Yaur feet feel lighter the whale day long I
New crown neolite Soles are actually 25\% lightermake the whole shoe lighter, more comfortable!

## Imagine . . . soles as fiexible as a shadow

Your feet will feel the difference... a grand new sense of comfort! So whenever you buy shoes or have shoes re-soled look for the Crown emblem and the neolite name. Step on it!

ANN BLYTH, CO-STARRED IN MGM'S "ALLTHE BROTHERS WERE VALIANT"

## ANN BLYYIF agrees.. Shéll know how much you love her if you give her a TANE!

Unusual modern eheat in Seafoam mahogany with roomy drawer in base. Model +2853 . $\$ 795^{*}$
Also in blond oak, $\$ 2852$; Cordovan mahogany, $\$ 2856$. Lane Table, +240 . Chest price,

ALane Cedar Chest is the gift that tells a girl-more tenderly than words-how much you care for her.
It's a beautifully sentimental way of saying that you share all her happiest expectations . . . for the future . . . and the home she'll someday have.
Yet in a very practical way, a Lane helps her plan for that home. Magically it gathers other gifts-a heavenly collec-
tion of blankets, quilts, fine bed and table linens, delicate lingerie-gitts that every bride dreams of owning.

And what wonderful storage space a Lane offers-especially for woolens! It keeps precious things sweet-smelling and fresh-safe from moths and dust-as no other storage method can.

Besides that, just one garment saved from mothscan pay for a handsome Lane!

Lane is ihe ONIY pressure-tested, aromatight eedar chest. Msde of $3 / 4$-inch red cedar in accordance with U.S. Government recommendations, with a mothprotection guarantee underwritten by one of the world's largest insurance companies, upon proper application. Helpful hints for storing are in each chest. The Lane Company, Inc., Dept. L , Altavista, Va. In Canada: Knechtels, Ltd., Hanover, Ont.

## CONMAR, makers of the guaranteed zipper, suggest

## 4 WAYS TO KEEP OUT OF ZIPPER TROUBLE

4BE SURE to close zippers on trousers, skirts or dresses before pressing. There is a good reason for doing this. It prevents the slider from being damaged by the iron. If a zipper tends to stick immediately after a garment has been cleaned or pressed, it's usually because this very simple rule was neglected.

2
SNIP OFF ragged edges. The finest zipper-even a Conmar-can jam on a bit of thread. So why not take the time to go over your wardrobe occasionally and snip off any ragged edges or loose threads that could get caught in the zipper teeth? It may save you precious minutes some time when you're hurrying to go out.

Isn't it a relief to know that you need never get stuck in a nasty zipper jam like this again? The Conmar experts promise that just by taking the four simple precautions on this page, you can avoid most zipper difficulties. And one more thing. Caution the children never to yank or force a zipper. Zippers are like all mechanical devices. They respond better to gentle and considerate treatment.

3NEVER USE pliers or other tools. Zippers should slide easily when you pull them. Of course. you can sometimes help a poor zipper to work better by applying paraffin wax. But a good zipper, particularly a Conmar, shouldn't need it. Conmar zippers, you see, are made to outlast anything they're attached to!

4ALWAYS LOOK at the pull-tab on the zipper before you buy any zippered article. And you know, one way to be sure of getling a dependahle zipper is to look for the name "Conmar." Every Conmar zipper is guaranteed to work perfectly-or we'll repair or replace it! Conmar Products Corp., Newark 1, N. J.

## SPEAKING OF

Single photograph is parlayed whimsically into

The picture at left was one of the mass which flooded the W.G.M publieity office charged with luring the pullic to see the new movie Mograbo. It seemed like a suitably African pose for the stars of the movie: Clark Gable (looking no older than he did the first time he played the role, in 1932, when the film was
called Red Dust), Ava Gardner, Grace Kelly. A whimsical press apent deciled to have some innocent fun by subatituting the jungle and the veld for the picture's unexciting studio background. He clipped out the three figures and pasted them up on other pictures more redolent with local color, which had

SAME SFAllS STAND WATCH WHTH THE SAME GeN

## PICTURES

a jungle phantasmagoria
been taken by a second camera crew on safari through east Africa. The result shown below (with some variations on the right) was to put the remarkably dead-pan actors-whose actual contact with local wild life had mostly been confined to the Nairobi game reserveinto some remarkably terrifyinq predicaments.

## A GOOD MOVIES KICKS ARE . . .

. . . GRACE KELLY IN PANTHER PIT
Mogambo is one great entertaining grab bag of oldfashioned thrills. When an English anthropologist's stuffy wife, played impressively by young Grace Kelly, goes out walking alone, it isn't long before she has fallen into a panther trap and is crouching in helpless terror a few feet beneath a fierce beast.

...CLARK GABLE AS SPEAR TARCET
Besides killing the panther, catching a family of gorillas and maintaining a semblance of order between the two beautiful women who are in love with him, the white hunter-hero of the movie has to prove his virility by standing against a wall and letting tribesmen throw spears at him from 50 feet.

## ALL 'THIS AND AVA TOO

## FTHIS is the way to saw wood! <br> NEW Power Tool for Easy Woodeufting

New gasoline-powered McCulloch chain saw cuts firewood, pulpwood, saw logs, fence posts, poles, ties, props, beams. It fells and limbs trees. It bucks logs and prunes branches. It rips logs into construction timber. It clears land and maintains orchards. In any kind of woodcutting, this new, professional-quality chain saw will save its purchase price in less than a year, often in less than a month!

ACCURATE - LOW-PRICE • SILENT - NO WINDING

Proof of Telechron clock superiority is the fact that nearly all electric power plants -in regulating the limekeeping accouacy of eloctricity to your home-use Telechron master clocks.
Telechron electric clocks start at $3^{98 *}$

[^0]

GARDNER GAMUT of temperament is extended in Mogambo to include suavity, shown here as she pours drinks for her lover and his new girl friend.

A GARDNER GAMBIT of rather ancient vintage is tried out on the hero, who at this stage of the plot is more interestel in keeping his gan elean.

GARDNER IN HER GLORY sprawls during a drinking bout in the arms of her hero, as he learns the hard way that a girl of her type is the type for him.

## LETTERS TO THE EDITORS

## FAULKNER

Sirs:
Robert Coughan's first inetalment ahout Faulkner ("The Private World of Walliam Faulkner," Life, Sept. 28) gets A-plus in my grade booh.

Georce E. Simmons
Tulane University New Orleans, La.

## Sirs:

Why people sucb as Faulkner must be continually upheld by literate people is beyond me. It would be refresh. ing and unique to read an article ahout a normal, well-adjusted individual for a change...

Llulan Mueleer
Detroit, Mich.
Sirs:
What purpose is served by the revelation of Faulkoer's peraonal life, except perhaps the enormous pleasure Mr. Coughlan must take in rubbing a great man's face in the mul?

Newport, R.I.
Sirs:
The piece on William Faulkner was really excellent. . . .

John Switatskt
Chicago, Ill.
Sirs:
Your story on Bill Faulhuer is of great interest and very well done. Several years apo when I heard things were going hard with him I wrote him a letter ashing if he would care to come back to the movie studios. He tlid and the story editor of Warner Brothers brought him back to the eoast, where he had become a legend. I had known him for some time, but 1 don't think ausone ever dares call himself Bill's friend; but I ilid met some apecial ard. mission into his worlal. I was part of a car pool that picherl him up every day outside his hotel and he rode every day with four or five movie writers who were too seared to talh to him, It was at the end of one of these rides that one of the sercenuriters said to me, "He must like you Steve, he said grod narning' to you."
. Bill worked very hard at the studios and tonk great pleasure in his wash. While most writera turned in 10 to 20 puges a weet, Bill would po off and hooch out a 100 or 200 pages in two or three days. It was often wild and daring material.

...and better for your health!

Here are the amazing facts, discovered by independent researeh and checked by throat specialists:

When tested against the smoke front eigarettes and cigars, Kaywoodie smoke contained 3 to 4 times less harmful nicotine and acid-tars!

When tested against the smoke from 34 other pipe brands, Kaywoodie smoke was the coolest of all . . . contained far less acid-tars, resins and earbon partieles!

When smokers switeh to Kaywoodie, throat rawness, huskiness, and often coughing are eliminated.

Next time you buy a pipe-or give one as a gift-be sure that you make it a Kaywoodie!

# ... you can sleep at my house, Tommy! 

(Based on an actual case from Company File \#C.52-42)

How I got through that night I'll never know.
But I did find out how kind your neighbors can be. The Underhills took Tommy and me; the Abbotts, Barbara and her mother.

I didn't sleep, of course. How could I! First of all, there was the reaction from all the excitement that terrible moment when it looked as if Tommy was trapped in his room.

Later my thoughts turned to my insurance. After so many lucky years without a fire I had begun to think I was immune. The premiums on the $\$ 4,000$ policy covering my household belongings seemed like a waste of money. Now, with all the destruction vividly in my mind, I realized that $\$ 4,000$ wouldn't be half enough. The fire was going to cost me at least $\$ 5,000$ over and above my insurance to replace our furnishings alone.

This is a true case. All too true!
We bring it to you because so many people-both home-owners and renters - are, like Tommy's father, under-insured.
If you're one of them-and the chances are 7 out of 10 you aredo something about it, won't you ... at once.
What to do: write for a free lnventory Booklet that'll help you figure the present value of your personal belongings. But don't fail to see your Hartford Fire 1nsurance Company Agent; or your insurance broker. If you don't know how to get in touch with your Hartford Agent, write us for his name
and address - now.

## LETTERS TO THE EDITORS

One of the jobs Bill had in Holly. wood was to write a movie based on a novel of mine called Stallion Road. I doubt if he ever read much of it. It was a California novel, and he didn't like California, but he did find out about the names of the characters and some of the plot, and he sat down and wrote an original Faulkner story in play form. It was a wonderful, daffy, powerful thing, but no one dared make it. Meanwhile Bill, very lonely for bome, had bought himself a mare and was raising a horse in Hollywood. When she was in foal he had a problem, One day leaving the studio, I found Bill sitting in his ear, the very pregnant mare in a trailer attached to the ear. I asked him where he was going, and be said, home to Oxford. 'I don't want any mare of mine to throw a foal in California." And he was off for home.

Stephen Longstreet
Beverly Hills, Calif.
STRANGE SHAPES
Sirs:
What do you mean "strange shapes" (Speaking of Pietures, Life, Sept. 28)? Fifty years ago, long before belly tanks and the present eraze for "styling," a few intrepid designers here and abroad had already evolved similar racing cars. Consider the accomplishments of Emil Mors, French, 1903, and Walter Baker, American, 1904.

Peter Helck
Boston Corners, N.Y.

- Above is 'Baker's electrie Torpedo, the fastest car in America in 1904 when it burned up traeks at Ormond Beach, Fla. at 104 mph . It was equipped with a 40 -cell power plant but 20 were the most ever connected up, since no one dared throttle the car to its full capae-ity.-ED.

## FATHER DIVINE

## Sirs:

There have only been two times that I have found something in Life which made me so mad 1 eould write a letter like this. The first was the article on the Prophet Jones ("Prophet's Minh," Life, March 30). The second was the article on Prephet Jones and Father Divine ("A Prophet and a Divine Meet," Life, Sept. 28).

Think of the hungry mouths that could be fed from the value of Joner's 812-diamond bracelet alone! True Christians do not care about luxurious living for themselven but use all donations for worthy causes.

Frances Kiedson
Kermit, Texas
Sirs:
With no wish to offend the followers of either, Father Divine or Prophet Jones, I must still thank Life for its funniest story in years.
It is obvious that eacb "divinity" regards the other az a real square mes. siah. The whole comic business only beeomes less so when one consider

FOR THE TUMMY

THIS YEAR, there are more washable dresses on the market than ever before in fashion history. Even the prettiest party dresses, like this rhinestone-studded cotton satin print, can be wasbed with ease if you follow the instructions on this page and use plenty of good Rinso. Almost any fabric made today is at home in Rinso.

## How to wash and iron a dress the easy way - with Rinso

by Eleanor B. Cook, former Ansociote Editor of McGall's

## Use Rinso with SOLIUM and follow these helpful hints

You can save plenty of money on laundry bills if you know how to wash and iron your own dresses. And it's so simple. Just follow the instructions on this page. I personally feel that one of the most important of these instructions is "use plenty of Rinso." Here's why.

First, Rinso contains a wonderful ingredient called soLuus. Thousands of housewives have noticed that soluas makes their white dresses look whiter than when they were brand new. And print dresses actually look brighter than new. Rinso with soluma is equally effective on sheets, pilloweases and the other items in your wash.

Remember, Rinso costs you less-you usually pay about $20 \%$ less for Rinso soap than for most of the other washday products. Why? Simply because it now costs us less to make Rinso - and we pass this saving on to you.

One more point worth remembering: Rinso is guaranteed to get your wash whiter than new, or your money back plus postage. Guaranteed by Lever Brothers Company, 390 Park Avenue, New York 22, N. Y.

FOR QUICKER, easier drying and ironing, hang dresses to dry on shaped, rustproof hangers. Straighten seams. Ironing dress while still damp saves sprinkling.

ALWAYS iton skitt last. Biasskirts should be ironed diagonally from seam to seam. If dress has hem-to-waist pleats, pin them in place before ironing.

IRON sleeves and collar (if any) first, then do bodice. If dress has rhinestones or sequin trim, iron it on wrong side over a Turkisb towel for extra padding.

SAVE $20 \%$-You usually pay about $20 \%$ less for Rinso soap than for detergents. Lever Brothers Company guarantees Rinso will do a better job on your wash.

## Tempt your dog with red, raw meat

Better for him too-than meat alone! What's the most inviting dinner for a hungry pup? Who says, "A highpriced piece of red, raw ment"? Wrong! He'll go for PARD first. And your money back if he doesn't? Pard's better for him too. For meat alone can't nourish a dog completely. PARD gives your dog all the good meat protein he craves, plus all the vitamins and minerals he needs.

Buy PARD-and watch him go! CHLOROPHYLL" added to combat doggy breath and body odors 1
*Chlorophyllins- 0 derivative of Chlorophyll

## LAKE CHAMPLAIN

Sira:
As an ex-Navy radarman I enjoyed your picture of the Combat Information Center on the U.S.S. Lohe Champlain ("Great Brain Guides Carrier') Battles," Life, Sept. 28), but it left me bewildered to see such a confidentisl setup published so openly.
During my four Navy years I was constantly reminded that CIC was such a highly restricted place that all nnauthorized personnel were forbidden to enter.

Wiluam E. Polcsa
Cambridge, Masa.

- Life disclosed no classified details. To preserve the seerecy of the CIC room, Champlain CIC nfficers spent a half day concealing classified instruments and posting unrevealing markings on the status and plot boards. After scrutiny by security officers in Washingtnn the picture was released as taken.-ED.

## REAL ANDRÉ

Sirs:
Your article, "The Real Andre" (Life, Sept. 28), was fine. Did you know that the three gents who turned bim in were permanently honored by baving countien in northwestern Ohio named for them: Williams, Paulding and Van Wart-somehow corrupted in the spelling to Van Wert.

New York, N.Y.

OHIO COUNTES
Sirs:
You call Andrés captors "ruffiana . demanding money." Although Irving Bacheller in In the Days of Poor Richard calle them "ragged, profane, abominable cattle thieves," ray boy. hood Barnes' Brief Hisory says: "These incomparable patriots declared that they would not let him (André) go for 10,000 guineas. Congresa voted to each of them a silver medal and a pension for life."
One of these three, David Williams, was my granduncle nix generations back.
Listen to Don McNeills Breokfost Club, ABC rodio, weokdoy morninge.

NEW DRY-TYPE FOOD! Never before one like it...with FlavOI CANT ReSISt/

It took meat men-it took Swift-to make a dry dog food taste this good! Extra meat fat added. Chlorophyll too. Also Aureomycin
to keep your dog "on feed"]

## From STUTZ Bearcat

## To BUICK Wildeat

Quite a contrast in their contours - but they're both distinguished for their design, and their AC-sparked performance:

AC spark plugs provide superior performance for today's motor cars because they have today's best spark plug insulators - patented CORALOX.
CORALOX resists, to a greater degree than any previous insulator, the formation of oxide and carbon deposits, which cause
"shorting" and intermittent missing -

- robbing engines of as much as 10\% OF THEIR POWER
- WASting gasoline by as much as ONE GALION IN TEN
No matter what make or model car you drive - for the "payoff" in power, performance and economy, get a new set of ACs - the one and only spark plug with patented CORALOX insulator.

## Double-Rich Latherin

 Double-Quick Time!
## LETTERS TO THE EDITORS

$\mathrm{X}, 1866$, Williams himself testified he had more than easual interest in a bribe. He asked for Andrê's horse, bridle, wateh and 100 guineas and was prevented from having them only by the cry, "No, by God!" from one of the other captors.-ED.

## NATION'S ATTIC

Sirs:
1 think the Smithsonian is deluded believing it has the steering wheel of the Maine ("The Nation's Atric," LIFE, Sept. 28). Hanging on a wall of the Havana Yacht Cluh is a ship's wheel identified as that of the Maine. It is possible that the Cubans grabbed the refic first since the yacht club is located on the harbor where the disaster oecurred.
W. M. Jenkins Jr

Kingston, Pa.

- The Navy's Bureau of Ships reports that the Maine had two steering stations and a number of spare wheels. A heavy-duty wheel is on display in the Smithsonian. The primary wheel hangs in the Havana Yacht Club and another was a 100 th birthday present from West Point to Annapolis in 1945 (above).-ED.

## EDITORIAL

Sirs:
Thank you for restoring my faith in the Ameriean politician. Your editorial on morals in politics is inspiring ("Should U.S. Policy Be Moral?"' Lafe, Sept. 28). I was beginning to wonder if anyone in Washington cared about moral principles in goverament.
Chicago, III.
Viagexa Boddy

## Sirs:

This is one of the best editorials 1 have read in Lafe. But you leave a big question in my mind and in the minds of others: what should be the moral standard of U.S. policy? What is the criterion of absolute right and wrong? You imply that it is contained in the teachings of Christianity. Do you mean the great moral standard of the Bible? Without a standard to judge by are we not left merely to writing highsounding editorials on moral policy about what we or someone else thinks is right or wrong?

Washington, D.C.
Buaney Dyek

- Yes, the teachings of the Bible are our insight into the eternal standards of right and wrong.-ED.

LUCILLE BALL AND FAMILY ON "LIFE" COVER AND LUCY'S ARM AS SHOWN IN FICTIONAL "LIFE"

# FICTIONAL ASPECTS OF 

The plot of the I Love Lucy TV show a couple of weeks ago had to do with Lucy's chagrin at having only her arm shown in a Life story. The central prop of the show was a copy of what looked like Life, which contained pictures dealing exclusively with Ricky Ricardo and the baby. To forestall puzzled inquiries as to whether we have ever published such a story we hasten to assure our readers that the story, like the rest of the show, was pure fiction. Of course Lucille Ball, all of her, has appeared in Life on several occasions, once with husband and children (Life, April 6).

There is a considerable body of fiction of one sort or another involving Life and although not all of it is complimentary we are in general pleased at what we consider tributes to the vitality of the magazine. The male lead in the 1948 Broadway hit, Goodbye, My Fancy, was supposed to be one of our photographers. There was a lady in The Philadelphia Story who took pictures and was widely thought to be patterned after a lady member of our staff.

In several movies Life photographers have played the parts of LiFE photographers and we've had attention from mystery novelists
too. And of course cartoonists have poked fun at us regularly, On occasion Lafe stories have played a part in the creation of fiction. Christopher Morley once helped us do a story on a typical white collar girl (Life, March 25, 1940) based on Morley's novel, Kitty Foyle. In making the movie later, Director Sam Wood followed our picture layout closely, M-G-M is now making a movic called Take the High Ground which is based on Mark Kauffman's memorable story on Marine boot training (Lafe, Oct. 8, 1951). And in 1939 John Steinbeck invited us along as he spent some time living with migrant workers in California, with the result that Photog. rapher Horace Bristol was able to do a picture story based on the living materials used later by Steinbeck in The Grapes of Wrath.

We were reminded of another pleasant connection with literature just last week when an Associated Press dispatch from Stockholm revealed that Ernest Hemingway, whose The Old Man and the Sea appeared in Life last year, and Sir Winston Churchill, whose sixth volume of World War II memoirs starts next week, were considered the strongest candidates for the Nobel Prize for Literature.

CHILDREN AT BOBBY GREENLEASE'S SCHOOL, GATHERED TO KNEEL AND PRAY FOR HIS RELEASE, ARE PHOTOGRAPHED JUST AS THEY HEAR THAT HE IS DEAD

# THE NEWS THAT SHOCKED A NATION 

The children at the French Institute of Notre Dame de Sion had assembled to pray for the safe return of their hidnapecl classmate, Bobly Greenlease. When the dreadful news came in they nere told that Bobly was dead. And the look that erept over their faces mirrored the shock and horror that millions across the nation felt at hearing of the fate of the friendly little Kansas City 6-year-old.

Though the fact of the kidnaping had been reported, the country had known very little about it-not much more than how the crime had been accomplished. A neatly dressed red-haired woman had gone to the school and said she was Bobby's aunt sent to take him home to his sick mother. The school relcased Bobby to her. Then he and his "aunt" disappeared.

Bubby's father, Robert C. Greenlease, a 71 -year-old millionaire, was successful in keeping both the police and the press out of the case as he bargained for the return of the child of his old age. All Greenlease himself knew about the kidnaping was what a man calling repeatedly on the
telephone would tell him-that he had Bolby, and that he was safe but hidion anay. For the child's releave, the man demanded 8600,000 , three times as much as any kidnaper had ever dared ask in ransom.
Twice Bebby's 39 -year-old mother came to the phone herself and bepyed the kidnaper to prove that her boy was all right by asking him some duestions" "the name of the driver of our car in Europe last summer" and "what did you build in your playroom the last night you were home." (It was an Eiffel Tower of play blocks.) The kidnaper said he would ash, but called bach an hour later without the answers. Bobby, he explained cunningly, would not "cooperate."
Bobhy couldn't very well. But neither his mother nor his father had any way of knowing this until it was tragically too late. Then they and all the country at last learned the complicated and fantastic details-told on the following pages-ahout the dissolute hidnapers who had committed one of the foulest murders since the death of young Charles Lindbergh.

# FROM A MILITARY ACADEMY TO 

At Missouri's swank Kemper Military School the Greenlease hilnaping case had inception 20 years ago when Carl Hall (abore) met Paul Greenlease.

2 Robert C. Greenlease, Paul's stepfather, was a wealthy who liked money and said prophetically, "My hands are as white as lilies and you'll never see a callous on them."

3 Hall inherited this Pleasanton, Kan. house from his Jather as part of a $\$ 200,000$ estate. Squandering the estate, he tried robbery, was convicled and paroled. Then he remembered the Greenlease fortune from his K.M.S. days.

7 Bobby was sent to fashionable French Institute of Notre Dame de Sion. Sept. 28 Bonnie Heady, who had met Hall and become his mistress, came to take Bobby home. A nun new to the school let Bobby go.

8 Bonnie brought Bobby to taxi of Willard Creech. 0 "He was such a sweet child," said Bonnie later. "He came so nice. He talked about getting a dog and ice cream." But Bobby was nervous, she said.

9 At this parking lot Bonnie turned Bobby over to Hall, who was waiting in a red car. He told her to go buy him some shirts while he visited with boy, then got into the car with Bobby and drove away.

12Arthur Eisenhower, brother of the President and executive vice president of the Commerce Trust Co., got the ransom money together $-40,000$ pieces in $\$ 10$ and $\$ 20$ bills as specified by Hall.

13 At the Greenlease home Honey Boy, Bobby's French poodle, wandered disconsolately while the family was trying to buy his young master back. Two unsuccessful attempts were made to drop the
$\$ 600,000$ in a duffel bag. On the first try, instructions were confused. The second time the money was actually dropped but then had to be picked up again when Hall called and said he didn't get it.

## KIDNAP HIDEOUT IN ST. LOUIS

4 Another who came into case was Bonnie Healy, for 20 years respected wife of a St. Joseph livestock man (abore). But then she started drinling.

5 The Healys lived in this house in St. Joseph. Bonnie got it last year when she divorced her husband. She rigged it with a $\$ 5,000$ combination bar and recreation room, soon had turned into an alcoholic and a prostitute.

6 visit Greenlease Jr. is shown here with his father on a ished everything on his onty son. Bobby's kiddie car was a battery-powered jeep especially scaled down to size.

This was the place where, according to the story he told later, Hall found Bobby Greentease dead-the cellar of Bonnie Heady's white bungalow in St. Joseph. Hall claimed he turned Bobby over to confederate in Kansas City, drove to St. Joseph witb Bonnie and found Bobby's body with a bullet hole in his head.

11 Intermediaries for Greenlease in the ransom negotiations which Hall conducted over the telephone were Norbert $O^{\prime}$ Neill (lefi) and Robert Ledterman, who here stands at the sereen door of the Greenlease house and wards off newspaper reporters' questions. Hall made a total of 10 telephone calls to the house.

1 On a Highway 40 bridge, east of Kansas City O'Neill and Ledterman dropped the money at midnight. Hall, who watched with Bonnie from a car, scooped up the bag and headed for St. Louis.

15 After an all-night drive, Hall and Bonnie wound up in a dingy apartment in St. Louis. They had been drinking wildly and quarreling. Fed up with Bonnie, he gave her $\$ 2,000$ and dumped her here.

16 Later Hall picked out something a little fancier for himself, a $\$ 185$-a-month apartment in the Congress Hotel's ritzy Town House annex. He checked in carrying ransom money in two suitcases.

18
Key figure in case was Cab Driver Hager. He picked up Hall who said he "wanted a woman." Hager thought Hall was just on a spree.

19 Prostitute Sandra O'Day was the girl Hager found for Hall. When Hager came back next morning, Hall threw him several thousand dollars.

20 Police Lieut. Shoulders, after Hager's report, checked Hall's room, found $\$ 293,992$. Hall told him, "T'm one of those in the kidnaping."

21 Hall's possessions when captured included two foot lockers holding ransom money, new shirts, new hat, whisky, .38-caliber murder gun.

92 Bonnie and Hall sit together in police station, Bonnic holding her lover's hand. She claimed she did not know about kidnaping, had stolen Bobby because Hall told ber he was his son by a former
marriage. Police, finding her fingerprints on ransom notes, were suspicious of denial-and of Hall's story he had not killed Bobby but found the gun by his body. They were charged with kidnaping, murder.

23 In back of Bonnie's bungalow, police opened grave, which Hall had newly planted with flowers, and found Bobby in blue plastic bag. Police draped ropes over furniture to keep off curiosity seekers.

24Bobly's dentist, Dr. Hubert Evversull, was called to make positive identification from the teeth of body which was already badly decomposed.

25 New name in the case was exconviet Thomas J. Marsh who Hall said killed Bobby. Police doubt ed story but started search for Marsh.

96 Bobby's classmate, Robert Cuddihy, 7 , one of only two boys left in class of girls, looks lonely. "Bobby's now in heaven," he said.

27 This sad sign was posted on the Greenlease Cadillac agency. Remarked one worker in sympathy, "I feel sorry for that poor millionaire."

28 Bowed in anguish, Bobly's mother and father leave the Forest Hills manso20 leum in Kansas City after the burial rites. Their only other child, Virginia, 11 , can be seen partly through the bush in front. The Greenleases' adopted son Paul, whom Hall knew at Kemper, is behind them wearing dark glasses. The

Mass of the Angels was sung in the church where Bobby would soon have taken first Conmmunion. Archbishop Hunkeler of Kansas City delivered the sermon, spoke of the parents' grief: "Your sorrow in not in that the cheery person is gone, but in the agonizing fear that he was in the hands of evil persons.

President Eiscnhower told a recent visitor that he had been having atomic bombs for breakfast. He is said to be spending half his working hours on the atomic problem. He has devoted grave words to it in all his recent public statements. It obviously weighs on his mind, and no wonder: he is the first U.S. President who has had to take serious account of the possibility that this country can be physically destroyed by a foreign attack.

Ever since the Soviet super-bomb explosion of last August, responsible government officials have been trying to get a correct perspective on this danger-not only for their own peace of mind, but in order to convey it correctly to the public. As AEC Chairman Lewis Strauss put it, "a well-posted public is the best assurance of wise decisions." It is clear that big atomic policy decisions are in the making. But a correct perspective on the bomb has yet to be achieved.

Gordon Dean, former AEC chairman, said recently that "within two years she [Russia] will have the capability to virtually destroy us if she moves first. Since we have consistently underestimated the Russians let's call it one year-not two." Last week, within a few hours of each other, Secretary of Defense Wilson guessed it would take the Russians three years to perfect and deliver an H-bomb; Arthur Flemming, the defense mobilizer, and Congressman Sterling Cole, chairman of the Congressional Atomic Energy Committee, said it could happen right now; and Civil Defense Chief Val Peterson, while not saying how soon, fatuously declared that an atomic war is inevitable. The rising Babel finally forced the President to shush his discordant subordinates and to give us his own clear and authoritative summary of the known facts (see box).

From this summary all further public speculation on the subject must now start. It need not end there, however, for certain other facts are known and certain other decisions can be inferred or predicted.

First, it can be inferred, hopefully, that we have heard the end of "Operation Candor." That half-baked phrase, implying that the people have hitherto been deceived, had two versions. One, recommended by J. Robert Oppenheimer, would have disclosed military secrets, such as the size of our atomic stockpile, which Chairman Strauss says would be much more meaningful to Soviet strategists than to American opinion. This Eisenhower has decided against. The other was a plan to scare the people out of their supposed apathy by a presidential speech or series of speeches. But it turned out that no description of the atomic danger, however vivid, can by itself erase the question that best summarizes the public attitude now: so what?

This question can only be answered by one of two courses of action. Accepting Val Peterson's premise, we could arm to the teeth both offensively and defensively: decentralize our cities, put factories underground, build mass bomb shelters, circle every city with antiaircraft batteries and interceptor aircraft, and generally turn ourselves into a garrison state. The other course is to turn our main energies, not into defense, but into an urgent and vigorous diplomacy, backed by enough force to discourage Soviet aggression, and aimed at reducing the power of Communism to harm us or the world. This second course offers the better chance of avoiding war with Russia. The Eisenhower administration has obviously chosen it.
The Pentagon finished its 1954-55 budget proposals last week.

Unlike Secretary Wilson's first budget, which trimmed the Air Force by $\$ 5$ billion, this one is not an economy budget. It asks for $\$ 35$ billion, about the same as this year's; the Air Force is assured of a 127-wing program and may get 137 wings, and the Army and Navy are also happy. The "new Wilson," as Pentagon reporters call him, can no longer be called a "second Secretary of the Treasury."
On the other hand, this budget contains no hint of the equipment that would be needed for an all-out defensive strategy, or garrison state. It asks merely for $\$ 600$ millions of new funds for the "Distant Early Warning" network of radar and communications posts at sea and (with Canada's permission) in Northern Canada, and also includes some new home interceptor wings.
These are the only concessions to Russia's super-bomb. In other respects the budget is based on the same strategic principle that has protected us since 1946, threat of retaliation. Our strategy is offensive rather than defensive; if war comes, we will still try to carry it to the enemy.

## the new starting point

"The Soviets now possess a stockpile of atomie weapons of conventional types and we nust furthermore conelude that the powerful explosion of August 12th last was produeed by a wcapon, or the forerunner of a weapon, of power far in excess of the conventional types.
"We, therefore, eonclude that the Soviets now have the capability of atomic attaek on us, and sueh eapability will increase with the passage of time.
"And now a word as to our own situation. We do not intend to disclose the details of our strength in atomie weapons of any sort, but it is large and increasing steadily. We have in our atomic arsenal a number of kinds of weapons, suited to the speeial needs of the Army, Navy and Air Foree for the specific tasks assigned to caeh service.
"It is my hope, my earnest prayer, that this country will never again be engaged in war. . . ."
-DWIGIIT D. EISENIIOWER

Another major decision is implied rather than stated in this budget. It is not the "new look" budget that weapons experts have been waiting for. It continues to do what we cannot afford to do much longer, namely "pyramid" new weapons techniques, such as guided missiles, atomic submarines and trans-sonic bombers, on top of a full array of oldfashioned weapons, such as the four battleships still maintained by the Navy. But as the President told his press conference, the weapons strategy problem is under continuing study, and it is safe to predict that Radford will come up with a more radical shift of cmphasis, perhaps even before this budget is adopted.

If this shift happens, the role of atomic weapons in our basic strategy will be much more central than it is now. Their very evolution assures this. We now possess, not just a few race-suicide bombs, but "a whole array" of atomic weapons, tactical as well as strategic. In the dread economy of slaughter, the use of these weapons would greatly reduce the estimated $\$ 10,000$ it cost us to inflict each enemy casualty in Korea. Their effectiveness forces them into the center of our military planning. And that done, logic confronts us with the gravest decision of all: if we are going to rely on these weapons, we have got to be prepared to use them.

The military will not use an atomic weapon without the President's specific permission. In Korea the question scarcely arose, since the military did not think it had the right targets for atomic weapons. If he ever faces an occasion for using atomic weapons, the President's lonely and awful decision will be as hard as any Lincoln faced. Even the earlier decision will be a hard one: to tell the world in advance that atomic weapons will be used against aggression in any war, large or small, where they are militarily useful. But we do not think the President has much choice.

For the most fundamental decision of all has already been made, both by the government and the people. That is to seek all means of avoiding war except funk. This places the primary burden of survival in the atomic age on the vigorous foreign policy, of which our atomic weapons are merely an arm. Only the right foreign policy can bring us to the day when freedom is strong enough to control and forswear these weapons. It is therefore our foreign policy, and not the atom itself, that needs public attention, eriticism and support.

## SLAUGHTERHOUSE FUGITIVES IN A FRONT YARD RODEO

When someone left a gate open at the Port City Paeking Co. in Houston, a frisky Brahman yearling on his way to the slaughterhouse stuck his nose out and decided to take a walk. Twenty-nine others followed. All afternoon and evening, and into the next morning, they gamboled down the Houston streets-one of them reached a point three miles from the
stockyards-messed up suburban yards and gardens, splintered fenees, broke a few windows. But no great damage was done, and the eitizens had a good show while it lasted. Those living at 446 Wheeler Avenue (entore) had the unexpeeted pleasure of secing a rodeo performed for free in their own yard as two stockyard cowboys reped two of the fugitives.

CONTRAST IN MOSCOW juxtaposes end of old street against tall new apart-
ment. Boys were surprised to find TY aerials (left, near chimney) in slum area.

SLOGAN FOR FARMERS at collective near Kiev is a sign urging "forward to Communism." Emond (foreground) stares at it, and farm official stares back.

FRIENDS IN LENINGRAD were Berger's guide Olga and companion Sasha, assigned to him by Young Communist League. They stand beside bust of Apollo.

## COLLEGE REPORTERS INTERVIEW THE U.S.S.R.

They find borsch, friends . . . but also arguments

dANIEL BERGER

In a year when more Americans than usual were seeing Moscow, the latest adventurers came bome last week with a rare pictorial record and a youthful appraisal of some things Russian. Two young men, 21-year-old Daniel Berger of Oberlin College and 25-year-old Mark Emond of Colorado University, went as editors of college newspapers, inspired by the earlier trip of several small town publishers (Lafe, April 20). Seeking visas in June, along with Zander Hollander of the University of Michigan, they got them in September, flew to Russia and toured Moscow and Kiev (Berger also went to Leningrad) for 15 days under a Soviet tourist agency package deal of 819 a day. They moved freely, or seemed to. But Berger had a feeling that somehow he never did get to places he asked to see, a steel plant for example. Though he found cops numerous, nobody did much to restrict his picture making. At the Moscow ballet an English teacher said hello and hospitably took them to a nightelub where he paid half of a $\$ 12.50$ bill for champagne. In Leningrad, Berger was invited to see television and, though the screen was tiny, he was astonished at the excellence of the programs-a Balzac novel dramatized and a melodrama on the soul-searching of a Sovict official. Invited to dinner at a collective farm near Kiev, they feasted on borsch, canned crabmeat, fried pork and eggs, curds and honey, washed down with toasts to peace in vodka, wine, beer and milh.

The travelers encountered no hostility, but university students, obviously primed, proved eager to debate the iniquities of the U.S. The arguments often ended with a Russian triumphantly shouting, "But what ahout Paul Robeson?" In turn the young travelers, spying significantly empty picture hooks among galleries of Sovict heroes, kept badgering their guide to show them

MARK EMOND a picture of the lately deposed Lavrenti Beria. The guide finally found one-in a mosaic on the ceiling of the subway. Making some friends, Berger thought the best was Olga Farmakovskaya, his guide in Leningrad. Olga wore glasses "but never when she didn't have to" and was proud of her diamond ring which was "real, of course, becausc we don't have imitations in Russia." It impressed Berger when, in a country where girls seldom "get the once-over," she created a sensation wearing "something brown with spangles on it" to the ballct.

BERGER PHOTOGRAPHED WHAT HE CONSIDERED MOSCOW SLUM CABOVE), BUT STUDENTS HE MET DEMURRED, SAID THESE WERE "OLD HOUSES, NOT SLUMS"

moscow art lovers visiting Tretyakov Museum on Sunday stare raptly at the exhibits. The museum is devoted exclusively to Russia's own art, both
classical and postrevolutionary, and a standout attraction is the life-size painting (center panel) of Marshals Stalin and Voroshilov standing on the Kremlin wall.

MOSCOW FREE MARKET brings shoppers to look at flowers. Here, where peasants are permitted
to sell surplus crops and handicraft and prices fluctuate with supply, blossoms cost up to $\$ 1$ each.

COLLECTIVE FARM NURSES, one out of uniform, stand in door of hospital which, at moment, is empty. Six-bedroom hospital cares for 900 families.

LENINGRAD STUDENTS, including girls in typical coed dress, browse in university library. Berger found students friendly, eager to practice their English.

THE PATE FAMILY-MEMBERS WHO MADE TRANSCRIPTION ARE FATHER (STANDING AT GENTER) AND (ON BENCH) MOTHER, SISTER BEULAH, AUNT JEANETTE

# 'WE GOT EVERYTHNG YOU WANTED' 

Bewildered family of a soldier staying with Reds records a heartfelt plea that he change his mind

Recently the family of Cpl. Arlie H. Pate (one of the men on the opposite page, top right) drove up from their farm in southern Illinois to Springfield to make a recording. The l eterans of Foreign Wars had asked them and other relatives of non-returning PW's to speak directly to the men in the hope that voices from home would convey to them the enormity of renouncing their oua country. The sponsors have sent 18 of the resulting transcriptious to Tokyo and are nore trying to find a way of having them heard by the men to whom they were addressed. Here is what the Pates said to Arlie:

Mother. Arlie, we been waiting a long time for you to come back. We got everything you said you wanted. I hope you come back.
Father. What's the matter with you, boy, you don't come on home like you ought to? We've got everything ready. We've got the hog ready to butchcr. Waiting for you a long time.
Sister. Hello, Arlie, this is your sister Beulah. How are you? I hope you eome home pretty soon.
Aunt. Hello, Arlie, this is your Aunt Jeanette. We want you to come home and be with us. We're hoping and praying to God you'll change your mind, Arlie, and come home to us, because your friends need you here and your folks need you here.
Mother. Arlie, you always talk about the farm. We've bought stock and everything you said you wanted. You said you wanted a lot of fruit and stuff to eat. Do come back to us, we sure need you. You're welcome home anytime you come home.
Father. Son, what's the matter that you can't come on home? Your Mommy's in bad shape and can't stand it hardly at all, you being gone like that. My lord, why in the world don't you come on over here? We got the stock and everything here waiting for you and you can have fried chicken and everything, fried chicken, fried squirrel and fried rabbits and you can just have a big time. All them neighbors all the time askin' where you're at, and what you're doin' and why you don't come on home. My lord, come on over here with us and be with us.
Sister. Arlie, you don't know what you've been missin'. Your sister, she's got two children now, a boy and a girl. Merle, he's five, and Kathryn, she's two. She's gonna have auother one in November and if you chauge your mind you might be here when she has her last one. Arlie, Merle talks about you all the time. He just talks about you all the time, he wants you to come home. That's all he talks about [crying].
Father. Arlie, I don't know what in the world's the matter with you. My lord, stay over there like that there? Why in the world? Get down and me and Uncle Willard would come over and go squirrel hunting with you. Shucks, you'd have a wonderful time. Come on over here and get on with us, be with Mommy. Why, shucks, she'd just be so pleased and well satisficd she wouldn't know what to do. My lord, you'd be surprised.

Mother. Hello, Arlie, Sammy said come home, he'd have a big time with you. Grandma, that's all she talks about. We'd go all over and see all of them, even in Arkansas and see the rest of the family. Sonny, this is awful hard on me. Won't you come and see us all? Please, Arlie, come home. Sister. Arlie, do you remember some of the times that we used to have when we were in school and how we used to have fights and I still remember the time that we whipped Dolly Heffman, I'll never forget that [cry$i n g]$. We used to have so much fun and I remember the time I scared Miss Penecost and she ran back to Miss Dennis' house and locked the door. If you'd come back we could have some fun like we used to have. Fither. Arlie, we could really have the fun, boy. Donnie ran out the other day when I started to town. He says, "Well, I'm going to town with you but I got to take a shave first." He's got him a nice mustache going now and just having a big time. And you'd get down there and there's all them neighbors around there and lots of girl friends around thereshuchs, you'd have a big time. My lord, you're worrying Mommy so she's purt near crying nearly all of the time you look at her.
Aust. Arlie, you know that Willard's moved over there by me now and he"s built him a little shack and he lives over there close to us. Howard and me and him and your Grandma Arnold over there-she lives in Sonny's place-and if you'll come back we'll be all in the family circle.

Arlie, you know that this is the only free country there is. You know that you can't stay over there and be free and you know well that you're a free-born American. And there's no place over there for you, And you better come home because, Arlie, you know that we all love you, you're the same boy now as you were when you left and we've got to treat you the same. You got to treat us the same. Because we're all the same blood, flesh and everything. Now Arlie, you must understand that you are a free American and we want you to come home where you can be with us because you're the only one that can tell us and be with us and let us know of all the things that's happened around the world.
I think if you'd come home that you could add several years to your mother's and father's life, that you may never see again if you don't.
Goodby, Arlie, and good luck and God bless you. Sister. Arlie, you just don't know how much grief you put on Mother, she sits and cries all the time and calls your name [sobbing]. Goodby, Arlie, God bless you and good luck.
Father. Son, I don't see what in the world is the matter with you if you don't come on home here. Here I'm letting Ronald take the truck and take Mommy to town to the doctor. You could be here with her and you could drive the truck and take her to town to the doctor whenever she needs you. My lord, she needs you bad, needs you awful bad.
Well now, Son, I'm going to have to leave you now. Goodby, but be sure and eome on home. And be with us now for, the rest of your days.

REPATRIATOR THIMAYYA HAS DECORATED HIS HEADQUARTERS WITH RUG OF LEOPARD HE KILLED

## PANMUNOM DILEMMA

## Reds show off a few converts but 22,000 PWs still say "No"

Against the 20-odd Americans listed as wanting to stay in Red hands are more than $22,000 \mathrm{Chi}$ nese and North Korean PWs who say they do not want to go back to Communism. They say this plainly-all but a few (right)-but they still are having trouble convincing the Reds and the U.N. Repatriation Commission.
An important man they must convince is Lieut. General K. S. Thimayya of India, chairman of the Repatriation Commission. So far Thimayya has ruled in favor of the Reds on vital points, holding against vociferous U.N. objections that PWs may be forced into "explaining rooms" against their will. The U.N.

ANTI-INDIAN BANNERS were stacked by Syng. man Rhee government for "spontaneous" parades.
considers Thimayya an honorable soldier and his Indian troops superb. But he is handcuffed not only by the technicalities of the armistice agreement, and by the presence on his commission of such "neutrals" as Czechoslovakia and Poland, but by the pro-Communist innocence of his boss back home, Prime Minister Nehru. Nehru told the Indian delegation to Korea that the anti-Red PWs "are obviously held under duress." Then he denounced the U.N. Command as apparently not wanting peace-despite the fact that it was Red China that stalled until last weekend before agreeing to a U.N. proposal that peace talk machinery be set up.

GESTICULATING RED, who chose to go home, tells Commie-staged conference of prison beatings.

BOWED RED collapses as he recalls "suffering" under the U.N. The woman is a Communist soldier.

ANTI-RED EXHORTATIONS are painted on tents by Chinese prisoners at Panmunjom. Some
say: "Kill Chu" (Chinese army chief), "Overthrow Mao" (China's dictator) and refer to Red "bandits."

## Where the Chicken's Plenty and the Cream is Rich <br> Created in Old-Time Farm Kitchens . . . Cream of Chicken Soup is made for you by Campbell's in the same hearty tradition. To a slow-simmered chicken broth are added heavy cream and tender pieces of chicken, with a garnish of celery, and fine seasoning. ## PHILCO

## WORLD'S FIRST HIGH FIDELITY RADIO-PHONOGRAPH W W

Revolutionary new electronic high fidelity developments from Philco Engineering Laboratories now produce the cleanest, purest, most thrilling sound in history!

There has never been anything that looks like it ... there has never been anything that performs like it . . . for this beautiful instrument ushers in a whole new era in the enjoyment of sound from FM and AM radio and from records.
Philco "Phomoranua"* brings you, for the first time, high ficlelity sound in Full Dinuension!

And the difference between it and ordinary reproduction is as though a door had been suddenly
opened. The room is flooded with sound . . . the purest, most thrilling sound you have ever heard . . . from deepest bass to highest treble. It is sound of unbelievable "presence". . . sound in Full Dimension.

This miracle of sound reproduction-the new Philco "Phonorama" - now makes it possible for you to own a true, matched High Fidelity system in a single acoustically-balanced cabinet.

And to own "Phonorama", we promise you, is an entirely new experience in listening pleasure. But rather than take our word for it, hear "Phonorama" yourself . . . at your Philco dealer's today.

Then only will you know how far advanced is this great instrument that sets a new standard for the world in high fidelity of sound reproduction.

Amazing "Acoustic Lens" floods the room with the full range of sound!
You have never seen or heard a speaker that performs like this! No large grille hole, or door to open. Through this "Acoustic Lens", developed by Philco engineers, the high fidelity output of "Pbonorama" is diffused to every corner of the. room. And the revolutionary new cabinet, designed to end distorting tones and resonances, assures you of natural sound, in Full Dimension.

Philco "Phonoromo"
Entirely new system floods the room with high fidelity sound in Full Dimension

Ordinory Rodio-Phonogroph Weak, thin sound except directly in front of speaket-and mo sound in Full Dimension.

Sensational Electronic Visual Tone Blender on Control Panel actually lights up to show the range of notes being played!

This dramatic Philco development is the first tone control system to let you see the range of sound going through the instrument ! It ends guesswork in setting Bass and Treble controls for best response
on "Hi-Fi" and other records, and on all programs. Graduared scale markings provide a handy way to index your records, and make it easy for you to set them exactly the same way each time.

The Finest FM-AM Radio Performance

Because "Phonorama" is a High Fidelity instrument it gives you the flawless FM performance that is a necessary part of any true high fidelity system. You can bear the difference! On AM radio, an improved tuner with "Phonorama" amplifier gives new dimension and realism, with top sensitivity and selectivity. Only "Phenorama" has in! -Trademarh Prices subjivt te olorges wiblow novioc.

## Frankfort Distillers Corp., New York.

THE CONSPIRATORS, Prime Minister Jagan of the People's Progressive Party and his wife Janet, met in Chicago where he was a dental student.

## FACE-OFF IN GUIANA

## The British act to end a pro-Communist regime

Last week in British Guiana a pro-Communist dentist named Cheddi Jagan and his Chicago-born wife Janet came face to face with the British Commonwealth. The Jagans have been political agitators in Guiana for 10 years. Working among poor sugar-cane cutters, for whom economic reform came too slowly, they built up a popular following. Last April, when the British gave the country a constitution and a general election, the People's Progressive Party, headed by the Jagans, won the election and appointed Cheddi Jagan prime minister.
But instead of forming a government for the people it pretended to serve, the party set out through strikes and sabotage to destroy the new constitution and bring forth a totalitarian state. Anticipating a coup and acting with a bold dispatch reminiscent of bygone days of the empire, the British government decided to revoke the constitution. To back up the governor (below) it immediately sent the cruiser Superb to the scene, ordered the aircraft carrier Implacable to follow.

THE GOVERNOR, Sir Alfred Savage, takes walk in full dress uniform with aides. A career colonial official, he has served in Palestine, Nigeria, Barbados.

COMMUNICATIONS Minister Sydney King visited behind iron curtain.

HEALTH Minister J. P. Lachhmansingh, heads sugar workers union.

EDUCATION Minister L. F.S. Burnham pushed Red program for sehools.

## PARTY PACKED THE TOP POSTS

The Jagans began as reformers, organizing groups to press for low-cost housing and labor laws. Working tirelcssly among the cane cutters, Janet was given the affectionate title of "Auntie." But once the People's Progressive Party came to power, the workers were forgotten in the battle against the constitution in which the British still retained final authority.

The party's ministers (above) turned out to have connections with many worldwide Communist organizations. Having deprived the party of power, Governor Savage announced that he would try to make a reality out of the Jagans' airy promises. As a convincing gesture, he added that the cricket match with Trinidad would be played that day as scheduled.

ROYAL WELSH FUSILIERS, landed from the cruiser Superb, march through Georgetown, the colony's capital.

To back them up Argyll and Sutherland Highlanders, aboard the carrier Implacable, were due to arrive this week.

Don't wait more than a day to try it. For New Woodbury Soap offers you the smoothing, softening care that usually comes in face cream jars alone. Why? Because this is the soap enriched with seven face cream oils and emollients, intended to help replace natural oils you ordinarily wash away. With New

Woodbury Soap, your face can have soap-and-water freshness, with face-cream smoothnéss, too. Use it for complexion loveliness. Use its rich and creamy lather for velvety beauty from head to toe. New Woodbury has a new lingering floral fragrance, too. Truly, it's the soap "for the skin you love to touch"!

## to hold the women who own shares in

Polo Groundz, New Yerk City-52,000

Uoiversily of Notre Dame- 56,000

Norlhwestern Uaivessity- 53,000

You'd need all these stadiums and seven more like the Rose Bowl to seat all of America's women share owners.

The men? To seat the men who own stock, you'd need all these stadiums pictured-plus eleven Yankee Stadiums for the overflow.
To make it even more remarkable, about one-third of these share owners report that their family income is less than $\$ 5,000$ a year. A housewife, for example, sets aside enough money to buy shares in a food company whose products she uses. A factory worker decides he wants to share in his company's profits as an owner of the business.

They have an ownership interest in everything their company has, from plants and patents to present and future profits.

## Picking a Stock to Own

The man or woman buying shares in American corporations has more than 15,000 companies
from which to choose. But the choice can be narrowed, because only 1,085 of these are on the New York Stock Exchange. And note that these relatively few corporations pay twothirds of all the dividends mailed to share owners in the United States.

No new, untried corporations are admitted to this national market place. No companies whose financial statements aren't readily available. No company that has never known what it is to make at least a million dollars profit in a single ycar.

All this, from your point of view, makes investing not risk-free, but a bit easier.

Investing can be a simple procedure when you have the help of a New York Stock Exchange broker. They have 1,840 offices in 426 cities. Whether you are placing an order or just asking questions, you'll be a welcome caller.

THE ENCHANGE MAGAZINE-Official Stock Exchange Publication
If you are already a share owner, or if you plan to own shares, be sure to read THE EXCHANGE, Here is a pocket-sized monthly written in nontechnical language - full of helpful investment information. For the next twelve issues, send $\$ 1.00$ to THE EXCHANGE Magazine, 11 Wall Street, New York 5, N. Y.

## "I drink all the coffee I want...

My husband and I are very fond of coffee but it was making us lose sleep. But did we give up coffee? Not at all! We just gave up drinking caffein. We changed to Sanka Coffee.
That was a wonderful idea! Now . . .

I get all the sleep I need!
And so does my husband! You see, Sanka Coffee is all coffee, real coffee, but it's also $97 \%$ caffein-free. We sleep like tops. And I'm a lot less irritable, too. Why don't you try Sanka Coffee? You'll probably like it better than the coffee you're drinking now."

## DONT STOP DRINKING COFFEE... JUST STOP DRINKING CAFFEIN!

Have you these symptoms? Nerves jumpy? Tire quickly? Short of breath? Blood pressure up? Can't sleep? These symptoms may come from the caffein in coffee. Switch over to Sanka Coffee.

## LIFE ON THE NEWSFRONTS

Decision on Trieste, a new Secretary for Labor

FREE TERAITORY OF TRIESTE

The U.S. and Britain, taking a drastic step to solve the YugoslavItalian dispute over the Free Territory of Trieste, announced they would withdraw their troops from Zone A, which includes the port of Trieste, and give it to the Italians. At this the Yugoslavs-who already control Zone B-spoke up bitterly and belligerently. Crowds in Belgrade threw rocks through the windows of the U.S. and British embassies. Marshal Tito dramatically told his people that "there will be no peace in this part of the Balkans" if the plan is carried out. But there was reason to hope his bluster would not be followed by a bite, for Tito knew about the Anglo-American plan-and kept quiet about it-before it was announced. In Rome the announcement was greeted with elation, even though it meant the U.S. and Britain are backing away from their 1948 stand that Italy should get the whole of the territory.

The U.N. General Assembly eleeted U.S.-baeked Turkey to fill the Eastern European seat on the Security Couneil formerly held by Greeee. The Soviet bloc candidate, Poland, was beaten out after eight ballots. Two other nations, Brazil and New Zealand, were elected without opposition.

## Jean Valjean of the Bronx

A modern, real-life version of Victor Hugo's Les Misérables was enacted when a Bronx thief named Mike McConnell stole $\$ 10,200$ from the unlocked, unguarded safe of some Franciscan nuns who over the years had befriended him, forgiven him three times for petty thefts and drunken brawls and nursed him back to life when he was dangerously ill. When McConnell was found and arrested by police in a Bronx bar he had only 23 ćleft. He had burned more than $\$ 6,000$ worth of checks, he said, and given most of the rest to needy friends to pay for false teeth and a TV set. But one of his pals, after accepting a $\$ 200$ gift from McConnell, ungratefully stole $\$ 500$ from him.

Prime Minister Churchill, speaking to a conference of his Conservative party, disclosed the two steps he believes the West should take to prevent war. The firsti seek a treaty with the U.S.S.R. The second : rearm the Germans, whether or not the French agree.

## Labor gets a new Secretary

President Eisenhower filled the gap in his Cabinet left by the resignation of Martin Durkin by naming 52 -year-old James P. Mitchell (left) as his Secretary of Labor. Mitchell, a vice president of Bloomingdale's department store in New York, a

JAMES P. MITCHELL personnel expert and a nephew of Actor Thomas Mitehell, has been serving as assistant Secretary of the Army for Manpower since last spring. During World War II he was in charge of labor and manpower problems for the War Department. Al Hayes, president of the A.F. of L. machinists' union, called the appointment "incredible." But the C.I.O.'s President Walter Reuther had kinder words for the new Secretary. Said he, "Mr. Mitchell enjoys a good reputation among the labor people who have dealt with him. ..."

## OF THE WORLD

and a solution to Turnpike's mystery killings

#### Abstract

A ham-handed publicity man in Paris, Ill. began to worry that the little town could ignore a personal appearance of Dorothy Lamour in an upcomiag variety show. To arouse interest, he sent every third man in the phone book a postcurd reading: "Darling: Don't forget our date at 8 p.m., Oct. 28. Dorothy." What this stuat really aroused was a host of suspicious uives. Oae started divorce proceedings, another angrily kicked the pane out of her picture window, a thind flagged douth a locomotive to berate her engineer husband who happened to have an ex-cife named Dorothy. Miss Lamour, who hadn't known about the postcards, took out a newspaper ad to apologize and try to placate Paris' outraged wives.

## 1,000 murders in eight months

Indonesia's partially Communist government admitted its weakness by revealing that in eight months rebels of the Daryl Islam (Islamic State) movement in West Java murdered 1,000 civilians, kidnaped 100, burned 6,300 houscs, robbed 10,500 homes. In Sumatra new disorders broke out when thousands of fierce Moslem tribes called Achinese attacked army troops with old swords, kris, kitchen knives. Impressed by the outgunned rebels' religious fervor, a battalion of government troops, mostly Moslems, were reported to have switched sides.

KNIGHT SHARES INAUGURAL STAGE WITH CAROLYN (LEFT), MARILYN
Chief Justice Earl Warrea's successor as goveraor of Califoraia, Gooduia Jess Knight, was suora ia last week. Prominent at the ceremony were his two photogenic daughters. The youngest, 20 -year-old Carolyn, is a student at the University of California. The other, Mrs. Robert Eaton, 26, will be her widower father's official hostess in the governor's mansion.

## Animal arteries are used in humans

Surgeons working at Georgetown University's Medical Center in Washington, D.C, reported successfully using portions of the bodies of animals as spare parts for humans. They transplanted sections of arteries from pigs and calves into four patients with defective blood vessels, after sterilizing, freezing and drying the tissue to remove all life. In time new human arteries formed around the transplants.

Ohio and Pennsylvania police belatedly started hunting for 27-year-old John Wable to charge him with the series of murders that terrorized truckers on the Pennsylvania Turnpike for several weeks (LIFE, Aug. 17). The police in Uniontown, Pa. had Wable in their hands two months ago on a minor eharge, but when he tried to confess to the Turnpike murders at that tine they shooed him away as a "serewball." He has since pawned a wateh stolen from one of the vietims. And bullets found in the bodies of two murdered truekers have been matehed up with Wable's pistol.

UNANNOUNCED MEETING at airport finds Republican Troast waiting for chance to catch President's hand when it comes down from adjusting tie.

## BINGO IS NO ISSUE

But New Jersey discusses letter for racketeer

In recent weeks of active campaigning in New Jersey, which is electing a governor in November, a chief talking point was bingo. Both candidates, Republican Paul Troast and Democrat Robert Meyner, were $100 \%$ for it and were trying to get credit for allowing the voters to pass an amendment allowing churches and charitable organizations to conduct "games of chance sometimes called bingo and . . . raffles."

But a new issue appeared when it was disclosed that Mr. Troast had written a letter urging "executive clemency" for the union racketeer Joey Fay jailed for having shaken down contractors for the sum of $\$ 368,000$. A state senator tried hard to get Troast off the hook saying he only did it to stave off a strike at the Mahony-Troast Construction Co., of which the candidate is president. Meanwhile, worried, though still favored to win the election, Troast rushed to a New Jersey airport where President Eisenhower was taking off after a speaking engagement in hopes that the President's prestige might bolster his own.

VEHEMENT SENTIMENTS of the Democratic candidate are expressed on a poster which a volunteer worker is here assisting him to autograph.

OF COURSE, THERE'S A DIFFERENCE IN VANILLA PUDDINGS!

1. Many more folks (young and old) prefer Jell-O Puddings over any other kind!
2. That's reason enough to try it. Here's another! There's good milk nourishment in Jell-O Pudding treats!
3. Double-feature wonders-make delicious pie fillings, too. Be sure to try some!

## WINDOWS

that look in on Ballantine $A L E$

Boston's Sheraton Plaza Hotel

Hotel Nacional de Cuba in Havana

Worth looking into is the enjoyment people get from Ballantine Ale.

In flavor, in satisfaction, Ballantine Ale is not to be compared with any other malt beverage. Top fermentation . . . with Ballantine's pedigreed yeast working upward, not downward ... makes the difference!
America's 4 to 1 favorite, Ballantine Ale is more often than not the only ale served at the finest clubs, hotels, restaurants, and aboard ship and train.
Some day a good friend will introduce you to this wonderful drink. But why postpone the pleasure? Order a bottle for yourself-today. Expect and get something wonderfully different!

P. Ballantine \& Sons, Newark, N. J.

## ALL LIT UP FOR A LANDING

## Navy fits officer with electric suit to signal jets in at night

I might landing on an aircraft carrier by a jet plane, hurting in at 135 mph outo a rolling. pitching deck, is one of the most perilous routines of modern warfare. To pilots the key man in the act is the landing signal officer, who stands near the stern and guides the pilot in with hand padiles. To make its L.S.O. more visihle the Navy ix trying the deviee of putting him into a suit strung with amber light
bulbs (right) and actually plageing him into an electric sochet. The time-exposure picture below, takell on the U.S.S. Turrura, shows how the L.S.O. looks to the approaching pilot as he signals that his approach is ohay (two bright squares), tells hin to lower his right wing (are to right), left wing (are to left), finally (horizontal are to the left, down swept are at right) to "cul your rngine, friend, and come aboard."

132 AMBER LIGHTS illuminate the I.S. $).-28$ on clicet and arms, 28 on each leg, 24 each padtle.

Lit Up for Landing continyeo

DAY LANDING shows L.S.O. holding square paddles steady to signal Cougar he is too high to land. L.S.O. starts bringing in plane a half mile away,

LIGHTED BOARD is sometimes used to land planes. Pilots complain it has "no personality."

WANDS AND PIPE, both lighted, are forerunner of lighted suit. Pipe help show pilot if deck is tilted but some L.S.O.s think wands are too cumbersome

## Take your camera with you everywherefor that's where great snapshots are

It's so easy to save your memories instead of wishing you had. And it costs but pennies. Just get the take-your-camera habit. Take it everywhere-and use it. In the house. In the yard. On family outings. Wherever you go. Try it for a week, and you'll want to do it all your life.

New, thrifty Duo-Pak holds two rolls of Kodak Verichrome Film for black-and-white snapshots. One for your camera . . . one for a spare. In the popular sizes 620,120 , and 127 .

So personal ... photo greetings made from your own snapshot. Order now for Christmas.

## No other bandage sticks

# BAN <br>  Plastic <br> TRADE-MARK 

AMAZING "TOUCH-AND-LIFT"TEST PROVES IT:

Other bandages must be pressed on. But just touch the end of a BAND-AID Plastic Strip with new "SUPER-STICK" against a glass.

It sticks at a touch! Without any pressure, it sticks so firmly you can lift the glass.

## like

## Strips with Super-Stick

You can even fill the glass with water, and this new "SUPER-STICK" adhesive won't loosen.

No other bandage stays on so well-or stays so neat!
Wash it! Soak it! It won't come off or get soggy. The thin, flexible plastic fits like your skin and washes clean - gives you all-day protection.

And BAND-AID Plastic Strips are skillfully fleshtoned and textured to blend with your skin better than any other bandage.

Available with plain or Mercurochrome pads.

How to have a brighter view from this position

It's tough to be laid up by an accident.
But it's ever so much tougher when worry about the cest of an accident clouds the outlook of a man trying to get back on his feet.
So isn't it wise to make sure that worry about money will never enter your nuind, should you ever find yourself with nothing to do but stare at a traction splint?
A Travelers Modern Accident policy will pay doctor and hospital bills. It will provide money
every uwh to take the place of the pay check that you can't bring home.

You can take a brighter view of a long con-valescence-free of the fear that you'll have to spend your lifetime savings or go into debt to pay your bills.

Call your Travelers agent or broker right away -let him give you full information about this important insurance. If you don't know your local Travelersman, write and we'll send his name.

THIS PICTURE OF THIAM CHU, CUDDLED BY NEIGHBOR KATHRYN CHAN, 10, APPEAREO IN SINGAPORE PAPER WITH STORY OFFERING TO GIVE HER AWAY

## A BREAK FOR BABY

Given away because of 'evil' birthday, Thiam Chu seems luckier than a Singapore soothsayer said

Leong Thiam Chu became a dreadful burden to her family when she was only a month old. It was then, as is the custom in Singapore, that Thiam Chu's mother, Mistress Leong Kum Seng, visited a soothsayer, seeking portents for her newest baby's future. The fortuneteller had shocking news: Thiam Chu's birthdate, July 22, had been "an evil day"; should the Leongs try to bring her up with their older daughter and son, she would surely die and bad fortune would befall the rest of the family. For another month Mistress Leong and her electrician husband brooded fearfully under the baleful curse hanging over the family's heads.

At last Ah Soh, as Mistress Leong is known to friends, brought herself to follow the soothsayer's advice to cxorcise the curse by giving the baby away. Her tearful plea to the Straits Times produced the headline reprinted above; it was answered the same day when a shiny limousine came to the humble Leong home and an astonishing lady bountiful stepped out. One day more and Thiam Chu had been adopted legally by such foster parents that nobody ever again could call her a bad luck baby (next page).

FLOODLIT STATUE of St. Michael on castle looks down on diplomats. The castle was built around 136 A.D. by Emperor Hadrian to serve as his tomb,

## TORCHES OVER TIBER

## Lamplit party draws notables to Roman castle

For the first time in 400 years the shadowy, erenelated walls of Rome's Castel Sant' Angelo took on a dazzling brilliance a fortnight ago as the Italian government turned the onetime mausoleum and papal residenee into a mammoth reception hall. The reception was in honor of visiting Greek Premier Alexander Papagos, and the castle, which customarily resounds only to the shuffle of sightseers, teemed with 950 international notables who swarmed over the red-carpeted drawbridges, elimbed the ramparts lit by flaming suet pots and milled about the frescoed halls in a one-night spree that was a sumptuous, though more decorous, echo of the celebrations of the Renaissance popes.

A CHAIN OF FLAMES from more than 1,000 lamps illuminates the ramparts and drawbridges where soldiers in Renaissance costumes stand guard.

## DEAR SIRS:

"By 1960 please send me these items..."

The facts in this letter are not imag. inary. They merely sum up what cconomists predict for the United States by 1960.

To American Industries
Dear Sirs:
By 1960, please arrange to be making thirty per cent more goods than you made for me in 1950.

I expect a growth of about twenty million people in my family, the same as in the past decade. Part of my order is because of them. Part is to increase my standard of living.

If possible, arrange more leisure time for me. I do not wish to work longer hours to pay for increased purchases.

You will, of course, find me new products better than the old. You have done this in the past, but please increase your efforts.

Please tell the electrical manufacturers to be making two times as much by 1960. I am increasing particularly my purchases from them.

Very truly yours,
(signed) The American Public
What this letter calls for is clearly understood by any company or industry that has earned public good will and hopes to keep it.
Here are three moves that General Electric is accordingly making:
First, if production and leisure are to increase at the
same time, the nation's skilled man power must be used with increased effectiveness. To help create more goods to meet America's needs, General Electric is in the middle of a billion-dollar expansion program.
Second, products now on sale must do more if pcople are to get more for their money. Examples may help here. Engineers at General Electric have multiplied the efficiency of turbines, the light from lamps, the power of x -rays, and so on. Such engineering is and must be an always expanding program.
Third, new products must be found to make known products obsolete by comparison. To find new truths, research in America must increase. At General Electric, new research facilities and people are being added.
Here are some fields where scientists say new discoveries could make a big difference to all of us...ways toconvert atomic energy into useful power ... ways to store heat for later use ... ways to create light from now invisible infrared rays ... "fuel cells" to convert energy of gaseous combustion directly into clectricity . . . new metals to stand higher heat (for jet engines and turbines).
October $15^{\text {th }}$ marks General Electric's 75th anniversary. We start the next 75 years with greater experience, more capacity and, we hope, more effcient planning. We hesitate to look back over our shoulders at what has been developed-modern x-ray, electrically driven trains and ships, the tungsten lamp, the fluorescent lamp and such-for we are convinced that the findings of the future will be more significant. .

## Of course you can have the

Of rare beauty, it symbolizes the precious bonded bourbon it contains, and the promise of pleasure to come. It is yours to give with pride or receive with pleasure, and costs no more than the standard OLD TAYLOR bottle.
 IN THE GRECIAN DECANTER

OLD TAYLOR is available in the standard boetle and in the Grecian Decanter where regulations permic. The price is the same for each.

## EDUCATION

# High School Girls Help Hospital 

'JUGS' SOLVE NURSE SHORTAGE

Three years ago, with pride and promise, the townspeople of Akron, Colo. (pop. 1,750) dedicated their 22-bed Washington County Public Hospital, only to find themselves up against a problem that bothers older and larger hospitals, a shortage of nurses. Today the problem has been solved for Akron, thanks to a group of high school students who go by the club name of JUGS (Just U's Girls). After school and on weekends 40 girls of Akron High pitch in, under professional direction, to perform chores which frec the hospital's graduatc nurses for more essential duties.
From general training the JUGS go on to specialize as nurses' aides, laboratory aides, office workers and occupational therapists. As much at home in the hospital as most girls are at a drugstore soda fountain, the JUGS, in helping the hospital solve its service problem, have also founal a way of exploring a profession. Five already have gone on to pre-nursing courses in college. Impressed by the JLGS' performance, the Colorado Medical Society has set about organizing a statewide network of JUGS.

SERENADE FOR A PaTIENT brings four JUGS to the hospital room of Tom Collins to help him celebrate his 80th lirthday with cake and choral effects.

FU VID-R IISING, SIIOW was put on by JUGS to pay for decorating their recreation quarters in a made-over storeroom. A star was Lea Lesher doing tap dance.

JUGS continued

AS NURSE'S AIDE, Lea Lesher comforts youngster with earache. Says hospital chief, "These JUGS make kids feel at ease as none of us can do."

AS STUDENTS of orthopedic methods, JUGS watch east being put on broken leg. Nurse helping the doctor is Mrs. Emaline Moots, mother of three JUGS.

As dietitian's aide, Joyce Axtell feeds Mrs. Charlotta Jeweth, 80, from tray which she herself prepared and hrought up from hospital hitchen.

JEANNE CRAIN says, "Yes, I use Lustre-Creme Shampoo." In fact, in a mere two years, Lustre-Creme has become the shampoo of the majority of top Hollywood stars! When America's most glamorous women use Lustre-Creme Shampoo, shouldn't it be your choice above all others, too?

## For the Most Beautiful Hair in the World 4 out of 5 Top Hollywood Stars

 use Lustre-Creme Shampoo

Glamour-made-easy! Never was
hair care easier or more rewarding. In hardest water, Lustre-Creme Shampoo foams into lavish, deep-cleansing lather that actually "shines" as it cleans . . . leaves hair soft and fragrant, gleamingbright, free of loose dandrull.

Will not dry hair! Wonderful LustreCreme doesn't dry or dull your haireven if you want to shampoo every day? Lustre-Creme is blessed with. Valural Lamolin to make up for loss of protective oils . . . bring out glorious sheen and sparkling highlights in your hair.

Makes hair eager ta curl Now you can "do things" with your hair-right after you wash it! Lustre-Creme Shampoo helps make hair a joy to manage. Even Hyaway locks respond to the lightest touch of brush or comb. And this, without any special after-rinses!

JUGS continuto

RECEIVING HER CAP, a symbol of 100 hours of service, Lea Lesher appears before fellow JUGS and hospital auxiliary in candlelight ceremony.

TAKING THE SUN in mid-afternoon, group of JUGS relaxes on roof. Several times JUGS have been called in for emergency help in car accidents, fires.

IINING UP at hospital entrance, JUGS gather before departure of Elna Stephenson (foreground) for college, where she will take prenursing course.

## COMIC STRIP DOLLS

Yokum's baby is latest in a successful series
While sociologists have been closely watching the postwar bumper crop of American babies, U.S. toy manufacturers have been keeping a sharp eye on the equally big bumper crop of comic strip babies, In 1947 when Gravel Gertie and B.O. Plenty of Dick Tracy had a baby girl named Sparkle Plenty, the toy company that marketed a doll version of the child made $\$ 6$ million and started a trend. The past six years, which produced 12 major comic strip babies, has brought on eight comic strip baby dolls (p.86). Last week when Li'l Abner Yokum of Dogpatch finally discovered his baby was a boy and called him Honest Abe, a shiny plastic version of Abe (below), was already selling for \$2.98.

HONEST ABE DOLL, mosl inexpensive comic strip baby model so far, is expected to outstrip previous record of 87 million in sales ly Bonny Braids doll.

## When you start driving home

## Acid Action starts to attack your engine!

Whether the trip home from the fair grounds is five miles or fifty, it makes little difference in the amount of wear in your car's engine. For the major cause of engine wcar occurs between the time when it is started "cold," and when it is fully warmed up.
You see, every time you start a cold engine, partially burned gasoline and moisture unite to form acids which immediately go to work on the cold cylinder walls and other engine parts. And it is this acill action -not friction-that accounts for most cn gine wear.

Actually, with tolay's frequent stopping and starting, one mile in every three is an acid-action mile.

Shell X-100 Motor Oil has long countered
this major cause of engine wear with alkaline "X" safety factors added to neutralize acids formedduring the engine warm-up time. Now Shell X-100 has almost twice the amount of these "X" safety factors. Now Shell X-100 stops acid action. Moreover, it contains extra cleansing factors, which prevent deposits from fouling hydraulic valve lifters and other vital parts.
At your next oil change, try this heavy duty, high detergency, premium motor oil. Let your Shell Dealer refill your crankease with Shell X-100. It's incomparable.

RIVAL DOLLS, based on comic strip hahies at prices ranging from $\$ 4.95$ to $\$ 14.95$, have many special sales gimmicks. Ricky Jr. (top, left) wets his pants"
and feeds from a baly bottle. Joan Palooka (bottom, right) smells permanently of bahy powder. To see dolls matched with comic strip characters, turn the page.

## THE WORLD WE LIVE IN: PART VI

# THE <br> <br> AGE OF <br> <br> AGE OF <br> MAMMALS 

And God made the beast of the earth after his kind and cattle after their kind . . . and Gol saw that it was good. . . .

Gexesis 1:25

DURING 100 million years of the Mesozoic era when dinosaurs rulel the carth. a group of small and timorous creatures dwelt furtively amid the shadows of the swamplands and sought safety in the high branches of the softwood forests. Lowly in origin but unique in their endowments, they represented a new class of animals: the mammals, warm-blooded vertebrates that bore their young alive and gave them milk in infancy. Never numerous-they have hrought to the modern world only 3,500 species as against 8,600 bird species and 800,000 species of insects- they now encompass the largest and most intclligent of all terrestrial fauna. Headed and transcended by Homo sapiens, their most creative and destructive protagonist, they are the dominant form of life on the planet Earth today.

Beholding the bewildering diversity of living things that populate the lands and waters of the world, man has uneasily recognized both his hasic spiritual differences from other creatures and his kinship with them. Since the dawn of reason he has repeatedly defined and redefined himself both as a participant and spectator in the pageant of life. The Greeks saw man as a rational animal, set apart from the lower orders by the uniqueness of his intellectual faculties. In the Christian view man is both flesh and spirit. To the modern naturalist he is "Homo faber"-a tool-making animal. To the psychologist he is a talking animal, capable of feeling guilt. But to the evolutionist man is essentially a mammal with an oversized brain.
This specialized organ, seat of the peculiarly human attribute of reason, is a heritage from the ancient past, born of the uncompromising demands imposed on man's remote forebears in their fight for survival during the tyranny of the dinosaurs. Unlike the reptiles, which ahandoned their young to circumstance, the mammals cared for their offspring in infancy, providing them with a period of education and experience. Those with the highest capacity for learning emerged best equipped for the struggle to survive. Hence, through natural selection, the mammalian brain enlarged rapidly-especially the cerebral hemispheres which are the centers of memory and intelligence. Moreover, unlike the dinosaurs, the mammals were endowed with heat control and an even hody temperature and could resist climatic variations and sustain physical effort over longer periods of time. Activity, directed by intelligence, was the touchstone of mammalian success.
So for many millions of years the mammals lived in perilous coexistence with the dinosaurs. While their fossil record is scant, four groups of primitive mammals have been identified as early as the Jurassic period, 165 million years ago; all of these must have descended from ancestral forms which evolved from therapsid reptiles in the late Triassic ("The Pageant of Life," Life, Sept. 7). It was not until the Cretaceous period, however, that the mammalian line began to burgeon. And then, with what seems from our remote point of time ineredible swiftess, the dinosaurs died and the shy and humble mammals came into a great inheritance-the entire face of the land.
The period of time since the mammals took over the earth is called the Cenozoic era. It is divided into seven epochs beginning with the Paleocene, 75 million ycars ago, and coming down to the Recent, which is the epoch in which we now live. The story of the mammals during all these periods but the last, which we see around us, is depicted chronologically in the painting shown in sections on the following pages. as it has been deciphered from the bone beds of America's West. It differs from the other chapters of evolutionary history only in that it has not ended. The climax of the story-the ultinate fate of the mammals-lies in the unknowable void of the future.

DOMINANT ANIMALS of the Cenozoic era are shown above in chronological order (bottom to top) as they appeared epoch after epoch in successive strata of rock (see chart at right) representing the times in which they lived and died.

From furtive creatures hiding in the gloom of ancient reptile-ridden forests evolved the vigorous and intelligent animals that dominate the earth today

CAMEL'S PROGRESS as reconstrueted (aborc) from skulls (right) found in superimposed layers of rock is traced through six epochs of Cenozoic time. Beginning with a primitive herhivore of the Paleocene (lowest stratum), camels
continued to evolve in western America until they mysteriously died after the Pleistocene (dark brown ridges and valley at top). In the Old World camels have survived into the seventh Cenozoic epoch, the Recent, in which we live.

## PSITTACOTHERIUM

## SIX EPOCHS IN THE U.S.

## EARLY MORNING OF THE MAMMALS' REIGN

NEVER since the first sea ereatures crawled from Devonian waters onto the margins of the land had the earth seemed so desolate of life as at the dawn of the Paleocene epoch. Of the mighty dynasty of reptiles only a few minor strains survived: alligators, turtles, boa constrictors. And the mammals that had clung to existenee in the shadow of the dinosaurs were uifformly small and sequestered. Once again the land lay waiting for the leitmotiv of evolution-the recurring growth
of large animals from small ones and specialized from primitive forms. In western America, which is depicted here, the shallow sea that had covered most of the great plains withdrew and the Rockies arose. The climate remained bland. Subtropical plants-figs, breadfruit, pal-mettos-bloomed across the lowlands. Onto their moist, warm expanses, almost doubled in size by the recession of the inland waters, there deployed the small advance guard of the mammals, freed now by the death of the dinosaurs to descend from the trees, where most of them had lived, and scek new ways of life on the ground.

Among the first of these were a few small insect-eaters, insignificant in stature but vastly important in the evolutionary story, for they were the basic stock from which all true modern mammals would later evolve. Their prototype was Prodiacodon, a primitive hedgehog; more

LOXOLOPHUS PALAEORYCTES

PANTOLAMBDA
TETRACIAENODON

BARYLAMBDA
THYLACODON
mioclaenus
speeialized members of the same group included Planetetherium, a gliding animal, and shrewlike Palacoryctes. With them came the herbivore, Psittacotherium, and two survivors from the Mesozoic, ungainly Taeniolabis, whose tribe died out in the next epoch, and the marsupial Thylacodon, whose progeny persists in the opossum.

As the Paleocene progressed there diverged from the original stoek several lines of great future signifieance. Notable among these were the first primates, small arboreal, nocturnal animals like Plesiadapis, with bushy hair and a long tail. One of the first earnivores was Loxolophus, a small raccoonlike creature whose sharp-cusped teeth identify him unmistakably as an early flesh-eater only just bcginning to relinquish the inseetivorous habits of his forcbears. The group of herbivores represented hy Tetraclaenodon and Miocluenus,
small horse-headed, cat-bodied ereatures, was probably ancestral to the ungulates (hoofed animals) of today, though they still wore claws adapted to life in the trees. Later in the Paleocene there appeared an order of truly hoofed vegetarians known as amblypods, or "slow-footed ones," among them sheep-sized Pantolambda and larger Barylamb$d a$, which sometimes attained a length of eight feet. As with many orders that speeialized quickly for a particular way of life, the ambly pods were destined for extinction.

Although the immediate ancestors of modern mammalian lines did not emerge until a later epoch, by the close of the Paleocene the land once more teemed with life. The hospitable plains and lowlands were peopled with flourishing forms that ultimately would produce the most vigorous and efficient animals that ever trod the earth.

short-lived northerners were Mctachciromys, whose South Ameriean cousins survive today in the order of armadillos, anteaters and sloths, and the carly primates-lemurs like Notharctus and tarsioids like Tetonius. Intermediate hetween lemurs and monkeys, the tarsioids were the first animals to develop close-set eyes, sharing a single field of vision and perceiving depth in the stereoscopic fashion that has since enabled man to examine his environment with unique understanding. In North America lemurs and tarsioids persisted to the end of the Eocene and then disappeared, leaving our country empty of primates until the immigration of Ifomo sapiens in recent times. A native North American development was the expansion of the rodents. Small squirrelish forms like Paramys were prolific in the

## AN EPOCH OF UNCERTAINTY

V the 20 million years of the Focene, nature indulged the evolving mammalian lines. The climate remained amicable. The upheaval that had reared the Rockies sulsided and the patient rain began its quiet leveling. The lowlands lay earpeted in subtropical green. Upon them new orders appeared, the aneestral forms of most modern mammals. At some interval early in the Eocene the continents of North and South America were sundered by rising waters. As a consequence several orders of primitive mammals thrived in isolation in the Southern Hemisphere while their kin died out in the north. Among the

Eocene and by its end they had begun to diverge into all the varied types that make rodents the most adaptable of contemporary mammals. Along with the rodents the descendants of the primitive Paleocene carnivores continued to speeialize, produeing caflike Oxyzena, doglike Mesonyx and weasellike Tritemnodon. The Paleocene ungulates also specialized, but less successfully, fabricating such ineffective creatures as Phenacodus and slow-fonted Coryphodon. Still more grotesque were their distant relatives the uintatheres, which enlarged into the awkward giants Eobasilens and Lintatherium, the size of modern rhinos. Both died out near the end of the Eocene.
The extinetion of the primitive herbivores may have been effeeted by the advent of modern ungulates. Eohippus, the first horse, stood
no higher than a fox terrier, yet his slender legs and even teeth made him a far more felicitous form than his lumbering precursors. With Eohippus appeared his horselike cousins, the titanothere Palcosyops, whose descendants would flourish in the next epoch as the largest animals on earth, and Hyrachyus, a forebear of modern rhinos.

Among the competing mammals of the Eocenc therc also stalked a giant from another domain. Diatryma, a huge running bird, seven feet high, with massive legs and a powerfully beaked head. Diatryma's appearance in a world of small, inexpert mammals suggests that at this moment of evolutionary history the face of the earth may have been a battleground upon which two growing dynasties, the birds and mammals, were locked in an uneertain struggle for sovereignty.

## A TIME OF TRIAL AND TRIUMPH

0F all the epochs of the Cenozoic era nonc brought greater events than the Oligocene. Within its span the earth assumed many of the aspeets it wears today. In Europe the first folds of the Alps arehed from the Mediterranean. Eastward the immense Himalayan paroxysm began to buckle the crust of Asia. And in the New World voleanoes spewed fire and ash over large areas of the Northwest. Meanwhile the climate grew eooler, and in the heartland of America the ancient subtropical forests began to retreat southward, surrendering their dominions to grasses, eonifers and hardwood trees. In the animal kingdom the Oligocene witnessed the fading away
of most of the primitive mammals and the founding of the modern faunas. Of the earliest mammalian lines only a few lingered on, unehanged and unehanging through later epochs, as persisting reminders of the humble origins from which all contemporary creatures came -the opossums, hedgehogs, moles and shrews. The order of rodents enlarged rapidly, augmenting their numbers early in the epoch with the ranks of the beavers, gophers, rats and mice. Ahead of them raced their relatives, the rabbits, whieh had begun to multiply at the end of the Eoeene and whieh have multiplied exuberantly ever since.

The protagonists of the new epoeh, however, were larger animals. The giants of the Oligocene were the titanotheres, ponderous planteaters that had appeared in the previous epoeh and then proceeded to evolve into Brontops, a hoofed and horned beast, 14 feet long,

protoceras
HYAENODON

HOPLOPHONEUS
SUBHYRACODON

PROTAPIRUS
POEBROTHERIUM
BOTHRIODON
with weak teeth and a brain the size of an orange. Of the primitive flesh-eaters only IIyaenodon and his close kin survived, hut two-great modern groups of carnivores had already begun to emerge: the dogs, specializing in pack pursuit, and the cats, specializing in solitary stalking. The latter were already notably represented by sabre-toothed Hoplophoneus, a powerful predator with two-inch fangs, sinewy loins and savage, retractile claws.
The hoofed vegetarians had earlier evolved along two major lines: odd-toed ungulates-horses, asses and zebras, rhinos and tapirs; and even-toed ungulates-cattle, shcep, goats, pigs, hippos, antelopes, camels, giraffes and deer. Within the former group the horse continued to evolve along undeviating lines. Mesohippus, the three-toed Oligocene horse, had longer legs and a straighter back than his tiny

Eocene forelear. Though lie was still no larger than a collie, his brain had expanded swiftly, and it was doubtless his intelligenee, combined with agility, that enabled him to survive. To the roll of his odd-toed relatives the Oligocene also added the first tapir, Protapirus, and one of the first true rhinoceroses, Subhyracodon. Coneurrently the eventoed ungulates brought forth an unlovely species of giant pig, Archae. otherium; an amphitious swinc, Bothriodon, ancestral perhaps to the hippos; a gregarious type of ruminant, Oreodon; a six-horned, deerlihe cud-chewer, Protoceras; and an ancestral camel, Poëbrotherium. Thus as the Oligocene drew to its close the varied hosts of the herbivores and clans of the carnivores were already hastening down their diverse evolutionary corridors into the domains they occupy today. The outlines of the molern animal kingdom were elearly east.

DICERATHERIUM
PROMERYCOCHOERUS MERYCOCHOERUS

## A PERIOD OF PLAINS-DWELLING

TIIF, most momentous phenomenon of the Miocene, and indeed one of the great milestones in the history of life, was the suilden spreading of the grasses, which, having slumbered in the shade of the old subtropical forests, swiftly responded to the ever eooler. drier elimate of the new epoch and seized vast areas of the land, ereating the prairies, plains and veldts of the modern world. Fron their first harsh, stubly blades there evolved in time the forage plants and cereals that have hecome the lasie forol supply of man and his domeso tieated animals. As the grasses spread aeross the flatlands of Ameriea the grazing mammals ranged in ever larger herds, and many forest
dwellers emerged from the green shadows onto the golden sunlit plains. Under these auspieious conditions both branehes of the ungulates expanded rapidty. The Miocene horse. Merychippus, approached the last lap of his evolutionary eourse. He had now attained the stature of a modern pony. and his proportions were slim and graceful. His outer toes had grown smaller; his middle toe had evolved into the funetional hoof of the contemporary horse. His teeth had developed high crowns and hard surfaces suitalle for pulverizing prairic grass. By the end of the Mioeene, Merychippns was thoroughly alapted to life on the open range. His ould-toed cousins, the rhinos and chalicotheres, however, were less suecessful. For a time, Diceratherium, a small but prolific rhinoeeros of the Mineene, appeared to thrive, but in the next epoeh he, along with all other rhinos, vanished from the Ameriean

## THE AGES OF GIANTS AND ICE

T1IE Plincene, whilh euded one million years ago, was the autumn of the Cenozuic era, the last tenient epoch before the invasion of the cafrel ice sheets from the north. Litle by litule the bite of the winds grew sharper. Over the wide prairies of North America the tall grasses surrendered to shorter, hardier herbage. In the Southwest the ancient, subtropieal forests shriveled in the rain shadow of the newly reared coastal Sierra, and then vanished under desert sands. Northward, pine trees marched down the mountain slopes of the resurgent Rochies and young craggy Cascades, out aeross the high
plateaus, driving the sequoias of carlier epochs from all but their present sanctuary in the California hills.
For the most part Pliocenc life remained as rich and variegated as in the past, and the evolving mammals continued to increase in size. Even the small rodents grew huge, begetting Epiguulus, who was notable not only as a giant among midgets hut as the only memher of his hreet that ever grew horns. At the other end of the scale loomed Telooceras, an immense amphibious rhino that had migrated from Asia during the Miocene and all but supplanted his iudigenous American cousins. The second-generation mastodons had adjusted well to their new enviromment and pronducel several native genera, among them .Ameleledon a "shovel tucher." whose lower

many branches-the weasels themselves, martens, fishers, wolverines, shumhs and otters. Raccoons and bears appearell, hoth off-hoots of the primal dogs. And on the wide plains, as on the velidts of Africa today, large eats lihe. Machairodus stond silent in the shate of seattered groves or erept on their bellies through the long. rippling grass as they stalhell the ir living quarry.

At some time in the middle of the Miocene there appeared a stranger from the far side of the world. Comphootherium the mastodon trad eome out of Eeypt. Ever since the late Eoeene his tribe had lwen cvolving hy the Nediterrancan and in the valley of the Nile. Sprung from primitive suhungulate stock. they gradually increased in size, their tromhs and tnsks grew longer. Then in the late Oligocene, impelled by some mysterions wanderlust, they made their exodus
from Egypt and healed eastward on one of the greatest pilgrimages in the history of living things. Century after century, millennium after millemium, they stamped and trumpeted their way across southern Asia to the Paeific and then northward to the Arctic Sca. At the Bering Straits they found a land bridge remporarily emergent: they crossed it and enterel the New World soone 20 million years ay"
Thus at the end of the Hioecne the plains of America teemed with life more almudant than ever flourished in the past, more luxuriant than ever would thrive again after the eoming of man. The golden age of mammals would last for one more epoch only. For great changes were in storc. Imperceptibly the climate of the carth was prowing colder. Far to the north the iec eaps were beginning to form. Soon their chill breath would be felt on the happy plains.

plains. Still swifter extinction overtook the chalicothere Moropus, a weird earieature of a horse with primitive teeth and mismatched legs that terminated not in hoofs but claws.

Meanwhile the even-toed ungulates assumed numerical ascendancy over their odd-toed competitors. Three genera of ruminants. members of a now-extinet family known as oreodonts, fleurished briefly but extravagantly, and then died out. Of these Promerycochoerus and Merycochoerus were amphihious; the third, Merychozs. was a plains dweller. The pig eomplex produced a Mincene giant, Dinohyus, which, standing six feet high, almost as massive as a hippopotamus, was the largest of all nonamphibious swine. The camels put forth two models: Promamelus, a small but familiar looking prototype, slightly larger than a sheep; and Alticumelus, an ontlandish sort of super-eamel with
a nerk as long as a giraffes, alapted to an arboreal diet. Deerlike ruminauts also tried several eyperiments. The line initiated in the preceding epoch by Prolocras eontinuad in the Mincene with Syndywerns, a loug-nosed, overspecialized creature burdened with two sets of horns, one emerging from under his ears, the other sprouting from the loridee of his nose. A more sucerssful eonception was tiny Merycohus, who carried on his small head a handsome set of branching horns and who ultimately sired the family of American antelopes hnown as pronghorns. I Nincene forebear of true deer and giraffes was grareful Cranieseras.
As in other ages the affluence of herbivores lrought opulence to the flesh-raters who preyed upon them. Along the fringes of the forests and in the depths of the woods the weasel family diversifiod into

MASTODON
CASTOROIDES
jaw extruded two long scooplike incisors ideally suited for dredg. ing roots from soft earth. The caninc-ursine lime also essayed gigantism: Agriotherium was an enormous bear, fully four feet high at the *houlder; Imphicyon was a huge dog who doubtless dominated all other canine earnivores that harriel the Plocene plains. Among the hoofed animals appeared Sphenophalos, a sturdy pronghorn, and Sinthetoreras, culmination of the Protoceras line and the closest facsimile of a unicorn that capricious nature ever contrived. The cvolving horac meanwhile entered the homestretch with the adrent of Pliohippus, the immediate and virtually full-grown forebear of Equus, the genus man exploits today.

The transition from Plioene to Pleistoeene marked one of the
great erises in the history of life. The stupendous ice sheets overtying Greeuland. Sibcria and northern Europe now began to thieken rapilly. And as they grew, aceumulating and eompacting the snows of innumerable winters, the waters of the oceans fell. The lsthmus of Panama rose again from the depths and the land bridge across the Bering Strats lay completely dry. Aeross these great Iransoccanic causeways the animals of three eontinents streamed in ever increas. ing numbers, intermingling, interbrceding, waging an internecine struggle to survive. An immediate eonsequenee was the all but total extermination of the archaic herhivores and marsupials that had thrived in happy isolation in South Ameriea since the Paleocene.

During the first $[6), 000$ years of the Pleistoeene the ice sheets

erept ever southward, refriyerating a third of the earth's surface. Then they receded and temperate climates again prevailed. Four times in all, the continental glaciers crunched down from the nerth, and lour times they withdrew. (The last great retreat, which began some 10,000 years ago, is still continuing today.) As they ground hark and forth over the great plains, alrading the face of the land, carving valleys and ereating new lakes and rivers, the animals responded with tremendous vitality, some of then growing to proportions greater than any terrestial mammals ever attained before or since. Notalle among them were Castoroides, a beaver the size of a small bear; Canis dirus, a six-lioet wolf that rangel the continent from coast to coast; Smilorken, the salre-tewthed tiger, larger and heavier than any
tiger of today, who dared to attack even the giant mastodons, and whose great jaws, capable of a $90^{\circ}$ pape, were armed with six-inch fangs with which he stableed his victims to death; and Teratornis, a carrion-cating cousin of the modern condor with a wingspread of 12 feet, the largest flying bird in the history of life. There were also giants among the ungulates-Bison crussiocornis and the durable musk ox which still persists in the Aretie tonday. The horse rearched the climax of his evolutionary growth with Equus, only to dic out in America at the end of the epoel. He did not return to the Now World until the Spanish conquisladores imported his descendants from Europe a mere fonr centuries ayo.

The mightiest of all the Pleistoeene mammals were the mastodons

## Each season is right for this lighter-weight

Let autum zero into winter and winter wellow into spring--you'11 weather all seasons smartly in this all-year lighter-weight, Champ Dash. There's a blend of airiness, style and four-season comfort throughout
its superbly crafted 3 ounces. Smoothly fashioned from imported Kasmir fur-felt. And pre*creased to keep a fresh-from-the-hatbox shape in smog, rain or sleet. Is it time you had a new hat, a comfortable hat? Champ Dash is yours, individually boxed, for only 37.50 . Other Champ lighter-weights and regular-weights, $\$ 7.50, \$ 8.50, \$ 10$ and 812.50 . At men's stores and department stores everywhere.

## THE AGE OF MAMMALS contruuro

and mammoths. The latter, recent arrivals from Asia, swiftly came to rule the American plains, diversifying into at least four species, of which one, the 10 -foot-high woolly mammoth, ranged the top of the world, dwelling among the glaciers and dying among them in such numbers that half of the world's ivory stores have come from lis imperishable' tusks. Among the immigrants from south of the border there arrived three prodigies: Borcostracon, a giant glyptodont, offshoot of the armadillo line, visored and carapaced in armor plate from nose to tail; and the ground sloths Mylodon and Megatherium. The latter, one of the largest mammals that ever lived, weighed more than a modern elephant and, when he reared on his hind legs, lifted his witless head 20 feet above the ground.

Unfathomably these giants of the Pleistocene-the mammoths, mastodons, saber-tooths and sloths-died out as swiftly as the dinosaurs before them. As spring returned after the million-yearlong winter they vanished like ice statues in the sun, leaving the reaches of North America to the small animals and the bison. And so once again, as had occurred before in the changeful history of life on earth, vast multitudes of living creatures-whole species, genera, families-abruptly vanished from the face of the planet. All the largest and strongest animals of the Cenozoic era, representing the most splendid assemblage of mammals that ever existed before or since, disappeared from the temperate zones of both hemispheres. Only tropical Africa and Asia somehow escaped the wholesale extinctions.

The great dying of the late Pleistocene and early Recent epochs marked the most far-flung and radically destructive crisis in the entire history of the mammals. To the modern evolutionist it presents an enigma no less baffling than the great dying of the reptiles 75 million years before, and as in the carlier instance he can only

## A NOTE OF ACKNOWLEDGMENT

LIFE is indebted to the following seientiste for aesietanee in the preparation of this essay: Dr. Bobb Schaeffer, the Ameriean Museum of Natural History; Dr. Roland W. Brown, the National Maseum, Washington, D.C.; Drs. Carl O. Dunbar and Joeeph Gregory, and Ralph C. Morrill, Yale University. Special thanke are due to the eeientifie staff of Yale's Penbody Museum who supervised the production of Rudolph $F$. Zallinger's painting of the Age of Mamamals, shown on the preceding pages, and of his paintings of dinosaurs and marine reptiles whieh appeared in The Pageant of Life (LifE, Sept. 7).
suggest multiple causes-climatic changes, competition, failure to adapt. Yet many of the faunas that died out at the end of the Pleistocene had survived the equally drastic changes that had accompanied the transitions from glacial to interglacial ages. Competition has ever been a factor in the processes of life: the extinction of many local populations can be directly attributed to the invasions of their habitats by competing genera. As the last of the great ice sheets withdrew, primitive man, the most ruthless competitor of all, crossed Bering Straits into North America. Today his chipped-stone weapons are still occasionally excised from the bones of some great animal that survived the glaciers only to fall victim to his implacable hand.

Yet human rapacity provides only a fragmentary explanation, for the science of palcontology has proved beyond doubt that natural extinction has occurred time and again on a worldwide scale since the dawn of life. It is, indeed, one of the striking configurations of evolutionary history that in each successive age some group of animals has risen from obscure beginnings to a period of ascendancy, only to surrender its sway to another incipient and apparently unaggressive line. Thus the Cambrian period was ruled by the extinct trilobites, the Ordovician by the extinct giant nautiloids, the Silurian by the extinct sea scorpions, the Pennsylvanian by the amphibians which survive today in only a few inconspicuous lines, and the entire vast span of the Mesozoic era by the extinet giant reptiles.

Evolutionists hesitate, therefore, to assign specific causes to

CONVERGENCE is a pallern of evolution whereby unrelated species acquire similarities of form and habit by adaptation to similar environments. Thus the four animals above all evolved in the sea and developed striking resemblances, though each represents a different vertebrate class. The shark and porpoise are modern creatures; Ichthyosaurus and Hesperornis lived in the Mesozoic era.

## THE AGE OF MAMMALS continuso

specific extinctions, preferring rather to state simply that over great periods of time the physical environment changes and certain populations die off because for some reason they fail to adapt. The apparent suddenness and simultaneity of the great extinctions, moreover, may be an illusion created either by gaps in the chronicle of the rocks or by the immense perspectives of geologic time. Thus the great dying of the Pleistocene mammals was sudden only in a relative sense. It would appear that the extinctions occurred sporadically, spreading gradually from local centers, and were often as not partial, wiping out faunas in one place and leaving them untouched in another. The consequences of these incomplete extinctions are visible today in the spotty distribution of many animal populations-a phenomenon that long baffled zoologists. Tapirs, for example, now exist only in such widely separated regions as Malaya and Central and South America, though they once flourished over vast areas of both hemispheres. And, more familiarly, elephants, rhinos, camels-these too represent vestiges of far greater populations, impounded today in habitats incomparably smaller than they occupied during the great days of the Pleistocene.

As in earlier ages, however, the vitality of animal life proved greater than the destructive power of whatever forces had combined to imperil it. At the moment the sheer mass of life on the planet stands close to an all-time high and, more significant, its diversity is greater than in any age prior to the dawn of the Cenozoic. For the major pattern of the evolutionary panorama is divergence, the tendency of life to differentiate, to become more variegated, to educe more and more forms and varieties of organisms. 1 t is true that divergence is not the only configuration woven in the long tapestry of life on earth. Around it lie other patterns: static lines of arrested development (like the unchanging opossum, oyster, rabbit and turtle); forms of parallel evolution, where allied groups follow independent avenues of development and arrive at similar results (as in the case of deer and antelope); and forms of convergent evolution, where utterly unrelated groups mutate slowly into near facsimiles of one another (as in the case of the reptile ichthyosaurs and the mammal porpoises). Nor are these necessarily rarities. Nature offers its players only a limited number of roles, of habitats and techniques for exploiting them; whenever a

## THE AGE OF MAMMALS contruvuo

biological niche is temporarily vacated, it must in time be filled. From the network of natural forces it is difficult to select a single strand representing a main line of progression, of advance to a propitious end. Yet, as the life saga has unfolded, it would appear that the factor most conducive to survival has been an increase in perception-the development of more efficient sense organs and more complex and sensitive nervous systems, capable of interpreting sensations and responding to them swiftly. From the beginning these attributes have constituted the great arsenal of the mammals. Pound for pound, brain for brain, the dinosaurs were by comparison with the mammals mere automatons. Indeed it is probable that the mammals may have survived and succeeded to hegemony of the earth not in spite of but by reason of their very weakness and obscurity, their smallness in a world dominated by giants, their nakedness in a world of armor plate-in particular, by their fear and sensitivity and awareness in a world of unverceiving, insensate, brainless brutes. And as the epochs of the Cenozoic flowed past, these priceless endowments were augmented in certain lines through the elaboration of nervous systems and enlargement of brains.
The culmination of the present evolutionary progression is man. Proud of his intellectual equipment and of his sense of immortality, man has often tended to underestimate his other lega-cics-to envisage himself as a puny, hairless, wingless, shivering, unarmored, slow-footed pygmy in an arena of superior physical specimens, and to attribute all conquests to his rational faculties. Actually Homo sapiens is a giant in the animal kingdom; only a handful of mammalian lines are larger, stronger, swifter. Of the more than one million species of animals on earth man is capable of killing all but a few without rccourse to the weapons he ingeniously contrives for his own destruction. Yet it is true that man's supreme heritage is his brain-that mysterious and convoluted mass of soft tissue which enables him to perceive the world around him with unique acuity and respond to its stimuli with a subtlety and self-consciousness that sets him apart from all other living things. It invests him, moreover, with a power which no other creature ever possessed-the power to modify his environment, to govern and alter the very course of evolution for all the multifarious estates of life, including his own. Though a relative ncwcomer, an upstart on the planet Earth, man nevertheless stands alone in the complex of nature, the master of vast and incalculable forces, and arbiter of his own fate. For as Plato succinctly ohscrved more than 2,000 years ago, "Mind is ever the ruler of the universe."

## NEXT IN THE SERIES:

## LIFE IN TODAY'S OCEANS

With the next artiele, "The World We Live In" series turns from the distant past to the present. Previous chapters have shown how the carth was born and how its inanimate components ofland, sea and air, its plants and its animals evolved through the ages. Forthcoming chapters will concern regions of the present-day world and the living things that inhabit them. The first of these will deal with life in the sea. Paintings by Artist Rudolf Freund will portray in brilliant color the wonderfully varied ereatures that live on the sands and roeks and pilings of the tidal shallows, and the free-swimming fish that roam the sunlit surface and lightless depths of the open sea. Unique color photographs, the first ever published, will show living plankton-the tiny, drifting plants and animals whieh are the main food sourec of the sea. Sixteen more pages of photographs will show how ocean animals move through their viseous habitat, how they feed and defend themselves, how they prey upon each other in a ceaseless struggle for survival.

BINGO SKIRT FOH FOUR PLAYERS (BFTTIE, STS) HAS THE WEAREH'S SCORE CARD AFFIXED UPSIDE DOWN. ALL NUMERALS AND MARKERS ARE CUT OUT BY HAND

FLOORED BOARD for playing backgammon appears on skirt (Bettie, \$60) which has an outsize pocket to hold dice, shaker and felt markers in two colors.

## Parlor Game Skirts

THEY ARE MADE FOR PARTY PLAY

The wide felt skirt, gaily decorated with anything from families of fur poodles to rhinestone phone numbers, is referred to in the garment trade as "a conversation circle" because it gets its wearer talked to or about at cocktail parties. This year the felt skirt decoration has been put to a new and different use by Bettie Murrie, a young New York designer who is also a practiced backgammon player. As she hopefully sces it, purchasers of her new designs will sit on the floor, spread their skirts out around them and passcrsby will sit down beside them for a hemside round of their favorite game.

The skirts are made from felt, cut in a complete circle, with facsimile gameboards of colored felt patched on near the border. Pieces and markers for use in the various games are contained in a decorative pocket. Designer Murrie has already produced skirts adapted for bingo (with three partners) and for backgammon (for tête-à-têtes). Her plans for the near future envisage skirts for all intellectual levels, from chess to parcheesi.

## How long should

your stockings last ?
Some stockings last only a short time. Some last for weeks. Whatever the wear you've been getting from your present stockings, we honestly believe that you can add days, even weeks, to it with long-wearing Cannon stockings. And here's why we think so:
Long-wearing Cannon stockings have a sofl finish that guards against snags. The
hard finish, used on many stockings, cannot give the same protection.

Long-wearing Cannon stockings are reinforced all the way round-the-toes, not straight across, skipping the little toes where runs are apt to start.

Long-wearing Cannon stockings are knit, never stretched, to fit. And they come in proportioned lengths-short, medium, long -to fit you without pulling or bagging.
Long-wearing Cannon stockings are carefully inspected. Only perfect pairs are ever labeled Cannon!

How long your stockings last depends on how well thcy're made. That's why we say Cannon stockings will last longer than the vast majority of stockings you can buy at any price. You can count on Cannon stockings for long life, as you do on Cannon towels and sheets.

Ask for long-wearing full-fashioned Cannon nylon stockings at your neighborhood store. In every popular color and sheerness-from $\$ 1.15$ to $\$ 1.50$.
Try them today and see how well they wear! Cannon Mills, Inc., 7o Worth Street, New York City 13.

## ON WITH THE GiRLS

## Gleason offers them in quantity and in frames

Last year Comedian Jackic Gleason sct a TV mark by linting up 16 chorus girls in one show (Life, Scpt. 29, 1952). This year, punchdrunk with pulchritude, Gleason offers his usual 16 dancers, plus 16 show girls, plus seven statcly sirens who pose in frames-making a grand total of 39 bcauties, which no other TV show rivals. Gleason thinks straight sex is overdone on TV, picks girls for "interesting cheekbones and slinky eyes." Gleason's main worry, he says, is to think of excuses to get even more beautiful girls into his show (CBS-TV, Saturdays). All he really needs, of course, is Emerson's dictum, "Beauty is its own cxcuse for being."

## -TEA AND SYMPATHY•

## Deborah Kerr, trimmphant in Broadway debut, saves a boy from suicidal despair

Tea and Svmpathy is the season's first hig news on Broadway. It launches Deborah Kerr, fresh from her good movie worh in From Ilere to Eternits. as a powerful and sensitive new stage star. It launches 31-year-old Robert Anderson as an able new dramatist. And it given Broadway what will prohably le its most talked about new hit. The play. directed hy Flia Kazan. deals intelligently with a difficult theme: Laura. a prep school housmaster's wife, befriends Tom, one of the students. br inviting him
into her living room for what is traditionally called tea and sympathy. A sensitise bos. Tom is falsely aecused of laching masculinity. Shurned by classmates and mistrusted by hiis father. Tom is particularly despised by Laura's rugged hushand. In a desperate attempt to prove his manhood, he sech out an ugly prostitute but finds himself repelled by her. Hoping to turn the hoy from suicidal despair. Iaura. who is already alienated from her hushand, ends the play on a moving and compassionate note (before).

## Now...alotion <br> \title{ S 

}
## Amazing effects right away!

Chapping clears quickly...
Redness fades out..
Palm calluses reduce...
Rough elbows soften, whiten...

This revolutionary new lotion by Pond's does more than just superficially smooth your hands-it relieves the causes of chapped redness and roughness.

Angel Skin actually heals chapped skin.

## Deep softening action

Unlike other hand lotions, the goodness of Angel Skin is not stopped on the outer surface of your skin-but goes deep.

It quickly penetrates the dead-skin surface roughness, and brings immediate help to the living skin tissue beneath. Angel Skin promotes natural skin health.

## Prevents dryness

and irritation from soap and detergent alkalies
Of all the leading hand lotions today, only this new Pond's lotion is scientifically designed to neutralize drying alkaline effects of soaps and
detergents. This is why busy housewives report such amazing improvement in their hands from the regular use of Angel Skin.

> Now-no more sticky "coating" on your skin!

It's impossible for this revolutionary new lotion to leave any sticky film on your skin, because -again unlike other leading lotions-Angel Skin contains no "filler." Your skin takes up all its fragrant richness-immediately. Gets the full benefit of its deep softening action.

> You see its amazing effects on chapped, rough skin-right away

Dry, scratchy roughness smooths out. Flushed angry redness fades.

Coarsened skin of knuckles, cuticles, feet and elbows becomes soft again.

Your hands are softer, smoother, whiteryounger looking.

HER HEAD ENGLOSED WITHIN A PLASTIC BUBBLE, MRS. RUTH WANE BREATHES AIR PUMPED IN UNDER PRESSURE WHILE IRON LUNG'S CASING IS REMOVED

## A BETTER BREAK FOR POLIO PATIENTS

## Improvements give a respite from iron lung life

To a polio vietim who ean no longer breathe for himself nothing is more disheartening than the thought of spending every hour of his life flat on his back in an iron lung. Watching the world reflected in the mirror above him, he has one compelling tesire-to eseape, if only hriefly, from monotonous immobility. In the past few years the iron lung has been radically altered to mahe life within it more bearable. By enclosing the patient's head in a plastie bubble (above), air can be pumped in and out of his lungs while the rest of the machine is remosed (belou). Thus loug periods of therapy and nursing care are possible. Doctors are also experimenting with a new hang in which patients can actually sit up. But most eneouraging of all new developments is a breathng technique (p. 128) which enables patients to leave their iron prisons for hours at a time and return to a world they once thought they would never see again.

# COLDS an SORE THROATS <br> can be <br> DANEEROUS INFECTIONS.... 

## Give them ANTISEPTIC TREATMENT!

There are no known cures for a cold, but research proved that Listerine can often be mighty effective in helping to reduce their number and their severity. That is also true in reducing the number of sore throats.

Tests made over a 12 -year period showed that regular twice-a-day Listerine users had fewer colds, and usually. milder ones, and fewer sore throats than non-users.

That is because Listerine Antiseptic treats colds, and sore throats due to colds, as the infections they really are . .. treats them with safe, germkilling action.

Kills Germs on Throat Surfaces
You see, Listerine Antiseptic reaches
way back on throat surfaces to kill millions of germs, including those called "secondary invaders" (see panel above). These are the very bacteria that often are responsible for so much of a cold's misery when they stage a mass invasion of the body through throat tissues.

In other words, Listerine attacks them before they attack you. Tests showed that germs on mouth and throat surfaces are reduced as much as $96.7 \%$ fifteen minutes after gargling ... as much as $80 \%$ even an hour after.

So, get in the habit of using Listerine Antiseptic night and morning, and betweentimes, when you teel a cold or sore throat coming on.

At the first symptom...
LISTERINE AMTISEPTIC Quick and Often

## If the best you would serve...

## Let us tell you in verse

For the whiskey and gin on your home bar shelf...
Trust to Calvert's fine taste to speak for itself! In Highball, Manhattan and Old Fashioned, too... It's the whiskey taste-tested by people like you.
But never mind us-make your own quick taste-test,
Then stick to the whiskey whose taste you like best!
Like those who have switched to this smooth, mellow brand,
We bet youll vote Calvert the best in the land.
If the calls for Tom Collins or Martini, dry...
Calvert $G$ in is the finest that money can buy!
Never "perfumy" nor heavy with flavor-
It makes a gin drink youll be happy to savor. It's Vacuum-Distilled for more delicate taste -
No wonder each drop is too precious to waste. As a man who knows whiskey, it's Calvert for you... And today Calvert offers the finest gin, too!

#  WTH THE GENUINE CORK TIP 

DRESSING FOR THE RACE, EARL SANDE, EMACIATED FROM A DIET, FLASHES NERVOUS GRIN IN JOCKEYS ROOM AS A BYSTANDER POKES AT HIS LEAN RIES

# THE GREAT SANDE SLIMS DOWN TO RIDE AGAIN 

SANDE IN 1928

For two months Earl Sande ate little but fish and cheese and, as the diet took effect, his arms grew scrawny and the flesh metted anay from his ribs. He got down from 138 pounds to 111. Then, after a lapee of 21 years, the greates joekey of his time-who combined a gente manner and elassic "seat" with a shrewd understanding of horses and a thorough knowledpe of alt the bordertine tricks of his trade -was ready to ride again. He was 51 and dead broke. He reported to the jockeys' room at Beimont Park, with
a pair of old boots and a borrowed saddle and joked goodnaturedly about his hald head. The crowd, moved by the old hero's audacity, applauded when he went to the paddock and were still cheering as he rode onto the track on his way to the post. He finished third in that first race (p.13i) and lookel good doing it. Despite his age and weakness from his diet, Sande planned to keep right on riding. "I owe everybody from the landlord to the feed man," he confessed willingly. "You might say 1'm riding for the creditors."

## Betty Crocker Pie Crust Mix

## WHEN YOU BUY OTHER PACKAGE AT REGULAR PRICE

( $+\begin{gathered}4 \\ 2 \\ +\end{gathered}$2-Action Shortening I FOR TENDER, I FOR FLAKY in Betty Crocker Pie Crust Mix

It's custom-made for Betty Crocker, and blended with flour milled specially for pie crust. Together, they make a difference in the pie dough as well
as in the finished crust. (Tender and flaky!)

Try it! Now's the time, while you pay regular price for one package, get the other at half price.

IDA LUPINO DISCOVERS PIE CRUST SECRET
"This is going to be the prettiest pie I ever made!" Here Ida Lupino admires her high flutin' edge. "The dough's so pliable. I can do anything with it." (Secret lies in super-soft flour blended with 2 -action shortening.) An excellent cook, Miss Lupino says she is no pie expert. Dough tore going into pan but was easily mended, and finished pie was pretty. Betty Crocker staff member, Marylee Duehring, assisted.

MARGARET SHOOTING at LifE's Photographer Alfred Eisenstaedt was dressed and wigged for a role in a burlesque version of quartet from Rigoletto.

## SHE TAKES PHOTO OF PHOTOG

While covering Margaret Truman, Life Photographer Alfred Eisenstaedt was put to work as an extra on TV for a skit in which Prizefighters Jake La Motta and Rocky Graziano-who themselves were surprise hits as comedians-stage a slaphappy bout. Eisenstaedt moved around the ring in the guise of a sports photographer. To commemorate the occasion of his TV acting debut, Eisenstaedt asked \liso Truman to take his picture. She did (above) with the result shown below. When he saw the photo of Miss Truman taking his photo, Eisenstacdt told her, "You were not bracing the Rolleifiex properly, It should be held against the abdomen to avoid movement." Miss Truman explained she is more accustomed to the smaller Leica. When he saw the photograph of himself that Miss Truman took, Eisenstaedt made two observations: 1) "It is a little fuzzy." 2) "It shows my bad side." But he gallantly praised the expression Miss Truman caught.

THE PICTURE SHE SHOT is a study of ringsiders and Eisenstaedt as he raptly poises to take his own photos of the Graziano-La Motta comedy bout.

Be a bare-faced beauty, too, with Aycr's new Apricot Cream that thoroughly removes the two kinds of dirt your skin is subject toand does it so prettily!

For there's dirt that dissolves in water and dirt that dissolves in oil. Soap and water tackle one but dry your skin and leave the other, Even the finest cleansing oil alone does only half a job. So Ayer has created Apricot Cream, an emulsion of rich penetrating oils and rain-soft water, which thor-oughly-and beautifully-cleanses your skin of both kinds of dirt.

Petal-skin tinted and delicately scented,

Apricot Cream provides a rich sliding film that literally slips off dirt and make-up, yet leaves all the natural oils that keep your skin from drying.

## plusextrolan

Apricot Cream docs more. It softens, smooths your complexion, berause it contains Fxtrolan, Ayer's exclusive non-allergenic ingredient that exceeds even lanolin in soothing, smoothing properties. This should be the first cream for young users, the essential cream for busy women, the basic cleanser for the skin that needs special treatment creams.

In Convenient Tube or Jar, 1.00 to 4.00 plus tax. For a limited time, free of extra charge with every 2.50 and 4.00 size, a Desk and Travel Kit containing 3 purse-size tubes of Ayer's Apricot Cream, Formulayer and Hand Cream.

If you cannot obtain Harriet Hubbard Ayer prod ucts at your favorite department or drug store, you may send 83.00 (includes Fed. tax) and the name of your favorite cosmetic department or drug store to Harriet Hubhard Ayer, 390 Park Avenue, New York, We will send you the combination of Apricot Cream and, without extra charge, the Desk and Travel Kit.

As you would expect from Plymouth, elegance of styling is matched by excellence of engineering. In the new 1954 Plymouth yon'll find the smoothest, softest ride ever built into a low-price car. Flashing performance with enduring economy. Safety features that Plymouth alonc offers in the low-price field. In every detail, far-sighted engineering makes Plymouth the car which is built better to be your best buy! Your Plymouth dealer invites you to see and drive the new Plymouth soon.

He guards our earth

He's a man of the woods at heart, or he wouldn't have picked such a lonely job. You can't expect to sec many people or movies or ball games when you choose the life of a Forest Ranger. You have your radio, your books, and in the summer there'll be a few vacationers to say hello to. But mostly you go it alone-just you and your family in a small house in the middle of a great tract of land which the American people have placed in your care.
They hand you a piece of their national wealth - so many million trees, so many thousand square miles of soil and grass, so many rivers and lakes and mountains. And they tell you: "Look after it. Don't let it die or burn or wear out. Be the doctor and lawyer and nursemaid and fireman and engineer and business manager for this piece of the living American earth." And then you're on your own.
You get up early in the morning and go out on your rounds. Some days you look for tree diseases; some days you count animals.
days you look for tree discases; some days you count anie
Often you go to the little streams that are the birthplace of America's rivers, and you take samples of their water to be tested for purity. You look for places
where the soil may be wearing thin. You study the roads, the trails, the power lines. And always you keep a sharp eye for those rising wisps of smoke that can turn the woods into a terrible red torch of destruction.

The lumbermen come here on business, and it's your job to mark the trees that are ready for cutting-not too many, not too few. The ranchmen graze their herds here, and it's up to you to decide how many cattle the land will support. For this land belongs to all your countrymen, not only the living ones but those still to be born, and it must be used but not used up, enjoyed but not destroyed. It's your job to protect it from disease, from fire, from weather - and from ourselves.
We in America like our men of progress and our men of change. But we also honor the conservers-those men who preserve without change the things that are worth saving. Some are men of law, and some are men of faith, and a few are men of the woods at heart, living in lonely cabins, guarding our irreplaceable carth.

## AVIATION

## Fastest fllaht yet, a streak in the sky

## blur on photo is a nayy fud Jet traveling 110 feet while setting 753.4-mph record

On the scorched shore of California's Salton Sea observers gathered recently and tensely watched the sky. A Navy jet interceptor appeared far to the left, then streaked past them and the course markers (center, above) so fast that anyone who blinked more than once missed the first leg of the world's fastest jet run. The plane, a Douglas Skyray, made the prescribed four passes over the 1.8 -mile course at an average speed of 753.4 mph , exceeding by
16.1 mph the low-altitude record set by a British Supermarine in Libya in late September.

The Salton Sea basin was chosen for the run because of its extremely hot climate-it was $98.5^{\circ}$ the day the record was broken. At such temperatures the speed of sound is considerably higher than normal, so that jets can reach greater speeds before being slowed as they buffet against the sonic barrier. The delta-winged Skyray, or F4D, was piloted by Lieut. Com-
mander James B. Verdin, who once before had attempted to break the speed record in the same plane but was forced to slow up on the last lap because his fuel was running low. This time, its tanks filled with all they could take, the F4D performed perfectly, received an affectionate pat from its pilot after the record was broken. "That's a real going machine," said Verdin, probably anticipating the day he would fly even faster in a plane that was really gone.

© BACARDI IMPORTS, INC., 595 MADISON AVENUE, N. Y., RUM . . 86 PROOF.

COOL FUEL, so it will contract and thus allow the jet's tanks to hold a greater load, passes through pipe whieh is surrounded hy chunks of dry iee.

JUBILANT JETMAN is Commander Verdin. A veteran combat pilot, he now plans a carrier take-off in Skyray.

DELTA WINGS of F4D give it the appearanee of a huge moth. It has an air intake on each side of fuselage, will be in full produetion in three months,

## -. . in the presence of this

## incomparable man.'

"I recall telling Winston Churchill, many years ago, that writing was his forte, that in devoting himself to it he would enhance his public stature and usefulness. Happily for us all, he never gave up writing oven while he was achieving greatness in many ways-as the leader of his nation, as the indomitable defender of Britain and the Crown, as one of the chief architects of victory over Nazism and Fascism and of defense against Communism. Much of his fame rests upon his glorious leadership in wart but he has never led Britain in a war of aggression. He has fought only in defense of peace and freedom. These have been and are his goals. His writing is matehed only by his part in the events he describes. Through all the times he records, I have valued him as a friend. He writes as he talks. As you read you feel yourself in the presence of this incomparable man."

## BMRNARD BARUCH

WITH these words America's own elder statesman hails the world's elder statesman. Sir Winston Churehill, whose longawaited book, Triumph and Tragedy; the final volume of his memoirs of World War II, will begin in Life next week.

This volume by this incredible statesman, warrior, historian, oracle will undoubtedly be acelaimed as the one book of our time that gives us a real and intimate understanding of the events that shaped the world we live in today. It is a book that could be written only by one of the major characters in the world drama it deseribes. The writer himself says of the revelation in this book: "I should not tell this tale now when all is plain in glaring light if I had not known it and felt it when all was dim, and when abounding triumph only intensified the inner darkness of human affairs."

Much of this story of the war is revealed in the confidential messages exchanged by President Roosevelt. Premier Stalin and Prime Minister Churehill. When events became too complicated to handle by eorrespondence, the famous wartime triumvirate met to talh it out in person. Sir Winston tells what went on at the conferences in Queleec, Moscow, Ialta and Potslam.

> What meally happeued at Yahta?
> Why did the Russians get to Berlin first?
> Hour did the cold trar start? And hou soon did Churchill see that it was coming? And why teere his hands tied by the U.S. wheu he proposed to win it?
> Houc did Stalin react when he first heard about the A-homb?

Triumph and Tragedy answers these and many other questions in secret documents never before revealed, and in the author's own audacious explanations. And along with the triumph of the Allies' military victory over Nazism, along with the tragedy of Russia's duplicity, this volume of Sir Winston's memoirs will bring you Churehillian wit at its best as he reports rare aneedotes which only he can tell.
LuFE's serialization of this most important work will run for five consccutive weeks and, as in our past presentation of these memoirs, will be supplemented with pictures, many of them in color, of the author, his family, his associates and the events he describes and with paintings from Lure's own collection of great war art. Andrew Helskell, Pablisher

Which cigarette

## 1.

Five people simultaneously light up five well-known brands of filter-tip cigarettes. Then each smoker puts his cigarette into the special glass made with a tube through which smoke can be drawn.

## 2.

Four puffs . . . no more . . . of smoke are drawn into each glass by each of the five smokers. Then the glasses are allowed to sit for a few minutes untilthenicotine and tar particles in the smoke have settled.

## 3.

At a given signal,eachsmoker lifts his glass. See the amazing results! The irritants that come right through the other four filters produce dark, ugly stains. But there's scarcely a trace from the new KENT. Proof that KENT removes far more irritants than any other filter cigarette. Visual proof of the greatest health protection in cigarette history 1

# gives you the greatest healh protection? 

## Five smokers compare KENT with four other

## well-known filter-tip cigarettes. Look at the results...

## then decide which cigarette you should smoke.

According to published medical reports, at least 1 out of every 3 smokers is sensitive to the nicotine and tars in tobacco smoke.

Until recently, if these sensitive smokers wanted a good smoke, they just had to suffer the consequences. But now . . . with the introduction of the new kent with the Micronite Filter . . . their problem is solved.

## What KENT's Micronite Filter does

 KENT's Micronite Filter is the only filter that takes out enough of the nicotine and tars in tobacco smoke to give sensitive smokers the health protection they need.In fact, KENT removes far more nicotine and tars than any other filter cigarette . . . and you can see proof of this fact for yourself in the three pictures on the opposite page.

## Why the Micronite Filter is best

There is a good reason why the results you see in the third picture so favor KENT. It is because the Micronite Filter is made of a material which has been used to purify the air in atomic energy plants of microscopic impurities . . . while other cigarette filters are made of ordinary cotton, cellulose or crepe paper.

This material-as used in KENT's Micronite Filter-is so effective that it removes nicotine and tar particles as small as $2 / 10$ of a micron ... so tiny that it would take 10,000 of them to cover the head of a pin.

At the same time, you can easily draw through the Micronite Filter the wonderfully rich flavor of the fine tobaccos blended especially for KENT cigarettes.

## with exclusive MICRONITE filter

## Try KENT today

With your first KENT, you'll discover how good a cigarette can be when you're not bothered by the harsh taste of nicotine and tars. And we believe that you sensitive smokers will be delighted with how much better you feel after smoking a carton of KENTs.

teits of the britisil sard infantry regiment neatly line the rolling slopes northeast of russian-held sevastopol in the spring of ibst

## A KOREAN-IIKE

# On its 100th anniversary, a conflict with Russia 

WAR PIIOTOGRAPHER Roger Fenton sits for a self-portrait wearing the garments of a Croat soldier. After war he quit photography and became a lawyer.

One hundred years ago this month, the sultan of Turkey declared war against the czar of Russia and lit the fuse which set off the Crimean War. At the time and for nearly a century since, this war was dismissed by most people as one of the most senseless ever fought, remembered best for a minor incident-the charge of the Light Brigade at Balaklava. But in retrospect it is clear that the Crimean War raised the first alliance of Western powers against the expansionism of imperialist Russia. Because of this and because it was fought in a far corner of the earth, this 19th Century conflict bears a curious resemblance to the 20th Century Korean war.

The members of this first Western alliance-Great Britain, France, Sardinia and Turkey-ran into wartime problems as big as their overall plan. They chose to fight the war on the Crimean peninsula-within the boundaries of Russia but a staggering 2,500 miles from the industrial centers of Europe. For France and Great Britain, that called for one of the most ambitious supply lines in the history of warfare. Eventually, however, the Allied armies suffered from mismanagement at the front and indifferent support at home. The war drifted into stalemate and finally ended with the signing of a peace treaty 29 months after it had begun.

For examples of tactical brilliance, the Crimean War set few high

## WAR IN CHIMEA

## is recalled in the worll's first battlefront pictures

standards for later military men. But in the midst of bumbling generals, civilians made notable contributions. Best known of all was Florence Nightingale ( $p .156$ ), whose heroic work dramatically raised the character of the British soldier and nurse in the eyes of the public. The first correspondent in history ever to be sent to war by his newspaper was William Howard Russell of the London Times who sent back hlistering on-the-spot stories. The first wartime cable was laid across the Black Sea to Varna. There it connected with telegraph to London and Paris. This revolutionized military communications by making it possible for political leaders at home to communicate directly with the general staff at the front (a practice the generals regarded as a nuisance).
And the Crimean battles were covered by the world's first successful war photographer, a Britisher named Roger Fenton who, journeying to the front with crude equipment, struggling with glass plates, sweating in the heat of his darkroom van and even ducking occasional cannon balls, miraculously managed to produce 350 singular photographs. Here Lafe publishes the best of Fenton's work, which-as a London magazine in 1855 predicted it would-records "the dreadful Crimean struggle long after the traces of war's iron hoof have been effaced."

COMBAT AREA was limited to the tip of Crimean peninsula, but some Allied wounded were shipped 300 miles across the Black Sea to hospitals in Scutari.

Crimean War contrinuso

FLOREVCE NIGHTINGALE set up first modern nursing system and first efficient wartime hospital. Her suggested reforms subsequently established a new health organization in the British army.

## Heroics and llunders

The chief problems of the Allied forces in Crimea came not from enemy bullets but from a vast complex of difficulties originating behind their own lines. Altogether, the war claimed the lives of 143,000 Allied soldiers, but more of them died from an epidemic of cholera than from battle casualties. The epidemic arose from inadequate sanitary precautions and from lack of sufficient hospital facilities-evils not entirely mitigated by Florence Nightingale's untiring efforts. The commanding staff was continually harassed by governments at home offering arm-chair advice. The tripartite command of French, British and Turkish generals had frequent internal disagreements. There was heroism aplenty in the field but confusion in the ranks often brought needless casualties. The most celebrated blunder of all arose from a misinterpretation of orders for the Light Brigade which, amid the volley and thunder of cannon, sent the ill-fated "six hundred" off into the valley of death. The bored belligerents signed a peace treaty in 1856, and the significant effect of the Western coalition was to block the czarist drive southward for a warm water port on the Mediterranean.

COMMANDERS IN CHIEF of Allied forces hold one of their last conferences. They are (left to right) Lord Fitzroy Raglan, a Britisher who gave his name to the style of coat and sleeve he wore; Omar Pasha, a Croatian-turnedTurk; and Aimable Pélissier, last of a series of French commanding generals.

When Federal agents and local police raided a farm at Walpole, near Boston, Mass., in February, 1953, they destroyed this illegal still, which they estimated had cost the Government $\$ 10,000$ in lost taxes every week it operated at capacity, Nine 700 -gallon capacity mash vats also were found. Officials said the still probably had operated for two years.

Two 1,000-gallon stills and other equipment, estimated by Alcohol Tax Unit officers to cost at least $\$ 100,000$ to build and install, were seized in a Kensington, Pa., furniture plant. Elaborale and expensive installations like this are indicative of the huge profit to be made in illegal distilling.

The East was the first target of the bootleg syndicates, but today the racket is sweeping across the country. Distilling equipment above was seized in Detroit in July, 1953.

AT TODAY'S $\$ 10.50$ A GALLON LIQUOR TAX...

# Bootlegging is Again a National Protlem 

## A \$6 tax will combat it ... and give you legal beverages at fair prices

The makers and merchants of legally distilled spirits are asking that the Federal excise tax be adjusted from the present $\$ 10.50$ per gallon to a maximum rate of $\$ 6$. Even at $\$ 6$, the Federal tax alone would still represent approximately one-third of the average retail price of a bottle of whiskey.

In 1944, when the Federal rate jumped from $\$ 6$ to $\$ 9$ a gallon, organized crime began to move in; since November, 1951, with a $\$ 10.50$ a gallon "tax advantage", bootlegging in metropolitan areas has begun to rival Prohibition's worst.

The 1944 and 1951 increases, supposedly "temporary", have long outlived their usefulness. They
have encouraged the ever-growing production of a filthy product that in a single shocking instance put 41 Georgia people in coffins and over 200 in hospitals.

Today, thousands of Americans are risking their health by drinking bootleg whiskey. Priced out of the legal liquor market by the prohibitive Federal tax, they are fair game for the bootlegger and his vicious product.

Federal enforcement staffs are undermanned. Yet last year they seized 10,685 outlaw stills; state and local authorities captured over 10,000 more. So long as a fantastic profit remains in a bottle of
tax-cheating "bootleg", effective enforcement is next to impossible.

There is only one fool-proof way to beat the bootlegger: Take his customers away by bringing legal liquor prices down to average-income levels.

A maximum $\$ 6$ tax will remove most of the rich profit from illegal distilling . . . will make big operations like those pictured above too costly a risk.

A maximum $\$ 6$ tax will recover some of the tax millions now being stolen from Federal, state and local treasuries . . . a loss that has been conservatively calculated at over half a billion dollars a year.

A maximum $\$ 6$ tax will give you good legal beverages at fair prices.

These benefits are not wishful thinking. They are based on the record.

TAX FACTS. When you pay around $\$ 4.27^{*}$ for a "fifth" of your favorite whiskey from a licensed retailer, you actually pay about $\$ 1.89$ for the whiskey itself, about $\$ 2.38$ more in Federal, state and local taxes. In spite of general cost increases since 1942, the average distillery price of whiskey, less taxes, has not increased. Today it's the tax that hurts! -The average national retail price.

## CLASS OF '89 MEETS AGAIN

Old grads help to honor Baruch

The Class of 1889 of the City College of New York got together again laxt week to help their school pay trihute to the man who graduated 13th down the list 64 years ago. On the very site whcre once they took classes and then had posed for their official commencement picture when their ranks were full (above), a handful of 'B9ers sat with No. 13 himself, Bernard M. Baruch (below), for 90 minutes of nostalgia and name-changing. C.C.N.Y.'s business school was being ceremoniously rededicated as
the Bernard M. Baruch School of Business and Public Administration.

Having been sought out as a friend and adviser of presidents for most of his 83 years, Baruch has grown accustomed to having honors and honorary degrees showered on him. This honor, however, almost cost him his composurc. As he waited for the public ceremonies which followed their private get-together, Baruch confided to his old college mates, "T'm usually not nervous-but I am a little now."

INFORMAL REUNION of Class of 1889 brings together the five men (shouen top of page) in same order. Studying original class picture, Baruch said, "I wish

I had more time to remember some of the fellows." With academic gown Baruch wears hood given him with honorary Doctor of Laws degree by C.C.N.Y. in 1947.

## THE LIFE BALANCE IN WHOLE FISH AND WHAT IT MEANS TO YOUR CAT

Do you remember this delightful drawing? It appeared some years ago in a Puss 'n Boots ad with this jingle:

> This Fish 1 once caught Is Food for your thought As students of "Eot-otogy."
> Fish won't bring cots weath But will bring them health. It's Noture's sown way, don't you seet

We thought of the jingle as we studied recent rescarch findings which bring poet and scientist together in happy accord. For research now strikingly demonstrates that the life-giving factors created by nature...and representing nature's own ideal life balance . . . make fish, whole fish, probably the best single food you can feed your cat.

Almost any part of the fish, when properly prepared, furnishes certain important nutrients. Fish ranks extremely high that way. Fish flesh or fillets, the parts generally reserved for human consump-
tion, are richly endowed with easily digested, growth-promoting proteins.
Other parts of the fish abound in calcium, phosphorous, iodine. Still other parts are reservoirs of Vitamins A and D, of manganese - essential to lile reproduction, ol thiamin, riboflavin, iron.

Each part of the fish contributes nutritive elements, but only the whole fish rejresents the nutritive whole, the perfect sum of the parts... the complete inventory of life, itself.
Science thus explains why the whole fish, properly selected and processed, becomes the ideal nat-
ural diet for cats. That is why cats grow and thrive, sparkle with life and beauty, when they are regularly led Puss 'n Boots. Because in our canneries the whole fish, fillets and all, is cooked and packed with added pralatable and healthful cereals ${ }^{*}$. Nature's own balance of vital elements remains intact ... just as it existed in the living fish.
Whenever, wherever you buy Puss 'n Boots you are assured ol this life balance . . . because Puss 'n Boots is made of only freshcaught whole fish. It is a distinction that has won millions of cat owners to regular Puss 'n Boots feeding. It is an inviting and satisfying way for you to see your cat at her very best... lively, lovely and lovable.

*The cercale, or groina, in Puss 'n Boots ore themtelves valuable souress of additionol elementa for promoting growth ond good heolth in your eat... contributing to flavor, digeatibility, ond all-round nutritionol bolonee.

## An Old Cook's New Art

## SWTTCHING FROM SALCE TO OIL, IIE PAINTS MEVIORIES 70 YEARS PAST

Through a mixup in names a few years ago, the Denver Art Museum mistakenly invited Martin Saldaña to its children's art class. Martin proved to be an elderly cook with a beard, retired beeause of a stomach ailment. He joined the class anyway. But after a few lessons he found the youngsters too sophistieated for his tastes and withdrew to paint what was on his mind: memories of his own childhood in Mexico. It wasn't long before
he excited his teachers with a spate of gaily geometric primitives aglow with flitting tropieal birds, bright-eyed playmates and Ameriean schoolmarms warmed by cxotic landscapes. Saldaña has been working at the museum every day since. But recently his relatives delivered sobering news. He had thought he was 72-they say he is 78 . "I have to work and work now," he says, looking at his watch. "I have so much to do."

## Let in the light-but have your furnishings of color-enduring Chromspun

The more light you have in your house, the more you need Chromspun colors. Herc the curtains, the draperies, the upholstery, the pillows and even the lamp shade are Chromspun. All better investments because this acetate fiber is color-locked not only against light ${ }^{*}$, bet against gas fading, cleaning, washing, and erocking . . a combination of color qualities never before achieved by any other fiber natural or man-made. What is cqually important, Chromspun makes it possible to blend or mateh colors with

[^10]

In 1943 Christian Henrichsen, a Boston electrical engineer, died and left his childless widow, Margaret, then 42, with the necessity for making a new life. Mrs. Henrichsen had been for many years a devoted Sundayschool worker and it was natural that she should turn for comfort to the church. Her desire, hovever, was to give, not to receive. How she fulfilled that desire is movingly described in the following article and in her book, Seven Steeples, to be published this month by Houghton Mifflin (\$3).
no porch, just a wooden doorstep that led to the green door with two narrow glass panels. I tried the door; it was locked. I looked around, half-expecting some neighbor to appear with a welcoming smile, some member of the Ladies' Aid to help me move in. No one was in sight.

In search of a neighbor who might have the key, I had my first good look at the church. It was frighteningly big and impressive looking. As in a good many Maine churches, the spire was at the left over the entrance, a type of architecture that seems to belong here and to fit right in with the pointed firs. The belfry shingles had rounded ends that overlaid each other like fish scales, appropriate for a seaside community. At the top was a weather vane and on it a bluebird was perched, singing joyfully. Surely a good omen.

I found the key at the Robertson home just below the parsonage. Mr. Robertson came across the street and opened the door for me. I saw a little narrow hall with a straight stairway that went up almost from the doorsill, on the right a living room and behind it a dining room with a sideboard, an ugly heavy table and straight chairs. The living roon had three wicker chairs with the most elaborate curlicues I had ever seen and a cylindrical wood-burning stove with a nickel embroidered petticoat around the base and a nickel "Grecian urn" on top. I had somehow expected a fireplace, but this stove was the heating unit for the house. Central heating was achieved very simply: there was a hole cut in the ceiling both in the study and in the kitchen to allow the heat to go upstairs. There I found two large bedrooms and a smaller one which the last pastor had used for a study.
The furniture was adequate. And obviously someone had been in to wash the floors and wipe down the walls. But the kitchen! I remembered my cozy little white kitchen with its shiny modern equipment in the home I had just left. This kitchen had a low, wood-burning range and an iron sink, somewhat rusty, with a big pump at the end of it. Leading from the sink was a wooden trough which served as drain. But it wasn't needed at the moment because the pump didn't work. Mr. Robertson said he guessed it needed new leathers. The woodwork of the kitchen and even the pump were a depressing orange color.

## An air of real dignity

ALL in all it was not an encouraging prospect. Reminding myself that I had volunteered for this, I went across to the church. It was dark inside. But I could see that the hangings were maroon and the pews were of varnished wood. The pulpit and chairs had simple, straight lines. To my amazement the door was at the front of the church instead of at the back. Everyone came in right beside the pulpit platform and had to go down the side aisle to get to the pews.

But the little church had an air of real dignity. And I noticed with delight that the windows were frosted glass on the lower half, with colored squares in the upper. Little squares of red and blue and yellow and purple floated across the dim, quiet room. How the children must love to watch the mysterious bits of color, I thought, remembering my own childhood and what fun it was to look out through such windows and see the world all green or fiery red or bright blue.

CHURCHES ON CIRCUIT OF MRS. HENRICHSEN

Each week Mrs. Margarel Henrichsen rides a circuin of linule village churches along Maine's remote northern coast 10 conduct services and otherwise minister to her scattered flock. There are some 600 families in her seven parishes. On Sundays she opens her first service in Sorrento, Maine al 9:30 a.m. and her last in Prospect Harbor al 7:15 p.m., drives 90 miles during the course of the day. She conducts services in only six churches. At the seventh, in East Sullivan, she no longer preaches but still adviscs on Sunday-school matters and performs other functions.

# Widow turned circuit rider revives religious life in neglected Maine parishes and happily discovers that 'there are no little churches in the kingdom of God' by Margaret Hevrichisen 

I went to the second pew from the front, sat down and bowed my head. I asked God to make me a real minister of Jesus Christ to these people in this church. Then I waited, head bowed, in the stillness for some time. When I rose I felt a great deal better about the future.

ISOON became accustomed to the old house, even to getting my water from the well next door. I enjoyed the view of Schoodic Head on one side and of Cadillac Mountain on the other as I pumped my pails full. And one morning a few days later, I met one of my new neighbors on the street. I said, "Good morning-how are you?" and I got the usual "Go-od" spoken in the lovely soft voice of northeastern Maine. Then she peered up at me anxiously and said, "Do you like it hcre?"
"I love it," I said. "I think I like it better than any place I've ever lived." Her face broke into a wonderful smile like the sun coming out. I was thrilled. It was the first real sign of welcome and I felt that truly this was where I was meant to be.
There were a good number of people that first Sunday in the church. As I crossed the street from the parsonage I was glad to hear the clear, deep tone of the old bell being rung by one of the young boys. The organist was already at her place when I entered, and as the service continued I found that she had a beautiful voice and a real sense of music. It seemed strange to be looking toward a solid wall at the back (the only entrance was right at my left hand) and at the enormous wood-burning stove which looked big enough to contain the lads Nebuchadnezzar consigned to the fiery furnace. But I soon forgot the strangeness of the setting as the familiar words of Scripture united us all in the realization that this was the hour when we could worship the Father in spirit and in truth.

Besides this church there was another in my circuit. It was Pros. pect Harbor, a little fishing village with gray and white houses set along the water's edge, stacks of lobster pots, boats riding peacefully in the harbor, dark red buildings of a sardine cannery at the curve of the shore and gulls flying purposefully overhead. The church was as tidy as the fishermen's houses and as cheerful as the one in North Sullivan was somber. The congregation had a goodly percentage of men in it, and I noticed gratefully that they sang lustily as if they liked to go to church. How their voices rang out on the old hymns! Buoyed up by their responsiveness, I would continue with the Scripture and the pastoral prayer. I would hardly speak three sentences before a deep "amen" would ring out from someone. Throughout the service there were always smiles, nods, more amens and the sense that they were with me all the way-an earnest, lively congregation in a little church that shone with evidence of loving care.

IHAD scarcely got used to the work of two churches when the district superintendent asked me if I would take on three more, temporarily."Can you carry them until I can get someone else?" heasked. That was nine years ago. I still have them. We managed somehow to arrange the hours and fit five services into the day: East Sullivan at 10 in the morning, North Sullivan at 11:15 (which was much too close to

## MARIE

Edeiquer INC 8512 SUNSET BOULEVARD HOLLYWOOD 46 , CALIFORNIA

NEWLY PAINTED PEWS at Ashville, salvaged from abandoned church and redecorated by parishioners, show characteristic spirit of congregations.
"I want to get married," he answered.
"Oh, tell me about it." I noticed his clean but unironed work clothes and his work cap and thought of course he wanted to make plans for a future wedding. But his answer was, "She's in the car."

When "she" came in, I recognized her as a woman whose husband's funeral I had held a few weeks before. Notified of the death one morning, I had gone out to the little house to find three bewildered teen-age children. The mother, I had been told, was "living away from home." She had come to the funeral, however, and I had wondered about her. Now, here she was, looking pale and weary. "She's just come out of the hospital," the groom explained.

We talked together a few minutes, and I noticed gratefully that when I remarked that unselfishness was the keynote for married happiness, they seemed to respond. It was my first wedding. I hoped they didn't guess. As I looked at their worn faces, I longed to have the occasion beautiful for them. There were no flowers in the house, but I cleared the drop-leaf mahogany table of its magazines and books, lighted the tall white candles in their silver holders, propped my open Bible against mother's Sheffield fruit dish and went out in the hall to put on my robe. If this wedding was to have sacred significance for these people I resolved to give it all the dignity and beauty I could. With my silver cross about my neck and the service book in my hand I confronted them-only to realize that they had no witnesses.

Whom could we get? I named the neighbors who might be available. Their eyes finally sparked to one name. So we waited while the groom went down the street to get these people who had already prepared for bed and had to be persuaded to get dressed again and come. Then as I proceeded with a prayer in my heart that God's blessing would be with them, I was engulfed by a feeling of responsibility and in my confusion lost my place in the service book. The ring had been put on the bride's finger as the groom haltingly followed me through the ritual, so solemn and meaningful. Where was I? My eye scanned the page and in a second I found myself reading the final prayer of blessing.

Only as they went out the door did I realize that I had completely left out one paragraph of the service; and it was the one with the words which pronounced them "husband and wife together." Perhaps they didn't notice the omission. I worried a little about the legality of it, and out of curiosity I checked later with a lawyer who assured me that since the vows had been taken they were indeed legally married. Anyway I am sure that God who knew the depths of their lives through the past years, the bride's weariness and weakness, and the husband's desire to take care of her, knew also that they were husband and wife in the truest sense, whether I had said so or not. They have moved back into town now, their little house under the big maple is gay with geraniums in the window boxes, and their contented expressions as they pass me in the street make me feel that all is well.

VIINTER in Maine mademy ministerial tasks more difficult, but at the same time the rewards seemed greater. The first time I awoke to a snowy morning in Maine I went downstairs and stepped in a drift up to my ankles, right in the front hall. By closing the door from the living room into the hall and from the kitchen into the hall, I had three rooms which kept fairly warm. The holes in the ceiling-my "central heating"-I also closed off and so the rooms in which I lived stayed comfortable. But when it was necessary to go into the hall or upstairs it was like an icy plunge.

## SEVEN STEEPLES conrinuzo

The real test was keeping warm at night. Once long ago, for a joke, someone had given me some long red flannel skiing tights. They were wonderful though they must have looked a bit strange under a pink flannel nightgown. A blue knit bed jacket, some heavy hand-knit white wool socks tucked into lavender handknit traveling slippers and a sleeveless sweater, which added another layer and kept the underneath layers from shifting about too much, completed my bedroom attire. Never did a lady prepare for bed in such a colorful manner. On really cold nights I pulled yet another sweater over my head and tied its arms around the neck. I remembered once as a child reading somewhere that tramps used this method to protect themselves from the cold. If the neck with all its arteries and veins is warm, you feel warm all over.

Even worse than the bitter cold days and nights were the blizzards that seemed to come fresh from the North Pole. We were soon hit by the biggest snowstorm I had ever seen. For two or three days the wind howled, the thick soft snow soon became dry and powdery. Whipped by that wind, it stung almost like sleet and drifted in great piles about the house. The typewriter was promptly moved to the kitchen table, the oven door was opened and when I sat to read I toasted my feet in the oven. A wonderful time to catch up on the study course for my ordination I thought.

## Mission through a blizzard

BUT then, just after I had settled down, the phone rang. Marguerite Gordon's mother, whom I had visited at her sickbed a few days before, had taken a turn for the worse. Could I get the car out of the garage? I had long since learned to leave the garage door open; better to have snow drifting inside than piled in a frozen mass against the door, making it immovable. The snowtread tires would do a lot, but they wouldn't buck the drift across the driveway. With a scarf I tied an old felt hat firmly down around my ears. Then, in my sheepskin-lined boots and my winter coat, I took up the snow shovel and started out. As I opened the door the wind took my breath and tossed it a mile or so down the road. The storm door was wrenched out of my hand and blown back against the house with a bang that cracked the panels. This was a sure-enough blizzard!

I managed to dig a crazy path to the driveway and tackled the height of the drift. It was hard work shoveling against that wind, but I finally carved it down sufficiently so the car wheels could do the rest. They did, and I made my way through the gathering dusk and swirling snow to Marguerite's house. Their driveway had been shoveled by Marguerite's husband, Maynard, so capable, so devoted and, of course, so silent!

With courage that never ceased to affect me, Marguerite and her sister Phyllis kept the conversation in their mother's room cheerful, hopeful and robust, even though they knew she could never get well. I was there when the doctor came, and I followed him out to the kitchen. "It can't last much longer," he said to the girls. There were quick tears on both their faces, but they were hastily wiped away. Then one of them turned to me and said, "We've sent for mother's brother. He'll get in on tonight's train. Do you think you could possibly meet him for us? Maynard could go, but we don't like to have him away. He's the only one of us who can lift her-and if anything should happen. ..."
"Of course," I said, "Maynard must stay here with you." I knew how they depended on him. To drive 13 miles each way through that storm would not be easy, and the train might be very late, but of course I was glad to go. Inch by inch I crawled, grateful when the light of an occasional approaching car helped me to see where I was. Finally I reached the station-to hear, as I had feared, that the train would be about an hour late.

It came at long last; and then the long, difficult drive home. The trip should have taken 20 minutes. Instead it took about an hour and a half. I shall probably never have to drive under such hard conditions again. But when we got back to the house and I saw the eyes of the old woman as her brother came into her room, the difficulties of the trip seemed like nothing at all. I knew it was a privilege to be allowed to share so intimately in the life of a family like this one.

SYOMEHOW, despite my many activities, I completed my study course and was ready to be ordained at last. The final paper had been turned in, the last examination taken and passed. Conferene was coming and with it my ordination service. I pictured the service as I had seen it performed for others-the group of young men standing before the bishop to receive the solemn charge, their

Glass of water test proves amazing disintegrating speed of a Bayer Aspirin tablet. Test of time proves its gentleness.

Gentle relief and fast relief. Both are important when you're suffering with pain. And of all pain relievers, only Bayer Aspirin ean
offer you this proof that it gives you both: Bayer Aspirin's gentlencss is proved by time. It is so gentle that its reeord of safetyof safe use by millions of people-ean be matehed hy no other pain reliever. So gentle, in fact, that doctors preseribe it even for small children.
Bayer Aspirin's speed is proved merely by dropping a Bayer Aspirin tablet in a glass of
water. It starts to disintegrate almost in-stantly-so fast you need a stopwateh to time its speed. It does the same thing in your stomaeh. That's one reason why it makes you feel better-fast.
So when you have an ordinary headaehe, take Bayer Aspirin. And remember-if Bayer Aspirin does not relieve your pain-don't experiment-it's time to see your doctor.

kneeling figures as the hands of the bishop, the elders and district superintendents were laid on their heads in the act of ordination. I pictured it over and over again in my mind and felt that this supreme experience for which I bad been preparing so long would be a wonderful moment.

And then, the Sunday before I was to go to conference, one of our boys, a fine young man of 14 , approached me after churcb. With obvious effort, he asked, "Mrs. Henrichsen, could I join the church next Sunday?"

I felt a moment of panic. The next Sunday was Conference Sunday. I was to be ordained in a city about 150 miles away. Then I looked again at the boy's face; I could read in it what he had been feeling. I realized that next Sunday was not only the date for my ordination, it was also Mother's Day. This boy's decision was his Mother's Day gift to his mother. It meant everything to him. I hesitated only a moment before saying, "Of course you may. It will be wonderful for us all to have you."

When I got to Confcrence the next Wednesday, I looked up the bishop and explained the situation. "Of course I'd like my ordination this year," I said, "and I'm ready for it. But when a boy comes to you with a request like that, you don't say to him, 'No-you'll have to wait a week.'"

The bishop agreed that it was too important for the boy to be put off. I said I would be willing to wait for another year, but as it happened I didn't have to. I was ordained by the bishop in a special ceremony on the Friday preceding that important Sunday.

## Hymns and sea chanteys

IALWAYS take my vacations in the winter-summers in Maine are far too busy to think of it, partly because everybody in every other state is there taking his vacation. A great many of these "summer people" enter into the church community with eagerness and help us with projects we could not otherwise consider. When one summer we decided to have a two-week vacation Bible school, one of the teachers was an enthusiastic lady who spent her winters teaching in a progressive school.
She and her husband so enjoyed tbis vacation Bible scbool that when our two weeks were up they continued having the children who lived in their part of the parish come once a week to their place for more of the same. The program was different and remarkable; seldom has a vacation Bible scbool combined Bible lessons, hymn singing and worship with sea chanteys and ballads, swimming parties, suppers cooked on the beach and even painting and folk dancing. The children came to feel that God was in their good times as well as their solemn worsbip, and that it was the natural and right thing to stop work and play occasionally to thank Him.

## SEVEN STEEPLES continusa

On the place was a tiny shack that had once been a pony stable and more recently a shed for lobster pots. The children cleaned it out and made a little outdoor chapel. As they decorated it, they learned the appropriate Scriptures: "The heavens declare the glory of God and the firmament showeth His handiwork" was the Psalm they learned the day they fastened starfish, which they had collected and dried, to the ceiling to represent the starry heavens. The altar table of white birch saplings held a picture of Christ, and near the door was one of St. Francis. One little girl, caught up by the reverent devotional spirit, wrote a hymn of her own and composed the music for it. They all brought bunches of bright berries, bits of driftwood, sea urchins, all sorts of finds, as their gifts to the altar. One day they found a gull wing on the beach-its feathers soft and pearly-whereupon thcy lcarned the bit about "if I tahe the wings of the morning and dwcll in the uttermost parts of the sea, even there Thy hand shall lead mc and Thy right hand shall hold me."
Whenever I visited, an eager hand led me to the chapel to sec what new treasures had been added. It was a sight to sce 12 or 14 children come splashing out of the water and in their dripping bathing suits take a visitor over to see their own little chapel. They always entered softly and reverently. They would perch on the benches, talk gently of God's wonderful ways, sing a Bach chorale or two, perhaps recite some Scripturc, ask the visitor for the story and close with a simple heartfcle prayer and the Lord's Prayer. It was not "playing church"; it was much more real.

After worship and a swim (not usually mixed together in quite this manner, but so spontaneous and genuine that there seemed nothing incongruous about worshiping in bathing suits), the group would gather around the fireplace for cocoa and cookies. The afternoon would usually end with the singing of old ballads led by the husband, who accompanied himself on an enormous guitar. The children would sing their rousing sea chanteys, just as their own seafaring ancestors once did. Somehow, after that summer, most vacation-Bible-school ventures have seemed tame indeed.

## An hadian wedding

THERE is probably nobody in this whole section more beloved and respected than Susy-and "Susy" she is to the people for miles around and to the fishermen and hunters who rent her camps from April through November. She and her husband, "Big Chiet" Stanwood, live on a narrow neck of land hetween two of the finest lakes for salmon and trout fishing anywhere around. Susy's language is as forthright as her thinking. She has no place in her heart for sham or pretense and she is kindness itself. As she puts it, "T'd rather do things, when I can for people-get more fun out of itthan be growlin' about it." I think I would rather incur the wrath of all the district supcrintendents and bishops of the church than lose the respect and regard of Susy Stanwood. There is something about her as crystal-clear as the spring water she dips up for her guests, and she expects that clarity from all with whom she deals. I think the initial interview with St. Peter must be something like facing Susy.
One day she called me on the phone. "Mrs. Henrichsen, there's a couple out here want to get married." This was a Saturday morning.
"Well, send them in to see me," I suggested. 1 could hear a very flat silence at the other end of the telephone. Then, "You couldn't come out here this afternoon?" Now I realized that Susy wanted to have a part in it.
"Why I guess I could," I said. "What about these people, Susy? Do they know what they are doing?"
"Oh yes," her voice was strong and hearty. "T've known them both a long time. They're all right."
So the hour was set and I went out across the hills and the cut over blueberry land, down the long road that penetrated the very heart of the forest and out to the fishing camp, with the lakes sparkling in the spring sunshine and the wind in the pines making lovely caressing noises. To my amazement when 1 entered the house I found that the couple werc Indians. The man was a chief who made his livelihood by giving lectures on Indian lore to schools and community groups. His copper-colored face was wreathed in smiles, his English cultivated and flawless. He wore a number of rings of beautiful silver and turquoise work, the sort of thing one expects in Navaho country but hardly in Maine. His bride also had on beautiful heavy silver jewelry, bracelcts and an intricate necklace. After Susy introduced us, we talked for a few minutes about the meaning of the ceremony. I looked over their papers which were in order, and I felt that they were both

Artcarved

For one so dear to you-on this day of doys- the finest quality diamond is always your wisest choice. When you choose Artcarved, you're sure of recagnized quality ... registered and guaranteed on all four value counts-color, clarity, cut and carat weightby ane of the world's aldest ond largest ringmakers, famous for 103 years. ## SEVEN STEEPLES continuro

intelligent and sinccre in their devotion, mature people who woul make their marriage succeed.

After they had been pronounced "hushand and wife together' and we had had the final prayer and benediction, Susy invited $m$ to stay for supper with them. Since it was Saturday and it wa Maine, supper was baked beans, brown bread and cabbage salad Not even a wedding feast can disturb down-East tradition for Sat urday night menus. As I pitched into the feast, I caught mysel wondering how many ministers have been invited to that sort o wedding supper-at one end of a long table in a fishing camp, wit a full-blooded Indian chief smiling down at his shy bride.

FISHING is in the lifeblood of Maine, and there are more varie ties than a casual observer would suppose. In the center o Franklin there is a tiny thread of a stream that wanders througl alder growth near the railroad station. One day the station agent looking out of his window, saw a big, shiny red car with out-ol state license plates parkel beside this stream. The driver matche his car; he was dressed in the most expensive fishing togs. Witl new creel and fly rod he advanced on the brook. The station agen left his post and sauntered over. He stood watching the strange for a minute.

The fisherman spoke first. "Any trout in this brook?" His ton was a little patronizing.
The agent spat thoughtfully. "Might be," he answered. "O might not. Never can tell about trout. But I wouldn't fish tha brook if I was you, Mister."
"And why not, I'd like to know?"
"Well," said the agent, "people round here kinda leave tha brook for the kids. I wouldn't like to say what might happen t, you or that car of yours if they was to catch you fishin' here.
Without a backward look, the agent sauntered off. He had th day before stocked that brook from a shipment of state hatcher fingerlings that had come through his office. For years he has seel to it that there are trout there "for the kids." When he got bac to the station he looked out the window. The shiny car and th stranger had gone.

TTHERE is a great deal of gentlehearted kindness in these back country homes. And sometimes it is mixed with tragedy, $\mathrm{O}_{1}$ one hidden road there lived a family in a fairly large shingle-and tar-paper home. There were several children. One day I went ou to call, making my way through the mud, over the scattered toy around a harking puppy tied to a tree and into the kitchen. I an sure the temperature in that kitchen must have been well over 90 it was like opening a blast furnace when I stepped inside. Three o the children seemed quite normal, though the baby was so ver white I feared for it. Two of the children had not taken off thei snowsuits and the baby was very warmly dressed; no wonder it wa whitc in that terrible heat. The fourth baby, a little girl about $21 / 2$ could only make incoherent sounds. She was obviously abnorme -her large head and face badly discolored with a deep red birth mark. "Poor child," I thought, "what chance does she have?" Bu as I visited, I noticed the tender solicitude of the mother for thi

## REVEN STEEPLES continuid

andicapped little one, as if by the very strength of her love she vould shield it from the fierce struggle of life.
Perhaps a year later I was called to the home. This child had iied. The grief of the father and mother was real and deep. The ather sat bowed behind the stove suffering silently-a figure of prrow before the double mystery of life and death and the strange recident that might have made life so very hard for his little firl if she had lived to grow up. The mother smiled through her ears as she said she knew it was the love of the Heavenly Father hat had taken her baby out of a world that would have been too :ard for her.
But the depth of heartbreak for me came during the service. The ttle girl, in a lovely white dress with pleated skirt, patent leather hoes and white socks, lay in the tiny casket like a doll. Her face vas white and clear. It was the only time the mother had ever seen t that way. The mother looked down into the casket for a long, ilent time and then turned to me, whispering in awe. "My baby b beautiful," she said. "My baby is beautifu!!"
Whenever I think back on all thesc experiences, I realize that it s these people who have made each experience so rich for me. I :ave often tried to assess what it is that makes them the way they re, what it is that draws them so close to God.
I suppose the sea has something to do with it-the sea and their ronstant closeness to it. There is a particular place along the rugged oastline where I have gone many times for quiet meditation and nspiration; it is to me one of the most beautiful spots in the world. remember going down there one afternoon. just before dusk. The un was beginning to drop behind Cadillac Mountain, throwing its rutline into deep purple shadow and making a golden glory above md behind it that was reflected in the water. I stood close to the ncks, tasting the salt spray from the long green swells that ceaseessly rose and fell. What mighty power lay under those lifting raves, clear, translucent green one moment and crashing white oam the next. Watching them, I remembered what one of my zarishioners had once said to me: "Nobody couldn't live here and ratch these tides day in and day out and not know somebody was a charge of things." As I watched, the sun disappeared; dark dusk rept across the water. And out beyond the breakers I saw a tiny tuck, a bufflehead, riding serene and confident on the tumbling sea -so small and so unafraid. Yes, I thought, surely the spirit of God till moves on the face of the deep.
I turned away to drive back home across this dear Maine land, rassing one after another of the tiny buildings where we worship ogether, perfectly ccrtain of one thing-that no matter how few n numbers the congregations I was called to serve, there are no ttle churches in the Kingdom of God. There is no such thing as small church when it is a church of Jesus Christ.

- HONENT OF MEIDITATION is taken by Mrs Hentichsen fo eonsider her rext sermon, white resling on a rochy headland in the dcadia National Park.

GERMANS ENJOY A WINY HOLIDAY

Six days a week in summer and early fall the Ahr Valley in Western Germany is a peaceful, verdant place with nothing stirring but a few vintners who plod slowly along its sheer rock terraces tending their vines. But the first light of Sunday brings hundreds of rumbling buses, whining motorcycles, carts, cars loaded with visitors from cities as far away as Frankfurt and the Ruhr who come to drink the red wine of the Ahr, which is rare in a region noted for white wines and a lot cheaper in the valley than it is back home. With a few bottles of Ahrwein in hand or inside them, the visitors spill out over the countryside or jam the narrow valley streets and winehouses. Some of them tipsily try barefoot wading in the Ahr, which flows eastward to the Rhine and the city of Remagen, 15 miles away. Others jostle for a chance to swing hilariously above the valley on the Sessel Seilbahn (opposite page).

The happy vintners of the Ahr Valley who usually age their wines for at least a year are now selling it off as soon as it is fit to drink. And the happy deportment of the weekend winebibbers has made the valley famous in Western Germany with a new saying: "Who has been to the Ahr and does not know he has been there has really been to the Ahr."

ASTRIDE WINE BARRELS, portly sightseers hold hands and sing while an accordionist serenades them after guided tour of biggest wine cellar in the Ahr.

## Genuine MACMILLAN RING-FREE Motor Oil is sold oNLY at

$\checkmark$ SERVICE STATIONS $\checkmark$ garages $\checkmark$ CAR DEALERS
Look for the Big Red

The big red M sign is your guide to your oearest dealer where gennwine Macmillan Hingfree Motor Oil is sold.

When many people are asked about Macmillan RING-FREE Motor Oils, they think of them as oils to clean carboo out of sluggish engines to reduce ping.

But that's ooly part of the story.
Actually the regular use of Macmillan ringfree Xtra Heavy Duty Oil prevemts bydranlic valver from sticking and more than pays for itself io the gasoline it saves!

LOOK AT THESE FIGURES:
Average all drein. ................. 1300 milles At 15 miless por gollon, gas eontumed. 100 gallon:
 Go tolline averoge coste , 28.63 cents per gallion

This $\mathbf{\$ 2 . 2 9}$ more then pays for your all
drain of 5 querts of 45 \& $^{\dagger}$ per quert.
Compared to other brands-under the same load, speed and road conditions - Macmillan ring-Free Xtra Heavy Duty dreds of tests in cars of many makes showed an average reductioo in gasoline coosumption of $8 \%$ over all other braads of oil tested.
Start using Macmillan RiNG-PREE Xtra Hesvy Dury Oil because it does such a wonderful job of cleaniog. But keep oo using it-mooth in and month out-because it reduces friction inside your engine, prevents bydraulic : allsesf from sticking, saves wear and tear and repair bills, makes your car stay newer longer and wore than parys for itself in the gas it saves!
