,000 pairs of soldiers' shoes has been given to the Quebec Boot and Shoe Manufacturers' Association by the French Government, through the Hon. L. P. Pelletier, representative of the Province of Quebec in Eng-

land. This news arrived last week when Herbert Gale, of Gale Brothers, chairman of the association received a cable containing the offer and the conditions of the contract. A meeting of all the manufacturers interested was held and it was decided to accept the offer, which will give \$1,000,000 to the Quebec shoe trade. The first 100,000 pairs will be delivered in France by the end of December, and the balance in January. It is rumored that the British War Office will also give a substantial order to the association, which includes twenty-five factories.

Two New Brunswick shoe manufacturing firms, the Hartt Boot and Shoe Co. of Fredericton, and the J. M. Humphrey Co., Limited, of St. John, are to share in the business arising from the equipment of the Canadian forces, and workmen are now busy turning out the orders for shoes which have been received. The Humphrey Co., of St. John, tendered for the manufacture of 3,000 pairs, and their tender was accepted with instructions to complete the order by December 15th, and the rate of 1,000 pairs each fifteen days, until 3,000 are finished. The demand for their regular lines is continuing so satisfactorily and business conditions are so encouraging, that it would not have been possible for the company to have accepted a larger order, and this was why their tender was for 3,000 pairs only.

Popular Shoe Traveler Weds

The marriage was celebrated at the home of the bride's parents, 459 MacKay street, in Montreal, on November 12th, of W. George Borland, son of late Wm. F. Borland and Mrs. Borland, to Miss Jessie Eveleigh, daughter of Mr. and Mrs. Joseph Eveleigh. Only the immediate relatives of the bride and groom were present. Mr. Borland, or "George"

as he is more familiarly known to his many friends, is very well known in the footwear trade. He is connected with Messrs. Jackson & Savage, Montreal, representing them in Quebec Province and Eastern Ontario. The family of the bride is also a prominent one in the shoe and leather world, her father being president of J. Eveleigh & Co., Limited, Montreal, trunk and bag manufacturers. To the East Mr. and Mrs. Borland left on their honeymoon. As a testimonial of their esteem for him, Mr. Borland's fellow workers presented him with a beautiful cabinet of cutlery along with a suitable address.

AMONG THE SHOE MEN.

The Klassy Boot Shop, Montreal, has assigned. H. C. Benson, shoe dealer, Queen street west, Toronto, has assigned.

G. Musselman, shoe retailer, of Preston, Ont., has made an assignment.

Richardson & Co., shoe dealers of Calgary, have sold out to the Jap Co.

A. S. Many & Co., shoe manufacturers of Montreal, have recently registered.

W. V. Mathews, of Ames-Holden-McCready, Limited, Montreal, was in Boston last week.

The Rena Footwear Co., Montreal, have installed some new machinery parts in their factory.

W. D. Wilbur has sold his shoe and grocery business at Delhi, to his father, W. H. Wilbur.

Tom Stedman, of the Stedman Shoe Co., Winnipeg, was in Toronto last week on business.

E. T. Wright & Co., Inc., Rockland, Mass., have increased their authorized capital to \$600,000.

J. S. Fraser, shoe dealer, of Pembroke, Ont., was in Toronto recently calling upon the trade.

John Shier, of Shier & Mullen, Cannington, Ont., was in Toronto recently on a visit to the trade.

H. R. Emery, of Blachford, Davies & Co., Limited, Toronto, was in Montreal last week on business.

O. H. Vogt, of the Great West Felt Co., Elmira, Ont., is on a business trip to Winnipeg and the west.

G. C. H. Lang, of the Lang Tanning Co., Berlin, recently visited Chicago and other American centres.

M. J. Wilson, of wholesale and retail harness firm of M. J. Wilson & Sons, Ottawa, passed away recently.

A. Levy, 260 Yonge street, Toronto, has returned from a visit to New York, Boston and other shoe centres.

P. I. Hersey, vice-president of the Regal Shoe Co., Boston, Mass., was in Toronto recently on business.

A demand of assignment has been made in the case of Percival & Graveline, shoe manufacturers, Montreal.

C. J. Fitzgerald, of the Cook-Fitzgerald Co., London, Ont., is spending a few days in New York and Baltimore.

R. B. Gravlin, of the White Shoe Co., Toronto, was a caller at several Montreal factories during the past week.

S. J. Grosch, of the Grosch Felt Shoe Company, Milverton, Ont., recently spent a few days in the west.

J. A. Matheson, of Beardmore & Co., leather manufacturers, Toronto, is on a business trip to the Old Country.

C. Gourlay, of Gourlay & Fogelberg, Limited, shoe manufacturers, Berlin, was in Toronto last week on business.

The Perth Shoe Company, of Perth, has received an order for 2,500 pairs of men's boots for the Militia Department.

J. W. Baldwin, shoe dealer, of Sault Ste. Marie, Ont., was in Toronto last week calling upon the members of the trade.

E. P. Mullarkey, of the Wm. A. Marsh Co., Quebec, has returned from a business visit to Boston and other shoe centres.

McManus & Co., shoe dealers, 456-458 Queen street, Fredericton, N.B., have sold out their business to Arthur V. Rowan, who will continue it under the same name. The

members of the late firm have gone to San Diego Cal., to reside.

Frank Perry, representing Hoag & Walden, Lynn, Mass., was in Toronto last week showing a fine range of samples.

H. L. Daville, Boston representative of C. Parsons & Son, leather dealers, Toronto, spent a few days in Toronto recently.

James T. Sutherland, of Kingston, representing the Cook, Fitzgerald Co., London, was in Toronto last week on business.

S. G. Amero, manager of the London branch of the Kaufman Rubber Co., Berlin, was in Toronto last week on business.

Jas. Muir, Jr., of the Jas. Muir Mfg. Co. Maisonneuve, Que., has been on an extended business trip to various points in the West.

Clayton Hurlbut, of the Hurlbut Co. shoe manufacturers, Preston, Ont., has returned from a business trip to Boston and other cities.

T. J. Mooney, formerly with Ames-Holden-McCready, Limited, Montreal, has accepted a position with the James Muir Co., Maisonneuve.

J. B. Keany, formerly with the Slater Shoe Co., Montreal, is now foreman of the sole leather room of H. Jacob & Sons, Norwalk, Conn.

J. Schwartz, of L. B. Wasserstrom, leather dealer, New York City, was in Toronto, London, and other cities last week on purchasing expedition.

Howard C. Blachford, of the firm of H. and C. Blachford, Toronto, is spending a few days among the shoe centres of the New England states.

George Stockand is opening a new shoe store in Edmonton at the corner of First and Jasper avenue, which will be up to date in every particular.

Bert Packard, of L. H. Packard & Co., Montreal, has returned from a visit to the larger American cities, including Boston, New York and Philadelphia.

S. H. Parker, of the Solid Leather Shoe Co., Preston, Ont., was in Toronto last week on business and reports that his firm are very busy working full time.

J. J. Connor, Western Canada representative of McLaren & Dallas, Toronto, has returned from an extended business trip through the prairie provinces.

The U.S.M. Co. recently installed one of their new six-foot shoe repair outfits in the establishment of Gustave Groesenek, 13 Hickson street, Verdun, Que.

E. D. Pretty, of the Blachford Shoe Manufacturing Co., Toronto, has returned from an extended business trip in Northern Ontario in the interest of the firm.

Frank B. Dunlap, Sydney Mines, C.B., has installed in his establishment, through the U.S.M. Co. of Canada, a 16-foot Goodyear Shoe repair outfit, model "N."

The shoe factory owned and operated by Trimble Bros., of Calais, Me., was destroyed by fire a few days ago with a loss of \$33,000. Partial insurance was carried.

Supplementary letters patented have been issued, changing the name of Wm. A. Marsh Co., Western Limited, Winnipeg, to that of Congdon, Marsh, Limited. Arthur

Congdon is at the head of the new firm, while A. N. Douglas is associated with him.

J. C. Breithaupt, of the Breithaupt Leather Co., Berlin, Ont., was a visitor at the Chemists' and Tanners' Convention held in Chicago, October 28, 29, 30 and 31st.

The U.S.M. Co. have installed one of their model "N" six-foot Goodyear shoe outfits in the repair shop of Archille Tremblay, 605A St. Valier street, Montreal.

Miss Crocker, who has been stitching forelady at the factory of E. T. Wright & Co., St. Thomas, Ont., has taken a position with the Alberta Shoe Co., of Redcliffe, Alta.

F. Gauvreau, formerly foreman of the packing room of F. W. McKeen, Quebec, has been appointed manager of the Plessisville Shoe and Leather Co., Plessisville, Que.

The Red Star Shoe Hospital is the new name of what was formerly the Red Cross Shoe Hospital, 105 Garnier street, Montreal. Additional machinery has been installed recently.

G. J. Scott, western representative of the P. Jacobi shoe store supplies, Toronto, has returned from a successful business trip covering all the western provinces, as far as the Coast.

Several U.S.M. Co. agents have been spending their time during the past two weeks setting up and starting the new machinery equipment of the Drummond Shoe, Limited, Drummondville, Que.

Wm. Niehaus, one of the oldest residents of Berlin, passed away recently in his 83rd year, having resided in Berlin for 52 years. In 1863 he opened a shoe store, which he conducted for a long period.

The U.S.M. Co. of Canada have recently sent out a new six-foot buffing and finishing outfit, which they state is filling a long felt want in the repair trade. They have received many orders for same.

Rosecrans Murphy, of Chicago, who represents the Julian & Konkenge line of Cincinnati, Ohio, was in Toronto, Ottawa, Hamilton and other cities last week on his return from a business trip to the west.

The Regal Shoe Co., Toronto, have filled a large order for army boots for the Canadian forces and also secured

ANOTHER SHOEMAN AT THE FRONT

Captain Geo. H. Wilkinson, who is a widely known shoe retailer of Windsor, Ont., where he has conducted a most successful business for the last thirteen years, is at present

with the Canadian volunteers in England. Captain Wilkinson has always taken a deep interest in military matters, and when the call of the country came, was one of the first who volunteered. His store is doing "business as usual."

a contract from the Government for furnishing five thousand canvas "rest shoes."

E. G. McColough, a well known shoe man of St. John, N.B., who for a number of years carried on business in North Sydney, was in that city recently in the interest of a Montreal shoe manufacturing firm.

E. Many, Goodyear agent of the United Shoe Machinery Co. of Canada, is at present looking after installations in the factories of J. M. Humphrey & Co., St. John, N.B., and Hartt Boot and Shoe Co., Fredericton, N.B.

Frank Mercer, western representative of the Brandon Shoe Co. Brantford, has returned from his Western Canada selling trip, and is now spending a few weeks in Cuba, where he is interested in a large grape fruit plantation.

Mons Tonbourn, while working at the picking machine in the Elmira Felt Co.'s plant, at Elmira, Ont., in some way was caught by a shaft and whirled against the machine, fracturing his skull and breaking his jaw. His recovery is doubtful.

The biggest demand in a dress shoe to-day is for patent leather boots, with either gray or fawn tops. A demand is being made for boots with "nigger-brown" cloth uppers. Some shops are showing lace boots, having tops from eight to ten inches.

The City Council of Windsor, Ont., have passed a By-law fixing the closing hour for all stores except fruit stores, druggists, tobacconists and restaurants, at 7 p.m. on all days except Saturdays, day before a holiday and two weeks before Christmas.

E. T. Wright, head of the E. T. Wright Shoe Co., Rockland, Mass., recently lost his father. Mr. Wright was 89 years of age and had retired from active business for some time. When young he worked at the shoe trade and knew the business thoroughly.

Chas. Cook, Jr., formerly superintendent and assistant manager of the Baker-Carpenter Co., of Portsmouth N.H., has accepted a position as assistant superintendent of Ames-Holden-McCreedy, Limited, No. 1 factory, Montreal. Mr. Cook has assumed his position.

Lt. K. D. Marlatt, of the 9th Mississauga Horse, who is identified with the leather firm of Marlatt & Armstrong, Limited, Oakville, has secured a commission in the Mounted Rifle Regiment under Lt.-Col. Chadwick which corps is holding itself in readiness to go to the front.

James C. Bryant, who recently joined the staff of the Toronto branch of the Kaufman Rubber Co., was presented with a handsome club bag and appreciative address by the staff of F. J. Weston & Sons, Toronto, with which house he was identified nine years as city traveler.

W. E. Short and W. R. Percival, western representatives of the Kingsbury Footwear Co., Montreal, have returned to that city. Both Messrs. Short and Percival experienced very successful seasons although they found business difficult to secure early in August just after war had been declared.

An aggravated assault was committed on C. Occhionero, shoemaker, 579 Fullum street, Montreal, when a man named John Codir, entered the shop and demanded money, which was refused. The caller then picked up a bludgeon, struck the shoemaker over the head and left him lying unconscious on the floor. The assailant was arrested.

Among the business visitors to Toronto last week were Raoul Lanthier, of the Kingsbury Footwear Co., Montreal; Norman MacFarlane, of the MacFarlane Shoe Co., Montreal; F. L. Wagner, of the Aylmer Shoe Co., Aylmer, Ont.; John Adams, of the Murray Shoe Co., London; Philip Pockock of the London Shoe Co., London, and others.

J. and J. Clarke, of Galt, who conduct a number of shoe repair shops in that town, have branched out into the manu-

facture of misses' and children's shoes in McKay and nailed work, having installed a complete outfit in the premises at 34 Water street south, formerly occupied by the Follows Shoe Co., who have ceased business. They will make for their various stores.

Jas. Brown and J. P. Mitchell, travelers for the Alberta Shoe Mfg. Co., Redcliff, Alta., who have been over their representative territories, report that business is very good, and that customers are well pleased with the output of the firm. Several skilled hands have arrived from the East to take positions in the factory, while E. T. Weaver has been engaged as foreman of the bottoming room.

Thomas Kickham, who has for many years been engaged in the leather and harness business in St. John, N.B., has received the appointment of inspector of saddlery in Ottawa, and has already taken up his duties in that city. He has for years been connected with the harness and leather trade and of late has done business in partnership under the name of Kickham & Currie, in Waterloo street, St. John. He has taken an active interest in local civic and political affairs.

The Brandon Shoe Co., of Brantford, has been awarded a contract for 5,000 pairs of Army boots, which will be used to equip the second contingent. The Brandon Shoe Company's factory is now a Union Shop, a contract having been entered into to use the stamp of the International Boot and Shoe Workers' Union. E. W. A. O'Dell, of Hamilton, organizer for the Union, had charge of the negotiations, but was more than met half way by A. Brandon, the president of the company.

Among the shoe travelers who have returned from extended business trips to the prairie provinces, are Ed. Lynch with the Minister, Myles Shoe Co., Toronto; Percy Fry with the Smardon Shoe Co., Montreal; J. G. McDiarmid with Cook-Fitzgerald Co., London; Gordon Wadsworth with L. H. Packard & Co., Montreal; Robert Tobin with Coates, Burns & Wanless, London and the Adams Shoe Co., Toronto; John Lauffer with G. V. Oberholtzer Co., Berlin, and others.

The Edward Stark Shoe Co., of Vancouver, B.C., have decided that their patrons can be better served by the firm having their combined stocks under one roof, and they will close the branch store at 1002 Granville street, on November 30th. In making the decision, the company concluded that people who desired to buy Stark shoes—at least the majority of them—would come to the main store. The firm will now pay one rent instead of two, as well as consolidate numerous other expenses.

The laced high shoes are certainly an accepted fact, says a Kansas City paper. All the smart boot shops are showing them, and they are most ornate with colored cloth tops and colored laces. A combination of black and white shows the lower part of the shoe in black patent kid, the top of white cloth with a narrow band of black patent kid around the top and down both sides of the front, which is laced with white laces. Black and white striped stockings are to be worn with this effect.

The week of November 14th to 21st will be "Made in Canada" week in Windsor, Ont. The merchants of the city will make special window displays of Canadian-made goods. The event will be held under auspices of the Board of Trade. Special advertising has been placed in local papers as well as those in neighboring towns. It is expected that in this way the people will become more acquainted with Canadian-made goods and that the demand for "Made in Canada" lines will be greatly increased.

The Blachford Shoe Mfg. Co., Toronto, have issued a folder in connection with their "Order Now" department, featuring certain in-stock lines. The styles illustrated were

drawn from the original shoes and are decidedly neat and artistic, being executed by the art department of the SHOE AND LEATHER JOURNAL. The folder (which is very attractively gotten up) is the work of the printing department of the Acton Publishing Co., and copies featuring 1915 spring styles, are being sent to all the leading retailers in the Dominion.

R. Dack & Son, 80 King street west, Toronto, will next month remove to the stand formerly occupied by them which is just across the street. The premises are being overhauled, a new front installed and up-to-date fixtures placed in position. This old established shoe firm, who have been doing business in Toronto for eighty years, will soon be in the same quarters which they occupied for that long period but, owing to the contemplated erection of a big hotel, which project later fell through, they had to vacate a couple of years ago.

Another of the J. H. Porter Shoe Stores has been opened at 974 Bloor street west, near Dovercourt road, making three stores that have of late been established by this firm in Toronto. The new establishment is sixty feet deep by twenty-two wide, and has fine double display windows with tiled, receding entrance. The single carton shelf system prevails, the fixtures being of mahogany. The seating arrangements are first class, rows of mahogany opera chairs running down each side, while the centre of the premises is carpeted. Uniform labels are used and the

WAR SENTIMENTS ACROSS THE LINE

Mr. C. G. Marlatt, of Marlatt & Armstrong, Limited, leather manufacturers, Oakville, Ont., who is commodore of the Royal Canadian Yacht Club, returned recently from the meeting of the Interlake Yacht Association at Oswego, N.Y. One of the pleasing features of the banquet held at this gathering was the toasting of "King George V" following that of the "President of the United States." The gusto

with which the company sang "God Save the King" could not be excelled anywhere in Canada, said Commodore Marlatt and to his surprise at the conclusion the band struck up "It's a Long Way to Tipperary." Approval of Britain's course was voiced many times by Americans present and Mr. Marlatt said it fairly warmed the heart of a Britisher to find the sentiment in her favor so unanimous.

interior of the shop presents a decidedly attractive appearance.

The C. N. W. Shoe Co., Limited, of London, whose factory was recently gutted by fire, have secured more commodious premises on Rectory street, where they have resumed operations. The work of removing the machinery, which escaped damage, has proceeded satisfactorily. The loss on stock has been adjusted and the firm are running again as usual. The C. N. W. Shoe Co. report that the fire makes no difference regarding their business, in that they are in a position to fill all orders, immediate and future. The company, which manufacture women's high grade welts exclusively, have been established about two years, and in that time have made splendid progress.

Joseph King, leather and findings dealer, Toronto, celebrated his seventy-ninth birthday on November 4th. He is still in good health and at his office every day in the premises at the corner of Scott and Wellington streets, which he has occupied for thirty-one years. Mr. King was born in Prague, Austria, and before coming to America away back in the sixties, thoroughly learned the trade of a tanner. He established the well known leather factory at Whitby, in which he was later joined by his brother Charles King, whose sons Joseph and Theodore, now conduct the business under the name of King Bros. & Co. In 1883 Joseph King, sr., came to Toronto to enter the leather and findings trade with which his son, H. S. King, is associated.

As was reported in the last edition, conditions in Montreal shoe factories continue to improve. Some manufacturers state their outputs have again reached a normal point, a few are very busy, but the majority report business as coming along nicely, and all seem to be satisfied. Makers of good medium lines are, of course, receiving the bulk of orders being given, while the trade in higher grade footwear is more quiet and retailers are ordering their stock of same on rather conservative lines. Some wholesalers state they are receiving demands for December and early January shipments, where in other years delivery was specified for dates well on into February. This can be taken as a good indication, and Montreal and Maisonneuve manufacturers are united in the opinion that further improvements in shoe conditions from now on are reasonably sure.

Everybody will wear white canvas shoes next spring, to avoid paying higher prices for leather shoes, according to W. F. Saunders, general manager of the Business Men's League, St. Louis, Mo. "The whole world will be struck by the craze for white shoes," Mr. Saunders predicted the other night. "With the fad will come the more extensive use of white socks or stockings, white suits or dresses and white hats. Prices of leather have been soaring a little bit higher each succeeding week since the war began, and the end is not yet. No one can tell how high the prices will rise during the winter. Shoe manufacturers are anticipating the demand for white canvas shoes by seeking names for brands. They also are arranging their machine equipment so as to be able to make white shoes in any quantity desired. White canvas shoes will cost not more than one-half the price of leather shoes, and will be cooler and more comfortable for wear during the warm months. Most of them probably will have soles made of rubber, in part at least."

USE OF KID BEING REVIVED

Kid leather is being used to-day a great deal more than it has been in the past few years. A few years ago it was used a good deal, not only in one section, but throughout the country. The use of this leather is being revived again, however, and a large amount is being cut now.

Especially is this true in factories making women's and misses' shoes, and it is thought it will be used to a much greater extent. Calf, however, is the leading upper to-day. It is much heavier and costs more than kid leather. The button boots, which are so very popular now, take more upper leather than is required on a lace shoe. For the higher-priced shoes, calf will be the prevailing leather for uppers. A fair grade of calf costs from 22 to 28 cents a foot, while the same grade of kid can be bought for about 18 cents. That is quite a difference in the price and it amounts to a large sum when you take into consideration the number of feet of leather that is used,—allowing about three feet of stock to the pair.

SHOE FACTORY WORKERS' EARNINGS

During the four years, 1910 to 1913, the wages of employees in the boot and shoe industry show a distinct upward trend, while during the same period the employees enjoyed the benefit of a decrease in full-time hours of labor. This is brought out in a report, based on information obtained from representative establishments in this country, which has just been published as Bulletin No. 154 by the Bureau of Labor Statistics of the United States Department of Labor, says Shoe Topics.

The average full-time weekly earnings of employees in the boot and shoe industry in 1913 in a few of the principal operations were as follows:

| | |
|--|---------|
| Cutters, vamp, hand (males) | \$19.05 |
| Cutters, vamp, machine (males) | 17.77 |
| Buttonhole makers (females) | 10.60 |
| Lining makers (females) | 10.38 |
| Top stitchers (females) | 11.47 |
| Vampers (males) | 17.47 |
| Vampers (females) | 13.45 |
| Lasting, bed-machine operators (males) | 18.21 |
| Edge trimmers (males) | 22.66 |
| Goodyear stitchers (males) | 21.96 |
| Treers, hand (males) | 15.54 |
| Treers, hand (females) | 8.56 |

The full-time hours of labor per week in 1913 did not exceed 60, and the average was about 55 hours.

NO "CHIPPING" OF PATENT LEATHER

Ever since patent leather has been used for footwear, shoe manufacturers have tried their best to devise some means of preventing the "chipping" and cracking of the tips and toes while the shoe is going through the factory. Up to the present time, it has been found next to impossible to prevent this chipping and the recourse has been to repair the "chipped" tips after the shoe is finished, says the Shoe Retailer.

Retailers, as well as shoe manufacturers, will therefore, be interested to learn that a patent has just been granted for a special method of protecting shiny leather tips while the shoe is in course of manufacture, which, it is claimed, absolutely prevents from 90 to 95 per cent. of the "chipping."

A TRAVELER'S APPRECIATION

Enclosed you will find postoffice order for one dollar, in payment of my subscription to the Shoe and Leather Journal. I always read your paper with much pleasure and wish you continued success.

George A. Gadbois.

St. Hyacinthe, Que.

CANADIAN ARMY "REST SHOE" MADE OF TWELVE OUNCE DUCK, BLUCHER, CALF TIP AND OUTSIDE COUNTER POCKET, CHOCOLATE KID FRONT FACING AND BINDING ON QUARTERS, TAB LINING ON VAMP; FLEXIBLE GOODYEAR INSOLE, OAK OUTSOLE, WITH SPRING HEEL. A NUMBER OF CANADIAN FACTORIES ARE NOW BUSY MAKING THIS SHOE WHICH MUST BE DELIVERED BY THE FIRST OF DECEMBER.

patented method, on the other hand, consists in the application of a special preparation which protects the leather and thus prevents it from cracking while lasting and going through the factory.

The advantages claimed for this new method are that it prevents practically all "chipping," thereby doing away with the expense of tip repairing, and in addition, that it gives the retailer whole tips instead of "doped" ones. Sometimes repaired tips stick to the cartons.

CLASSIFIED ADVERTISEMENTS

2 cents a word first insertion—1 cent a word subsequent insertion. No advertisement less than 50 cents per insertion accepted. Please remit cash with order.

WANTED—STOCK OF SHOES—Either in Toronto or live town in Ontario, in exchange for well-rented Toronto real estate. A. E. Cudmore, 29 Mountnoel avenue, Toronto.

PICKLED SPLITS WANTED

Cash prices paid for pickled splits and heads in all weights and qualities. Write us your offering. Wright & Wright, Inc., 109 Lincoln St. Boston, Mass.

The patentee is John A. Kelly, of Ziegler Brothers, Philadelphia.

Shoemen are well acquainted with the present method of tip repairing consisting of (1) scouring the broken parts, (2) rubbing in the filler, (3) "cutting down" and making smooth, (4) "flowing."

This is the generally accepted method, though variations are often introduced by different factories. The new

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

SPHINX

Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

Murray-Made FOR MEN *and Derby*

They're out-of-the-common!

In shoe-designing for the better-class trade, the problem is to get something that shall be at once distinctive, and yet unobtrusive. This problem has always been satisfactorily solved in

“MURRAY-MADE” and “DERBY” for Men,
and “CLEO” for Women.

There is that subtle difference about them, that never fails to please the discriminating buyer. Yet there is nothing freakish or “loud” about them. They always appeal, therefore, to people of refinement, who are capable of recognizing character when they see it.

Clinch the better-class trade of your locality, by handling MURRAY-MADE and DERBY for Men, and CLEO for Women.

Better Go Over Your Stock Now and Sort Up

FROM present appearances this will be an excellent season for rubber sales. Winter, with its ice and slush, has set in early, and demands on your stock are likely to be greatly increased thereby. Better order a little in advance of actual requirements, and have the goods on hand when your customers want them.

It's not too late yet to order Miner's Greyhound Tennis Shoes for next season. Absolutely the best sporting shoe on the market.

GALT, ONT.

Have You Noticed?

That "Life-Buoy" Rubber Footwear is always a little better in quality?

The experience of your customer, who wears the rubber, will vouch for this fact, so **WHY NOT HANDLE THE BEST?** In the long run you cannot afford to handle anything else.

"Life-Buoy" Leather Innerheel Rubbers

The weak point in most women's rubbers is the heel—the part that receives the roughest treatment. In "Life-Buoy" high-heeled rubbers a patented leather innerheel is used which gives the rubber greatly increased wear and enables the heel to stand the extra strain.

The "Life-Buoy" Patented Leather Innerheel has the leather cemented and vulcanized into the heel at time of construction in a manner to strengthen and protect it, thus

adding fully fifty per cent. to the wear of the rubber.

ONLY TO BE HAD IN "LIFE-BUOYS." THEY COST NO MORE THAN THE ORDINARY RUBBERS

Complete stocks in all popular lasts always carried at our Branch Warehouses. We have the styles you demand and will look after your requirements to your satisfaction. Wait for a "Life-Buoy" Salesman or order direct from the nearest warehouse.

DO YOU WANT THE REGAL AGENCY FOR YOUR TOWN?

to you, not only in actual profit on the line, but in the prestige it will give your store to link up with the world-wide reputation of Regal Shoes.

If we are not already represented in your town we are ready, now, to place the agency for Regal Shoes with *You*. It is worth real money

There are thirty-five styles carried in stock. Every pair has the same smart, metropolitan style that you will find in Regal Shoes in New York, Chicago, Philadelphia and other leading cities.

These shoes are made by us in Toronto by Canadian Workmen. They are designed by the same experts, cut on the same patterns, built over the same lasts and under the same supervision as the Regal Shoes produced in our three factories in the States.

They are ready to ship at once—the same day orders are received. You can get every style needed in a modern shoe store.

With Regals on your shelves and displayed in your windows, you can secure the lion's share of the \$5 to \$6 shoe business of your town.

SHOE

There are few shoes—if any—in the Canadian trade so popular as the two here illustrated. Their great reputation has been enhanced yearly until they stand supreme in their class.

The "Doctor's" shoe has a patented sole that keeps the foot at an even normal temperature regardless of conditions underfoot. Both sole and upper are waterproof.

The "Professor" shoe has a patented cushioned inner sole that makes walking easy. It is built on a last that gives the extreme of foot comfort.

Both these shoes are stylish and combine smart appearance with their other good features, which partly explains why these two shoes are such top-notch sellers every day of the year.

Canadian Manufacturers Going After War Orders

Important Meetings Held in Toronto and Montreal—Representatives Sent Abroad to Secure Business—Associations Will Co-operate so as to Fill Large Contracts—Tanners Say They Will be Equal to Any Demand that May Come—Better Understanding Now All Round

A co-operative organization which will be known as the Canadian Shoe Manufacturers' Export Association was formed on Saturday last at a meeting of Montreal and other eastern shoe manufacturers. A further meeting took place last Monday between the manufacturers and tanners.

The association, which embraces many leading makers in Montreal as well as other outside firms, will make a determined effort to procure a portion of the shoe orders now being placed by the Imperial Government, and to this end will send Messrs. A. R. Angus, of Ames-Holden-McCreedy,

Limited, and Oscar Dufresne, of Dufresne & Locke, to interview the War Office in London.

At the outset, Mr. D. Lorne McGibbon was elected chairman, H. E. Moles, of J. & T. Bell, Limited, vice-chairman, and W. S. Louson, secretary.

The association will submit a proposition to the Imperial Government guaranteeing the delivery within two months of a million pairs of military boots. Messrs. Angus and Dufresne, who sail this Saturday for England on board the Lusitania, will carry samples of the different manufacturers

and every effort will be made to secure orders from the War Office.

Of late many stories have been current regarding large orders of boots for the British army being placed in the United States. A statement to the effect that no orders have thus far been placed outside the British Empire has done little to stop the rumors. The fact remains, however, that nearly all hides offered for sale are being shipped to Great Britain, and it is thought in boot and shoe circles that the output of British shoe factories is now running around five hundred thousand pairs per week. Besides the requirements for the British army France has placed orders for over two million pairs of boots.

Thus far no business for the British army has been placed in Canada. Cable advices a week ago stated that an order for three hundred thousand pairs had been placed with Quebec firms by the French Government. This business has not as yet materialized.

Many firms have made efforts to secure the orders from the British Government individually, but as the best delivery that could be offered was for two or three months and for small lots the orders have naturally not found their way here.

The Dominion Government has communicated with the Imperial Government requesting that before any further business is placed the local association be given every chance of offering quotations.

The representatives who are going abroad will do their utmost to secure orders from the French Government.

It was stated after the meeting that the association would quote a very low price in order to secure a portion of the business. Their primary object is to keep the factories running.

In connection with the much-talked-of shoe business by European powers reported as having been received by the United States, it was pointed out that as far as it was possible to learn only about a million and a half pairs of shoes had so far been given to American manufacturers. This has all been from the French Government. It is also pointed out that it is not expected the Russian Government will be in the market for shoes, as they appear to be in an excellent position to manufacture their own wants. Much of the calfskin hides received here are exported from Russia.

The association are hopeful that at least a portion of the British army shoe requirements of the future will be placed in Canada. They contend that the big drawback has been in the delivery offered, and that now this difficulty has been overcome some of the business should find its way to Canadian firms.

Tanners and Manufacturers Meet

On Monday, another meeting took place, this time between the manufacturers and different tanners' representatives. At this meeting an agreement was reached whereby the tanners will co-operate with the manufacturers, who will be assured of a full supply of both sole and upper leather at a nominal promised price. One of the big drawbacks in the past towards Canadian makers failing to secure contracts from the government, is that when a quotation is made on a certain number of pairs, the manufacturer figures on the prevailing leather prices. While the government is considering the quotation, most likely a sharp rise is experienced in leather prices, and as a result the manufacturer must also raise his quotation figures or lose money on the contract. By the arrangement arrived at by the tanners and manufacturers through their meeting, this difficulty has been overcome, and the association will be prepared to carry out their contracts at the quoted prices.

Here are a number of the shoe firms who have joined the

association:—Ames-Holden-McCready, Limited, G. A. Slater, Limited, Daoust, Lalonde & Co., Dufresne & Locke, J. & T. Bell, Limited, Tetrault Shoe Manufacturing Co., Limited, Jas. Muir Co., all of Montreal, and Hartt Boot and Shoe Co., Fredericton, N.B., Amherst Boot and Shoe Co., Limited, Amherst, N.S., and J. M. Humphrey & Co., St. John, N.B.

Amongst the tanners represented were Duclos & Payan, Montreal; C. Galibert & Son, and Daoust, Lalonde & Co., also of Montreal; King Bros., of Whitby; A. Davis & Sons, Limited, Kingston; Robson Leather Co., Oshawa; Wickett & Craig, Toronto; H. B. Johnston & Co., Toronto; Barrie Tanning Co., Barrie, and Collis Leather Co., Aurora.

Ontario Manufacturers Alert

Two meetings of the Ontario Shoe Manufacturers' Association have recently been held in Toronto. The object of the gathering was to take some united action in reference to securing Imperial orders for army shoes, and to have the association co-operate as a whole in securing as large a consignment as possible. It is understood that an effort will be made to have any orders received made on a uniform last, and at uniform price, and then the orders will be divided among the different factories, according to their respective capacities.

A well-known Toronto business man has been engaged to cross to England and France with a view to interesting the War Offices. He will present, in his negotiations, a statement of the facilities, output and prices of Ontario manufacturers, as well as submit samples, and in the near future it is believed that some good orders will result. Alexander Brandon, of Brantford, is chairman of the Ontario Shoe Manufacturers' Association and presided at both meetings, and there was a large and enthusiastic attendance.

It is understood that the representative from the Ontario shoe manufacturers will visit London, Paris and perhaps Odessa. Samples of English, French, Russian and Belgian army boots, which had been made by members of the association, are being taken along to show what sort of shoe can be produced by the Ontario manufacturers. It is also reported that the English Government is in the market for a large number of Belgian shoes to equip the soldiers of that ruined little kingdom.

Sizing Up Leather Situation

The leather situation is assuming great interest throughout the entire world at the present time and what will be the future regarding hides is largely a matter of speculation, depending upon the length of the war, the number of shoes that will be made for army purposes, how far the substitution of fabrics, instead of leather for topping, etc., will prevail.

It is significant to note that during the past few days the British War Office has issued a decree, reserving the hides of full grown cattle for military purposes and that a special company, having charge of the leather business of the country, has been organized. All the tanneries will be operated in connection with this company, receiving their quota of hides which they are to tan for army purposes from it.

English kip and other leathers which have been largely used in Canada are now not only practically prohibitive in price, but not available under any circumstances. The French Government has also promulgated two decrees which have caused a good deal of comment in leather trade circles. One of these prohibits the export of raw hides and the other, the export of tanning extracts. It would appear that at the present critical time fresh problems are cropping up every day which have to be considered very carefully.

What Are You Doing to Capture the Xmas Trade?

Get Busy in the Line of Appropriate and Effective Store and Window Decorations—Some Seasonable Suggestions—How They May Be Carried Out—Impart to Your Store the Yuletide Spirit and Atmosphere.

The gift giving season of Christmas is nearly at hand—the air is being filled with the spirit of good-will and optimism, for the Yuletide holiday period is one that appeals to all classes and conditions of people. It is generally the harvest time of the shoe retailer, providing he makes suitable preparation for the occasion. He can do this in many ways—and the wise retailer is the one who makes preparations early. He should do all in his power in the way of special window trim and interior decoration, to present all the most attractive and latest in footgear to the attention of the

pers, pump ornaments, a pair of warm house boots, winter outing shoes, over-gaiters, traveling bag, hockey or skating boots, etc.

Christmas is indeed a great occasion for grown-ups and juveniles. It is at this particular season of the year that the largest volume can be done in slippers and shoes, but in order to make these goods move, they must be exhibited amid suitable surroundings and in such a way that a desire will be created to purchase. Give your store the Christmas atmosphere, imparting to it the suggestiveness and spirit of

AN APPROPRIATE BACKGROUND FOR NICE CHRISTMAS DISPLAY

public, and to emphasize that all presents be of a useful character or practical nature—not merely ornamental. Suggestions of this nature should have a stronger appeal than ever during the present time, when money is not as plentiful as last season and general business conditions not as active.

Look on the bright side—The holiday spirit is in the air. Like dawn, it comes and spreads its beauty over the whole world, inspiring a universal delight in giving. Its charm permeates the darkest hovels of trade and reawakens a universal unselfishness that is far too prone to sleep. It lays its finger on the hearts of parents and excites in children a fresh delight—that throws over the whole of their future lives a glow never to be forgotten. It calls to mind gifts and remembrances of all kind.

Presents that are useful are always acceptable and there is no more practical gift than that of a dainty pair of slip-

pers during the Yuletide season. Make a liberal use of wreaths, loops and garlands of evergreen and holly, mistletoe and poinsettias, so that your premises are in keeping with the cheer and buoyancy of the occasion.

Anything worth while in this world costs a little time and effort—involves some labor and sacrifice, and if you would have a striking and effective window, you must spend time in planning and carrying out the details.

Background and Winter Selling

As a timely help to our window trimmer friends, we illustrate a background and window setting appropriate for the holiday season.

The design we show in this background has a mirror back, but it can be used to almost as good advantage where a solid wood or curtain back is installed.

At each corner of the window are tall pilasters. These

are made of light lumber or compo board and covered with plain white outing flannel stretched on tight and smooth. Another good treatment would be to give these pieces a coat of cold water paint or alabastine, in white, and before this becomes dry, sprinkle diamond dust or metallic flitter over it quite freely. This will give a glittering and pleasing effect.

Between the two pilasters and at the top of the window is a cut-out piece to represent the gable end of a house and chimney. This may be made of light lumber or compo board, and then covered with a red crepe paper in brick effect. This brick paper can be obtained at most any drug or stationery store at a cost of about ten cents a roll.

Just below the brick is a plain white border made from a board about ten inches wide. This should be treated in the same manner as the pilasters. The lettering, "Merry Xmas," can be put on in red paint or can be cut from red cardboard and mounted on the border as is shown.

In the centre of the border is a medallion or cut-out piece. This is cut from compo or wall board and painted white. Before the paint becomes dry, sprinkle diamond dust over it and blend in a little coloring of pale green. In the centre of this cut-out, mount a Santa Claus false face, which lends the Christmas spirit to the display.

The centre of the window is filled in with a curtain made of any white material hanging in loose folds from the border.

The arrangement of fur top slippers around the Santa Claus head in the centre would be very attractive.

The platform may be used or omitted, as the trimmer desires. It is made of light lumber and treated in the same manner as the corner pieces.

The arrangement of the little flower trees in pots is clearly shown. These may be of evergreen, or be made up of holly with poinsettias as the flowers.

The floor of the window is covered with plain white outing flannel laid on smooth. At the top of each pilaster is a large red poinsettia spray. The chimney, roof and pilaster tops are finished off with artificial icicles. These are made from sheet wadding or cotton. These icicles should be sprinkled freely with diamond dust.

Try Some of Those Out

In this issue of the *SHOE AND LEATHER JOURNAL* several good suggestions from the "Shoe Retailer" are presented. Appropriate Christmas backgrounds and general directions are given for making holiday trims, both inside and outside the store. These are presented in ample time so that the arrangements may be carried out in the best possible manner.

It is well for the average shoeman to remember that window trims should not be too crowded, and that when neatly and artistically gotten up the possibilities of increasing one's trade are almost unlimited.

The first design can be used in any window, whether it has a mirror back or not. The solid wood or carton back will serve nearly as well as the mirrors.

A neatly trimmed window will do more than any other factor to get this business, if it is bright, and attractive, and contains features suggestive of the season. Something on this order is given in the drawing Fig. 1, the Christmas spirit being represented but not overdone in the use of holly wreaths and small evergreen trees worked into the design in connection with panels of bright red and white.

The construction is quite simple and should be easily understood from the drawing. The screen effect at the back can be made with a framework of light strips covered with red cloth and the panels filled in with white.

The longitudinal panel at the bottom is made up in just the reverse combination, being a white frame and a

red filled panel. The platform in front is to be used for a unit display of shoes, and is also done in white. The small evergreen trees are easily secured at this season, either the natural or the artificial trees. These can be placed in plain little bowls or jardinières in green.

Decorations for Interior and Exterior

We wish to place special emphasis on the necessity of a well decorated interior and exterior of the store at Christmas time. No matter how well the windows are decorated, if the proper Christmas spirit should be evident in the interior and on the exterior in the way of some seasonable decorative treatments that is inviting to the passerby.

Artistic and pleasing decorations covering every portion of the store do not necessarily call for a great amount of expense if the merchant, or trimmer, understands the different methods of substituting and combining the various materials on the market for this purpose.

Another scheme is to make use of what nature has provided in the way of trees, vines, etc. By gathering pine boughs and numerous other subjects from the woods, some wonderful effective decorations can be worked up.

For instance, the pine boughs can be treated to a coat of white, red or light green alabastine by dipping them into a large flat pan filled with same. If you find that you cannot work this out effectively, lay the branch on a flat sur-

Fig. 1

face and paint it with a large whitewash brush, and before the paint becomes dry sprinkle mica dust over it. This produces a beautiful frost, or snow, effect. By attaching several sprays to columns in the interior of the store one can have a very pretty and seasonable trim. A few poinsettias wired to each spray, pine boughs around the base of each post, tied with a wide band of red cambric, completes the trim. The cost of this effective decorative scheme is very small.

Another treatment, and one which will be very striking, is to procure branches of trees with all the leaves stripped off. These are then treated to a coat of white alabastine, or whitewash. Over this attach leaves of a seasonable nature, such as holly, oak, and other varieties that the flower manufacturers have on the market, and which can be secured in gross lots ready for wiring to the branches.

Other simple decorative schemes can be worked out by the use of roping holly and mistletoe sprays. By combining these with each other and working them up in wreaths, festoons and other styles of designs, the designer can introduce a trim for the exterior or the interior of the store that will be a winner in every respect.

We show in Fig. 2 an impressive and practical exterior decoration made of two festoons, two pendants, two wreaths and a Santa Claus' head.

In working this out, it would be well to first cut from

red cambric two festoons to fit the distance between the large wreath and the pendants at each side of the store. This is then edged with a festoon at the top and bottom of holly or beach leaves, or roping.

A large circle, cut from composition board or made from barrel hoops, forms a basis over which the wreaths may be attached. This circle should be covered with red

Fig. 2

cambric. Pendants made from the same material as that used for the festoons should be placed at each end, as shown in the design. Large bows of red cambric may be placed at each side, in the centre and at the base of the wreath, as suggested in the sketch. The announcement, "Christmas Greeting," is painted in white or silver. The Santa Claus' head can be painted on, or it can be made of papier-mache. If this scheme is worked out faithfully, it will make an unusually attractive front.

Simple Decoration for the Interior

Design No. 3 shows an interior treatment of a most simple nature. The wreath is made of white oak leaves and poinsettias, sprinkled with mica dust. Two wide strands of red cambric are attached to each side of the wreath and then secured to the columns. Placed at each side of the post is a large bow made of red cambric. Small sprays of holly are arranged around the post and at sides of wreath. Several sprays of poinsettias are placed at the

Fig. 3

base of each column and are held in position by a wide band of red cambric.

A children's play hoop, over which green tarlatan is stretched, serves as a foundation to work out the wording "Xmas Greetings." This is accomplished by first painting it on in glue. Over this sprinkle gold or silver flitter, which produces a most striking effect.

Shoe News in Short Shape

A twenty-one year lease of a store in the Royal Bank Building, Toronto, totalling \$105,000, has been taken out by Karrys and Katsulos. The stand is the second one from the corner of King and Yonge streets, having a frontage of 12 feet on Yonge by a depth of 28 feet. The lessees expect to occupy the new premises about the first of December, and are spending a considerable amount of money in furnishing it to make it one of the most up-to-date shoe shine parlors. The yearly rental is \$5,000.

There is a great demand for overgaiters, and all the smart young ladies in the leading cities are wearing them, in pearl grey, light fawn, dark fawn, and taupe, while a number of white overgaiters is also seen. There is a scarcity in most colors, particularly in pearl grey, in which it is impossible for some firms to fill orders. This is caused by such an abnormal demand being made, all at once, upon Canadian manufacturers of cloth, that they have not been able to supply the requirements of the trade.

Jas. Haslam, who has had an extended experience in shoe salesmanship, has recently graduated from the Kahler School of Chiropody, New York, and has been granted the degree of Doctor of Chiropody, after a most thorough course. Mr. Haslam has a very attractive office fitted up on the second floor of the Owl Shoe Store, 123 Yonge street, Toronto, which is equipped with all the latest appliances. He will devote special attention to the Chiropodic department of the store, on the staff of which he has been for the past two years.

A federal charter has been granted A. E. Wry-Standard, Limited, with a capital stock of \$500,000, divided into 5,000 shares of \$100 each, with headquarters at Sackville, N.B. The incorporators of the company are Albert E. Wry, F. T. Tingley, J. W. Sangster, John E. Fowler, Wm. C. Robinson, E. M. Copp, A. Anderson and W. C. Wry, all of Sackville, and James Smith and George Morton, of Middle Sackville, N.B. The company is empowered to carry on a general tannery business and to engage in making shoes, larrigans, harness and all kinds of leather goods. The company is empowered to acquire the Standard Manufacturing Co., Limited, of Middle Sackville, and also the business of the A. E. Wry, Limited, which has its plant at Sackville.

A disastrous fire occurred last week in the store of the Brockton Shoe Co., 440 St. Catherine street west, Montreal, doing damage to the extent of between \$24,000 and \$25,000. The blaze was discovered by a passerby who saw smoke pouring out of the basement windows of the store, and he turned in the alarm. The fire proved to be a deceptive one, as at first it appeared to be of an insignificant nature. It had started at a point nearly in the centre of the shoe store basement, and when the firemen attempted to enter it from front and rear they found it ablaze for nearly all of its hundred feet of length. Flames were already bursting up into the store proper but the firemen were able to make short work of the blaze in the sales department. The other portion of the shop, however, proved a harder task and it was some time before the fire was got under control. The stock of the Brockton Shoe Co. was practically wiped out. T. R. Trudeau, the manager, stated to the SHOE AND LEATHER JOURNAL that after renovations, a complete new stock would be installed, and the store opened as soon as an insurance adjustment is made. The old stock was partly covered by insurance. The company also run a store at 42 St. Catharine street east, which is doing business as usual.

Attractive Yule-tide Windows Bring Business

STUDY THE CHRISTMAS WINDOWS

In this issue of the *SHOE AND LEATHER JOURNAL* many suggestions for Christmas window trims are presented. Heretofore it has been the custom to include these in the mid-month number, but retailers have pointed out that the paper reached them too late in order to make effective use of the plans before the Yuletide season, particularly if any materials had to be secured out of town. In order that readers may have ample time to study the plans and adopt such ideas as may be suitable to the construction or facilities of their windows, the directions are given at this early date, and not in our usual Christmas number.

The *SHOE AND LEATHER JOURNAL* will be pleased to receive photographs from progressive retailers who are installing attractive and effective windows for the holiday season, and will have nice cuts made for publication. If you have something striking or original, it is surely worth photographing, and if it is worth photographing, it is worth presenting to the trade in order that others may gain some ideas or pointers from your display. The broad-minded man, the aggressive merchant, the dealer who is forging to the front, is he who is big and generous enough to co-operate with others, to give and to get, exchange suggestions and to offer the benefit of any new proposition to others. All photographs sent in will be promptly returned.

Here is a fine Christmas window which was installed last season by the Abernethy Shoe Co., of Kingston, Ont. It was devoted to women's and children's slippers, ladies' traveling goods and accessories, such as shoe buckles, fancy button hooks, shoe horns, etc., while the other window had a showing of men's, boys' and little boys' shoes, hockey boots and slippers, as well as traveling goods. The pillar in the corner of each window was covered with evergreen

and had shelves, about eighteen inches above one another, covered with white cotton batting, the floor also being covered with batting. Frames, covered with white cheese cloth and batting, were made for all mirrors, and over each centre mirror was a "Merry Christmas" sign, in purple letters on gold cardboard. All glass stands were covered with batting and tied with red baby ribbon. Real evergreen covered the edges of all frames, and silver tinsel was used to form cross bars over the mirrors, on which were hung infants' bright red slippers (in the women's window) and small red bells in the men's. In each window was a rubber box covered with batting and tied with red baby ribbon, and on each box stood a Santa Claus, while in the centre of both windows hung a card, referring to holiday gifts. On taking the photograph, the card in one window was removed, as it caused too much reflection, and a large dark card, with buckles, was substituted. The little windows, which are independent of the others, were white and trimmed to correspond with the larger ones. They were lighted by themselves with green shades. One large window was lighted with red lights, while the other had green. The beautiful effect created by these lights caused people to stop and admire, and made a wonderful impression.

A Cross, a Star and a Crescent

An original Christmas window trim was shown last season by F. Sutherland, shoe merchant, of St. Thomas, and was designed entirely by P. C. Smiley. On account of the dark colors and position of the lights in the windows, the photo is not very clear and does not show up the display to advantage. From the ceiling of each window, two bars, covered with red and green crepe paper (and having a small twig of cedar hung from each end) were suspended, while from the centre hung a small red Christmas bell. The centres of the floors were dark red, with an eight-inch border of light green crepe paper. Each window was supplied with a cross, a star, and a crescent, or half moon, set on pivots, so that by turning them round, any article attached, could

A CHRISTMAS HOLIDAY DISPLAY BY LEADING KINGSTON SHOE HOUSE

be easily removed without disturbing the rest. These were constructed of wood and covered with green canvas, on which cedar twigs were sewn, while the edges were bound with an inch wide strip of dark red crepe paper.

Here and there poinsettias were placed to lighten up the green background. The cross was 4½ feet high and 4 inches wide, and at arms, 28 inches from one end to the other. The crescent was 5 feet in diameter and 8 inches at the widest point. The cross (in the gentlemen's window) showed men's gray spats, chocolate Romeos and slipper soles. The star showed different styles of men's slippers, shoe arches, cushion heels, polish brushes and laces. The

ATTRACTIVE MEN'S DISPLAY IN SUTHERLAND SHOE STORE, ST. THOMAS, ONT.

half moon held men's dancing pumps, tags for trunks, club bags and traveling sets. Suit cases, club bags, gaiters, leggings and moccasins filled up the rear of the window and the shelf. Both windows—only the men's being here illustrated—showed the same colors and materials, and the entire cost of the decorations was \$4.25.

An Old Shoe of Years Ago

Highly polished mirrors occupied the whole of each window in the last Christmas display of James McClinton, Jr., of Goderich, Ont. The lattice work and the designing in the rear were made of laths, planed and painted white, which was dressed neatly, but not gorgeously, with red and blue ribbons and small Christmas bells. From the top of the lattice work to the top of the window glass were extended several evenly coiled, or rather twisted, paper rib-

bons. There was a uniformity and proper succession of colors namely, green, blue, red and white. On the lattice work were placed the special Christmas slippers and dancing pumps, the latter being given prominence in the centre. The floor of the window was loosely covered with cheese-cloth, beneath which was a white surface of cotton. In the gentlemen's window, special prominence was given to a walrus club bag and a few hockey shoes. But the most interesting object in this window was an old boot worn about the year 1885. It was large and coarse, and would weigh probably five pounds, on account of a heavy iron sole and heel. Placed at an angle with this was the latest gun metal shoe. This seemed to make a hit, and as a result, many inquired concerning the old shoe, and naturally attention was drawn to the other shoe by comparison. The shoes were placed on polished nickle stands, while a few pairs of foot-easers and boxes of corn pads added a little variety. In the ladies' window, some attention was paid to winter slippers of felt, cotton and silk material. Here were displayed two each of suit cases and ladies' club bags. The background frame was of a different model, but the coloring was of a similar uniformity.

Get Good Cash Profit Now

Most merchants have purchased the bulk of their Christmas and holiday merchandise. Those that have not, ought to get busy and do it without further delay.

With this buying out of the way, there should be started a very careful watching of stocks from now until stock-taking time, with a special view of getting things down to bed rock when stock is taken.

By this is not meant that merchants should reduce the assortment of goods on hand, but it does mean that a special endeavor should be made to reduce as much as possible all surplus stocks, so that when the inventory is taken they are as low as they can be made, and still take care of the reasonable requirements of the trade.

From now until January 1, is usually the very best selling season of the year. It is, perhaps, the time when overstocks brought about through the mistakes in buying that even the best merchant will make, can be brought to reasonable proportions with the least loss in profits.

Cut price sales are neither necessary nor desirable at this time of year. In fact they are very likely to prove a real detriment. But the careful selection of "leaders" from the overstocks; the close buying of staples; the team work by every member of the sales force and an increasing watchfulness, will bring better results from now until the first of the year than at any other season.

HOW GODERICH SHOE FIRM CAPTURED HOLIDAY SHOPPERS

Generosity of St. John Shoe Firm

Perhaps one of the most patriotic offers made in St. John, N.B., since the outbreak of the war has been given by two shoe merchants not of Canadian or British parent-

H. WIEZEL, ST. JOHN, N.B.

age, but who are natives of a country now at war with England. Reference is to Joseph and Herman Wiesel, proprietors of a big and growing cash business in Union street, who enlisted in the cause of the Red Cross Society the services of themselves, their clerks, a committee of society ladies from the city, and donated 10 per cent. of their gross receipts towards the cause. The firm did some live advertising and the week's sale was a success in every way. The people came in crowds and the turn-over was really remarkable. The committee of ladies assisting in the work proved to be of great assistance in stimulating trade and public interest in the scheme, which was highly praised by the press of St. John.

Besides this, Wiesel Bros. have made monthly contributions to the Patriotic Fund. The sum made was large, for the percentage was from the gross, not the net receipts. Some of the most prominent leaders in St. John society presided over the store during the week of the especial movement, to assist Messrs. Wiesel, who won most favorable comment by their splendid offer.

In one of their advertisements, Wiesel Bros. said: "Six years ago we commenced business in St. John as blank strangers and in every way handicapped foreigners. Although natives of Hungary we have learned since becoming naturalized citizens of the British Empire, what it means to enjoy freedom of speech, action and a true spirit of business and social co-operation. We thank our British fellow-subjects for prospering us and gladly do we hand over our thriving business for the sake of the splendid charities made necessary by the terrible war. We trust that the people of St. John will accept our donation in the spirit in which it is offered."

In another paper they remarked: "This is not an advertising scheme of ours. We are buying newspaper space merely to make the scheme widely known. Thanks to the people of St. John, our stores do not need much more advertisement. Our offer is a heartfelt tribute of loyalty to the British King and his cause, and coming from a couple

of ex-Hungarian boys—now naturalized Britishers—we would like to have it accepted in the spirit in which we make it. We might have given a substantial cash donation, but feel confident the plan about to be carried out will be surprisingly more remunerative. This is the story in a nut-

JOS. WIEZEL, ST. JOHN, N.B.

shell. The offer has been considered from all viewpoints by those accepting it, and we are happy to say the work will be heartily entered into. Remember, starting Monday and until Saturday night, these stores will not be Wiesel's, but our 'Soldier Boys'."

No Attempt Made to Defraud

Herbert Capewell, charged with fraudulent intentions toward R. H. Tremble and J. J. Tearney in connection with the commissions to be received from Government military contracts, especially in reference to shoes, was acquitted by Judge Coatsworth in the County Criminal Court, Toronto. It was alleged that Capewell said he would use his influence to secure contracts for boots, sweaters and socks from the Dominion Government. The successful tenderers were to pay 5 per cent. on the amount of their contracts. Of this commission, Capewell was to receive one-half, the rest was to be equally divided between Tremble and Tearney. The fraud consisted in the alleged statement of Capewell that he had to divide with a fourth man at Ottawa who was "howling for money." In the box, Tremble and Tearney both said that there had been no attempt to defraud them.

Another Shoeman Goes to Front

Ray Brewer, formerly of Fredericton, but for some time past in the employ of Waterbury & Rising, Limited, St. John, N.B., has volunteered for overseas service with the 26th Infantry Battalion from New Brunswick. Before severing his connection temporarily with the staff and firm, the latter presented to him a substantial check, and the former gave him a handsome silver wrist watch suitably engraved. He has been a popular member of the staff since coming to St. John.

Western Firm Re-organizes

As announced in the last issue of the *SHOE AND LEATHER JOURNAL*, the name of the Wm. A. Marsh Co. Western, Limited, has been changed by supplementary letters patent, to that of Congdon, Marsh Limited, the head

ARTHUR CONGDON, WINNIPEG

office being Winnipeg. A new charter has been received and the officers of the new company, who have just been elected are: Arthur Congdon, president, and A. N. Douglas, secretary and treasurer. Among the other directors are Fred W. Marsh, president of the Wm. A. Marsh Co., Quebec, and W. H. Miner, general manager of the Miner Rubber Co., Granby, Que. Mr. David Marsh, who has been

A. N. DOUGLAS, WINNIPEG

with the Wm. A. Marsh Co., Western, Limited, for some time, has returned to Quebec, as the requirements of the Quebec business necessitate his removing from Winnipeg,—the staff there very much regretting his departure. The interests of the Marsh factory in Quebec, and the Miner Company's factory in Granby, are closely interwoven with

those of the Congdon, Marsh Co., and they will naturally work in co-operation with the new concern in the development of a progressive and efficient distributing business throughout Western Canada, for leather and rubber footwear.

Mr. Arthur Congdon was born in Nova Scotia in 1863, and came to Winnipeg in April, 1882. In 1886 he became manager of the shoe department of the Hudson Bay Company at Winnipeg, and continued in that position until February, 1895, when he entered into the wholesale shoe trade in Winnipeg on his own account. In 1904, Mr. Congdon opened a branch of his business in Calgary, this being the first wholesale shoe house between Winnipeg and Victoria, and early in 1906 a further branch was opened in Edmonton. Shortly after the opening of the Edmonton branch, Mr. Congdon amalgamated with the James McCready Co., Montreal, and as vice-president and western manager, conducted the western end of the business until early in 1911, when the Ames-Holden-McCready Co. was formed. Mr. Congdon then removed to Montreal, as vice-president of this company, but afterwards resigned and returned to Winnipeg.

Mr. A. N. Douglas, secretary-treasurer of the new company, who will be closely identified with the management, first became associated with Mr. Congdon in 1902, and remained with him until some time after the Ames-Holden-McCready Co. was organized, when he resigned to accept a position as manager in Winnipeg for the Canadian Consolidated Rubber Company. When Mr. Congdon took over the Wm. A. Marsh Co. Western, Limited, Mr. Douglas again became associated with him, and brings to the new business a wide experience and an exceptionally thorough knowledge of western trade and conditions.

Will Erect Large Store

John Lennox & Co., of Hamilton, who carry on a wholesale shoe business and retail leather goods, etc., have decided to enlarge their present premises on the south side of King street, near James, by building a six-storey department store, which will be one of the best equipped in Canada. Mr. Lennox, who is one of Hamilton's most successful business men, has been identified with the shoe trade for forty-one years. While he has not been in good health for some time, he is improving, and is able to be at the warehouse for a few hours each day. In conversation with the *SHOE AND LEATHER JOURNAL* he stated that the department store upon the present premises would be built as soon as the war was over, and conditions more settled. They do not intend giving up their wholesale business, but have another warehouse into which they propose moving their wholesale end. The firm might, however, build a departmental store large enough so that they could conduct their big jobbing business on the top floors. All the details will be settled in the very near future.

Given Extra Time to Build

The city council, of Regina, Sask., adopted the recommendation of the finance committee favoring an extension of time to the Canadian Consolidated Rubber Co., and the Gutta Percha and Rubber Limited, in regard to the erection of new warehouses. The Canadian Consolidated Company were granted six months' extension in which to proceed with the building operations, in their agreement with the city on the site which they purchased in January last to build a warehouse. Gutta Percha and Rubber Limited were to have completed the excavation and foundation for a new warehouse by December 31st, 1914. They were also given six months' extension from that date.

London Shoeman Installs Handsome New Store Front

His Premises Have Been Enlarged and Completely Over-Hauled—Believes in Cash Buying and Cash Selling; Money Cheerfully Refunded in Case of Dissatisfaction—No Reduction Sales Held—All Approbation Goods Sent C.O.D.

A complete new store, from entrance to rear wall—this practically sums up the extensive improvements and alterations which Rowland Hill, a widely known and popular shoe retailer of London, Ont., has made to his premises. It is about fourteen years since Mr. Hill embarked in business for himself, and in that time he has built up a solid and satisfactory trade. He now occupies the whole of a three-storey building, and has one of the most artistic and inviting fronts of any retailer in the west. Interiorally his establishment is equally attractive, and it is interesting to note how these improvements have been effected.

Story of Steady Expansion

In 1901 he had part of the ground floor only at 189 Dundas street—his present stand—the space being fifteen by fifty feet. Part of the front had for a long time been occupied by a stairway, leading to rented rooms above. This stairway was torn out in August last and Mr. Hill now has two fine display windows, instead of one. His premises are now ninety feet deep by twenty-four feet wide. There are oak armchairs down the centre and a double settee in the rear for children, the latter department being located under the mezzanine floor, where Mr. Hill's office is installed. Besides the well-equipped office, there is a cash desk and wrapping table on this floor to which all goods are sent in carriers. There is a stairway across the back, leading to the mezzanine, and from there other stairways lead to the upper floors, where a reserve stock is carried for both stores, for Mr. Hill runs a successful branch establishment at 429

Hamilton road. Lighting and ventilation for the office were obtained by cutting away a strip of about four feet across the back part of the ceiling above the stairway.

There is a new findings case just inside the imposing entrance, with a small cash register for "hurry-up" sales. This also acts as a partial screen to the interior and is at the same time, ornamental. During the year, every part of the store has been overhauled. The rear improvements were made in February, and the splendid new front and some shelving put in a few weeks ago.

The design of Mr. Hill's new store front is particularly applicable to the merchandise, shoes, which are to be displayed. The show windows are shallow, and as a consequence all footwear shown therein, is close to the eye of the observer, and thus the windows are exhibiting the goods to prospective customers in exactly the same way that a salesman does.

Details of the Exterior

The store front construction consists primarily of copper work in a statuary bronze finish. Beneath the four show window plates of glass is solid metal bulkhead 19½ inches high. This bulkhead is rich in color and furnishes an attractive base. There are bronze grilles in the bulkheads. These grilles provide for ample ventilation in the basement, and the construction is such that the windows are on the inside of them, thus enabling the same to be closed or opened when desired. All glass is set in all-metal sash, which provides for drainage and ventilation of the windows. The sash is so constructed that the cold air from the exterior can

THE PLEASING AND ATTRACTIVE NEW EXTERIOR OF LONDON, ONT., SHOE HOUSE.

pass into the show window, up to the inner surface of the glass, which means that a cold current of air is constantly in motion and consequently the possibility of frosting is reduced to a minimum.

The transom is glazed with 4 x 4 inch cast tile prismatic glass which throws the light into the store. Set in this prism glass is the firm's name worked up from brown art glass. The effect is particularly pretty in the evening when the lights from the interior shine through this art glass.

The awning is encased in a metal awning bar, which protects the canvas when it is not in use. By virtue of the awning being suspended at the bottom of the prism glass, no light is kept from entering the store through this prism glass. The small inconspicuous corner bars clamp the glass at their corners and thus the vision of the observer is not obstructed in anyway. The window sides are of hard wood with a pure white enamelled coating. The white background provides an excellent contrast to the black and tan shoes displayed in front of it. The entrance is by a door in the side of the backing. The backs of the windows are of plate

ROWLAND HILL, LONDON, ONT.

glass which enables the customers in the store to see the articles on display.

It will be observed that the show windows are entirely enclosed so that no dust will have access and also the warm air from the store is kept out, which aids considerably in the prevention of frosting or sweating. The store front as a whole is a most attractive one and was installed by the Kawneer Manufacturing Co., of Guelph, Ont.

On Sound Business Principles

In his enlarged and renovated quarters Mr. Hill has plenty of light, his stock is not crowded, and there is ample space for reserve. He has built up a business on unique lines, among which may be mentioned the following:—No goods are sent out on approval, except on strictly C.O.D. terms. This plan was inaugurated a little over a year ago, and has worked well. No credit is given to any person, except to shoe dealers, or public and charitable institutions. Mr. Hill believes in cash buying and cash selling and gladly gives the money back in any case where a patron is dissatisfied. This is done cheerfully and willingly.

He has never had special sales, but offers slow selling lines at cut rates during the slack season. By being watchful, he does not have much accumulation of odds and ends. "Watch stock closely" has been his slogan.

Mr. Hill has always specialized on "Made-in-Canada" goods, and controls the agencies for some of the best men's and women's lines. His motto has ever been "reliable footwear" and he has always been ready to learn and profit by the experience of others. Two sons, Rowland, junior,

and Clarence, take an active interest in the business, while his sister, Miss Lottie Hill, has charge of the office. He has several salesmen, among them being Hector Boyce, Reuben Wills and Dan Flemming, besides extra help which he secures on Saturdays and holiday times.

For ten years Mr. Hill was in the employ of the J. P. Cook Co., London, where he thoroughly learned the retail business. He is vice-president of the Retail Shoe Dealers' Association, of London, and is a warm supporter of organization and co-operation among the trade.

Do You Base Your Profits Aright?

1. The remuneration of salesmen, for instance, is figured on a percentage of the selling price, and is not figured on the cost price. Therefore the selling price plan works in harmony with that.

2. The percentage of expense of doing business is based on the selling price. If you talk and think of your percentage of profit on cost and your percentage of expense on selling price, nine cases out of ten you will lose money before you get yourself untangled.

3. Because the mercantile and other taxes are invariably based on the percentage of gross sales. Therefore, it is important, if you are figuring in your mercantile and other taxes in your expenses, to figure them in the same way in which you are figuring your anticipated profits and making your selling prices.

4. Because the sales totals are always given in books of records. Cost totals are seldom if ever shown.

5. Because a profit must be provided for two items of capital. On the capital invested in merchandise and on the capital necessary for operating expenses not properly chargeable to merchandise account. This is only possible by figuring a profit on the selling price.

6. Because it indicates correctly the amount of gross or net profit when the amount of sales is stated. If you are figuring your percentage of profits through selling price, a statement of gross sales for the day, or month, or year would be a pretty accurate indication of what you should expect in the way of profit. The percentage of profit on sales is indicative of result of a year's business; percentage of profit on cost is not.

7. Because allowances in percentage to customers for cash discounts and otherwise are always from the selling price. Therefore, you can figure more accurately in taking your cash discounts into consideration if all your percentages are based in the same way.

8. Because no profit is made until the sale is actually effected.

9. Because by harmonizing your entire plan of figuring your percentages relative to profits in business, etc., with the entire plan on which your merchandising is harmoniously developing, you will not consider your selling price, percentage of profit and expense, etc., entirely different from anything else.—From "The Right Way to Figure Profits," by Thomas A. Fernly.

Deal Kindly With Suggestions

"He never said 'Thanks!'"

To nip enthusiasm in the bud in the way implied by the foregoing remark of a snubbed employe is not only cruel, but poor policy. The fortunes of many businesses have been affected by the attitude taken on the suggestion of the staff. The stagnant condition of one firm's affairs, and the flourishing condition of another's, are often traceable to the same cause.

Death of Veteran Shoeman

Many friends in the shoe trade will regret to learn of the death of W. J. Webster, which took place on November 26, at Cobourg, where he has been living for some time. For forty-six years the late Mr. Webster was engaged in the wholesale shoe trade at 60 Victoria Square, Montreal, retiring about a year and a half ago. He spent a great deal of his time on the road, covering the Dominion from the Atlantic

THE LATE W. J. WEBSTER

to the Pacific. His favorite territory, however, was Ontario. Mr. Webster made his first trip in 1866, from Brown & Charles, of Montreal, who were pioneer shoe manufacturers. He is survived by a son, W. Davidson Webster, of the Cobourg Felt Co., and a daughter, Miss Webster, who lives in Montreal. The late Mr. Webster was of a genial and kindly disposition, and, during the long period that he spent on the road, was engaged in business practically all that time. His passing marks the severance of another of the ties which bind the link of shoemen of the present day with those of the past.

Merchants Should be Exempt

E. M. Trowern, secretary of the Ontario Provincial Board of the Retail Merchants' Association is sending out to the members the following letter which explains itself.

As you are possibly aware, at the last session of the Ontario Legislature, an act was passed entitled "The Workmen's Compensation Act." The Ontario Provincial Board of our Association strongly opposed having the conditions of the Act apply to retail merchants, and the Government promised that retail merchants would not be included in its provisions. To carry out the conditions of the act, a commission was appointed, consisting of three members. To put the act into force, the commission have recently sent out a large number of forms, and we find that they have been sent to retail merchants to be filled in, as well as to manufacturers. In order to call the attention of the Government to the fact that they promised us that we would not be included a representative delegation recently waited upon the Hon. I. B. Lucas and members of the Commission, and explained our position to them. We received a good hearing, and we were asked to place in writing the various businesses that we consider come under the retail class, as the Commission had had no reliable information to guide them, as to

who were or were not retailers, when they sent out their forms. In addition to compiling this information, we intend to also compile the reasons why we think that the Act would be of no value to us,, but only result in adding to our cost of doing business for the benefit of other classes.

Until you hear from us again we would like you to explain our position on this subject to any of the members of your branch of our Association, and ask them to hold any forms that they may receive, until a later date. The accidents that you and your clerks and drivers are apt to be subject and liable to, do not come under the provisions of the Act, and consequently, if you did contribute anything toward it, you would not be protected as you should be. Any literature that you or the members of your branch may receive on this subject from the Workmen's Compensation Act Board, we would be pleased if you would forward it to our office.

Putting in Patriotic Window

A loyal and patriotic window, which called forth a great deal of favorable comment, was installed recently by H. J. Eady, 50 Yonge street, Toronto. Canadian flags formed the background and floor, and in an elevated position at the rear were three small Union Jacks, arranged to

form a pinnacle. The color scheme was nicely relieved by the display of apples, grapes, vines, wheat and chrysanthemums. In white letters on a large flag were the words "Invictus Shoes, the fruits of Canadian Production." Mr. Eady certainly showed considerable originality and good judgment in his arrangement and exhibit of fine footwear, and everything about the pleasing emblematic spectacle was well balanced and carefully planned.

E. J. Wright, who, for the past two years, has been in charge of the bottoming room of Cook-Fitzgerald Co., London, has resigned. He is contemplating opening up quick shoe repair shops in several Ontario cities.

Good News for Old Friends

The many friends of Mr. Jas. Robinson, of Montreal, throughout the Canadian trade will be glad to learn of his continued improvement in health. Two or three years ago he found it necessary to "go slow" and made arrangements to take some relaxation from business and public life. A year or so ago his condition became so alarming that an eminent specialist was consulted and he was placed under

J. GEORGE ROBINSON, MONTREAL

most careful treatment. The more dangerous symptoms have now subsided and he seems in a fair way to recovery. At the time he sought relief, and even before that, he placed his business in shape to practically run without his supervision. His son, Mr. J. G. Robinson, took on the buy-

D. S. BENVIE, MONTREAL

ing and selling end of the business, as well as the numerous outside interests of his father. In Mr. D. S. Benvie, who looks after the financial end of the concern, Mr. Robinson has a man who is as familiar and competent as himself to handle the monetary interests of the various departments

of Mr. Robinson's undertakings and thus there has been no break whatever in the continuity of the business. Mr. Robinson's features have been familiar to the readers of the SHOE AND LEATHER JOURNAL for a quarter of a century, and as a matter of interest to the trade, the photographs of his two lieutenants are now presented. J. George Robinson is a "chip off the old block," in more ways than one, the resemblance to the father being most marked in conversation. It looks as though, with or without Mr. Jas. Robinson's active participation, the business has a long life of continued growth and prosperity ahead of it. In the meantime the SHOE AND LEATHER JOURNAL, and the host of well-wishers who have followed Mr. Robinson's career, hope that the good news with regard to his improved health but presages the full return of his old vigor.

Smart Shops Showing Lace Shoes

The wave of the lace shoe seems to be sweeping over the larger cities of the United States, particularly New York, Philadelphia and Chicago. All the leading shops are showing them, and high-class retailers in Toronto already have these attractive creations in stock, while many new patterns are expected for the Christmas trade. At present, the lace shoe is being purchased exclusively by the smart dressers and the well-to-do, retailing at seven, eight, nine and ten dollars the pair.

Howard C. Blachford, of H. and C. Blachford, Limited, Toronto, who is manager of the women's department, has returned from an extended visit to the leading shoe centres of eastern cities. He says that all up-to-date shops are showing women's lace, and that many factories, catering to the best trade, are running largely on the new lines. The showings embrace the stage last, the short square French toe, and the fairly long, pointed toe. The foreparts are principally in patent and gunmetal. A few of the shoes have very short vamps, from 1½ to three inches, but the most popular length is about 2½ inches. The quarters, in all instances, come in grey, the new nigger brown shade, fawn, taupe, etc., while the heels are either of leather or wood, covered with the same material as the quarters, which imparts to the shoe a neat and artistic effect.

Some of the shoes have patent leather facings down the front, some are noticed with a gaiter effect, having a short, circular heel foxing, while a few are seen cut extremely high. The average height, however, is about the same as that of a fifteen button boot. Possibly, the most popular color is fawn just at the present time, and the favorite heel is the Cuban-Louis. There seems to be a return to lace boots among the best dressers, and, as already stated, the leading retailers are stocking them pretty extensively, in some lines. Whether the lace boot will be a ready seller for any length of time, or whether it will result in displacing the button boot to any appreciable extent, is, of course, conjecture.

One of the leading caterers to women's foot needs in New York when discussing the trend of women's styles the other day, was asked how he managed to keep up with them so fast and frequently were changes brought about. Said he: "I am always on the look out for something new, something distinctive, and particularly high class. You inquire how I keep pace with the procession. Well, I may tell you that I never re-order on any line, no matter how much demand there may be for that particular range of feminine footwear. I pass on to something else. The result is that I have shown and sold certain shoes and gone out of them while others are considering putting them in. You may think by not re-ordering, or sorting, that I would have a great many odds and ends. Well, I do, but I clean them out by means of a clearing company, and, of course, on all that I sell I have to obtain a very generous profit."

IMPARTING A WINTRY EFFECT TO HOLIDAY DISPLAY

Two exceptionally attractive and artistic Yuletide windows were installed by James Nash, shoe retailer, of Brandon, Man. He always makes a specialty of window trims. In the men's window, the floor was puffed with cotton, placed over stands of varying heights, which imparted the effect of a snow bank. The floor was covered with flitter and sprigs of holly, and the shoes, which consisted of the latest styles in men's footwear, together with hockey boots, pumps, Romeo, Everet, felt, and other lines of slippers were neatly arranged. In the background was a row of holly, suspended above which was a large Christmas bell, and tissue paper festooning. In the centre, against the background, was a papier mache face of Santa Claus, surrounded by a holly wreath. In the centre of the window was an open club bag, standing on end, and resting on the top was a handsome show card, which read: "For him—a nice pair of slippers or gloves." At the back of the window, several up-to-date lines of gloves and mitts were displayed.

The women's window, an illustration of which is here presented, was similarly arranged, and the shoes on display consisted of the neatest and nattiest effects in women's high and low cuts, boudoir, Juliet, evening, opera and other appropriate lines. At the back were displayed child's leggings, overgaiters, infants' soft soles, etc. At the front of each pair of shoes there were dainty little price cards, which served to add an individual touch.

In the centre was a neat show card with the words "A Merry Christmas," and in its upper left hand corner a typical winter scene. There is no more useful, serviceable

or practical gift for the holiday time than footwear and the enterprising retailer should take every means in his power to impress this fact upon the people, and to point out to them the advantage of early shopping in the way of a better service, a wider selection and more careful fitting.

Too Many Fake Propositions

"I think," writes a northern retailer, "that it is about time some steps were taken to stop fake advertisements, guessing contests, votes for libraries, pianos, kitchen cabinets, etc., to which merchants are subjected every now and then through the pressure of some society or the rather doubtful tactics of some competitor. I do not think that any store ever gained permanent advantage from going into such schemes, and I have tried them all. I cannot say that I have ever made a dollar out of the propositions, and generally after any little excitement created had subsided, trade fell off to quite an alarming degree. Most every proposition of this kind is "loaded" in favor of the promoter, and will eventually do any store more harm than good in the end.

"Another thing that ought to be discountenanced in every particular is the 'slaughter sale' business. I believe that a great many such flaring statements are pure fabrications, that unsettle the buying public and create false impressions in the minds of purchasers, regarding the profits that shoe dealers make. In the end, so-called "Slaughter Sales" act as a boomerang. To me, the "Big Bargain" sale always indicates that the man behind the gun is one of three things—a very poor business manager, a careless and inefficient buyer, or a fakir."

Newsy Briefs from Old Quebec

A. E. Marois, of the firm of Tourigny & Marois, shoe manufacturers, and wife, celebrated the twenty-fifth anniversary of their wedding on November 25th. In honor of the event, a large number of their friends and relatives were entertained at their handsome private residence, Villa Vic-

A. E. MAROIS, QUEBEC

toria, St. Foye road, where a very pleasant evening was spent. The house was beautifully decorated by pretty colored electric lamps, the table being especially attractive. Several automobiles were placed at the disposition of about 300 guests who attended, among them being the brothers of Mr. Marois with their wives and children. Mr. and Mrs. Marois have fourteen children living, and the god-parents of each of them were present on the occasion.

The day previous to the celebration of the silver anniversary Mr. Marois was called into his shop and presented with a fine silver fruit stand by his employes. The recipient made an appreciative reply, saying that he considered it was only his duty to develop his industry as rapidly as possible, in order to supply work for the many hands employed by him.

Mr. Marois' brothers presented him with different articles in silver. During the evening an address was read by J. A. Scott on behalf of the shoe manufacturers and leather dealers of Quebec, extending their congratulations to the popular pair upon the happy event, and wishing them many more years of prosperity and contentment. Following the reading of the address, Mr. Marois was then presented with a handsome and costly cabinet of silver cutlery, while Mrs. Marois was given a valuable silver mounted toilet set. Mr. Narcisse Gagnon, of Aird & Son, Montreal, who was present with his wife, presented Mr. Marois with a rich cut glass punch set. To all of these donations the pleased recipients made appropriate replies, thanking their friends for their good wishes and their tangible expressions of kindness and esteem. The children of Mr. and Mrs. Marois presented their parents with an address and silver fruit stand.

After all the gift giving had taken place, a splendid dinner was served, following which there were a number of toasts. An orchestra was present and the proceedings were enlivened by several musical selections. The remainder of the evening was pleasantly spent in dancing and other past-time.

Among the members of the trade who organized the presentation to Mr. Marois were J. A. Scott, Luc Routier, Art Richard, J. A. Cloutier and G. Lepine, C. Galibert, of Montreal, was represented by G. H. Bray. Among the shoe manufacturers who were present were:—O. Goulet, Elie Jobin, W. Desbiens, of the Wm. A. Marsh Co., L. Gauthier,

of the Louis Gauthier Co., J. H. Larochelle, Dr. Brunet and J. Tanguay, manager of the Rock Shoe Co. and among the leather men were:—Edgar Shee, Oscar Clement, Jos. Labrie, Louis Guay, A. Filardeau, Fidel Blouin, Geo. Bilodeau, Alf. Dupere, Pierre Blouin, A. A. Cantin, Art. Gosselin, Paul Hebert, Pierre Ouellet, Jos. Thivierge, Lucien Borne, H. Picard, J. W. Russell, Mr. Rogers, of the United Shoe Machinery Co. Paul Tourigny, formerly business associate with Mr. Marois, who was absent on business in the eastern states, sent his congratulations, regretting his inability to be present. A heliotrope satin badge was presented each guest, with the following inscription:—"1889-1914—Souvenir of the silver wedding of Mr. and Mrs. A. E. Marois, Quebec. 25th November, 1914."

A. Isseman, who represents the Walpole Rubber Co., of Montreal, was in Quebec recently calling upon the trade with a new special line of rubber sole, which can be sewed the same as leather, and which, it is claimed, will give better wear. Mr. Isseman was also showing a line of backing cloth for uppers and insoles.

H. Bonner, of the Bonner Leather Co., Montreal, was in the city last week calling upon the trade. He says that raw material is very hard to get.

Alf. Pouliot, tanner, of Quebec, lost one of his sons recently, who had just finished his classical course at the Quebec seminary. Many friends are extending sympathy to Mr. Pouliot in his bereavement.

All the stock in the F. W. McKean shoe factory has been removed to the premises of E. Shee, where it has been sold, and the proceeds will be handed over to the bank. The sole leather has been bought by Legace & Lepinay, the unfinished shoes by J. E. Samson, while the welting was purchased by the John Ritchie Co.

Live Views on Stylish Shoes

A leading authority on styles states that among the high-class trade during the coming spring season, one of the things which is going to sell remarkably well is the oxford, with blind eyelets, laced with a silk "fish-line." This oxford will have a pointed, receding toe, will be built with a turn or very light sole, and will be exceptionally graceful and neat. It is two years now since the oxford had any call in high-class city trade, and its return to favor is looked forward to with considerable interest and expectancy by smart shoppers in leading cities. Another authority on style says that a new cloth, known as the tri-color, which will have a kind of blue-reddish effect, will be seen on a number of late spring models. Certainly the lace boot appears to be winning its way into popular favor and all the leading retailers are showing them. Some novelties are being introduced, but the fawn and grey tops, with trimmings of black leather, to match the vamps, are leading just at present.

Another shoe, which is creating some interest in New York, is a white calf pump, with quarters striped with black satin ribbon, and celluloid-covered heel, with black and white effect or zebra pattern, as it is known by some. The only ornament is an onyx eye. The black and white effect is exceptionally pretty. Overgaiters are worn to a large extent in the leading cities, particularly by the young women, fawn and various shades of grey, along with a fair representation of white, being the leaders.

In men's footgear, the changes are not very noticeable for the winter. Cloth tops are popular in fawn and grey, while the plain recede toe and the stitched tip are seen to a great extent. The darker shades of brown also reveal a fair measure of appreciation for early winter wear. The brogue shoe, and long wing tip is also shown to a certain extent. Men's styles are much more conservative than women's—and always will be.

The Horseshoe Hunt Club's Outing

The Horseshoe Hunt Club left for the hunting grounds on a special Pullman car attached to the Cobalt train leaving Toronto on October 30th. This year it was composed of twelve members. The Newmarket contingent consisted of Dr. Stuart Scott, Douglas Scott, J. R. Y. Broughton, Andrew Davis and Hon. E. J. Davis. There were also J. C. Moore, city clerk of Guelph, Fred Underhill of Aurora, Elmer Davis, of Kingston, Dr. Dransfield, of Toronto, Mr. Tingle of the same place, and J. L. Johnston and David Johnston, of Ottawa. They arrived at their camp, in the Haliburton District, on Saturday afternoon, and were ready for operations on Monday, when the season opened.

The weather was anything but satisfactory from a hunting standpoint, and interfered very much with the party getting a large number of deer. Still in the aggregate they had no cause to complain, the twelve members securing eleven deer. This is only one short of the number they are entitled to by law. Of the Newmarket contingent, Dr. Scott secured one, and Mr. Broughton two. The others were divided around among the balance of the party.

This is one of the best organized hunt clubs in Canada. Their business is run in a thorough, systematic manner, an annual meeting being held each year during the camp, of which minutes are kept and all records in connection with the conduct of the business of the club. They have a comfortable house, good cook, and everything to make camp life thoroughly enjoyable when the work on the runways for the day is over.

Deer hunting is one of the most satisfactory holidays for a business man that it is possible to imagine. Everything one does is so different and conditions vary so much to what one is accustomed to at home, that business is entirely forgotten and the thorough change is enjoyed. As one of the members stated in a recent letter received by Hon. Mr. Davis, he returned home feeling fine and it was a real pleasure to jump into business again with a clear brain and renewed vigor. Two weeks seemed altogether too short, and the party returned on a special Pullman,

placed for them at Huntsville, on Saturday evening, November 14th, the Newmarket contingent dropping off on the Cobalt Sunday morning, happy to meet, sorry to part, happy to meet another year. The accompanying illustration shows the majority of the members of the Horseshoe Hunt Club, and what they accomplished. In other words, they have "the goods" with them.

Weak Spot is Easy Credit

In the opinion of Will Irwin, the well-known financial expert, the retail credit system is very inefficient. Writing in the Saturday Evening Post, he says: "Probably the weakest spot in American business is the retail credit system—with all due respect to those eminent political economists who think there are no weak spots outside Wall Street. Country merchants, as a whole, extend credit not only liberally, but prodigally; a considerable part of their bills receivable are payable, in fact, at the debtors' convenience. There is no question that this is a great handicap to the country retail trade. A country store need not run very long on this wide-open credit system before bills receivable absorb a considerable part of the merchant's capital. This means that he cannot pay the wholesaler until his patrons pay him. Probably free-and-easy credit has wrecked more small retail business enterprises than all other causes put together.

If the retailer does not pay his own bills promptly he is at a continual disadvantage in buying goods. If he is free and easy with credit, that puts him at a continual disadvantage in selling also. Jones buys twenty dollars' worth of goods of him and pays spot cash; Smith buys exactly the same goods at exactly the same price and pays in six months—which means that the merchant is either overcharging Jones or undercharging Smith, for twenty dollars spot cash is a greater value than twenty dollars paid in six months.

THE DAVIS LEATHER CO. FIND NO SHORTAGE IN DEER HIDES THIS YEAR

Canadian Manufacturers After Orders

(Continued from page 24)

Tanners Will Be Right There

Recently, at the request of Sir George E. Foster, a delegation of about fifty tanners had an interview with the Minister of Trade and Commerce, in Ottawa. It appears that some representations had been made to him, that leather manufacturers in certain sections of the Dominion were taking advantage of the occasion to unduly raise the price of their product, and that this prevented footwear manufacturers from securing as many contracts for army shoes as they would like, because they could not turn them out at the prices which foreign governments were willing to pay. In order to clear up the situation and to find exactly how matters stood, the interview took place at the Capital and a number of speakers were heard in the different branches of the leather trade—upper and bottom stock, harness, saddlery, etc. Among these were Hon. E. J. Davis, Newmarket; Geo. W. Beardmore, Toronto; Geo. C. H. Lang, Berlin; C. O. Shaw, Huntsville; F. G. Clarke, Toronto; Charles Robson, Oshawa; Alderman S. Morley Wickett, Toronto; J. Daoust, Montreal; C. G. Marlatt, Oakville. The tanners' side in

Joins Ranks of Benedicts

Harold Gladstone Greene, manager of the footwear department of the Montreal warehouse of the Gutta Percha and Rubber, Limited, was married on November 21st, to Miss Florence Margaret, third daughter of Mr. and Mrs. Wilton C. Eddis, Toronto. The ceremony was performed in St. Simon's Church, by the Rev. E. C. Cayley, D.D. The bridesmaid was Miss Georgie Eddis, sister of the bride,

H. G. GREENE, MONTREAL

while the best man was Mr. Leslie Greene, brother of the bridegroom. Mr. Greene and bride left for the east on a short wedding trip and will reside in Montreal. Mr. Greene is the son of R. H. Greene, secretary and manager of the footwear department of the Gutta Percha and Rubber, Limited, and for the past few years has been associated with his father as assistant manager, but last month was promoted to the head of the footwear branch of the company in Montreal. Many friends will extend their congratulations.

the way of supplies, capacity, demand, facilities, price tendencies, etc., not only in the matter of sole leather, but in harness leather, side stock, calfskins, etc., was ably presented by the different speakers. Sir Geo. E. Foster was assured that if very extensive orders were received for leather goods equipment, either in the way of shoes, saddlery or other paraphernalia for the army, the Canadian tanners would be able to supply the demand.

While it is true that it has been difficult to secure hides and skins, in view of the conditions of affairs brought about by the war and the fact that a number of shoe manufacturers have entered the American market as buyers who heretofore have obtained their supplies from abroad, still, it is felt that the situation will right itself to a very large extent. While the prices of all leathers are stiff and increasing, the future is by no means considered discouraging, and Canadian tanners, whose capacity has always been far in excess of that of the demand of the Dominion, will find a good outlet for their surplus, in overweight sole, splits and harness leathers. Many plants are now working overtime in an effort to meet the demands of the Militia Department. The lifting of the recent embargo on cattle and hides is also favorably regarded by the leather manufacturers.

It is understood that an embargo on leather had been suggested to the Department of Trade and Commerce, but after hearing the representations of the tanners, Sir Geo. E. Foster was enabled to understand the exact situation of affairs, being convinced that such a move was neither necessary nor advisable. One of the speakers pointed out that the complaint of eastern manufacturers in regard to the raise in the price of leather did not appear in the proper light. Certain shoe firms got prices on leather two months ago and had submitted figures for a certain style for army boot. Afterwards, when it was announced that a contract would be placed (eight or nine weeks later) the same manufacturers thought they could obtain supplies at the same price as the leather was quoted at the time of submitting the sample shoe.

Of course, in consonance with the scarcity of hides, the shutting off of foreign skins, the figure had gone up, and the leather manufacturers maintain that the few cents advance is altogether justified by the circumstances.

Another tanner pointed out that if any manufacturers really felt that they were being overcharged for leather by Canadian producers, all they had to do was to get their stock from the United States and incorporate it in the shoes on all foreign orders. The Canadian Government gives a refund of ninety-nine per cent. of the duty, this being done in every instance where raw material is brought in to be used in making articles which are exported. Many other points were brought out and it is thought that tanners will in every way be able to meet all orders for leather, which Canadian factories may place with them.

Larrigans for Boys at the Front

The British War Office is considering the use of long "beefskin" moccasins, such as are used by Canadian lumbermen, for the men at the front this winter. The larrigans, as manufactured in Canada, are waterproof, and with the heels and heavy soles attached would likely prove a great boon to the men bearing the brunt of the fighting. Many orders for such moccasins have already been received from the men in the Canadian contingent.

Lieut.-Col. Murphy, who was Transport Officer in the first Canadian contingent, and who went to England on a special mission for the Militia Department, has returned to Ottawa. He highly recommends such footwear for the use of the troops.

SHOE NEWS IN PARAGRAPH

L. E. Moreau has opened a shoe store in Edmonton.
W. C. Doyle has started a shoe store in Ernfold, Sask.
The Maple Leaf Shoe Co., Montreal, has been dissolved.
The stock of the London Shoe Store, Montreal, has been sold.

The Wheat City Tannery Co. have started in business in Brandon, Man.

C. E. Lepine has resigned from his position with Dupont & Frere, Montreal.

A new shoe store has been opened at 996 Dundas street, Toronto, by Mr. Ransom.

E. P. Mullarky, of Quebec, was in Montreal for a couple of days last week.

Hamilton Bros., late of Sutton, Ont., have opened a new shoe store in Newmarket.

Frank Ortlieb has opened up a shoe and harness business in St. Gregor, Sask.

The assets of Philip Lamv, dealer in shoes, dry goods, etc., in Montreal, have been sold.

A. Brandon, of the Brandon Shoe Co., Brantford, Ont., was in Toronto last week on business.

A. Bonisteel, of the Collis Leather Co., Aurora, Ont., was a recent visitor to the Boston market.

S. Morley Wickett, of Wickett & Craig, tanners, of Toronto, was in Montreal early this week.

P. F. & E. E. Anderson, shoe dealers, of Moose Jaw, have been succeeded by Anderson, Limited.

J. Sale, jr., of the Julian Sale Leather Goods Co., Toronto, was in New York recently on a short visit.

Several machinery parts have recently been installed in the Rena Footwear Company's factory, Montreal.

P. I. Hersey, vice-president of the Regal Shoe Co., recently paid a trade visit to Montreal and Toronto.

W. P. Stewart has started in the shoe business in Uxbridge, Ont., and put in a representative stock.

Dufresne & Locke, Maisonneuve, have had several new machinery parts installed in their factory recently.

Recently the shoe shop of H. Walker, Brampton, was broken into and six pairs of shoes, valued at \$20 stolen.

The Northway Co., of Orillia, are closing out their shoe department, which has been conducted for some time.

Jos. Erman, representing Krohn-Fechheimer Co., makers Co., Toronto, has returned from a business trip to Ottawa and Montreal.

Hon. F. J. Davis, of Davis Leather Co., Newmarket, was in New York and Boston last week for a few days' visit.

Frank R. Barber, dealer in shoes and men's furnishings, Port Elgin, Ont., was in Toronto recently calling upon the trade.

Charles E. Fice, of Toronto, Ont., representative of J. & T. Bell, Limited, has been spending a few days in Montreal.

"Terry" McGovern, of the Western Leather Goods Co., Toronto, has been spending a few days last week in Montreal.

Chas. A. Blachford, of Blachford Shoe Manufacturing Co., Toronto, has returned from a trip to Ottawa and Montreal.

In reply to an advertisement from the War Office, England, asking for tenders to supply winter boots for the soldiers at the front, the managers of boot and shoe factories

in St. John's, Nfld., have sent by the R. M. S. Carthaginian samples and price lists of the top boots made by these concerns.

Charles Bonnick, manager of the Toronto branch of Ames-Holden-McCready, Limited, spent a few days in Montreal last week.

James Valentine, of Valentine & Martin, shoe manufacturers, of Waterloo, Ont., was a caller on the Toronto trade last week.

Robert E. Katz, sales manager for the Panther Rubber Mfg. Company, of Sherbrooke, Que., was in Toronto last week on business.

A. Wellwood and Chas. W. Elliott, shoe retailers, Dan-

AN ATTRACTIVE FLOAT OF HUGH HOTSON, SHOE DEALER, TAVISTOCK, ONT., AT THE FALL FAIR IN THAT VILLAGE, IN WHICH A FINE DISPLAY WAS MADE OF DERBY SHOES FOR MEN WHICH ARE MANUFACTURED BY THE MURRAY SHOE CO., LONDON. MR. HOTSON IS SEEN STANDING ON THE RIGHT.

forth avenue, Toronto, have returned from a successful hunting expedition.

Chas. Robson, of the Robson Leather Co., Oshawa, has returned from a business trip to New York, Boston and other eastern cities.

The shoe store of Sparks Bros., St. Catharines, Ont., was entered recently and several pairs of shoes stolen, as well as mitts and gloves.

G. A. Blachford, of Blachford Shoe Mfg. Co., Toronto, is spending a few days amongst the shoe manufacturers in Rochester and New York.

W. C. Meyers, of Toronto, representing the Rideau shoe, has returned from an extended business trip throughout the western provinces.

A. Chadwick has moved into his new store in East Toronto, a few doors from his old stand. His new premises are larger and more attractive.

J. E. McCormack will open up a footwear and dry goods business in Carberry, Man. He has leased the stores formerly occupied by T. D. Stickle.

J. Hessenhauer & Son, shoe retailers, of Berlin, have installed an attractive new front in their place of business, which greatly improves its appearance.

R. G. Smith, western representative of the Slater Shoe Company, Montreal, has returned from his spring selling trip throughout the Prairie Provinces.

S. D. Wilson, buyer of the Hudson Bay Co. Vancouver branch, has been calling on shoe manufacturers in the East and spent a few days in Montreal and Quebec recently.

Fred. P. Beemer, of Toronto, who represents the Guplin line of slippers and the Sorosis shoe has returned from an extended business trip throughout the Prairie Provinces.

The large consignment of shoes, which was recently made by the Weston Shoe Company, of Campbellford, O.

for the Belgian sufferers, was shipped last week to that country.

Geo. Cowling, of the Blachford Shoe Manufacturing Co., Toronto, has completed his spring trip in Western Ontario, and reports spring business as being very satisfactory.

The U. S. M. Co. have installed one of their latest 16-foot Goodyear shoe repairing outfits in the establishment of the Montreal Shoe Repairing Co., 637 St. Catherine street west, Montreal.

C. T. Shaw, Montreal, president of the Anglo-Canadian Leather Co., has returned from a visit to New York and Boston. Mr. Shaw reports conditions in American centres as being very good.

John Leckie, of the J. Leckie Co., shoe manufacturers, Vancouver, and J. A. Thurston, superintendent of the company, were in Toronto, Ottawa, Montreal and other cities last week on business.

J. Geo. Robinson, of Jas. Robinson, Montreal, was in Ottawa during the early part of last week. Mr. Robinson states that shoe conditions in the last few weeks have shown a decided improvement.

H. H. Lightford, former superintendent of the Perth Shoe Co., of Perth, who has been spending some time in the New England States, was in Toronto, London and other cities this week on business.

E. W. C. Honen, formerly of Maisonneuve, who is now superintendent of the Barrie, Ont., plant of Underhills, Limited, was recently in Marlboro, Mass., being called there owing to a death in his family.

C. S. Sutherland, of the Amherst Boot and Shoe Co., Amherst, N.S., was in Montreal during the latter part of the past week. While in that city he attended the meeting of shoe manufacturers held last Friday.

G. A. Maybee, of Maybee, Kennedy, Limited, Moosejaw, is spending a few days in the east looking over the trade. He reports conditions in his section of the country as very good as far as the company are concerned.

Wm. Allin, Hampton, Ont., passed away recently in his 89th year. For some years he conducted a shoemaking establishment in that village. He was the oldest member of Canadian Order of Home Circles in Canada.

Grand Duke Michael of Russia has presented to the French army one million pairs of shoes which had been ordered from Webster, Mass., factories at an average price

of \$3 per pair. Some enormous orders for shoes for the Russian army also have been placed.

A. W. Dubois, representing Charles K. Fox, Inc., the widely known slipper manufacturer of Haverhill, Mass., was in Toronto last week showing a fine range in evening footwear.

John Brotherton, shoe retailer, Yonge street, Toronto, has sold his branch at 750 Broadview avenue, to A. E. Cudmore (formerly in the shoe business on Gerrard street east), who has taken possession.

Wm. Ryall, who for several years conducted a shoe business at 997 Queen street east, but retired some time ago, passed away recently at his home in Toronto. He was about 60 years of age, and was widely known.

W. George Borland, who has been away on a two weeks' honeymoon trip, has returned to Montreal and is again calling on the customers of Jackson & Savage, the firm which he represents in Eastern Ontario and part of Quebec province.

A. R. Clarke & Co., of Toronto, have orders from the British Government for 1,000 sheep-lined coats, and 18,000 shirts for the troops, which orders are now being filled. They have also received from the French Government, orders for mitts, shirts, blankets and woollen socks for the French troops, and this department of their factory is now very busy.

Among the shoe retailers in Toronto on business last week were J. C. McGill, Oshawa; J. B. Gould, Port Hope; W. J. Thurston, Guelph; R. A. Briscoe, Galt; Norton Fisher, Shelburne; W. Moore, Barrie; J. D. McArthur, Guelph; E. Vinick, Hamilton.

The many friends of A. W. Bradfield, who covers Eastern Ontario for F. J. Weston & Sons, wholesale shoes, Toronto, will sympathize with him in the death of his wife, which occurred on November 8th. Besides her husband, she leaves a family of two boys.

F. A. Guinivan, of Montreal, who is opening a handsome and decidedly attractive Walkover Shoe Store on Yonge street, has taken up his residence in Toronto. The new establishment is nearly completed and will be one of the finest footwear homes in the Dominion.

John J. Mason died recently at his home in Halifax, aged 87 years. He was a shoemaker by trade and for a long time conducted a shoe store at 109½ Gottingen street. He is survived by his wife, two daughters, and one son, Angus J. Mason, who conducts the shoe business.

John Neill, a well-known resident of Whitby, Ont., who died recently in his fifty-eighth year, was one of the founders of the Neill shoe stores, located in several of the largest towns and cities in Ontario. Mr. Neill, who was a native of Barrie, is survived by a widow and five children.

James T. Sutherland, of Kingston, who is a director of the Cook-Fitzgerald Co., of London, and a widely known shoe traveler, has again been elected manager of the Frontenac Hockey Club, of Kingston. Bert Abernethy, shoe retailer of that city, has been appointed treasurer.

J. A. McCreery, has opened a new shoe store in Bedford Park, Yonge street, Toronto. He has erected a new store, which is well lighted and nicely fitted up. Mr. McCreery has had several years' experience in business life and has selected a fine location for his new establishment.

The retail shoe trade is rather quiet in the larger Canadian cities, but in towns and villages it is good and sorting business has been fair. Where snow has fallen there has been a big demand for rubbers and felt goods. With colder weather dealers feel that a fine Christmas trade would be done and they are all ready for it.

Simpson & Co., shoe dealers, Toronto, who did business on Parliament street and Queen street east, recently made

Again Returned as Director

Chas. J. Silver, of the traveling staff of the W. B. Hamilton Shoe Co., Toronto, has again been elected a director of the Toronto Board of the Commercial Travelers' Association of Canada, being returned by acclamation and making his fourth year on the board. Many friends are extending congratulations as such a record shows the general esteem in which

Mr. Silver is held. The Commercial Travelers' Association has 12,000 members and there is contest for only two officers this year. For first vice-president there is a close battle between Mr. Alexander Cook, of Messrs. Greenshields, and Mr. George Moore, of John Macdonald & Co. Two Fieldings—Edward and W. M.—are fighting it out for the treasurership. A report will be submitted at the annual meeting of the mortuary benefit proposed two years ago, but the interest is centred upon the steps that will be taken in giving assistance for patriotic purposes.

an assignment to Osler Wade. The assets are shown to be \$4,975 and the liabilities \$4,539. At a meeting of the creditors held recently it was decided to hold a sale of the stock on Wednesday, December 9th.

The stock of the United Co-operative Stores, Limited, at 485 Notre Dame street west, Montreal, will be sold by the liquidator, C. W. Baker. The stock consisted of boots, shoes and rubbers, to the value of \$16,500, while the store fixtures were valued at \$4,000. The time for receiving tenders expired on December 1st.

The civic finance committee of Quebec came in for some criticism in regard to the purchase of some twenty-one pairs of rubber boots, which were obtained from Jules Giroux, of St. Romuald, at \$4.50 per pair, less five per cent. The chief fault was found with the committee because it had gone outside of the city to make the purchase.

One of the largest orders for shoes ever given an American manufacturer, was one placed by the French Government with Morse & Rogers, shoe manufacturers, New York, a few days ago. The contract was for \$2,000,000 worth of shoes for the allied troops, delivery to be made not later than the middle of January next.

"The Credit Men's Journal" is the name of a bright publication which has just made its appearance. It is published by Henry Detchon, general manager of the Canadian Credit Men's Trust Association, and the head office is in Winnipeg. The association has branches in Vancouver, Calgary, Regina, Toronto, Montreal and St. John.

Returns recently issued by the department of trade and commerce, Ottawa, show that the boots, shoes and slippers, which were imported during 1912-1913, were \$4,068,266. The census of 1910 showed that there were 180 establishments in Canada making shoes, employing 17,277 employes, with an annual wage bill of \$7,698,333, while the total value of footwear products was \$33,987,248.

The Canadian Rubber Company found it necessary to run three of its factories day and night to fill the Government orders for overshoes, ground sheets and blankets, rain-coats for officers and pouches for men. About 1,700 employes were directly affected by the first Canadian order. It is expected that similar business will follow the equipment of the second Canadian contingent.

Some amendments have just been made in the operation of the Workmen's Compensation Act in Ontario which comes into force on January 1st next. It is made clear that operations as boot and shoe making and repairing, harness making and repairing, etc., when carried on as part of and for the purpose of an exclusively retail business are not to be considered as coming under the Act.

Tom Stedman, Limited, Portage avenue, Winnipeg, who has been in the shoe business in that city for several years, recently made an assignment to C. H. Newton, official assignee. The liabilities of the firm to the trade are about \$72,843, while the trade assets (exclusive of equity in property) are \$61,800. A meeting of the creditors will be held at the office of the official assignee on December 3rd.

The sale of 1,000 cases of men's, boys', women's, misses' and children's rubbers, which were purchased by Suckling & Co., the well-known trade auctioneers, of Toronto, from the Independent Rubber Co., of Merriton, attracted a large number of buyers from various parts of Ontario. The bidding was lively and good prices were realized for the many lines sold. The sale was conducted at 76 Wellington street west, Toronto.

There has been an advance of 50% in shoe bristles, which are generally used by the disciples of St. Crispin in wax ends. Advices received from England state that this advance is on top of one which took place just before the war, of 20%. Price of bristles now ranges from \$10 to \$22

a pound. Shoemakers generally buy them by the ounce, and where they formerly had to pay \$1 to \$1.25, they will now have to hand out \$1.75 to \$2.00.

P. Leslie Cox, for twelve years in the employ of Waterbury & Rising, Limited, in their wholesale warehouse, died a few days ago at his home in St. John, N.B., leaving a wife and child surviving, besides his parents, two brothers and one sister. He was a bright, well liked young man of about twenty-six years of age, a member of the Sons of England, of the Sons of England Band, of the Royal Order of Moose, and a former member of the City Cornet Band.

A new type of show case, which was specially designed by Ed. Cook, proprietor of the Owl Shoe Store, Toronto, has been installed at the front of that establishment. It is made of plate glass in the form of a square, the sides being four feet wide and the height over six feet, while there is a canopy top of art glass. The interior of this large show-case is brilliantly lighted, and its facilities for displaying natty lines of shoes, are exceptionally good. The position of the case, at the front of the store, at once arrests attention.

John E. Wright has been elected president of the Dominion Commercial Travelers' Association, at the meeting in Montreal on November 14th, succeeding Geo. A. Mann. Max Murdock was re-elected treasurer, both by acclamation. The following nominations were made, the annual meeting to be held December 12th: first vice-president, J. A. Bernier and W. J. Irving; second vice-president, M. W. Hackett and Captain George Van Felson of Quebec; directors, J. R. Bissailon, L. L. Paul Bernard, W. Drysdale, W. J. Joyce, J. A. Laddy, Arthur A. Markus and G. W. Pucott—five to be elected.

Shoe dealers are inclined to consider men's and women's trade of greater importance than that of the younger folks. When one considers the fact that a child wears out a great many more pairs of shoes in the same length of time, as compared with their parents, it is seen that there is about the same amount of money spent in shoeing children as there is for adults. For this reason the children's shoe department should have as much attention as any other. Arrangements should be made to handle children's trade in such a manner that children and parents will both be pleased to come again. Many progressive stores throughout the country have set

Retiring President of Association

R. M. McGowan, who is the retiring president of the Northwest Travelers' Association and presided at a recent nomination meeting to select officers for the ensuing year, is well known to the footwear trade of the West with which he has been identified many years. He is the Western representative of the Palmer-McLellan Shoepack Co., Limited, of Fredericton, N.B., and has offices in the Ryan Commercial Building, Winnipeg. Mr. McGowan is succeeded as president of the Northwest Travelers' Association this year by Charles Holden of the Canadian Consolidated Rubber Co., Winnipeg, who was elected by acclamation. A resolution was carried unanimously that the Executive of the Association should in the near future interview the Manitoba Government and ask for the appointment of a competent sanitary inspector to look after hotels and boarding houses, this office not to be attached to the license department and that the Travelers' Association should recommend a man to the Government.

aside certain space for a children's department. They have fitted it with special fixtures, such as low seats, small individual chairs, etc. Others have gone even further and have provided a special playground for the children while their parents are selecting shoes. Some stores have lawn swings, "shoot the chutes," small play houses, hobby horses, etc. Some stores have a special lady clerk who does nothing else but wait on the children's trade. They are experienced in handling the small children and know just how to please them and their parents at the same time.

Why Not Look at All Samples?

"I have often wondered," said a traveling shoe salesman the other day, "just what the motives are back of a shoe dealer who refuses to look at a line of samples opened and spread for his inspection; for I know quite well that it is not always the reason that is given to the salesman who is turned down.

"It is a fact that we are often refused an audience by a dealer who, we know, would be interested in at least some of our goods if he would really study the samples.

"Sometimes I think it is really a form of cowardice. The shoe dealer feels that he has all of the goods he can carry; and he is afraid that if he sees the line he will find something in it which will cause him to buy. And he does not have the moral courage to view our goods, listen to our argument, and then not do business.

"While this is an attitude not altogether without merit, yet it is not, in my opinion, good policy. There is none of us who can know it all; and the only way to learn all that there is to know about style, is to see styles as they are shown and to listen to the story of a man who is naturally brought into contact with a great many people in the trade. True,

the merchant may be loaded up, and a good salesman will not make an effort to sell a lot of goods to a merchant in such a position; but in such a case the man with the sample trunks is pleased to have his line looked at, for he knows that there is an opportunity to get business from his prospect

at the some later time, or some other season, if he can interest him in the quality, the artistic merits or the general get up of his goods.

"The man who sticks to one line, simply because he has always bought it, may be a good account for the house with whom he deals; but if he continues this course by refusing to look at other goods, he is not a good merchant, and he is not doing himself justice or helping himself along the road to success, however unquestioned the merit of the line is he has always stocked."

SPHINX Shoe Cement Paste

"SPHINX" stands unique and without a rival in excellent qualities wanted by the shoe manufacturer.

It is a quick, strong and clean adhesive, ready for use.

It absolutely takes the place of high-priced cements—on all kinds of linings, cloth or leather, such as vamps, side linings, stays, sock linings, etc.

It is flexible—when applied thin with a brush. Will fasten counters and toe pieces, tap soles, etc.

Best for sock linings, as they never loosen.

There is nothing made that is just as good.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasoline for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment:

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

NO DIAMOND  TRADE MARK
No Fast Color

Get this fact firmly fixed in your mind. It may be the means of saving you considerable annoyance and inconvenience; for, if you will insist that the diamond trade mark shall appear on the surface of the eyelets in the shoes you order, you will be entirely free from any complaints regarding "Brassy" eyelets. Fast Color Eyelets are the only kind that cannot wear "Brassy." They enhance the good appearance of shoes more than any other accessory used in their manufacture; and, made as they are, with celluloid tops of solid color, they do not grow old but retain their bright, new appearance long after the shoes are worn out.

 The diamond trademark is a sure cure for all eyelet troubles. Only the genuine Fast Color Eyelets have it.

REGAL SHOES

Made in Canada

DO YOU WANT THE REGAL AGENCY FOR YOUR TOWN?

to you, not only in actual profit on the line, but in the prestige it will give your store to link up with the world-wide reputation of Regal Shoes.

If we are not already represented in your town we are ready, now, to place the agency for Regal Shoes with *You*. It is worth real money

There are thirty-five styles carried in stock. Every pair has the same smart, metropolitan style that you will find in Regal Shoes in New York, Chicago, Philadelphia and other leading cities.

These shoes are made by us in Toronto by Canadian Workmen. They are designed by the same experts, cut on the same patterns, built over the same lasts and under the same supervision as the Regal Shoes produced in our three factories in the States.

They are ready to ship at once—the same day orders are received. You can get every style needed in a modern shoe store.

With Regals on your shelves and displayed in your windows, you can secure the lion's share of the \$5 to \$6 shoe business of your town.

Survival Value

What is it? Survival Value is the lasting prestige added to all footwear by the affixing of the **Union Stamp**—it is the surviving standard because:

- 1st It is a guarantee of honest footwear, made under the best conditions.**
- 2nd It is a pledge of expert workmanship.**
- 3rd It is the pass-word which opens the sales doors to Union Men everywhere.**
- 4th After the other inducements have all been recited, the conclusive and finishing argument is the UNION STAMP.**

Every shoe bearing the **Union Stamp** retains a sales value of long duration, for no shoe bears the stamp unless it has been produced under the proper conditions and represents honest value.

For mutual profits, better and bigger business, insist upon the official stamp of the **Boot and Shoe Workers' Union**—the only guarantee of Union Footwear.

MR. ALEXANDER BRANDON

Once again we have reached the season that has been appropriated, by time-honored custom, for the exchange of friendly greetings.

And once again we take the opportunity to wish you a right Merry Christmas and a Happy New Year.

During the year that is now so rapidly fading away, we have had the satisfaction of adding many new names to the list of shoe dealers handling the various BRANDON lines.

In each case, the satisfaction has been mutual, for BRANDON shoes possess the real merit that makes for enduring friendship.

The Wish That Never Grows Old

A Merry Xmas and a Happy and Prosperous New Year to one and all. It is our sincere desire that our present mutually cordial relations may continue, and that we may receive an ever-increasing share of your business during 1915—which we were never so well-equipped to handle expeditiously.

Ames-Holden-McCready
Limited

Montreal St. John Toronto Winnipeg
Calgary Edmonton Vancouver

To you and yours may this coming Christmas Day be one of brightness and gladness. May it bring to you a full measure of happiness and leave memories that will be cherished.

In stressful times trying situations arise, but, as when clouds assemble a ray of sunshine lights the darkness, so a kindly word, a thoughtful act, relieves the tension when things look blue, and makes the old world better.

Our sincere wish is that we may all remember and practice this sentiment in the coming year.

To our clients we would also express our thanks for their orders during 1914, and our appreciation of the cordial relations which have always been maintained between them and us.

Holiday Greetings

We desire to extend to the CANADIAN SHOE TRADE both Wholesale and Retail our sincerest wishes for a **Most Happy Christmas Season** and a **Bright and Prosperous New Year.**

For almost a score of years we have enjoyed such support and endorsement of our business methods as has been most flattering to us and as profitable to our customers we hope as it has been to us. We would express our warmest appreciation of this confidence that has enabled us to give the Canadian trade the very best that is in us.

We hope to continue to meet in the future a patronage that has grown from a feeble beginning to a connection that extends from the Atlantic to the Pacific, and from the Great Lakes to the Arctic Lands. We are proud that TRICKETT'S has become a Common Bond of Confidence and Union amongst Shoemen, not only in Canada but wherever the British Flag floats.

Goes After Business For Quebec

John Perkins, of Duchaine & Perkins, has left for Europe, as a representative of the Shoe Manufacturers' Association of Quebec. He will interview the British and French governments with a view to obtaining orders for shoes for the factories of the Ancient Capital. The large order which was reported some time ago on apparently good authority, has not yet materialized. During the past few days stories have been circulating to the effect that placing of orders in Quebec has been retarded, owing to financial matters, and that the banks and federal government had refused to assist Quebec shoemen. This is not correct, as a leading member of the trade stated that there had never been a question of this nature raised.

Another Mile on the Journey of Progress

AS 1914 closes, and the ushering in of another year approaches, there naturally comes to every one an impulse to reflect upon the past, to look over what has been accomplished, to gather lessons from the school of experience, to be grateful for the joys that have encouraged us, and the sorrows which have left invaluable impressions upon our memories.

This edition of the Shoe and Leather Journal completes another year in its long and successful history, and also marks its fourth anniversary as a semi-monthly publication. For the generous patronage which has been extended, for the splendid encouragement received and for the many appreciative words spoken, the publishers are deeply grateful.

During the coming year we trust to merit the continuance of the cordial relations that have existed in the past, and to share with all the dawning prosperity of 1915. The Shoe and Leather Journal hopes that 1915 may contain the fullest measure of happiness and prosperity for every one of its readers, and sincerely thanks them for their loyal co-operation during the past.

As humanity approaches the season of gratitude and merriment, which has stood out prominently for centuries as the one ushering in the true spirit of truth and love, of peace and brotherly kindness, we realize more and more both as a nation and as individuals, how our welfare and prosperity are bound up by mutual considerations and concessions. It has been said that no man liveth to himself, neither can any man be a law unto himself. In this world he receives largely what he gives, and gets out of any effort exactly what he puts into it. In the management and direction of his business if he injects into it the qualities of energy, perseverance, service, integrity and industry, he will, in all human possibility, reap the same reward. Our happiness and genuine prosperity are now, and always will be, in exact proportion to our acquirement of the principle which fashions the Golden Rule.

So, while nations are engaged in conflict, while many large undertakings and well planned schemes have been upset by the clash of arms, still, there is no reason why the future should not be viewed with every sense of confidence and satisfaction. Never was the spirit of Canadians more thoroughly aroused than at the present time, not only in loyalty and devotion to the mother country, but in a determined effort and united endeavor to keep—not only the national flag flying, but to see that the banner of business is unfurled as usual.

Let none lose courage, heart or spirit—let all work hopefully and unitedly, to keep the wheels of industry turning, and to make the coming year more productive of results, both in a moral and material sense than any through which we have passed. Let every member of the shoe and leather trade do his part in the work that lies before him; and that work is, seeing that his country is not only made bigger, better and broader, in every respect, but that he, as an individual, may at the close of 1915, when reviewing his record and recapitulating his blessings, say, that he has contributed his share to the contentment, upbuild and prosperity of the Dominion.

With kindly feeling towards every one and grateful appreciation of many friendships and associations formed in a business and personal way, not only during the past year, but for the last twenty-eight in its progressive history, and believing that its work has always justified its worth, the Shoe and Leather Journal wishes every reader a Merry Christmas and Happy New Year.

What The Traveling Salesman Can Do For You

The Various Forms of Knowledge He Acquires on His Trips and in the Market May Be of Great Value to the Shoe Retailer—Why Not Avail Yourself of Them—He Can Give You Many Constructive Ideas.

What is it the traveling salesman does first when he enters your store bright and smiling? Does he ask you something, or does he tell you something? Or does he first merely look around over the shop and then look you up—you being the man who buys the shoes or who owns the store?

What does the traveling salesman do? It does not matter what he does so much as what you do, or rather, what you think.

In other words, what you get from the traveling salesman's visit depends largely upon your attitude toward him.

What He Stands for

The traveling salesman is many things to your shoe store. He is the expert customer—the customer with the buyer's and the seller's viewpoint, who sees your department with an impersonal, yet interested eye.

He is the experienced shoe man, who knows shoes especially and shoe stocks particularly.

He is the man with special interests of his own, which are the more valuable to you because they would not be interests were it not for your shoe store.

He is a man full of style and trade news, right from the sources of both, and he is full of enthusiasm regarding their significance to you and your customers.

He is a man full of shoe knowledge—technical, special, general.

He is a man deeply interested in the best way to sell shoes at retail, to advertise and display shoes.

He is a man of ideas—shoe and shoe store keeping ideas. And his judgment is good about business and business conditions.

He knows the shoe market—the part of it he represents personally, and all of it generally—so far as its significance to the merchant goes.

Roadman Has Broad Experience

He is a man of ideas. He gets ideas from the scores of other shoe shops he must visit besides yours; ideas on arrangement, systematization, accounting, organization, merchandising, selling, discipline—everything pertaining to the profitable selling of shoes.

He garners ideas, first, because he is intelligent and observant; second, because he is vitally interested in everything appertaining to the shoe business! Third, because he wants to help you!

Will you permit him to be of service? If you are willing, do you let him know it? Do you, as an owner and proprietor, maintain the proper attitude toward the traveling shoe salesman? Do you sustain the proper attitude toward the "man from the centre of shoe activities," wherever that centre may be? Do you, as a buyer, encourage your clerks to listen to the traveling salesman, especially when he dwells on the merchandise—the wearing, style and value merits of his goods?

If you can answer all these questions in the affirmative, the traveling shoe salesman for any reputable shoe manufacturer or wholesaling house can help you build up your business.

There are many ways. Three of them are worth considering here.

The shoe salesman deserving of the title usually has an extensive and accurate technical knowledge regarding the making of a pair of shoes and the proper fitting of a pair to the feet. He has such command of this knowledge that he likes to dispense it; and he can do it well.

If you have clerks who will have to sell the shoes you are buying of the traveling salesman, let him talk to them

a few minutes. Let him point out the special selling features of his merchandise; let him at the same time dwell upon certain problems in handling customers who are likely to buy his particular shoes once they are stocked in your department.

Head Can't Do It

You may think it is not necessary for the clerks to get this information first hand, that you can tell them just as well later. You cannot, and for two reasons:

First, he will not take the time. Second, you will not know the points as well, and you will not have the enthusiastic viewpoint of the traveling salesman; nor do you possess the aggregate experience of perhaps a hundred stores on the traveling salesman's route that are already selling the shoes.

Let the traveling salesman do it!

The second way the roadman can help is still more important than the first—because the point itself is more important. The shoe salesman knows the significance of season style trend in shoes. He can study your present stocks in such a way that he can help you to get styles you can sell, styles that will attract your clientele and will suit them. True, he must use some of this knowledge in merely getting an order from you; but encourage him, let him know you value his ideas, and he will take special interest in helping you.

Everything that helps you helps him and his house. He knows that; he knows that you know it. So lay aside prejudices and personal feelings and get all out of the traveling shoe salesman that is due you.

Too many retailers strive to make the traveling salesman think he is a periodical evil. No live retailer thinks that really, but they affect it in order to keep the salesman from thinking he is welcome or that his goods are creditable. He knows he is not an evil. He knows you know it. Cut out false and artificial attitudes and get down to brass tacks when the roadman spreads out his samples.

A Real Business Man

Now the third point! The traveling salesman knows quantities and qualities. He garners invaluable experience as to how much stock in a town of your size you ought to carry, something of the qualities and the matter of value. Do not be afraid to deal with him as a co-operative business man. Tell him something of your outlet for special kinds and grades of shoes.

Get his ideas regarding what increase and turnover you ought to make on certain lines—his and others. He will gladly give them, if he knows you want them.

Consider well the traveling shoe salesman. Do it, whether or not you are buying just now. He comes from the centre of things. He comes at a time when you most need constructive ideas. He sees other good stores that are making a success with the same facilities and capital you have and facing the same problems and difficulties you have. He can gauge your growth better than you can, year by year, because he comes and goes. He sees you now. Three or four months later he will come back. He has a good eye for contrast. Let him use his eyes for your special benefit.

Consider well the traveling salesman! He is your mentor, advisor, friend and willing servant!—Economist Shoe Section.

Octave Feuilteault, sole owner of J. H. Begin Reg., wholesale shoes, Quebec, passed away recently in that city.

Building Up Shoe Repair Business on Right Lines

How Toronto Firm is Widening Its Trade and Making Patrons of the "Come-back" Class—Believe in Effective Publicity—Care Taken to Procure the Right Name and Address of Every Caller.

Possibly one of the busiest shoe repairing plants in the city, is to be found at the Goodyear Shoe Repair Co., 853 College St., Toronto, operated by D. Pretty & Son. This firm has been making rapid progress since entering the repair business some three years ago.

"Dan" Pretty, as he is known to the trade, first entered the shoe business thirty-three years ago, making boots by hand, in a small shop in Shelburne, Ont. Many of his old friends, the hand shoe makers, will remember him working on the bench in Toronto. During the big strike some twenty-three years ago, Mr. Pretty went to Chicago, where he remained for some time. Returning to Toronto, he entered the employ of R. Dack & Son, making men's custom work by hand. He remained with this concern for 20 years. During that time there was great progress made in

THE SHOE REPAIR WORKS OF D. PRETTY, TORONTO

shoe manufacturing—from hand method to machinery. Mr. Pretty was operating the Goodyear machines when he decided to start in the repair business. Like many other successful business men, he began on a small scale, believing that those who start small have little to lose. He now has one of the busiest repair plants in Toronto.

Instead of installing the regular repair outfit or machinery on the frame, Mr. Pretty has the individual machines consisting of:—Goodyear rapid stitcher, McKay sewing machine, edge trimmer, edge setter, heel scourer, bottom buffer, finishing shaft, outsole channeler (for McKay work), insole channeling machine, hand power concave roller and foot power button machine. These machines have been added from time to time, and the equipment is now almost complete.

The site of the store is in a small business section by itself, at the corner of College and Ossington Ave., Toronto. It was thought that the machinery, if seen through the window, would attract attention, and in this way the trade

was secured. The power is procured from a motor in the basement where a line shaft is strung the length of the shop. Belt openings are cut through the floor, and all machines are driven from the main shaft. The power can be turned off or on from upstairs.

This concern secures mostly all of its work over the counter, doing very little for the retail stores and the accompanying illustration shows Mr. Pretty in a very natural pose.

The Duplicate Tag System

A duplicate number tag system is used for taking care of the work, and is found to be very satisfactory.

Great care is taken to procure the name and address of the customer so that if the goods are not called for within a reasonable length of time, the customer is notified by means of a postcard, and in most cases the shoes are then called for.

Mr. Pretty is a firm believer in advertising. A number of booklets entitled, "New Shoes From Old Ones," which describe the advantages of having shoes repaired on the Goodyear machine, are used, being enclosed with a brief circular letter and a small blotter. These are mailed to persons in the immediate neighborhood, whose names have been procured.

Another medium of advertising, is through the picture theatre in the neighborhood, where a small ad is thrown on the screen nightly, for a certain length of time. An advertisement is also placed in the dormitories of the Y.M.C.A. a few blocks away. This ad states effectively that shoes left before noon can be had, or delivered, the same evening. This one feature of having shoes repaired in a day, Mr. Pretty believes, has secured considerable business, as many people have only one pair of comfortable shoes, with which they are loath to part for more than a few hours.

Getting in the Business

Although it is made a point not to advertise it, a great deal of repairing is done while the customers wait—rubber heels chiefly. While there is only a man and a boy to assist, there is a great amount of work handled, the machinery being a labor saving device, and consequently the pay roll is kept at a minimum. The delivery system consists of a boy with a bicycle, and a telephone call will have the lad bring the parcel, and if at all possible the shoes are returned the same evening.

The present war crisis and financial depression has had little or no effect on business. In fact, the receipts for the month of October were slightly in advance of those for the same month last year. Of course, Mr. Pretty is not satisfied with the repair business alone, but is desirous of starting in the retail shoe trade, and steps have been taken to secure the store next door. He believes a certain amount of repair trade would be lost if he were to set the machinery at the back and put the shoes in the store. Many people, who buy their shoes elsewhere, do not feel readily inclined to bring them into another store to have them repaired.

Very Busy on Army Shoes

The Just Wright Shoe Factory, of St. Thomas, Ont., is being operated night and day in order to get out the present order of soldiers' shoes for the Government. As a result of these orders the company now has a pay roll \$460 a week in advance of its former pay roll. The company is expecting another order from the Government as soon as the present one is filled.

How to Deal With Complaints of Dissatisfied Customers

The "Trouble Doctor" Who Can Keep His Temper and Go Right on Smiling Has a Much Better Chance of Convincing a Customer That He or She Has Not Been Badly Treated After All—Stand by the "Square-Deal" Every Time

It matters little what line of business one enters, or to what class of custom he may especially cater; he will have his troubles—his complaints from dissatisfied customers. And most shoe men have the impression that the average person will find fault with the wear of shoes if he has half a chance. Yet you will find that your neighbors, handling other lines, have troubles of their own. The grocer gets back the butter he sends to Mrs. Black, who declares it unfit even for baking, though Mrs. Brown has expressed her approval of some from the same roll. The dry goods man hears tales of woe from the dress goods, from the hosiery, the gloves, in fact from every department, and so on down the street, says Hal Stewart, in a paper read before the Iowa Retailers' Convention.

Much Demanded of Shoes

But the shoes actually do get somewhat the worst of it. The coat may be laid off; the shoes are on the job all day long, often with pretty rough going beneath them, and pretty strong pressure upon them. If the coat rips, the lady of the house has a needle threaded for the emergency, while the shoe goes back to the dealer, and it greatly annoys the busy man to have to bother with it, as a shoe should never rip. Then often the shoe is burned, or cut, or torn, perhaps not violently enough to attract the wearer's attention; but he would have felt the sensation if the accident had happened to any other article of his apparel. So—just among ourselves at least—we will agree that the shoe man is much abused.

Perhaps 40 per cent. of the complaints we get are justifiable. We must eliminate several classes of claimants; there's the "chronic kicker" who goes the rounds and never gets his money's worth; the fellow who burns his shoes and has never been near a fire, a stove, a register or a radiator; and the insistent lady who bought her pair six months ago, but has only used them an occasional Sunday, though the heels are worn down nearly to the rand.

In treating complaints of this nature we must not allow ourselves to be imposed upon. The customer who blusters and bluffs with threats of taking away his patronage and that of his friends and neighbors, will, in seventy-five cases in a hundred come back and buy more; and if he does not, it is fair to presume that his patronage is worth but little, and his influence still less.

Keep Right on Smiling

We must beware of handicapping ourselves at the start by losing our temper. If your clerk comes to you and tells you there is trouble waiting for you, and you go forward filled with "righteous indignation," ready for a fight, you are starting out with a big handicap. For the trouble doctor who can hold his temper and keep right on smiling has a much better chance of convincing his customer that he has not been very badly treated.

Where Complaints Are Justified

But what are we going to do for the customer who actually has not received full value for his money? If we are to be successful merchants we must stand for the SQUARE DEAL—make and retain a reputation for fair dealing. And if your customer really has something coming to him, it must be adjusted unhesitatingly and cheerfully. If he is wearing the shoe that has gone wrong, lose no time in getting him seated and the shoe off of his foot.

This enables you to judge the wear it has received, gives you a look at the inside, and anchors your customer so he will not get away before you have a chance to make the proper adjustment. If the shoe has not been abused and it has failed to give reasonable service, it is good policy to satisfy the customer, even if the allowance made seems too liberal. Any reasonable man is willing to pay for the wear he has had from the shoe (and the first month's wear should count for all it is worth), and it is wiser to allow him a two dollar rebate on a \$3.50 shoe and have him leave your store fully satisfied than to make the adjustment with merely the sacrifice of your profit and lose your customer.

How to Treat the Manufacturer

If the fault is clearly the manufacturer's—if it is a clear case of too light counters, too flanky stock, too close lasting or too close stitching—nearly every manufacturer will make the proper allowance to you. But if we are to adopt the standard of the SQUARE DEAL, we must be consistent and treat the manufacturer with the same fairness we expect from our trade. In a hundred men engaged in the making of shoes you are apt to find as many fair-minded men, and as much wisdom as in a hundred retailers, "outside of this gathering, to be sure." And the manufacturer who feels that he is expected to stand for claims that have any taint of imposition will have no respect for the retailer or for his business.

There is one important sub-title which was omitted from this subject: besides "How to treat the customer" and also "the manufacturer," should have been added, "How to avoid trouble."

How Do Your Clerks Talk?

How do your clerks talk to your customers when they sell "shiny" shoes, satins and like delicacies? If a woman calls for a gun metal pump, and your best salesman finds that you haven't the size but are long on patents, is he not likely to say: "Here's a coltskin pump that I am sure will please you. Of course we cannot warrant patent leather, but I can assure you that you will get good service from these; we have not had a single complaint on this one." Perhaps not so strongly as this, but probably still stronger. And if that pair as much as surface checks, there is trouble ahead for you.

For many of us, retailing shoes is our life's work. We would not be happy in any other line. And we are all striving to "Sell more shoes and sell them right." And if we would minimize our troubles, let us keep away as far as possible from that word "WARRANT" and instead talk of Fair Treatment and the SQUARE DEAL, and forget the little annoyances which, after all, are far overshadowed by the pleasure in serving the host of SATISFIED CUSTOMERS.

LIKES THE SELLING TALKS

You certainly get out a good paper. "The Shoe and Leather Journal" has several splendid selling talks as well as many practical pointers. I have placed several orders through ads in your paper.

Yours, etc.,

Sackville, N.B.

H. MILLER.

Who is to Blame for Granting Too Generous Credit

A Question of Interest to Both Manufacturer and Retailer—Is the Credit Man, Salesman, Manager or Retailer Responsible for Present Conditions—Proper Solution of the Problem Presented.

Who is to blame for the too generous credits given certain retailer?

A Montreal shoe manufacturer caused the writer to ask this question of himself the other day. This manufacturer has just lost a comfortable little sum of money through the failure of a prominent central Ontario retailer, and was lamenting the fact.

"This is not the only instance of its kind," said he, "and I am not grieving over the fact of my having lost the money so much as I am complaining over the increasing number of failures caused by certain retailers going away beyond their limit in the amount of credit they get.

"Who is to blame? Well, I suppose when it comes right down to 'brass tacks,' I may be deserving of a certain amount of blame in allowing this particular dealer any more credit, but how am I to know just whom I should trust and whom I should not? If I expect to do business, I have to be prepared to take a chance, and before selling to this man I made as thorough enquiries as possible, and to all intents and purposes his credit was fairly good, yet here he has assigned, and his liabilities are about four times what they should be.

"I believe it would be to the benefit of both retailer and manufacturer to co-operate to a greater extent. This, as far as I can see, is the only solution to the problem, as then, there could be no room in the ranks of shoe retailers for certain dealers who, by their dishonest methods cause the retail trade in general to suffer, and I certainly do call it dishonest for a dealer to load himself up with a stock three or four times larger than he can handle.

"Moreover," continued the manufacturer, "there are some men who will open a shoe store, order as much stock as they think can be secured from the manufacturer or jobber, and 'skip out' after having partially disposed of the stock. These are the men who injure the credit of the retailer with the wholesaler and necessitate the very strict methods which manufacturers are often forced to adopt. Here is seen the cause of the wholesaler and jobbers inquiries regarding the credit and good standing of retailers throughout the country. Very often these dealers regard the quest for information as an insult to their good reputation. The man from the credit agency receives scant courtesy from the average retailer, who feels he is prying into business that in no way concerns him."

Who Is to Blame

Naturally, in the case of a failure such as the one referred to by the above manufacturer, one would be inclined to blame the credit man. Is it not he who looks after the credit of the customers? Is it not his place to judge as to whether the customers' financial standing warrants the shipping of further orders? That is what he is there for—not for ornament. But then, it is well not to be too hard on the credit man, for his is a position no one should envy. He is often between the devil and the deep sea. If he rejects an order for credit reasons, then there is a howl and wail from the traveling representative of the house, which the credit man can hear ringing in his ears for a month after? To avoid such trouble with the traveling salesman, if he passes the order in spite of his better judgment, and the house loses, then he gets it from the other side.

There appears to be something seriously wrong somewhere. Who is going to shoulder the blame? Shall it be the traveling man? It seems hard to blame him. We all know it is hard enough to get orders at all. But is he excusable if he makes such a mistake? It may be the traveler

is too anxious to make a record and only considers it his business to see that the goods are ordered, leaving it to the house to see that they get the cash. If this is so, it is a mistake for him to take this view, for it will reflect on him sooner or later. There is no one connected with a firm who is more capable of looking after credits than the traveling salesman, for it is he who gains the confidence of the retailer, and he can get a better insight into the man's true financial standing than any agency in business, or any credit man that ever lived.

How One Case Was Settled

The manager of a large Canadian factory told the writer he had many clashes with his travelers on the credit ques-

He Can Do Some Bowling

In addition to selling shoes—and a large number of them too—for J. & T. Bell, Limited, of Montreal, Charles E. Fice, of Toronto, finds time during the weeks that he is off the road to indulge in a number of recreations. He can raise roses, garden, lay hardwood floors, curl and bowl. On the green he is an expert and has won so many prizes during the past season that if another one equally as successful comes his way, he will have to erect an addition to his home

on Euclid avenue to house the trophies. As a member of the Granite Club he has taken part in a number of tournaments during the past few months. The rink in which he acted as vice-skip in the International Bowling Association at Buffalo, carried off cut glass comports in the finals in the consolation competition. In the Dominion Bowling Tournament at Toronto, Mr. Fice's rink won the finals in the primaries and each member was presented with a cut glass flower stand. In the Granite Club competitions the rink winning the lead was the one in which Mr. Fice played and each of the quartette was given a silver plate. The members also came in for the Noel Marshall prize of a medal for being the best all round rink. The capture of four trophies by Mr. Fice in one season is a remarkable record and the accompanying illustration shows him in bowling attire, holding a couple of the premiums.

tion. One of them some time ago after vainly attempting to secure credit for a certain prospective customer, retorted, "There are some fellows who sit around in an office all the time and think they are in a position to know what accounts are good and what ones are bad. I tell you this man of mine is all right and you are perfectly safe in letting him have three or four thousand dollars' worth."

"Very well," said the manager, if this chap is as good as you say he is and you seem to have perfect faith in him, I suppose you will personally be willing to guarantee the account?"

"Why should I," said the traveler, "it is you who are making the profit, do you think I am an easy mark?"

"All right then," declared the manager, "I do not think we will sell your friend any goods." There the matter ended, but a few months later when reverses overtook the retailer in question, the manager took occasion to remind the traveler that sometimes "the fellow who sits around the office" knows a thing or two.

Is the Head of Concern Responsible?

What about the heads of the different manufacturing concerns? Are they not sometimes at fault in the matter? They should keep in closer touch with the man outside. They should see that the credit man does his duty properly. It is up to the head of the concern to get all the different departments working more in unison with one other. Perhaps the fault of the house is even greater than that of not keeping in closer touch with customers and travelers. It may be the "grab all" methods which are not as rare as they might be in the manufacturing business. If that is the reason, then the sooner such methods are done away with, the better for all concerned.

One Means of Solving Question

Is the retailer at fault? Can you really hold him responsible for accepting all the credit he can? It depends entirely on circumstances. Here is where the honest, reputable dealer who is slowly forging ahead is handicapped. Manufacturers will never hesitate to aid a dealer who is sincere, and one who under proper conditions is bound to expand, but the trouble lies in "separating the wheat from the chaff," so to speak. How is the wholesaler when sufficient information is lacking, to decide whether an applicant for credit is deserving of it or not? Therefore, the credit evil is one of acute importance to the retailer just as much as it is to the manufacturer or jobber, and affects him, although indirectly, to just as great extent. The time comes in the history of every retailer when he desires his principals to strain a point and act generously in the matter of credit. Supposing that condition prevails in your own business to-day, and you make application to the manufacturer for more credit, or perhaps an extension of same. Perhaps he has just heard in the same mail of the failure of one of his customers. This man, say, has "worked" the manufacturer, a thing which is being done daily. Do you think the wholesaler will show any generosity towards you? No, unless you have been buying goods from him for years.

What is the solution of the problem from a retail standpoint?

It is for the retailer to assist the manufacturer directly in eradicating the evil, as much as possible, and indirectly by supplying any information required to the credit agency. By doing so you are joining the ranks of the retailers who have a standing, and withdrawing from the set who have not.

A Question of Honor

Moreover, it is not only a case of money saving, but is also one affecting the honor of the retail shoe trade in general. Every time a dealer "works" the wholesaler, an aspersion is cast on the high-standing or the honor of the whole trade.

For this reason alone, dealers should assist the wholesaler in every way possible.

Better co-operation, if secured, will, in time, deal effectually with the credit question. The only way to secure this co-operation is for every honest member of the trade to do his share towards bettering conditions. Thus, a better understanding will be reached between wholesaler and retailer, and more harmony result, which means ultimately—more profits.

Good News For Old Friends

"'Nother nickel, boss—shine's ten cents."

"Whatchye mean? I never paid more'n five cents."

"'s on account o' de war, boss."

"What's the war got to do with it."

"Why, all dis here, now, blackin' we use comes from Africa."

Keep Your Mind Ever Alert

The world of business moves, and is always and eternally moving forward, and movement makes changes. The man who keeps up with changed conditions, and evolves profit in spite of them must have a mind like a grappling hook. One never knows who has a good idea, and the man who selects only his chosen few, from which to get his inspiration, is going to miss out a lot of good things. Avoid self-sufficiency and the ingrowing mind. No man can go far on his own thoughts, nor can a man amount to much who tries to push his way through the world on stolen wisdom. Man must think for himself, but his thoughts, to be productive of good results, must be in harmony with the thoughts of others who are associated with him in the work he is doing. One of the most common things in business is to see the head of the business and the salesman of the business thinking thoughts entirely contrary to each other. We have heard of salesmen who knew more about running the business than the men who made the business possible. Our thoughts without any doubt influence our actions, and to have the thought of any business spread out in pursuit of different objects will necessarily retard the progress of that business. One of the most important duties of the head of a business is to harmonize the viewpoint of all in the business by process of education. When just and capable means in this direction leave a discordant element, that element must be eliminated to prevent destructive friction.

The Christmas Enterprise of Mrs. William Lester

By GEORGE BIRCH

The quiet, unimposing little shoe store of William Lester was one of those old-fashioned concerns that one sees in many small towns in Canada.

Its establishment dated back to the birth of Maplegot nearly twenty-five years ago with its present owner. William Lester was a man well known for his steady habits and rock-bottom honesty in business. He always looked upon "these new fangled ideas," as he would term it, with a certain amount of suspicion and contempt.

His trade was drawn chiefly from the farming classes, but the rapid growth of the town had introduced several factories. This necessitated the addition of more stock and the catering for a more particular class of buyers. He noticed that competition was getting keener with the advent of other stores and, at last, had to admit to his wife that his annual turnover did not correspond with the growth of population. As a matter of fact his trade up to December showed an alarming decrease on the previous year. It wanted but a few weeks until Christmas, and William Lester was discussing the coming festive season with his wife.

"Carrie," said he rather tamely, "We must try and pull a little extra this holiday, but for the life of me, I can't figure out anything to accomplish this."

Now Mrs. Lester was not so conservative in her ideas as her husband. She read the SHOE AND LEATHER JOURNAL regularly, and had taken mental notes of the large city store windows. Several times she had taken William to task for his "Rip Van Winkle" methods.

"Look here daddy," she said, "I can't give you an idea off-hand, but if you will leave it over till to-morrow, I may be able to suggest something to stir trade up a little."

"All right, dear," said her husband, "Go right ahead." "But," said Mrs. Lester rather pointedly, "I must ask you to give me a free hand in the matter or it's no deal."

"I promise you that everything shall be as you wish, therefore, consider yourself commander-in-chief of the forces that go to capture Christmas business," he jocularly replied.

Mrs. Lester had expected that eventually her husband would capitulate to more up-to-date methods, so here was her chance. Her brain was working overtime that night

but she planned her Christmas campaign. She figured out a complete change of window display, the principal window to be specially trimmed with the wax figure of a lady reclining in a wicker chair before an open fireplace. In fact it was a sitting room scene with appropriate surroundings. The lady held a photograph of a soldier in her right hand and the copy of a newspaper in the left, supposed to contain the latest casualty list. Extension electric lamps were attached to the fireplace which gave the scene a realistic appearance. This was accomplished with the aid of the clerk (she had borrowed the fireplace and wax figure from neighboring shopkeepers).

The card bearing the words, "Remember the absent ones" struck home, and the sale of Christmas footwear, principally slippers, for gifts began to soar above even Mrs. Lester's expectations. She was aware that Christmas is worthy of some special effort. No strikingly original display had ever been attempted in Maplegot before, although it is generally conceded that it takes well dressed windows to attract buyers to any shop. The storekeeper who organizes a Christmas attraction, has the pleasure of knowing that the merely curious will have to stop and look

and that, therefore, he has taken the first step in obtaining a customer. The remaining steps depend on the goods and the sales staff.

In addition to the improved display policy, Mrs. Lester gave the store a Christmas appearance by tasteful decorations. She also acquainted the people of Maplegot with the fact all they had to do was to leave the address of the intended recipient of gift footwear, with the cost of postage or express, and the parcel would be despatched accordingly. The result of Mrs. Lester's efforts was gratifying in the extreme, for not only was the sale of slippers nearly doubled but the turnover in other goods increased fifty per cent.

Mr. Lester's face bore the smile that won't come off that Christmas. "I have to hand it to you, Carrie," he said,

kissing his wife. "You'd better take the reins in future. It seems to me we fellows don't know it all."

"Nobody has a monopoly on the thinking stuff," she laughingly answered. "Have you remitted your dollar yet for your 1915 subscription to the SHOE AND LEATHER JOURNAL?"

Will Resume on Larger Scale

The Milton Shoe Co., Limited, of Milton, Ont., has had its factory shut down since the beginning of the war, but it is hoped that it will soon resume operations on a larger scale than ever. The company has been reorganized by the addition to its membership of several experienced and successful manufacturers, and has arranged for a loan from the town if the ratepayers approve. A by-law has passed its second reading. It provides for a loan of \$15,000, to be repaid with interest in twenty annual instalments. The ratepayers will vote on it at the January municipal elections.

January Clearance Sale Window Background

By C. S. EDGAR

There is an ever-growing tendency towards the use of greater care in designing windows for Clearance Sales. In accordance with this tendency towards improvement, we are showing, in this issue, two background ideas which are easy and inexpensive to make. While these designs are some-

with the same color. You can best judge just where to do this, by trying to recollect the appearance of trees just after a fall of snow. You may if you wish add a further "wintry" effect by sprinkling some artificial snow or "diamond dust" over the white paint before it becomes dry. This must be

Fig. 1

Fig. 2

what similar, they were originally designed for entirely different types of windows. The background in figure 1 is intended for a window having considerable depth, while that in figure 2 is intended for a long shallow window. Either of these designs, however, could be used for either style of window, by making a few changes.

To reproduce the setting shown in figure 1, it will be necessary to have the scenes painted for the panels. Of course if you can do this yourself you will cut down the expense considerably. This painting can best be done on wall-board, as it possesses the required stiffness to make it stand alone, thus doing away with the necessity for frames. However, if you have not the wall-board handy, make frames of strips of wood, about an inch wide by a half inch thick. On these frames mount some thick card-board, being careful to make all the necessary joints as neat and close as possible. Next stretch some white "cheesecloth" carefully and smoothly over the whole frame. This will give you a fine surface to paint on. For the painting use any good water-paint such as kalsomine, and apply it in a free and easy manner, at the same time, being careful not to have it too thick in spots. For the sky use a light blue color, applying smoothly over the whole portion to be occupied by the sky, allowing it to extend a trifle inside the outlines of the trees and the building. The trees should next be painted, for these use a very dark shade of green for the foliage and trunks. The building in the centre panel may be painted any color desired, but the writer would suggest the use of dark red as this color would add a bit of warmth to the painting, the blues and greens being what artists term "cold colors." Before proceeding further with the painting allow the colors already applied to become dry. When thoroughly dry, paint in the foreground of the picture with white, adding a touch of light blue-grey to the white in the shaded places. With the white paint sketch in the clouds and then touch up the branches of the trees

done while the paint is wet however, or the diamond dust will not stick.

When the painting is finished lay it aside to dry, while you prepare the rest of the background. The back of the window above the scenic panels is next covered smoothly with white felt or canton flannel. The stripes shown in the design may be painted on or the same effect may be obtained by the use of narrow ribbons. The back below the panels is treated in a like manner, the decorative designs at each side being made with ribbons or painted as before. When this is ready, put the panels in position, and your background is completed.

The design in figure 2 is carried out in the same manner as in figure 1, so that further explanation will be unnecessary.

When using either of these designs in the window, have your window cards and price tickets throughout the store made with a little scene in the upper left-hand corner. This serves to connect the goods in the store with those on display in the window.

APPRECIATE ITS GOOD WORK.

Will you please discontinue sending us the SHOE AND LEATHER JOURNAL. We have been subscribers for a long time and appreciate it very much, regarding it as a necessity to any live shoe dealer. The reason we are asking you to drop our name from your list is that we are closing out our shoe department, and intend specializing on other lines.

R. E. KELLY & CO.

Huntingdon, Que.

He is not Down Hearted

Writing to the SHOE AND LEATHER JOURNAL, a leading shoe retailer, who does business in a progressive Nova Scotia town, thinks after all, the effect of the "war" and the general depression in trade are somewhat like "A cloud with a silver lining."

"Although we are not doing the same amount of business as last season, still we are not kicking. We expected tight times, and bought light, so that the bailiff is not bothering us, nor the banks or wholesalers squeezing us hard. Another hopeful sign is that there is much less credit than last year. People seem to realize that if they cannot pay cash now, they had better wait for what they want, as the chances are that they will not be in any better position in a week or a month to meet their obligations. What a blessing it would be if, as a result of the present stringency, the "cash" habit would grow until it permeated the whole country. People would then get the habit of paying cash and sticking to it, and business conditions and results would be infinitely more satisfactory, not only between retailer and wholesaler, but between retailer and customer. In fact the wheels of commerce would work evenly and smoothly, year in and year out. I say it with all my heart, Let the cash habit grow!"

Military Honors for Shoemen

Further honors have come to some St. John, N.B. military men who, in the ordinary course of life, are engaged in the shoe and leather business. They have responded to the call of duty and entered the ranks of the thousands going from Canada to the aid of the Motherland in the second contingent. Shoemen throughout Canada will be interested in the announcement that Lieut.-Col. A. E. Massie, maritime manager for the Canadian Consolidated Rubber Co., is going to the front, and not only does he enjoy that honor but in recognition of his merit and standing in

LIEUT. COL. MASSIE, ST. JOHN, N.B.

the Canadian militia has been appointed to command the divisional train comprising some four hundred men from all Canada.

Col. Massie has had a wide military experience. He has been commander of No. 7 Company Army Service Corps in St. John for a great many years and has brought that unit to a standard of keen efficiency. About a year ago he was appointed to the command of the divisional train for the sixth district which covers the Maritime Prov-

inces. At the outbreak of the war he offered his services to the military department in whatever capacity they might be required, and the answer has come in his appointment to so important a post. He is being heartily congratulated by his numerous friends.

Another well known St. John man, David B. Pidgeon, is sacrificing his business and domestic interests for the

LIEUT. D. B. PIDGEON, ST. JOHN, N.B.

cause of his country and has been appointed to a post as lieutenant in No. 7 Company, Army Service Corps, which will be the headquarters unit attached to the divisional train. Lieut. Pidgeon has for years conducted a prosperous shoe business in north St. John. Although only young in the service of the militia department, he has shown commendable ability and on the appointment of officers to the unit being made, was honored with a post as senior lieutenant.

There is still another going with the unit as a commissioned officer, Lieut. A. Gordon Rainnie, brother-in-law of Lieut. Pidgeon, and for some years local manager of D. K. McLaren, Ltd., dealers and manufacturers in belting, leathers, hose, etc., with offices in Prince William Street. Lieut. Rainnie will also be on the staff of the headquarters company. The three officers who expect to leave with the army service units for the other side early in the new year, have already taken up their duties in barracks here.

Robert P. Sweatman, formerly manager of the Slater Shoe Shop, in King Street, St. John, left last week for Toronto where he will take a position with the Walk-Over Store on Yonge Street. He made many friends while in St. John who will wish him all possible success.

To Prevent Squeaky Shoes

An invention has been placed on the market which it is thought will prevent the squeak in shoes. The squeak it is known is caused by two pieces of leather playing one on the other. This new invention is a patented chalk envelope which is placed in the shoe. After wearing for a short time it breaks and the chalk distributes itself along the sole in the line of least resistance, especially where there is much chafing of the leather due to constant bending caused by walking. It has been found that a McKay shoe will squeak more than the welt, especially where a poor filling or no filling is used. When a double sole or doubler is used, as is often used in a McKay and welt shoe, it is here that the squeak is most noticeable. This chalk envelope has already received much attention.

STRAY SHOTS FROM "SOLOMON."

J. H. B.

A man living in a humble cottage between two rich and quarrelsome neighbors managed to exact from them the promise that in case of trouble between them they would respect his premises. To keep them off he erected a high fence and surmounted it with wire. He was awakened one night by the sound of his fence being battered down and jumping from his bed he sallied forth with a gun in his hand, clad only in his pyjamas, to protect his property. In the melee that followed the marauder, who paused in the real purpose of his attack, drove the indignant defender of his rights to cover and because he was fired on from the house, dragged him forth, shot him to death in his own back yard and burned down his house. His object, as he said, was to prevent people firing from houses or conducting a fight in undignified apparel. The reason given by the Germans for the outrages in Belgium is that the Belgians who shot at them in the streets and from the housetops were not in uniform.

The present war was as certainly due as any crop sown under reasonable conditions by a purposeful farmer. One may safely brush aside as rubbish the arguments that are made to do such yeoman service in explaining the origin of the trouble. Germany has for nearly fifty years been developing a fighting machine that would be absolutely the "last word" in armies and armaments. That she has practically succeeded to a degree, will not be denied even by her enemies; so far as "efficiency" goes the machine has done all so far that a highly perfected human mechanism can do. In the process, however, a spirit was created that made it idle to expect that adequate work should not be provided for the marvellous system of human butchery. The field had to be provided for this "grim reaper," if only to see the kind of a swath it cuts. To expect conditions of peace to prevail with such means of destruction at hand, would be as reasonable as to expect the millennium to arrive with hell loose around the corner.

In reading the "Times" or other English newspapers these days one is struck with the large number of young officers and men whose names appear in the death notices as "killed in action." The preponderance seems to be between the ages of twenty and twenty-five. These young fellows, the flower of British homes, the pride of British hearts, the hope of their families and their country, have laid down their young lives on a foreign soil and fill nameless graves in a strange land, and the gaps are being filled as they are made by others as youthful, as hopeful and as brave. It is only as we stand by the vacant hearths and see the anguish of desolate homes, that we begin to realize what the war means to them in the Old Land, and it is only when the lists of the dead and wounded amongst our own boys begin to come in that we will begin to feel that our part in the great tragedy of war is more than that of an interested onlooker. What it means to the world, as well as to the home, in the loss of latent possibilities, can never be computed by the most patient investigator, as the words strike his eye: "Killed in Action—Lieut. C. D. H., late of His Majesty's 9th Lancers, in the battle of the Aisne, aged

23, son of W. D and Mrs. H. of C—, Gloucestershire. *Requiescat in pace.*"

Bulletin mongers and feverish devourers of newspaper headlines can have but a faint sense of the magnitude of the issue, of the stupendousness of the armies engaged in this struggle of the ages between the forces of democracy and despotism. The crusade of the twentieth century rages around no sacred tomb and has for its battle cry no party or sectarian shibboleth. It is a war of ideas and ideals. The origin of the conflict is lost in the tremendous issues involved. Shall the old testament doctrine of force supersede the new testament teaching of love? Shall the new wine of the Sermon on the Mount be put into the old bottle of tribal and racial strife? Shall the philosophy of Cain, the first exponent of the doctrine of the survival of the fittest, prevail over the spirit that has built our hospitals, asylums and homes for the infirm? Shall the Roman dominate once more a world that has during twenty centuries been sitting at the feet of a Law Giver whose docile teaching has turned the heart of the savage into the abode of the Spirit of Peace?

This is no time for talk. Too much time has already been lost in absorbing "white papers" and arguing the righteousness of the "cause." What the world as well as the British Empire needs to-day is men to back the principle for which some men have died, filling trenches with their bodies, and women and children are wandering homeless and hungry. "Shooting the mouth" against arrogance and tyranny will never down the tyrant and set right the wrongs of the innocent. No cause has ever been a more righteous or holy one than the one for which we stand, and the man who takes not his place in the battle is worthy neither of his time nor the race to which he belongs. It is a time for Spartan courage and Marathon heroism. "Here am I send me" should be the spontaneous cry of every man who is in a position to take his place by the side of his brother. There is "no discharge in this war."

The same thought that touches individuals is applicable to nations. It is all very well to say "this is not a quarrel of our making." Outside nations cannot say it is not, at least, vital to their interests. No civilized people to-day can afford to stand indifferently aside. The United States, no less than Italy, Norway and Sweden, stand threatened with a menace that is as much greater than that of Napoleon a hundred years ago, as the armies engaged and the issues involved transcend those of that period. The attitude of the President of the United States when confronted with sworn evidence of the wrongs of Belgium, is no better than that of Gallio, who nineteen centuries ago, "cared for none of these things." With France, Russia and England out of the path of the modern world conqueror, what assurance has any of these nations of the right to "life, liberty and the pursuit of happiness." "Curse ye Meroz, bitterly, said the angel of the Lord, because he came not up to the help of the Lord against the mighty."

Breezy Comment on Some Retail Ads.

The Christmas advertisement of Fred. R. Foley, shoe retailer, of Bowmanville, is one of the most suitable and smartly arranged advertisements that could be inserted. He brings home the timely truth that the most acceptable gifts are those that are useful, which include suit cases, club bags, trunks and house slippers, all of which are featured by nice illustrations, and smart descriptions, while the range of prices is indicated. The advertisement is splendidly set up, is not too crowded, and is one of the best Christmas ads. that has appeared in any of the papers. Mr. Foley does a large mail order and has sent shoes to every province in

leathers used in their make, and any other points of interest. This has been done in the case of the "Classic" shoe, and at the same time, price indications are given in both women's and children's. The heading is a striking one, telling a story that should be convincing. When an old established

\$10,000 Worth of the Famous *Classic* Shoes For Women and Children Now in Stock At the "Murphy" Store

Women's Shoes,
\$4.00 to \$6.00 pair

Classic Shoes are made by Getty
& Scott, in Galt, Ontario.

Children's Shoes,
\$1.00 to \$3.00 pair

Two factories, having a capacity of over 3,000 pairs a day, one devoted entirely to Women's Shoes, the other making only Shoes for Children.

Both factories are equipped with the latest machinery and appliances known to the trade today for making Shoes of high standard, operated by the best makers available on this Continent.

With this organization for the past fifteen years, and a close, continuous study of customers' requirements and fashion's needs, it is small wonder that the Classic Shoe is now enjoying the widest sale in the Dominion.

We have placed in stock over \$10,000 worth of Classic Shoes in the most favored Fall and Winter styles for Women and Children. Our Shoe Department is ready, in the widest understanding of the term, to give wearers of Classic Shoes in this city an unusually varied choice and every satisfaction in styles, sizes, widths and particularly in wear.

In addition to the manufacturer's guarantee, our money-back policy protects you in every purchase.

Women's *Classic* Shoes

Come in patent, coltakin, gunmetal, fine Vici kid, with dull back cloth tops and suede, long, narrow receding toes, spool heels, many in the new gaiter effects.

Children's *Classic* Shoes

Made in the Kulture models, scientifically designed on youthful lasts, built to withstand hard usage while carefully preserving the shapely lines of young feet. Goodyear welts and high-class McKay's and turned soles.

WE GUARANTEE SATISFACTION ON EVERY PAIR OR REFUND
YOUR MONEY.

Closes at 5.30 p.m.

The John Murphy Company Limited

See Our Announcement on another page of this paper.

firm, like the John Murphy Co., buy such a large consignment of "Classic" shoes, it demonstrates that they have every faith in this well known line of footwear, and this assurance is backed by a double guarantee, in that the house state "Our Money Back Policy Protects you in Every Instance." This is straight-from-the-shoulder talk—has some vim to it and makes the reader believe in the honesty and merit of the goods. The ad. on the whole, is well balanced and systematically arranged.

New Last Factory is Now Ready

The new last factory which has been under construction by the United Shoe Machinery Co., of Canada, in Maisonneuve, is about completed and will be practically ready to start operations within a few days. Although no definite arrangements have yet been made, it is expected that Mr. Sturgis, formerly of Sturgis-Jones Co., Brockton, Mass., will be manager of the plant. The plant will be known as the United Last Company.

J. W. Rogers, Quebec agent, and L. W. Hanson, Toronto agent, of the United Shoe Machinery Company of Canada, were in Montreal Saturday, December 5th, attending the semi-annual meeting of branch agents, salesmen and department managers of the company.

Gifts That Are Useful

IT is useful presents that are appreciated and this is why we offer the following suggestions to busy Christmas shoppers:

Suit Cases In Imitation Leather, Japanese Matting, Woven Cane, Genuine Leather and Sea Lion Grain Suit Cases, all weights and sizes. Prices from\$1.15 to \$15.00

Club Bags In Split Cowhide, Heavy Paris Grain Leather, Sea Lion or Walrus Hide and Alligator Skin, different shapes, leather and cloth lined. Prices from\$2.00 to \$25.00.

Trunks Canvas or leather bound, brass trimmed, deep set in trays with covered hat compartments, steamer shape or square. Prices.....\$2.75 to \$7.50.

House Slippers

Can you think of anything more useful and acceptable as a Christmas gift than a nice pair of house slippers? We have them stylish and comfortable. Gents 65c to \$2; Ladies' 50c to \$1.50; Children's 25c to 50c.

Our Motto: Shoes That Satisfy

Fred R. Foley

Parlor Boot Shop
on the Sunny Side

Phone 12 - Bowmanville

Canada excepting one, and to many places outside the Dominion.

The ad. of the shoe department of the John Murphy Co. Ltd., Montreal, (of which H. H. Gibbins is the progressive manager), displays good judgment and originality. The "Classic" line of shoes is featured, and the various illustrations are very nice and neat. It is well in an advertisement in which one line of shoes is being presented, to give a short, descriptive talk on the varieties featured, what that range of shoes stands for, the styles they come in, the

Hockey Honors for Shoemen

Jas. T. Sutherland, who is a widely known shoe traveler, and also director of the Cook-Fitzgerald Co., of London, Ont., has been honored by the Ontario Hockey Association, in which many shoemen have always taken an interest, by being elected as first vice-president for the coming year. This distinction was tendered him unanimously at the 25th

J. T. SUTHERLAND H. E. WETTLAUFER KENNETH CASSELMAN

annual meeting, held in Toronto on December 5th. Mr. Sutherland was also recently re-elected manager of the Frontenac Hockey team, of Kingston, which position he has held for many years. His association with sport has always been of an earnest, manly character, and at all times he has sought to uphold the best interests and traditions of the great national winter game in Canada. H. E. Wettlaufer, who is sales manager for Chas. A. Ahrens, Limited, Berlin, is an enthusiastic past president of the Ontario Hockey Association, in which he has taken a deep concern for many years. He also attended the recent annual meeting.

Kenneth Casselman, of Casselman Bros., shoe retailers, of London, Ont., who has been first vice-president, has retired from the list of officers owing to purely business reasons. Mr. Casselman has long taken much interest in the game and his withdrawal from the O. H. A. is greatly regretted.

One outstanding feature of the gathering was the decision to contribute \$1,000 of the Association's funds to the Canadian Patriotic Fund, and also to make a grant of \$2,000 toward the Hospital for Sick Children, Toronto, which motion was seconded by Mr. Wettlaufer. The game of hockey and its association was never more firmly ensconced in the confidence and prosperity of the public than at the present time.

Shoe Buyer Talks on Buying Problem

Editor SHOE AND LEATHER JOURNAL:

The article in your last edition headed, "Why Not Look At All Samples," in which it was stated by a traveler that retailers should take time to look at travelers' samples whether they intended to buy or not, strikes me as being a little out of the ordinary. Possibly the traveler who was talking in this line never had any retail experience. If he had he would certainly know that if a buyer trotted to the sample rooms to see every line that was presented, he would spend a good deal of his time away from the selling end of his own business. If we looked at every line and gave every second or third man an order we certainly would have enough goods for the next season without any sorting. There is no shoe merchant who can buy all his ranges from any one house, and do himself justice, but he can go too far the other way and if he does he will find that he has too many ranges and not enough of any one.

As far as refusing to look at the samples of every traveler being a "form of cowardice" on the part of the dealer, as this traveler alleges, I differ with him for these reasons. Placing orders are usually given twice a year—in the spring and fall. Our office gives us so much capital (according to the business done) at the beginning of each season to be invested in the best markets and to the best advantage. Then some traveler comes along after we have spent our

appropriation and would put us in a position so that the office would jump on us or call us down. I would call it a "form of cowardice" if a buyer has not enough backbone to say no to a man when he is already through buying. If a shoeman has bought all he can carry and has picked his lines to suit his trade, why should he add to his stock just because some salesman has just as good a line for the same money.

When the average man sits down to a table to eat a meal he stays with it until he has satisfied his appetite. Why should he eat more just because some wholesome and very dainty dish is offered. If he does he is likely to feel the effect next day. It reminds me of the traveler, with whom I once came in contact, who, after extolling all the good features of his line and not persuading me to purchase, got angry and remarked that "we should look at all samples." Apparently he had not had much success with his line and it was getting on his nerves. Possibly he was right in his observation, but I do not think so.

A little argument on topics such as these is beneficial to us all and I like to see such matters taken up in your paper. It is the proper way of bringing shoemen together and getting new view points on a number of subjects of importance to every one in the trade. Wishing you a merry Christmas and a very happy and prosperous New Year. Sincerely yours,

A. T. MARSHALL,

(Buyer for Stewarts, Limited, Shoe Dept.)

Renfrew, Ont., December 11, 1914.

New Boot Shop is a Palace

One of the handsomest and best appointed shoe stores that can be found in any Canadian or American city has just been opened at 290 Yonge Street, Toronto. It is known as the Walk-Over Boot Shop, and the proprietor is F. A. Guinivan, late of the Walk-Over Boot Shop, St. Catherine Street West, Montreal. Mr. Guinivan is widely known to the trade and has every reason to be proud of his new and exceptionally attractive establishment, which is 156 feet deep by 30 wide. This makes the second Walk-Over Boot Shop in Eastern Canada, and from the artistic fittings and imposing entrance it may well be termed a footwear palace. The shelving is all of solid mahogany and there is a balcony surrounding the interior in order to take advantage of all the space possible. To do justice to the splendid store in any verbal description is impossible, and in the next issue of the SHOE AND LEATHER JOURNAL several views of the interior and exterior will be presented with a reference to all the fine features. The widely known Walk-Over system of fitting the customers' foot by means of a carefully prepared diagram, which system has been described in the JOURNAL, is followed. The pedal outline is indicated by means of a series of chart lines giving not only absolute knowledge of what shape is best suited to the patron, but the exact size as well. In this respect the maximum of comfort and efficiency is secured.

High Distinction For Shoeman

Elmer J. Bliss, president of the Regal Shoe Co., was elected president of the Boston Chamber of Commerce this week. He will succeed J. Randolph Coolidge, Jr., whose term of office expired with the ending of the Chamber year. Mr. Bliss is president and managing director of the Regal Shoe Company, of Boston and Whitman, Mass., which he founded more than 20 years ago. He is president also of the Regal Shoe Company, Limited, of Toronto, and the Regal Shoe Company of Pennsylvania. He is treasurer of the Bliss Securities Company of Boston, and a director of the International Trust Company of Boston.

Newsy Jottings From Old Quebec

O. Goulet, shoe manufacturer, was in Montreal last week on a business trip.

Louis Gauthier, of the Louis Gauthier Co., was in Montreal last week on a business trip.

Lachance & Tanguay are very busy and at the present time report having a large number of orders on hand.

Jos. Guay & Fils, tanners, of Quebec, have built an extension to their factory for the purpose of drying patent leather.

P. E. Boivin, manufacturer of Feather-weight ice creepers, Granby, Que., was in the city last week calling upon the trade.

Naz. Fortier, tanner, of Quebec, has sent to every manufacturer and leather jobber a fine map of Europe, which is much appreciated by the recipients.

Edmund Gaumond, formerly foreman in the lasting and finishing room of J. B. Blouin, Limited, has taken charge of the same department in Duchaine & Perkins factory.

Among the recent visitors in town were L. S. Odell, with Fisk Limited, Montreal; J. D. Woods, Cotton Threads, Limited, Montreal; A. C. Parker, Parkers Limited, Montreal.

Retail circles complain of trade being rather quiet up to the present, but, during the past few days, it has greatly improved. There has been considerable activity in felt shoes and rubber footwear.

A number of shoe manufacturers are taking stock. Orders are only coming in fairly well, but plants are not rushed. It is expected that there will be a considerable improvement after the holidays.

Arthur Roy, foreman of the lasting room of Gale Bros., died on Monday, December 7th. The funeral took place to Jacques Cartier Church, and the remains were interred in the St. Charles Cemetery. There was a large attendance and all the employees of the firm attended in a body.

At the offices of LaRue & Trudel, curators, there was sold the insolvent estate of Thomas Voyer, boot and shoe merchant. The stock of boots and shoes, valued at \$4,146.30, was bought for \$2,109.59. There was also sold the store fixtures, valued at \$496.25 for \$128.01. The book debts amounting to \$1,800 were purchased by Mr. H. Boivert for \$383.93.

Many friends in the shoe trade will regret to learn of the death of Joseph Arthur Mercier, Quebec, which took

J. A. MERCIER

L. BILODEAU

place on December 5th, at the age of 34 years. He was a partner in the firm of Louis Bilodeau, who is possibly the oldest shoe retailer in Canada if not in America, being sixty-four years in business and having attained the ripe age of eighty-four years. Before being taken into partnership by Mr. Bilodeau, Mr. Mercier was in his service five years and for a number of years past the deceased had practically entire charge of the selling and buying as Mr. Bilodeau has dropped out of active work. Mr. Mercier was noted for being a good accountant, a fine stock keeper and a first class manager. When Mr. Bilodeau began business at the age of twenty he was located at the break-neck steps but, after ten years moved to his present premises at 45-47

Sous le Fort street. The accompanying pictures show Mr. Bilodeau on the right and the late Mr. Mercier on the left. The firm have always done a wide trade and have many customers in the country whom they have supplied with footwear for years.

Octave Feuilteault, proprietor of J. H. Begin, Reg., wholesale shoes, Crown street, Quebec, died recently in his store. He left early in the evening to go out for a walk, and when he did not return, the members of his family went in search of him, and found him lying on the floor of his place of business. Life was extinct. Mr. Feuilteault had been in poor health for some time. There was nothing to indicate the cause of so sudden a demise. He is survived by a wife and seven children.

Mr. Parker on Selling Staff

Albert E. Parker, for the past twelve years in the warehouse of D. D. Hawthorne & Co., wholesale shoes, Toronto, has been appointed one of the city travelers for the firm and will look after all the trade east of Yonge Street, while

ALBERT E. PARKER, TORONTO

David Bain is the city representative of the house west of Yonge Street. Mr. Parker has filled the position of chief order clerk with Hawthorne & Co. for the last seven and half years and has been in the employ of the company for twelve years. Previously he was with the Royal Shoe Co. for some time. The change in the city representation has been brought about by John D. Hawthorne, for 18 years the city salesman of the firm, being given an important inside position owing to his health, he having recently recovered from a long illness. Mr. Parker and Mr. Bain will look after the Toronto work. Both are fully qualified to cater to the wants of their customers, being well acquainted with the shoe game. Mr. Parker entered upon his new duties last month. He is a Toronto boy and his chief delight outside of selling or handling shoes is in raising chickens. He is an ardent bird fancier.

The Adams Leather Goods Co., Toronto, has received part of the order for saddlery which the British and French Governments have given Canadian manufacturers, and the Northern Aluminum Co. has contracted to supply a large number of army canteens.

Have Closed Good Year's Business

There are perhaps no more popular or more widely known salesmen calling on the shoe trade of Canada to-day than the four gentlemen who are seen in the accompanying group. They have just closed a splendid year's business in

the interest of their firm, Philip Jacobi, the old established shoe store supply house of Toronto, which has been in existence for some fifty years. On the left is E. W. McTear, who covers Western Ontario and the Maritime Provinces and has been with the firm twenty-eight years. Next, is W. D. Fox, who looks after Northern and Eastern Ontario and Quebec Province. George J. Scott is the third gentleman, whose ground is from Winnipeg to the Coast, and then comes W. E. Young, who calls on the trade in Hamilton, Toronto, and the suburbs. Mr. McTear has just been elected a member of the Toronto Board of Directors of the Commercial Travelers' Association. These gentlemen are looking forward to next year's business with high hopes and fully expect record sales.

New Managers Enter on Duties

J. A. Connor, who has recently been appointed manager of the Toronto division of the Canadian Consolidated Rubber Co., has had about twenty-seven years' experience in the

shoe trade, and is well acquainted with every department of the business. He has entered upon his new duties and his brother, W. J. Connor, has succeeded him as manager of the London branch of the Canadian Consolidated Rubber Co. The new manager of the Toronto division, is a Port Stanley boy, but has resided the greater portion of his life in the Forest City. He got into the footwear game in 1887 with the late Daniel Regan, and remained with him about seven years, after which he took a position as traveler for the Goodyear Glove Rubber Co., N.Y., covering the ground from Toronto to Montreal for two years. This company made a particularly neat, high-class and artistic fitting rubber, and it was with them that Mr. Connor secured his first introduction into the rubber footwear. He was next on the staff with Garside & White (now the White Shoe Co.), Toronto, looking after north-western Ontario. After over eight years' service with this house, he joined the Robinson & Lindsay firm, of Toronto, with whom he remained five years, and four years ago, became identified with the Canadian Consolidated Rubber Co., being appointed as head of their London branch, which, under his direction, has shown expansion in all lines. Mr. Connor is very fond of the selling game, and will greatly strengthen that department in the Toronto office. It was at the request of Mr. J. K. Lindsay that a change was made, in order that the latter might devote his time exclusively to the accounting and financial end of the Toronto office, which has grown very heavy. Mr. Connor will have supervision of the London, North Bay, Brantford, Hamilton and Belleville branches. His brother, W. J. Connor, who is now the manager of the London branch, has also had an extended experience in the shoe line, being identified during his connection with the trade, with practically the same firms as his brother, who has just removed to Toronto.

The factory of Ames-Holden-McCready, Limited, at St. Hyacinthe, Que., is very busy at the present time and is turning out about 3,500 pairs daily, and has orders on hand which will run well into next year. The company have completed all their military boots, having made about sixty-five thousand pairs in all, which were all highly spoken of and gave every satisfaction.

AMONG THE SHOE MEN.

The stock of A. Arel, shoes, Montreal, has been sold. The Pittsburgh Shoe Store, Montreal, has recently been registered.

S. E. K. Walker, dealer in shoes, Port Hope, is retiring from business.

Jos. Daoust, of Daoust, Lalonde & Co., Montreal, was in Ottawa recently.

A. G. Harris has opened a men's furnishing and shoe store in Killarney, Man.

Wm. Johnson has opened a shoe repairing shop in the Bates Block, Truro, N. S.

Bert Packard, of L. H. Packard & Co., Limited, Montreal, was in Boston recently.

Ed. R. Lewis, leather dealer, Toronto, spent a few days in Montreal recently on business.

James Dorman, shoe retailer, 225 Broadview avenue, Toronto, has assigned to R. Tew.

Frank Stafford, of Sudbury, Ont., was in Toronto recently calling upon the shoe trade.

J. A. Little, shoe dealer, of Saskatoon, Sask., has sold his boot and shoe store to H. Henry.

A. C. Elliott, of Brooklin, Ont., was in Toronto recently calling upon members of the trade.

W. A. Hamilton, of the W. B. Hamilton Shoe Co., Toronto, was in Montreal and Quebec recently.

E. T. Jacobi, Toronto, has returned from a successful rabbit shooting expedition in Dufferin county.

W. J. Duncan, of the W. J. Duncan Legging Co., Seaford, Ont., was in Toronto recently on business.

J. & T. Bell, Limited, Montreal, have installed a new model U. S. M. button-hole machine in their factory.

J. A. Adams, of the Murray Shoe Co., London, was in Montreal, Ottawa and Toronto this week on business.

New machinery parts have recently been installed in the factory of Gagnon, Lachapelle & Lecours, Montreal.

David Marsh, managing director of the Wm. A. Marsh Company, Quebec, was in Toronto recently on a business trip.

F. A. Rogers, shoe buyer, of the Robert Simpson Co., Toronto, was a caller at several Montreal factories last week.

Robert Bussell has opened a new shoe store at 16 Torrens avenue, Todmorden, where he has put in a representative stock.

R. Leuiller, of Winnipeg, will take charge of the sample room of the Wm. A. Marsh Co., Quebec, and enter upon his new duties soon.

J. Schwartz, representing L. B. Wasserstrom, leather dealer, New York, spent several days recently in Toronto and other cities.

The many friends of A. W. Saunders, shoe retailer, 487 Bloor street west, Toronto, are congratulating him on the birth of a son and heir.

William H. Grosch, of the Grosch Felt Shoe Co., Milverton, Ont., was in Toronto, Montreal and other points recently on business.

Raoul Lanthier, of the Kingsbury Footwear Co., who is well known in Montreal shoe circles, was recently elected honorary president of the Montreal Hockey Association, the

large new amateur body which has just been formed in that city.

H. A. Burke has resigned his position as foreman of treeing room in the Ames-Holden-McCready, Limited, No. 1 factory, Montreal.

A. Brunet has taken over the shoe establishment formerly known as the Waldorf Shoe Store, 762 St. Catherine street east, Montreal.

L. W. Hanson, manager of the Toronto branch of the United Shoe Machinery Co., spent a few days in Montreal recently on business.

The shoe factory formerly conducted by A. A. Durkee, Limited, at Truro, N.S., will be dismantled and the machinery is being taken out.

W. V. Matthews, superintendent of Ames-Holden-McCready, Limited, Montreal, has been spending the past few days in the Boston market.

H. Bull, shoe retailer, of Grimsby, Ont., who has been confined to his home for some months is able to be around again and attend to business.

The Brandon Shoe Co., Limited, of Brandon, have just finished their contract for army shoes, which were turned out in good shape and on time.

The United Shoe Machinery Co., Montreal, state they have received a large number of orders for their new six-foot model "M" buffing and finishing outfit.

James Muir, sr., of the James Muir Co., shoe manufacturers, Maisonneuve, Que., was in Toronto this week and called upon a number of friends in the trade.

E. L. Emerson, of the Boston Last Co., Boston, is spending a few days at the Canadian branch of the firm in Richmond, Que. He was in Montreal last week.

W. H. Miner, President of the Miner Rubber Co., Granby, Que., and R. R. Macaulay, Secretary-treasurer of the company, have returned from a business trip to Winnipeg.

The Metropolitan Shoe Repair Shop has started at 1768 Dundas street, London. A model N 22 foot outfit with stitcher has been installed by the proprietor, E. J. Wright.

The stock of boots and shoes of Tom Stedman, Limited, Winnipeg, was sold by Newton & Nicholson, the assignees, this week. The stock consists of \$52,001.95 and the fixtures \$5,598.85.

L. S. McKindsey and J. M. Peterman, western representatives of the W. B. Hamilton Shoe Co., Toronto, have returned from extended trips throughout the prairie provinces.

N. W. Spear, of the Price Leather Company, Boston, called on several Montreal shoe houses this week. He reports business in Boston as being rather quiet at the present time.

Dufresne & Locke, Maisonneuve, report their factory as being very busy. Orders have been coming in freely they state, during the past few weeks, and calls are being made for early delivery.

It is confirmed that owing to dislocation of all branches of the Hudson's Bay Company's business during the war, the governor and committee have decided not to recommend the payment of the interim dividend on the ordinary shares. On this occasion twelve months ago fifteen per cent. was

paid on them, showing an increase of five per cent. on the previous year.

J. A. McLaren, of McLaren & Dallas, wholesale shoes, Toronto, who is confined to his home with an affection of the heart, is, his many friends will be pleased to learn, making good progress toward recovery.

H. Henry, who is connected with the Saskatoon branch of G. G. Lennox, wholesale shoes, was in Toronto recently, calling upon a number of friends in the trade. He has been on a visit to his home in Elmvale.

E. Leroux, of the United Shoe Machinery Co. of Canada, Montreal, spent the last week in Quebec setting up and instructing operators in the working of the new button-hole making machine recently sent out by his company.

The Cobourg Felt Co., who have installed a full line of machinery for the making of felt footwear in their plant at Cobourg, have turned out a fine range of samples in shoes and slippers, which will soon be presented to the trade.

The stock of the Simpson Co., shoe dealers, Parliament street, Toronto, who recently assigned, was sold this week at fifty and a half cents on the dollar. The stock of the same firm on Queen street east has yet to be disposed of.

The Kimmel Felt Co., of Berlin, are re-organizing their factory, which will not only give them a greatly increased output, but they will also place upon the market soon a fine line of Goodyear welt outing shoes, which are expected to meet with wide favor.

Isaac P. Hetherington died recently at his home in Jenkinville, N.B., after a lingering illness. Mr. Hetherington had travelled extensively in New Brunswick and Nova Scotia, and was for a number of years in the boot and shoe business. He was 78 years of age.

R. P. Sweetman, formerly manager of the Slater Shoe Store, St. John, N. B., has joined the staff of the new Walk-Over Shoe Store, Yonge street, Toronto. Mr. Sweetman has had an extended experience in shoe selling, and during his residence in St. John made many friends.

The Blachford Shoe Manufacturing Co., Toronto, who are makers of women's fine Goodyear welts, may shortly add a department for manufacturing turn footwear. George A. Blachford is visiting Rochester and other cities, looking into the situation and an important announcement may soon be made to the trade.

The price of leather is ascending all the time and an advance took place recently in wax splits which are now quoted at 38 to 40 cents and are very difficult to obtain. Other lines such as waterproof chrome, mennonite grain and split leathers are quoted very high.

Artistic and attractive calendars for the coming year are being sent out to the trade by the Grosch Felt Shoe Co., Milverton, Ont., Legace & Lepinay, shoe manufacturers, Quebec, Aird & Son, shoe manufacturers, Montreal, Robin Freres, last manufacturers, of Montreal, and other firms.

J. Dupras, Montreal agent of the U. S. M. Co., is spending a few days in the new Clark Bros.' factory at St. Stephen, N.B., superintending the installation and starting of the machinery. Cutting has already been started and the factory will be in full operation this week.

The recent cold weather has proved a boon to the shoe retailers and business took a decided jump, especially in felt footwear, hockey boots, larrigans, Arctics and other lines. Immediately after the holiday trade many dealers will be busy in taking stock and in making preparations for the usual January sale.

The representative which the Ontario shoe manufacturers have sent to the Old Country to negotiate with the authorities for orders in connection with army shoes, is Mr. A. J. King, of Toronto, who will represent the Association in England and France. He sailed on December

2nd for London, which will be his centre to work from, and if necessary, he will visit France, but it is possible that he may not have to do so, as it is said the French Government is represented in England.

T. H. Bigwood, who operates three stores in Toronto, has sold the one at 448 Spadina avenue to R. H. Kenyon, who has taken possession. Mr. Bigwood, who is president of the Ontario Shoe Retailers' Association, will still conduct his other two stores at 826 Yonge street and 364 College street, Toronto.

Judging by the quantity of shoe supplies being ordered from the U. S. M. of Canada at the present time, states an official of the company, it would indicate that conditions in the various Canadian shoe factories have improved somewhat, particularly with those manufacturers making staple and heavier grade footwear.

At the Cumming's Shoe Store, in Galt, Ont., on Ainslie street, there was on exhibition recently a hand-made "duck bill" shoe made in Galt nearly 48 years ago. The shoe is quite a curiosity, and marks the advance in styles and in comfort from those days when goose quills were inserted to ensure a good lively squeak.

Fire broke out recently in the shoe store of James Brown, Port Stanley. Mr. Brown's family lived over the store and were aroused in the middle of the night. They hastily escaped by means of a ladder placed at the rear. The interior of the store was gutted and the stock considerably damaged. The loss was about \$1,000.

The Essex Rubber Co., of Trenton, N.J., have sent out to the trade a very neat calendar for the coming year, showing a repair man examining a shoe which has been brought to him for repairs. The sole and heel which are of rubber have worn so well that they do not require attention. The calendar is in colors and is being welcomed by the trade.

A change has been made in the personnel of the board which will inquire into the complaints about the boots being made for the Canadian soldiers. John Sinclair, of Barrie, who was named a member of the board, declined to act, and has been replaced by T. O. Gallipeau, a shoe manufacturer of Montreal. The inquiry is now in progress.

An old and respected citizen of Montreal passed away last week in the person of Mr. William Booth. He was for many years secretary-treasurer of J. & T. Bell, Limited, shoe manufacturers. Since he gave up active work five years ago, he remained in the board of directors. He was a member of the Montreal Board of Trade, Canada Council K. of C. and St. Patrick's Society.

Oscar Vogt, of the Great West Felt Co., Elmira, Ont., has returned from an extended business trip throughout the West, going as far as the Coast. The output of the company has been increased this season and the factory working overtime in order to keep up with orders. The recent cold weather has had a marked effect on the demand for felt goods, particularly in the West.

It is proposed by a number of employes of the various Montreal shoe companies to organize an inter-factory bowling league. The employes of the United Shoe Machinery Co., Tetrault Shoe Manufacturing Co., Aird & Son, Star Shoe Co., Gagnon & Lachapelle, and a number of other factories, have signified their intention of joining. The schedule will start about January 1st.

Of the \$1,400 subscribed by the Toronto city teachers for needy school children, \$1,000 has already been spent on shoes. The fund for this work was started by a grant of \$500 from the Toronto Teachers' Association some months ago. To prevent overlapping in the dispensation of the articles, a card system requiring the signatures of the principal of the school and the captain for the district has been worked out. Some of the garments are being made by

the teachers in sewing circles, while the rest will be purchased.

The directors of the Canadian Consolidated Rubber Co., Montreal, have announced that it had been decided not to make the usual disbursements for the current quarter on the common stock (on which dividends at the rate of four per cent. were paid formerly) in view of the general financial conditions. It was stated, however, that the profits for the eleven months to November 30th show that the dividends on both the preferred and common stocks have been fully earned.

J. Hessenauer, shoe retailer, of Berlin, has completed a fine new front costing over the four figure mark, which greatly adds to the appearance of his store. Those who remember the old windows, with heavy protruding posts and heavy beading, will appreciate the change. The effect, from a display standpoint, is marked. The store being somewhat narrow, necessarily sacrificed the front windows, but the plan adopted has solved the problem, by building them "L" shaped into the store, leaving a spacious entrance.

LEATHER MEN GET TOGETHER

A meeting of several leading leather manufacturers, who are members of the Canadian Manufacturers' Association, was held in Toronto on December 7th for the purpose of effecting an organization for protection and better business relations with one another. There was a very large attendance. The members were entertained to luncheon by George C. H. Lang, President of the Lang Tanning Co., Berlin, at the National Club, Toronto. Mr. Lang was elected chairman of the new association and S. Morley Wickett, of Toronto, vice-chairman.

The annual meeting of the Tanners Section of the Toronto Board of Trade, which is held usually in December, will not take place until early in January, as S. Morley Wickett of Toronto, who is chairman of the section, is busy in the municipal elections while the officials of the Board are engaged in removing to their new quarters on the nineteenth and twentieth floors of the new Royal Bank building, where the members will have admirably equipped rooms.

REAL MILITARY OR DRESS PARADE SHOES?

Editor SHOE AND LEATHER JOURNAL:

What will be the result of the criticisms, kicks and complaints about the army shoes of Canadian shoe manufacturers for first Canadian Contingent.

Of course, we must bear in mind that everything pertaining to this Canadian force was done in a hurry, and for that reason we must be considerate, but, it is undoubtedly the desire of the Militia Department at Ottawa to get the best possible footwear suitable for active service that money will buy.

Reports were circulated quite freely from the Valcartier Camp that many of the shoes wore out and were quite useless in two or three weeks, and complaints have been reaching the public ever since the departure of the troops about the wretched footwear that they had been supplied with. We know that the leathers used in these shoes were of the best quality procurable in Canada and the United States, and fully up to specification, therefore, why should they give out in so short a time?

Most likely the fault was in the construction of the shoe, and you will find upon investigation, that they were excellent for dress parade, but little use for active service.

Although having the highest regard for the Goodyear welt system for making fine shoes, we have no hesitation in

saying that it is by no means the best method for making Army shoes for active service. The welt, five-eighths of an inch wide, going all around the shoe, sewed on to a shoulder of the inner sole, which necessitates a loose filler of some kind of felt material between the inner sole and the outer sole, is a point of weakness, and will not stand the extra hard wear which is required of an active service shoe. Wax thread, no matter how good the quality, will not stand the strain and hard usage that brass or steel will. In our estimation—and we feel sure active service will demonstrate the fact—the very best process for making Army shoes for active service is the Standard screw, which is made with a first quality inner sole the entire length of the shoe, a first quality middle sole (in place of the welt and filler) which goes the entire length and width of the bottom of the boot—then a first-class outer sole, all of which is fastened together by the Standard screw process, and is absolutely solid throughout.

If a moderate flexibility is required, the tension of the machine may be adjusted to have the screws further apart. This process avoids all sewing and seaming in the sole of the shoe, and undoubtedly will show the best results.

Goodyear welted shoes of the very best construction, and very carefully selected stock, which have been exposed to similar wear as in Army service, have been examined by

BRAVE BOYS OFF TO FRONT

As announced in a recent issue of the SHOE AND LEATHER JOURNAL, Edmund and Clifford Weston, sons of Fred. W. Weston, president of the Weston Shoe Co., Campbellford, Ont., have enlisted with C Company, 21st Battalion, and are now at Kingston, Ont., for service in the second Expeditionary forces. Edmund Weston is twenty-two years

EDMUND WESTON

CLIFFORD WESTON

of age, and had charge of the leather department in the factory, while Clifford is seventeen years old, and was on the staff of the Bank of British North America, Campbellford branch. Both young men are very popular in their native town, and are sure to uphold worthily and well the honors of their country whose call they are answering.

W. J. CONNOR, MANAGER OF THE
LONDON BRANCH

OF MONTREAL PLANT

J. A. CONNOR, MANAGER OF THE
TORONTO DIVISION

THREE NEW APPOINTMENTS BY CANADIAN CONSOLIDATED RUBBER CO.

the writer, and the weak spots were where the welt was sewed on to the inner sole, and the outer sole sewed on to the welt.

Therefore, to sum up, in our opinion, the best method at present known for making an Army shoe is the Standard screw, with a heavy outer sole and a medium weight middle sole and inner sole, all of the best quality, fastened with the Standard screw process.

Yours truly,
SCRUTINEER.

Montreal, December 14th, 1914.

A SHOE THAT WILL NOT SLIP

One of the new non-slip infants walking shoes turned out by the Hurlbut Co., of Preston, Ont., with patent vamp and red kid top. The shoe is made on right and left lasts and not a tack is used in its construction. The main thing is the non-slip, flexible sole feature, which is

appreciated by mothers of little ones who are learning to walk or are not yet sure on their feet.

HE TAKES ANOTHER STEP UP

I. W. Kuehner, who for the past two years has held the position of manager of the Maple Leaf Rubber factory at Port Dalhousie, Ont., is leaving for Montreal to take charge of the large factory of the Canadian Consolidated Rubber Co., in that city. Many friends will wish him every success

in his responsible position. He was born in Waterloo in 1879, and after being educated in Galt and Guelph, was for a time employed with the Waterloo Mfg. Co., but later entered the service of the Berlin Mfg. Co. This was some fourteen years ago, and he remained with that firm five years. He was then in business for himself for a while after which he joined fortunes with the Merchants Rubber Co., and was given charge of the cutting department. After four years service, he entered the employ of the Miner Rubber Co., at Granby, but later, re-joined the Canadian Consolidated Rubber Co., being made assistant superintendent of the Maple Leaf Factory. Soon after, he was made superintendent and for the past two years, as stated, has filled the responsible post of manager. He is the youngest superintendent in the employ of the Canadian Consolidated Rubber Co.

PROGRESSIVE YOUNG CANADIAN—Eight years' experience with two large United States shoe companies; at present managing store in New York City; wishes similar position or traveling for other shoe house in Canada; best references, etc. Box 92, SHOE AND LEATHER JOURNAL, Toronto.

Christmas Greetings

TO THE SHOE DEALERS OF CANADA

In the year that is now ending, it has been our good fortune to introduce MURRAY-MADE, DERBY and CLEO Shoes to many new merchants. We have the best of good reasons for feeling assured that such new introductions will follow the usual course and result in permanently cordial business relations being established between the dealer and ourselves in each case.

We wish you all a MERRY CHRISTMAS and a BRIGHT and PROSPEROUS NEW YEAR.

The Dunlop Line

You don't need to believe as we do that the Dunlop Line is paramount. All you have to observe is that the Dunlop Line is the easy line to sell. Reputation, Advertising, Quality—these factors have sent the Dunlop Line to the front.

It is not necessary for you to introduce the Dunlop Line. We have done that for you.

Read the paragraphs below. They contain illustrations of and information about Dunlop Leaders.

Dunlop Rubber Heels

Dunlop Rubber Heels are outselling any other heels in Canada to-day. Don't take our word for it; ask any shoe-findings jobber in Canada. To-day the number of jobbers carrying the Dunlop line is five hundred per cent. greater than last April when the campaign commenced.

That is what conscientious service—a frank statement of what we intended to do and doing it—did for Dunlop Heels in eight months.

We make a full line of Heels—"Peerless," "Comfort," Whole Heels, etc. Stock up with this easy seller, if you are not at present on the Peerless firing line.

Dunlop Rubber Soles

It had to come—a rubber sole that could really stand the gaff.

We put our experts on the job and the picture you see herewith is the result of long deliberation.

Dunlop Soles will wear indefinitely.

Dunlop Soles will not crack. Dunlop Soles will give maximum resiliency.

Dunlop Soles will not dry out.

Dunlop Soles will go to the front the same as Dunlop Rubber Heels. Quality, with an organization back of it will do that.

Why not Dunlop Rubber Soles and Soling for your line now?

Dunlop Cements for Manufacturers

We make Cements that make friends.

For nearly a quarter of a century our line has filled the bill for Canadian Boot and Shoe Manufacturers. Why not you?

Why not test our claim that nothing in this country surpasses "Channel," "Chrome" and "Gem" for all those durable qualities in a cement, principal among which are maximum adhesion and speedy drying qualities.

Put up in barrels of fifty gallons or in gallon lots. We also make a full line of cements for rubber heels and patching purposes.

22-FOOT GOODYEAR SHOE REPAIRING OUTFIT

MODEL N

THIS Outfit represents the highest development in shoe repairing machinery, and meets every demand of modern shoe repairing. It embraces all the essential processes for making new shoes from old ones, giving the maximum of equipment and efficiency in the minimum space. The Outfit has the Goodyear Stitching Machine with all its improvements, including a new style steam generator which uses gas or gasolene for generating the steam, and operates automatically, thereby insuring a uniform heat for keeping the wax in proper condition and requiring little attention from the operator. The Edge Trimming Machine has the new feature of the two shafts, being operated by a single belt, and the cutter grinder is attached directly to the main shaft. This arrangement gives better results with less power.

The Buffing and Scouring Machine has a shaft 57 inches long and carries the following equipment :

- | | |
|--|-----------------------------------|
| 2 Split Bottom Buffing Rolls | 2 Flat X-Ray Heel Scouring Wheels |
| 2 "C" Shape X-Ray Heel Scouring Wheels | 1 Heel Breast Scouring Wheel |
| 1 Pin Wheel Pad Complete | |

A powerful Blower System removes the dust resulting from the trimming, buffing and scouring operations, and is designed to overcome certain objectionable features of other blowers.

The Finishing Machine has a 78 inches shaft which has all the necessary equipment for black or russet work:

- | | |
|--|--|
| 2 Corrugated Rubber Shank Finishing Wheels | 1 Corrugated Rubber Heel Finishing Wheel |
| 1 Corrugated Rubber Bottom Finishing Roll | 2 Shank and Bottom Brushes |
| 2 Heel Brushes | 1 Stitch Cleaning Brush |
| 1 Levelling Roll | 1 Bead and Wheel |

At the end of the Outfit is the Oscillating Edge Setting Machine which is fitted with union irons and in its motions duplicates hand workmen with quicker and better results.

Each of the machines is operated independently by a friction drive pulley, so that it is necessary to use only those machines which the operator may require. This feature means a saving of power.

All the machines are firmly mounted on legs and driven by a countershaft with carefully adjusted bearings, so that the Outfit runs with very little vibration, and is in every way most efficient.

We Are Operating Once More

Clark Bros. are in their new factory and hard at work on orders for Winter delivery and preparing for Spring, 1915.

New machinery has been installed throughout, and the line of samples has been added to so as to make their range complete.

Several new lasts have been introduced, while the popular lines that have made such a hit with the entire trade are again being made.

Retailers will find Clark Bros'. Shoes distinguished by the same character, workmanship and quality that gave them an individuality before the fire.

Have your jobber submit samples of Clark Bros. mock Goodyear Welts for women.

Jobbers' Inquiries Solicited
