NET PRICE LIST.

DR. JAEGER'S

≪ SANITARY

Woollen Glothing System.

Every Article of Dr. Jaeger's System bears the above Trade Mark.

NONE ARE GENUINE WITHOUT IT.

SOLE DEPOT:

A. ALLPORT,

21 & 23 COLMORE ROW, BIRMINGHAM.

BRITISH MANUFACTURE.

Dr. Jaeger's Sanitary Woollen System Co., Ld., Central Office (Wholesale):— 95, MILTON STREET, LONDON, E.C.

MEMORANDA

TO WHICH ATTENTION IS RESPECTFULLY REQUESTED.

This edition supersedes previous editions.

Wholesale Postal Address: 95, MILTON STREET, LONDON, E.C.

Retail ,, ,, 42 & 43, Fore Street, E.C.

,, 3 & 4, Princes St., Cavendish Sq., W.

", ", ", EAST STREET AND THE AVENUE, BRIGHTON.

, ,, ,, 23, COMMERCIAL STREET, LEEDS.

N.B.—Customers ordering by Post for the first time should address their correspondence to 42 & 43, Fore Street, London, E.C., unless, in view of probable future transactions, some other Depôt should be considered more convenient.

All Goods are supplied for Net Cash. References or Remittances are requested from strangers before dispatch of Goods. Remittances should include cost of carriage (see below).

Orders should be headed with—Full Postal Address, forwarding

instructions, and Railway Station for Parcels.

Full permanent home address (if writing from a temporary abode).

Title, whether Mrs., Miss, etc., should be stated.

Change of address should be immediately notified, and the late as well as the new address mentioned.

In the event of any mis-spelled name, or wrong designation in the Invoice, the error should be pointed out at once; otherwise much subsequent confusion may arise.

To ensure that returned goods are duly credited, the name and

address of sender should be enclosed.

Post Office Orders may be made payable to "John Smith."

Cheques to be crossed—"Cr. A/c. of JAEGER SYSTEM Co. LD."

and made payable to the Company.

Complaints can only be entertained when received within ten days from execution of order. Articles which have been used cannot be taken back.

CARRIAGE OF PARCELS.

DR. JAEGER'S SANITARY WOOLLEN SYSTEM Co., LD., desire to inform their customers that they cannot pay carriage of parcels, all their prices being based upon a Net Cash payment. Goods for the Country will be sent by Parcels Post when possible, postage being charged on Invoice; when this is not possible, the best and cheapest route will be chosen, and carriage charged forward. Goods for the London District will be sent either by Parcels Post, or by Carter, Paterson & Co., with whom the Company have made arrangements for specially cheap rates—see scale at foot—and to save annoyance and trouble to customers, carriage will be paid by the Company and charged on the Invoice.

SCALE OF RATES by CARTER, PATERSON & Co.:-

ANSWERS to OBJECTIONS

SOMETIMES MADE TO

Dr. Jaeger's Sanitary Woollen System.

It is **not** a "Fad!" but a System of adapting the covering to the body, instead of, as hitherto, the body to the covering.

It is not "coddling!" because the continuous draining of water from the tissues hardens them, and strengthens the whole body.

It is not irritating to the skin! In a very short time any feeling of the kind vanishes, and the skin is maintained in a healthy glow.

It is not oppressively warm in summer, but cool! Oppressive heat is felt when the skin cannot exhale freely through linen or lined outer-clothing. The most signal instance of this is the discomfort caused by a mackintosh. Clothing and Bedding of porous Animal Wool throughout allow the skin to freely throw off the superfluous heat of the body—hence the use of flannels for cricketing, rowing, &c.

It is **not** uncomfortable to be continuously buttoned-up (in all wool clothing)! as a very short experience will show, and in no other way can the body be preserved at an *equable temperature*, and yet *lightly* clothed.

It is not incompatible with wearing evening dress!

It is **not** expensive to adopt! Outerclothing already in wear can usually be rendered sanitary, by replacing linings, &c.

It is not less cleanly, but much cleaner than ordinary clothing and bedding, which retain the exhalations from the skin!

It is not to be passed over because you feel well at present! It enhances both health and comfort and protects the body against attacks of disease to which the strongest succumb.

5

DR. JAEGER'S SANITARY WOOLLEN CLOTHING, &c.,

CAN BE OBTAINED AT THE FOLLOWING ADDRESSES:

If difficulty is experienced in procuring the Jaeger Goods, or if other Goods are offered in their place, the Public will confer a favour by communicating with the Company at the Central Office, 95, Milton Street, London, E.C.

THE VALUE TO THE PUBLIC

OF THE

GENUINE JAEGER TRADE MARK.

(See facsimile on page 23.)

THE JAEGER COMPANY make and sell **ONLY** Pure Unadulterated Woollens.

Which other Firm can substantiate a similar statement, and can show a Trade Mark which is accepted by the general Public as a

GUARANTEE AGAINST ADULTERATION?

The JAEGER Company maintain a Scientific Staff and a Laboratory fitted with every requisite for testing chemically and microscopically the purity of their Woollen yarns and materials. Which other Firm incurs this labour and cost in order to protect the Public against imposition?

The value of the JAEGER Trade Mark to the Public is therefore twofold:—

It guarantees Pure Wool, in place of Wool only too frequently mixed with from 25 to 75 per cent. of Cotton.

It represents a successful stand against the Dishonesty and Trickery of Adulteration.

The prediction made when the present Company was founded, that the Public would never pay for Pure Wool, has been completely falsified by the extraordinary popularity of the genuine JAEGER goods.

Adulterated and otherwise inferior Imitations of the garments designed and popularised by Dr. JAEGER are freely offered by unscrupulous traders as the genuine "JAEGER" goods; and as Cotton is much less costly than Wool, the mixture can be sold more cheaply than the pure material, which however is infinitely more healthy, comfortable, and economical in the end.

The penalties for imitating a Trade Mark are so severe that the Public may rely on the genuineness of goods which bear the above Brand, and the JAEGER Company venture to appeal to the Public, in the interest of buyers themselves, of fairness, and of commercial honesty, to note and make use of this certain means of detecting and rejecting spurious JAEGER goods.

International Health Exhibition, 1884.

"The First Wealth is Health."

Emerson.

REASONS

FOR

DR. JAEGER'S

REFORMS.

DR. JAEGER'S Reforms of Clothing and Bedding are based on the scientific adaptation of the covering of the body, by day and by night, to the nature and needs of the skin.

The skin is pierced by millions of pores, through which is constantly exhaled a watery vapour, whereby the body is relieved of much matter that would be poisonous if suppressed or retained.

The chief desideratum, therefore, in the body's covering is that the skin's function of exhalation should suffer as little impediment as possible, and here two points must be chiefly considered:—

The covering should be pervious throughout, to permit the exhalation to escape.

The skin should be maintained at an equable warmth, as any chill diminishes its activity, driving away the blood to the internal organs.

These conditions were found by Dr. JAEGER to be fulfilled only by porous fabrics of Animal Wool, while plant-fibres (Linen and Cotton) are directly antagonistic to them.

Animal Wool is the material devised by nature for animal covering, and possesses, as the simplest experiments will prove, the valuable quality of not attracting or retaining the noxious, mal-odorous matters which the animal body exhales. Moreover, being a slow conductor of heat, Animal Wool does not chill, even when damp.

Dead Plant-fibre (Linen and Cotton), on the other hand, like living plants, absorbs evil odours from the surrounding atmosphere—but cannot, as the living plant does, assimilate them—and therefore gives them out again, if damped or wetted. Moreover, Plant-fibre readily conducts heat, and therefore quickly chills, especially if damp, when it has an icy feeling. The nature of Plant-fibre is to readily take up moisture, like a sponge, while the horny nature of Animal-fibre offers greater resistance to saturation with wet. Further, the usual close web of Linen and Cotton offers mechanical hindrance to the escape of the watery vapour exhaled by the skin.

These considerations induced Dr. JAEGER to try the effect on himself and on others of wearing Clothing, and of sleeping in Bedding, consisting wholly of pure, porous, woollen materials; and he found that practice amply confirmed his theory.

The vital function of exhalation performed by the pores of the skin has a very great influence on the health, so much so, indeed, that if this function be suspended by artificially closing the pores, even for a short time, death will ensue. Anything which tends to check or discourage the skin's action is therefore harmful; and clothing which, owing to its impervious nature, or to its faulty construction, hinders the escape of the watery vapour exhaled, and exposes the body to risk of chill, is **injurious** to health.

Healthy Clothing and Bedding should therefore consist wholly of pure Animal Wool, woven into porous fabrics, and all material of Plant-fibre should be avoided, whether as underwear, or as lining to outer clothing, or as sheets, etc.

As, however, these hygienic conditions constitute a complete revolution from the old unsanitary haphazard way in which Clothing and Bedding have so long been made, Dr. Jaeger foresaw that his reforms would never get beyond the stage of theory unless facilities were provided

for the public to make practical trial of them. He accordingly set to work to devise the best conceivable clothing and bedding which his extensive study and experiments on the subject could suggest. Although only a man of science, whom makers of the old-fashioned unscientific clothing would naturally set down as a mere theorist, his intense conviction that he was right stimulated him to persevere until he could persuade various manufacturers to carry out his ideas.

First, he devised an ideal Shirt, embodying four principal features:—

- 1. Pure, unadulterated (perhaps as novel a notion as any)
 Animal Wool, undyed and unbleached, i.e., of Natural colour.
- 2. Porous stockinet web, so soft as not to irritate the most sensitive skin, and much less liable to felt and shrink than the rectangular web of flannel.
- 3. Buttoning on shoulder, preventing ingress of draught at front or back.
 - 4. Double thickness over chest.

This last feature is, of course, in addition to sufficient protection at the back, and is recommended by Dr. JAEGER on the ground that the blood vessels which terminate down the front middle line of the trunk are expanded by extra warmth over that part, stimulating the circulation of the blood, and assisting the skin to perform its secretory function.

Dr. JAEGER also remodelled all other items of Underwear, and continued his practical efforts at reform, until he had caused to be constructed, on common-sense principles of health and comfort, every article of Underclothing, Outerclothing and Bedding for Men, Women and Children of all ages.

Full descriptions of the various details of Dr. Jaeger's Sanitary Woollen System are appended in this Catalogue, and in all of them the leading idea of perviousness throughout to the exhalation of the skin is carefully considered.

Textile materials of vegetable fibre (Linen and Cotton) are completely discarded from Dr. Jaeger's System; and he found that silk (which is not, like animal wool, designed by nature for clothing purposes, but is

merely the excretion of a worm) is deficient in the important quality of perviousness. The correct, sensible rule is to make the body's covering of such material, and in such manner, as to maintain the necessary equable warmth, while placing the least possible impediment to the escape of the skin's exhalation. It is surprising how light in weight the clothing can be made on these conditions; and when to this consideration are added those of greatly enhanced health and comfort, as well as of constant protection from chill, enough is said to show Thinking People that Dr. JAEGER'S reforms are exceedingly worth their attention.

A great deal of supposed chronic ill health, such as disorders of the respiratory organs, of the stomach and digestive organs, and of the bowels; rheumatic complaints, lumbago, and other diseases attributed tochill; excessive corpulence, etc., may be remedied, alleviated, and, above all, prevented, by treating the body as the highly sensitive, warmblooded organism which it is, provided with a complex apparatus of pores and blood-vessels, whose functions are of vital importance. Hitherto the almost universal tendency has been to treat the body as though it were an inanimate dummy on which anything and everything, however hygienically unsuitable, might be hung, at the dictate of fashion or habit.

Clothing and Bedding which are pervious throughout, because made wholly of porous Wool, keep the tissues constantly drained of the superfluous fat and water, the accumulation of which, under unsanitary covering, is responsible for many of the disorders enumerated above. Under the JAEGER covering the flesh becomes literally hardened, acquiring greater specific weight, and the body is far better fitted to resist the attacks of epidemic and other disease.

It is, therefore, quite a mistake to suppose that the JAEGER Clothing and Bedding are enervating, or more fitted for invalids than for healthy The strongest man may succumb in a few days to congestion of people. the lungs, bronchitis, etc., brought on through his unsanitary clothing, or through sleeping in damp linen sheets.

Here, therefore, is a great Hygienic Reform, which has been welcomed, adopted, and recommended by many high medical authorities, has been tried by thousands of thinking people, and has stood the severe

test of every kind of opposition and attack from motives of prejudice and interest—although of scientific opposition, in the sense of any serious endeavour to refute Dr. JAEGER's theory, there has been none.

Dr. Jaeger's Sanitary Woollen System has thus established its claim to examination and trial, but the trial should be thorough, as the principle of perviousness throughout to the skin's exhalation is essential, if the immense benefit of really Healthy Clothing and Bedding is to be enjoyed. The Outerclothing must be reformed, as well as the Underwear: the Tailoring Departments at the Jaeger depôts undertake to remove the discoloured, mal-odorous, unwholesome cotton lining and backing from waistcoats, coats, etc., and to adapt Outerclothing already in use so as to protect the body from sudden chill in any part Such Healthy Outerclothing is perfectly compatible with customary fashion and appearance.

That pervious All Wool Clothing and Bedding protect the body from chill is intelligible to every one, but it is a common error to suppose that such Clothing and Bedding are "hot" in summer. Heat is felt to be oppressive when the natural action of the pores is hampered, and the exhalation cannot escape. If the covering is *impervious*, there is a strong desire to throw everything off from the stifled skin; but the wearer of porous, woollen covering, through which the skin can breathe, is no more oppressed by it than is a cricketer by his flannels, which every athlete knows to be the coolest, safest, most comfortable wear for violent exercise in hot weather.

Dr. Jaeger's position in the Reform of Clothing and Bedding which bears his name is simply that of its founder. The functions of practically carrying out his ideas, of manufacturing and distributing the Jaeger Clothing and Bedding, are delegated by him to this Company, established by warm adherents to his Reform, who had themselves experienced its benefits before they undertook its introduction, and who bound themselves to Dr. Jaeger to maintain his principles intact, especially as to purity and high quality of materials.

Dr. Jaeger's Sanitary Woollen System Co., Ld.

THE "LANCET," 1st May, 1886.

SIX MONTHS' EXPERIENCE OF SANITARY WOOLLEN CLOTHING AND BEDDING.

Sir,—I should be glad if you can give me the opportunity to render to your readers a short account of the effects in my experience of the use of sanitary woollen

clothing and bedding.

If I may judge from my own case, very many who may have read or heard more or less of Dr. Gustav Jaeger's propositions with regard to dress, have dismissed them with little ceremony as pedantic, or as well enough for those who are not acquainted with the virtues of good English underclothing, &c. To all such I would say "Don't." The experience of several winters led me to look forward to the last with grave apprehension as prolific of severe and exhausting catarrhs, followed by increased susceptibility and renewed attacks. In October, I, for the first time, saw an exposition of Dr. Jaeger's views in his excellent little volume "Health Culture," and was so impressed with their soundness that I adopted the sanitary woollen clothing and bedding advocated by him in their entirety. The result has been complete immunity from colds, and a very marked increase in my capacity for work. I have not put on a great coat night or day, have slept with an open window in bedroom, and have been

able to enjoy the luxury of an open cab instead of a close brougham.

Instead of alternating feelings of heat and cold, there has been an uniform and most agreeable glow of warmth. I have, without any alteration of diet or regimen, lost 7-lbs. in weight, and (which will, I believe, tax the credulity of some) have witnessed the disappearance of a lipoma of the nape of the neck, which had existed for some years and had suggested the necessity for an operation. These latter facts powerfully illustrate the truth of Dr. Jaeger's contention that the complete and continuous action of the skin drains the organism of water and superfluous fat. I would say, further, that the feeling induced of perfect health is not the least of the recommendations to adopt the system. I may mention that of the many who have, more or less, fully addicted themselves to it from my example or advice, I have not known one who has been disappointed. Lastly, I would add a word on the need there is, if the full benefit to be derived is wished for, that nothing but pure wool should enter either into dress or bedding.

> I am, Sir, yours faithfully, JOHN PENHALL, M.D., F.R.C.S.

St. Leonards-on-Sea, April 17th, 1886.

THE "INDIAN MAGAZINE," February, 1886. HOW TO PRESERVE HEALTH IN INDIA. By Dr. C. R. Francis.

An article on clothing would be incomplete without a few words on the subject of the "Sanitary Woollen System," recently introduced by Dr. Jaeger, Professor of Comparative Anatomy and Physiology at Stuttgart. In the matter of costumes Dr. JAEGER is a thorough revolutionist. He would have every article of dress, worn by men, women and children, made of wool; and certainly the purity, softness, and elasticity of the finer kinds of the material, manufactured under his guidance, are qualities that combine to render it extremely attractive. The most irritable skins would doubtless be tolerant of the summer quality of the stockingnette stuff, which is not only extremely soft, but probably very durable. It is well suited for shirts, undervests, and other garments worn next the skin; as also, indeed, for petticoats and dresses. And the natural colour (light grey) is well adapted for India. value of flannel is recognised by all who indulge in sports likely to cause profuse perspiration; and there seems no reason why all clothing, ordinarily used in that country, should not be made of Dr. Jaeger's pure animal wool, which is manufactured of varying degrees of thickness and strength; and which may be dyed of almost any colour—the dyes being genuine and harmless. The khakee (grey cotton) suits, which are now worn by a portion of the army in India, might, with advantage, be made of In short, the principle upon which wool is advocated, being recognised, viz., its protective power against chills, and its offering the least possible impediment to the escape of emanations from the body, there is no limit to its application. All who are contemplating a career in India—everyone in fact who can—should pay a visit to the depôt of the Sanitary Woollen System Company, 3 and 4, Princes Street, Cavendish Square, W., or 41, 42 and 43, Fore Street, London, E.C., or send for one of their illustrated catalogues, and examine the several garments, or the forwarded specimens, and then read all that is urged in favour of the material, as opposed to vegetable fibre, which, in the various forms of cotton, linen, muslin, etc., is in such general use throughout the world.

CHILDREN'S DRESS.

The Editress of Baby, Miss Ada S. Ballin, the well-known writer on Hygiene, remarks in issue of May, 1889:—

VEGETABLE fibre is not sufficiently pervious to these exhalations, and the ordinary method of its manufacture renders it more impervious than it need otherwise be; it absorbs until it is wet, and then leaves much unabsorbed moisture on the surface of the body, chilling it and checking the further action of the skin. After violent exercise, it hangs damp and clammy against the skin, whereas an all-woollen material will rest on the skin it has nearly dried, and be only damp itself even when the wearer has been in a violent perspiration. Hence, the adoption of woollen garments for all athletic sports, and the great desirability of woollen clothing for wear in summer and in tropical climates.

That irritation which sometimes follows the unaccustomed wearing of woollen next the skin is generally caused by the material being of recent manufacture or coarse quality, and in all but the rarest cases it passes off within a few days, if the practice is persevered in. It is not felt when the fine Jaeger materials are used, and we have reason to be grateful for the production of these materials.

In summer weather I believe that many cases of so-called nettle rash, and that most painful skin disease, prickly heat, the name of which admirably describes the sensations it produces, are caused by the sudden checking of the functions of the skin, owing to the thinness of the vests worn. These cases are not often met with in medical practice, as, although extremely painful, the affections are known not to be dangerous, but I believe they are much more common than is generally thought, and privately I have met with several in the persons of those who in summer wear calico next the skin.

A typical case has been recorded in a medical contemporary by Mr. Wharton, whose patient, himself a medical man, suffered tortures every year, from May till November, from prickly heat (lichen tropicus). His sufferings were aggravated by increase in the action of the skin, and all treatment availed nothing. "At last," said Mr. Wharton, "it occurred to me that perhaps the light, short-sleeved Indian gauze vests that he wore in summer had some share in the causation of his agony; they were too thin either to absorb the perspiration, or to protect the skin from sudden chills. I accordingly advised him to wear throughout the summer the thickest long-sleeved vests, made entirely of wool, such as he wore in the depth of the winter. The result was the absolute cessation of his experience of 'prickly heat.'" There is a very prevalent idea that woollen clothing is weakening, but this is only a misapprehension of the fact that it is weakening to allow the body to be constantly overheated. Although woollen is worn, the body need not be overheated, even in summer, care being taken that the quality and quantity of the clothes is suitable to the external temperature.

Mrs. Scharlier, M.D., B.S., writes:-

For a child to be thoroughly well equipped to meet the joys and the dangers of the seaside, the Jaeger system ought to be followed, and the clothes should all be woollen. There should be no calico or linen from skin to coat. Woollen or cashmere socks and strong ancle-shoes are the best foot-gear. Next to the skin should be worn a thin woollen combination reaching from neck to knees; over this a little underdress of beige, cashmere, or thin flannel. This should be all in one piece, whether its lower portion be the ordinary petticoat or the divided skirt. The over-dress, or frock, should also be all in one, and of woollen material.

CHILDREN'S FEET

ARE PROTECTED FROM

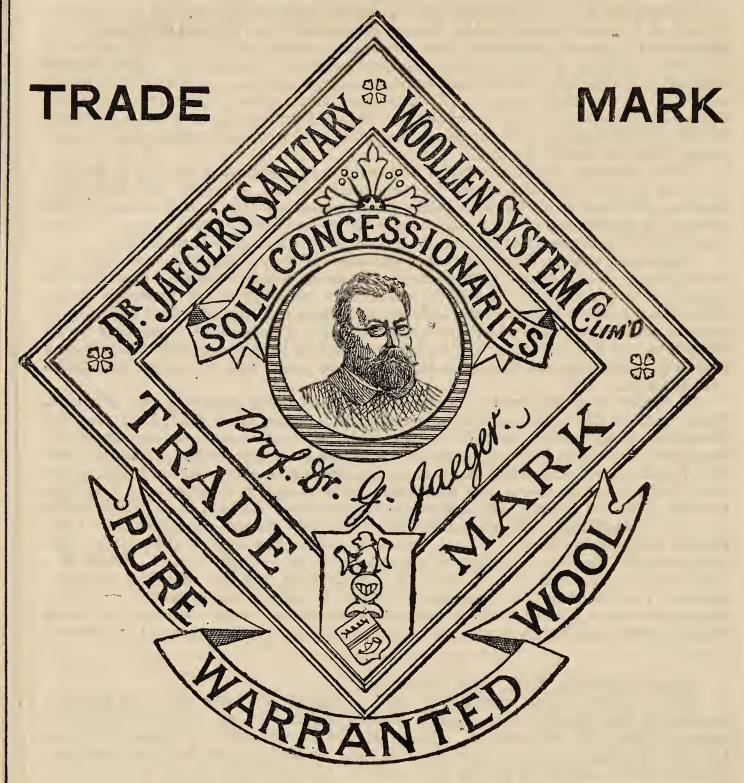

CHILL, CHILBLAINS, CORNS,

By the JAEGER BOOTS AND SHOES (See page 38).

Healthy in Material, in Shape, and in Construction, the JAEGER CHILDREN'S BOOTS AND SHOES are a unique means of rescuing Children's Feet from the martyrdom and distortion caused by the usual unscientific boot or shoe, and of averting the baneful effects of chilled feet on the general health.

SOLE GUARANTEE OF MANUFACTURE

under Dr. JAEGER'S authority.

COUNTERFEIT GOODS,

Made up to more or less resemble the Dr. Jaeger's Sanitary Woollen Underclothing, are frequently offered in substitution for the real articles. The public are warned that ONLY GOODS BEARING THIS COMPANY'S TRADE MARK are guaranteed to be genuine and in accordance with Dr. Jaeger's Sanitary Woollen System.

Dr. Jaeger's Sanitary Woollen Bedding.

COOL IN SUMMER, WARM IN WINTER.

In Summer the woollen covering permits the body to evaporate its surplus moisture, which linen bedding would retain; while in Winter, when the body has no surplus heat, the non-heat-conducting properties of wool render it greatly superior to the chilly nature of linen. Moreover, damp wool will not chill, while damp linen or cotton sheets are a constant source of danger.

A correspondent of the *Times* (Oct. 6th, 1885), who has adopted Dr. Jaeger's Sanitary Woollen System, writes:——"At night in the winter months my bed now" warms me, instead of my warming the bed, as used to be the case with linen or calico sheets."

The JAEGER Sanitary Woollen Bedding comprises the following articles:—

Bolster.

25

Coverlet, Camel's Hair and Sheep's Wool Coverlets.

Mattress (entire or in three sections—a most convenient arrangement).

Pillow.

Case.

Quilts.

Sheets, Cashmere, Camel hair or Natural Wool.

Nightclothing (see pages 63 to 65).

The Mattresses and Pillows are stuffed with pure Wool and are covered with pure natural Camel Hair or Sheep's Wool Material.

The Sheets, etc., are made of very fine, durable Cashmere, which will not shrink in washing.

The Coverlets and Rugs are made of the finest quality of undyed, natural brown camel hair or sheep's wool.

Dr. JAEGER states:—"The advantage of the natural brown coverlets of sheep's wool consists in their freedom from all artificial dye; this I personally guarantee. They therefore attract less dirt, and secure a more undisturbed sleep.

"The Coverlets of camel hair wool retain the peculiar odour which proceeds from the camel, and which is an excellent remedy (long known in the East) for soothing the nerves; consequently the sleep which these Coverlets procure is still more quiet and refreshing than in the case of the Coverlets of sheep's wool. Camel hair wool Coverlets are especially to be recommended for nervous persons, and sufferers from sleeplessness."

These Coverlets and Rugs may therefore be considered indispensable to all who adopt Dr. JAEGER'S Sanitary Woollen System, and they will be found of the greatest use to travellers (protecting against damp and unclean beds) and to sportsmen, as well as for driving and for carriage rugs.

For prices see the following page.

BEDDING—continued.

(Close to Moorgate Street Station).

MATTRESSES.

The Stuffing consists of the best quality of pure wool, without any admixture of vegetable fibre.

To give the Mattresses, Bolsters and Pillows the necessary elasticity and springiness a layer of horse hair is inserted between the upper and under layers of wool, which are thus prevented from becoming hard and lumpy.

These Mattresses are supplied in three varieties.

No. I.—Best White Wool stuffing, with pure horse-hair layers.

Covering: Camel Hair Cloth or Dark Natural Wool Cloth.

This Mattress is supplied entire, or in sections.

"The Jaeger Featherweight" (Regd.)

HATS AND CAPS

ARE

PERVIOUS TO PERSPIRATION.

THIS means that the Perspiration evaporates, instead of condensing and pouring down the face.

The leading principle of Dr. Jaeger's Reforms—that really Pervious Clothing and Bedding must be made wholly of porous animal wool—is especially important in Hats and Caps.

No mechanical means of ventilation can be an efficient substitute for the natural ventilation through porous animal wool. An ordinary Hat is less ventilated—even with the crown knocked out—than a Jaeger Hat of porous animal wool. The plant-fibre in the former retains the noxious matter exhaled, while Wool lets it go free.

The greatest sceptic as to the Health and Comfort of wearing Wool will be well-nigh converted, if he try the Jaeger Woollen Hat lining, in place of the usual unwholesome strip of impervious leather, saturated with perspiration.

Dr. JAEGER writes:

"The best head-covering would certainly be—none at all. But usage, and in many cases weather conditions, render this impracticable, and as both usage and the weather conditions must be reckoned with, the problem to be solved is the construction of a head covering which will approach as closely as possible the ideal of the natural head-covering; and this has been done.

"Three points require to be considered with the hat: 1. It must consist exclusively of animal fibre; all cotton or linen lining must be excluded, as well as the usual strip of leather which encircles the forehead. The latter may be replaced by a strip of felt, or, better still, the hat may remain completely unfurnished, like the Turkish fez. 2. Not only are the hard hats, now in such general use, bad because the pores of the material are closed, impeding the passage of the exhalation from the head. Of course, soft hats cannot be worn in all cases, and on ceremonial occasions the hard hat may be chosen; but ordinarily the hygienically superior soft hat should be worn.

HATS AND CAPS—continued.

"Camel hair is admirably suited for felt hats, and hats of this "material are highly to be recommended.

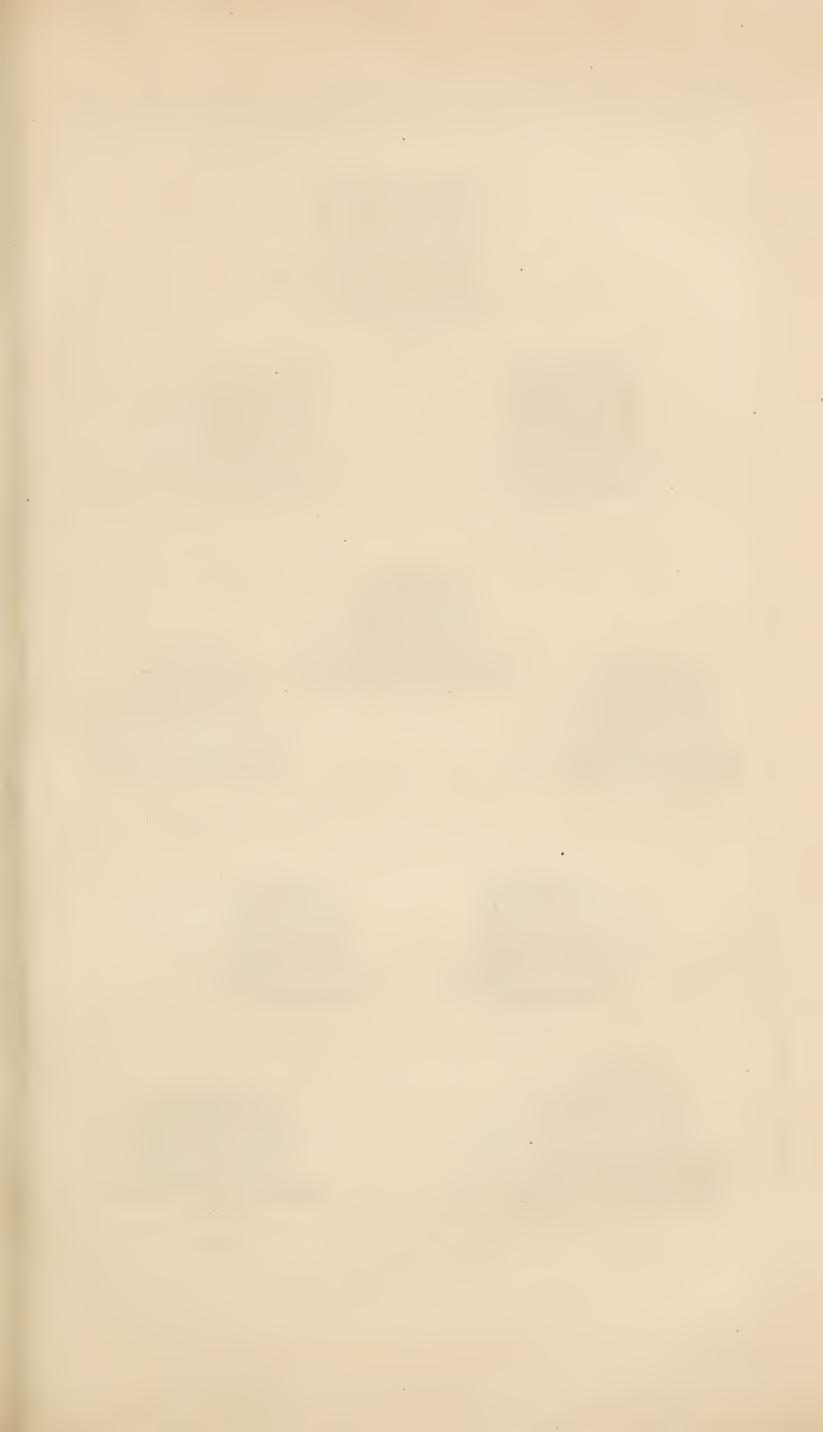

"The Sanitary Woollen Hats are manufactured in the most

"various forms, to suit every taste and shape of head."

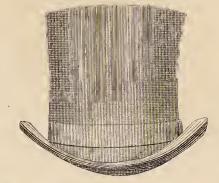

"It is obvious that the use of Sanitary Woollen Hats cannot "be too strongly recommended to those who are already bald, or are "threatened with baldness, or who suffer from perspiration or pains "in the head. Persons who are becoming 'thin on the top' may "by this means, if taken in time, still save their hair, and avoid the "alternatives of baldness or of wearing a wig, either of which is "objectionable, both on hygienic and æsthetic grounds.

"To those whose baldness is past praying for, in addition to "the Sanitary Woollen Hat, may be recommended the comfort to "be procured in cold weather by wearing a pure woollen indoor "cap. The slow heat-conducting property of animal fibre, whether "in the form of the natural hair or of a pure woollen cap, checks "the too rapid escape of warmth from the head, and excludes the "access of chilling draught to the skull. At night a cap of the "Sanitary Woollen stockinet or knitted material may be worn with "advantage by those who are deficient in the natural protection to "the head afforded by abundant hair."

Dr. Jaeger's Sanitary Woollen Outerclothing.

THE JAEGER SANITARY BOOTS AND SHOES.

NEMESIS, described by Lemprière as the Goddess of Vengeance, perhaps most frequently overtakes men for their ill-treatment of their feet.

A great deal has been written on the subject of the hygienic shape of Boots and Shoes, but very little consideration is paid to the hygienic qualities of the Material.

Dr. Jaeger's Reforms of Clothing and Bedding, which at first startled Society by their novelty, but are now being generally adopted by thinking and cultured people, require that the covering of the body shall, while protecting the skin from chill, be of such pervious materials as to allow the freest possible escape to the watery vapour constantly exhaled through the pores. This excretory function of the skin rids the body of much matter which is noxious and even poisonous if retained or repressed by the ordinary impervious clothing and bedding, beneath which the stifled skin cannot properly breathe.

Case a man in plaster of Paris, leaving the breathing-passages free, and in considerably less than four-and-twenty hours he will have ceased to live!

Can there be any more convincing proof of the vital functions which these pores are devised by nature to perform? Yet what consideration is paid by 999 people out of 1,000 to this point, and what attempt is made to facilitate this all-important function?

The feet, which have their due proportion of the 3,000,000 pores with which the human skin is perforated, are imprisoned from morning to night in a casing of more or less thick leather, rendered first as impervious as may be by tanning, and then completely so by blacking. As if this were not

BOOTS AND SHOES—continued.

enough, the Boots or Shoes are lined with impervious material manufactured from plant fibre, and possessing two paramount defects:—It is the inherent nature of such material to absorb and retain noxious and malodorous matters, and, further, to be such a ready conductor of heat as to cause a chill whenever damp.

The temperature of the extremities exercises a most important influence on that of the whole body. Warm gloves on the hands are often as good as an overcoat, and apart from the alternatives of comfort and discomfort, the hygienical value of warm (not hot) feet is very great.

The JAEGER Sanitary Boots and Shoes are simply the embodiment of plain Common Sense. The foot is, as it were, for the first time enabled to breathe, and to throw off those secretions which, when forcibly retained by an impervious covering, are the source of constant discomfort and of more or less serious ailments. In addition, great pains have been taken to shape the JAEGER Boots and Shoes in strict accordance with the anatomical requirements of the foot.

The use of Animal Wool for the internal linings and the uppers with leather "golosh" is perfectly compatible with elegance and shapeliness as the most cursory inspection of the JAEGER Sanitary Boots and Shoes will show.

Animal Wool, as a slow conductor of heat, maintains the feet warm even under conditions which, if the feet are covered with other material, may be fatally dangerous. If the Animal Wool covering becomes wet, it does not chill the feet, which remain warm, and the moisture promptly evaporates.

On the other hand, Animal Wool, when not lined with other material maintains a comparatively even temperature, preventing excess of heat, and protecting from chill caused by too rapid cooling. The familiar feeling of oppressive heat in the feet is due to their inability to perspire freely and naturally in their usual hermetically sealed state. If the covering is of Animal Wool only, the perspiration passes easily away

BOOTS AND SHOES—continued.

the feet remain dryer and cooler in the sultriest weather, and the offensive odour, which in some cases no amount of cleanliness will prevent from clinging to the ordinary Boot or Shoe, ceases from troubling.

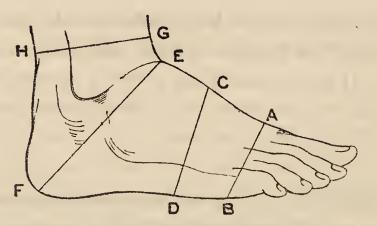

The JAEGER Boots and Shoes are practically as proof against wet and mud as those of impervious leather, over which however they possess this immense advantage, that if they do get wet the risk of injury is much lessened, and they speedily dry on the feet. The woollen felt sole or sock, on which the foot rests, is removable, and may be changed and aired from time to time with advantage; and in addition there is an arrangement in the heel of the boot for ventilating the sole.

Weak feet are hardened by the facility for the evaporation of superfluous moisture; the joints are strengthened; corns and other troubles from undue pressure are alleviated.

Tourists are particularly recommended to use the JAEGER Sanitary Boots and Shoes, as in lengthy walking excursions the feet remain much longer fresh and capable of exertion.

DIRECTIONS FOR MEASUREMENTS OF BOOTS AND SHOES.

When ordering specially, give the full length of foot (not of boot) and the following dimensions taken all round the foot at the points indicated:—

A B-Joint.

C D—Instep.

EF—Heel.

G H—Ankle.

To ensure a perfect fit, it is best to forward lasts, or to send a pattern boot, together with a tracing taken round each foot, standing on a sheet of paper.

Customers' own lasts can be made to order at 4/6 per pair, and will be kept for future use, if desired.

Boot Trees, ready made, 7/6 per pair; to Order 9/6.

TAILORING DEPARTMENT.

42, 43, Fore Street, E.C. (close to Moorgate Street Station); 3 & 4, Princes Street, Cavendish Square, W.

THE JAEGER SANITARY COATS AND TROUSERS.

No one on reflection will dispute that outerclothing is ordinarily constructed without reference to Sanitary principles. It fails to afford adequate protection to the body against chill because it is imperfectly closed, and admits draughts of cold air up coat sleeves and trouser legs, under the armpits and in at the bosom. A crowning absurdity is the practice of cutting away the outerclothing over the delicate organs of the chest, which are left to be protected by the shirt front. Again, in warm weather ordinary outerclothing becomes hot and uncomfortable, to a point at which relief can only be obtained by its removal. This is due to the imperviousness of the material, especially of the lining, padding, backing of waistcoat, &c., confining the heat and exhalations from the skin.

Dr. Jaeger's Sanitary Woollen Outerclothing is constructed, as will be seen below, to overcome these important evils, and those who adopt it may, in addition to its beneficial effects upon the health, count upon a great furtherance of personal comfort at all seasons, whether hot or cold, and may rely upon adequate protection to the body against changes of temperature however sudden and severe.

The material consists throughout of pure animal wool, and offers as little impediment as possible to the passage of the exhalations of the skin.

The web should therefore be porous, and very closely woven textures should be avoided, the best being the so-called "Stockinet" or "Tricot."

Exhaled vapour is impeded by accumulation of web over web, the pores of the upper surface obstructing those beneath. An important reduction in the number of layers ordinarily worn is practicable, without affecting the appearance of the clothing, or lessening its protective influence.

The clothing is so fitted to the figure that the air between it and the body cannot move in an ascending direction, thereby producing a draught of cold air from underneath. The coat should button compactly to the figure, and be well closed over the chest so as to maintain uniform warmth over the whole body. Those to whom this may seem irksome will not find it so. Every soldier will bear witness to the comfort of the buttoned-up coat.

A double thickness of material from the throat to the abdomen, in addition to sufficient protection at the back, is recommended by Dr. Jaeger, on the ground that the blood vessels which terminate down the front middle line of the trunk are expanded by extra warmth over that part, stimulating the circulation of the blood, and assisting the skin to perform its excretory function. The sleeves of the coat are lined with woollen material, and these as well as the trouser-legs may be closed

OUTERCLOTHING—continued.

against upward draughts of air by webbings sewn in them, fitting round the arms and legs, MAINTAINING AN EQUABLE TEMPERATURE and preventing

the possibility of local chills.

Overcoats need not be worn, except in very extreme cold, such as is seldom experienced in this country. The JAEGER clothing is such that it is not too hot indoors, and yet keeps the body sufficiently warm out of doors.

Evening dress can be worn when requisite, and made or altered so as to comply as far as is practicable with the Sanitary Woollen System.

NOTE.—It is not necessary to reject woollen outerclothing already in use, and the Tailoring Departments will gladly undertake to adapt such outerclothing as nearly as practicable to Dr. Jaeger's Sanitary Woollen System.

Charges for adapting woollen outerclothing, already in use, by removing, as nearly as practicable, ALL lining and padding of vegetable fibre and inserting pure woollen linings, pockets, etc., instead, are as

follows:—

For Jacket	about	11/6	For Trousers	5/9
" Morning Coat	,,	12/6	,, Vests	7/6
			" Chesterfield Overcoat	21/-
			rousers and 1/6 for Sleeves

CLERICAL SUITS of all kinds.

CLOTH for Suits, &c.—Patterns and prices upon application.

SLEEVE AND TROUSER WEBBINGS.

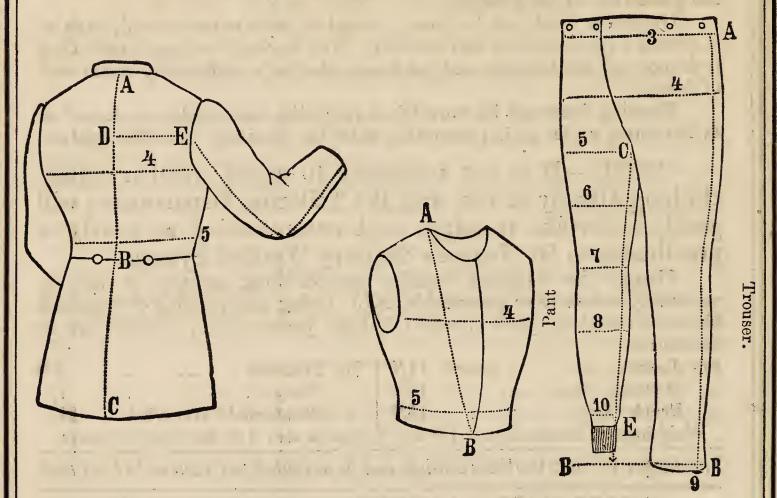

The draught of cold air drawn up the clothing by the heat of the body is effectually stopped when these are sewn inside trouser legs and sleeves. They are very strongly made, of pure undyed woollen material, and are most valuable in the ordinary loose trousers and sleeves, preventing local chill. The trouser webbings quite obviate the necessity of wearing drawers for warmth.

For Sleeves 1/6 per pair.
,, Trousers 1/9 ,,

OUTERCLOTHING—continued.

DIRECTIONS FOR MEASUREMENT FOR MEN AND BOYS.

COAT.

- 1. Length of Coat from the centre of neck A to the bottom at waist B, and down to C.
- 2. Half width of back D to E.
- 3. Length of sleeve, from E to the elbow, and thence to the middle of the hand.
- 4. Round upper part of body, beneath the coat, close up under the arms.
- 5. Round waistband of trousers.
- 6. Size of shirt collar: state whether coat collar to be upright or lay-down.

VEST.

- 1. Length of Vest from A to B.
- 2. The measurements 4, 5, 6, as above.
- 3. If sleeves are required, state length.

TROUSERS.

- 1. Length from hips, from waistband seam (excluding waistband) A to B, or E, when trousers close at ankle.
- 2. Length of fork at C to B, or E.
- 3. Round waistband, measured over trousers.
- 4. Greatest width across seat.
- 5. Round thigh, close up to the fork, measured horizontally.
- 6. Round middle of thigh.
- 7. Round knee.
- 8. Round calf.
- 9. Width of foot, according to wish.
- 10. Round upper part of ankle, when trousers are to be closed at E.

OUTERCLOTHING—continued.

SANITARY WOOLLEN LININGS

FOR COATS, WAISTCOATS, ETC.

No garments can be Sanitary, i.e., pervious to the exhalation of the skin, if the lining be not of pure wool. Thus the material of the lining, which ordinarily receives no consideration, becomes a matter of the first importance, and has been so regarded in this selection of Sanitary Woollen Linings, of which patterns will gladly be forwarded.

OUTERCLOTHING—continued.

SPORTING SPECIALITIES.

HEALTHY sport is identical with a pleasant means of exercise, and the distinctive object of exercise is to promote the activity of the skin. In this enhanced activity of the skin consists the chief benefit derived from exercise, but herein also lies the chief danger, if the clothing be not throughout of porous woollen matrial. Underclothing and linings of linen, cotton, or other impervious materials, prevent the evaporation of the moisture copiously exuded from the skin, and a sudden chill is produced, which is frequently the forerunner of congestion of the lungs, and other painful and dangerous diseases. To sportsmen, therefore, Dr. Jaeger's Sanitary Woollen System especially recommends itself, as assisting the beneficial effect of their hard exercise, while protecting them from the chills to which they are especially subject. Clothing, which when wet through with moisture—whether from within or from without—is absolutely certain to cause no subsequent bronchitis, congestion of the lungs, or rheumatism; which is a permanent and automatic means of training down and keeping in condition; which is reduced to a minimum of weight; is clearly the proper clothing, whether the sport be Shooting, Cycling, Rowing, or any other form of athletic exercise. These desiderata are all combined in Dr. Jaeger's Sanitary Woollen Clothing, and special constructions of Outer garments have been devised to meet each special requirement. The arduous character of the training which competitors in pedestrian and rowing matches, and jockeys who must ride within a given weight, have to undergo, is greatly mitigated or altogether disappears if Dr. Jaeger's Sanitary Woollen System of Clothing and Bedding be permanently adopted, and the accumulation of water and fat in the tissues, which it is the object of training to disperse, be thereby prevented.

OUTERCLOTHING—continued.

KNITTED GARMENTS.

Knitted Garments are kept in stock and are also made to order. As they are knitted into shape on the machine, *i.e.*, not cut out of cloth, these garments combine with the firm smooth nature of the knitted material great durability, and retain their shapes.

The yarn is pure woollen, of the best quality, and the "Natural"

shades are without dye.

The coats are not lined, and on account of their porousness, and of their fitting so closely to the figure, are pronounced by Dr. G. Jaeger to be sanitarily perfect.

Highly recommended for use indoors, or when Touring,

Cycling, or Shooting.

KNITTED SUITS (MEN'S) made to order in Natural and Navy. (For measurement see page 41.)

LADIES' DRESS MATERIALS.

Dr. Jaeger's Sanitary Woollen System has sometimes been reproached with paying more attention to Men's than to Ladies' outer dress. answer to this, it may be pointed out that Ladies' outer dress is in some important respects of better sanitary construction than Men's; the upper portion usually buttons well round the throat, and is closed against all admission of draught, especially when narrow sleeves are worn. A reform of Ladies' outer dress should therefore aim at the material rather than at the form, and in this direction there is room for a great deal of The chief mistake commonly made in the selection of improvement. materials for Ladies' outer dress is that the quality of perviousness is wholly ignored. Dresses of pure wool are the exception; but even when the exterior material complies with this description, its sanitary value is almost certain to be destroyed by its being lined with some material of vegetable fibre which is in many cases quite impervious to the vapour exhaled from the skin.

The immeasurable hygienic advantage of clothing which affords the least possible impediment to the passage of the body's exhalation from the skin to the outer atmosphere, is explained elsewhere as a cardinal principle of Dr. Jaeger's Sanitary Woollen System. Female clothing should consist of Sanitary Woollen Chemise and Drawers (or Combination), Sanitary Woollen Corset and Petticoat, and a Dress of Sanitary Woollen material and lining. Thus attired, a woman is fit to go anywhere and do anything. She is as hygienically clothed as her brother or husband in his cricketing or rowing flannels. The more exercise she takes, and the freer she perspires, the better will be her digestion, her complexion, and her health in general.

LADIES' DRESS MATERIALS—continued.

That this common sense view is filtering into the public mind is clearly shown by the continually increasing demand for Ladies' Dress Materials and Dress Linings, in accordance with Dr. Jaeger's Sanitary Woollen System. Ladies find to their surprise that these materials make-up as tastefully, and are equally compatible with the requirements of fashion, as materials which are wholly or partly composed of impervious fibre, and are therefore to be rejected as unwholesome. The superior beauty, in an artistic sense, of the folds formed by Woollen Materials, when draped, is matter of every-day knowledge.

Special arrangements have been made with manufacturers to supply goods which are guaranteed, by careful analysis, to be free from adulteration. In spite of this important restriction, the variety of design, shade, and colour will be found exceedingly pleasing and even charming, and it is confidently hoped that these goods will receive the examination and approval which they thoroughly deserve, both in respect of quality and of price.

N.B.—Every piece of the JAEGER Dress Materials has one corner enclosed in a leaden seal, stamped with the Jaeger Trade Mark, guaranteeing the goods to be pure wool.

TAILOR-MADE LADIES' OUTERCLOTHING can be made to order in the best style by the Company's Tailoring Departments, completing the hygienic value of the Jaeger Underwear.

DRESSMAKING.

Where any difficulty is experienced in getting the Jaeger Dress Materials and Linings made up, the Scientific Dress-Cutting Association, 272, Regent Circus, London, or their Local Agents,* will undertake the work on their well-known scientific principles, ensuring accurate fitting.

The Scientific Dress-Cutting Association can supply the Jaeger Dress Materials and Linings at the Fixed Prices when they cannot be obtained through a local Jaeger Agent.

N.B.—Madame DAVY, 7, Duke Street Mansions, Grosvenor Square, W., Miss WALKER, 153, Great Portland Street, W., make Dressmaking on the JAEGER System their speciality.

Dr. JAEGER'S

SANITARY WOOLLEN UNDERCLOTHING.

THE Pure Woollen Underclothing, of Stockinet Web and Natural colour, was originally devised by Dr. Jaeger as most conducive to health and comfort. The Natural colour has the additional advantage of wearing better and shrinking less, the woollen fibre not having been deteriorated by dyeing or bleaching.

The prompt recognition by the public of the superiority of the JAEGER WOOLLEN UNDERCLOTHING to the flannel and other so-called woollen underwear generally made, has produced much unscrupulous imitation of the GENUINE JAEGER GOODS which, however, remain unique in their Absolute Freedom from Adulteration.

The JAEGER TRADE MARK (see page 23) is now recognized throughout the world as a

GUARANTEE FOR PURE WOOL.

SPECIAL ORDERS.

To meet the convenience of customers who cannot satisfy their requirements from the Stock sizes and shapes, arrangements have been made for executing Special Orders on our own premises. The charges for garments thus specially made are necessarily heavier than for Stock goods, and there is a somewhat longer interval before delivery can take place.

The Company cannot take back garments duly made to special instructions.

Note.—All sizes quoted of garments made of Stockinet material are average, as it is impossible to guarantee that all garments of the same size have exactly the same dimensions, on account of the elastic nature of the material.

Short Sleeves.—Long sleeves are understood in the regular quotations, but the following garments can be supplied at the same prices:—

Half Sleeves (about 12 in.) with webbings.	Short Sleeves (about 6 in.) with webbing.	Short (Ringed) Sleeves (about 3 in.) with lace.
Men's Undervests, K (page 62). ", ", KK (", 62). ", ", B (", 62).	~~ / FO\	Ladies' Combinations, K (page 56). "KK, (low neck) (page 56). "Chemises, KK, (low neck) (page 58). "Undervests, KK, (low neck) (page 62).

Alterations in sleeves, to suit special requirements, necessitate re-making, for which Is. 6d. extra will be charged per garment.

Children's measurements, not the age, must be given.

UNDERCLOTHING—continued.

BABIES' CLOTHING.

(Pure Porous Wool, free from Dye.)

BABIES should be in ALL WOOL from the hour of their birth. Vegetable fibre (Linen and Cotton) is unwholesome at every age, and especially so for young infants.

In ALL WOOL the Baby's skin is kept active, at an equable temperature, neither too hot nor too cold; whereas, if a flannel vest is worn under linen or cotton, the skin is stimulated to exhale, but the exhalation cannot properly escape, and both the health and the comfort of the child are prejudiced.

Vegetable fibre materials when warmed or wetted are apt to emit offensive odours, poisoning the air which the Baby breathes.

Underwear, Outerwear, Diapers, Bedding—all should be made of pure porous animal Wool, free from dye. Woollen Diapers work admirably. They do not chill the baby when wet or insufficiently aired, and remain comparatively free from offensive odour.

By the simple change from Vegetable fibre Clothing and Bedding to ALL WOOL, an immense amount of illness among infants may be prevented, and, above all, they are protected from chill.

Complete Outfit of JAEGER BABIES' CLOTHING supplied, packed in box.

UNDERCLOTHING—continued.

THE JAEGER COMBINATIONS,

Guaranteed Pure Animal Wool,

For MEN, WOMEN and CHILDREN.

Doubly thick over chest and stomach.

JAEGER COMBINATION.

The Combination Under-Garment will be found particularly convenient by Ladies, and has been widely recognised as agreeable and practical to wear. It is also strongly recommended for Men who ride, as it does not become displaced.

FOR PRICES AND SIZES SEE OPPOSITE PAGE.

THE JAEGER COMBINATION FOR BATHING.

With short sleeves and legs, fitting close, with girdle.

Surgeon-General Beatson, M.D., F.R.C.S., writes:—"The Jaeger Bathing Dress is quite perfect, and should be used by all swimmers. It does away with all sense of being cold and naked when the other clothing is taken off. The shock caused by entering cold water is greatly reduced and quickly recovered from, and the normal temperature of the body is conserved while swimming, so that immersion can be maintained with comfort for a long time. The more general use of the Jaeger swimming-dress at our sea-side resorts, would no doubt tend to diminish greatly the number of bathing fatalities which fill the columns of newspapers during the bathing season, and are so frequently the result of sudden cramp and impaired action of the heart, caused by the diminution of animal heat, against which the unclothed swimmer, however skilful, has no defence."

For prices and sizes see opposite page.

THE JAEGER PANTS AND DRAWERS,

Guaranteed Pure Animal Wool.

For MEN, WOMEN and CHILDREN.

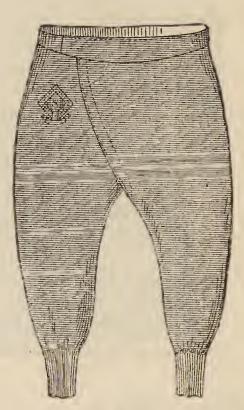

MEN's.

These are made of the finest material, afford an agreeable warmth, and are a protection against, and remedy for, disorders of the Stomach, supplying the place of an abdominal bandage.

They are, therefore, highly approved by the Medical Profession, and can be strongly recommended as a Sanitary form of underclothing.

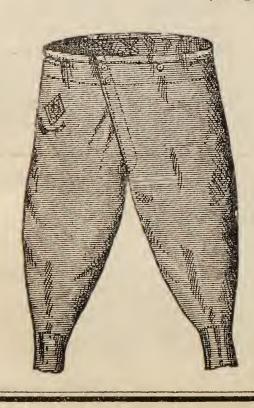

DOUBLY THICK OVER THE ABDOMEN.

LADIES'.

(DOUBLE SEAT.)

THE JAEGER CYCLING DRAWERS.

Those who prefer to wear drawers when cycling, will find this special construction exceedingly agreeable, as the Sanitary Woollen Material greatly diminishes the discomfort of the heat induced by exercise and the close contact of the saddle.

THE JAEGER SLEEPING SUITS.

THE "SOPORIFIC," REGD.

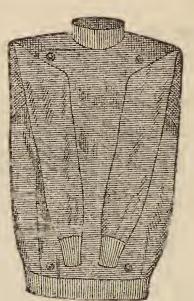

The Suits are in three parts:—Hood covering the head and throat, JACKET and PANTS. The Pants terminate in stocking form, so as to envelop the feet.

In commencing to sleep with the window open, as is strongly recommended by Dr. Jaeger, these garments will be found very comfortable, as also during the cold season, or when the necessity is felt for extra protection to the head, in cases of thin hair or baldness.

which will be found most serviceable in travelling, as it occupies little room, and in summer dispenses with the need of anything further than a light covering over the feet. This Sleeping Costume is especially suitable for the Tropics, and for Alpine and other Tourists, who may have to put up with scanty sleeping accommodation. Its division into parts makes it very convenient in packing.

For prices see opposite page.

Regd. 18268

Regd. 18269.

SANITARY WOOLLEN SLEEPING WRAPPER.

This envelops the entire figure, and is an excellent protection against damp beds. It is also most useful when extra warmth is required, or as a dressing or bath wrapper.

For prices see opposite page.

THE JAEGER SOCKS & STOCKINGS.

GUARANTEED PURE ANIMAL WOOL.

The imperfect construction of the ordinary boot or shoe is not the sole cause of the unsatisfactory condition of the feet; an important share of the responsibility attaches to the equally imperfect construction of the ordinary Sock or Stocking. The accumulation of perspiration, due to the compressing together of the toes, causes an unnatural softening of the skin on the inner surfaces, resulting in sores, soft corns, etc., in spite of every care and attention; and the foot not only becomes crippled in shape, but its actual working powers are diminished.

These troublesome foot complaints are obviated by the form of sock or stocking described and illustrated below. The many trials which have been made have been attended with complete success, as numerous medical testimonials witness, and this form of construction can be most strongly recommended as practical and beneficial.

The Jaeger Socks or Stockings with Divisions for the Five Toes.

are especially recommended to those who take much walking exercise, and whose feet perspire freely. The woollen material surrounding each toe enables the perspiration to pass away, leaving the inside skin of the toes dry, and soon re-

Regd. 1088.

storing it to a condition as normal and free from offence as that of the skin between the fingers of the hand. The crippled state of the toes is also much benefited and improved by the use of these Socks or Stockings.

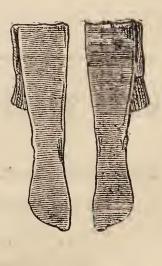

The Jaeger Socks or Stockings with Division for the Great Toe.

Regd. 1087.

In walking and standing, the great toe is the most important of the five; but its use is greatly diminished when it is pressed on one side together with the other toes, and cannot lie straight nor move with freedom. Persons, therefore, who are unwilling to adopt the best form of Sock or Stockingthat with divisions for the five toes-will do well to adopt this form, with a division for the Great Toe alone.

The Jaeger Socks or Stockings without Divisions for the Toes.

These, like the others, are made in the correct shapes for the right and left foot, and of sufficient width over the toes to prevent their being compressed together. (This construction is especially recommended for children under six years of age.)

N.B.—These goods are knitted of the best wool and in the best manner. It is, however, well to point out that in some cases the peculiar mode of treading wears through any Woollen Sock more or less quickly. The texture is pressed quite thin, and loses much of its power of resistance. In such instances frequent change is recommended. After being lightly washed, or merely soaked in water and gently manipulated, the net work resumes its elasticity and firm hold.

PETTICOATS.

Lightness and perviousness are two all-important elements. These are effectually provided in the Sanitary Woollen Petticoats, which are cool in summer, because pervious, and warm in winter, because non-heat-conducting. Their lightness of weight is a recommendation at all seasons.

OVER-PETTICOATS-LADIES' & CHILDREN'S.

Kilted Over-Petticoats have a 5-in. kilt at bottom. Braided Over-Petticoats are nicely trimmed with three rows of braid.

UNDER-PETTICOATS, STOCKINET.

The Stockinet Petticoats are made of the same materials as the Sanitary Woollen Underclothing, and are trimmed at the bottom with $1\frac{1}{2}$ in lace.

They are exceedingly light and agreeable wear, and very pleasing in appearance.

UNDERCLOTHING—continued.

The Jaeger Sanitary Woollen Corset.

No one has a good word to say for Corsets, authorities on Hygiene denounce them, but most women wear them. Yet the inference that they are a necessary evil would be founded on ignorance of what constitutes a healthy Corset.

Dr. JAEGER'S solution of the Corset controversy is simple, and recommends itself to common sense. He says, in effect, "wear it, if you like, but let it be pervious!"

The ordinary Corset stifles the body which it imprisons. Even when the underclothing is woollen, the skin cannot breathe through an impenetrable mass of pasted cotton, or whatever other material the ordinary unsanitary Corset is made of. The all-important excretory function of the pores is wholly ignored, and the consequences are debility and depression of vital power in the digestive and other organs thus maltreated. The spongy, enervated condition of the tissues causes a craving for more and more support, inducing tight lacing and the anatomical distortions with which books on hygiene abound.

Further, the unsanitary Corset retains the noxious matters which are exhaled by the skin, and which, especially when there is perspiration, must reach the Corset through the underclothing. The underclothing is regularly changed, but the Corset is worn for months, and, if made of the usual material, becomes before long an unwholesome, mal-odorous garment.

Whoever studies Dr. Jaeger's Reforms will appreciate the great hygienic advantage of a Corset of pure, pervious woollen material, through which can pass the vapour exhaled by the skin. Such a Corset over the woollen underclothing, and beneath a woollen dress, lined (if at all) with woollen lining, allows the skin to breathe, promoting a feeling of health, buoyancy, and freedom from oppressive heat, alike during strenuous exercise or when the body is in repose.

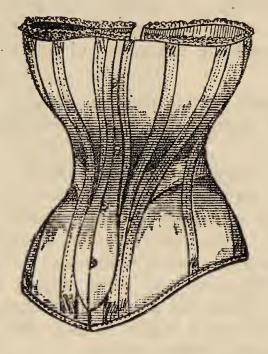

Directions for washing THE JAEGER WOOLLEN CORSETS.

The Corset, after any metal parts have been removed, to be treated with a solution of "Suaviter": Soap (see directions on page 85). It should remain, covered up, in soak for half-an-hour. This, aided by the process of repeatedly drawing the corset through the hand, separates any grease deposited by perspiration. As the quantity of such deposit varies with each individual wearer, this operation may require to be repeated to some extent. Rubbing should be entirely avoided, as it has an injurious effect on the material; if any portions are not quite cleansed, they should be touched with soap, lightly brushed, and washed out in lukewarm water. After washing, the Corset should be hung up, fastened from the top, and while still damp vigorously pulled lengthways. The ironing should be done without too great heat, to avoid shrinking.

PATENT WATCH-SPRING STEEL CORSET

WITH SLIDING WATCH-SPRING STEELS

IN PLACE OF WHALEBONE.

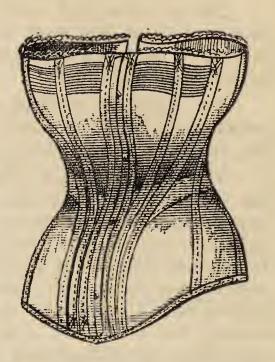

Whalebone Corset, "Martha," Spoon Busk,

OR

Watch Spring Steel Corset, not corded,

Spoon Busk.

Whalebone Corset, "Elise," Straight Busk,

OR

Watch Spring Steel Corset, corded,

Straight Busk.

These Corsets permit the free movement of the body.

The Watch-spring Steels are *suspended*, not fixed, as in the ordinary Corset, which, whether made with whalebone or steel, easily breaks when tightly laced.

The Patent Sliding Watch-spring Steels yield to every movement of the body, whether in bending, sitting, etc., without penetrating the material of the Corset.

For washing, the buttons on which the springs slide can be removed, and the springs withdrawn, and the Corset, when washed, can be readjusted with the greatest ease.

The latest improvement to this Corset is the addition of a Belt, which is fashioned in the shape of a well-formed waist, strengthening the Corset and imparting gracefulness to the figure.

UNDERCLOTHING—continued.

All Corsets are kept in sizes from 19 in. to 30 in.

INSTRUCTIONS FOR MEASUREMENT OF CORSETS.

(Separate Forms are supplied for filling in.)

in.	a. Span round waist.
in.	b. Height from waist to under the arm.
in.	c. Length at hips, from the waist downwards.
in.	d. Height at back, from the waist upwards.
in.	e. Span round chest and back (as in measuring for a dress).
in.	f. Span round base of corset.
in.	g. Depth in front.
in.	h. Height in front from the waist upwards.

These measurements should not be taken over the dress, and should be stated in inches.

When an exceptional shape is required, a corset which has been worn should be sent as pattern, and any alteration desired should be indicated.

CAUTION.—The public are earnestly warned against Counterfeits

of the Jaeger Woollen Corsets.

All sorts of sophistications are practised, from wholesale adulteration, to coating the interior side of the Corset with a gummy fluid, which imparts to the material an unnatural stiffness, and, of course, a corresponding imperviousness. This insanitary treatment may be detected by the shiny appearance and harsher feel of the material, which, if rubbed, gives off a powdery dust.

No Jaeger Woollen Corsets are genuine, unless they bear on the

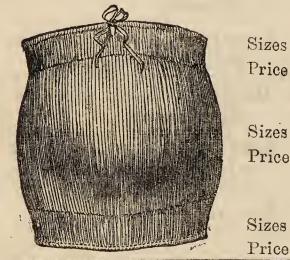

box the Company's Trade Mark.

Dr. Jaeger's Sanitary Woollen System—— SUNDRIES.

STOMACHIC BANDAGES.

The best practical evidence of the value of such bandages is that in the campaign of 1870 every soldier in the German Army was supplied with one. The Jaeger Woollen Stomachic Bandage should be at hand in every household for immediate application in cases of diarrhæa and bowel complaint, which it promptly remedies by the additional warmth imparted to the region which it covers. Persons who are at all subject to these disturbances will find great benefit from wearing the Bandages continuously.

'UNIVERSAL' ABDOMINAL BELT.

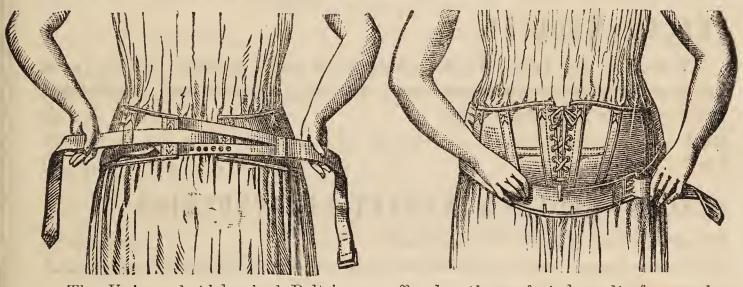

(TEUFEL'S PATENT.)

(SUPPORT WITHOUT PRESSURE.)

For Pregnancy, Corpulence, and all Abdominal Complaints.

Or the multitude of other Belts hitherto devised none has so succeeded in satisfying the requirements of Medical Men and their Patients. Owing to defective shapes and other faults Belts sit badly, draw together, and work up, doing more harm than good, and completely failing of their purpose.

As the result of many years' experience, the Patentee brought out in 1869 an Abdominal Belt, which, for its original and excellent construction, was recognised as the best and most practical of its kind then existing. The Patentee, however, has since incessantly striven to improve the Belt in directions suggested by the Medical Profession and by numerous Patients.

The Universal Abdominal Belt is now offered as the perfected result of so much thought and labour. In its seven different forms it will be found to apply to every phase of the conditions cited in the above heading. The peculiar advantages of its patented construction are, that it lifts and supports from below, without pressure, and may be extended or taken in at pleasure, but never gets out of place when properly put on. As it is very important that the Belt should be put on correctly, careful attention is requested to the instructions enclosed in the box in which each Belt is packed.

A separate illustrated catalogue, showing the different forms of the Belt, with explanations of their uses, and indicating how the measurement should be taken, will be forwarded immediately upon application.

These Belts are especially recommended as manufactured in accordance with Dr. Jaeger's Sanitary Woollen System:—

STOCKING SUSPENDER.

Stocking Suspenders are recognised to be a great improvement on the old-fashioned garter, by which the leg is compressed so as to interfere with the circulation of the blood. The Woollen Suspenders and Clasps are of ingenious and convenient construction, and are pervious to heat and perspiration, the textile material being of pure undyed animal wool. These are fitted up with the well-known Hoven's Clip.

In ordering Suspenders with band, waist measurements should be given.

TOWELS. Bath Towels, 5/3 each; Hand Towels, 2/9.

THE

PLATINUM "ODORICIDE" (Regd.)

Destroys all Odours of every Description.

Is therefore invaluable in Dining Rooms, Smoking Rooms, Sick Rooms, and wherever the atmosphere requires deodorizing.

First qu	iality,	White Glass	•	•		•	•	10/6
"	,,	Green Glass	•		•			11/6
Second	,,	White Glass	•		•	•	•	7/6

THE "Odoricide" possesses the remarkable faculty of passing in a short space of time the entire atmosphere of a room through the Platinum Spiral which surrounds its wick, and which glows without flame for many hours, consuming in the process all unwholesome odours and impurities which the atmosphere may contain.

Dr. JAEGER discovered that when the evaporating power of the "Odoricide" is employed for the sustained dispersal in the surrounding air of a deodorizing agent (Rimmel's Toilet Vinegar is recommended), its value is greatly enhanced.

DIRECTIONS FOR USE.

The spirits of wine must have a strength of 168 degrees "Sykes" (or the platinum spiral will not properly glow) and must be perfectly free from fusel oil which is otherwise diffused in the atmosphere of the room. Many disappointments

have been caused by using too weak spirit.

Before lighting a wick for the first time, it should be well suffused with spirit. The flame should burn two or three minutes, in order to draw up sufficient spirit into the wick to keep the platinum glowing. When the flame has burned sufficiently long, the glass cover should be popped quickly on and off again, extinguishing the flame, when the platinum spiral will continue to glow until the supply of spirit is consumed. The "Odoricide" should be protected from draught.

To extinguish the glow, the glass cover should be replaced, and should be left until the "Odoricide" is again required, as otherwise the spirit will evaporate.

The "Odoricide" should not be allowed to continue to glow until all the spirit is consumed, or the wick will char; if this happens, the charred portion must be removed.

A few drops of Eau de Cologne or other perfume added to the spirit will be continuously imparted to the atmosphere. By adding camphor, turpentine or some other volatile deodorizer, the deodorizing effect of the "Odoricide" is greatly enhanced. The usual proportion of deodorizer to one filling of the "Odoricide" is 15 to 20 drops, but varies according to the size of the room and the number of persons in it. For very large rooms or theatres two or more are required.

N.B.—J. Travers and Sons' plain Spirits of Wine, at 4/6 per large bottle, may be obtained of W.C. Clark, 4, Lower Belgrave Street, London, S.W.; and of their other Wine and Spirit Agents in Town and Country.

ON THE EFFECTIVE WASHING

DR. JAEGER'S

SANITARY

WOOLLENS

SUAVITER IN MODO.

FORTITER IN RE.

The Jaeger "SUAVITER" Washing Powder.

To derive the full benefit and comfort from wearing the Pure Wool Jaeger Clothing, it must, when dirty, be cleansed in a rational manner, as explained in the following remarks:—

Wool is a cellular structure, with a horny shell, filled with an oily substance. In proportion as this structure is injured by violent methods of washing, its beneficial action as covering material for the wearer's skin becomes impaired. Some deterioration in hygienic quality must inevitably take place each time that the fabric is washed, but this may, by proper treatment, be reduced to a minimum. To this end the process of washing must be gentle, but rapid and effective.

The Jaeger Company have taken considerable pains to find a harmless but efficient cleansing agent for woollens, and they now offer, as combining these important qualifications, their

"SUAVITER" WASHING POWDER.

The Company's own experience of the excellent characteristics of "Suaviter" is confirmed by the favourable testimonials received from others who have tried it, and they confidently recommend its use as permitting frequent washing of the pure woollen materials, without injury to the hygienical qualities.

"Suaviter" is economical because, being very powerful, it is used in a greatly diluted form, so that a little goes a long way. It has no odour, is not sticky, and can be rinsed out with the greatest ease. It is therefore peculiarly suitable for the Jaeger Clothing, and is the only means by which the Jaeger Camel Hair Rugs and Blankets can be washed to perfection.

"Suaviter" cleanses not only woollens, but cotton, linen, sponges, brushes, etc., etc., rapidly removing grease, and is therefore indispensable in every household. It is particularly valuable to families who are averse to having their garments washed in a crowd with others, and who prefer superintending the work at home.

INSTRUCTIONS FOR WASHING WITH "SUAVITER."

- N.B.—Never begin to wash Woollens unless they can be finished right off.

 If Woollens are kept in soak or damp all night they will inevitably shrink.
- 1. Dissolve thoroughly in a little boiling water 1 oz. (not more) of "SUAVITER," then mix with 3 gallons suds, made with $1\frac{1}{2}$ oz. best plain soap, and stir well. Immerse clothes at temperature as hot as the hands can bear, do not leave to soak, but work clothes about, and press through hands, not rubbing. Pass through wringer, and rince at least twice in clean warm water, passing them again through wringer. Stretch to shape and hang up to dry.
- 2. Iron when half dry, and stretch to proper size while steaming under the iron. Note that if iron be too hot it will singe, if too cool it will tend to shrink the wool. After ironing, dry completely in open air or before the fire.
- 3. To render white, pass clothes through slightly blued water, or expose, when dry, to sulphurous fumes.

Price per Tin (about 14 oz.) "SUAVITER" Powder 9d., post free 1s.

N.B.—Sample Tins supplied at 1d. each.

DO NOT DESPAIR OF

WASHING WOOLLENS WELL

BEFORE HAVING TRIED

The JAEGER "SUAVITER" WASHING POWDER.

AN ALTERNATIVE METHOD WITH AMMONIA SOAP.

The clothes should be placed to soak in water (at about 100° Fahrenheit) in which soap has been boiled up.

To about every six gallons of water (or sufficient for washing six large garments and several smaller articles) add three table-spoonsful of liquid Ammonia, which removes grease deposited by perspiration.

Any good Soap may be used, but AMMONIA SOAP, which combines Ammonia in the proper proportion, is recommended. It is supplied by the Company at 1/3 per 2 lb. tin. The proportion to be used is $\frac{3}{4}$ lb. to 6 gallons of water.

Other directions as above.

Note.—Experience has shown that the shrinking of Woollen Clothing is influenced by the nature of the perspiration given off by the wearer; especially when the clothing is first adopted, and its salutary effect causes the skin to give off the expections previously repressed and retained.

JAECER SANITARY CLOTHING
BEDDING ME TAILORING.

BEWARE OF IMITATIONS.

N.B.—The Jaeger Natural Wool, Stockinet Underclothing, originated under Dr. JAEGER'S directions at Stuttgart, could, until lately, only be made in Germany, as British Manufacturers had not the proper machinery. So soon as leading firms in this country could be induced to provide the necessary plant, and procure the proper yarn, for manufacturing the JAEGER Underclothing, it was arranged (with the consent of the Original Makers) for it to be produced, under strict supervision as to purity of material and other high qualities, in British factories by British workpeople.
